ENGLISH NORTHERNE NAVIGATIONS, AND DISCOVERIES; RELATIONS OF GREENELAND, GROENLAND, THE NORTH-WEST PASSAGE, AND OTHER ARCTIKE REGIONS, WITH LATER RVSSIAN OCCVRRENTS.

THE FOVRTH BOOKE.

CHAP. I.

A Voyage set forth by the Right Worshipfull Sir THOMAS SMITH, *and the rest of the* Muscouie *Company, to* Cherry *Iland: and for a further discouerie to be made towards the North-Pole, for the likelihood of a Trade or a passage that way, in the Ship called the* Amitie, *of burthen seuentie tuns; in the which I* IONAS POOLE *was Master, hauing fourteene men and one boy:* A.D. 1610.

THE first of March 1609. I wayed at *Black-wall* and went to *Grauesend*. The third day I went downe to the *Noore-head*. The ninth, wee wayed and put out to Sea (blessed bee God:) and by the fifteenth day I was in the Bay of *Rosse*, on the Coast of *Norway*, in Latitude 65. degrees: at what time the wind came Northerly, and blew extreame fierce, with great store of Snow and Frost. The sixteenth day, wee had the like weather and winds, so that wee could not maintaine a * mayne-course, and we lost some of our Beere. The seuenteenth day, we had Snow, and all the Beak-head was so laden with Ice, that it seemed a firme lumpe, and the wind at North, which blew so fierce that we could not maintaine a * fore-course, and draue vs backe to the altitude 63. degrees, 56. minutes. The storme continued so exceeding violent, that I was faine to spoone before it fortie eight houres, and the same wind and weather continued till the twentie one day, and in that time wee were driuen as farre to the Southwards as *Shottland*. And being faire by the Land, and seeing no likelihood of faire weather, I got a Fisher-man to conduct mee to a good Harbour, called *Hamersound*, not so much to eschew the stormy weather, as to stop some leakes, and to amend our tackling. I tarryed in *Shottland* till the twelfth of April 1610. at which time the wind was Southerly. The former wind came to the North at midnight, with great store of Snow, which froze as fast as it fell: which wind continued till the fourteenth at noone. At two of the clocke it came to the East north-east, and I stood to the Northwards, after many stormes, much cold, Snow, and extreame Frosts. I had sight of the North-cape the second day of May. Then I stood towards *Chery* Iland, the winde being at West North-west. The third day at noone, the Cape bare South South-east; seauenteene leagues off, we had much Snow with Frost. The fourth day, it was thicke weather with

with great ſtore of Snow and Froſt, the winde at North-weſt and by North. The fift day, it was faire weather, the winde at North North-eaſt. The ſixt day, at two of the clocke in the morning, I met with ſome Ice, but not very thicke, ſo that I held my courſe toward *Chery* Iland, the winde being at South: at fiue of the clocke, I ſaw the Ice ſo thicke, that I could not poſſibly get through it. Then I ſtood to the Weſt wards with a ſhort ſayle, and ſounded, but had no ground at a hundred fathome: thicke foggie weather, at eight of the clocke it began to cleere vp, and I ſtoode into the Ice finding it ſcattered in ſome places; and at twelue at noone, I found the Pole eleuated aboue the horizon 74. degrees 7. minutes, and ſounded, but had no ground at one hundred and ſeuentie fathomes. From twelue till foure, I ran North North-weſt two leagues, and ſounded, and had a hundred and ſixtie fathomes. Then *Chery* Iland did beare, as I iudged, North North-weſt, about fifteene leagues off or more: from foure till eight it was calme, at eight of the clocke the winde came Southerly, and I ſtood towards the Iland and found the Ice ſo thicke, that the Ship had no roome to wend, and withall ſuch a fogge that I could not ſee one Cables length; in which time the Ship had many a knocke, but thankes be to God, no harme was done. By twelue of the clocke, the ſeuenth day, I got out of the Ice and lay a hull till the North Sunne, at which time it began to be cleere weather: then I ſet ſaile, and ſtood to the Eaſtwards, cold froſty weather.

Chery Iland.

Ice.

The ſixt day of May wee were in 74. degrees 7. minutes.

The eight day it was very foggie, the winde at North and by Eaſt, with Snow and Froſt: I ſtood to the Eaſtwards, in hope to get the Eaſter end of the Ice, and ſo to *Chery* Iſland; and I ranne into a Channell betweene two firme bankes of Ice, and could finde no way through, but lay in the Ice till the ninth day at a South Sunne. Then I obſerued, and found the Ship in the altitude 74. degrees and 17. minutes, the winde being at North North-weſt, very faire weather, but froſtie.

Abundance of Ice.

I ſailed in the aboueſaid Ice, one while one way, and another while another, in hope to finde ſome opening towards the Iland: but which way ſoeuer I ſtood, I ſaw all the Sea couered with Ice. At a South Sunne, the tenth day, I obſerued both with my Aſtrolabe and Croſſeſtaffe, and found the Poles height 74. degrees and 15. minutes: and the variation 13. degrees and 30. minutes the North point Weſterly: by a North Sunne I got out of the Ice into the open Sea, and to write each courſe, way, and winde, with all other accidents, would be too tedious: but the thirteenth day of May, at midnight, I ſounded, being in very thicke Ice, and had a hundred thirtie eight fadoms; there preſently I eſpied the Lioneſſe ſtanding into the Ice, I kept her company till eight of the clocke at night, and then I ſteered as followeth, from eight aboue ſaid, till twelue at noone: The foureteenth day I ſailed North-weſt and by North twelue leagues, the winde at South South-eaſt, thicke foggie weather; from twelue till foure at night, I ſailed ſeauen leagues North, the ſame winde and weather with raine. And by the fifteenth day at foure of the clocke in the morning, I had ſailed North twentie ſeauen leagues, the ſame winde and weather: at what time I ſuppoſed, that I was not farre from land, becauſe I ſee great ſtore of Sea-Foule* about the Ship: at eight of the clocke I ſounded, but had no ground at a hundred and fortie fathome: very foggy weather: likewiſe I ſounded at twelue of the clocke at noone; no ground at a hundred thirtie fiue fathomes, where I met with Ice and great ſtore of Fowle, as before, winde at South, and foggie weather.

74. degrees 15. minutes. variation 13. degrees. 30. minutes.

The Lyoneſſe was ſent to *Chery* Iland.

* As *Cobodines* wildgeeſe and Willocks.

Ice.

I ſtood through the Ice, till eight of the clocke at night, holding no courſe by reaſon of it, at which time I ſounded, and had nintie fiue fathom greene oze, the weather being all one, and very much Ice from eight, till ten of the clocke. I ſayled North, one league and a halfe, and had ſeuentie fiue fathoms rockie ground. From ten till twelue at midnight I ſayled North one league and a halfe, and ſounded, and had thirtie ſeuen fathoms, the wind being at South, with great ſtore of raine and fogs, and abundance of Ice round about, but ſomething broken. Then I ſtood off Weſt and by South, and tooke in all the ſayles, except the fore-ſaile and maine top-ſaile: and at one of the clocke the ſixteenth day ſounded, and had fortie fathomes oze: likewiſe I ſounded at two of the clocke, and had fiftie two fathomes: I could neither perceiue Current nor Tide in all this time, and it did raine as faſt as I haue commonly ſeene in *England*: then I ſtood to the Eaſt wards, and at three of the clocke ſounded, and had fortie fathomes oze: and thus I ſailed among the Ice Eaſt and Eaſt and by South, and Eaſt North-eaſt, keeping no certaine courſe, by reaſon of the Ice, and had theſe depths following, 30. 20. 19. 16. and fifteene fathomes, and then I ſaw the Land within two leagues and leſſe of me, bearing betweene the South and by Eaſt, and the North-weſt: then I ſtood in Eaſt and by South, ſuppoſing to haue found a harborough within a ledge of rocks that lay off a low point, which ſeemed like an Iland, and ſtanding in, I found depths, 10. 9. 8. 7. 6. 7. 4. and three fathomes, ſtanding in it a ſhoald bay, and full of rockes.

Much raine.

Land the 16. day of May.

Then I ſteered away North-weſt and by Weſt, and had ſix, ſeuen, eight, and ten fathome foule ground; this part of this Land is foule ground a great way off, therefore come no neerer this place then ten fathome, and that will carry you cleere of all dangers that I could ſee. Towards noone it cleered vp, and I did looke the Meridian altitude of the Sunne, which was 34. degrees and 20. minutes, the declination being 21. degrees and 10. minutes North, the Equator muſt

Note.

must bee 13. degrees and 10. minutes aboue and beneath my Horizon. The Complement being 76. degrees and 50. minutes, the Poles height. Likewise I found by true obseruation the Compasse to vary 16. degrees, and before I had sayled foure leagues I saw a Sound that lay East and by South in, the winde comming to the East South-east; then I sent the Skiffe on land in the mouth of the Sound, because I supposed I had seene Morses on the land, but they proued Rocks. I followed into the said Bay with the ship, but standing in I had a stiffe gale of winde off the shoare, which draue abundance of Ice out of the Sound, through the which I enforced the ship, in hope there to haue found an Harbour; in turning in I found these depths, thirtie fiue, thirtie, twentie, and eighteene fathoms. The Boat came aboard about a North-west Sunne, and the men told me they found deepe water within and foule ground; they saw great store of Mohorses lying on the Ice, but none on land, and they brought a piece of a Deeres horne aboord, therefore I called this Sound *Horne Sound*, and a Mount that lyeth foure leagues to the South of it, the *Muscouy* Companies Mount, because it was my first landfale.

76. degrees 50 minutes, Pole height.
Variation 16. degrees.
The North point westerly.
Rockes.
Mohorses or Morses.
Hornsound.
Muscouy Mount.

Then finding no benefit here to bee had, nor Hauen for the ship, I stood to Sea, and sayled North-west and by North foure leagues: at midnight it blew very hard, and I stood to the Westwards with a short sayle, and sayled foure leagues West by eight of the clock the seuenteenth day. Then I stood to the Landwards, the winde being at South South-west thick weather: and three leagues from me I saw a Point, which I named the *Ice Point*, because there lay abundance of Ice vpon it. Then I saw another Point beare North North-west fiue leagues off, which I named *Bell Point*, because of a Hill formed like a Bell on the top, and to the Northwards of *Bell Point* goes in a great Bay with two Sounds in it, the one lieth in East South-east, the other North-east and by East; the last Sound you can hardly discerne, by reason there is a long Iland lying in the mouth of it. But the going into the said Sound is on the North side, yet there is an Inlet vnder Point-partition, but very narrow and full of Rocks, and an exceeding strong Tyde setteth in there. This day I found the weather very warme and farre temperater then I haue found it at the North Cape at this time of the yeere: this place lying in 77. degrees and 25. minutes, and the Cape in 71. degrees and 20. minutes; this place being to the Northwards of the Cape 6. degrees and 5. minutes: and note, two leagues to the Southwards of *Bell Point* is a ledge of Rocks three miles off the shoare, and come no neerer the shoare then fifteene fathom: vpon the North side of the Bay is low land, which I named *Lowneſſe Iland*. I called the North Sound *Lowe Sound*. Into the Bay I turned, the winde at East North-east faire weather; turning in I had no lesse then fortie fathoms close by the shoare, and in the middest no ground at sixtie fathoms, and being neere the Point that parteth both the Sounds, the winde increased with raine. Then I saw the Sound frozen ouer from side to side, and vpon the Ice a Beare and great store of Mohorses, but the winde blew so extreme hard, that the Boat could not row to windwards, to trie if we could kill some of them. The fogs and raine continued till ten of the clock the nineteenth day, at which time the raine ceased, and it did freeze with snow and winde and fogs, as before.

Ice-point.
Bell point.
Point partition.
The ayre temperate.
Lowneſſe Ile.
Lowsound.
The Sounds season.
Very thicke fogs.

From twelue at mid-night the nineteenth day, till foure in the morning the twentieth day, I sayled three leagues South-west and by South, then I found the Ice thicker then before. It was very thick fogs, with winde, frost, and snow, and cold, that I thinke they did striue here which of them should haue the superioritie. I put into the Ice aforesaid in hope to get through, and after many a sore stroke with the ship in it, I got through at a South-west Sunne, at what time it began to be faire weather. Then I stood through the Ice towards the land againe, in hope that that land would proue worth the labour and trauell; and going to set the mayne top sayle, it was frozen as hard as euer I saw any cloath in all my life time, so that all my company could very hardly set it; and whereas I supposed, and haue often said, that this climate is not so subiect to foggs in May and Iune, as it is in Iuly and August, it is contrarie; for I haue not seene the Sunne on the Meridian these fiue dayes, nor seene it at all in sixtie houres: I had not sailed three leagues North-east, when it was as thicke as it was before with Frost and Snow: yet I stood still towards the Land.

Extreame cold weather.
Sailes frozen.

The twentie one, I saw the Land at an East Sunne, and stood towards it, and at a South and by West Westerly, I obserued the Sunne, and found the Meridian altitude of it 33. degrees 30. minutes, the declination being 21. degrees 56. minutes, &c. the altitude of the Pole was 78. degrees 26. minutes. The winde at North North-east: cold frostie weather: This place I called the *Black-point* Ile: I called a point (that lyeth foure leagues to the North-west of *Black-point*) *Cape-cold*, and to the South-east of *Black-point* is a great sound, which because it was couered with Ice, I called *Ice-sound*, and standing neerer to the shore, I could not see any Sound or Harbour open; therefore I determined to stand to the Northwards to seeke what good might be done that way to profit the Merchants, and also to get some Wood, for we had but little left. I sounded at the *Black-point*, and had twentie three fathomes streamy ground. At two of the clocke I stood off, and at midnight stood to the shore againe, cold weather with frost, the winde at North and by East. The two and twentieth day, at an East Sunne, I was faire by the Land, betweene *Cape-cold* and *Black-point*, a league off where it fell calme, and I sounded there, and had twentie eight fathoms, where I tried for Fish, but could take none.

The three and twentieth day, at an East North-east Sunne, I was within three leagues of *Capecold*: this day it was faire weather, and I tooke the Suunes height at twelue of the clocke, and found it to be 33. degrees 30. minutes, the declination being 22. degrees 13 minutes, the distance of the Pole from my Zeneth, was 11. degrees 17. minutes, the complement thereof being 78. degrees and 43. minutes, the Poles altitude. All this day it was calme all the forenoone, warme sunshine weather, and whereas I named this place *Cape-cold*, if I had falne with it this day, or the like, I should haue giuen it another name. Here I tried to take fish, but could perceiue none. *Item*, there is a point that beareth from *Cape-cold* North & by West which I called *Faire-forland*: this *Forland*, and *Cape-cold*, and *Black-point*, are all one Iland. At sixe of the clocke at night, the winde came to the North North-west, then I determined to view the Ice-sound better; but comming neere it, I perceiued it packt ful of Ice, so that I could see no end thereof at the Top-mast-head, neither could I see any open water in it. At a North Sun, the wind came to the North-east, and by North, then I stood to the Northwards, as before.

Faire weather.

Fayer-forland.

The foure and twentieth day, at a North-east Sunne, the wind came to the South-west, faire weather and warme. At a North north-east Sun, I tooke the Meridian Altitude, which was eleuen degrees aboue the Horizon, and by working accordingly, I found the eleuation of the Pole aboue the Horizon, to be 78. degrees, 37. minutes. The fiue and twentieth day, at an East-south-east Sun, I set the boat to the land, neere *Fayer-forland*, and it being calme I sounded fortie fiue fathoms, where I proued for fish, but could find none, and within one league of the shoare I had fiue and thirtie, and thirtie fathome streamy ground. At a South-east Sunne, the Boat came aboord laden with Wood, and some Whales fins. The men told mee there was great store of Morses in the Sea, about the shoare side, and about thirtie on Land. Immediately I sent my Mate, *Nicholas Woodcock* with the Boat on Land againe, to see if they could kill any of the said Mohorses, and also to search what other thing they should hap to find that might proue beneficiall. Moreouer I was certified, that all the Ponds and Lakes were vnfrozen, they being Fresh-water, which putteth mee in hope of a milde Summer here, after so sharpe a beginning as I haue had, and my opinion is such (and I assure my selfe it is so) that a passage may bee assooneattayned this way, by the Pole, as any vnknowne way whatsoeuer, by reason the Sun doth giue a great heat in this climate; and the Ice, I meane that that freezeth here, is nothing so huge as I haue seene in 73. degrees.

No fish.

In all this land by the sea side is good store of Drift-wood, but none groweth here.

N. Wood cock.

Whale-fins.

Hope of a Polare passage.

The sixe and twentieth day, at a North-east Sunne, the Boat came aboord againe, hauing slaine but two Morses, at twelue at midnight the wind came to the North, and blew so hard, that I was enforced to try with a Mayne-course, cold frosty weather, with snow. The sayd wind and weather continued till a South Sun, the seuen and twentieth day, at eight of the clocke at night, the wind came to the North-west and by West faire weather, then I stood towards the Land again. And at a South-east sun, the eight & twentieth day, I was within three leagues of *Fayer-forland*, and standing in I sounded diuers times, and had these depths, 15. 17. 19. and 18. fathoms, within fiue, sixe, and seuen myles of the shoare, and when *Fayer-forland* did beare South and by East by the Compasse. It being two miles from me, I saw the Land beare North-east and by North, about nine leagues off, the which because it was full of knottie Mountaines, I called *Knottie-point*, and betweene *Knottie-point*, and *Fayer-forland*, I saw a great Bay, which because it was foggy on the sudden, I could not discouer. In the Sea, about the *Forland*, I saw great store of Mohorses and Sea-fowle, I sounded in the Bay and had nintie fiue fathomes rockie ground. I stood to Sea, and had very foule weather, with snow, and fogs, and frost, which weather continued till the thirtieth day, at foure of the clocke in the morning, at which time I was within one mile of *Fayer-forland* in nine fathomes, and then I sayled East North-east about two miles, and had these depths, 18. 17. 16. 14. and 12. fathomes all rockes. Then I steered South with the like depths and grounds, but when I had runne South South-east three miles further, I had sandie ground, then did *Fayer-forland* beare West and by North, about three leagues of, the next cast I had tenne fathomes foule ground, and from thence I steered two leagues South and by East, hauing these depths, 10. 9. 8. and 7. fathomes, then I saw the Bay couered ouer with Ice. I turned out the wind at North. This Sound I named *Fowle-sound*, for in this Bay are three Sounds; this I spake last of, which lyeth in South, and goeth out at *Black-point*: another lyeth in East South-east, which I named *Deere-sound*: another goeth in North, which is called *Closse-coue*, and being neere the point betweene *Fowle-sound* and *Deere-sound*, it fell calme, and I sent the Skiffe on Land, and standing after, with a little wind at West, I found the sayd Point very shoale, with a ridge of Rockes, where I had these depths, 4. 5. 6. 7. 9. 10. 18. and then 30. fathomes. At a South Sun, the Boat came aboord and brought Wood, and some Whale-fins.

Knotty-point.

Thirty day of May.

Foule-sound.

Deere-sound.

Close-Coue.

The last of May, at an East North-east Sun, I was within three leagues of *Knotty-point*, at which time I saw Ice all the Sea ouer betwixt the West and the Land: then I saw another Point foure leagues distant from *Knotty-point*, the one bearing of the other North and by East, and South and by West, and it is smooth Land, the which I named the *Gurnerds-nose*, in different warme weather: and finding the Ice to bee so thicke that I could not passe it, and the wind comming to the West, I stood to the Southwards againe, determining to search the Sounds better for a Road, and

Ice.

Gurnerd-nose.

for

for commodities, because I saw no good to bee gotten in keeping the Sea amongst the Ice, and at a North Sun, I was in the entrance of *Close-coue*, where I had no ground at one hundred & twenty fathomes, and yet I was within two Cables length of a sunken ledge of Rockes, that lyeth on the Larboord side of the Bay a mile from the shoare. Note.

The first of Iune I found a good Road in *Close-coue*, on the South-west side, where I rid in seuen fathomes sand mingled with oze, at an East Sun I sent a Skiffe to a low Point, that lyeth on the North side of the Bay, where they found some Whales fins, and three pieces of Mohorse teeth, and vpon a little rockie Iland, they saw neere one hundred Mohorses, which were there sleeping. In this time I went towards the bottome of the Sound, and slue a white Beare. At a South-west Sun, I went towards the rocke, to see if I could kill any of the Morses that lay there, and as wee went by the shoare side I espied Deere, three of them I slue, and one of my company one. But when I came to the rocke, the Ice that the beasts lay on, was hollow, and the rocks that was betwixt the Ice and the sea stood sloping toward the Sea; the which when I saw, I determined to go aboord and let them alone, yet afterward I went on the rocke betwixt the Ice and the Sea: and as I with the rest of my company were killing them, the Ice brake, and Ice and beasts slid into the Sea together, and carryed one of the men with them, so that he escaped out of that danger very hardly; for besides the weight of dead Mohorses, and Ice that bruised him, the beasts that were aliue strook at him in the water, and bruised him very soare. I had beene in the same case, if I had not beene the nimbler, and slipt on one side. I killed three Morses, whose teeth I tooke off. Then I espied the Beare, which my Mate had hurt before with a shot; hee went into the Sea, when hee saw the Boate, where I slue him with a Lance, and brought him aboord. Iune. A Beare slaine. Foure Deere slaine. His name was *Thomas Whitman*. A Beare slaine.

The second day at a North and by East Sunne. At a South Sunne, I went to the South shoare of *Deere-sound*, where I found a good quantitie of Fins, and came aboord, at a North North-west Sunne. The third day, being Sunday, I rid still, hauing the wind at West South-West much wind. Then vpon the side of a Hill, a mile to the Westwards of the Road, I set vp a Crosse, with a writing vpon it, signifying the day of my arriuall first in this Land, by whom I was set out, and the time of my being heere. This Road I called *Crosse-road*. At a South-east sunne the fourth day, I wayed, the wind at West South-west, and when I was almost out, the wind increased with fogs, which made me put back into the Road, where I anchored the same day at six of the clocke, at afternone. The fifth day, at a North-east and by East sunne I wayed, and it fell calme, then I went to the East side, and killed some Fowle, which I found in great abundance: and when I was readie to go aboord, I saw fourteene Deere, at which time I spent all my powder, and shot but one shot, with the which I slue a fat Buck. The same day, at a South sun, I went on Land and slue two Deere more. And at a South-west sun I went on Land and slue a Doe, and took the Faune aliue, and brought it aboord, but it dyed the next day. The calme continued till the sixth day, at an East North-east sunne (and we droue in the Bay, with a little soaking tyde that runneth there.) Then I sent the skiffe to the rocke aforesaid, to see what store of Mohorses were there; at three of the clocke they came aboord, and told mee there was neere two hundred beasts. I tooke both the boat and skiffe, with all my company, and went to the rock, and in going thither I slue a Beare: but when I came to the rocke, the beasts began to goe into the sea, then I presently went on land, with all my company, and slue eightie beasts, whose teeth I tooke, and in going aboord slue another Beare, and came aboord the seuenth day, at a North-east sun. Then I saw two white fishes, which at the first sight I supposed to be Beares, they had long snouts like Sturgeons, two flat Fins close by their gils, flat bodied, small towards their tailes, and a broad taile. A crosse set vp. *Crosse road*. A good Road for all winds. There is great store of Fowle in this Land. A Buck slaine. Three Deere slaine. A fawne taken Beares slaine. Mohorses. White fishes.

The tenth day, I went on shoare and slue fiue Deere, with the which, and them that I slue before I haue lengthened out my victuals, blessed be the Creator of the World, * which hath not made any part thereof in vaine, but so that in these parts (which hath seemed vnpossible to our Ancestors to bee trauelled vnto, by reason of the extreame cold which they supposed to bee here) I find the ayre temperate in the Lands, and nothing so cold as I haue found at *Chery* Iland in fiue seuerall Voyages. Moreouer, in this Land I haue seene great store of Deere, which haue neither bush nor tree to shelter them from the nipping cold of Winter, nor yet any extraordinarie pasture to refresh them. If these (I say) hauing nothing but the Rockes for a house, and the Starry Canopie for a couering, doe liue here; why may not man, which hath all the gifts of God bestowed vpon him for his health and succour? Fiue Deere. * *Isa.* 45. 18.

The eleuenth day in the morning, I sent the skiffe to a Beach, that lyeth Northwards from the Rocke where we slue our beasts, but when they came to the Rocke, it beganne to blow hard at North North-west, that they could not proceed any further, vpon the Rocke they found a Beare, and slue him, and came aboord. In which time I tooke the boate and went to the East side, and slue two Beares and two Deere.

The twelfth day, at a North-east sunne I wayed, and hauing very little wind, I sent the skiffe to goe to the place abouesayd, at a North sunne, they came aboord and brought some Whales Finnes and a Beare, and told mee that it did blow very much wind at Sea, yet I had Two Beares, and two Deere slaine.

Crosse-road. in 79. degrees 15 minutes. Compasse vary 18. degrees 16. minutes.

it all this time calme in the Bay. Yet before I could get out of the Sound, the wind came to the North-west, and blew very hard, which made mee to put roome for *Crosse-road*, where I rid till the fourteenth day, in which time I caused both the boates to bee trimmed, and the thirteenth day at noone, I obserued on Land, in this place, and found the Poles height 79. degrees, fifteene minutes, and the variation of the Compasse 18. degrees, 16. minutes North-west: the same day I slue a Bucke.

Ice.

The fourteenth day, at a South-east Sunne I wayed, the wind at South-west foggie weather, at a South-west Sunne, I went on Land and slew a Buck. The fifteenth day, at East Sunne, I got out of the Bay, at which time I saw abundance of Ice to the Sea-wards, but the wind came to the South-east, and I sayled betwixt the Ice and the shoare. At a North-west Sunne, I sent the skiffe (with seuen men in it) to the Land vnder *Knottie-point*, at which time the wind came to the North-east, and I stood to the North-wardes, where I had these depths, fifteene, thirteene, and eleuen fathomes foule-ground. These depths were about a league, and to the Northwards of *Knottie-point*, I saw great store of Whales, the like I saw in *Deere-sound*. The sixteenth day, the Skiffe came aboord, and brought a few Finnes, and fiue Deere, and they told mee that within the Bay, that lyeth betwixt *Knottie-point* and *Gurnerds-nose* is a Hauen, in the entrance whereof is an Iland, and seuen fathomes going in, but within eight, nine, fifteene, and twentie fathomes good ground. This maketh *Gurnerds-nose*, an Iland, for this Hauen goeth out on the North-west side of *Gurnerds-nose*. I named this Hauen, the *Fayre-hauen*; I found a great tyde heere, which runneth South South-west, the floud commeth from the Southwards.

Great store of Whales.

Fiue Deere slaine.

Faier-Hauen.

Abundance of Ice.

79. degrees 50. minutes. the Latitude of *Gurnerds nose.*

The first place of my being this Voyage

This Vnicorns horne is the Horne of a fish of which see after in *Baffins* discouery.

Ten Beares slaine.

Then standing to the Northwards, I saw the Sea couered with Ice, which lay close to the Land which made me stand to the Southwards again, I obserued at *Gurnerds-nose*, and found the Poles height 79. degrees, 50. minutes. At a North-west Sun, the same day, I sent the skiffe on Land to search the Coast to the Southwards of *Knottie-point*, where I sounded and had twenty foure fathomes Foule-ground, and in the Fayre-way I sounded, hauing these depths, 30. 35. 45. and 48. fathomes all Rocky-ground. By the seuenteenth day, I was in the entrance of *Close-cone*, at a South Sun, at which time the Skiffe came aboord, and brought a Beares skin, and a Buck, and a good quantite of Whales Fins and an Vnicornes horne, which was fiue foot and seuen inches long, and in the biggest part of it, it was seuen inches and a halfe about. The eighteenth day, at a South Sun, I came into the Road, where I rid all that day, hauing very much wind and raine that wee could doe nothing. At a North Sunne, I sent my Mate, with the Skiffe, and sixe men to seeke for more Fins, &c. The ninteenth day, at a North Sun, they came aboord, hauing slaine ten Beares, three of their skins and fat they brought aboord, and a good quantitie of Fins, and six paire of teeth. The twentieth day, in the morning, I sent both the Boat and Skiffe to flay the other seuen Beares, the wind being at North faire weather. But they were no sooner gone, but it blew very hard at North, which brought abundance of Ice out of the bottome of the Sound, but did the Ship no hurt. At a West South West Sunne, the Boats came aboord with the Beares skins, the wind aboue said set so much Ice out of the sound vpon the Ship, that it inforced mee to set sayle.

Fiue Deere slaine.

A yong beare taken.

A Beare slaine

Take heede of this point.

The one and twentieth day, at a North Sun, I stood towardes *Fayer-forland*, and sent out the skiffe. The two and twentieth day, at a South-east sunne, they came aboord, with the skiffe laden with Fins, and killed fiue Deere. Then I went on Land to search what I could find, and I slew a Beare, and tooke a young one aliue, and at three of the clocke in the afternoone I came aboord with the skiffe laden with Fins. The three & twentieth day, at a South-east sun, the Boat came aboord, and brought a good quantitie of Finnes, and a Beares skinne. Then I stood toward *Cape-cold*, and the same day, at a South sunne, I sent the skiffe on Land to the Northwards of the Cape, where they found sixteene Mohorses on a rocke, which they slue; and at a North-east sun, the foure and twentieth day, they had brought all the teeth and blubber of them aboord; at which time the wind came to the North-west, and blew verie hard: then I stood towardes the *Ice-sound* to seeke what commodities it would yeeld. At a North sunne I was neere *Black-point*, which hath a great many sunken Rockes lying on the southermost end of it, therefore you must come no neerer that shoare then twentie fiue fathomes. The fiue and twentieth day, till a South sun, it was calme, and the tyde droue the ship so farre from the Land, that I could not send the boat on shoare.

A Bucke slaine

The sixe and twentieth day, at a South South-west Sunne, I came aboord, more laden with trauell then commodities, at which time I slue a Buck. Then I stood toward *Ice-sound*, and at a Point which parteth *Foule-sound* and *Ice-sound*, I had thirtie fathomes oze, & so to ten fathomes Rockes, then I steered East along the shoare, and had betwixt thirtie and fifteene fathomes oze and sand. In fifteen fathomes I anchored, hauing the wind at North North-west, faire weather at a North-west sun, at a North sun, I sent the skiffe to the shoare to search for commodities. The seuen and twentieth day of Iune, at an East North-east sun, they came aboord, and brought a good parcell of fins. At six of the clock I sent the Skiffe to the Land againe, and set sayle with the ship; but it being calme, and the tide setting the Ship towards a ledge of rocks, made mee to anchor againe.

Digitized by Google

gaine. At a South South-eaſt Sun, they came aboord againe, and brought a good quantitie of fins: at a South Sunne I ſent the Skiffe towardes the mouth of *Ice-ſound*, and in the entrance thereof I found a Coue in the which was twentie fathomes, and ſo to thirteene, but by reaſon of the tyde, and edy-winds, I could not get into it; here the Skiffe came aboord and brought a few finnes. Then I ſteered to another Sound, in the South ſide of *Ice-ſound*, where I anchored in twentie fathomes oze, the ſame day at a North Sun. The eight and twentieth day I ſtayed at the place abouesaid, and tried the Beares greaſe to bring it into oyle, and when we were all buſied, a Beare came ſwimming ouer the Bay, towards the ſhip, which I ſlue, and ſplit my Peece; the wind being at Weſt. The nine and twentieth day, at a South-eaſt Sunne, I ſent the skiffe to ſearch the Coaſt to the Weſtwards of this Bay, the wind at North-weſt. The laſt of Iune, the skiffe came aboord, at a South-eaſt Sunne, and brought a few Finnes, and a Bucke, the wind at North.

A Beare ſlaine.

A Bucke.

The firſt of Iuly, being Sunday, I rid at the place abouesaid, in hope to haue more Mohorſes on Land; I obſerued heere and found this place in 78. degrees, 24. minutes, and the variation Weſtwards, ſeuenteene degrees. Then I ſent the skiffe to ſee if any more beaſts were on Land. The wind at North-weſt, faire weather. The ſecond day, at a North North-eaſt Sunne, they came aboord and brought two Deere. The third, wee ſlue a few Morſes, whoſe teeth and blubber wee brought aboord, at a North-weſt Sunne, at which time I ſlue a Pricket: this place I named the *Green-hauen*. Immediately I ſent the skiffe to take the teeth, and fat of ſeuen beaſts, which lay ſlaine in another place. The wind at Weſt, thicke foggie weather. It floweth here on the Change day South, and by Weſt, and hyeth ſixe foot water, and runneth halfe tyde halfe quarter. The fourth day, we rid ſtill the wind at South-weſt with fogs and raine, and very much wind: at the ſame time I ſaw great ſtore of Ice in *Ice ſound*. The fifth day at a North-eaſt Sunne I wayed, the wind at Weſt thicke weather, and in ſtanding out wee ſlue a ſhe Beare, and tooke her two young ones. Indifferent faire weather, we lay becalmed all this day.

Iuly the firſt.

78 degrees, 24. minutes, var. 17. deg. W.

Two Deere ſlaine.

Greene-harbour one Deere ſlaine.

Ice.

A Beare ſlaine, two yong ones taken.

The ſixth day, I was off *Lowneſſe* (at a South Sunne) the wind being at Eaſt blew ſo hard, with raine and thicke weather, that I was enforced to take in all the ſayles ſaue a Mayne-courſe, which ſtorme continued till eight at night, at which time I ſet more ſayle, and ſtood to the Southwardes, hoping to get ſome goods that way. The ſeuenth day, at noone the wind came to the North-eaſt, and then it began to bee cleere weather, at what time I ſaw the Land of *Bel-ſound*, whither I purpoſed to goe, yet could not by reaſon of abundance of Ice, which lay aboue three leagues from the Land, which I could not poſſibly paſſe. At a North-weſt and by Weſt ſun, I ſaw abundance of Ice all along the Land, to the Southwards of *Bel-ſound*. The eight day, at twelue at noone, I ſtood into the Ice, in hope to get to the ſhoare, the wind at North and by Weſt haſie weather, *Horne-ſound* bearing Eaſt North-eaſt, nine leagues of, I ſtood to the landwards till foure of the clocke, at which time I found the Ice ſo thick that I was forced to ſtand to the Southwards to eſchew it. I ſayled by, and amongſt the Ice, till a North North-weſt Sunne, at which time I was within three leagues of the ſhoare. Then I ſounded, and had thirtie ſixe fathomes. Then I ſtood to the Weſtwards, and finding all this part of the Land full of Ice, I purpoſed to ſtand to the Northwards againe to ſearch for commodities that way: the wind being at North-weſt, I turned to windwards, till the tenth day, at eight of the clocke before noone, at which time wee found a part of a dead Whale, which I cauſed to bee made faſt to the Ship, determining to get into ſome Harbour, there to make the beſt of it I could. Before I could get into *Bel-ſound*, at which time I ſaw all the bottom of the Sound full of Ice, ſo that there was no refuge for the Ship. Then I was faine to turne out with the winde at Weſt, and beganne to blow verie hard. At a North-weſt Sunne, it was fayre weather, and I ſent my Mate with the skiffe to ſearch the Coaſts towardes *Bel-point*. The fourteenth day, at a North-eaſt Sunne, the skiffe came aboord, and brought three Beares, which they had ſlaine. Immediately I ſent the Boat for water and wood, and then I ſtood through the Ice, and got through it by a North Sun the fifteenth day, the wind at North-weſt foggie weather. Then I turned to windwards, to double *Lowneſſe*, and got cleere of it: at ſixe of the clocke at night thicke foggie weather.

Ice.

A dead Whale.

Three Beares ſlaine.

The ſixteenth day, at fiue of the clocke in the afternoone, I got to *Black-point*, the wind comming to the South, thicke weather. Then I ſent the skiffe to range the Coaſt, and to ſearch what they might find. The ſeuenteenth day, at ten of the clocke they came aboord, and brought ſome Fins, and three Deere. Then I ſtood towards *Croſſe-road*, and anchored there at a North-ſun, the wind and weather as abouesaid. The eighteenth day, about fiue of the clocke in the morning, I ſent the skiffe to ſee if they could find any Morſes on Land, on the Rocke, or in *Deere-ſound*, and in the meane time, I, with the reſt of the company got drift-wood and water readie, and about a South ſunne, a Beare with two young ones; the Dam I ſlue, and tooke the young ones aboord the ſhip, the wind Northerly, cold, foggie weather. The nine and twentieth day, in the morning, I went to the Eaſt ſide, to ſee if any Mohorſes were on land; there I ſlue foure exceeding fat Buckes and a Doe. In which time the skiffe came aboord and brought two Beares ſkins, but found no beaſts, and in *Deere-ſound* they found Sea-coales, which burnt very well.

Three Deeres ſlaine.

Sea-coales.

Digitized by Google

The twentieth day, I sent the Skiffe into the bottome of *Closse-eone* to search it for commodities, the wind at South close weather with raine: at eight of the clock at night they came aboord, but found nothing; immediately I got wood and water aboord, which was ready before, preparing to set sayle the wind and weather abouesaid, we slue three Deere. The one and twentieth, I wayed, the wind at North faire weather. The two and twentieth day, the wind came to the West, and then I stood to the Northward, at eight of the clocke hasi-weather. At twelue of the clocke at noone the wind came to the North, and I stood to the Southwards by *Fayer-forland*. The three and twentieth day, at an East north-east Sunne, the Boat brought some Whales finnes, and three Buckes, and one Doe: In which time I thought I had seene Land beare West from me. I stood to the Westwards, and by a South South-east sunne, had run fifteene leagues West and by South, then I perceiued it to be fogs. The foure and twentieth day, at seuen of the clocke in the afternoone I came into *Bel-sound* and found but little Ice, then I sent the Skiffe to seeke for a Road for the Ship, and also for commodities. The fiue and twentieth day, at three of the clocke in the morning, the Skiffe came aboord, hauing beene in the mouth of the North *Inlet*, which I call *Low-sound*, they went into it by *Point-partition*, but there is no good Channell that way for a Ship: neuertheless there seemeth to bee an Inlet or Channell, but it is full of Rockes from side to side, and the men told mee, that vpon the Land lay some Mohorses, which I sent them to kill. At eight of the clocke, the Skiffe came aboord, and brought the teeth of the sayd beasts, and some blubber. Immediately I sent them into *Bel-sound*, to seeke for a Road for the Ship, the wind at West thicke foggie weather. About an North West Sunne, I anchored in *Bel-sound*, in sixteen fathomes ozie ground, this Harbour lyeth about two leagues aboue *Point-partition* on the South-side of it, and here a ship may ride safe from all windes. At a North Sunne my Mate slue a Beare. The six and twentieth day in the morning, it blew hard, and I went on Land and slue a Beare, and a Bucke which had three inches and an halfe in thickenesse of fat on the haunches. At nine of the clocke I sent both the Boats to fetch the fat of those Mohorses which were slaine the day before, and likewise to search if they could find any more, the wind at North with fogs. At six of the clocke at night the Boats came aboard with the fat, and brought two Buckes, but found no beasts on Land.

Three Bucks slaine.

No good channell.

A Beare slaine. A fat Bucke. And although I haue not written of the fatnesse of the rest, yet the most of them were two and three inches thicke of fat.

The seuen and twentieth day, at a South South-east Sunne I weighed, the winde being at North and by West faire weather, and I steered out (betwixt an Iland and the point where I rid) South-west and by West, hauing these depths, 10. 7. 6. 5. and 4. fathomes: then I was in the middest betwixt the said point, and a shoald which lay South and North, one of the other, and after keeping the same course, I had these depths, 5. 6. 7. 8. 9. 10. 12. and 13. fathomes, in all these depths I had sand, and after oze. At sixe of the clocke the wind came to the South-west with fogges, and I turned to the wind-wards. And at twelue, the eight and twentieth day *Lowneese* did beare North-east about foure leagues off, where I sounded hauing thirtie two fathomes streamie ground with blacke stones, at which time it was calme, and continued so till the nine and twentieth day at sixe of the clocke in the morning, then the wind came to the North with fogges, and I stood to the Southwards, and to see what Commodities I could find that way.

My departure from the land, Ice.

At nine of the clocke I was neere the *Ice-point*, where I met with much Ice, which put mee from the Land, and I was enforced to steere South-west and by South to shunne it, the winde at North-west which blew hard with fogges. The wind increased, I stood towards *Cherrie* Iland (if possible I could attayne it) for fogges and Ice. The thirtieth day, at foure of the clocke in the morning I saw no Ice, hauing kept no certayne course, by reason of the Ice which I had past, the winde at North and by West, cold foggie weather with raine. From the time aboue-said till twelue of the clocke at noone I sayled South South-east, and ranne fifteene leagues, the same wind and weather, at which time I sounded & had eightie fathoms greene oze like Kowes dung. I sounded at two of the clocke, and at foure of the clock, the first, eightie eight, the second, eightie two fathomes, and sayled sixe leagues, the former course wind and weather. At which time I heard a breach which proued Ice, then I steered West to eschew it, the fogges being so thicke that I could not see one Cables length.

A fish seene, Ice & fogs two of the greatest hinderances in the Northerne Nauigations.

The last of Iuly at noone, I had sayled South and by East halfe a point Southerly eight leagues hauing little wind, and sounded, and found one hundred and fortie fathomes thicke foggie weather, and in haling vp the Lead, a fish followed it to the top of the water: then I tryed to take fish but could not. At foure of the clocke in the afternoone, the winde came Southerly, and I stood to the Westward, by reason the Ice lay both to the South and East of vs, at a North Sunne it was cleere weather, and I saw the Ice round about vs, cold weather with frost.

The first of August, we beat in the Ice till noone, but could finde no end thereof, because it was so foggie, and the Ice packed very close; yet after many intricate courses, I got to the Westwards of it at mid-night the same day, the winde at South-east, cold weather with raine and fogges. And after I had seene so much Ice that I could not come neere *Cherry* Iland, to prosecute the rest of my Voyage, I determined to stand for *England*, as God would giue me leaue. From mid-night the first day, till eight of the clocke the second day before noone, I sayled South-west and by South fiue leagues, the wind at East South-east, thicke fogges with raine. From the se-

I stood towards *England*.

cond

cond day at eight of the clocke, till the third day at twelue of the clock at noone, I sayled West South-west fifteene leagues, the wind at South and by East, wet foggie weather. From noone abouesaid, till twelue at noone the fourth day, I sayled foure leagues South, the winde variable, and the most part of that time calme, and so continued till eight of the clocke at night, at which time the wind came to the South and by East, and blew very hard; from the fourth day at noon till the fift day at noone I sayled South-west Westerly seuen leagues. The sixt day, the winde was at South-east cleere weather, at noone I found the shippe in 73. degrees, the North Cape bearing by my computation, East South-east Easterly. The seuenth day at noone, I found the ship in 72. degrees 22. minutes, indifferent faire weather. And from the seuenth day at noone, till the eight day at noone I sayled foure and twentie leagues, the course South South-west, the wind at South-east and by East, at which time it beganne to be very foggie, and the winde came to the South, but immediatly it was calme, and continued so till mid-night. Then the wind came to the North, little wind, and at a South Sunne the ninth day, I had sayled South seuen leagues. From the ninth day at noone till the tenth day at that time I sayled South, and ranne seuen leagues South, it being calme most part of the day, with much rayne and fogges. From twelue the tenth day, till noone the eleuenth day, I sayled South and by West, and ranne seuenteene leagues, the wind Northerly. And from the eleuenth day at noone, till the twelfth at that time, I sayled South and by West eighteene leagues, the winde at North North-west faire weather. From noone the twelfth day, vntill twelue at noone the thirteenth day, I sayled South and by West fortie eight leagues, the wind betweene the North, and the West North-west gustie weather. From the thirteenth at noone, till the fourteenth at noone, I sayled South and by West fortie fiue leagues, the wind betwixt the West North-west, and the West South-west gustie weather, latitude 64. degrees 21. minutes. From the fourteenth day at noone, till the fifteenth day at that time, I sayled South and by West nine and twentie leagues, at which time I obserued and found the ship in 62. degrees 53. minutes faire weather, the wind at North. At foure of the clocke the same day, I saw *Skutsnesse* in *Norway* seuenteene leagues off, and bearing South-east, from whence I hold it superfluous to write it, being a place well knowne. The last of August I arriued at *London*, Blessed be God for euer and euer. *Amen*.

In 62. degrees 15. minutes.

A briefe note what Beasts, Fowles, and Fishes were seene in this Land.

BEasts: Buckes, and Does, white Beares and Foxes, of colour dunne and grey.

Fowles: white Partridges, a small land Bird, like a Sparrow, partly white, and partly browne, a Fowle with a combe and a tayle like a Cock, a redde Fowle of the bignesse of a Pidgeon; a white Fowle with a greene bill, the top of the bill of it and the eyes were redde, with blacke feet. Wild Geese, Coluidines, Gulls, Sea-mewes, Willockes, Noddies, Ice-birds, Reeks, and Sea-pidgeons.

The Coluidine is as big as a Mallard, the male is neerer of the colour, and the female browne.

Fishes: great store of Whales, Grampuses, Mohorses, the white fish I spake of the seuenth of Iune, a small fish like Cuplen, likewise I saw the bones of Cods, or Haddocks; but could take no fish: I often looked for Shel-fish, but could take none: diuers of my company did see two Beauers.

CHAP. II.

A Commission for IONAS POOLE our Seruant, appointed Master of a small Barke called the *Elizabeth*, of fiftie tunnes burthen, for Discouerie to the Northward of *Greenland*, giuen the last day of March 1610.

INas much as it hath pleased Almightie God, through the industry of your selfe and others, to discouer vnto our Nation a Land lying in eightie degrees toward the North-pole: We are desirous not only to discouer farther to the Northward along the said Land, to find whether the same be an Iland or a Mayne, and which way the same doth trend, either to the Eastward or to the Westward of the Pole, as also whether the same be inhabited by any people, or whether there be an open Sea farther Northward then hath beene alreadie discouered. For accomplishing of all which our desires, we haue made choice of you, and to that end haue entertayned you into our seruice for certayne yeares vpon a stipend certayne: not doubting, but you will so carrie your selfe in the businesse, for which you were so entertayned, as God may be glorified, our Countrey benefited, your selfe credited, and we in our desires satisfied. And for your better instruction to proceed in this your Voyage, we haue thought good to set downe our opinions what course wee thinke fit to be obserued in the same: which is, That forasmuch as by your owne report of the great

Poole entertayned by a certaine stipend. He was as I haue heard, miserably and basely murthered betwixt *Ratcliffe* and *London*, after his returne from this Voyage.

Digitized by Google

ſtore of Whales in thoſe Seas, wee are at an extraordinary charge this yeare, of ſetting out a ſhip and men for that purpoſe, which ſhip is called the Marie Margaret *of* London, *in burthen one hundred and fiftie tunnes or thereabout: Our meaning is, that you doe keepe company with the ſaid ſhip, and not to leaue her, till God ſend you to the places, where ſhe may make her Voyage: which by your report ſhould be at a place named by you the laſt yeare* 1610. Whale Bay.

And God ſending you to the ſaid place, we would haue you to ſtay there the killing of a Whale, or two or three, for your better experience hereafter to expedite that buſineſſe, if through extremitie of the Ice you ſhould be put from your Diſcoueries. And in the meane time while you are ſtaying about killing of the Whale, you may cauſe ſome of your people to bee ſearching the Coaſt with their Shallops for Whale finnes, Morſes teeth, Amber greeſe, or any other commodities, that may be found vpon that Coaſt. And hauing thus ſtayed a conuenient time with the ſaid great ſhip for the purpoſe aboue ſpecified, wee would haue you then to proceed on your Diſcouerie for the ſatisfying of our expectations formerly mentioned, which is, to diſcouer further to the North Pole as farre as poſſibly you can, and how the Land alreadie diſcouered doth trend, and whether there be any inhabitants in the ſaid Land, and whether there be an open Sea to the Northward beyond the ſaid land. And in this your coaſting the land, we doubt not but you will endeauer with your Shallops to gather vp all the Whale finnes you can finde, and to kill the Morſes which you can come by on land, and to reſerue the teeth and blubber to the moſt aduantage that may bee, the better to beare out the great charge which you know we are at in theſe Diſcoueries. And to that end we haue laden in you eleuen Tunnes of emptie caske.

Further diſcouerie to the North.

And hauing ſpent ſo much time in this your Diſcouerie, and in gathering vp of ſuch commodities as that Coaſt will affoord, and as the ſeaſon of the yeere will permit you, then we would haue you returne for England, *and in your way homeward to touch at the place where you left the* Mary Margaret, *to ſee if ſhee be not gone; and finding her there, and that the time of the yeere will permit, wee would haue you melt your Blubber into Oile before your comming from thence, to auoid the great trouble and inconuenience you know we fell into the laſt yeere* 1610. *by bringing the ſame hither in Blubber. But if the ſaid ſhip ſhould chance to be full fiſhed, and ſo to be gone before your comming thither, yet we would haue you ſtay there, or at* Cherie *Iland ſome ſmall time to melt your Blubber: to which end we haue appointed* Thomas Edge *our ſeruant in that ſhip to leaue a Copper, and ſuch neceſſaries as ſhall ſerue your turne, for the performing of that buſineſſe, behinde him; and haue deliuered him likewiſe aduertiſements at that place of their proceedings in the voyage, and of their intent, what courſe they purpoſe to take, together with their opinions, what courſe they would haue you take.*

Thomas Edge, See ſup. l. 3. c. 2.

In theſe matters of Diſcouerie and vncertaine Voyages, the varietie of occurrences and Sea dangers is ſuch, as we cannot directly preſcribe a courſe certaine to be held: yet we hold it fitting to ſet downe Our opinions of the needfull. which are, that at your firſt departure out of England *you keepe counſell together, and agree vpon your places of meetings, if by tempeſt of weather you chance to bee ſeparated; ſtill ſhaping your courſe directly for* Chery *Iland, where we would haue you ſtay. And if at your comming thither you finde the ſame cleere of Ice, and that there be Morſes on ſhoare, then wee would haue you to worke vpon them, as time and opportunitie will permit, alway hauing reſpect to your intended voyage. And hauing diſpatched your buſineſſe in that place, wee would haue you depart in company together for* The Whale Bay, *as aforeſaid, and to follow our inſtructions formerly ſet downe to be done in that place.*

Cherie Iland.

And hauing performed what may be done in the parts beyond Cherie *Iſland, and ſo returning backe againe for* England, *we hold it fit you make your* Rendez vous *againe at the ſaid* Cherie *Iland, and there to ſtay the one for the other, and to be killing of the Beaſts there till the laſt of Auguſt, if neede bee. And if it happen that one ſhip doe arriue there before the other, and no Morſes come on ſhoare, then wee would haue them ſpend the time in ſearching for the Lead Ore, or any other Minerall matter that may be like to be of worth vpon the ſaid Land. And thus hauing ſtayed at* Cherie *Iland till the laſt of Auguſt the one for the other, and not meeting together, the ſhip ſo ſtaying hauing made her Voyage, wee would haue her to returne directly for* England, *and to leaue a Note in writing of the day of her departure. This is our opinion. Notwithſtanding, if vpon better grounds you ſhall among your ſelues finde a conuenienter courſe to be held for the good of the Voyage, and the benefit of vs the Aduenturers, wee leaue it to your ſelues to agree vpon, as time and opportunitie ſhall ſerue.*

And for the auoyding of an Obiection heretofore vſed, That the want of ſufficient victuals hath beene the cauſe of the ouerthrow of the Voyages by ſpeedier returne home, then otherwiſe they would; wee haue thought fit to ſet downe the quantitie of victuals deliuered aboord your ſhip in this our Commiſſion, to the intent to cleere our ſelues and our Agent of that imputation, and to lay the blame on your ſelues, if by default the ſame be euill husbanded. The particulars are theſe. Beefe, 22.c 3. quarters, 18li. Biſquit 30.c Beere 14. Tunnes. Fiſh, 200. of Haberdin, and halfe an hundred Lings. Cheeſe 300.c weight. Butter three Firkins. Oyle three Gallons. Peaſe ten Buſhels. Oate-meale fiue Buſhels. Candels, fixe doſen. Aquavitæ, thirtie Gallons. Vinegar one rundlet of twentie Gallons. This proportion of victuals will laſt you ſeuen or eight moneths with good husbandry, together with the helpes of Fiſh, Fowle, and Beaſts that are to be had in abundance vpon theſe Coaſts. So that we hope you ſhall haue no cauſe to the contrary, but cheerfully to goe forward in your buſineſſe, whereby not onely the ſmall Barke you goe in, but the great Ship may come home fully laden with one commoditie or other, which we doubt not but by your diligence and good endeuours you may attayne vnto.

But

But if you shall chance by extremitie of Ice, or otherwise to be put backe from your discouerie, or from obtayning commodities vpon the coast of Greenland, *whereby to lade both ships; then we would haue you stay at* Cherie *Iland, or other Ilands thereabout, so long time as possibly you can, and as the season of the yeere will permit you, to finish the rest of your voyage. And if there bee sufficient lading betweene you both to lade the bigger ship, wee would haue her to bee dispatched from thence with all speede, and you to stay there as long as you may conueniently for the good of the Voyage: which the more beneficiall it prooueth, the more it will be for your credit, and we will not be vnthankefull at your returne.*

We would haue you at euery place of meeting with the Mary Margaret, *to deliuer to* Thomas Edge *our seruant a particular Note of what goods you haue taken into your ship. And at your last lading place we would haue you make a generall inuoyce of the whole Cargason of goods laden in your ship, and hauing signed the same, to seale it vp, and direct the same to our Agent resident in* London. *And if you doe chance to meete with the* Mary Margaret *at or after your last Port of lading, we would haue you deliuer a Copy of the said inuoyce to our seruant* Thomas Edge *for our better satisfaction, what casualtie soeuer might happen by the way, and at any hand to haue such an inuoyce euer readie sealed, and for mortalities sake put vp in some sure place of custodie.*

We hold it fit, that you Ionas Poole *should be as grand Pilot in this voyage to the Northward. And therefore we would haue you to accompany the great ship, and to bring her to the places of fishing for the Whale; or to any other place, which you out of your experience shall thinke fit to bring her for the good of the Voyage and benefit of the Aduenturers. And our will is, That* Steuen Bennet *Master of the said great ship together with the rest of the company in that ship, doe follow the said* Ionas Pooles *directions, as they will answer the contrarie vpon their perils at their comming home.*

And for that heretofore the Company haue beene abused by lewd and bad people, who haue imbeseled part of that which by our great charges and aduentures hath beene obtayned: Our minde and will is, That you Ionas Poole *doe make search in your owne ship, that none of our Whale finnes, Morses teeth, Oyle, or any other commodities gathered at our charge, be imbeseled or carried away by any of the Mariners, who will looke to haue the vttermost of their wages paid them, and to bee fed with meate and drinke sufficient. And God sending you into* England, *we would haue you suffer none of your people to goe on shoare vnsearched: neither would we haue you to leaue the ship till your comming into the Riuer of* Thames, *that we giue you order to the contrarie. And if you chance to be winde bound vpon the coast, you may send vp one of your people with your Letter, but not to come your selfe on shoare till our farther order, as aforesaid.*

The like order we would haue Steuen Bennet *to vse in his ship; by vertue of this our Commission, which we haue ordered to* Thomas Edge *our seruant to see performed accordingly.*

And in as much as we haue agreed here with a Tanner for all the Morses hides which wee kill and bring into England, *and haue sent men of purpose for the flaying, salting, and ordering of the same, whereof we haue appointed one to goe in your ship: We would haue you reserue the said hides, and floore your ship therewith in stead of ballast. And if you obtayne a greater quantitie then you can bring away with you, hauing alwayes regard to commodities of more value, which are Oyle, Teeth, and Whales finnes, that none of them be left behind; We would haue you leaue the said ouerplus of hides in some conuenient place, till the next yeere, that we send more store of shipping.*

Agreement with a Tanner for Morses hides.

A Commission for *Thomas Edge* our seruant, appointed to goe as our Factor in the Ship called the *Mary Margaret*, of the burthen of one hundred and fiftie Tunnes, for the killing of the Whale and Morses vpon the coast of *Greenland*, or any other place in the North Ocean: Giuen the 31. of March, 1611.

YOu are not ignorant of our imploying you heretofore in two seuerall Voyages to Cherie *Iland. The first whereof, by reason of one* Duppers *going thither, together with certaine men of* Hull, *glutting the said place, procured to vs a thousand pound losse of our principall. As also in the second Voyage, because you could not come to set footing vpon the said Iland, by reason of the abundance of Ice lying round about the same sixteene leagues comp[a]sse till the twentie eight of* July, *by which occasion our whole charge of setting out that yeeres aduenture had beene lost, if the refuge to lade our ship backe againe from Saint* Michael *the Archangel in* Russia *had not holpen vs: yet notwithstanding that helpe, wee lost by that voyage aboue fiue hundred pounds. We entring into due consideration of the premisses, doe not impute the cause of these our losses vnto you; but to the accidents then happening contrarie to our expectation: yet these losses growing vpon vs in the times of your imployment, we can doe no lesse then put you in minde thereof, to the intent to incourage and stirre vp your minde to doe your vttermost indeuour to further the businesse in this your third imployment, that we may recouer our selues of the losses formerly sustained. And for that end we haue made choice of you againe to goe as our Factor in the Ship* Mary Margaret, *of one hundred and fiftie Tunnes, the Master being* Steuen Bennet, *for the killing of the Whale: And to that end, as you well know, haue bin at charge of procuring of sixe men of Saint* Iohn de Luz, *accustomed*

Aduentures and losses in first Discoueries.

Digitized by Google

Sixe Biscainers procured for killing of the Whale (as I haue heard) by *Woodcocks* aduise, who had liued and been imployed with them in *Grand Bay*, &c.

med to that function: whose names are as followeth: videlicet, Iuan de Bacoyne, Iuan de Agerre, Martin de Karre, Marsene de Horisada, Domingo de Sarria, and Adam de Bellocke: which men wee would haue to be vsed very kindely and friendly during this their voyage, whereby being strangers and leauing their owne Countries to doe vs seruice, they may haue no iust cause of complaint, but rather to be incouraged to doe vs seruice hereafter, if there be cause. And although it be our meaning they should be encouraged by all good and curteous vsage to be readie to doe vs seruice, yet we will haue you together with our owne people and Mariners imployed in this Voyage, to obserue and diligently put in practise the executing of that businesse of striking the Whale, as well as they: And likewise to know the better sorts of Whales from the worser, whereby in their striking * they may choose the good, and leaue the bad. And to that end we doe set you downe here vnder, the seuerall sorts of Whales, together with the differences of goodnesse betweene the one and the other, as we haue gathered the same by information from men of excellencie in that businesse: who make knowne vnto vs, that there are eight seuerall kindes of Whales, all differing the one from the other in quantitie and qualitie. Which for your better instruction, we haue thought good to set downe in this our Commission.

* This was a conceit, as if all places had choise of all kindes, which experience hath since taught otherwise.

The first sort of Whales, is called the Bearded Whale, which is black in colour, with a smooth skinne, and white vnder the chops; which Whale is the best of all the rest: and the elder it is, the more it doth yeelde. This sort of Whale doth yeelde vsually foure hundred, and sometimes fiue hundred finnes, and betweene one hundred and one hundred and twentie Hogsheads of Oyle. The second sort of Whale is called Sarda,

See of the kinds of Whales *sup.* 471. I haue added this to be compared with that, for further light.

of the same colour and fashion as the former, but somewhat lesse, and the finnes not aboue one fathom long, and yeeldeth in Oyle, according to his bignesse, sometimes eightie, sometimes a hundred Hogsheads. The third sort of Whale is called Trumpa, being as long as the first, but not so thicke, of colour Grey, hauing but one Trunke in his head, whereas the former haue two. He hath in his mouth teeth of a span long, and as thicke as a mans wrist, but no fins: whose head is bigger then either of the two former, and in proportion farre bigger then his body. In the head of this Whale is the Spermaceti, which you are to keepe in Caske apart from your other Oyle: you may put the Oyle you finde in the head and the Spermaceti altogether, and marke it from the other Oyle, and at your comming home, we will separate the Oyle from the Spermeceti. The like is to be done with the Oyle of this sort of Whale, which is to be kept apart from the Oyle of the other Whales. The reason is, that the Oyle of this sort of Whale being boyled, will be as hard and white as Tallow, which to be mingled with the other Oyle being liquid, would make the same to shew as footie Oyle, and so consequently spoyle both, and be of little value: you are therefore to be very carefull to keepe the Oyle of this sort of Whale apart, as well of the head as of the body, for the reasons before mentioned. In this sort of Whale is likewise found the Ambergreese, lying in the entrals and guts of the same, being of shape and colour like vnto Kowes dung. We would haue you therefore your selfe to be present at the opening of this sort of Whale, and cause the residue of the said entrals to be put into small Caske, and bring them with you into England. We would haue the Master also to be by at the opening of this Whale, and to be made priuie of the packing of those Barils. And although it be said, that the Ambergreese is onely in this Whale and in none other, yet we would not haue you be absent at the opening of any other: but if you see cause to make a reseruation of the entrals of euery Whale, that you shall perceiue to be cause of the least suspect to haue any of the said Ambergreese, being a matter, as you know, of good worth, and therefore not slightly to be regarded. The Teeth likewise of this sort of Whale we would haue you cause to be reserued for a triall; as also any other matter extraordinarie that you shall obserue in the same. This Whale is said to yeelde in Oyle fortie Hogsheads, besides the Spermaceti. The fourth sort, &c. as sup. 471. 472.

Spermaceti or Permaciti as the vulgar call it.

Ambergreese.

And in as much as industrie and diligence are two principall steps to atchieue great enterprises, and negligence and idlenesse are enemies to the same; we would haue you in this charge committed vnto you, to imbrace the one, and to auoide the other: and to shew that example of paines taking to the rest of the company of your Ship in your owne person, as well in setting them on worke, as in putting your owne hand to the businesse when neede requireth, so that there be no idle time spent, but that euery one be imployed in some businesse or other in helping to kill the Whale, or in searching the Bayes along the coast for Whales, Ambergreese, Morses teeth, or any other strange thing, that may be found vpon that coast, or in killing the Morses, Beares, or any thing that may make profit toward our great charges.

Touching directions for your keeping company together with the Elizabeth, and of the course we thinke fitting for the Master of that Ship to obserue, we haue set the same downe at large in our Commission deliuered to Ionas Poole, a Copie whereof we deliuer you herewith, for your better instructions, to obserue what is to be done on both your behalfes for the good of the Voyage: which our Commission, we would haue you strictly obserue, vnlesse vpon some speciall occasion to vs vnknowne, and by the consent of the principall Officers in both the Ships, you shall see iust cause to the contrary.

The rest as not so necessary to the publike is omitted.

You haue with you an order set downe by the Lords of his Maiesties priuie Counsell, for the maintaining of our Charter: which we would haue you make knowne to any of our Nation, that you may chance to meete withall either at Cherie Iland, or vpon any of those coasts. And if any stranger doe offer you violence, or doe disturbe you in your trade, you may both defend your selues, and maintaine your trade to the vttermost of your powers, &c.

CHAP. III.

A briefe Declaration of this my Voyage of discovery to Greeneland, *and towards the West of it, as followeth: being set forth by the right Worshipfull Sir* THOMAS SMITH, *Governour of the right Worshipfull Company of new Trades, &c. written by* IONAS POOLE.

WE set sayle at *Blacke-wall* the eleauenth of *April*, 1611. with foure Shippes: The one called the *Mary-margaret*, of burthen one hundred and fiftie Tuns, with nine and fortie Men and Boyes. The next the *Elizabeth*, of burthen sixtie Tuns, with eighteene Men and Boyes. The third was called the *Amitie*, of burthen seauentie Tunnes, with foure and twentie Men and Boyes. The fourth was called the *Resolution*, with about sixteene Men and Boyes: the *Resolution* was appointed to goe to Saint *Nicholas* in *Russia*, in hope to make two Voyages thither this yeare. The *Amitie* was to goe to *Pichora* or *Nouazembla*, there to see if they could make a Voyage by way of trade, or by killing of Mohorses, &c. The *Mary-margaret* was appointed to keepe the *Elizabeth* companie to *Greeneland*, abouesaid, there to kill the Whale, for which purpose we had sixe men of Saint *Iohn de Luz*, with all things fitting for that purpose. The *Elizabeth* was appointed to see if it weare possible to passe from *Greeneland* towards the Pole, and to search in those Seas what likelihood of a passage that way, &c. But before we were as farre to the Northwards as the latitude of sixtie fiue, we were all separated, by reason of contrarie windes and foule weather: the *Elizabeth*, in which Ship I was, was stoked, that the water which was in her could not come to the Pumpe, but lay vpon the balast, which was the cause we could beare no sayle to keepe the *Mary-margaret* companie.

Foure Ships.

See *Supl.* 3.

The Ships separated.

Yet by the thirteenth day of *May* I came to *Cherie* Iland, and the foureteenth I spake with the *Amitie*. The sixteenth day I met with the *Mary-margaret*, which kept mee companie to *Greeneland*, but in our passage hither we saw a banke of Ice to the East wards of vs, aboue fortie leagues long. The nine and twentieth of *May*, we anchored in a place named (by me the last yeare) *Crosse road*, but before we got thither, wee were much troubled with Ice and contrarie windes, and we found almost all the sounds full of Ice, that the *Biscainers* could not strike one Whale, although they saw diuers, which as they said were of the best kinde of Whales.

Cherie Iland.

Crosse Rode.

Ice a hinderance to Whale killing and discoueryl

I staid there till the sixteenth of *Iune*, in which time we set vp our shalops and ranged some part of the Coast but found little, by reason the beaches were couered with Snow and Ice. Likewise in the same time, I was put out of the roade with Ice, and stood out West and by North into the Sea about foureteene leagues, where I found a banke of Ice; then I stood into the sound againe and got of the Shalop which was in the roade, at which time (which was about the eleauenth of *Iune*) I stood to the Sea againe and had a storme at South, which sunke our Shalop, and I saw the Ice lye close to the Land in 80. degrees. Then I went into *Crosse roade* againe, and had a Shalop from he *Mary-margaret*, and because I perceiued the Ice aboue said to lye close to the land, and impossible to passe that way there running verie strong Tides, in the which it is dangerous deaing with the Ice: I determined to stand to the Southwards alongst the said Ice, to see if I could finde the Sea open that way, and so get to the Westwards of the said Ice, and then proceeded on my Voyage: but I found it to lye the next hand South South-west and South-west and by South, and ranne alongst it about one hundred and twentie leagues, at which time I supposed my selfe neere *Groenland*, as it is laied downe by *Hudson* and others, and called *Hold with hope*: I ranne neere fortie leagues to the Westwards of the Eastermost part of the said Land, as it is laid downe, and by my accounts I was to the Southwards of it, neere the latitude 74. degrees, where I saw abundance of Whales by the sides of the Ice; for I sailed all this time sometimes in, and sometimes by the said Ice, and sounded most commonly each watch, but had no ground at 150. 140. 180. and 200. fathomes.

80. Degrees.

New discouery

Hold with Hope.

Store of Whales.

Then the winde cane to the North-west, and I perceiuing the Ice to trend still to the Southwards, determined to land to *Greeneland*, from whence I came, there to make my Voyage and likewise to try the certaintie concerning the misplacing of the Land, but the next day, being about the seauen and twentieth of *Iune*, the winde came to the North, and I stood for *Cherie* Iland, and came to it the nine and twentieth of the same Moneth, where I found that place of my being, when I supposed I should haue found Land, did beare from *Cherie* Iland West and by South, aboue one hundred twentie fiue leagues. When I came to the Iland I saw about three hundred Morses on land, but a storme comming they went all into the Sea.

Cherie Iland.

Three hundred Morses.

The twelfth of *July* we slue aboue two hundred; and by the three and twentieth day wee had taken all their fat Hides and Teeth, which with the Victuals we had laded the ship: then I determined to hale vp a shalop to goe to *Greeneland*, to search if I could finde any Land or Ilands, that might prou: beneficiall the next yeere, and likewise to search for Teeth and Whales Finnes.

Digitized by Google

Finnes. The foure and twentie, and fiue and twentie dayes, it was very much wind at North, which cauſed the Sea to go ſo high that we could not land. Yet at eight of the clock at night the wind ceaſed, and I went on land where I found certayne of the *Marie Margarets* men, by whom
Mary Margaret loſt. I vnderſtood, that the ſaid ſhip was caſt away, and that Maſter *Thomas Edge* ſeruant to the right Worſhipfull Company, &c. with *Stephen Bennet* Maſter of the ſaid ſhippe, and others to the number of thirtie perſons, were arriued on the South ſide in three Boats, and that they parted from two Boats in *Greenland* with nine men in them.

Immediately Maſter *Edge* and Maſter *Bennet* came aboard, and I weighed and ſtood to the Weſt ſide of the Iland, and anchored there, and put neere one hundred Morſe-hides on land, and ſome emptie caske, and haled vp a ſhallop. The ſix and twentieth day about noone, we weighed and ſtood to the South-weſt ſide of the Iland, and ſent men on land to hale vp two ſhallops there. And at mid-night I ſet ſayle for *Greenland*, carrying with mee two *Biſcaine* ſhallops, determining there to try the Blubber of thoſe Morſes we had killed, and bring it to Oyle, and to bring all the Oyle, Teeth, and Finnes which they had gotten in that Countrey. And after diuers winds, but indifferent faire weather, I arriued at *Blacke-point* the laſt of July, and hauing the wind at North, I was perſwaded by diuers that had gone that way to go betwixt the Iland and the Mayne, but when I was almoſt through, and in ſight of that place where the *Mary Margaret* lyeth ſunke, I could not find water enough for the ſhip, yet I was told there was enough by diuers that had gone that way in the ſhallops. Here we ſtayed two dayes to buoy the channell, which is ſhoald and narrow, for we had at three quarters floud, but eleuen foot water.

Ship of Hull. The third of Auguſt I got ouer, and about eight of the clocke at night, I anchored neere the *Mary Margaret*, the Sunne being in 79. degrees, and there I found a ſhippe of *Hull* conducted thither by one *Nicholas Woodcock*, he being in one of the Boats which ſtayed in *Greenland*, when thoſe came from thence that came to *Cherrie* Iland. The ſhips name was called the *Hopewell*, one *Thomas Marmaduke* being Maſter. Here we found that hee had ſlaine aboue one hundred and thirtie Mohorſes, which were left on land when Maſter *Thomas Edge* came from thence with the Boats aforeſaid, and we did determine to kill at my arriuall. Aſſoone as the ſhip was moored, wee got out Blubber and ſent it on land to bee brought into Oyle, and wee followed our worke till the ſeuenth of Auguſt at noone, at which time hauing Oyle by the ſhips ſide, we put out all the Blubber which was in hold, ſaue two tuns and a halfe, ſuppoſing the ſhip had ballaſt enough in her, for there was aboue twelue tuns of Hides, which were the chiefeſt cauſe of the loſſe of the ſhip, and nine tunnes of Oyle, and aboue ſeuen tunnes of ballaſt a Hogſhead and a Barrell of Teeth: beſides halfe a tunne of ſtones, all which was about nine and twentie tunne weight, and to any vnpartiall mans iudgement, ſufficient to ſhift a Barke of ſittie tunnes. But as the laſt But went out of her, the ſhip began to held, and with all a great may men went to leeward, there being at that time aboue forty aboard. Then the hides which lay in hold, ſlid to leeward, and brought her altogether downe, then euery man made ſhift to ſaue his life, and I being farre from the hatches, could not get vp ſo ſoone as others did. At which time I ſaw
Double danger. death before mine eyes two wayes, one if I ſtayed in hold, I was ſure to be drowned: the other if I went vp the hatches, I was in election to be ſlaine; for downe at the hatche fell hogſheads of beere and diuers other things, the leaſt of them being ſufficient to beate a mans bones, and in attempting to get vp, I was beaten downe twice and hurt. But it was not the will of God to take my life from mee then, but to reuiue me, to plucke me euen from the jawes of death, and by ſwimming and crawling I got into the Sea cleere of the ſhip where a Boat toole me vp, and bleſſed bee God, no man periſhed at that ſo dangerous an accident. We being all got into three Boats, went to the *Hull* ſhip, where we found but ſmall comfort: for *Duke* told vs plainly, wee ſhould not come aboard his ſhip, and cauſed Pikes and Launces to bee brought to keepe vs out. Then Maſter *Edge* and diuers others deſired him to let mee come aboard, which hee did, and with much adoe I got aboard, hauing mine head broke to the ſkull, and my brow that one might ſee the bare bones, and by mine eare I had a ſore wound, likewiſe the ribs in my right ſide were all broken and ſore bruiſed, and the collar bone of my left ſhoulder is broken, beſides my backe was ſo ſore, that I could not ſuffer any man to touch it.

That which followeth, being further accuſation of Marmaduke, *is omitted. And I haue here added out of his Brother* Randolph Poole *their returne; omitting the former part of his Relations of the ſame Voyage.*

In this our great diſtreſſe, *Thomas Marmaduke* Maſter of the ſhippe of *Hull*, profeſſed great kindneſſe towards vs, promiſing vs paſſage, and that he would try if he could recouer our ſhip: but hee deferred the time one whole weeke, till ſhee was full of oze, ſo that when wee came to weigh her, both her Cables burſt, and ſo we left her to all our ſorrowes, without hope of recouerie. Then we went aboard the ſhip of *Hull*, which God had prepared for our ſuccour, where our Merchant agreeing for the fraight, we got the goods aboard; namely, about twentie, or one and twentie tunnes and an halfe of Oyle, and a Barrell of Beares Oyle, about tenne tunnes of Whales Finnes bound vp in an hundred and ſixe bundels, in euery one thirtie Finnes, and in ſome more, fiue Hogſheads of Morſes Teeth, and one and twentie odde paire. And if our ſhip had not miſcarried, the Voyage had beene much better.

The

Digitized by Google

The nineteenth of Auguſt, we directed our courſe for *England*, the weather being reaſonable faire, and the wind for the moſt part betwixt the North and the Weſt: and wee continued our courſe homeward all that moneth. They returne homeward.

Vpon Tueſday the third of September, about two of the clocke in the morning, we were imbayed with land, and were neere the ſhoare before we were aware. Wee ſteered backe North and by Eaſt: and at twelue of the clocke we found our ſelues to be on the Weſt ſide of the Iles of *Orkney*, and ſteered Eaſt into a great ſound, called *Pentlow Fryth*, where wee beeing entred there came a Boat from the ſhoare, which brought vs freſh meat, and one of the men directed vs through the Sound. This Sound lyeth in the latitude of 58. degrees and 36. minutes, and the courſe through, is Eaſt North-eaſt, and Weſt South-weſt, it floweth there on the change day, South South-eaſt and North, North-weſt halfe a tyde, nine foote high or thereabout. At the entrance in on the North ſide, there is an high red Mountayne, and the Sound there is twelue miles ouer: but farther in the land is ſomewhat lower, and the Sound narrower. You may ſayle along the North ſhoare two miles off the land in fortie or fiftie fathomes; and on the ſaid ſhoare about foure miles Eaſt South-eaſt. From the red Cliffe there is a Bay, into which you may ſteere North by Weſt, giuing the Weſt point of the entrance into the ſaid Bay a good birth: for there the water is ſhoald and fowle ground: but in the middle of the entrance, 30. 20. 18. 12. 10. 6. and 5. fathomes: but wee anchored in 10. fathomes, fine ſandie ground. September 3. *Orkney* Ilands *Pentlow Fryth*, in 58. degrees 36. minutes.

The fift of September at an Eaſt South-eaſt Sunne wee ſet ſayle, keeping our courſe aboue mentioned, leauing fiue ſmall Ilands on our larboord ſide, and one Iland on our ſtarboord ſide: and ſo keeping an high Cliffe, which lyeth into the Sea on *Scotland* ſide, open of a low Land in the ſound on the ſame ſhoare, we ſayled out as before is ſaid.

Vpon the day at a North Sunne, we anchored in *Humber* mouth: there it floweth on the change day Weſt South-weſt. Vpon the eight day we arriued at *Hull*, ſafely and well in body, but much diſtreſſed and impayred in our ſtates, which God at his good pleaſure can reſtore.

At our firſt comming to this Country of *Greenland*, the Mountaynes and Valleyes thereof, except it were ſome few places, were all couered with ſnow: but ere we went away, the tops of the high Hils, and the lower Plaines appeared greene with Moſſe, and ſome little quantitie of graſſe. This Countrey, and likewiſe the ſeas in theſe parts, are ſubiect to maruellous thicke and miſtie weather, eſpecially when the ſunne with his moſt forcible heat melteth the Ice and ſnow, whoſe vapours obſcure the light of the ſunne, making ſmall difference betweene the day there, and the irkeſome night in other places.

We found in this Countrey many fat Deere, which we killed with our Peeces and Dogges at our pleaſure, which was a great refreſhing to vs in that vnquoth place: many white Beares, with white, grey, and dunne Foxes. We found alſo abundance of Fowle: namely, Culuidines, ſea Pidgeons, white land Partridges, wild Geeſe, Willockes, and many other Fowles. Among which I noted the nature of one, which we called an *Allen*; who (like to the great fiſhes, which eate vp the ſmall, or like to ſome great men, which deuoure all the labours of the poore) when ſome ſmaller Birds haue gotten any thing, then he leaueth not beating of them, till they haue caſt vp what they haue eaten, which he laying hold of deuoureth vp: and ſo with little meate in their gorges, and few feathers on their backes, he leaueth them to get more, not for themſelues but for him. We found on the ſhoares many huge Morſes. Many fat Deere, white Beares, white, grey, and dun Foxes. Abundance of ſundry Fowles. *Allen* a deouring Fowle. Many huge Morſes.

There is great ſtore of freſh water in euery Valley, which proceedeth moſt of the melted ſnow. On euery Beech is great plentie of drift wood, but neuer a buſh nor tree groweth in thoſe quarters, as farre as we haue hitherto diſcouered.

CHAP. IIII.

A Relation written by IONAS POOLE *of a Voyage to* Greenland, *in the yeere* 1612. *with two ſhips, the one called the* Whale; *the other the* Sea-horſe, *ſet out by the Right Worſhipfull the* Muſcouie *Merchants.*

THe ſeuenth of Aprill, 1612. wee ſet ſayle at *Blacke-wall*, and went to *Graueſend*.

The third of May we came to *Cherie* Iland, where we found a ſhip of *Holland*, in which one *Alan Salowes* an *Engliſhman* was Pilot. The ſame day about a North ſunne we anchored on the Weſt ſide of the Iland. *Cherie* Iland.

The fourth, we trimmed a ſhallop which I left there the laſt yeere: and *Alan Salowes* went aboard our Admirall, and Maſter *Ruſſell* ſent for Maſter *Thomas Edge*, Maſter *Arthington*, *Iohn Maſon*, and my ſelfe: where wee had ſome ſpeech about detayning him, and to haue brought him into *England*: but in the end hee was let goe. At a North ſunne we ſent our ſhallop to the South-eaſt ſide of the Iland to fetch a ſhallop, which was left there the laſt yeere: but they could not get thither for Ice, and came aboard againe at an Eaſt North-

Digitized by Google

North-eaſt Sunne the fift day: at which time we weighed, and ſtood to the Weſtward, but immediatly we altered our courſe, and ſtood toward the Iland againe among the Ice; and about a Weſt North-weſt Sunne wee ſent our Skiffe and Shallop to fetch the Shallop aforeſaid. The winde was at North and by Weſt, froſtie weather with ſnowe.

The eight, wee ſtood toward *Cherie* Iland againe, and were faire by it at a South ſunne: at which time the winde came to the South-eaſt, and wee ſaw the *Hollander* ſtanding with vs. Then we altered our courſe, and ſayled Weſt North-weſt, determining, if hee followed vs, to ſtay for him. At ten of the clock at night hee came to vs: and the Admirall ſent his ſhallop aboord of him to command him to be gone out of our companie: and at a North ſunne hee ſtood away from vs, and ſayled North and by Eaſt, and we lay by the lee.

The twentieth at a South Sunne we ſaw our Conſort, and ſpake with them, and they told vs, that they had almoſt ſplit their ſhip with a piece of Ice, which brake nine of their Timbers, ſo that they had fiue foot water in hold.

Blacke point. The one and two and twentie dayes, wee plyed to windward, the winde being at North faire weather. And at *Blacke Point* wee ſaw great ſtore of Ice driuing to the South. At eight of the clocke at night *Blacke Point* did beare from mee Eaſt and by North nine leagues. And the Great ſtore of Whales. three dayes paſt we ſaw great ſtore of Whales within ten or twelue leagues off the Land.

Cape *Cold.* The three and twentieth we were faire off Cape *Cold*; where Maſter *Edge* and Maſter *Arthington* went with the *Basks* in their Shallops for *Croſſe-rode*, in hope to kill ſome Whales. And we ſaw ſtore of Whales in the Sea.

Foule Sound. The fiue and twentieth we got into *Foule Sound*, all the Sounds being full of Ice; and the Shallops came aboord and brought ſome Veniſon, which was very leane. And at ſix of the clock *Faire Foreland.* the *Basks* went with the Shallops to *Faire Foreland*, to ſee if they could kill a Whale: and at a North-weſt Sunne Maſter *Edge* went with a Shallop, to ſee if *Croſſe-rode* were open.

The ſix and twentieth, the two ſhips aboueſaid came into *Foule Sound*: one of them was that The *Diana* of *London.* *Hollander* before mentioned; the other was a ſhip of *London*, called *The Diana*, whereof one *Thomas Buſtion* dwelling at *Wapping* wall, was Maſter.

Dutch Merchant brake his necke. The ſeuen and twentieth, *Alane Salomes* came aboord of our ſhip, and told vs, that his Merchant had broke his necke downe a Cliffe. The ſame day the *Hollander* and the *Diana* ſtood to the Southward. The winde was at North North-weſt, and Northweſt, which kept the Ice in the Sounds. The twentie eight, we ſent the long Boat and our Shallop to *Brokenneſſe*, with a Shallop of ten Tunnes, there to be ſet vp. The winde was at Weſt with ſnowe and froſt. The ſame Six *Biſcayners.* day the *Basks* came aboord, but could kill neuer a Whale. The winde came to the South South-weſt, with froſt and ſnowe.

The nine and twentieth, the winde was at South with much ſnowe. The ſame day one of our men dyed, named *Iohn Butcher*, hauing layen ſicke about three weeks. The thirtieth, one *Michael Perkins* dyed aboord *The Whale*. The laſt of May, the winde was at South; and wee ſtood toward the *Foreland* in 79. degrees. The ſame day at midnight, the Chyrurgeon of *The Whale* dyed.

Iune. The firſt of Iune, we ſtood into *Foule Sound*, where wee ſaw abundance of Ice driue out with the winde at Eaſt. The ſecond day, the winde was at North and by Eaſt, cold froſtie weather. *Tho. Marmaduke.* All which day wee lay vnder ſaile in the mouth of the Sound. The third day, wee ſpake with *Thomas Marmaduke* of *Hull*, in a ſhip called *The Hope well.* Wee ſent for him to come aboord, but he anſwered, that he was not well, and ſent his Mate *Chriſtopher Nayler*. The ſame day, we ſtood to the mouth of the Sound, but it was couered with Ice. And *Marmaduke* ſtood to the Northward; and as we were afterward informed, diſcouered as farre as 82. degrees; two degrees beyond *Hakluyts Headland*. The fourth, we ſent our ſhallop on ſhoare in *Foule Sound*, to ſee *Marmadukes* Diſcouerie to 82. degrees. if any harbour were open to ride in, and to put our Admirall on ground to ſtop her leake. The ſame day, our long Boate came to vs from *Brokenneſſe*. And we turned into the Sound, becauſe we ſaw the Ice driue out with the winde at South, and blew hard. The fift, we anchored in *Foule Sound* in ſeuenteene fathoms water and ſandie ground, where we ſaw the place where both the ſhips lay which wee loſt the laſt yeere, couered with Ice. The ſame time wee ſent our ſhallop with our Carpenters, to finiſh the aforeſaid ſhallop at *Brokenneſſe*. The winde continued at South; and the *Whale* turned into the Sound by vs, and achnored there at a South-weſt by South Sunne. The ninth, the Admirals Boate and ours went with prouiſion and men to worke vpon a Whale, which the *Basks* had killed; and we ſtood toward the *Foreland* with the ſhips, where the Whale was killed, the winde at South, thicke foggie weather. And by an Eaſt North-eaſt Sunne wee anchored in the mouth of *Foule Sound* in fifteene fathoms, gray ſand with ſome ſhells. At a Weſt ſunne the Boate came aboord for caske and other prouiſion, and told vs, that the *Basks* had killed two other Whales.

The ſeuenteenth, one *Baske* named *Chapel*, tooke fiue of our *Engliſh* men to him, and they trimmed the ſhallop to kill the Whale. About a Weſt North-weſt ſunne they went away, the winde at South. The twentieth, the *Biſcaine* ſhallop came aboord of vs from the *Foreland*, and told vs that they had ſtrooken three Whales, which brake away.

The

The two and twentieth wee rid ſtill, the winde being at North-weſt, with ſnowe and froſt. The fiue and twentieth, we got the Whale on flote, hauing ſtopped her leake. We were no ſooner off, but it blew moſt fiercely, ſo that the Whales long Boate and our ſhallop brake from the Whales ſterne, and were ſplit in pieces on the Ice, that lay on ſhoare. The ſame day about a South ſunne two men came from *Faire Foreland*, and told vs that Maſter *Edge* was come from the South in the Pinnaſſe, and had ſpoken with one *Nicolas Woodcock* an *Engliſh* man, which was my Mate to this Countrey of *Greenland* in the yeere 1610. The ſaid *VVoodcocke* was now Pilot o fa ſhip of Saint *Sebaſtian* in *Biſcay*, and rid in *Ice Sound*. Moreouer, they ſpake with the men of the Boate of the *Diana*, and ſaw the *Hollanders* Boate, but ſpake not with their men. The two men abouesaid told vs likewiſe, that *Iohn Chapel* our *Baske* with fiue *Engliſh* men had killed a Whale: and betwixt them and another ſhallop they had ſlaine another, and had them both on ſhoare.

Woodcock Pilot of a *Biſcay* ſhip.

The fourth and fifth Whales killed.

The ſeuen and twentieth we rid ſtill, and our Carpenter went to worke to mend the knee of our beake-head. And I went to ſee what Morſes were on Land, where I found neere one hundred and fiftie. The eight and twentieth, the ſhallop that had all *Engliſh* men in her ſaue one *Baske*, came aboord for prouiſion, and told me, that they and *Iohannes Chapel*, had ſlaine a great Whale cloſe by our ſhip, which towed them off into the Sound, and our long Boate followed them. At the ſame time we ſaw ſixe Whales cloſe by the ſhips ſide as we rode in harbour: and we ſaw great ſtore in the Sound, and within one houre there were ſo many about our ſhips and in the Sound, that we could not count them. About a North-weſt ſunne our long Boate brought the men that ſtrooke the Whale abouesaid, and towed their ſhallop on land: for the ſaid Whale had ſunke her with his taile. The ſame time our Carpenter went to worke on the broken ſhallop, and I went to the place where the Morſes lay, where I found about three hundred on land. Then I went aboord the *Whale* to get ſome harping Irons: for they had all, but I could get but one, becauſe the reſt of the *Basks* had laid them vp, enuying that one *Baske*, that went with all *Engliſh* men, had done ſo much, becauſe by their good wills they would not haue vs to haue any inſight into this buſineſſe. Moreouer, hee that had the chiefeſt command in this voyage, did greatly condemne the going of ſo many *Engliſh* men with that one *Baske*, either for feare they ſhould kill none, and loſe all their prouiſion for the ſaid vſe, or for feare that our men ſhould kill the Whale aſwell, and as ſoone as they; yet was there none of the other Boates but had loſt more then they had loſt. And as for killing, there was not one Whale killed with one Boate alone, ſaue ours, with all *Engliſh* ſaue the *Baske* aforeſaid, which ſlue three without the helpe of any other Boate. This day the *Basks* ſlue another Whale at the *Foreland*.

The ſixt whale killed.

Three hundred Morſes.

Biſcainers enuie.

The ſeuenth Whale killed.

The nine and twentieth, the broken ſhallop was mended, and I went to the *Foreland*, to ſee whether the other ſhallops would come where the ſhips rode in harbour, where abundance of Whales were ſtill. The ſame time the *Basks* killed another Whale. Then I romaged my ſhip, and put caske on land. All this day it was calme.

The eight Whale killed.

The laſt of Iune, one came from the *Foreland*, and told vs, that the *Basks* had ſlaine two great Whales. All this day likewiſe it was calme: and there lay abundance of huge Whales in the harbour about our ſhips. One of the whales abouesaid, *Iohannes* with the fiue *Engliſh* men ſlue without any of the others helpe. For they ſtood on the land flouting, and ſaying, that it was vnpoſſible for them to kill him, and would not once lanch their Boates to helpe them: yet hee was one of the greateſt that were killed this yeere. All this day the whales lay ſo thicke about the ſhip, that ſome ran againſt our Cables, ſome againſt the Ship, and one againſt the Rudder. One lay vnder our beake-head and ſlept there a long while. At which time our Carpenter had hung a ſtage cloſe by the water, whereon his tooles lay. And wee durſt not moleſt the ſaid whale for feare he ſhould haue ouerthrowne the ſtage and drowned all his tooles. In the end he went away, and carried the ſhips head round, his taile being foule of the Cable.

The firſt of Iuly, at a North North-eaſt Sunne, the ſhallops came to kill whales in the harbour where we rid, and ſtrooke three, which all brake away. The ſame day, *Iohannes* ſtrooke a whale, that ſmit in the ſide of his ſhallop and ſplit it. Now wee perceiued the whales to begin to goe out of the Bayes. The ſecond day, the *Basks* ſlue three great whales faire by our ſhips, in leſſe then foure houres; vvhich vvee vvith our long Boate and men towed into harbour, and made faſt to our ſhip. And the *Basks* vvent with their ſhallops to *Faire Foreland*.

The ninth and tenth Whales killed.

The ſeuenth day, wee had abundance of Ice about our ſhips, which vvith the winde and the tyde draue out off another Sound. The eight, vve rid ſtill, and vvere troubled vvith much Ice, by reaſon of a ſtorme that blue at South-vveſt and by vveſt, &c. The reſt is omitted as hauing nothing of note, but ordinarie accidents.

The eleuenth, twelfth and thirteenth Whales killed.

CHAP. V.

A Iournall of the Voyage made to Greenland *with ſixe* Engliſh *ſhips and a Pinnaſſe, in the yeere* 1613. *Written by Maſter* WILLIAM BAFFIN.

Aſcenſion day.

BY the prouidence of Almightie God wee departed from *Queenborough* the thirteenth day of May with ſixe good Ships, *viz.* The *Tigre*, Admirall; the *Matthew*, Vice-admirall; the *Sea-horſe*, called the *Gamaliel*, the Reare-admirall; the *Deſire*; the *Annula*; and the *Richard* and *Barnard*; with the *Iohn* and *Francis* ſhortly to follow.

The one and twentieth day, faire weather, the winde Southward, wee ſtill making to the Northwards. This morning wee had ſight of Land on the Coaſt of *Norway*, it lying Eaſt and by North off about twelue or fourteene leagues. This day at noone, we were in the latitude of 61. degrees and 30. minutes, the variation of the Compaſſe at *Scontes-nes* is eight degrees Eaſt, it being about ten or twelue leagues off: wee hauing made a North way halfe Eaſt, about thirtie leagues.

The three and twentieth at noone, in the latitude of 65. degrees and 45. minutes, in which place, the Needle of Declination doth dippe vnder the Horizon 63. degrees and 30. minutes by that Inſtrument which declineth 54. at *London*.

Greenland attayned in eighteene dayes.

The thirtieth day, about three of the clocke, wee eſpied the land of *Greenland*, being about eight or nine leagues off. The Southwardeſt part of it bare South-eaſt and by Eaſt off it, which ſhortly wee perceiued to bee the Land lying in 76. degrees and 55. minutes, which is called *Horne-ſound*. This Land lyeth by our common Compaſſe North North-weſt. Within two houres after we had ſight of Land, it began to ſnowe, and was very cold. This euening the Compaſſe was varied thirteene degrees Weſt.

The one and thirtieth day, variable weather with ſnowe, and very cold, and the winde alſo variable: and in the afternoone the winde was at the North-eaſt. In the morning, wee eſpied a ſhip, and about noone we ſpoke with her, and their Maſter and Pilot came aboord of vs. And wee knew them to bee that ſhip of Saint *Iohn de Luz*, which had leaue of the Companie to fiſh. And they told vs, that there were eight *Spaniards* on the Coaſt. Alſo, wee eſpied another ſhip, which we ſuppoſed to be a *French* man, and had one *Allan Sallas* to their Pilot.

A ſhip of Saint *Iohn de Luz*. Eight *Spaniards* on the coaſt.

The ſecond of Iune, in the morning, about fiue of the clocke, our Generall ſent our ſhallop to a ſmall Pinke, that all this night we ſaw along the ſhoare, to bid their Maſter and Pilot come aboord vs, which preſently they did. The Maſters name was *Clais Martin* of *Horne*, and his ſhip was for *Dunkerke*, and he told vs that he was conſorted with another ſhip that was his Admirall, the Captaines name was *Fopp* of *Dunkerke*, and that he was on the Coaſt. Wee kept the Maſter and Pilot aboord of vs, and ſent ſome of our men aboord of her, and brought her vnder our lee: and then, we ſent their Maſter aboord againe, charging them to follow vs. This afternoone we tooke their ſhallop with fiue or ſixe men, whereof two were *Engliſh* men, and one *Scot*, at the *Faire foreland*.

The Generall was Captaine *Beniamin Ioſeph* after ſlaine in fight with a Carrike.

The fourth day alſo faire weather. This morning was the firſt Whale killed. Wee had no night ſince the three and twentieth of May. The fift day, faire weather, but very cold, the winde North. Wee ſayled along the Iland being about eighteene or twentie leagues in length; lying for the moſt part by the common Compaſſe North and by Weſt halfe Weſtward. About nine of the clocke in the afternoone, we ſaw our other three ſhips, *viz.* the *Gamaliel*, the *Deſire*, and the *Richard* and *Barnard*, which lay there to and fro, becauſe they could not goe into their Harbour by reaſon of the Ice: and alſo, becauſe there were foure other ſhips in a Bay or Coue, called *Pooppy Bay*, or *Nickes Cone*: and alſo other ſhips on the other ſide in *Greene Harbour*. We ſayled along the drift Ice vntill about one or two of the clocke in the morning, at which time, we came to an anchor in the entrance of the Sound, becauſe the Ice came driuing out ſo faſt.

Dutch ſhip. No night the 23. of May.

The ſixt day, faire weather, the winde variable, till the afternoone: at which time it came to the Northwards. About three in the afternoone we weighed anchor, and about ten of the clocke we came to the foure ſhips lying in *Pooppy Bay*: two of them being *Hollanders*, and one a *Rocheller*, and the other a ſhip of *Burdeaux*. The Maſters of the *Hollanders* came aboord of our ſhip, to ſpeake with the Generall, both of them being of *Amſterdam*, and brought a Commiſſion granted by the *Graue Maurice*, for to fiſh in this Countrey. But, when they ſaw our Kings Maieſties Commiſſion granted to the worſhipfull Companie, they told our Generall, that they would depart this Coaſt: hauing our Generals Ticket to ſhew to their Aduenturers, that they were there, and had made their Port, and how he would not ſuffer them to fiſh. We anchored cloſe by the *French* ſhip wherein was *Allane Sallas*, being readie to fight, if they refuſed to come aboord vs. So, when we ſent our ſhallop, the Maſter came preſently and their Surgeon, who could ſpeake *Engliſh*. At the firſt, they denyed that *Sallas* was aboord of them; but, being hardly vrged,

Diuers ſtrangers.

they

they confessed that hee and one *Thomas Fisher* an *English* man were aboord, who were both presently sent for. This *Sallas* was their Pilot, and *Fisher* was their Gunner.

The seuenth day faire weather, we road still at an anchor. This day I obserued the latitude of the place, and found it in 78. degrees 24. minutes. The variation of the Compasse is in this place 15. degrees 21. minutes West. About a North Sunne a small ship of *Biscay* came into the harbour where we roade. Lat. 78. deg. 24. minut. Ship of *Biscay.*

The eight day, for the most part snow, the winde Southward. This day the Master of the *French* ship, being a ship of nine score, or two hundred, called the *Iaques* of *Burdeaux*, agreed with our Generall that hee might fish on the coast: our Generall was to haue halfe the Whales he could kill. Also, this day, the Master of the ship of *Rochel*, and the Master of the small ship of *Biscay*, were agreed to depart from the coast. Snowe.

The ninth day, faire weather. This morning the *Gamaliel* our Reare-Admirall, and the *Desire* weighed anchor to goe for *Greene harbour*, where two ships lay, one of *Dunkerke*, and the other of Saint *Sebastian* in *Biscay*. The Captaine of the *Dunkerke*, called *Fopp*, had beene with our Generall, and told him that he would depart from this Coast. Our Generall gaue him leaue to take the Pilot of the small Pinke, and the other *Dutch* men he had taken of his; keeping only the *English* men and the *Scots*. Also, the two ships of *Holland*, with the ship of *Biscay*, and that of *Rochel* weighed anchor, and departed from this Harbour. About six of the clocke in the afternoone, came the Master of the ship of Saint *Sebastian* aboord of vs, being brought by one of the Masters Mates of the *Desire* (they hauing taken two of his Shallops) to know our Generals pleasure, whether he should haue them againe, or no. Our Generall gaue them him againe, vpon condition, that he would depart the Coast. About a North North-west Sunne, we weighed anchor to goe for *Horne-Sound*, where we heard, that there were diuers ships; the wind Northward a small gale. *Greene harbour.*

The tenth day, faire weather, the winde at North, being very close weather. About a North Sunne we came to an anchor in the entrance of *Low Sound*, where we saw two ships ride at anchor. Our Generall sent our shallop to see what ships they were, who found them to bee the two ships of *Holland*. Also our long Boate went on shoare to set vp the Kings Maiesties Armes vpon a low point of land, lying a great way off, called *Low-nesse*. We set vp a Crosse of wood, and nayled the Armes vpon it. *Low sound.* His Maiesties Armes and a Crosse set vp at *Low-nesse.*

The thirteenth day, in the morning, it snowed very fast, being very thicke weather, the winde variable, we standing off from the land. About seuen of the clock it began to cleere vp, at which time we espied three ships; and making toward them, at length we perceiued them to be the three ships which came from the Bay where we road: the winde also was at East and by South, and blew a very stiffe gale. Then we stood in for the shoare, and spent most of this day in turning vp *Horne-Sound*. And about a North North-west Sunne, at ten a clock wee espied six ships lying at anchor on the South side of the Sound, in a small Bay. The one of them was Captaine *Fopp* the *Dunkerker*, who came in before vs, and was appointed by our Generall to come into this harbour, and there to stay for vs, and to goe to the *Foreland*, to haue his other ship which we kept there. Foure of them were *Biscaines* of Saint *Sebastian*; and one of them was in the harbour where we road and found the *French* ship: The sixt was a ship of *Amsterdam*, wherein *Thomas Bonner* was Master and Pilot, and aboue twentie *English* men more. All the *Biscaines* came aboord of vs as soone as we were at an anchor: but *Thomas Bonner* refused to come, being sent for by our Generall. Our Generall commanded our Gunner to shoot at him, he himselfe discharging the second Ordinance. Then presently he began to set saile, and cut his cable, thinking to get from vs: but wee hauing shot him through three or foure times, they began to weaue vs, so we sent our shallop and he came aboord. There were fiue or sixe more of the *English* men fetched aboord, and some of our men sent to bring her to an anchor, where shee might ride safe: for, shee was almost run ashoare. This was about a North sunne, or eleuen a clocke. The *Biscaines* were charged presently to depart, so soone as they had filled fresh water, which, they said, they wanted; and to bring what Whale finnes they had found, or had taken, or other things. Snowe. *Thomas Bonner English* man, Master and Pilot.

The fourteenth day, faire weather, the winde at East North-east. This morning one of the *Biscaines* brought a few Whale finnes aboord of vs, and the skin of a Beare, which they had killed. Then was our Boate-swaine sent aboord of them to search their ships, and to bid them depart. Our Generall kept the *Holland* ship, wherein was *Thomas Bonner*, to the vse of the Companie. This day I obserued the latitude of this place by a Quadrant of foure foote Semidiameter, and found it to stand in 76. degrees 55. minutes: the Declination of the Needle vnder the Horizon, is 67. degrees 30. minutes, pointing to the Northwards: but pointing to the Southwards, it is 80. degrees. The variation of the Compasse is 12. degrees 14. minutes west from the true Meridian: but from our common sayling Compasse it is 17. degrees, because the Compasse is touched fiue degrees and a halfe to the Eastward, and the variation is to the Westward. 76. deg. 55. min. declination 67. deg. 30. min. Variation 12. deg. 14. min.

This day in the afternoone, the foure ships of *Biscay* departed from this Harbour, which is called

called *Horne-Sound*: and about a North sunne, I, with the Master *Thomas Sherin* went ashoare with other, to set vp another Crosse with the Kings Maiesties Armes, cast in Lead, nayled vpon it. Then I obserued the Sunne vpon his North Meridian, by my foresaid Quadrant, and found it eleuated aboue the Horizon 10. degrees and thirtie minutes: but because his heigth at the South Meridian, and his heigth at the North did not agree, in finding of the Latitude, I did abate fiue minutes from each, as the meane betwixt both: for his altitude at the South Meridian was 36. degrees 40. minutes, the declination 23. degrees and 29. minutes.

The fifteenth day, faire weather, the winde in the morning South, but almost calme. This day about noone we weighed anchor with the ship of *Amsterdam*, and diuers of her men were fetched aboord vs with their Shipper, and some of our men were sent aboord her with one of our Masters Mates, called Master *Spencer*. All this day it was so calme, that wee were faine to towe our ship. Our Carpenter did trim vp two of the *Biscaine* Shallops which they did leaue behinde them, and they did leaue diuers Hoopes and Caske staues ashoare.

The eighteenth day, faire weather, the winde variable, we stearing away Northward. This afternoone wee met with another ship of *Biscay*, being a ship of two or three hundred Tunnes. Our Generall, as he did to the rest, caused her Master and Pilot to come aboord vs, to whom he shewed his Commission, charging them to depart this Countrey. They, seeing no remedie, were content, so soone as they had filled fresh water. Wee met with them off the Southward part of the Iland. Our Generall being so neere *Greene Harbour*, where the *Gamaliel* and the *Desire* road, wee went into the Sound to see them, with this great ship of *Biscay*, and the ship of *Amsterdam*. We found that the entrance of *Greene Harbour* was quite stopped with Ice; and ran our ship into it, thinking to get through, but wee could not. Then wee got her out againe, and came to the Bay where wee roade on the other side of the Sound in *Poppy Bay*, or *Niches* Coue.

Abundance of Ice.

The nineteenth day, faire weather, the winde Northward. This day about twelue of the clock we came to an anchor in the foresaid Bay. This afternoone there came another ship of Saint *Sebastian* into the Bay where wee roade: and about seuen of the clocke, the Captaine came aboord of vs, who told vs that he had lost six of his men and a shallop vpon the coast of *Groineland*, vpon an Iland in the latitude of 72. degrees or thereabouts. This was the Master which had beene here the last yeere, and made a great voyage, Master *Woodcocke* being their Pilot. His making so great a voyage, was the cause that so many ships were here this yeere.

An Iland in 72 degrees on the Coast of *Groinland*.

The twentieth in the morning, we had newes that the *Iohn* and *Francis* was come about two dayes agoe, and that they had killed one and twentie Whales at the *Foreland*, and had also killed two at *Greene harbour*. This day it was very close weather with some snowe; the winde North-west. This afternoone the Captaines of the two *Biscay* ships were commanded to depart this Coast.

Three and twentie whales killed.

The one and twentieth, wee perceiued another ship standing toward vs. Wee lessened our sailes and stayed for her to see what shee was. At length, we perceiued her to bee another *Biscaine*. About a North sunne we came to an anchor in *Greene harbour*; by the *Gamaliel*, and the *Desire*, and the ship of *Burdeaux*: and the *Biscaine* followed vs. So soone as they were come to an anchor, their Captaine came aboord of vs, to whom our Generall shewed his Commission as he had done to the rest, charging him to depart those Coasts, and told him, that hee would take away some of their shallops. They earnestly intreated him not to take them away, and they would depart: the Captaine offering his bond to our Generall, that if he stayed either in *Greenland*, *Groineland*, or *Cherie* Iland, he would willingly forfait all he was worth. There was another Whale killed in *Greene-harbour*, in the killing whereof there was a man slaine, and a Boate ouerwhelmed, by too much haste of following him, after the harping Iron was in him.

A man slaine.

The three and twentieth day, faire weather, the winde Northward. This day, and the last night I obserued the latitude of the place where we roade, and found it by both, to bee in the latitude of 78. degrees 7. minutes: the skie at both obseruations being very cleere, where I finde that there is no sensible error betweene a South obseruation and a North, the skie being cleare. But if the skie be hasie, there will be some difference, as of eight or ten minutes, being obserued on shoare by some large Quadrant or other Instrument for the purpose, also a South South-west Moone by the common Compasse, maketh a full Sea in this place.

Latitude 78. deg. 7. min.

Note.

A South South west Moone maketh a full Sea here.

The ninth of Iuly, faire weather, the winde at North. This day wee stood to the Southward along the Iland: but, toward night it fell calme, and then the winde came to the West. The tenth day, faire weather, but thicke and close, the winde South South-west. All this day we stood for *Bell-Sound*. Our Generall went on shoare this afternoone, and killed foure Deere, and brought a young Morse aliue with him aboord.

The eleauenth day faire weather, but calme. This afternoone wee perceiued fiue shippes in a *Bay* in *Bel-sound*. The winde was so calme, that we were faine to towe in our shippes, and about a North North-west sunne, we came to an anchor by them, with our three ships, *viz.* the *Tigre* Admirall, the *Mathew* Vice-Admirall, and the *Richard* and *Barnard*, hauing made all things reddie for to fight. These fiue shippes which rid here, the one was a great shippe of *Biscay* of seuen hundred

hundred Tunnes, and the two *Hollanders*, which we found the sixt of *June* in *Pooppy-bay*, and one small Pinke of *Amsterdam*, and another small shippe of *Rochell*. This great shippe of *Biscay*, which we expected would haue fought with vs, sent their Captaine aboord of vs before we came to an anchor, and submitted themselues vnto the Generall. The two ships of *Amsterdam*, whose Masters names were these, *viz. Cornelius Caliac*, *William Vermogon*, Admirall, and *Iohn Iacob* Vice-Admirall, these two would gladly haue stood out with vs, if the *Biscaine* would haue assisted them. A Biscayn ship of 700. tuns.

The twelfth day faire weather. This day the ship of *Iohn Iacobe* was vnladen of such goods as shee had in her; as Oyle, Blubber, and Morses skinnes. The thirteenth day I was sent in a shallop to *Greene Harborough*.

The foureteenth day, thicke close weather, the winde Northward; but toward noone it began to cleare vp, and then it blew more winde. About a West sunne, we came to a small Iland, or rather a Rock, where Morses vse to come; where we found seauen which we killed, and knocked out their teeth, and let them lye. In this place are many of these rockes, where are great multitudes of foule, and they are called *Lizets* Ilands. The Land all along is so full of Rockes, that it is vnpossible for any shippe to come neere the Maine, but in the Sands which are very deepe, and good to come in. All this euening and night wee rowed betweene this Hand and *Ice-sound*. Many rockes full of Fowle. *Lisets* Ilands.

The fifteenth day, about nine or tenne a clocke, we came to the shippes in *Greene-harborough*, where we found, that they had killed eighteene Whales in all. Foure of these ships were *Frenchmen*, which had killed eight Whales for the Companie according to the agreement which the Generall had made with them: which was, that they should kill eight for vs, and after, what they could kill, should be for themselues. Our *English* men had killed three in this place, and the *Baskes* in the *Desire* also three. The *Desire* had taken in an hundred tunnes of Oyle when wee came there, and she was to be laden so soone as she could. Eighteene Whales killed. Three Whales killed by the *English*.

The seauenteenth day also faire weather, the winde Northward. This day, toward a West Sunne, the Master of the *French* shippe came from *Sea-horse Bay*, who went thither to speake with our Generall: because Master *Mason* and Master *Cooper* had stayed his Shallops from going to Sea, in regard they would not obserue the orders which the Generall had appointed them: which were, that those Whales which our *Englishmen* did chase, they should not follow, nor our men should not follow the Whales they chased. For the order of the *Biscaines* is, that who so doth strike the first Harping Iron into him, it is his Whale, if his Iron hold. This euening, I say, he returned from *Sea-horse Bay*, hauing lost his labour: for the Generall and Master *Edge* were in *Bell-sound*. We vnderstood by him, that they had killed some eight and thirtie Whales in all; and that there was one hundred and sixtie tunnes of Oyle ready made. Eight & thirty Whales killed.

The fiue and twentieth day in the morning, the *Desire* weighed Anchor to go to the Generall, and the Master of the *French* ship also this morning went from thence to speake with the Generall, because of a Whale which was in strife betweene his *Biscaines* and ours: when for pilfering and for some peremptorie speeches, two of the *Rochellers* were ducked at our Yard arme, the one on the one side, and the other on the other. This day I also obserued the latitude of this place, and found it to be 77. degrees 40. minutes. Also, the variation of the Compasse is 13. degrees 11. minutes West. This variation was obserued the third of *August* in the morning: the height of the sunne aboue the Horizon was 17. degrees 24. minutes, and the declination was 14. degrees 41. minutes. North in the latitude of 77. degrees 40. minutes, and his Magnetical azimuth was 63. from South to East. The ninth day wee had sight of Master *Bonners* Ship, wherein was Master *Marmaduke*, who had beene to the Northward as farre as *Faire-hauen*: and now, as he said, he was bound to the southward to discouer beyond *Point Looke-out*, hauing his direction from Master *Edge*, as he said. Our Generall told him, that hee had hindered the Voyage more by his absence, then his discouerie would profit; and that it were best that he went backe with him to the *Fore-land*, and that he would giue no licence to goe now for Discouerie, because the yeare was farre spent: but bad him, according to his Commission, so to proceede. The twelfth day I obserued, and found the latitude of this place by an exact obseruation to be in 79. degrees 14. minutes. They in the *Pooppy-Bay* had seene a ship of *England* off *Black-point*, and had spoken with her, who told them that they were come from *Kildeene*. Auguſt 1. Latitude 77. degrees, 40. minutes. Variation, 13. degrees, 11. minutes. Latitude 79. degrees, 14. minutes. This was Master *Cudners* ship of *London*.

The foureteenth day faire weather, the Winde at North North-east. This day about tenne a clocke in the forenoone, we waied anchor to goe homeward, being sixe ships in company, *viz.* the *Tigre* Admirall, the *Gamaliel* Vice-Admirall, the *Iohn* and *Frances*, the *Anuula*, the ship of *Burdeaux* which the Generall agreed with to fish in *Greene-harborough*, and the *Biscay* ship which fished in Sir *Thomas Smiths* Bay.

The fifteenth day very faire weather, all the forenoone almost calme: in the afternoone, an easie gale at North-east. This day about twelue a clocke at noone, wee were against *Faire Foreland*, which is in the latitude of 79. degrees 8. minutes. This night was very cleere and faire weather, and also calme, by which meanes I had very good opportunitie to finde the sunnes refraction. For beholding it about a North North-east sunne, by the common Compasse, at which time the sunne was at the lowest, it was but one fift part of his body aboue the Horizon, hauing about foure Latitude 79. degrees 8. minutes. Sunnes refraction.

Digitized by Google

foure fifth parts below, so neere as I could gesse. His declination for that instant was 10. degrees 35. minutes North, being at noone in the 2. degree 7. minutes of *Virgo*, his daily motion was 58. minutes: whose halfe beeing nineteene to bee added to the former, because it was at twelue houres afore noone. I say his place at that instant was 2. degrees 26. minutes of *Virgo*; whose declination was as before 10. degrees 35. minutes: the Latitude of the place was 78. degrees 47. minutes, whose complement was 11. degrees 13. minutes, the declination being substracted from the complement of the Poles eleuation, leaueth 38. minutes, foure fiue part of which 12. minutes; which being substracted from 38. leaueth 26. minutes for the Refraction. But, I suppose the Refraction is more or lesse, according as the ayre is thicke or cleare, which I leaue for better schollers to discusse: but this I thought good to note, for the better helpe of such as doe professe this studie.

Note.

The sixteenth day also very faire weather, and for the most part calme: the winde that was, was at North-west. This morning, we espied a ship out in the offen, ouer against *Cold-cape*, which we stood with, and she also stood with vs. And when we came to her, wee found her to be the *Desire*, a shippe of *Alborough*. Our Generall sent for the Master and Merchant aboard of vs, who certified him that they came from *Killedaeue*, and that they had made but a bad Voyage of fish: and they were come to see, if we could fraight them home. The Merchant was of *London*, whose name was Master *Cudner*: the Masters name was *Fletcher*, who also brought sixe men which *Thomas Bonner* had left at *Cherie* Iland. These sixe men had killed but one Morse all this yeere at the Iland: who also told vs, that *William Gourdon* was gone to the Northwards. At noone, the three and twentieth day, I obserued the variation of the Compasse, and found it to be one degree 5. minutes East.

M. *Cudner* of *London*.
William Gourdon.
Variation 1. degree 5. min.

The three and twentieth day faire weather, with a fine gale at North and by East. We stearing away South and by West halfe South: being at noone, by supposition, in the latitude of 69. degrees no minutes. Hauing sailed since yesterday noone, some thirtie leagues South, true.

The foure and twentieth day, very faire weather and cleere, the winde all the fore-noone Northwards, but about noone it came to the South-east. This morning I obserued the middle starre in the Great Beares tayle, and found it to bee in the latitude of 68. degrees 24. minutes about two a clocke, at which time that starre was on the Meridian vnder the Pole. Also I obserued the starre in the Beares Rumpe about one a clock, and found the like latitude. Also all this day we had sight of *Rost* Ilands, being about ten or eleuen leagues off vs. Also at noone I obserued the latitude by the Sun, and found vs to be in the latitude of 68. degrees no minutes, which did agree with the former Obseruations by the starres. Also the variation of this place is 4. degrees 8. minutes East from the true Meridian; wee hauing runne since yesterday noone some two and twentie leagues South and by West. Almost all the afternoon it was almost calme.

Rost Ilands or *Rosten*.
68. deg. no min.
The variation 4. degrees 8. minutes East.

The fiue and twentieth day also very faire weather, the winde this morning came to the East South-east a fine easie gale. We steered away South and by West halfe West ten leagues, being at noone in the latitude of 67. degrees 5. minutes. The variation of this place is 5. degrees 3. minutes East, neere to the set of our Compasse. This Euening the winde came to the South South-west, which continued about two Watches.

Variation 5. deg. 3. minutes East.

The nine and twentieth day faire weather, with a good gale of winde at North North-east. From two this last night to sixe, we stood away South-west and by South, and at sixe we steered away South South-west, being at noone by obseruation, in 62. degrees no minutes. The land about *Scoutesnesse* lyeth in this sort: from sixtie three toward sixtie two, it is nineteene leagues South South-west halfe Westward: from thence tenne leagues South and by West, which is two or three Ilands, which are the Westwardest land in *Norway*, lying in the latitude of 62. degrees 44. minutes. But whether these Ilands, or a Point of land, which lyeth about three or foure leagues more to the North, be called *Scoutesnesse*, I know not. The sixt of September we entred the *Thames*.

The lying of the land about *Scoutesnesse*.

CHAP. VI.

A Voyage of Discouerie to Greenland, *&c.* Anno 1614. *Written by* RO. FOTHERBYE.

THe ship *Thomasine* went downe from *Black-wall* to *Woolwich* the sixteenth of Aprill, and from thence to *Gravesend* the three and twentieth, where shee remayned vntill the eight and twentieth of the same; and weighing from thence she anchored againe in *Tilberie Hope*, with ten ships more of good burthen, and two Pinnasses all of the *Greenland* Fleet, set forth also at the charge of the said Company, vnder the command of Master *Beniamin Ioseph*, Chiefe Captayne and Generall of the said Fleet.

We

We set sayle out of *Tilberie Hope* the fourth of May, and came to an anchor the same day in *Lee* Road, where we stayed till the next morning, then wee set sayle againe and went forth to Sea before night. — We went forth to Sea.

We proceeded in company of the Fleet, and met with stragling Ice the fiue and twentieth of May in the latitude of 75. degrees 10. minutes, through which wee passed without danger, holding on our course all that day, till time of mid-night; then we found the Ice so close packt together, that we were forced to tacke about, and stand to the Westward, till wee found more open passage; wee plyed through it without any great danger, till the eight and twentieth day: but then being in sight of Land, we passed amongst very much Ice all the fore-noone, which lay in great abundance on both sides of vs: but a desire (as it seemes) to get through it, drew vs on to be the more intangled with it, for about noone we could neither find a passage to goe forward, nor way to retyre backe againe, but being nine ships and two Pinnasses (for the *Prosperous* and the *Desire* lost Company through foule weather, the one and twentieth of May, otherwise we had beene thirteene sayle) we began very suddenly to bee inclosed and shut vp with Ice. Now euery one wrought the best meanes he could for the safetie of his ship; Our Master in the *Thomasine*, caused a Hauler and a Grapnell to be carried forth, and laid vpon a great Iland of Ice, and so we rid as at an Anchor, and by that meanes wee stayd from forceable rushing against other peeces; afterward we laid forth an anchor for surer hold, and made fenders of an old Cable, which was hung ouer the ships sides to keepe the Ice from piercing of her plankes. Wee rid thus from the eight and twentieth of May till the second of Iune, still floating as the wind droue vs with our anchor, holding Iland, which now we accounted as the shoare, and made vse thereof accordingly, for vpon it our Carpenter sealed and trimmed our lesser shallop. — We met with Ice in 75. deg. 10. minutes. Eleuen Sayles fast in the Ice. M. *Th. Sherwin.*

On the second of Iune we had a great homeming Sea, the wind being at North-west, whereby we iudged we were not farre from an open Sea to windward of vs; there wee resolued to make tryall what we might doe, to free our selues out of the Ice. In the afternoone about three a clock we got aboard our Anchor, letting fall our fore top-sayle, and putting forth our Mizen; and so droue a sterne for a while, till the floating Iland gaue way; then wee filled our top-sayle, and attempted diuers places where to passe, but had repulse and fell asterne againe; notwithstanding at the length we preuayled, and with much adoe we attayned an open Sea at a North, and by West Sunne, parting very gladly from these ill neighbouring Ilands; which at our parting from them, gaue vs or rather receiued from vs some knockes, but whilest we remayned amongst them they seemed much more perillous then they proued hurtfull, so wee praysed God for our safe deliuerance, wishing that the rest of the ships which we left in the Ice, were as cleere out of it as was the *Thomasine*. — Iune. We goe cleere off the Ice.

Hauing attayned the open Sea to the Westwards, we proceeded to the Northwards, keeping the Ice still on our starboord side, and met with the *Mary An-Sarah*, that got also free of the Ice the same day that we came forth of it; we kept company together till the next day, when being as high as Prince *Charles* Iland, we both stood in for the shoare, the *Mary An-Sarah* going for *Bel-sound*, her assigned Harbour; but we proceeded to the *Fore-land*, where when wee came the sixt of Iune, wee met with two shallops that belonged to the *Desire*, wherein was *Cuthbert Appleyard*, and *William Summes* Harponiers; by whom we vnderstood, that the *Prosperous* and the *Desire* had more desiredly prospered, then all the rest of the Fleet, they escaped the danger that all the rest fell into, and came to the *Fore-land* the third of Iune, finding the Harbour open. — We met with the *Mary An-Sarah.* We came to the *Fore land.*

Here was yet no worke begunne, for they had not seene one Whale since their comming into the Harbour; so that for vs there was no cause of stay to bee helpfull vnto them, and therefore we proceeded to the Northward, hoping to find the shoare still as free from Ice, as it was at this place; but it fel out contrary to our expectations, for being come as farre as *Maudlen Sound*, in the latitude of 79. degrees 34. minutes, we met with some stragling Ice, and from the mayne top we saw much Ice lye betwixt vs and *Hackluyts Head-land*, which seemed to bee close to the shoare, therefore we sent some men in a shallop to *Maudlen Sound*, to see if it were open, that wee might harbour our ship there, and search for a leake which wee found her subiect vnto in foule weather. — We proceeded to the Northwards. *Maudlen Sound.* *Hackluyts Head-land.*

The Sound was open and we anchored in a good Harbour, but the Ice was not gone cleere from the shoare, therefore we could not hale our ship aground, but we carined her and set vp our *Biscaine* shallop which we carried with vs out of *England* in pieces. — We anchored in *Maudlen Sound.*

The next day after our comming hither I went forth in a little shallop (the other being then vnset together) to see how the Ice lay at *Hackluyts Head-land*, and whether we might passe with our ship that way or no. Being come forth of the Harbour, we perceiued, that it was very foule weather at Sea, notwithstanding I proceeded into *Faire Hauen*, where the South Harbour was then open, but much Ice lay then in the *Sound* vnbroken from shoare to shoare; otherwise wee might haue passed that way to *Hackluyts Head-land*, betwixt the Iland and the mayne Land; we stayed here till the next morning, then the weather beganne to cleere vp, and wee put forth to Sea againe, intending to goe without the Ilands: but being out of the Harbour wee found the foule — I went forth in a shallop.

Digitized by Google

We set sayle out of *Maudlen Sound* and followed the Ice.

foule weather to be such, as our little weake shallop was not able to endure, therefore we returned againe to our ship into *Maudlen Sound*, where we killed two Female Morses, and took their Teeth, Hides and Blubber.

On the tenth of Iune we set sayle out of *Maulden Sound*, and coasted along to the Northward, till we were past *Hackluyts Head-land*, but then we saw the Ice lye before vs, extending close to the shoare, so that for vs to passe further that way, it was not possible: therefore wee turned to the Westward, to see if wee could finde passage further from the shoare. Wee sayled as the Ice trended West and West South-west till the thirteenth day, and keeping still alongst it, we found it to trend neerest South and South South-west, we proceeded well thus far, till we came vnder the latitude of Prince *Charles* his Iland, in 78. degrees 40. minutes, being eight and twentie leagues from shoare, but then we altered our course, and stood in for the *Fore-land*, to goe and be helpfull to the other ships there for the furthering of their Voyage according to our Instructions (as some did vnderstand them) but contrary I am sure to some of our desires. When we came neere the *Fore-land*, we saw eleuen ships of *Hollanders* vnder sayle, plying to the Southwards; one of them came roome towards vs, and strucke her top-sayles twice, whereby we supposed they tooke vs for some of their Fleete, which they wanted, but wee held on our course still into Sir *Thomas Smiths* Bay, where we came to an anchor the fifteenth of Iune, by the *Iohn-Anne-Francis*, and the *Desire*, the *Mary Margaret* being then vnder sayle to go to the *Fore-land*.

Prince *Charles* Iland in 78. degrees 40. minutes.

Wee stood againe for shoare.

Eleuen *Holland* ships.

We anchored in Sir *T. Smiths* Bay.

Here was yet no need of any helpe that we could make them, for they had hitherto neyther killed nor seene one Whale since their first comming in hither; therefore we thought it best not to stay here, but rather goe to *Faire Hauen*, where wee should bee more readie to proceed on our Discouerie when the Ice would giue vs leaue, and in the meane-time wee might bee helpfull to the two ships thither assigned for the making of their Voyage, and so much the rather wee hasted, because we vnderstood that the *Hollanders* also set forth a ship on Discouerie.

We went forth of Sir *T. Smiths* Bay.

We set sayle the seuenth of Iune, and met with the *Prosperous*, that came from *Crosse-road*, and was going into Sir *Thomas Smiths* Bay, there to get some Bricke and Lime to mend their Fornace, as *Nicholas Woodcocke* the Master told vs; then we went forth to Sea, and being about foure leagues from the shoare, the winde began to blow so hard from the North-west, that wee were forced back againe to seek Harbour, and came to an anchor the nineteenth of Iune, in *Crosse-road*. Here we stayed two dayes, much wind blowing at the North North-east, till the one and twentieth of Iune, and then in the after-noone the wind came to the East and by South, and the weather was faire, therefore at a North North-west Sunne, we weighed and set sayle againe, and so did the *Thomas Bonauenture*, that came to an anchor by vs this morning, beeing also bound for *Faire Hauen*.

We were driuen backe againe into *Crosse-road*.

We set sayle out of *Crosse-road*.

This next day in the afternoone we were thwart of *Maudlen Sound*, and the weather being faire and calme, we sent a shallop to the Northward, to see what alteration there was amongst the Ice, and to seeke out some good Harbour for a ship, and also to set vp the Kings Armes at *Hackluyts Head-land*, or some other conuenient place.

One shallop to the Northward The other into *Maudlen Sound*.

When Master *Baffin* was gone from the ship in the foresaid shallop, I went presently into the other shallop into *Maudlen Sound*, there to set vp the Kings Armes, and also to see if there were any Morses come ashoare; when I was within the *Sound*, I found no Beeches bare for Morses to come vpon: for Ice and snow lay yet vndissolued from the shoare side, but I went to the Harbour, and there caused a Crosse to be set vp, and the Kings Armes to bee nayled thereon; vnder which also I nayled a piece of sheet Lead, whereon I set the *Moscouie* Companies Marke, with the day of the moneth and yeere of our Lord. Then cutting vp a piece of Earth, which afterward I carried aboard our ship, I tooke it into my hand and said, in the hearing of the men there present to this effect.

The Kings Armes set vp in *Trinitie Harbour*.

I take this piece of Earth, as a signe of lawfull possession (of this Countrey of King Iames *his* New-land, *and of this particular place, which I name* Trinitie Harbour) *taken on the behalfe of the Company of Merchants, called the Merchants of New Trades and Discoueries, for the vse of our Souereigne Lord* Iames *by the grace of God, King of great* Brittaine, France, *and* Ireland, *whose Royall Armes are here set vp, to the end that all people who shall here arriue may take notice of his Maiesties Right and Title to this Countrey, and to euery part thereof. God saue King* Iames.

Trinitie Harbor is vnder the parallel of 79. degrees 34. minutes.

This is a good safe harbour, and is vnder the latitude of 79. degrees 34. minutes, as I haue found by good obseruation, and haue of Westerly variation 25. degrees. When I had here set vp the Kings armes, I returned toward our ship, which was come to an anchor at the entrance of *Faire hauen*, staying till the floud came, because that at the Tide of Ebbe, there runnes a great current out of the *Sound*; so at the next floud, we came into *Faire hauen* and anchored by the *Gamaliel* and the *Thomas Bonauenture*, the three and twentieth day of Iune.

We came to an anchor in *Faire Hauen*.

Then *Iohn Mason*, Master of the *Gamaliel*, came aboord of our ship, and I asked him if he had any worke for our men, for I would cause them to come a shore: he told me, that hitherto he had not seene a Whale come in, but his Furnaces and Coppers were already set vp, and therefore as yet he had no neede of helpe, but when occasion serued he would imploy them. This day about eleuen

No Whales were yet come in.

Digitized by Google

eleauen a clocke Maſter *Baffin* returned in the Shallop from the Northwards: he ſaid that he had beene at Cape *Barren*, which is the point of an Iland three or foure leagues from *Hackluits head-land*, but further then that he could not paſſe for Ice which lay cloſe to the ſhore, and he had not ſet vp the Kings armes in any place. The ſhallop returned from the Northwards. Cape *Barren*.

On Munday the ſeuen and twentieth day of Iune, I went forth againe in the Shallop to the Northward, partly to ſee what alteration there might be in the Ice, with the Eaſterly windes which had blowne hard ſince the Shallop laſt returned, but chiefely to ſet vp the Kings armes in ſome place conuenient, becauſe there was none ſet vp to the Northwards of *Maudlen ſound*.

We rowed to Cape *Barren*, where formerly Maſter *Baffin* had bin, and finding the Ice there gone from the ſhore, we proceeded further to an Iland which now we call the *Saddle*, in reſpect of the forme thereof, more then a league diſtant from Cape *Barren*. In our way thither it began to ſnow, and grew to be a great and vehement ſtorme from the Weſt North-weſt, therefore we haſted and got to the Ice ſide of the aforeſaid Iland, and there made faſt our Shallop with a grapnell laid vpon the Ice ſhore, vſing the beſt meanes we could with our ſhallops ſaile to keepe vs from the extremitie of ſo cold an harbour: we ſtaid here eight houres, and the ſtorme continued driuing the Ice ſtill Eaſtward in great abundance and with wonderfull ſwiftneſſe: when the weather began to cleere, I cauſed the men to rowe to Leewards to another Iland a league diſtant, which ſeemed then to be a Cape of the maine land, purpoſing there to ſet vp the Kings armes; but afterwards wee found it to be an Iland, and to the maine wee could not come for broken Ice. *Saddle Iland*. A Storme.

This ſtormie weather continued from Munday night till Friday morning, during which time we had beene but eleauen leagues at the furtheſt from our ſhip, yet went we ſo farre as we could haue gone, had the weather beene neuer ſo faire; for at foure leagues diſtance from Cape *Barren*, the Ice lay firme and vnbroken two or three miles from the ſhore, and cloſe againe to it lay the ſhattered Ice thronged together with this preſent ſtorme.

On Friday morning we came backe againe to *Hackluits headland*, and there I ſet the Kings armes in the like manner as at *Trinitie Harbour*: from thence we rowed towards our ſhip, and as we entred into *Faire-hauen*, there came a Whale that accompanied vs into the harbour leaping and aduancing himſelfe almoſt quite out of the water, falling headlong downe againe with great noiſe; we haſted aboord our ſhip, and I ſent forth both our Shallops to ſtrike this Whale if they could, and told Maſter *Maſon* of her comming in, who alſo went forth in his Shallop: but it ſeemes the Whale paſt vnder the Ice which lay yet vnbroken betwixt the North harbour and the South harbour, for they could not ſee her againe. Iulie. The Whales began now to come in.

The next day there came more Whales in, and *Robert Hambleton*, our Maſters mate ſtrucke two, which vnluckily eſcaped; the firſt for want of helpe, the *Gamaliels* Shallop being in chaſe of another Whale, and our owne little Shallop not able to row againſt a head-ſea to aſſiſt the other: ſo that at length the Whale hauing towed the Shallop forth to Sea, the harpingiron came out: the ſecond was alſo ſtrucken within the ſound, and ranne vnder the Ice, which lay yet vnbroken at the Eaſt end of the Sound, and drew the Shallop vpon it cleare out of the water; by which meanes the Harpingiron came forth. Here we remained till the ſixt of Iulie, our men and Boates being helpefull at all times to further the Voyage. Two Whales eſcaped.

The ſixt of Iulie we ſet ſaile forth of *Faire-hauen*, intending to make triall if wee could to get to Weſtwards of the Ice, and ſo proceede to the Northwards, hauing ſent away one of our Shallops the day before, prouided with twentie dayes Bread, to coaſt alongſt the ſhoare, ſearch the Beach for Commodities, and ſet vp the Kings Armes at places conuenient, hoping thereby to preuent the *Hollanders*, who now rid in the North harbour of *Faire-hauen*, and were ready for the firſt opportunitie, to diſcouer and take poſſeſſion of other harbours, hauing two Ships to goe forth onely vpon Diſcouery. We came forth of *Faire hauen*.

We ſailed Weſtwards from *Faire-hauen* ſeuen leagues, and then met with a maine banke of Ice which trended North & South, the Sea appeared to the Northwards to be open ſo far as we could ſee, therfore we plied that way: when we had run ſeuen or eight leagues more, the Ice lay ſo thick on euery ſide, that we were bard from proceeding any further; then we ſtood in toward the ſhore, and being a little to the Northwards of Cape *Barren*, our Shallop had ſight of vs, & came rowing to vs through the broken Ice. Maſter *Baffin* told vs the ſhore to the Eaſtward was much peſtered with Ice, and he had ſet vp the Kings armes at the entrance of a faire *Sound*, about foure leagues diſtant from Cape *Barren*. We met with Ice and ſtood to the Northwards. Our Shallop came to vs.

Now the weather being faire and calme, Maſter *Sherwin*, Maſter *Baffin* and I, went in the Shallop to the place where the Kings Armes were ſet vp, purpoſing (becauſe the ayre was very cleere) to goe vpon ſome high mountaine, from whence we might ſee how the Sea was peſtered with Ice, and what likelihood there was of further proceeding. According to this our intent, we aſcended a very high hill, and from thence we ſaw the Ice lye vpon the Sea ſo farre as we could diſcerne, ſo that the Sea ſeemed to be wholly toured with Ice, ſaue onely to the Eaſtwards: we thought that we ſaw the water beyond the Ice, which put vs in ſome hope that we ſhould ere long get paſſage with our Shallops along the ſhore, if we could not paſſe with our ſhippe. Being thus

Digitized by Google

We returned towards *Faire hauen.*

thus ſatisfied, we returned abord our ſhip and plyed towards *Faire hauen*, aduiſing amongſt our ſelues of the beſt courſe we could to further the buſineſſe committed vnto vs.

We intended to diſcouer in Shallops.

We reſolued to make our diſcouery along the ſhore with both our Shallops, and to carry with vs our prouiſion for the Whale-killing, conceiuing good hopes beſides, of profit which the beaches would afford vs; therefore we intended when our ſhip was brought ſafe into harbour againe, to goe from her with both our Shallops, and to put in practiſe this our late reſolution. But the weather falling calme, and a fogge ſucceeding, which continued three dayes, ſo that our ſhip came not into harbour till the twelfth of Iuly; I went from her the eleuenth day, intending to ſearch the Beaches, till Maſter *Baffin* came to me with the other Shallop, and then we to proceede both together: but before he came, I had gone ſo farre as that the Ice would not ſuffer mee to paſſe a Boates length further, and I had alſo ſearched a very faire Beach which was altogether fruitleſſe.

I went forth in the one Shallop.

Maſter *Baffin* came to me at a place appointed the foureteenth day of Iulie, in the other Shallop, and we proceeded both together to the Eaſtwards againe, and found paſſage amongſt the Ice about a league further then I had lately beene, ſo that we came to the firme Ice, that lay almoſt two miles from the ſhoare of *Red-beach*, vnbroken vp this yeare. Here wee haled vp our Shallops out of the water, leſt the broken Ice which is carried to and fro with the winde, might ſplit them or bruſe them: then Maſter *Baffin* and I with foure men more walked ouer the firme Ice and went aſhore on *Red-beach*, where we trauelled about the ſpace of three miles by the ſhore ſide, but found no commodities as we expected to haue done; for here had the *Hulmen* been in 1612. as we might know by fires that they had made, and gathered the fruites that many yeares before had brought forth. Thus as we could not finde that which wee deſired to ſee, ſo did we behold that which we wiſhed had not beene there to be ſeene, which was great abundance of Ice, that lay cloſe to the ſhore and alſo off at Sea ſo farre as we could diſcerne; wherefore being thus ſatisfied, and more wearie to know that we could paſſe no further, then with trauailing ſo farre, we returned to our Shallops, and went aboord of our Ship in *Faire hauen* on Sunday the ſeuenteenth of Iuly, paſſing the neereſt way betwixt the Ilands and the maine Land, for now the Ice was broken betwixt the South-harbor where we rid, and the North harbour, where the *Hollanders* rid.

Maſter *Baffin* came to me in the other Shallop. *Red-beach.*

Wee haled our Shallop vpon the Ice.

We returned to our Shallop

The next day we ſent our Shallop to the North-eaſt ſide of *Faire hauen*, there to lye for the comming of the Whales ouer againſt the *Gamaliels* two Shallops that lye on the other ſide for the ſame purpoſe.

The twentieth of Iuly, wee were vnder ſaile to goe forth of *Faire hauen* with the *Gamaliel*, purpoſing to haue taken two Ships that rid at the entrance of *Maudlen-Sound*, with *Iohn Maſon*, who firſt deſcried them, ſuppoſed to be the one a *Bask*, and the other an *Engliſh* man; but the winde blew right into the Harbour, ſo that we could not get forth, and therefore we came to an anchor againe where we rid before.

We were vnder ſaile and came to an anchor againe.

On the one and twentieth of Iuly, our Harponiers killed a Whale, which ſplit one of our Shallops and ſtrucke the Harponier that was in her ouerboord: but both hee and the reſt of the men were relieued and taken into an other Shallop; then we ſent our Carpenter to mend the Shallop that was ſplit: and on the fiue and twentieth day they helpt to kill another Whale.

We killed a Whale.

On the ſixe and twentieth of Iuly, I drew the plat of *Faire hauen*, as it is here proiected (but here too coſtly to inſert.)

When this Scoale of Whales were paſt, we went out of *Faire hauen* the firſt of Auguſt with both our Shallops, Maſter *Baffin* in the one, and I in the other, with fiue men more in each Shallop, thinking that now we ſhould finde the Ice broken and cleere gone from the ſhore, conceiuing ſome good hope to proceede and make ſome new diſcouery, which was the chiefe occaſion of our imployment. Wee paſſed ouer *Red cliffe-Sound*, which we found cleare of Ice; and from thence we proceeded to *Red-beach*, where we alſo found great alteration ſince our laſt being there, notwithſtanding the Ice was not cleerely voided from the ſhore; for in ſome places it was firme and vnbroken off, for the ſpace almoſt of halfe a mile: ſo we rowed alongſt it, till wee came neere the North end of the Beach which lyeth furtheſt into the Sea, and there we found an open way to the ſhore with our Shallops, and went on land; but ſeeing in all places great abundance of broken Ice, we lay cloſe to the ſhoare, and doubting that although perhaps with much adoe, we might get about the point of the *Beach*, yet ſhould we ſtill be peſtered with Ice from proceeding any further, we reſolued to walke ouer land, to the other ſide of the *Beach*, where we ſaw a hill about foure miles diſtant; from which we thought we ſhould be ſatisfied, how much further it was poſſible for vs to proceede: ſo thither we trauailed, where when we came, wee ſaw a very faire Sound on the Eaſt ſide of the Beach which was open within, but there lay very much Ice at the entrance of it, which although it was extended more then halfe ouer Sound, yet we doubted not but if we could get our Shallops about the Beach, we ſhould finde either one way or other to paſſe ouer the ſaid Sound, & from the high land on the other ſide, we ſhould receiue very good ſatisfaction, if the weather continued faire and cleare as now it was, therefore we intended to make triall what we might do; but before we returned we went down to the point of the Beach, at the entrance

Auguſt. We went to the Northwards with our Shallops.

We got to the ſhoare of *Red Beach* with our Shallops.

We walked ouer *Red-beach.*

Digitized by Google

entrance of the Sound, and there ſet vp a Croſſe, and nailed a ſixe pence thereon with the Kings Armes. This being done, we returned to our Shallops, and according to our late determination, we rowed about the point of *Red-beach*, and with many crooked windings amongſt the Ice, at length we got ouer *Wiches Sound* (for ſo it is now named.)

The Kings armes are ſet vp at *Wiches Sound*.

As ſoone as we were ouer on the other ſide, about two leagues from *Red-beach*, Maſter *Baffin* and I clambred vp a very high hill, from whence we ſaw a point of land bearing East North-eaſt, by the ordinary Compaſſe eighteene or twentie leagues diſtant, as I ſuppoſed. Wee likewiſe ſaw another faire Sound to the Southwards of vs, which was much peſtered with Ice, but we could not ſee the end of it. Here vpon the mountaine wee ſet vp a Warelocke, and then came downe againe with leſſe labour, but more danger then we had in getting vp, by reaſon of the ſteepineſſe thereof: then we walked to the ſhoare ſide, and there found many beach Finnes, whereby I conieCtured that Maſter *Marmadukes* men in his firſt diſcouery, made in Anno 1612. had not beene vpon this land to ſearch the Beaches, for in all other places where we had beene heretofore, we could finde nothing at all. Now therefore we reſolued to make further ſearch alongſt this ſhoare, and to proceede with our Shallops ſo farre as we poſſibly could: whereupon wee returned to our men againe whom we left with our Shallops, where we firſt landed.

We paſſed ouer *Wiches Sound*.

We found Beach Fins.

Hauing ſtayed here a while and obſerued the latitude which I found to be 79. degrees 54. minutes, we ſaw a Shallop come rowing towards the extreameſt point of this ſhoare, therefore we haſtned towards them to ſee who were therein, and found them to be Maſter *Marmadukes* men, lately come from their ſhip the *Hartſ-eaſe*, which they ſaid they left at Sea amongſt the Ice, about a league from *Red Beach*: here they were ſetting vp a Croſſe, which they ſaid that they found there fallen downe, and had beene formerly ſet vp in the time of Maſter *Marmadukes* firſt diſcouery, by one *Laurence Preſtwood*, whoſe name I ſaw thereon engrauen, with two or three names more, and it had the date of the ſeuenteenth of Auguſt 1612. Vpon this Croſſe they nailed the Kings Armes.

We met with the *Hartſeaſe* Shallop.

Note.

Here we parted from them, and according to our former determination we proceeded, ſome in the Shallops amongſt the Ice, and others on ſhoare, till wee went about foure leagues further: in which ſpace we found many more Finnes, and one paire of Morſes teeth, but now we found the Ice ſo cloſe packt together, that wee could not proceede any further with our Shallops: wherefore Maſter *Baffin* and I intended to walke ouer land vntill we ſhould be better ſatiſfied how farre this Sound went in, for wee could as yet ſee no end of it, and it ſeemed to make a ſeparation of the land; ſo leauing our men here with the Shallops, wee trauailed almoſt a league further, till we came to the point of a ſandie beach, that ſhot into the Sound, which was wonderfully ſtored with drift Wood in great abundance. From this point we receiued ſuch ſatisfaction as we looked for, becauſe we ſaw the end of the Sound which lies South in about ten leagues. It hath in it a good harbour that is landlockt, and doubtleſſe it is a good place for the Whale-killing if it be not euery yeare as now it is peſtered with Ice. Here I ſaw a more naturall earth and clay then any that I haue ſeene in all the *Countrie*, but nothing growing thereupon more then in other places. This Sound is that which formerly had and ſtill retaineth the name of Sir *Thomas Smiths* Inlet.

The end of Sir *Thomas Smiths* Inlet diſcouered.

Being thus ſatisfied, we came backe againe to our Shallops, and ſeeing no way but one, we returned towards our Ship; but before we could get to *Red-beach*, there aroſe a very great ſtorme from the East North-eaſt, after we had entered amongſt the Ice in *Wiches Sound*, ſo that we were ſeparated the one Shallop from the other, whereby our danger was the greater: for whiles wee were both in company together, the one might haue beene helpefull to the other when neede required, and more eaſie it ſeemed to ſaue them both, then being ſeparated to keepe either of them from wracke; but God (who in his wonted mercie is euer ready to relieue the faithfull diſtreſſed) did not onely ſo prouide that we met together againe, and indeede were helpefull the one to the other (otherwiſe I doubt the one Shallop had miſcarried, for ſhe was in great danger) but alſo deliuered vs ſafely out from amongſt theſe perillous rockes of Ice, which it was very hard to ſhun, and at the length brought vs into an open Sea, where with as ſcant a ſaile as we could make, we paſt ſwiftly before the winde, the Sea comming diuers times ouer the ſternes of our Shallops, which wet our skinnes, that had ſcarſe any dry cloathes on before to keepe them warme, by reaſon of a drizeling Snow which fell with the ſtorme: then we went aboord our Ship into the South harbour of *Faire hauen*, the fift of Auguſt, with one hundred and fiftie Beach finnes, and one paire of Morſes teeth, giuing thanks to God for his bleſſing and mercifull deliuerance.

We returned towards our Ship.

A ſtorme began when we were amongſt Ice.

We get forth of the Ice.

We came aboord our ſhip.

The ninth of Auguſt, two ſhips of the *Hollanders*, that were appointed for Northerne Diſcouery, were ſeene thwart of *Faire Hauen*, ſayling to the Southwards.

The *Holland* Diſcouerers go homewards.

The eleuenth of Auguſt, we ſet ſayle forth of *Faire Hauen*, the winde at South South-weſt, intending to make tryall, if yet the Ice would admit vs to haue paſſage to the Northwards or the North-eaſtwards. We held our courſe from Cape *Barren*, North-eaſt and by East, till ſeuen a clocke at night, at which time hauing runne eight leagues from the ſhoare, wee met with the Ice which lay East and by South, and Weſt and by North, and bore vp alongſt it to the Eaſtwards, for the winde was now come to the North North-weſt; then wee tackt about to the Weſtwards,

Our Ship went forth to Sea.

We met with Ice eight leagues from the Shore.

Digitized by Google

We plyed off and on the Ice two dayes.

Weſtwards, and plyed off and on cloſe by the Ice, till the thirteenth day at mid-night, ſtill expecting a change of the weather, that we might haue made ſome aduenture amongſt the ſhatterd Ice, for both on the twelfth and thirteenth day, the winde blew hard at North, and the weather was cold, thicke, and very winter-like with fall of ſnow: this winde being ſo contrarie, droue both the Ice and our ſhip to leewards towards the ſhoare, ſo that wee were forced to put into Harbour againe, and came to an Anchor the fourteenth day in the North Harbour of *Faire Hauen*, where the Fleet of *Hollanders* lately rid, at which time the *Hartſeaſe* was there at an Anchor.

Wee anchored againe in the North Harbor.

Now was the Land both Mountaynes and Plaines wholly couered with ſnow; ſo that almoſt all mens mindes were poſſeſſed with a deſire of returning for *England:* But to preuent a ſudden reſolution for a homeward Voyage without further ſatisfaction, I made motion that once againe we might goe forth with our ſhallops, to ſee what alteration there might bee found alongſt the ſhoare. It fell out that I was to goe in one ſhallop for this purpoſe, ſo I tooke with me eight men, and went from our ſhip the fifteenth day of Auguſt.

I went to the Eaſtwards in a ſhallop.

Ice was newly frozen in *Red-cliffe Sound.*

We rowed to *Red-cliffe Sound*, where we paſſed through much Ice that was newly congealed being thicker then an halfe Crowne piece of ſiluer, notwithſtanding we broke way through it, and being ouer the *Sound*, we had a cleere Sea againe; then we proceeded to *Red-beach*, where finding the ſhoare cleere of Ice (which at my laſt being there was wonderfully peſtered) I conceiued good hope to finde paſſage to the furtheſt Land from thence in ſight, bearing Eaſt halfe a point Southerly, nine, or ten leagues diſtant; to this end we put off from the ſhoare of *Red-beach*, and rowed a league and more in an open Sea, and then met with Ice which lay diſperſed abroad, and was no hinderance to our proceeding, ſo that we continued rowing the ſpace of ſixe houres, in which time we had gotten more then halfe way ouer: but then we found the Ice to lye very thicke thronged together, ſo that it cauſed vs much to alter our courſe, ſometimes Southward and ſometimes Northwards, and euen in this time, when we thought wee ſtood in moſt need of cleere weather, it pleaſed God to ſend vs the contrary, for it beganne to ſnow very faſt, which made the Ayre ſo thick that we could not ſee to make choice of the moſt likely way for vs to paſſe, therefore I thought good to ſtay here awhile, hoping that ere long the weather would bee more agreeable to our purpoſe; ſo a Grapnell being laid forth vpon an Iland off, to hold faſt our ſhallop, a Tent was made of the ſhallops ſayle to keepe the weather from vs, and we remayned here fiue houres, but finding no alteration in the conſtant weather, I willed the men to take downe the Tent, and with faire tearmes perſwaded them, that notwithſtanding the wet weather, it were good to be doing ſomething, to get ouer to the deſired ſhoare, where we might refreſh our ſelues, and haue fire to dry our wet clothes; they ſeemed well content with this motion, and ſo we rowed the ſpace of foure houres more, the Ice ſtill cauſing vs to hold a South and South South-eaſt courſe, which carried vs further into Sir *Thomas Smiths* Inlet, and put vs from the place where we willed to be.

I intended to go once to *Point Deſire.*

A great ſnow began.

I could not paſſe for Ice.

The thicke ſnowie weather continued all this time, which was very vncomfortable to vs all, but eſpecially to the men that rowed; and as the ſnow was noyſome to their bodies, ſo did it alſo begin to aſtoniſh their mindes, as I well perceiued by their ſpeeches, which proceeded vpon this occaſion. The ſnow hauing continued thus long, and falling vpon the ſmooth water, lay in ſome places an inch thicke, being alreadie in the nature of an Ice compact, though not congealed, and hindred ſometimes our ſhallops way; this I ſay cauſed ſome of them, not altogether without reaſon to ſay, that if it ſhould now freeze as it did that night when we came ouer *Red-cliffe Sound*, we ſhould be in danger here to be frozen vp. Howſoeuer this ſearch might bee a meanes to diſcourage the reſt, that conſidered not of ſuch a thing till they had heard it ſpoken of: yet true it is, that I ſaw no likelihood, by reaſon of the Ice, how to attayne my deſire at this time, and therefore I bade them row toward the ſhoare of *Red-beach* againe, where I intended to ſtay till the weather might happily be more conuenient. So holding a Weſt North-weſt courſe, ſo neere as the Ice would ſuffer vs, wee came to the Eaſt-ſide of *Red-beach*, hauing beene eighteene houres amongſt the Ice, during all which time the ſnow fell, and as yet ceaſed not.

The originall cauſe of Ice at Sea.

I went backe againe to *Red-beach.*

When we had been here about an houre it began to cleere vp, and the wind to blow hard at Eaſt, which rather packt the Ice cloſe together in this place then diſperſt it, ſo that I was now out of hope to get any further then I had beene alreadie: wherefore I returned toward our ſhip, intending as I went to make a more particular Diſcouerie of *Broad-bay*, and *Red-cliffe Sound*, hoping that one place or other would afford ſome thing worthy of the time and labour. When we were come to the Weſt ſide of *Red-beach*, it began to blow much wind, where withall the Sea growing to be great, all men aduiſed to paſſe ouer *Broad-bay*, whilſt the winde and weather would ſerue vs to ſayle, for they ſaid it was like to be very foule weather: ſo ſeeing that it was no conuenient time for coaſting, we came ouer the Bay to *Point Welcome* (which I ſo named becauſe it is a place, where wee oftentimes reſted, when wee went forth in our ſhallops) it is about foure leagues diſtant from the North end of *Red beach.*

I returned towards our ſhip.

Point Welcome.

At this point the *Hollanders* had ſet vp Prince *Maurice* his Armes, neere vnto a Croſſe which I had cauſed to bee ſet vp aboue a moneth before, and had nayled a ſixe pence thereon with the

Digitized by Google

the Kings Armes, but the men that were with me, went (without any such direction from mee) and pulled downe the said Princes Armes, whilst I was gone vp a Mountayne to looke into the Sea, if I could see any Ice: and when I came downe againe they told me, that the six pence was taken from the Crosse that I had set vp, and there was another post set by it, with the *Hollanders* Armes made fast thereon, which they had pulled downe; so, because the six pence was taken away, I caused one to nayle the Kings Armes cast in Lead vpon the Crosse: which being done we rowed to the bottome of *Red-cliffe Sound*, and as we coasted along st the shoare, wesearched two little Beaches, which had some wood on them, but nothing that we found of better value.

The Kings Armes are set vp againe at *Point Welcome*. I went into *Red cliffe Sound*.

About two leagues within the *Sound*, on the East side there is an Harbour where shippes may ride in good ground Land-locke, but if other yeeres be like this, I cannot say that it is an Harbour fitting for ships, because it is late ere the Sound breake vp; for euen now there lay much Ice at the bottome of it, insomuch, that I was forcst to leaue the shallop, because I could not passe with her for Ice, and walke two miles ouer stonie Mountaynes, with another man in my company, to bee satisfied concerning a point of Land that shot into the Sound, whether it were an Iland or no, as by all likelihood it seemed to bee: but when I came to the farthest part of it, I saw it joyne to the mayne Land, wherefore I called it *Point Deceit*, because it deceiued mee so much. From hence wee proceeded toward our shippe, and came aboord of her in the North Harbour of *Faire Hauen*, on Friday night being the nineteenth of August, where she rid alone; for Master *Marmaduke* was gone forth to Sea that day.

Point Deceit.

I came aboord our ship.

The two and twentieth of August, *John Mason* Master of the *Gunsdiell*, came ouer from the South Harbour for helpe to hayle vp a Whale which had beene sunke fourteene dayes, in one hundred and twentie fathome depth, or else to pull the Warpe and Harping Iron out of her, for now it was time to take her or forsake her. Master *Sherwin* our Master caused our long Boate to bee manned and went with him; when they came where the Whale was sunke, they haled, and shee presently rose, bolting suddenly vp with a thundring cracke made with the bursting of her bodie; and notwithstanding shee had layen so long, yet had shee all her Finnes fast. Whilst this was in doing, the *Hartsease* was comming into the Harbour from the Northward, and anchored by our ship an houre after.

A Whale lay sunken fourteene dayes.

The *Hartsease* anchored by vs.

Here wee stayed till the seuen and twentieth of August, and since my last returne hither in the shallop from the Eastwards, the weather hath beene commonly warme, and the Mountaynes were now more cleere of Snow, then they had beene any time this yeere, notwithstanding there had much snowe fallen since the beginning of this moneth, but it was quite consumed, and a greater signe of warmth and thaw was now to bee obserued then any time of the yeere heretofore; namely, by the often falling of the Ice into the Sea from the huge snowie bankes, making a noyse like Thunder, so that the time was very hopefull, but thus wee made vse of occasion offered.

Warme weather in the end of August.

The seuen and twentieth of August, it was faire and warme weather, calme till noone, then had wee a gale of winde from the South South-west, wherewithall wee set sayle out of *Faire-hauen* in the company of the *Hartsease*, with whom wee had beene in termes of consortship, but nothing was concluded. About sixe a clocke at night wee were sixe leagues from Cape *Barren*, which bore from vs South-west and by South.

We set sayle to the Eastward.

Wee proceeded still to the North-eastward, and on the eight and twentieth day in the morning wee had runne about twentie leagues from Cape *Barren*, in an East North-east way by the ordinary Compasse, being open of Sir *Thomas Smiths Inlet*, nine or tenne leagues from the shoare; at which time wee were come to the Ice that trended East South-east, and West North-west, but the Sea being very rough, wee stood off againe from the Ice; in the afternoone it fell calme, and at night we had a gale of winde at East, and the ship was steered West, and then South-west homewards.

The *Thomasine* returnes for *England*.

The nine and twentieth day, the winde Easterly an easie gale; at foure a clocke in the afternoone *Hackluyts Head-land* bore from vs South-east by East foure leagues distant: this Euening was very warme.

The thirtieth day, the winde at North-east an easie gale, at foure a clocke in the afternoone, *Maudlen Point* bore East North-east halfe a Point Easterly about three leagues distant: towards the Euening it fell calme, the weather not cold.

The thirtieth day, faire Sunne-shine weather and calme till noone, and then we had a good gale of winde from the North-east, being fiue leagues distant from the *Fore-land*, which bore South-east; now wee altered our course and stood to the West-ward: therefore to keepe vs still in the parallel that now wee were in which was 79. degrees 8. minutes, West North-west course was directed, in respect of the Variation, to make good a true West way.

We stood to the westwards.

This course wee held till we had runne about twentie leagues, and then wee ranne twentie leagues more in a West and by North course till one a clocke on Friday morning; at which time it fell calme; and wee heard the Sea make a great noyse, as if wee had beene neere Land, but wee rather iudged it to bee Ice, as indeed it proued to bee, for in the morning when it

Digitized by Google

was light and cleere, wee saw the Ice about a league from vs, which trended Southerly; hauing now a gale at East North-east, wee steered away South and South South-east, but in the afternoone we were embayed with a long banke of Ice, which wee could not weather, therefore wee were faine to tacke about, and the winde hauing come more Southerly then it was in the morning, wee stood off from the Ice North-east and North-east and by North, and then to the Southwards againe, making sundrie boardes to get forth to wind-wards of the Ice.

Wee met with Ice.

The third day before noone, wee had sight againe of Ice to Westwards of vs, and at noone were vnder the paralle of 78. degrees, 27. minutes, according to my Obseruation: then wee stood a way South to keepe cleere of the Ice, for wee had a great homing Sea, although but little winde; and therefore durst not be so bold to edge too neere it, especially the wind being Easterly as then it was.

On the fourth day our men saw the Ice againe from the mayne top-mast head, and therefore wee still maintayned a Southerly course: the next day it began to be foggie, and continued close weather and hazie for three dayes, so that wee had no more sight of the Ice; neyther could wee at this time receiue any further satisfaction concerning the same: therefroe wee kept a Southerly course so neere as wee could, although wee had but little winde, and the same very variable till the ninth day, but then wee had a good gale of winde at West North-west.

We left the Ice and came for England.

On the tenth day beeing Saturday, wee were by my reckoning fiftie leagues distant from *Low-foot*, which bore from vs East South-east halfe a Point Southerly: this day the wind shifted to the South-west, and at night came to the South with much raine; then came backe againe to the West North-west and began a great storme.

A storme beganne.

This night the Master and others saw a light vpon the Fore-bonnet, which the Saylers call a *Corpo Santo*: it appeared like the flame of a Candle, and (as Sea-men obserue) it alwayes presageth an ensuing storme; which to verifie, this foule weather continued the next day, and grew to be so vehement on Sunday night, that the Sea oftentimes ouer-raked our ship, and wee were faine to lye atry with our fore course onely, and our Mayne top-mast also strucke, which last thing (as Sea-men say) is seldome done at Sea, then about one a clocke we were forced to take in our fore course, and to lye a-hull for fiue houres.

A Corpo Santo. It is often seen at the end of stormes.

The fourth day of October, the shippe came to *Wapping* with the whole number of men that shee carryed forth (my selfe excepted that was come before) being sixe and twentie, all in perfect health.

CHAP. VII.

A true report of a Voyage Anno 1615. *for Discouerie of Seas, Lands, and Ilands, to the Northwards; as it was performed by* ROBERT FOTHERBIE, *in a Pinnasse of twentie tunnes called the* Richard *of* London: *set forth at the charge of the Right Worshipfull Sir* THOMAS SMITH, *Knight, my very good Master, and Master* RICHARD WICHE, *Gouernours: and the rest of the Worshipfull Company of Merchants, called the Merchants of* New Trades *and* Discoueries, *trading into* Moscouia, *and King* IAMES *his* New Land.

BY the prouidence of Almightie God I went forth of *Harwich* Harbour in the foresaid Pinnasse, the twelfth of May, in the company of eight shippes of the Fleet, for King *Iames* his *New Land*, who in foule weather out-sayled me in the latitude 71. degrees, or thereabouts. So I proceeded alone towards King *Iames* his *New Land*: and met with Ice in latitude 73. degrees 30. minutes, I stood North-eastwards for the wast of King *Iames* his *New Land*, and had sundry conflicts with the Ice in rainie and wet foggie weather, and had sight of Land the eleuenth of Iune, and on the nineteenth of the same I anchored in *Faire Hauen*. Here I stayed till the third of Iuly, for the Pinnasse had receiued some hurt amongst the Ice, which to amend, I was faine to hale her a-ground, besides diuers other things necessary to be done, which detayned mee longer then willingly I would haue stayed there.

From hence I sayled Northward, but met with Ice in latitude 79. degrees 50. minutes, being sixe leagues from *Hacklwyts Head-land*, then I coasted the Ice as it lay in Points and Bayes to the Westwards and South-westward, and being thirtie leagues from the Land in latitude 79. degrees 10. minutes, I found it to trend Northward and North-westwards, and coasted it to the latitude

Hacklwyts Headland.

of 79. degrees 50. minutes, but then I was embayed with Ice, and was faine to stand out againe and sailed aboue ten leagues before I got cleere: when I was out of this Bay, I proceeded South Westerly with the Ice on the starboord to the latitude 78. degrees 30. minutes, where being fortie leagues from the shoare, I was againe embayed with the Ice, and hauing had faire Sun-shine weather all the day, which made mee the bolder to stand so neere it, the weather on a sudden fell foggie, and the wind beganne to blow hard at South, which put vs to great trouble and no small perill: but the Almightie power who hath mercifully deliuered vs heretofore out of as great dangers, preserued vs also from this: when wee were gotten cleere off the Ice, we had the Sea much growne, and the storme increasing, but beeing desirous still to keepe the Sea, I stood close by the wind vnder a payre of coarses, till the Pinnasse waxt leake with bearing too much sayle, and there was forced to lye atry vnder a mayne coarse only: and although shee stemmed South-east and South-east by South, yet was she hurried violently to the North-eastwards, and by the mercifull prouidence of God we fell right with the *Fore-land*, in latitude 79. degrees, then I stood ouer Sir *Thomas Smiths* Bay for harbour in *Crosse-road*, where I anchored the thirteenth of Iuly being Thursday. I stayed here foure dayes, in which time my men mended the Sayles and ships tackling that had receiued hurt by the late storme, and made a new mayne Sayle to serue in time of need, and on the seuenteenth of Iuly I weighed out of *Crosse-road*, and sayling Westwards from thence came to Ice againe in latitude 78. degrees 40. minutes, which I coasted as it lay neerest South-west, or more Westerly, but with many Points & Bayes, wherewith I was sometimes intangled, yet, God be thanked, got cleere againe, either by helpe of Oares or Sayles without any hurt. In this sort I proceeded with good satisfaction, although not with so good content, till I came to the latitude of 76. degrees, beeing aboue one hundred leagues from Point *Looke-out*, but then was crossed with a contrarie storme from the South-west and South South-west, which droue me to the South-eastward, till I came in the latitude of 74. degrees, and then I made my way Westward againe, so neere as I could lye, close by the winde, and ouer-ranne the formerly supposed Land of *Groynland*, which some haue layd downe in plats and extended to 75. degrees. When I came into the latitude of 73. degrees, I stood West and North-west, and fell with Ice againe in latitude 73. degrees 50. minutes, and thought indeed at that time that I was neere Land by abundance of Fowle, which we saw in great flockes: but such thicke fogges haue continued for three or foure dayes togesher, that we might sooner heare the Land if any were, then see it, and so did we first find this Ice by hearing the rut, thinking till we saw it, that it had beene Land, so that we were embayed with it, before we thought that we had beene neere it; then I stood out againe and coasted the Ice still to the Westwards Southerly, but could see no Land, as I expected to haue done, vntill wee came vnder the latitude of 71. degrees thirtie minutes, and then we espyed a snowie Hill very high in the cloudes, for this day was very cleere at Sea, but the fogge was not yet cleered from the Land, so that we could see no part of it, but only the top of a snowie Mountayne, which appeared very high although wee were fourteene or fifteene leagues distant from it, bearing off vs South-east and by South.

Perill and escape.

Note. Errour of *Gronland.*

Fogges.

High Hill.

Then I stood in for the shoare, supposing it had beene part of the Mayne of *Groynland:* for the fogge lay on each side of this Mount, as if there had beene a great Continent vnder it, but it proued otherwise, for as we came neerer to it, the fogge dispersed more and more, and when wee were fiue leagues distant, the Land appeared in forme like an Iland.

When I came neerer the shore, I could find no Harbor to anchor in. Notwithstanding, the weather being faire & calme, I hoist out my Boat & went ashore with three men more, and set vp the Kings Armes: then we searched a Sandie Beach, which was abundantly stored with drift wood, but yeelded no other fruits, that we could find worth the taking vp, so I returned aboord againe, and sent ashoare my Boat to fetch some wood. But before the men had laid into her the little quantitie that she was able to carrie, they came aboard againe, for the wind began to blow hard, and the Sea to goe loftie, so that here was no place for vs to abide any longer, otherwise I was purposed to haue searched further alongst the shoare, but this gale of winde comming Northerly I stood from hence to the Westwards, being desirous to see more Land or finde a more open Sea. And hauing sayled about fifteene or sixteene leagues I met with Ice again, in latitude 71. degrees, and coasted it eight or nine leagues further Westward, and South-westward as it lay, but then the wind came to the South-west, and we stood close by it a while to the Southwards; but finding the gale to increase, and considering that it was the most contrary winde which could blow against my further proceeding (for the Ice as we found did trend neerest South-west, and besides if there had beene any high Land within twentie leagues of vs, wee might perfectly haue made it, the weather was so faire and cleere.) In these respects, and for the Reasons following, I tooke the benefit of this wind to returne to the North-eastwards againe, being now about two hundred leagues from King *Iames* his *New Land* in latitude 71. degrees.

Drift wood.

Note.

First, I purposed to sayle alongst the South-east side of the Land that I had discouered, to bee better satisfied what Harbours there were, and what likelihood of profit to ensue; and from thence to proceed to the place where I first fell with Ice in latitude 73. degrees when I was driuen to the South-eastwards with a Westerly storme, for I am yet verily perswaded, that being

Digitized by Google

there we were not farre from Land, although wee could not see it by reason of thicke foggie weather. Then my further intent was, if I found no good occasion to spend my time there, for to coast the Ice, or try the open Sea to the Northwards, betwixt 73. and 76. degrees, where formerly I had not receiued desired satisfaction by reason of a storme that draue me off, and then I purposed, if time might seeme conuenient, to proceed to the North Coast of King *Iames* his *New Land*, to haue seene what hope was there to be had for passage Northward, or for compassing of the Land, which is most like to be an Iland.

I stood away East and by South, and being neere the foresaid Iland, the winde came to the West and blew a very hard gale, where with I passed alongst the South-east side of the Iland vnder a paire of coarses, but without that satisfaction which I expected: for the winde blowing so stormie, and the Sea growne very great, I was forced to stand further from the shoare then willingly I would haue done, and besides there was a thicke fogge vpon the Land, whereby I could not be satisfied what Harbours or Roads were about it, yet might we see three or foure Capes, or Head-lands, as if there went in Bayes betwixt them. I sayled about it, and then stood to the Northward againe, and being now assured that it was an Iland, I named it Sir *Thomas Smiths Iland.*

Sir *T. Smiths Iland.*

This Iland is about ten leagues in length, and stretcheth North-east and South-west: it is high Land, and at the North end of it there is a Mountayne of a wonderfull height and bignesse, all couered with Snow, which I called *Mount Hackluyt*; the base or foot of it on the East side is almost foure leagues long, it hath three such sides at the base lying out to the Sea, and from the fourth side doth the rest of the Iland extend it selfe towards the South-west, which is also, as it were, a place fortified with Castles and Bulwarkes, for on each side there bee three or foure high Rockes which stand out from the Land, appearing like Towres and Forts. It lyes in the parallel of 71. degrees, where the Needle varieth from the true Meridian Westwards eight degrees. The Land is generally so farre as I haue seene, Rockie and very barren, and worse then the Land that I haue seene in King *Iames* his *New Land*, vnder eightie degrees, for there is no grasse but mosse, and where I first landed vpon low ground, all the stones were like vnto a Smiths sinders both in colour and forme. the sand is generally mixed with a corne like Amber; the Beaches are abundantly stored with drift wood and many stones, light like Pumis, which will swimme on the water. I saw many traces of Foxes and the footing of Beares, but not any signe of Deere or other liuing creatures, and very small store of Fowle.

Mount Hackluyt.

From hence I stood to the Northward according to my former purpose, but was crossed with a contrarie storme from the North-west which put me off to the Eastward: but as the wind shifted I made my way to the North-westwards all I could, and came againe to the Ice in latitude 75. degrees, from whence I proceeded towards King *Iames* his *New Land*, and had sight of the Land the eighteenth of August, being in latitude 77. degrees 30. minutes; and hauing a hard gale of wind then at North-west, I stood close by it vnder a paire of coarses, but could not weather Prince *Charles Iland*, and therefore I bore vp, intending to goe into *Nicks Cone*, which is on the North side of *Ice-sound*, there to attend a faire winde, and in the meane time to get ballast aboard the Pinnasse, and all other things necessary. But comming to enter into the Harbour, I thought it not a place conuenient, because I could hardly haue gotten out againe with a Southerly wind, which would carrie me to the Northwards, and therefore I stood ouer for *Green-harbor*, where I anchored at one a clocke in the morning, the nineteenth of August.

Here I caused my men to launch a shallop, and to get ballast and water aboard the Pinnasse, and before nine a clocke at night I was readie to proceed Northward with the first faire winde. I stayed here fiue dayes, during which time it blew hard for the most part at North and North-west, and on the foure and twentieth of August, the winde came to the East North-east as wee supposed, till we were out of the Harbour, so I set sayle to proceed Northward, and had the wind Easterly out of *Ice-sound*, wherewith I stood North-west towards Cape *Cold*, but being cleere of the high Land, we found the wind to bee at North North-east, therefore I resolued of another course, which was this.

Hauing perused *Hudsons* Iournall written by his owne hand in that Voyage wherein hee had sight of certayne Land, which he named *Hold-with-hope*; I found that by his owne reckoning it should not be more then one hundred leagues distant from King *Iames* his *New Land*, and in the latitude of 72. degrees 30. minutes or thereabouts: therefore seeing I could not proceed Northward, I purposed to goe to the South-westwards to haue sight of this Land, and discouer it, if wind and weather would permit. So I stood away South-west, and sometimes West South-west, till I had runne one hundred and thirtie leagues, and was by account in latitude 72. degrees 30. minutes, where hauing the wind contrarie to proceed further Westward, I stood Eastward till I had runne thirtie leagues, in which course I should haue seene this Land, if credit might be giuen to *Hudsons* Iournall, but I saw not any. And hauing a hard gale of winde still Northerly, I conceiued no course so good to be taken at this time, as to speed homewards; and so stood to the Southwards, directing my course for *England*, this being the eight and twentieth of August. After which time the wind continued Northerly till the sixt day of September, and then wee

Hudsons Hold-with-hope questioned, as before also.

were

Digitized by Google

were on the coast of *Scotland* in latitude 57. degrees, and on the eight day of September had sight of the land of *England* on the coast of *Yorkeshire*. Thus by the great mercy of God haue we escaped many dangers, and after a cold Summer haue some taste of a warme Autumne. All glorie therefore be to *God* the *Father*, the *Sonne*, and the *Holy Ghost*. Amen.

By this briefe Relation, and by the plat wherein I haue traced the ships way vpon each seuerall trauerse it may plainly appeare, how farre the state of this Sea is discouered betwixt 80. and 71. degrees of latitude, making difference of longitude 26. degrees from the Meridian of *Hackluyts Headland*.

Now if any demand my opinion concerning hope of a passage to bee found in those Seas; I answer, that it is true, that I both hoped and much desired to haue passed further then I did, but was hindred with Ice: wherein although I haue not attayned my desire, yet forasmuch as it appeares not yet to the contrarie, but that there is a spacious Sea betwixt *Groinland* and King *Iames* his *New-land*, although much pestered with Ice; I will not seeme to diswade this worshipfull Companie from the yeerly aduenturing of 150. or 200. pounds at the most, till some further discouerie be made of the said Seas and Lands adjacent, for which purpose no other Vessell would I aduise vnto, then this Pinnasse with ten men, which I hold to bee most conuenient for that action, although heretofore I conceiued otherwise, but now I speake after good experience, hauing sayled in her out and in aboue two thousand leagues.

RO. FOTHERBY.

A Letter of ROBERT FOTHERBY to Captaine EDGE, written in *Crosse-rode*, Iuly 15. 1615.

MAster Edge, *By the mercy of God I came into* Crosse-road *on Thursday last, being driuen from Sea neere shoare by extreme tempest. At the beginning of the storme I was vnwittingly embayed with Ice aboue fortie leagues from land, in latitude* 78. *degrees and* 30. *minutes, but, thankes be to God, I got cleare of it, yet not without much trouble and great danger. Hauing plyed vnder two coarses to and againe so long till my Pinnasse was made leake with bearing, I tryed it vnder a mayne coarse and stem'd South-east and South-east and by South, notwithstanding I was hurried to the Northward, and fell right with the* Foreland, *which by reason of the misty storme we could not see till we were within a league of it; then I stood ouer the Bay and came to an anchor here, where I must be forced to stay till our sailes be mended, and a new mayne coarse be made, if not a fore coarse also. Then I purpose to goe to Sea againe, and to proceed in coasting the Ice to the Westward, if it hinder me to proceed Northward. I haue already coasted it from* Hackluyts Headland *to the latitude aforesaid, and intend to beginne againe so neere as I can at the place where I was put off with the storme. I came from* Faire Hauen *the fourth of Iuly, and then had there beene killed twelue Whales, besides one found dead, and another brought in by* Fra. Birkes, *which he found at Sea before he came into* Faire Hauen.

Ships of the King of Denmarke.

When I came in hither, here were three Ships and a Pinnasse of the King of Denmarks; *they rid in deepe water about a league and a halfe from the Road, but weighed from thence, and the Admirall came to an anchor close by me, and sent to intreat me to come aboord of him; I went aboord and was courteously entertayned by the Generall, who questioned me of the Country, and asked me by what right the* Englishmen *Merchants did resort and fish in this place: I told him, by the King of* Englands *right, who had granted a Patent to the* Muscouie *Company of Merchants, whereby he authorizeth them, and forbiddeth all others to frequent these places. Then he entreated me to goe with him to Sir* Tho. Smiths *Bay, to the two* English *ships there. I told him, it would be losse of time to me, because I had some businesse here to doe, and then to goe forth presently to Sea againe to prosecute my Discouery. He said, that he would haue me goe with him to be witnesse what passed betwixt him and you, for he had matters of importance to acquaint you withall, which concerned our King and theirs, and therefore intreated me to giue direction presently to weigh and set saile, for I must needs goe with him: I replyed againe, that it would be a great losse vnto me of time, and I knew not how to answer it; but he told me peremptorily that I must goe with him. So seeing no remedie, I bad the Master be readie: then he presently weighed and kept me aboord him, but afterwards meeting with the two Captaines that came from you, he returned and anchored againe in* Crosse-road. *I receiued very courteous entertaynment of the Admirall, Vice-admirall, and of Captaine* Killingham: *but Captaine* Killingham *being aboord of me, went away as he seemed, discontented, because I would not giue him a young Morse I haue aboord, which I denyed to doe, because I writ to my Master from* Faire Hauen, *that such a thing I haue, and will bring aliue into* England, *if I may. When he went off aboord of me, he said, he would shoot downe my flag: And soone after there came a shot which flue ouer vs, out of the Admirall, and I expected another; but soone after there came a man aboord of me out of the Admirall, to see if any of your men that came in the Shallop, would goe with them into the Bay, and he swore vnto me that the shot was made to call their Boat aboord, because they were ready to weigh. As farre as I can perceiue, their purpose is to see what Grant the King of* England *hath*

made vnto the Companie, for they seeme to pretend that the right of this Land belongs to the King of Denmarke, *and neither to* English *nor* Hollanders. *Thus with my heartie commendations to your selfe, and Master* Bredcake, *together with my praiers for your prosperous voyage, I commit you to God.*

CHAP. VIII.

Diuers other Voyages to *Greenland*, with Letters of those which were there employed, communicated to mee by Master WILLIAM HELEY.

An. 1616. *Edges* Iland was discouered, and a prosperous voyage was made, all the ships being laden, vnder the command of Captaine *Thomas Edge*. An. 1617. *Witches* Iland was discouered; and what voyage was made appeareth in the Letter following, written to Master *Decrow* by *William Heley*.

Laus Deo, in Portnick *the* 12. *of August*, 1617.

Worshipfull Sir,

MY *dutie remembred, May it please you to vnderstand, that through Gods blessing our Voyage is performed in all the Harbours in the Countrie this yeere, with a greater ouerplus then our ships will carry: so that in some places wee must of force leaue good store of Oyle and Blubber behinde for the next yeere. Wee are all for the most part readie to set sayle, being full laden: onely I desire to see the Coast cleere of Interlopers, whereby our prouisions may be left in securitie. We tooke a ship of* Flushing, *called the* Noahs Arke *(Master,* Iohn Verlile*) in* Horne-sound, *hauing out of him two hundred hogsheads of Blubber, and two Whales and a halfe to cut vp, a great Copper, and diuers other prouisions, and sent him away ballasted with stones. There were two more of them who were gone laden with Blubber, before we could get thither, hauing intelligence of our comming. There were also two* Danes, *who made one hundred and odde tunnes of Oyle, and laded one ship for* Copen-hauen, *the other with halfe the Oyle and Finnes for* Amsterdam, *and left the Country about the sixth or seuenth of August. And for Master* Cudner, *he rid in* Portnick, *where he killed eleuen Whales, and made some seuentie and odde tunnes of Oyle, which is laden aboord him and his Finnes. In whom, if our ships had come together thither as I desired, I would haue laden fortie or fiftie tunnes of Oyle in him, and displaced his men and sent him for* England: *but bad weather hindring our ships getting thither, and his sudden departure after our comming in with the* Pleasure, *shee being laden and not sufficiently fisted to surprise him, he escaped, but I sent her away in company with him, whereby he may not doe any hurt in other places in the Country. I would haue had him to haue taken in some Oyle, for which I offered him fraight, so I might put some men into him to see to it, and that it might be brought safe to* London: *but he refused, yet protesteth, he purposeth to bring his ship and goods to* London: *his voyage is by the thirds, so that his men will rather dye then forgoe that they haue got. The small ship* Iohn Ellis *is returned from the South Eastward, hauing made some further discouery, and killed some eight hundred Seamorse, and laden the teeth, and thirtie tunnes of hides, and the rest of his lading in Oyle: he brought some Sea-horse blubber with him. He met with* Thomas Marmaduke *of* Hull *in those parts, who had not done any thing when he saw him towards making a voyage, but went for* Hope *Iland, and no doubt but hee will doe much spoile there. As for the* Beare, *shee departed for* Hamborough *the third of August out of* Crosse-road; *and the* Gray-hound *in company with her for* England, *who, I hope, is safely arriued, and by whom I hope you vnderstand of her proceedings at full.*

The Whales killed this yeere in the Country are about one hundred and fiftie in number, and the Oyle made will be about one thousand eight hundred and odde tunnes, besides the blubber left for want of caske. The lading of this ship is one hundred and eightie tunnes, as by the Bill of lading here inclosed. Thus hauing not further wherewith to acquaint your Worship, withall praying God to send all home in safety with a good passage; I humbly take my leaue, and doe rest

Readie at your Worships command in all dutifull seruice.

WILLIAM HELEY.

Digitized by Google

A Letter of Master ROBERT SALMON *to Master* SHERWIN. *In Sir* THOMAS SMITHES *Bay, the* 24. of Iune, 1618.

LOuing friend Master Sherwine, *I kindly salute you, wishing you as much prosperitie as vnto my selfe, &c. Since our comming into the Bay, we haue beene much troubled with Ice and Northerly windes, so as we haue not beene two dayes free of Ice. We had a storme Northerly which brought in much Ice, so as we were inclosed withall eight dayes: there went such a Sea in the Ice that did beate our ships very much for fourre and twentie houres, that I did thinke we should haue spoyled our ships: but I thanke God we cannot perceiue any hurt at all it hath done to vs; also we haue broken two anchors with the Ice; we haue killed thirteene Whales, but they yeeld but little, in regard of the Ice which hath much hindred vs in our worke, for in ten dayes we could not doe any worke the Bay was so full of Ice: the Bay was full as low as* Fox nose, *and now at this present the Bay is full of shattered Ice, the windes hanging Northerly keepes it in. Here is fiue sayle of* Flemmings *which haue fourteene and sixteene pieces of Ordnance in a ship; and they doe man out eighteene Shallops, so that with theirs and ours here is thirtie Shallops in the Bay, too many for vs to make a voyage: there is at the least fifteene hundred tunnes of shipping of the* Flemmings; *we haue reasonable good quarter with them, for we are merry aboord of them, and they of vs; they haue good store of Sacke, and are very kinde to vs, proffering vs any thing that we want. I am very doubtfull of making a voyage this yeere, yet I hope* Crosse-road *will helpe vs for one ship; the Company must take another course the next yeere: if they meane to make any benefit of this Country, they must send better ships that must beat these knaues out of this Country, but as farre as I can vnderstand by them, they meane to make a trade of continuance of it: they haue euery one of them Graue* Maurices *Commission vnder his Hand and Seale: we will let them rest this yeere, and let who will take care the next yeere, for I hope not to trouble them. I pray remember my dutie to the Captaine, and also to honest Master* Thornbush, *and to* Iohn Martin; *Master* Smith *doth remember his loue to you, and to all the rest of his friends: we are well at this present, I thanke God: I pray let vs heare from you when you haue any conuayance; I hope wee shall goe home in companie together as wee came out. Thus with my loue once againe remembred to you, beseeching God to send vs all a prosperous voyage, and ioyfully to meet, I rest.*

A Letter of Master TH. SHERWIN: *Bell-sound* this 29. of Iune, 1618.

MAster William Heley, *your Letter I receiued, wherein I vnderstand you haue tooke very great griefe, which I am very sorry for: but I am in good hope to come to you my selfe one of these dayes, that I may comfort you with a good couple of Hennes and a bottle of Canary wine, but I pray bee carefull of your selfe and keepe you warme, and take heede the Nodis doe not pick out your eyes: but as for the* Flemmings *let them all go hang themselues, and although you be not strong enough to meddle with them, yet the worst wordes are too good for them, the time may come you may be reuenged on them againe. The Captaine wishes they would come all into* Bell-sound *and beat vs out, and carry vs for* Holland; *here is a great fleet of them in this Country. Here came in two* Flemmings, *but wee handled them very honestly, but for feare of after-claps, or had it beene the latter part of the yeere, we would haue handled them better; now they be gone for* Horne-sound, *I would that they had all of them as good a paire of hornes growing on their heads, as is in this Country. As concerning our voyage, Master* Salmon *can certifie you both in* Horne-sound, *and in our harbour. My brother* Busse, Iohn Martin, *and I, drinke to you, and wish you many a Venison pasty. We haue so little to doe wee feare we shall all haue the Scurvy, but we haue pulled downe the* Flemmish *house, and brought it neere more fit for our turne. Thus praying you to remember my loue to all at* Faire-hauen, *I cease, with my prayers to God, to send you and vs all a prosperous voyage, with all your good health, that we may goe merrily home together.*

A Letter of IAMES BEVERSHAM to Master HELEY. From *Faire-hauen*, the 12. of Iuly, 1618.

MAster Heley, *My commendations remembred to your selfe, Master* Salmon, *Master* Smith, *and Master* Beymond, *as also to Master* Wilkenson, *Mate* Headland, *Master* Greene, *and the rest of our good friends with you, wishing all your healths as my owne; I am very sorry to vnderstand of the annoyances by the* Flemmings, *both with you and other places; as also of the small hope there is, in making a voyage this yeere. For our parts we are and haue beene so pestered with Ice these twentie dayes, that we haue not beene able to goe out to Sea with our Shallops aboue twice in the time, neither haue we beene able to doe any good by reason of foule weather and fogs, nor haue seene any more then*

one

Digitized by Google

one Whale in all that time, which after shee was killed turned vs to much trouble, by reason of foule weather, and forced vs at last to leaue her in the Ice, where the Beares made a prey of her, who I feare will spoyle her before shee be recouered. We haue killed sixteene Whales besides, whereof the Flemmish Biscainers *stole one, for which they haue promised satisfaction, but they are so shut vp with Ice that they are not able to stirre either Ships or Shallops. All the Sea to the Northward of* Hakluyts headland, *and both Eastward and Westward thereof, is packt so full of Ice, that I feare it will ouerthrow our voyage, and put our ships in much hazard, the Lord release vs of that miserie in due time. I neither haue nor will be slack to doe my best endeuours for the good of the voyage, the prosperitie whereof I doe much wish and desire both here and in all other places. I pray remember my loue to the Captaine, by your next conuoy to the Southward, with my commendations to all the rest of our friends; thus for present wishing your health, I kindly take my leaue, and rest your louing friend.*

I had thought to haue added a large Discourse of occurrents betwixt the *Dutch* and *English* in *Greenland* this 1618. and had prepared it to the Presse. But hauing alreadie giuen some Relation thereof from Captaine *Edge* &c. and seeing the insolencies of some of the *Dutch* were intolerable to *English* spirits, which then suffered, or hereafter should reade them; I chose rather to passe them by; aduising my Countrimen not to impute to that Nation what some frothy spirit vomits from amidst his drinke, but to honor the *Hollanders* worth, and to acknowledge the glorie of the Confederate Prouinces, howsoeuer they also haue their sinks and stinking sewers (too officious mouthes, such as some in this businesse of *Greenland*, beyond all names of impudence against his Maiestie, and his Leege people, as others elsewhere haue demeaned themselues) whose lothsomenesse is not to be cast as an aspersion to that industrious and illustrious Nation. Euery Body hath its excrements, euery great House its Vault or Iakes, euery Citie some Port exquiline and dunghils, euery Campe the baggage; the World it selfe a Hell: and so hath euery Nation the retriments, scumme, dregs, rascalitie, intempered, distempered spirits, which not fearing God nor reuerencing Man, spare not to spue out that to the dishonor of both, which sauing the honor of both can scarsly be related after them. A difference is to be made of relation and personall faults, of which we haue said enough in the East *India* quarrels, twixt ours and the *Dutch*.

A Letter of Iohn Chambers to W. Heley, Bel-found Iune 16. 1619.

Louing and approued good friend, Master William Heley, *&c. I am forc't to write in teares vnto you for the losse of our Men, by the most vncouth accident that euer befell vnto poore men. The thirteenth of Iune last we were put ashore in the* Ice Bay, *our Shallops being not aboord: but as soone as wee heard of it, we made what haste we could, and haled our shallops vpon the Ice, and went aboord our ship. By that time we had beene there an houre, making what meanes we could to get her out, a maine peece of the Cliffe falling, the fearefullest sight that euer I beheld being then aboord, expecting nothing else but death, with all the rest that were in her: But God of his great mercie and prouidence deliuered vs, that were not then appointed to dye, that were past all hope of life; for the Ice fell so high and so much, that it carried away our fore-Mast, broke our masne-Mast, sprouug our Bouldstrut, and fetcht such a careere that she heaued a piece of Ordnance ouer-boord from vnder our halfe Decke, hoise me ouer boord amongst the Ice in all the sea, and yet I thanke the Lord I was neuer hurt with a piece of Ice, although it pleased God they were spoyled and killed close by me. Thus hauing related vnto you the miserie of this our Voyage, hoping of your aide and assistance in what you may, I shall be euer bound to pray for you. The Captaine bid me write vnto you for a fine inch Haser, which I pray you spare me and it be possible: I haue writ the particular of our wants in my Brother* Sherwins *Letter, which I pray you be a meanes to further me in. Thus ceasing any further to trouble you, I commit you vnto the Lord, vnto whom I pray to blesse and prosper you in this your present Voyage, with all the rest of your dayes.*

Terrible Disaster.

The men that are killed are these: My Mate *Money*, *Nicholas Greene* and *Allin* the Butcher. There be many more hurt which I hope will recouer it by the helpe of God and the meanes of a good Surgeon.

Louing friend Master Heley, *I kindely salute you, &c. Your Letter I receiued the fifth of this present: wherein I vnderstand of the backwardnesse of your Voyage, the which I am hartily sorrie for: but you must be content, seeing it is the will of God it shall be so, and that other harbours take neighbours fare with you: our best hopes of our Voyage was vpon you, for of our selues we doe little, in regard we are much troubled with Ice, and haue bin so this ten dayes, which hath made vs hale ashoare sixe or seauen times for it: we haue had the windes at North-east, and East North-east, and at North-west, which now keepes in the Ice: we haue killed ten Whales, whereof eight are made into Oyle, which hath made one hundred and eleauen Tuns & a halfe, the other two were killed the fourth of this present, being very large fish,*

not

not doubting but they will make sixe and thirtie or fortie tunnes: we haue the hundred tunnes aboord, the rest Master Barker taketh in, in regard Master Bushes shippe is not fitted vp, we shall make her fore-Mast to serue againe and all things else for this Voyage. The fourth of this present, George Wiuelden came from Horne-sound, where they haue killed foure Whales, they haue bin much troubled with windes Easterly, also much Ice, there is so much Ice off of Point Looke out, that George could not get about. This Ice hath put in young Duke of Hull into Horne-sound, his ship being much torne with the Ice, his Merchant is now aboord of vs, his name is Medcafe, whom the Captaine doth detaine, his Voyage is vtterly ouerthrowne, for he hath lost one shallop with sixe men, and another shallop broken with the Ice, his Ruther Irons being all broken, his Steeme broke a way close to the Woodings, also George did meete with a Fleming of Flushing, burthen two hundred tuns, the which he thinkes is cast away with Ice, for the Ice did beate her very sore. I vnderstand by M. Catchers Letter, that there is eleauen saile of Flemmings and Danes about them, I doubt not but we shall call them to account of how many tunnes of Oyle they haue made, as they did call vs the last Voyage to account: my loue is such vnto them, that I protest I could wish with all my heart that we might goe and see them, and to spend my best bloud in the righting of our former wrongs. Also I vnderstood by Robert Foxe, that Adrian of Flushing is one of them, I should be very glad to see him, that I might balance the account with him. The Captaine willed mee to write vnto you concerning the Russe house, that if you cannot set it vp, that then you should make an English house of it, and to place the post of a Deales length, and to be three Deales in length, and so much in breadth, and so to couer it with Deales the next yeare, and so he thinketh that it will make two frames: also hee could wish that you would remoue the Coppers more vp into the Bay. I pray you commend me to my louing friend Master Sherwine, Master Wilkinson, Master Henderson and Michael Greene; also my loue remembred vnto your selfe, I take my leaue, hoping we shall see you at the Fore-land ere it be long: till when, I pray God to blesse you and prosper you in all your proceedings. Resting still

Bell-sound the fifth of
Iuly. 1619.

Your assured friend to command
ROBERT SALMON Iunior.

A Letter of I. CATCHER to Master HELEY from *Faire-hauen. Laus Deo*, this seuenteenth of Iune 1620.

LOuing Brother, with my best loue I salute you, wishing you better then we at this time, to haue good store of Whales to make for you and vs a Voyage, for we haue seene small store of Whales, but haue killed none as yet. In the Flemish harbour there is three Flemings great shippes, whereof is one Statesman of Warre, who haue set to Sea eighteene shallops with three Biscaners in euerie shallop; and in our harbour two of the Kings of Denmarkes ships, who haue set to Sea seauen shallops with three Biscainers in euerie shallop: the Hollanders haue killed one Whale, and found one Whale of the last yeares killing. I thought good to send to you the sooner, because we hope you haue good store of Whales, that you may send for vs to you, which I pray God you may, for we are in great doubt, but our hope is, if that you are not yet prouided to send for vs, we haue a great time to stay in this Countrie, in which time, it may so please God, that we may here make a Voyage. For our selues, one of our men is dead, and one other sicke, so that wee haue but one and fiftie men, which is too little as you know, therefore if you can spare vs three men, they will stand vs in good stead: if our Voyage commeth in, there is to the Northward good store of Ice, which putteth vs in good comfort that we shall haue Whales: the Danes doe report that there is two shippes to come from Denmarke to our harbour, but as yet are not come. I pray you commend vs to Master Wilkinson, Master Greene, Master Hedlam, Master Cleyborne, Master Alpho, and all the rest of our good friends. Humfrey Moore is very sicke, so that we shall want a Harponiere. I know not what to write more to you, for with griefe I write this. Thus kindely taking my leaue, beseeching God to blesse vs, and send vs a good Voyage, with a merry meeting, I rest

Your louing brother to vse
IOHN CATCHER.

A Letter of ROBERT SALMON from Sir THOMAS SMITHS Bay, Iuly 6. 1621.

LOuing friend Master Heley, with my loue I salute you, &c. These are to certifie you, that vpon the fifteenth of the last, we arriued at Sir Thomas Smiths vnfortunate Bay: since which time we haue killed sixe Whales, which are almost reduced into Oyle, being some seuentie tunnes or somewhat more; so within a day or two we may goe sleepe, for I feare we haue our portion of Whales in this place: wee haue not seene a Whale this foureteene dayes, and faire weather is as scarse as the Whales, for ten daies together nothing but blow, sometime Southerly and sometime Northerly: I doe verily perswade my selfe that God

Digitized by Google

God is much diſpleaſed for the blood which was loſt in this place, and I feare a perpetuall curſe ſtill to remaine yet; God I know is all-ſufficient, and may, if it pleaſe him, ſend a Voyage in this place. Newes from Faire-hauen *I can write you none, for as yet we haue not heard from him: the reaſon thereof I cannot conceiue; I feare his Shallop is miſcarried, for certainely elſe we ſhould haue heard from him ere this, or ſome other cauſe there is: I pray God it be not ſo. I pray commend me to Maſter* Iohn Hedlam, *and tell him that the Maſter and Pilot doe ſet both their horſe together, being very great friends: alſo I pray commend me to my Coſen* William Driuer *and Maſter* Wilkinſon, *wiſhing them all happineſſe. I am in good hope that you haue done ſome good vpon the Whale, not doubting but you will haue ſufficient for your ſelues and to helpe your neighbours, the which I deſire may be. Other newes I haue none to write you. So deſiring God to bleſſe you in your proceedings in this your Voyage, I take my leaue: Reſting*

Your louing friend to command
ROBERT SALMON *Iun.*

Nine Ships were imployed *Anno* 1622. of which one for Diſcouerie. Their diſaſtrous ſucceſſe you may reade before, page 469. The laſt Fleete *Anno* 1623. was ſet forth by the former Aduenturers, vnder the command of Captaine *William Goodlard*, *William Heley* being Vice-admirall. Of the ſucceſſe thereof you may read the Letters following.

Laus Deo in Faire-Hauen, the foure and twentieth of Iune, 1623.

MAſter Heley, *your health wiſhed, as alſo a happy accompliſhment of your pretended Voyage deſired. I had written you according to order, of all matters happening ſince our arriuall, had not contrarie windes and weather preuented, and therefore haue taken the firſt opportunitie offering at preſent.*

Wee arriued at our harbour with both our Ships in ſafetie vpon the third of this preſent, bleſſed be God, finding the yeare paſt to haue beene a verie hard ſeaſon, in regard of the great quantitie of Snow and Ice, but yet not very offenſiue to vs in reſpect of our good harbour. Touching our proceeding vpon our Voyage, by the eight of this preſent we had killed thirteene Whales, and then were all our Shallops conſtrained in, by reaſon of foule weather, till the fifteenth, dicto, *and vpon the fifteenth we killed two more, which being all boyled but the heads, and then eſtimated will hardly make paſt eightie Tunnes, which is a very ſmall quantitie. The weather continued bad till the twentie two,* dicto, *and vpon the three and twentieth we killed three more, which by probabilitie will make neere fortie Tunnes. And thus wee doubt not but by degrees we ſhall accompliſh our Voyage, by the grace of God.*

As touching our order for the Flemmings, *wee went as yeſterday aboord them, ſuppoſing that wee ſhould haue found the* Danes *there, but they are not as yet arriued, but wee found there fiue ſailes of* Flemmings, *the* Admirall *fiue hundred Tunnes, the* Vice-admirall *of the ſame burthen, the other three neere two hundred each Ship, hauing alſo fiftie or ſixtie perſons amongſt them, hauing foure and twentie Shallops belonging to their fiue Ships, and are building Houſes and Tabernacles to inhabit, for they make new and ſubſtantiall: alſo they told vs, they expected one or two Ships more euerie day: after ſome time we had conference concerning the order giuen vs with the Generall* Cornelius Ice, *and declared vnto him that the time granted them to fiſh vpon King* Iames *his* New Land *was expired, and thereupon his Maieſtie hath granted to our Principals a Commiſſion vnder the broad Seale of* England *for the depreſſing of any Interloper or* Flemming *whatſoeuer that we ſhall meete withall vpon this Coaſt; yet notwithſtanding it pleaſed our Principals to appoint vs to goe aboord them, and in a louing manner to informe them hereof, which if you will condeſcend vnto and deſiſt fiſhing, you ſhall manifeſt your ſelues friends to our Principals; if otherwiſe, you ſhall cauſe them to compell by force; who had rather perſwade by loue. Vnto which he anſwered, that he heard of no ſuch matter in* Holland, *for if there were, it ſhould be certified by writing: to which we anſwered, that Sir* Nowel Carroon *their Agent was not ignorant of it, who ſhould giue information: and ſaith he, I haue a Commiſſion from the Prince of* Orange, *for the making of my Voyage vpon this Coaſt, which was procured by my Merchants for my defence: and this is that could be gotten by words from him.*

Alſo at our firſt arriuall, there rode two Biskie ſhippes with the Flemmings, *but within a day or two they waied and ſtood for the Southward: but inquired of the* Flemmings *what port they were bound for, they anſwered, for the North Cape; but Maſter* Maſon *is perſwaded they are at* Greene-harbour: *to which purpoſe I wrote to Maſter* Catcher, *that he giues order to his ſhallop that goes to* Bel-ſound, *to ſtand in for the harbour, to giue the Captaine true information. And ſo for preſent I reſt, intreating you to remember me to Maſter* Salmon *and Maſter* Iohn Hadland: *and thus contracting my ſailes, leſt the winde of my words carrie me into the Ocean of diſcourſe, here I anchor: reſting*

Your friend
NATHANIEL FANNE.
Maſter

Master CATCHERS Letter the nine and twentieth of Iune, 1623.

BRother Heley, with my best loue I salute you, wishing your health with a prosperous Voyage, &c. Since our departure, we haue had much foule weather and troubled with Ice before we could get into harbour, and after we came into harbour, we neuer let fall anchor, by reason of the Ice, till the sixteenth of this month, in which time we killed sixe Whales at the Fore-land, which made but eighteene Tuns and a halfe; and since we haue killed sixe Whales more, which I hope will make in all vpwards of eighteene Tunnes. We haue fit nine Shallops verie well, and I thanke God not one of our Men faileth, saue one that was shot accidentally with a Musket. I hope some of the Southerne harbours will supply our wants, if there be any, which I feare there will: our harbour, manie say still, is vnpossible to make a Voyage, by reason that the Flemmings shed blond there, which I pray God to take that plague from vs. For Faire-hauen, I doubt not but that you shall heare by the Letters sent you of the proceedings; but Master Sherwin writ, that there is fiue Flemmings of fiue hundred Tunnes a peece: there was also two Biscainers which the English nor Flemmings would suffer to fish: therefore they departed, and said they would goe for the North Cape; but I thinke they are in Greene-harbour, or gone to the Eastward; which if they be in Greene-harbour, our Shallop going to Bel-sound shall touch there to see, and so certifie the Captaine, and know his will what he would haue done in it: I hold it not fit that they should harbour there. There are no Danes in the Countrie as yet, &c.

Captaine WILLIAM GOODLARDS Letter: *Bell-sound* this eight of Iuly, 1623.

LOuing friend Master Heley, I kindely salute you, wishing health to you with the rest of your companie, praising the Lord for your good successe in your fishing. To certifie you of our proceedings; wee haue killed here in Bel-sound three and thirtie Whales, and lost manie more by Irons broken, yet I hope sufficient to fill our ships: we haue boiled a hundred and eightie Tunnes, of which a hundred and sixtie aboord our Ship, and make account sixtie tunnes more will fill our hould. Our Whales here proue verie watrish and leane, which maketh bad Oyle, and hindereth vs much in boyling. This present day our shallop came from the Fore-land, at which time they had killed fifteene Whales verie small, and are verie doubtfull of a Voyage there: if God sendeth fish into this harbour, I will not spare till I haue killed sufficient to fill all our Casks, to leaue for them if there be occasion. The foure and twentieth of Iune, there was killed at Faire-hauen eighteene Whales, which proue verie small to yeelde by their estimation one hundred and twentie tunnes: hauing there fiue Flemmings well fortified, and ships of fiue hundred Tuns some of them, and two more expected thither euerie day, which I feare will hinder much our shippes in their fishing this yeare, and in my iudgement not to be remoued from thence, for they hauing a Commission from the States to fish vpon this Coast; were our whole Fleete there, and could put them away, yet would they flie to one of our Southerne harbours, and so should we spend our time in following of them, and lose our Voyage, &c. There were two French Ships of Saint Iohn de Luz at Faire-Hauen, which were put away by the Flemmings and our Ships, which they iudge are gone for the Cape. Flemmings.

With a heauie heart I write you the lamentable accident which happened here the eight and twentieth of Iune, our shallops all out in chase, and my selfe asleepe; my brother hauing a shallop lying by the ships side, spide a Whale going into the Ice Bay, followed him and strucke him, and his rope being new ranne out with kinckes, which ouerthrew his shallop, where he lost his life with my Boy Bredrake, being as we thinke carried away with the rope (the deerest Whale to me that euer was strucke in this harbour) there was neuer anie losse, I thinke, went so neere my heart, &c. Peter Godford drowned.

Many other Letters I could haue added, but doubt I haue already wearied you with this vncouth Coast, whereto our *English* Neptunes are now so wonted, that there they haue found not onely Venison, but *Pernassus* and *Helicon*; and haue melted a *Musean* Fountain out of the *Greenland* Snowes and Icie Rockes. Whole Elaborate Poems haue I seene of Master *Heley*, as also of *Iames Presson*, there composed: but we haue harsher Discoueries in hand, to which wee are now shipping you. This I thought good at our parting to aduertise thee, that Master *Heley* hath affirmed to me touching the diuersitie of weather in *Greenland*; that one day, it hath beene so cold (the winde blowing out of some quarter) that they could scarse handle the frozen sailes: another day so hot, that the pitch melted off the ship, so that hardly they could keepe their cloathes from pollution: yea, he hath seene at midnight Tobacco lighted or fired by the Sunne-beames with a Glasse. Likewise for a farewell to our Whale-storie, I thought good to deliuer Stowes relation touching a Whale somewhat differing in forme from those here vsually found in Greenland: my selfe also hauing spoken with some diligent viewers thereof in Thanet where it was taken Iulie 9. 1574. shooting himselfe on shore besides Rammesgate in the Parish of Saint Peter, and there dying forsaken of his Ocean parent. Hee came on shoare about sixe of the clocke at night, and died about sixe the next morning, before which time he roared and Cold and heate strangely variable. Tobacco lighted by the Sun at midnight.

and was heard more then a mile on the land. The length was two and twentie yards, the nether iaw twelue foote in the opening: one of his eyes (which in the Greene-land *Whale, is verie ſmall, not much greater then the eye of an Oxe) being taken out of his head, was more then ſixe Horſes in a Cart could draw; a man ſtood vpright in the place whence the eye was taken. The thickneſſe from the backe whereon he lay, to his bellie, which was vpwards, was fourteene foote; his taile of the ſame breadth: three men ſtood vpright in his mouth: betwixt his eyes twelue foote: ſome of the ribs ſixteene foote long: the tongue fifteene foote long: his liuer two Cart load: into his noſtrils anie man might haue crept: the Oyle of his head Spermaceti, &c.*

CHAP. IX.

The late changes and manifold alterations in Ruſſia *ſince* IVAN VASILOWICH *to this preſent, gathered out of many Letters and Obſeruations of* Engliſh *Embaſſadors and other Trauellers in theſe parts.*

§. I.

Of the reigne of IVAN, PHEODORE *his ſonne; and of* BORIS.

Gods mercy to *England* whiles warres haue infeſted the reſt of the World.

READER, I here preſent thee not what I would of *Ruſſian* affaires, but what I could. We *Engliſhmen* vnder the gouernment of his Maieſtie, haue enioyed ſuch a Sunſhine of peace, that our Summers day to many hath beene tedious; they haue loathed their *Manna, and longed* for I know not what *Egyptian fleſh pots*. For what elſe are Warres but *pots* ſet ouer the fire of Anger (how often of Furie, yea of *Hell*, the Furies or Deuils blowing the coales) and boyling *mans fleſh*? whole Families, Villages, Townes, Cities, Shires, Prouinces, not onely hurried thereby in confuſions of State, harried and enflamed with combuſtions of goods and goodneſſe, but the fleſh of Men, Women, and Children, but chered and as it were boyled beyond the manifold ſhapes of Death, vnto the bones, into the Vapors, Froth, Scumme, Chaos, nothing and leſſe then nothing of Humanitie! Such is the inhumanitie, the immanitie, the manitie of Warres! And ſuch Warres haue made impreſſions into all our Neighbour Countries (whiles wee ſit vnder the ſhadow of *Beati Pacifici*) haue lightened on *Turkie* and blaſted the *Seraglio*; haue thunder-ſtricken *Barbarie*, haue torne the *Atlas* there, and rent the *Griſon* Alpes in *Europe*; haue ſhaken *France* with earthquakes; haue rayſed *Belgian* ſtormes, *Bohemian* broyles, *Hungarian* guſts, *Germanian* whirlewinds (theſe ſelfe-diuided in Ciuill, that is, the vileſt, vnciuilleſt maſſacres and worſt of Warres) that I mention not the inundations and exundations of *Poland*; the Snowes and Miſts of *Sweden*, the *Daniſh* Hailes and Froſts. But all theſe and more then all theſe Tempeſts, Turnado's, Tuſſons haue combined in *Ruſſia*, and there made their *Hell-mouth centre*, there pitching the Tents of Deſtruction, there erecting the Thrones of Deſolation.

A. Thuan. hiſtor. l. 135.

Peſtilence and Famine had gone two yeeres before as direful Heralds, to denounce theſe dreadfull warres and mutations of State: the Peſtilence poſſeſſing the Northerne parts of the World, and diſpoſſeſſing it of many many thouſands: the Famine in *Ruſſia* wanting neceſſaries to eate, neceſſarily deuoured all things, not onely Cats, Mice, and impure Creatures, but mens fleſh alſo, and that in neereſt neceſſitude, Parents reuoking to their wombes by vnnaturall paſſage the deareſt pledges of Nature, which hauing euen now dyed with hunger, were made preſeruatiues from like death to thoſe which firſt had giuen them life. The Mightier made ſale of the Poorer, yea, Fathers and Mothers of their Sonnes and Daughters, and Husbands of their Wiues, that price might bee had to buy Corne, which was now beyond all names of whatſoeuer price credible. But theſe things muſt be further ſearched.

Bloudineſſe is a ſlipperie foundation of Greatneſſe, and the *Mercifull* haue the promiſe to *finde mercy*: other wiſedome (how euer ſeeming politike) is *earthly, ſenſuall, deuilliſh*; yea, ruine to the foole-wiſe Conſultors, as appeareth in *Pharaohs working wiſely*, that is, cruelly, to preuent the multiplying *Iſraelites*. The greateſt of Creatures on Sea and Land, the Elephant and Whale, liue on graſſe, weeds, and ſimpler diet, not on rapine and fleſh or fiſh-deuouring prey: Thunders and all tempeſtuous ſtormes trouble not the higher aiery Regions, but the lower and thoſe next the baſer earthy dregs, the ſediment and ſinke of the World: nor doth ancient Philoſophie reckon Comets other then Meteors, or falling Starres to be Starres indeed, but excludes both from the heauenly Sphæres. Had *Alexander* followed this rule, and ſought Greatneſſe in Goodneſſe (like him which is *Optimus Maximus*, the Great God, the great Good of the World) and in himſelfe

Iam. 3.

Exod. 1.

Digitized by Google

ſelfe rather then others, in being Maſter of himſelfe then Lord of large Territories; he neither had ſighed after the conqueſts of other Worlds which *Fooloſophie* had created, before he had ſeene the tenth part of this; nor had dyed by poyſon in a forraine Countrie, forced to content himſelfe with poſſeſſing, nay, being poſſeſſed of a few feet of earth: then had he beene in very deed (now but in Title) GREAT *Alexander*. Great Goodneſſe is the true and good Greatneſſe.

I know not how fit a Preface this may ſeeme to the enſuing *Ruſſian* Relation; this I am ſure, that they which write of *Iuan Vaſilowich*, the Great Great *Muſcouite*, doe lay heauie aſperſions on his Father and Grand-father, but on himſelfe ſuperſuperlatiues of crueltie (that I mention not other vices) both for Matter and Forme. Theſe things are deliuered particularly in the Hiſtories of *Alexander Gwagninus*, *Tilmannus Bredenbachius*, *Paulus Oderbornius*, *Reinoldus Heidenſten* and others, in large Tractates written thereof purpoſely. His merits of the *Engliſh* might procure a ſilence of his euils (wee of all men being in regard of reſpect to our Nation vnworthy to ſpeake, that which hee, if thoſe Authours haue not beene malicious, was worthy to heare) if ſo dreadfull effects did not force an Hiſtorian (that is, the Regiſter of the execution of Acts of Gods bountie and iuſtice decreed in the Court of Diuine Prouidence) to looke to the direfull Cauſe in foregoing ſinnes, that after Ages may heare and feare.

I will touch a few of thoſe which *Gwagninus* alone relates. His owne brother being accuſed *An.* 1570. by *Wiſkonati*, is ſaid without leaue granted to cleare himſelfe, to bee put to exquiſite tortures firſt, and after to death; his wife ſtripped and ſet naked to the eyes of all, and then by one on horſe-backe drawne with a rope into the Riuer and drowned. *Ioan Pietrowich*, a man of principall command, accuſed of treaſon, preſenting himſelfe to him, not admitted to make any purgation, was ſet in Princely accoutrements on a Throne, the Emperour ſtanding bare-headed before him and bowing to him, but ſoone after with a knife thruſting him to the heart, the Attendants adding other Furies till his bowels fell out; his body dragged forth, his ſeruants ſlaine, three hundred others in his Caſtle executed, his *Boiarens* all gathered into one houſe and blowne vp with poulder; their Wiues and Daughters rauiſhed before his face by his followers, and then cut in pieces, and no liuing thing left in their houſes or grounds; the husbandmens wiues ſtripped naked as they were borne and driuen into a Wood, where were Executioners purpoſely ſet to giue them their fatall entertainment. His Chancellor *Dubrowſti* ſitting at table with his two Sonnes, were alſo vpon accuſation without anſwere cut in pieces, and the third ſonne quartered aliue with foure wheeles, each drawne a diuers way by fifteene men. *Mieſſoiedowſchly*, ſupreme Notarie, diſpleaſing him, his wife was taken from him, and after ſome weeks detayning was with her hand-maid hanged ouer her husbands doore, and ſo continued a fortnight, he being driuen to goe in and out by her all that time. Another Notaries wife was rauiſhed and then ſent home and hanged ouer her husbands table, whereat he was forced daily to eate. In trauelling if he met any woman whoſe husband he liked not, he cauſed her to ſtand with her nakednesſe diſcloſed till all his retinue were paſſed. Cutting out tongues, cutting off hands and feet of his complayning Subiects, and other diuerſified tortures I omit; as alſo the guarding his father in lawes doores with Beares tyed there, that none might goe in or out, hanging his ſeruants at his doores, torturing him for treaſure; caſting hundreds of men * at once into the water vnder the Ice; two thouſand ſeuen hundred and ſeuentie thus and by other tortures executed at *Nouogrod An.* 1569. beſides women, and the poorer perſons which Famine forced, did eate the bodies of the ſlaine, and were after ſlaine themſelues; the Archbiſhop alſo ſet on a Mare with his feet tyed vnder the belly, and made to play on Bag-pipes thorow the Cities; the Monks ſpoyled and ſlaine; *Theodore Sirceuij*, the Founder of twelue Monaſteries, tortured to ſhew his treaſure and then ſlaine: *Wiazinsky* his Secretarie, by many dayes renewed tortures dying; hee recreating himſelfe with letting Beares looſe in throngs of people; *Iohn Michalowich Wiskewan* the Chancellor, his eares, lips, and other members one after another cut off * by piece-meale, notwithſtanding all proteſtations of his innocency; aboue two hundred other Nobles at the ſame time variouſly executed, one his Treaſurer, two other Secretaries; the Treaſurers wife ſet on a rope and forcibly dragged to and fro thereon (by that torturing her naked fleſh, to learne her husbands treaſures) whereof ſoone after ſhee dyed in a Monaſterie, into which ſhee was thruſt. All theſe are but a little of that which *Gwagninus* alone hath written. A taſte and touch is too much of bloud, and in ſuch immanities. He is alſo ſaid in a famine to haue gathered many people, in expectation of almes, on a bridge, and there guarded the bridge being cut to drowne them, as the readieſt way for cheapneſſe of corne. But I lothe ſuch crudities. His laſt crueltie was on himſelfe, dying with griefe, as was thought, for the death of his eldeſt ſonne *Iuan*, whom falſly accuſed he ſtruck with a ſtaffe wrought with Iron, whereof he dyed in few dayes after. Hee was a man accuſed for communicating in diſpoſition with his father, and as a ioyfull Spectator of his tragicall executions.

Al. Gwagnini deſcript. Moſc. George brother to the Emperor done to death. Hee addes principal Nobles, here omitted.

* 700. women at one time; 378. priſoners at another, 500. Matrons and Virgins of noble bloud expoſed to be rauiſhed by the *Tartars* in his ſight at another time &c.

* A Secretarie cutting off his priuities, he died preſently; which the Emperour conſtruing to be done purpoſely, cauſed him there inſtantly to eate what he had cut off.

But if any delight to reade the terrible and bloudie Acts of *Iuan Baſilowich*, he may glut, if not drowne himſelfe in bloud, in that Hiſtorie which *Paul Oderborne* hath written of his life, and both there and in others take view of other his vniuſt Acts. I will not depoſe for their truth, though I cannot diſproue it: aduerſaries perhaps make the worſt. For my ſelfe I liſt not to rake ſinkes,

Digitized by Google

ſinkes againſt him, and would ſpeake in his defence, if I found not an vniuerſall conſpiracy of all Hiſtorie and Reports againſt him. I honour his other good parts, his wit, his learning (perhaps better then almoſt any other *Ruſſe* in his time) his exemplarie ſeuerity on vniuſt Magiſtrates, his Martiall skill, induſtrie, fortune, wherby he ſubdued the Kingdoms of *Caſan* and *Aſtracan* (which alſo the *Turke* ſending from *Conſtantinople* an Armie of three hundred thouſand to diſpoſſeſſe him of, *A.* 1569. beſides his hopes and helpes from the *Tartars*, few returned to tell their diſaſters, and the deſtructions of their fellowes) beſides what hee got in *Siberia* and from the *Pole*, *Sweden*, *Pruſsian*, extending his Conqueſts Eaſt, Weſt, North, and South: yea, his memorie is ſauourie ſtill to the *Ruſſians*, which (either of their ſeruile diſpoſition needing ſuch a bridle and whip, or for his long and proſperous reigne, or out of diſtaſte of later tragedies) hold him in little leſſe reputation (as ſome haue out of their experience inſtructed me) then a Saint.

His loue to our Nation is magnified hy our Countrimen with all thankfulneſſe, whoſe gaines there begun by him, haue made them alſo in ſome ſort ſeeme to turne *Ruſſe* (in I know what loues or feares, as if they were ſtill ſhut vp in *Ruſſia*, & to conceale whatſoeuer they know of *Ruſsian* occurrents) that I haue ſuſtayned no ſmall torture with great paines of body, vexation of minde, and triall of potent interceding friends to get but neglect and ſilence from ſome, yea almoſt contempt and ſcorne. They alledge their thankfulneſſe for benefits receiued from that Nation, and their feare of the *Dutch*, readie to take aduantage thereof, and by calumniations from hence to interuert their Trade. This for loue to my Nation I haue inſerted againſt any Cauillers of our *Ruſſe* Merchants: though I muſt needs profeſſe that I diſtaſte, and almoſt deteſt that (call it what you will) of Merchants to neglect Gods glorie in his prouidence, and the Worlds inſtruction from their knowledge; who while they will conceale the *Ruſſians* Faults, will tell nothing of their Facts; and whiles they will be ſilent in myſteries of State, will reueale nothing of the hiſtories of Fact, and that in ſo perplexed, diuerſified chances and changes as ſeldome the World hath in ſo ſhort a ſpace ſeene on one Scene. Whiles therefore they which ſeeme to know moſt, will in theſe *Ruſſian* Relations helpe me little or nothing (except to labour and fruſtrated hopes) I haue (beſides much conference with eye witneſſes) made bold with others in ſuch books as in diuers languages I haue read, and in ſuch Letters and written Tractates as I could procure of my friends, or found with Maſter *Hakluyt* (as in other parts of our ſtorie) not ſeeking any whit to diſgrace that Nation or their Princes, but onely deſiring that truth of things done may bee knowne, and ſuch memorable alterations may not paſſe as a dreame, or bee buried with the Doers. Sir *Ierome Horſey* ſhall leade you from *Iuans* Graue to *Pheodores* Coronation.

The moſt ſolemne and magnificent coronation of PHEODOR IVANOVVICH, *Emperour of* Ruſſia, *&c. the tenth of Iune, in the yeare* 1584. *ſeene and obſerued by Maſter* IEROM HORSEY *Gentleman, and ſeruant to her Maieſtie.*

* Or *Theodor*

Sir *Ierom Horſey.*

The death of *Iuan Vaſilowich* 1584. April 18.

WHen the old Emperor *Iuan Vaſilowich* died (being about the eighteenth of April, 1584. after our computation) in the Citie of *Moſco*, hauing raigned fiftie foure yeares, there was ſome tumult & vprore among ſome of the Nobilitie and Comminaltie, which notwithſtanding was quickly pacified. Immediately the ſame night, the Prince *Boris Pheodorowich Godonoua*, *Knez Iuon Pheodorowich*, *Meſthis Slaſiky*, *Knez Iuan Petrowich Sutky*, *Mekita Romanowich* and *Bodan Iaculewich Belskoy*, being all noble men, and chiefeſt in the Emperours Will, eſpecially the Lord *Boris*, whom he adopted as his third ſon, and was brother to the Empreſſe, who was a man very well liked of all eſtates, as no leſſe worthy for his valour and wiſedome: all theſe were appointed to diſpoſe, and ſettle his Sonne *Pheodor Iuanowich*, hauing one ſworne another, and all the Nobilitie and Officers whoſoeuer. In the morning the dead Emperour was laid into the Church of *Michael* the *Archangell*, into a hewen Sepulchre, very richly decked with Veſtures fit for ſuch a purpoſe: and preſent Proclamation was made (Emperour *Pheodor Iuanowich* of all *Ruſſia*, &c.) Throughout all the Citie of *Moſco* was great watch and ward, with Souldiors, and Gunners, good orders eſtabliſhed, and Officers placed to ſubdue the tumulters, and maintaine quietneſſe: to ſee what ſpeede and policie was in this caſe vſed, was a thing worth the beholding. This being done in *Moſco*, great men of birth and accompt were alſo preſently ſent to the bordering Townes, as *Smolenske*, *Vobske*, *Kaſan*, *Nouogorod*, &c. with freſh garriſon, and the old ſent vp. As vpon the fourth of May a Parliament was held, wherein were aſſembled the Metropolitane, Archbiſhops, Biſhops, Priors, and chiefe Clergie men, and all the Nobility whatſoeuer: where many matters were determined not pertinent to my purpoſe, yet all tended to a new reformation in the gouernement: but eſpecially the terme, and time was agreed vpon for the ſolemnizing of the new Emperours coronation. In the meane time the Empreſſe, wife to the old Emperour, was with her childe the Emperours ſon, *Charlewich Demetrie Iuanowich*, of one yeares age or there abouts, ſent with her Father *Pheodor Pheodorowich Nagey*, and that kindred, being

Lord *Boris* adopted as the Emperors third ſonne.

fiue

fiue brothers, to a towne called *Ouglets*, which was giuen vnto her, and the yong Prince her sonne, with all the Lands belonging to it in the shire, with officers of all sorts appointed, hauing allowance of apparell, iewels, diet, horse, &c. in ample manner belonging to the estate of a Princesse. The time of mourning after their vse being expired, called *Sorathyn*, or fortie orderly dayes, the day of the solemnizing of this coronation, with great preparations, was come, being vpon the tenth day of Iune, 1584. and that day then Sunday, he being of the age of twenty fiue years: at which time, Master *Ierom Horsey* was orderly sent for, and placed in a fit roome to see all the solemnity. The Emperour comming out of his Pallace, there went before him the Metropolitane, Archbishops, Bishops, and chiefest Monkes, and Clergie men, with very rich Coapes and Priests garments vpon them, carrying pictures of our Lady, &c. with the Emperors Angell, banners, censers, and many other such ceremonious things, singing all the way. The Emperour with his nobility in order entred the Church named *Blaneshina* or *Blessednes*, where prayers and seruice were vsed, according to the manner of their Church: that done, they went thence to the Church called *Michael* the Archangell, and there also vsed the like prayers, and seruice: and from thence to our Lady Church, *Prechista*, being their Cathedrall Church. In the middest thereof was a chaire of maiestie placed, wherein his Ancestors vsed to sit at such extraordinary times: his roabes were then changed, and most rich and vnualuable garments put on him: being placed in this Princely seate, his nobilitie standing round about him in their degrees, his imperiall Crowne was set vpon his head by the Metropolitane, his Scepter globe in his right hand, his sword of Iustice in his left of great riches: his six crowns also, by which he holdeth his Kingdomes were set before him, and the Lord *Boris Theodorowich* was placed at his right hand: then the Metropolitan read openly a booke of a small volume, with exhortations to the Emperour to minister true Iustice, to inioy with tranquility the Crowne of his ancestours, which God had giuen him, and vsed these words following:

The day of *Theodor* his coronation.

Through the will of the almightie and without beginning God, which was before this world, whom we glorifie in the Trinitie, one onely God, the Father, the Sonne, and the holy Ghost, maker of all things, worker of all in all euery where, fulfiller of all things, by which will, and working, he both liueth and giueth life to man: that our onely God which enspireth euerie one of vs his onely children with his word to discerne God through our Lord Iesus Christ, and the holy quickning spirit of life, now in these perillous times established vs to keepe the right Scepter, and suffer vs to raigne of our selues to the good profit of the land, to the subduing of the people, together with the enemies, and the maintenance of vertue. And so the Metropolitan blessed and laid his crosse vpon him. After this, he was taken out of his chaire of Maiesty, hauing vpon him an vpper roabe adorned with precious stones of all sorts, orient pearles of great quantity, but alwayes augmented in riches: it was in weight two hundred pounds, the traine and parts thereof borne vp by six Dukes, his chiefe imperiall Crowne vpon his head very precious: his staffe imperiall in his right hand of an Vnicornes horne of three foote and a halfe in length beset with rich stones, bought of Merchants of *Ausburge* by the old Emperour, in *Anno* 1581. and cost him 7000. Markes sterling. This Iewel Master *Horsey* kept sometimes, before the Emperour had it. His Scepter globe was carried before him by the Prince *Boris Theodorowich*: his rich cap beset with rich stones and pearles, was carried before him by a Duke: his sixe Crownes also were carried by *Demetrius Iuanowich Godonoua*, the Emperours vncle, *Mokita Romanowich* the Emperors vncle, *Stephen Vasilwich*, *Gregorie Vasilwich*, *Iuan Vasilwich* brothers of the bloud royall. Thus at last the Emperour came to the great Church-doore, and the people cried, God saue our Emperour *Theodor Iuanowich* of all *Russia*. His Horse was there ready most richly adorned, with a couering of imbrodered pearle and precious stones, saddle, and all furniture agreeable to it, reported to be worth 300000. markes sterling.

There was a bridge made of a hundred & fiftie fadomes in length, three manner of waies, three foot aboue ground, and two fadome broad, for him to goe from one Church to the other with his Princes and nobles from the presse of the people, which were in number infinite, and some at that time pressed to death with the throng. As the Emperor returned out of the Churches, they were spred vnder foot with cloth of Gold, the porches of the Churches with red Veluet, the Bridges with Scarlet, & stammelled cloth from one Church to another: and as soone as the Emperor was passed by, the cloth of gold, veluet and scarlet was cut, & taken of those that could come by it, euery man desirous to haue a piece, to reserue it for a monument: siluer and gold coine, then minted of purpose was cast among the people in great quantitie. The Lord *Boris Theodorowich* was sumptuously and richly attired, with his garments decked with great orient pearle, beset with all sorts of precious stones. In like rich manner were apparelled all the family of the *Godonouaes* in their degrees, with the rest of the Princes and nobilitie, whereof one named *Knez Iuan Michalowich Glynsky*, whose robe, horse and furniture, was in register found worth one hundred thousand markes sterling, being of great antiquitie. The Empresse being in her Palace, was placed in her chaire of Maiesty also before a great open window: most precious and rich were her robes, and shining to behold, with rich stones, and orient Pearles beset, her crowne was placed vpon her head, accompanied with her Princesses, and Ladies of estate: then cried out the people, God preserue our noble Empresse *Irena*. After all this, the Emperour came into the Parliament

house, which was richly decked: there he was placed in his royall seat adorned as before: his sixe crownes were set before him vpon a Table: the Bason and Ewre royall of gold held by his knight of gard, with his men standing two on each side in white apparell of cloth of siluer, called Kindry with scepters and battle-axes of gold in their hands, the Princes and nobility were all placed according to their degrees all in their rich roabes.

The Emperour after a short Oration, permitted euery man in order to kisse his hand: which being done, he remoued to a princely seate prepared for him at the table: where he was serued by his Nobles in very princely order. The three out roomes being very great and large were beset with plate of gold and siluer round, from the ground vp to the vaults one vpon the other: among which plate were many barrels of siluer and gold: this solemnitie and triumph lasted a whole weeke, wherein many royall pastimes were shewed and vsed: after which, the chiefest men of the Nobilitie were elected to their places of office and dignitie, as the Prince *Boris Pheodorowich* was made chiefe Counsellour to the Emperour, Master of the Horse, had the charge of his person, Lieutenant of the Empire, and warlike engins, Gouernor or Lieutenant of the Empire of *Cazan*, and *Astracan*, and others: to this dignitie were by Parliament, and gift of the Emperour giuen him many reuenewes and rich lands, as there was giuen him, and his for euer to inherite a Prouince called *Vaga*, of three hundred *English* miles in length, and two hundred and fiftie in bredth, with many Townes and great Villages populous and wealthy: his yearely Reuenew out of that Prouince, is fiue and thirtie thousand Markes sterling, being not the fifth part of his yeare Reuenue. Further, he and his house be of such authoritie and power, that in forty dayes warning, they are able to bring into the field a hundred thousand Souldiours well furnished.

The conclusion of the Emperours Coronation was a peale of Ordnance, called a Peale royall, two miles without the Citie, being a hundred and seuenty great pieces of brasse of all sorts, as faire as any can be made; these pieces were all discharged with shot against bulwarkes made of purpose; twentie thousand hargubusers standing in eight ranks two miles in length, apparelled all in veluet, coloured silke and stammels, discharged their shot also twise ouer in good order: and so the Emperour accompanied with all his Princes and Nobles, at the least fiftie thousand horse, departed through the Citie to his palace. This royall coronation would aske much time, and many leaues of paper to be described particularly as it was performed: it shall suffice, to vnderstand that the like magnificence was neuer seene in *Russia*.

The Coronation, and other triumphs ended, all the Nobilitie, officers, and Merchants, according to an accustomed order euery one in his place and degree, brought rich presents vnto the Emperour, wishing him long life, and ioy in his kingdome.

The same time also Master *Ierom Horsey* aforesaid, remaining as seruant in *Russia* for the Queens most excellent Maiestie, was called for to the Emperour, as he sate in his Imperiall seat, and the also a famous Merchant of *Netherland* being newly come to *Mosco* (who gaue him selfe out to be the King of *Spaines* subiect) called *Iohn de Wale*, was in like sort called for. Some of the Nobilitie would haue preferred this subiect of the *Spaniard* before Master *Horsey* seruant to the Queen of *England*, whereunto Master *Horsey* would in no case agree, saying, hee would haue his legges cut off by the knees, before hee would yeelde to such an indignitie offered to his Soueraigne the Queenes Maiestie of *England*, to bring the Emperour a present, in course after the King of *Spaines* subiect, or any other whatsoeuer. The Emperour, and the Prince *Boris Pheodorowich* perceiuing the controuersie, sent the Lord Treasurer *Peter Iuanowich Galawyn*, and *Vasili Shalkan*, both of the Counsell, to them, who deliuered the Emperour backe Master *Horseys* speech: whereupon he was first in order (as good reason) admitted and presented the Emperour in the behalfe of the *English* Merchants trading thither, a present, wishing him ioy, and long to raigne in tranquilitie, and so kissed the Emperours hand, he accepting the present with good liking, and auouching, that for his Sisters sake, Queene *Elizabeth* of *England*, he would be a gracious Lord to her Merchants, in as ample manner as euer his Father had beene: and being dismissed, he had the same day sent him, seauentie dishes of sundry kinds of meats, with three carts laden with al sorts of drinks very bountifully. After him was the foresaid subiect of the *Spanish* King admitted with his present, whom the Emperor willed to be no lesse faithfull & seruiceable vnto him, then the Queen of *Englands* subiects were & had been, & then the King of *Spains* subiects shold receiue fauor accordingly.

Iohn de Wale.

All these things thus in order performed, prayses were sung in all the Churches. The Emperour and Empresse very deuoutly resorted on foote to many principal Churches in the Citie, and vpon Trinitie Sunday betooke themselues to a progresse in order of procession, to a famous Monasterie called *Sergius* and the *Trinitie*, sixtie miles distant from the Citie of *Mosco*, accompanied with a huge armie of Noblemen, Gentlemen, and others, mounted vpon goodly Horses with furniture accordingly,

The Empresse of deuotion tooke this iourney on foote all the way, accompanyed with her Princesses and Ladies, no small number: her Guard and Gunners were in number twentie thousand: her chiefe Counsellor or Attendant, was a noble man of the bloud Royall her Vncle of great authoritie, called *Demetri Iuanowich Godonowa*. All this progresse ended, both the Emperour and Empresse returned to *Mosco*: shortly after, the Emperour by the direction of the Prince

Boris

Boris Pheodorowich, ſent a power into the Land of *Siberia*, where all the rich Sables and Furres are gotten. This power conquered in one yeere and a halfe one thouſand miles. In the performance of this warre, there was taken priſoner the Emperour of the Country, called *Chare Sibersky*, and with him many other Dukes and Noble men, which were brought to *Moſco*, with a guard of Souldiers and Gunners, who were receiued into the Citie in very honourable manner, and doe there remaine to this day.

Chare Sibersky Prince of *Siberia* taken priſoner & brought to *Moſco*.

Hereupon the corrupt Officers, Iudges, Iuſtices, Captaines and Lieutenants through the whole Kingdome were remooued, and more honeſt men ſubſtituted in their places, with expreſſe commandement, vnder ſeuere puniſhment to ſurceaſe their old bribing and extortion which they had vſed in the old Emperours time, and now to execute true iuſtice without reſpect of perſons: and to the end that this might be the better done, their lands and yeerly ſtipends were augmented: the great taskes, cuſtomes, and duties, which were before laid vpon the people in the old Emperours time, were now abated, and ſome wholly remitted, and no puniſhments commanded to be vſed, without ſufficient and due proofe, although the crime were capitall, deſeruing death: many Dukes and Noble men of great Houſes, that were vnder diſpleaſure, and impriſoned twentie yeeres by the old Emperour, were now ſet at libertie and reſtored to their lands: all priſoners were ſet at libertie, and their treſpaſſes forgiuen. In ſumme, a great alteration vniuerſally in the gouernment followed, and yet all was done quietly, ciuilly, peaceably, without trouble to the Prince, or offence to the Subiect: and this bred great aſſurance and honour to the Kingdome, and all was accompliſhed by the wiſedome eſpecially of *Irenia* the Empreſſe.

Theſe things being reported and carried to the eares of the Kings and Princes that were borderers vpon *Ruſſia*, they grew ſo fearfull and terrible to them, that the Monarch of all the *Scythians* called the *Crim Tartar* or great *Can* himſelfe, named *Sophet Keri Alli*, came out of his owne Countrie to the Emperour of *Ruſſia*, accompanied with a great number of his Nobilitie well horſed, although to them that were Chriſtians they ſeemed rude, yet they were perſonable men, and valiant: their comming was gratefull to the Emperour, and their entertainment was honourable: the *Tartar* Prince hauing brought with him his wiues alſo, receiued of the *Ruſſe* Emperour entertainment, and Princely welcome according to their eſtates.

Sophet Keri Alli King of the *Crimsa riuns* at *Moſco*.

Not long after, one thouſand and two hundred *Poliſh* Gentlemen, valiant Souldiers, and proper men came to *Moſco*, offering their ſeruice to the Emperour, who were all entertayned: and in like ſort many *Chirkaſſes*, and people of other Nations came and offered ſeruice. And as ſoone as the report of this new created Emperour was ſpred ouer other Kingdomes of *Europe*, there were ſent to him ſundrie Ambaſſadors, to wiſh him ioy and proſperitie in his Kingdome: thither came Ambaſſadors from the *Turke*, from the *Perſian*, the *Bogharian*, the *Crim*, the *Georgian*, and many other *Tartar* Princes. There came alſo Ambaſſadors from the Emperour of *Almaine*, the *Pole*, the *Swethen*, the *Dane*, &c. And ſince his Coronation no enemie of his hath preuailed in his attempts.

It fell out not long after, that the Emperour was deſirous to ſend a meſſage to the moſt excellent Queene of *England*, for which ſeruice he thought no man fitter then Maſter *Ierome Horſey*, ſuppoſing that one of the Queenes owne men and ſubiects would bee the more acceptable to her. The ſumme of which meſſage was, That the Emperor deſired a continuance of that league, friendſhip, amitie and intercourſe of traffique which was betweene his Father and the Queenes Maieſtie and her Subiects, with other priuate affaires beſides, which are not to bee made common.

The new Emperor *Pheodore Iuanowich* his Letters and Requeſts to the Queene.

Maſter *Horſey* hauing receiued the Letters and Requeſts of the Emperour, prouided for his iourney ouer Land, and departed from *Moſco* the fift day of September, thence vnto *Otuer*, to *Torſhook*, to great *Nouogrod*, to *Vobskie*, and thence to *Nyhouſe* in *Liuonia*, to *Wenden*, and ſo to *Riga*: (where he was beſet, and brought forthwith before a Cardinall, called *Rageuil*, but yet ſuffered to paſſe in the end:) From thence to *Mito*, to *Golden*, and *Libon* in *Curland*, to *Memel*, to *Koningsburgh* in *Pruſsia*, to *Elbing*, to *Dantzike*, to *Stetine* in *Pomerland*, to *Roſtock*, to *Lubeck* to *Hamborough*, to *Breme*, to *Emden*, and by Sea to *London*. Being arriued at her Maieſties Royal Court, and hauing deliuered the Emperours Letters with good fauour, and gracious acceptance, he was forthwith againe commanded to repaſſe into *Ruſſia*, with other Letters from her Maieſtie to the Emperour, and Prince *Boris Pheodorowich*, anſwering the Emperours Letters, and withall requeſting the fauour and friendſhip, which his Father had yeelded to the *Engliſh* Merchants: and hereunto was he earneſtly alſo ſolicited by the Merchants of *London* themſelues of that Companie, to deale in their behalfe. Being thus diſpatched from *London* by Sea, he arriued in *Moſco*, the twentieth of Aprill, 1586. and was very honourably welcommed, and for the Merchants behoofe, obtayned all his Requeſts, being therein ſpecially fauoured by the Noble Prince *Boris Pheodorowich*, who alwayes affected Maſter *Horſey* with ſpeciall liking. And hauing obtayned priuiledges for the Merchants, he was recommended from the Emperour againe, to the Queene of *England* his Miſtreſſe, by whom the Prince *Boris*, in token of his honourable and good opinion of the Queenes Maieſtie, ſent her Highneſſe a Royall preſent of Sables,

Maſter *Horſeys* voyage from *Moſco* to *England* ouer lands

Luzarns, cloth of Gold and other rich things. So that the Companie of *English* Merchants, next to their thankfulnesse to her Maiestie, are to account Master *Horseys* paines their speciall benefit, who obtayned for them those priuiledges, which in twentie yeeres before would not be granted.

The manner of Master *Horseys* last dispatch from the Emperour, because it was very honorable, I thought good to record. Hee was freely allowed post-horses for him and his seruants, victuals and all other necessaries for his long iourney: at euery Towne that he came vnto from *Mosco* to *Vologda*, which is by Land fiue hundred miles, he receiued the like free and bountifull allowances, at the Emperours charge. New victuall and prouision were giuen him vpon the Riuer *Dwina* at euery Towne by the Kings Officers, being one thousand miles in length. When he came to the new Castle, called *Archangel*, he was receiued of the Duke *Knez Vasili Andrewich Isumogorodsky* by the Emperours Commission into the Castle, Gunners being set in rankes after their vse, where he was sumptuously feasted: from thence he was dispatched with bountifull prouision and allowance in the Dukes Boat, with one hundred men to rowe him, and one hundred Gunners in other Boats to conduct him, with a Gentleman Captaine of the Gunners. Comming to the Road where the *English*, *Dutch*, and *French* ships rode, the Gunners discharged, and the shippes shot in like manner fortie sixe pieces of their Ordnance, and so hee was brought to his lodging at the *English* house vpon *Rose* Iland.

And, that which was the full and complete conclusion of the fauour of the Emperour and *Boris Pheodorowich* toward Master *Horsey*, there were the next day sent him for his further prouision vpon the Sea by a Gentleman and a Captaine, the things following. Sixteene liue Oxen, seuentie Sheepe, six hundred Hens, fiue and twentie flitches of Bacon, eightie bushels of Meale, six hundred loaues of bread, two thousand Egges, ten Geese, two Cranes, two Swannes, sixtie fiue gallons of Meade, fortie gallons of Aquavitæ, sixtie gallons of Beere, three young Beares, foure Hawkes, store of Onions and Garleeke, ten fresh Salmons, a wilde Boare.

All these things were brought him downe by a Gentleman of the Emperours, and another of Prince *Boris Pheodorowich*, and were receiued in order by *Iohn Frese* seruant to Master *Horsey*, together with an honourable present and reward from the Prince *Boris*, sent him by Master *Francis Cherry* an *English* man: which present was a whole very rich piece of cloth of Gold, and a faire paire of Sables.

Thuan. hist. lib. 120.

Ivan Vasilowich is reported to haue had seauen Wiues, and of them to haue left three children surviuing, *Theodore* or *Pheodore* and *Demetrius* a yongling by his last wife, and a Daughter, which was the wife of L. *Boris* aforesaid, whose sister *Pheodore* had married in his Fathers life time, who would haue caused her diuorse for her barrennesse (as he had caused *Iuan* his eldest sonne diuers times to doe and his refusing it at last, was the occasion of that angry, last, and fatall blow, before mentioned) but being protracted by faire excuses for a time, the diuorse of soule and body in the Father preuented that in the marriage bed of the Sonne. Yet by his Testament he ordained, that if within two yeares she proued not fruitfull, hee should marrie another. The executers vrged this after that terme expired; but *Gerusia* or *Irenia*, so wrought with her husband, that their counsels were frustrate: wherein she was assisted by the politicke wisdome of her brother *Boris*, who was now become chiefe Pilot, though not the Master in that *Russian* ship: and is said formerly to haue been no small doer in those cruel designes of *Iuan* his deceassed Master; yet had he cunningly cast the blame on him now dead, and wisely insinuated into the peoples fauour, by mitigating the seueritie of his Decrees. You haue read before of his great Reuenues and wealth, recorded by eye witnesses. *Thuanus* saith, that three hundred of the *Knazeys* and *Boiarens*, whereof the Senate of the Empire consisted, by aduise of the Executors, had subscribed. *Boris* made the simpler Emperor beleeue, that it was a conspiracie against him: whereupon they were all committed, ten of which (whom he thought his most dangerous aduersaries) were suddainly and priuily executed: to the rest, he procured the Emperours pardon and fauour, seeming very sorrowfull that this clemency had beene so much foreslowed: and that the hastie execution had preuented his officious indeuors for their deliuerance. And that he might seem serious, he got their goods to be restored to their heires: so working himselfe into the good liking of all degrees.

Boris his plot.

But soone after, yong *Demetrius* the Emperours brother was slaine, as hee was going to Church betwixt two *Boiarens*, by a mad man (as he seemed) who was thereupon suddenly slaine; but the author which set him on worke, could not be found: whereupon *Boris* was suspected to affect the soueraigntie. *Thuanus* elsewhere telleth, that hee corrupted those which were about *Demetrius*: and the great Bell being rung as is vsuall in cases of fire to bring the people together, *Demetrius* at that noise running forth, some were set in that tumult to kil him, which accordingly was effected, as he was comming downe a Ladder: the rumour whereof, caused the tumultuous people (making no curious search for the doers) to kil those of the Family which they met in their furie, to put the suspition thereof from themselues: which notwithstanding, *Boris* exercised seuerer tortures and terrible executions vpon them, and as one which hartily execrated the fact, burned the fort to expiate the parricide. This place being farre remote * from the Court, whi-

Thuan. hist. lib. 135. sec. *Demetrius* slain some tell that one pretended his coller stood awry, in mending it, cut his throate.

*It was in the Northern parts at *Duglets*.

ther

ther he was thought purposely to haue sent him, could not admit so open euidence of manifold testimony; but that it gaue occasion of other Tragedies, by another supposed *Demetrius*, as shall anon appeare. Meane while, *Boris* could not escape aspersion of the fact past, and suspition of like intended to the present Prince; and therefore was forced to coniure vp his best wits to worke him into better reputation. He did hereof either take occasion, or make occasion by diuers fires in * diuers Cities of the Kingdome, the Houses being of wood, and easily consumed: which losse (made, as some deliuer by his own incendiaries, he seemed much to commiserate, and by affected bountie, repaired those ruines out of the publique Treasure: others say, out of his priuate purse:) thus, not onely raising so many *Phœnixes* out of those ashes; but making deuouring fire, become fuell to his magnificence, and raking reputation out of the flames and cinders: thence erecting a Theatricall scene whereon to acte in popular spectacles, his many parts of care, industry, alacrity, wisedome, power, bounty, and whatsoeuer might fether his nest in the peoples hearts, thus easily stoln and entertained in affection to him, whiles *Theodore* liued, which was not long: he dying in the yeare 1598. on twelfe day, hauing liued thirty sixe yeares, and reigned neere foureteene. His impotency of body and minde, you haue read before in part. *Thuanus* affirmeth, that *Iuan Vasilowich* his Father said, he was fitter to ring Bels in Churches, then to gouerne an Empire; aluding therein to his superexceeding deuotion and most deuout superstition. His death caused a new aspersion on *Boris* as procured, in some mens conceits (and reports) by poyson.

* Some write that he caused diuers places in *Mosco* to be fired, and then afterwards out of his owne cost repaired them.

D. Fleti

Death of *Theodore.*

His dead body was buried with his ancestors, in Saint *Michaels* Temple in the Castle, and Souldiours were presently sent to the borders, to prohibite ingresse or egresse. *Theodores* will was read, and therein *Gernia* (or *Irenia*) his wife, and the Patriarch, entrusted with the administration of the State. Hereupon a generall State assembly was assembled at *Mosco*, and their oathes giuen to the Empresse. After this the Empresse went into a Nunnery, to passe there the fortie dayes destined to publique sorrow: in which time (whether of her owne or with her brothers accord) making shew of vnspeakable sorrow for her deceased Lord, she renounced the world, and transferred the Imperiall gouernment vpon the *Knazeys* and *Boiarens*, which her Husband had bequeathed to her; that they, according to their wisdome, and loue to their Countrie, might take care thereof. This was done by her brothers counsell, to try what the people would doe: who were so moued therewith, that they came thronging to the Nunnerie gates, lamentably imploring her care in so perillous a time, whom onely they were bound to serue. And when she bad them goe to the *Knazeys* and *Boiarens*; they protested against them, saying, they had sworne to her, and would be ordered by L. *Boris*, her brother. Hereupon *Boris Pheodorowich* goeth out to appease their tumult, and vndertaketh for the fortie dayes of mpurning, together with the *Knazeys* and *Boiarens* to administer the Empire. In which time, the Empresse renounced secular cares, and professed her selfe a Nunne; changing her name from *Gernia* to *Alexandrina.*

The Empresse succeedeth.

Russians vse of fortie dayes mourning for an Emperours death.

The Queene turneth Nun.

The time of mourning being past, the people were called into the Castle, and the Chancellour made an Oration, perswading them to sweare obedience to the *Knazeys* and *Boiarens*, which they with out-cryes disclaymed, offering to doe it to the Queene and L. *Boris*. The Councell sitting to consider hereof, the Chancellor came forth againe, and commanded them to sweare to the *Knazeys* and *Boiarens*; the Queene hauing now become a Nunne. Whereupon they all named *Boris* her Brother, as one worthy of the State, to whom they were readie to sweare. Hee being present, rose vp and modestly excused himselfe, protesting his vnwillingnesse and vnworthinesse, and bidding them chuse some other more worthy. And going withall into the Church, they laid in manner forceable hands on him, with loud cryes and lamentations, beseeching him not to forsake them. Whereat he wept and still refused, alleaging his insufficiencie: and to kindle greater desire in the people and Nobles, absented and hid himselfe with his Sister in the Nunnerie the space of a moneth. In which space the people fearing his flight, besieged the place, and with continuall clamours vrged the Queene, to perswade her Brother to accept of the Empire which she had refused. Shee againe sends them to the *Knazeys* and *Boiarens*, the mention of whose names seemed to cast them into a fit of mutinie and sedition. *Boris* then commeth forth and tels them, if they were no quieter, he also would take Sack-cloth, and (as his Sister had done) enter into a Monasterie. They made so much greater stirres, casting out some desperate threats of looking to themselues, where the Common-wealth was desperately neglected. The Queene then wonne by their importunitie perswadeth her brother no longer to resist Gods will, which had put this constancie into the peoples mindes, and to accept that which thus God seemed to command, praying for his blessing therein.

Boris his willing vnwillingnesse.

Boris after new excuses, at last seeming ouercome by his Sisters intreaties, and to haue held out sufficiently to remoue enuie, assenteth to her, and shee signifieth as much to the people, to whom she presents him, praying them to be as loyall to him, as they had beene earnest for him. *Boris* also spake vnto them: *Forasmuch as it seemeth good to the Diuine Grace and Prouidence, whereby all things are gouerned, that by common consent and continuall Prayers intreated, I take on mee the Principalitie ouer you, and all the Prouinces of* Russia, *I will no longer resist, how heauie soeuer I conceiue*

Boris his speech

this

this burthen to my ſhoulders, but haue determined to vndertake your protection with greateſt fidelitie, being readie to ſway the Ruſſian *Scepter and Gouernment, as farre as Gods grace ſhall enable mee. On the other ſide bee you faithfull to mee and to my command, as God may you helpe. I am your moſt gentle King.*

Ioyfull acclamations followed, with all proteſtation of their fidelitie and future obedience. He entring into the Monaſterie, after Prayers, receiued the firſt Benediction. The people returned full of joy, and the Bels (of which are numbred in *Moſco*, three thouſand) reſounded the publike Feſtiuitie. All the Magiſtrates and Officers, & ſuch as receiued Salarie of the King, go preſently to the Monaſterie and carrie Gold, Siluer, Precious Stones, Pearles, Bread, and Salt, (after the ſolemne cuſtome) with wiſhes of long life & al happines, and deſiring to accept in good worth their Preſents. He with thankes rendred, accepts only the Bread and Salt, ſaying, theſe were his; the reſt they ſhould take to themſelues. Then doth hee bid them to a Feaſt, and preſently with *Mary* his Wife, *Theodore* his Sonne of ten yeeres old, and *Arſenica* his Daughter being ſixteene, he goeth out of the Monaſterie with pompeous Proceſſion to the Caſtle. Like Preſents were offered to his Wife and Children, which accepted only the Bread and Salt, remitting the reſt to the Preſenters. When he was comne to the Caſtle, he choſe his Siſters Lodging; for that of the Prince deceaſed, as offenſiue by his death was deſtroyed, and after new built.

Boris Emperor.

His Wife, Son, & Daughter.

After Feſtiuall entertaynment of innumerable people, ſolemne Oath was taken of all the Gouernours; thoſe things being in action till May. Then came newes that the *Crim Tartars* had entred the borders thinking to find all things troubled with an interregne; whereupon he aſſembled an Armie of three hundred thouſand, and went in perſon againſt them. But the *Tartars* hearing how things went, returned home and ſent Embaſſadors to the Emperours Tents. Hee returned with them to *Moſco*, where the next September (which is the beginning of the *Ruſſian* New yeere, which enters in other places with Ianuary following) hee was publikely bleſſed by the Patriarke, carrying a golden Croſſe in his hand, and on the fourteenth of September, before the *Knazeys*, *Boiarens*, Biſhops and other Orders, had the Crowne ſet on his head by the Patriarke, and the Scepter put in his hand, with the Solemnitie in ſuch caſes accuſtomed.

Tartars.

Ruſſian New yeere.

Boris crowned.

Twelue dayes together all Orders were feaſted in the Caſtle, and the Magiſtrates and Officers had a yeeres pay giuen them. Merchants alſo of other Countries had Immunities and Priuiledges granted. The Ruſtickes had their payments to their *Boiarens* reaſonably rated, and their perſons made more free. *Germane* Merchants had moneyes lent them to repay ſeuen yeeres after without Vſurie. Widdowes, and Orphans, and poorer perſons receiued much Almes. *Pheodores* Obſequies were ſolemnely performed, and the Prieſts richly rewarded; and that Empire which ſeemed dead with the death of the houſe of *Beala*, now was as it were reuiued, and receiued a glorious Reſurrection.

Thus haue we deliuered you *Thuanus* his report touching *Boris* manner of acquiring the Empire without publike enuie, and cunning wiping off the aſperſions of *Pheodore* and *Demetrius* their deaths. And as euery bodie is nouriſhed by Aliments correſpondent to the Principles of the Generation, ſo did hee ſeeke by politike wiſdome to eſtabliſh that which by wiſe Policies he had gotten. Wherein his care was not little to multiply Treaſure, and as at firſt hee had ſeemed popularly prodigall, ſo after a ſmall time of his Reigne, hee became prouidently penurious, the wonted allowances of the Court being much ſhortened from that which had beene in former times, as I haue receiued from eye-witneſſes. Likewiſe he was carefull to hold good tearmes with his Neighbouring Princes, and aſwell by plots at home, as by forreigne Aliance indeuoured to ſettle on his Race this new gotten Empire. He is ſaid for this end to haue ſought a Wife for his ſonne out of *England*, and a Husband for his Daughter out of *Denmarke*. His Wife was a woman of haughtie ſpirit, who thought her too good for any *Hollop* (ſo they call a ſlaue, and ſuch ſhe eſteemed all the ſubjects) and on ſuch tearmes ſhe is ſaid to haue beene denied to a great man his beſt Souldier and Commander of his Armie.

His policies.

P. *Baſman.*

But while his Sunne ſhined now in the height of his courſe, and with brighteſt and warmeſt beames of proſperitie, there aroſe groſſe vapours out of *Demetrius* his graue, which grew quickly into a blacke darke cloud, and not only eclipſed that Imperiall glorie, but ſoone engendred a bloudie ſtorme, which with a floud ſwept away that whole Family, and ouer-whelmed alſo the whole Empire. Contraries ſet together cauſe the greater luſtre; for which cauſe I will bring on the ſtage a Gentleman, which attended Sir *Thomas Smith* employed in Honourable Embaſſage from his Maieſtie of Great *Brittaine* to the then flouriſhing Emperor *Boris*, and out of his large Relations deliuer you this which followeth in his owne words (omitting the moſt part * to our purpoſe not ſo pertinent) in the Booke printed, *Anno* 1605.

* Where the cenſorious bitterneſſe alſo ſeemeth too much to inſult on *Boris* his diſaſters.

Digitized by Google

§. II.

Occurrents of principall Note which happened in Russia, *in the time while the Honourable Sir* THOMAS SMITH *remayned there Embassador from his Maiestie.*

SIr *Thomas Smith* Knight, accompanied with Sir *T. Challener* and Sir *W. Wray* Knights, diuers Gentlemen and his owne Attendants, repayred to the Court on the tenth of Iune 1604. then lying at *Greenwich*, where by the Right Honourable the Earle of *Salisburie* he was brought to His Majestis presence, kissed his Hand, &c. The next day he tooke leaue of the Prince, and on the twelfth being furnished with his Commission, he came to *Grauesend*, and next morning went aboord the *Iohn* and *Francis* Admirall: and the two and twentieth of July anchored within a mile of the *Archangell*. The sixteenth of September, hee came to *Vologda*: the fiue and twentieth to *Perislawe*, and there staid three dayes, and then departed to *Troites*, (that faire and rich Monasterie) so to *Bratteshoen* and *Rostouckin*, fiue versts from the great Citie of *Musco*. The fourth of October, the *Prestaue* came and declared the Emperours pleasure that hee should come into the *Masco* that forenoone: presently after came Master *I. Mericke* Agent, with some twentie Horses to attend his Lordship, which forth-with was performed. Then we did ride, til we came within a little mile of the many thousands of Noblemen and Gentlemen on both sides the way, attended on horsebacke to receiue his Lordship. Where the Embassadour alighted from his Coach, and mounted on his foot-cloth Horse, and so rode on with his Trumpets sounding. A quarter of a mile farther, met him a proper and gallant Gentleman a-foot of the Emperours stable, who with Cap in hand, declared to the Embassadour, that the Emperour, the young Prince, and the Master of the Horse, had so farre fauoured him, as to send him a Iennet, very gorgeously trapped with Gold, Pearle, and Precious Stone: and particularly, a great Chaine of plated Gold about his necke, to ride vpon. Whereupon the Embassador alighted, imbraced the Gentleman, returned humble thankes to them all, and presently mounted. Then he declared that they likewise had sent horses for the Kings Gentlemen, which likewise were very richly adorned, then for all his followers: which Ceremonie or State performed, and all being horsed, he departed, we riding orderly forward, till wee were met by three great Noblemen, seuered from the rest of the multitude, and the Emperours *Talmache* or Interpreter with them.

They being within speech, thus began that Oration they could neuer well conclude: Which was, That from their Lord and Master the mightie Emperour of *Russia*, &c. they had a message to deliuer his Lordship. The Embassadour then thinking they would be tedious and troublesome with their vsuall Ceremonies, preuented their farther speech with this (to them a *Spell*) *That it was vnfitting for Subiects to hold discourse in that kind of complement, of two such mightie and renowned Potentates on horsebacke.* They (hereby not only put by their Ceremonious Saddle-sitting, but out of their Paper instructions) allighted suddenly, as men fearing they were halfe vnhorsed, and the Embassadour presently after them, comming very courteously all three, saluting the Embassadour and the Kings Gentlemen, taking them by the hands. Thus like a Scholer, too old to learne by rote (the Duke named King *Volladamur Euanywich Mawsolskoy*) with his Lesson before him, declared his message; which was, that he with the other two Noblemen, were sent from the *Great Lord, Emperour and great Duke* Boris Phedorowich, *selfe-vpholder, great Lord Emperour, and great Duke of all* Russia, Volademer, Moskoe *and* Nouogrode, *King of* Casan *and* Astracan, *Lord of* Vobskoe, *great Duke of* Smolenskoe, Tuer, Huder, Vghory, Perme, Viatsky, Bolgory, *&c. Lord and great Duke of* Nouogrod *in the Low Countreyes, of* Chernigo, Reean, Polotskey, Rostoue, Geraslaue, Bealozera, Leifland, Oudorskey, Obdorskey, Condingskey. *King of all* Syberia *and the North Coasts, Commander of the Countreyes of* Iuersky, Gryfinsky, *and Emperour of* Kabardiuskey, *of* Chirkasky, *and of the whole Countrey of* Garskey, *and of many other Countreyes and Kingdomes Lord and Emperour*, to know of his Maiesties health of *England*, the Queene and Princes. The second, being a Captayne of Gunners (the Emperours Guard) named *Kazrine Dauidowich Beaheetchouo*, pronouncing the Emperour and Princes Title, said hee was sent from them to know his Lordships health and vsage, with the Kings Gentlemen. The third, was one of the Secretaries, named *Pheodor Boulteene*, obseruing the former order did deliuer what he had in command from the Emperor, Prince and Empresse, to informe the Embassador of their much fauour towards him, and the Kings Gentlemen, in prouiding for his Honourable entertayne and ease, a faire large house to lodge in: Also that they three were sent from the Emperour, Prince, and Empresse, to be his *Prestaues*, to supply the Emperours goodnesse toward him, to prouide his necessaries, and deliuer any sute it pleased the Ambassadour to make to the Emperour. To all which the Embassadour very wisely gaue answere (as they made report vnto the Emperour.)

Tedious Title.

So we all presently mounted againe, the *Prestaues* on either hand of the Ambassadour his Horse and Foot-cloth being led by his Page, some small distance, his Coach behind that, and some

Digitized by Google

some sixe thousand Gallants after behind all: whom the Embassadors riding through the guard, that was made for him, very courteously bowed himselfe. Thus was he followed by thousands, and within the three wals of the Citie, many hundreds of young Noblemen, Gentlemen, and rich Merchants well mounted, begirt the wayes on euery side: diuers on foot also, euen to the gate of the house where the Embassadour was to be lodged, which was some two miles. Whither being come, he was brought into his Bed-chamber by the Noblemen his *Prestaues*, where with many thankes for their honourable paines, they were dismist, betaking themselues to their further affaires. The next morning came three other *Prestaues* with the former, to know of his Lordships health, and how he had rested the night past: withall, that if his Lordship wanted any thing, they all, or any one of them, were as commanded, so readie to obey therein. These, with the Interpreter and sixe Gentlemen were most within the walls, lodged in a house ouer the gate, besides we had fiftie Gunners to attend, and guard vs in our going abroad.

Strange request.

The eight of October being the fourth day after our comming to *Muscu*, the *Prestaues* came to his Lordship to let him vnderstand, they heard he should goe vp the next day: wherefore they desired his speech and Embassage to the Emperour: and the rather, that the Interpreter might (as they pretended) translate it. To this purpose, very earnestly at seuerall times they made demand. The Embassadour answered, that he was sent from a mightie Prince, to bee his Embassadour to their Emperour, and being sent to their Master, he deemed it not only a dishonour to him, but a weaknesse in them, to require that at his hands.

His audience.

The eleuenth of October, his Lordship being sent for by his *Prestaues* there wayting, hauing excellent Iennets for himselfe, the Kings Gentlemen, and good horses for the rest: as likewise two gallant white Palfreis to carrie or draw a rich Chariot, one parcell of the great Present, with his followers and the Emperours guard, carrying the rest: on each side the streets standing the Emperours guard with Peeces in their hands well apparelled, to the number of two thousand by esteeme, many Messengers posting betwixt the Court and our *Prestaues*. Thus with much state, softly riding, till we came vnto the vtmost gate of the Court (hauing passed through the great Castle before) there his Lordship dismounted. Then met him a great Duke (named *Knasa Andriay Metowich Soomederowe*) with certayne Gentlemen, to bring him vp. So in order as we rode, we ascended the staires and a stone Gallerie, where on each side stood many Nobles and Courtiers, in faire Coates of *Persian* Stuffe, Veluet, Damaske, &c. At the entry to the great Chamber, two Counsellors encountred the Embassadour, to conduct him through that Roome, round about which sat many graue and richly apparrelled Personages. Then we entred the Presence, whither being come, and making obeysance, we staid to heare, but not vnderstand, a very gallant Nobleman, named *Peter Basman*, deliuer the Emperours Title: Then the particular of the Presents, and some other Ceremonies: which performed, the Embassadour hauing libertie, deliuered so much of his Embassage, as the time and occasion then affoorded: After which the Emperour arising from his Throne, demanded of the King of *Englands* health, the Princes, and Queenes: then of the Embassadors and the Kings Gentlemen, and how they had beene vsed since they entred within his Dominions: to all which with obeysance wee answered as was meete. Then the young Prince demanded the very same.

P. Basman.

The Embassador hauing taken the Kings Letter of his Gentleman Vsher, went vp after his obeysance to deliuer it, which the Lord Chancellor would haue intercepted. But the Embassadour gaue it to the Emperours owne hands, and his Majestie afterwards deliuered it to the Lord Chancellor: who tooke it, and shewing the superscription to the Emperour and Prince, held it in his hand openly with the Seale towards them. Then the Emperour called the Embassadour to kisse his hand, which he did, as likewise the Princes, and with his face towards them returned. Then did hee call for the Kings Gentlemen to kisse his hand, and the Princes, which they after obeysance made, did accordingly. Afterwards, his Majestie inuited his Lordship, the Kings Gentlemen and the rest to dine with him, as likewise Master *I. Mericke* Agent by name, who gaue his attendance there on the Embassadour, and was now (as diuers times) very graciously vsed of the Emperour and Prince: no stranger (that I euer heard off) like him in all respects.

Emperours glorie.

Being entred the Presence, we might behold the excellent Majestie of a mightie Emperour, seated in a Chaire of Gold, richly embroydered with *Persian* Stuffe: in his right hand hee held a golden Scepter, a Crowne of pure Gold vpon his head, a Coller of rich stones and Pearles about his necke, his outward Garments of Crimson Veluet, embroydered very faire, with Pearles, Precious stones and Gold: On his right side, (on equall height to his Throne) standing a very faire Globe of beaten Gold, on a Pyramis, with a faire Crosse vpon it, vnto which before hee spake, he turned a little and croft himselfe. Nigh that, stood a faire Bason and Ewer, which the Emperour often vseth daily.

Princes splendour.

Close by him in another Throne sat the Prince, in an outward Garment like his Fathers, but not so rich, a high blacke Foxe Cap on his head, worth in those Countreyes fiue hundred pound, a Golden Staffe like a Friers, with the likenesse of a Crosse at the top. On the right hand of the Emperour, stood two gallant Noblemen in cloth of Siluer Garments, high blacke Foxe Cappes, great and long chaines of Gold hanging to their feet, with Pollaxes on their shoulders of Gold.

Pollaxes.

And

Digitized by Google

And on the left hand of the Prince two other such, but with Siluer Pollaxes. Round about the benches sat the Councell and Nobilitie, in Golden and *Persian* Coats, and high blacke Foxe Caps, to the number of two hundred, the ground being couered with Cloth of Arrasse, or Tapistrie: The Presents standing all the while in the Roome, within little distance of his Majestie, where he and the Prince often viewed them. Being now by our *Prestaues* and others come for to Dinner, who led vs through much presse and many Chambers to one very faire and rich Roome, where was infinite store of massie Plate of all sorts; Towards the other end stood the Emperours Vncle, named *Stephean Vaselewich Godonone*, Lord High Steward, being attended with many Noblemen and Gentlemen, whom my Lord in his passage saluted, which with an extraordinary countenance of aged Ioy, he receiued, making one of their honourable Nods. The Embassador entred the dining Roome, where we againe viewed the Emperour and Prince, seated vnder two Chaires of State, readie to dine, each hauing a Scull of Pearle on their bare heads, but the Princes was but a Coronet. Also their Vestments were changed.

Counsell and Nobilitie.

Plate.

Dining roome.

The former Duke, that for that day was the Embassadours *Prestaue*, came, as commanded from the Emperor, and placed the Embassador at a Table, on the bench side, some twentie foot from the Emperour. Then the Kings Gentlemen, Master *Merieke*, Master *Edward Cherrie*, and all the rest were placed, so that our eyes were halfe opposite to the Emperour. Ouer against the Embassadour sat his *Prestaues* vppermost. Also in this large place sat the Priuie Counsell, to the number of two hundred Nobles at seuerall Tables. In the midst of this Hall might seeme to stand a great Pillar, round about which, a great heigth stood wonderfull great pieces of Plate, very curiously wrought with all manner of Beasts, Fishes and Fowles, besides some other ordinarie pieces of seruiceable Plate.

Change of Rayment.

Two hundred Nobles guests.

Being thus set (some quarter of an houre as it were, feeding our eyes with that faire Piller of Plate) we beheld the Emperours Table serued by two hundred Noblemen, all in Coats of cloth of Gold. The Princes Table serued with one hundred young Dukes and Princes of *Cassan*, *Astracan*, *Syberia*, *Tartaria*, *Chercasses* and *Russes*, none aboue twentie yeeres old.

Three hundred noble Seruitors.

Then the Emperour sent from his Table by his Noble Seruitors, to my Lord and the Kings Gentlemen, thirtie Dishes of meate, and to each a loafe of extraordinary fine bread. Then followed a great number of strange and rare Dishes, some in Siluer, but most of massie Gold; with boyled, baked, and rosted, being piled vp on one another by halfe dozens. To make you a particular Relation, I should doe the entertaynment wrong, consisting almost of innumerable Dishes: Also, I should ouer-charge my memory, as then I did mine eyes and stomacke, little delighting the Reader, because Garlicke and Onions, must besawce many of my words, as then it did the most part of their Dishes.

Garlike and Onions.

Drinkes.

For our Drinkes, they consisted of many excellent kinds of Meades, besides all sorts of Wine and Beere. Diuers times by name, the Emperor sent vs Dishes: but in the midst of Dinner hee called the Embassadour vp to him, and dranke our Kings health, where the Emperour held some discourse of our King and State. But at one time (striking his hand aduisedly on his brest) *Oh, said hee, my deere Sister Queene Elizabeth*, whom I loued as mine owne heart, expressing this his great affection almost in a weeping passion. The Embassador receiuing the Cup from his Princely hand, returned againe to his owne place, where all of vs standing, dranke the same health out of the same Cup, being of faire Christall, as the Emperour had commanded, the Wine (as farre as my judgement gaue leaue) being Alligant.

Meads.

Memory of Q. *Elizabeth.*

Thus passing some foure houres in banquetting, and refreshing our selues too plentifully, all being taken away, we did arise. The Embassadour and the Kings Gentlemen beeing called by name to receiue from his Emperiall hands, a Cup (or rather as they call it a *Tendouer*) of excellent red Mead, a fauour among them neuer obserued before, which Cups for they were great and the Mead very strong, we often sipped at, but without hurting our memories, we could not say *Amen* vnto: which the Emperour perceiuing, commanded them to be taken away, saying, Hee was best pleased with what was most for our healths.

Thus after our low courtesies performed, wee departed from his presence, riding home with the same former guard and attendance to our Lodings; where our *Prestaues* for that instant left vs, but shortly after they came againe, to accompany a great and gallant Duke, one of them that held the Emperours golden Pollaxes, named *Knes Romana Phedorowich Troya Narone*, who was sent from his Majestie to make the Embassadour and the Kings Gentlemen merrie: likewise hauing instructions to drinke their Emperours, our Kings, and both the Princes healths, and diuers Princes else, which hee did himselfe very freely and some of vs, as many of them as wee could with our owne healths, there being such plentie of Meades and other Drinkes, as might well haue made fortie *Russes* haue stumbled to sleepe. Thus light-headed, and well laded especially if you take knowledge of the thirtie yards of cloth of Gold, and the two standing Cups with couers, which the Embassadour rewarded him withall, before he departed.

Gifts.

But vnwelcome newes within foure dayes after our audience so vnhappily came, as not only our Affaires, but any else, except counsell against present danger, was not regarded. For this was held for currant, that one who named himselfe *Demetrie Eudowich Beala*, as the Sonne of their late

Newes of *Demetrius.*

Digitized by Google

late Emperor *Iuan Vaſillowich*; hee that in the reigne of *Pheodor Euanowich* his brother was in his infancie, as was thought, murthered at *Ongleets*) is now reuiued againe, and vp in armes for his right and inheritance: whereupon preſently was ſent an Armie of two hundred thouſand Souldiers, either to take or ſlay him. But he was ſo ſtrengthened with *Poles, Coſſacks*, &c. that a number of *Ruſſes* yeelded to his obedience.

Vpon the one and twentieth of Nouember, the young Prince of an ancient cuſtome going to a Church within *Moſco*, the Kings Gentlemen vpon knowledge thereof (the Ambaſſador being vnwilling to be ſeene publike, as alſo for that the Emperor himſelfe did not goe as hee was accuſtomed) went and attended where his Excellency might ſee them, and they ſafely behold him,
Princes pomp. who rode in a very faire and rich ſled, hauing a gallant Palfrey lead by two Groomes to draw it, many hundreds running before to ſweepe the ſnowe away where he ſhould paſſe, and were ſaid to bee ſlaues, which I verily beleeue, becauſe certainly they were his Subiects. Then came the Prince richly apparelled with two *Tartar* Princes ſtanding before on his ſled, and two young Dukes behind, with two hundred ſleds following him.

The eight of Februarie, the Emperor ſent vs ſleds to ride abroad, and this day the rather, that we might behold a reported victorie, againſt the reputed Rebell *Demetrie*, &c. So we the Kings Gentlemen did behold three hundred poore Priſoners, ſeuenteene Enſignes, and eleuen
Peter Baſman. Drums brought in, with more glorie then victorie. About this time returned *Peter Baſman*, one of the Generals, who had performed very honourable ſeruice, and certainly, he was the man of greateſt hope and expectation in the whole Empire, who was brought into the *Moſco*, with all the Counſell, Nobles, Gentlemen, and Merchants, a grace neuer performed before to any Subiect. But not without ſuſpition of ſome extraordinarie ſecret herein, and beſides particular fauours, bountifull rewards, and a promiſe he ſhould neuer goe againe vntill the Emperor himſelfe went, he was, being but a young man, made a Priuie Counſellor. Forthwith one thing I will you ſhall obſerue the Emperors fauour, and his then noble Spirit, he making diuers times ſute (as was thought) becauſe they were in great danger, to goe againe to the warres, once proſtrated himſelfe to obtayne his deſire, but falling downe too humbly, hee could not eaſily riſe againe, whereby the Emperor vnderſtanding of his many and great wounds, was ſaid to weepe, riſing himſelfe vp to raiſe and helpe him vp, but extraordinarie Cauſes haue the like Effects, as hereafter you ſhall vnderſtand.

We were lodged in the ſame houſe where the young Prince *Iohn* of *Denmarke*, brother to that King and our now Queene of *England*, did lodge, (who would haue married the young Princeſſe
Oucſinia the Princeſſe. *Ouckſinia*, the Emperors only daughter, but that he vnhappily there died) but not in any of thoſe lodgings: for it is a cuſtome there, that where a Prince dyes (eſpecially a ſtranger) not of long time after to let any other lodge there.

Now the Ambaſſador vnderſtanding of the conuenience of his paſſage downe by ſled-way, alſo fearing (as wiſe men had cauſe) what the iſſue of theſe warres would be, knowing the ſtate here vſed in any ſutes, bethought himſelfe aduiſedly that it was high time, being the middeſt of Februarie, to deſire a ſecond audience for his ſooner diſpatch, which he forthwith requeſted, and wrote a letter to that purpoſe vnto the Lord Chancellor.

Second audience. Vpon the tenth of March, the Ambaſſador with the Kings Gentlemen all richly apparelled, and all his followers decently attending, very honourably (as before) and with the like recourſe of beholders, and guard of Gunners (but that they were ſaid to bee Citizens by reaſon of their
Citizens Souldiers. warres, but in like apparell) was attended to the Court, being receiued with the former grace, or more, he aſcended the Preſence: the Emperour and Prince holding their wonted ſtate, onely changing their Veſtments with the ſeaſon, but for the riches nothing inferior.

So ſoone as the Ambaſſador and the Kings Gentlemen were come oppoſite to his Throne, hee commanded ſeates that they might ſit downe: then with a Maieſtick countenance, repreſenting rather conſtraint then former cheerfulneſſe, he declared, that He, his Sonne and Councell, had conſidered his Maieſties Letter, the Maieſtie of King *Iames* of *England*, as alſo on whatſoeuer elſe was deſired, and in token of his ioyfull receiued amitie with the renowmed King of *England*, as with his Predeceſſor, he had wrote his Princely Letters to that purpoſe. Herewith the Chancellor from the Emperour deliuered the Ambaſſadors his Highneſſe Letters to his excellent Maieſtie. Withall vnderſtanding by the Chancellor hee had ſome farther matter to intreat of, then in his Briefe to his Maieſtie was remembred: therefore hee had appointed foure principall Councellors to conſult with him of his Requeſts, which was done. After, the Ambaſſador yeelding courteous thanks for his Maieſties fauour, his Lordſhip attended by many Nobles, proceeded to the Councell Chamber, whither preſently after came foure Councellors, and the Emperours *Tolmach*: who after ſalutations, we withdrew to the next chamber, where wee paſſed away an houre in diſcourſe, among many young Nobles, hauing the Ambaſſadors Interpreter. In the end, after three or foure goings and returnes of the Chancellor from the Emperour, wee went againe before him (where after hee had commanded vs to ſit downe as before) by the mouth of the Chancellor was openly deliuered a Briefe of the whole Embaſſie (and that dayes particular deſire, according to the Ambaſſadors requeſt, confirmed.) Alſo in good and pleaſing language,

Digitized by Google

language, was declared the great desire that the Emperour had, for the continuance of peace and amitie with the renowmed *Iames* King of *England*, as with the late Queene *Elizabeth*, withall that in due time (all accidents well ended) he would send an honourable Ambassador for further affaires, as likewise to congratulate with our King of his happinesse in so plausible comming to his Right and Inheritance. Likewise, a Grant of a new Priuiledge for the Companie, which he said should be vnder the golden Seale, &c.

Which ceremonious speech ended, the Emperor called for the Ambassador and the Kings Gentlemen to kisse his hand, and the Princes: which done, with the Emperors nod or bowing to vs, as likewise the Princes, desiring the remembrance of his and the Princes commendations to his Maiestie, the Prince, and Queene of *England*, we were dismissed, but not before the Emperor said he would send home to vs. Thus we tooke our last leaue of the Emperors Court, being more graciously and especially entertayned then before, or then euer any would take knowledge Ambassadors were vsed withall: we are honorably attended home, and a Duke of great account, named *Knas Euan Euannowich Courbetes*, was attended with many of the Emperors seruants within our Gates: following him a dinner, sent from the Emperor by some two hundred persons, consisting of three hundred seuerall dishes of Fish (for it was now Lent) of such strangenesse, greatnesse, and goodnesse (for their number) as it were not to bee beleeued by any report, but by a mans owne eye-sight, with infinite store of Meades, and Beere, in massie plate, &c. Golden Seale. Great dinner.

The eighteenth of March, the Emperor sent by *Vassily Gregorewich Telepnow*, the Roll wherein was the Demands of the Ambassador, and the particulars of the whole negotiation, as there at large appeares. The nineteenth, his Maiestie sent by *Menshoy Buldecow*, vnder Treasurer, a royall Present to the Ambassador of many particulars, also to each of the Kings Gentlemen, being rewarded, he departed.

The twentieth of March, being honourably accompanyed with thousands of Gallants of each side the streets all along as we passed, the Ambassador departed from the Citie of *Mosco*, with the whole numbers of horse-men still becking vs, till we came a short mile on this side the Citie where we made a stand, and after some complement betweene the Ambassador and his kinde and honourable *Prestaue*, the Duke *Vollagdemer*, with almost weeping on his part, the Ambassador went from the Emperors sled to his coach set vpon a sled, and wee alighted from the Emperors horses, and betooke our selues to our easie and pleasant passage in sleds, such a passage as this part of the World would wonder at, in which a man though hee goe a Hackney pace, may as easily reade as sleepe. Ambassadors departure. Sled-passage.

Thus accompanyed with Master *Iohn Mericke*, Master *William Russel*, sometimes Agent for the *Dutch*, and many other Merchants, we easily rode that night to *Bratteshin*, thirtie miles from the *Mosco*. The next morrow taking leaue of them all, we continued our iourney fiftie and sixtie verits a day easily.

Within few dayes after wee heard newes certainly of the Emperors sudden and vntimely death: which, considering neither the *Prestaue*, the Gouernour, or Bishop, had not or would not often dayes after take knowledge of, we might in the meane time haue doubted of, but that his Lordship had it from Master *Iohn Mericke* by Letter particularly. His death was very sudden, and as it was in it selfe, very strange: for within some two houres after dinner, hauing (as hee vsually had) his Doctors with him, who left him in their iudgements in health, as the good meale he made could witnesse, for hee dined well, and fed plentifully, though presently after as may be thought, feeding ouer-much, hee felt himselfe not onely heauie, but also payned in his stomacke: presently went into his chamber, laid himselfe vpon his bed, sent for his Doctors (which alwayes speeded) yet before they came, hee was past, being speechlesse and soone after dying. Before his death (as speedie as it was) hee would bee shorne, and new christned: what the cause was otherwise then the griefe, inward sorrow, with diuers distractions about the warres, and their bad successe, fearing the worst on his part, onely God knowes: yet who so remembers Gods iudgements, or Princes policies for Kingdomes, with mans sinfulnesse, and considereth the one with the other, may bee satisfied, if not contented. Emperor *Boris* his death. New christened.

For the Emperours person, he was tall and well bodied, teaching out of his authoritie obedience, of an excellent presence, black and thin haired, well faced, round and close shaued, strong limmed. A Prince framed betweene Thought and Resolution, as being euer in labour, but neuer till death deliuered: neuer acting (though euer plotting) but in his Closet or Councel Chamber. One rather obeyed then loued, being feared where hee was not serued: doubtlesse, vpholding a true Maiestie and gouernment in euery part, but in his owne minde: that it is a question, whether he were more kinde to Strangers, or seuere and iust to his Subiects, or hatefull and terrible to his Enemies. A father and a Prince, whose wordes, counsels, obseruations, policies, resolutions, and experiments, were but the life of his deare Sonne, neuer aduising, entertayning, no not praying without him. In all Ambassies and Negotiations, remembring his sonnes name with his owne, louing him (being louely) for that himselfe would bee loued, vnwilling to spare his presence, desirous to haue him at all occasions before his eyes. I shall not doe Emperors person. His respect to his sonne.

Digitized by Google

amisse, to giue a taste of the fruit sprung from so stately a Tree. Being by a learned and well trauailed Gentleman diuers times particularly aduised, to let the Prince take some more (then no recreation) by which meanes he might aswell prolong his life, as instruct his iudgement and delight his minde: Oh, would the Emperour answere, one sonne is no sonne: nay, I am perswaded, three sonnes to me is but halfe a sonne. But had I sixe sonnes, then I might safely say I had one, how then should I part with that at any time, I know not to bee mine for any time. This may giue satisfaction to any vnderstanding both of his feares and iealousies: his great loue, and much care. It was an vsuall speech with the Emperour vpon good reason to say, *hee was the Lord and father of his sonne, yet withall, That he was not onely his seruant, but his very * slaue.*

* Because he had done more for him, then might lawfully be commanded.

Two policies of the said Emperour I shall willingly acquaint you with, for diuers reasons. One was, when hee caused fire to bee kindled in foure parts of *Mosco*; whereat himselfe was noted to be very diligent, with all his Nobles and Courtiers: and after it was quenched, he sent his bountie to them all, that builded anew their houses, and repaid all their losses. And this was but to stop the rumour, then so common, of his strange gayning the Empire: by which stratagem of his, when his people were readie to mutinie, they were created anew good Subiects; yet did admire his not onely care, but goodnesse towards them all.

A second, was at that time the Land was visited with a mightie famine, and as great a plague (some foure yeeres since), whereof a third of the whole Nation is rated to haue died: and the murmuring multitude said the cause was, *their electing of a murderer to the Empire; wherefore God did thus visit them:* Whereupon, hee caused Galleries to bee builded round about the vtmost wall of the great Citie of *Mosco*, and there appointed daily to bee giuen to the poore, twentie thousand pounds sterling: which was accordingly performed for one moneth; whereupon the common peoples mouthes and bellies were well stopped.

Here wee lodged till the sixt of May, being wearied with the inconstancie and ill-some newes of flying reports, whereupon the time of the yeere requiring, the Ambassador resolued to passe downe the Riuer to *Colmogro*, as well that hee might the sooner haue newes from *England*, as happily to bee out of feare of any disaster, the rumours being innumerable and vncertaine.

Peter Basman sent against *Demetrius*, reuolteth.

After the suspicious death of the old Emperour *Boris Pheodorowich*, &c. by the appointment of the Prince (then their expected Emperour) and the Counsell, *Peter Basman* (that noble Sparke) was speedily dispatched and sent as Generall vnto their ill succeeding warres, as their last hope (indeed hee prooued so in a contrarie sense) and the onely refuge to the Commons: whither being come, hee with himselfe presented most of his command, as many as freely would offer themselues: Vnder which were all the *English*, *Scots*, *French*, *Dutch* and *Flemmings*, whatsoeuer: and with him, or rather before him (as least suspected) *Ries Vasili Euanch Goleeche*, the other Generall, a man of great birth, and in the prioritie of place, to bee receiued before *Peter Basman*. All which, the now well knowne newly opinionated Emperour very graciously receiued, happily not without some iealousie of many particulars.

Demetrius now sent Messengers with Letters which entred the Suburbs, where the Commons in infinite numbers brought them safe into the spacious Plaine before the Castle gate: within which, as daily they did vse, so now were all the Counsellors in consultation; but happily not in a secret Counsaile; also wherein was the Emperiall Court.

Tumult of the Commons.

There these *Boyerens* made demand for many of the Counsellors, especially for the *Godonowes*, to come to heare their right King *Demetrius Euanowich* speaking vnto them by Letters: Who yet after refusall (and I cannot condemne all) many came; the Commons being resolued, else to fetch them out. Then, by the *Boyerens* aloud was read the Emperours Letters, to this effect.

Demetrius his Letter.

That hee much wondred at that time, wherein expedition was to bee accounted safest policie, hauing sent many Letters and Messengers to them, concerning their approouing him to bee their lawfull Prince, as being the sonne of Euan Vasilowich *their late Emperour, and the onely brother of* Pheodor Euanowich *selfe-vpholder, of happy memorie, both with inuincible Arguments and direct Reasons to the manifesting thereof, they (notwithstanding his long patience and gracious remisnesse) were not onely so proud as not to answere his Princely Letters, but so presumptuous as to retayne his Messengers, whereby they made themselues apparantly to bee no lesse Vipers to the State in obscuring him, then Traytors to himselfe the true and right Emperour, by defrauding them: yet giuing him a strong Argument by their Silence, of their guiltinesse; also allowing thereby, time and opportunitie (if hee had not beene their true-borne Emperour, and with the naturall Mother, tendered the life of her deare Children) to haue conquered and destroyed the whole Nation.*

All which notwithstanding, hee (being confident in his owne conscience, of his iust Title, made the Prince of patience and humilitie from his former many great miseries and dangers) had in his Princely wisedome and clemency againe wrote these (but certainly his last Peace-requiring, and Grace-offering Letters: yea, was content to desire them be mught) and doubted not shortly but he should command, onely aymed at the good of the Commonwealth and State in generall; as he that without much shedding of his Subiects bloud, desired the Kingdome.

Also

Digitized by Google

Also to this end hee had sent men of great birth, viz. Rues Pheodor, Euanowich Mechithsosky, *and* Rues Demetre, Euanowich Suskey; *and giuen them Commission to displace his Enemies, and* Prestaue *the* Godonoues, *and others, till his further pleasure were knowne, consuming those monstrous blond-suckers and Traytors, with returne of the Commons answere thereunto: Likewise to demand his Messengers, and they to bee brought before the Commons, whom hee had reason to beleeue were ill-intreated, if not murthered; withall, that if they did submit themselues now to him, as to their lawfull Prince and Soueraigne, (which hee was truely resolued their consciences were guiltie of) that yet they should finde him a gracious and mercifull Lord; if otherwise, a seuere and iust Reuenger of them, and their many misdeedes towards him, as hee that had his Sword euer vnsheathed to execute his vengeance on them all: and was easily perswaded they were not ignorant of the many Victories hee had obtayned formerly against them, when they would seeme able and willing to fight with his Souldiers: and how afflicted and troubled herewith they all were: But that now, he had their chiefe and strongest Heads and Armes in his owne hand, the whole World might not betroth him they durst once speake openly against him, as assured that all (excepting a very few, and they of the worst) in heart were his loyall Subiects, &c.*

But before this Letter was halfe read, the Hearts and Hands of the multitude were strangely combined together, not one speaking, but all confusedly like fettered and chayned Horses stamping; being indeed without any feare, but of not doing mischiefe enough, all (as one) running violently into the Castle, where (meeting two of the pitifully tormented Messengers) they pawsed to heare them as sufficiently as their insufficiencie would permit them, deliuer the vilde manner of their torturing, whipping, and roasting, which was in deede a Whip and Spurre to driue them, without wit or humanitie, as if they had beene fired like Gun-powder with the very sparkes of heate: Such barbarous crueltie, beastly actions, and inhumane spectacles, as without the great Deuill had beene their Generall, no particular could haue acted; laying violent hands on all they met: but not killing (the great mercy of God) any man of account.

Thus the whole Citie was in an vproare, all the Counsellors houses, sellers, and studies ransacked, beginning with the *Godonones*; spoyling, renting, and stealing all they met vvith; but carrying little away but drinke, which they could not carry away.

The Commons (no doubt) would haue made this day little inferiour to the massacre of *Paris*, so violent and deuilish were their sudden resolutions; but that the Nobles (best beloued and obeyed) intreated, where none could command: others perswading, all wishing an end to this most miserable and neuer exampled mischiefe. But the multitude did what they would and could; especially on the greatest, which certainly were the worst: So as the Empresse flying to a safer lodging, had her coller of Pearle pluckt from her necke.

Then the Prince, Empresse, and Princesse, were prestaued (a second command being come from the Campe) with the *Godonones*, and many others that were suspected most: The Nobles ioyning in one counsell for the present ordering of these sudden accidents, and for answere to the Prince *Demetrius Euanowich*, who suddenly was by generall consent concluded (by the particular knowledge of *Bodan Belskey* a great Counsellor, that was priuie to his departure, and some others) to bee their right and lawfull Emperour, onely a few excepted. So as the young Prince was by many (but particularly by his mother) counselled to leaue the Kingdome vtterly, before it forsooke him; to follow his Fathers example in murdering himselfe, and herein his mother (that Map of miseries, that Cradle of crueltie) and his onely deare sister would associate him.

Letters were deuised, and Messengers framed to effect this desperate treacherie on his innocent life; so as in very few dayes (for Mischiefe hath the wings of Thought and Resolution) they three did consent (an vnhappy coniunction) to destroy themselues; and rather to lay violent hands vpon their hatefull liues, then make an Enemie seeme cruell in executing Iustice on them: which * yet certainly this Emperour neuer dreamt of, but determined the Prince should be within himselfe, not lesse then Absolute, and in a very great Dukedome. The Princely Mother began the health of Death to her noble Sonne, who pledged her with a heartie draught, therein so much strength did hee adde to his vile wicked obedience, that hee prooued a banquerout presently, and hand in hand embracing each other, they fell, and died as one, the Mother counselling and acting, whilest the child bethought and suffered: yet see Prouidence and Commiseration, Constancy and Obedience: the Princesse dranke, but like a Virgin temperately: so as modestie (the want of which was the death of the Mother) now prooued the life of the Daughter.

* Thus he: but others ascribe this murther to *Demetrius* his command, and this selfe-murther was pretended to auoid enuy of the fact.

Death of Mother & Sonne.

However it was with Boris *for other things; I thought it not amisse to adde this testimonie of his respect to the* English *Nation and Merchants in Priuiledges granted them, as followeth.*

Digitized by Google

Emperor Boris his Mosco Patent translated whiles Sir Th. Smith was there.

ONe *Almightie God without and before the Beginning, the Father, the Sonne, and the Holy Ghost, whom we glorifie in the Trinitie, our onely God, Creator and Preseruer of all things euerywhere, by which Will and Working, be liueth and giueth life vnto Man; Our onely God which inspireth euery one of vs his Children with his holy Word, through our Lord Iesus Christ, the Spirit of Life, now in this latter times, establish vs to hold the right Scepter, and suffer vs of our selues to reigne, for the good of the Land, and the happinesse of the People, together with our Enemies, and to the doing of good.*

We the great Lord Emperour and great Duke Boris Pheodorowich *of all* Russia, *sole Commander of* Volodemer, Mosco, Nouogrod, *Emperour of* Cazan, *King of* Astracan, *Lord of* Vobsko, *and great Duke of* Smolensko, *of* Twersko, Vhorskoy, Permskoy, Vatskoy, Bolharskay, *and of others, Lord and great Duke of* Nouagrod *in the low Country of* Chernego, Rezan, Polotskay, Rostouskoy, Yeraslauskoy, Belozerskoy, Leeflanskoy, Owdorskoy, Obdorskoy, Condinskoy, *and all* Siberia, *and the North parts; Lord and Commander of* Euerskoy *Land, and* Cabardinskoy *Country, and of* Cherces, *and* Igarskoy *Land, as also of many others Lord and Commander, with our Sonne Prince* Phedar Borisowich *of all* Russia. *We haue bestowed on the Merchants of* England, *viz. Sir* Iohn Hart, *Knight; Sir* William Webb, *Knight;* Richard Saltanstall, *Alderman;* Nicolas Mosbley, *Alderman;* Robert Doue, William Garaway, Iohn Harbey, Robert Chamberlin, Henrie Anderson, Iohn Audwart, Francis Cherie, Iohn Merick, Anthony Marlar; *Wee haue granted and licenced them to come with their ships into our Dominion the Country of* Dwina, *with all manner of Commodities, to trade freely from the Sea side and within our Dominions, to the Citie of our Empire of* Mosco. *Also there made sute vnto vs Sir* Iohn Hart, *Knight, and his Companie, to gratifie them to trade to our Citie of* Mosco, *and to our Heritage of great* Nouogrod *and* Vobsko, *and to all parts of our Empire, with their Commodities, and to Trade freely without custome: vpon which Wee the great Lord Emperour and great Duke* Boris Pheodorowich *of all* Russia, *with our Sonne Prince* Pheodor Borisowich *of all* Russia, *haue granted vnto the* English *Merchants, Sir* Iohn Hart, *Knight, and his fellowes, for our Sisters sake Queene* Elizabeth, *free passage to come into our Kingdome of* Mosco, *and into all the rest of our Dominions, with all manner of Commodities to trade and traffick freely at their pleasure. Also we haue commanded, not to take any kinde of Custome for their goods, nor any other Customes whatsoeuer,* viz. *for passing by any place by Land, nor for passing by any place by Water; nor for Custome of their Boats or Head money, nor for passing ouer Bridges and Ferries, nor for any entrie of Wares: as also all manner of other Customes or Duties whatsoeuer wee command shall not bee taken of them: But they shall not bring other mens goods into our Dominions, nor likewise recarry out of our Kingdome any other mens goods as their owne: nor to sell or barter for other men. Neither shall our Subiects buy and sell for them or from them: neither shall they keepe any of our peoples goods or pawnes by them to owne or colour them. Likewise they shall not send any of our Subiects to any Towne or Citie to buy Commodities. But what Citie they come into themselues they shall sell their owne Commodities, and buy our Commodities. And when they shall come to our Heritage to great* Vobsko *and* Nouagrod, *or to any other Citie within our Dominions with their Commodities, that then our Gentlemen and Gouernours, and all other officers shall suffer and let them passe according to this our Letter, and to take no manner of Custome of them whatsoeuer for any of their Commodities for passing by, nor for passage ouer any Bridges: neither shall they take any other Custom whatsoeuer in all our Dominions. And whereseoeuer they happen to come, and doe proceed to buy and sell; as also whereseoeuer they shall passe through with goods not buying of any Commoditie nor selling their owne, then in those Cities they shall take of them no manner of Custome whatsoeuer as aforesaid: and wee haue gratified and giuen them leaue to trade in all parts of our Dominions with their goods freely without Custome. And likewise whensoeuer the* English *Merchants shall bee desirous to buy or sell or barter their wares with our Merchants wares for wares, then shall they sell their wares whole sale and not by retaile, Cloth by the pack and by Clothes and by remnants; and Damasks and Veluets by the Piece and not by the Yard or askeene, and such Commodities as is to be sold by waight, not to sell them by the small waights, that is to say, by the* Zolotnick. *Also they shall sell Wines by the Pipe and the Hogshead, but by the Gallon, Quart or Pot or Charke they shall not sell: moreouer, they shall buy, sell and exchange their owne Commodities themselues, and the* Russe *Merchants shall not sell or exchange for them or from them their Commodities, neither shall they carry any mans goods to no manner of place vnder colour of their owne, and which of the* English *Merchants would at any time sell his Commodities at* Colmogro *on the* Dwina, *or at* Vologda *and at* Yeraslauly *they may, and of all their Commodities throughout all our Cities and Dominion, our Gentlemen, Gouernours, and all other Officers shall take no manner of Custome according to this our Imperiall Letter of fauour. Also through all our Dominions, Cities, and Townes they shall hire Carriers, Boats, and men to labour or rowe in the said Boats at their owne cost. Likewise when as the* English *Merchants shall desire to goe out of our Dominion into any other Kingdome, or into their owne Land, and that we thinke it good for them to take with them from our Treasure any Commodities to sell or exchange them for vs, for such Commodities as shall be fitting to our Kingdome, and to deliuer them to our Treasurer: and with those their and our goods, our Gentlemen and Gouernours shall suffer them to passe through all Cities and Townes within our Dominions without Custome*

ſtome as before. And when they haue ended their Market, and doe deſire to goe from the Mosko; *then they ſhall appeare in the Chancerie to the Keeper of our Seale, the Secretarie* Vaſſily Yacolowich Schellcalou. *Likewiſe, if there happen to the* Engliſh *Merchants any extremitie by Sea, or that a ſhip be broken, and that it be neere any place of our Kingdome, then we command that all thoſe goods ſhall bee brought out iuſtly, and bee giuen to the* Engliſh *people that ſhall at that time bee in our Land; or if they be not here, then to lay them vp all together in one place, and when the* Engliſhmen *come into our Land, then to deliuer thoſe goods to them Alſo wee haue beſtowed on the* Engliſh *Merchants the Houſe of* Yourya, *in the* Mosko *by a Church of Saint* Maxims *neere the* Marget, *to dwell in it as in former time, keeping one Houſe-keeper a* Ruſſe, *or one of their owne ſtrangers: but other* Ruſſe *folkes they ſhall not keepe any. Likewiſe theſe Merchants haue Houſes in diuers our Cities as followeth: A Houſe at* Yeres, *a Houſe at* Vologda, *a Houſe at* Colmogro, *and a Houſe at* Michael *the Archangell, being the ſhipping place: theſe ſaid Houſes they ſhall keepe as in former time according to this our Imperiall Letter of fauour, or gratified without paying any manner of Rent or any other duties whatſoeuer, either at* Mosko, Yereſlaue, Vologda, Colmogro, *or at the Caſtle of the* Archangell, *neither ſhall they pay any taxe. Alſo at thoſe Houſes at* Yereſlaue, Vologda, Colmogro, *and at* Archangell *they ſhall haue Houſe keepers of their owne Countrey-men, or* Ruſſes *of a meane ſort that are not Merchants, a man or two in a Houſe: to lay vp their goods in thoſe Houſes, and to make ſale of their goods out of thoſe Houſes, to whom they will according to this our Imperiall Letter of fauour, but their* Ruſſe *Houſe-keepers in their abſence ſhall not ſell any of their Commodities. And the* Engliſh *Merchants ſhal come with their ſhip to their Port, as in former times they haue done to vnlade their goods out of their ſhips, and likewiſe to lade them againe with our* Ruſſia *Commodities, at their owne charges of Boates and hire of men, and ferrying ouer the ſaid goods from their ſhips to their Houſe at the Caſtle of* Archangell. *Likewiſe our Officers, Cuſtomers, and Swornemen ſhall take a iuſt note of all ſuch goods as they haue both of* Ruſſia *and* Engliſh *Commodities, and the note to paſſe vnder the Merchants* Firma, *becauſe it may be knowne what goods paſſeth of the ſtrangers and of the* Ruſſes. *But they ſhall not looke ouer their goods, neither vnbind any packs in any place, and when they doe ſend their owne* Engliſhmen *from* Archangell *to our Citie of* Mosko, *or doe ſend* Ruſſia *Commodities into their owne Land, Then all our Officers and Cuſtomers ſhall let them paſſe without delay, according to this our Letter of fauour. And whenſoeuer the Merchants ſhall be deſirous to ſend any of their owne Countreymen into their owne Land, or into any other Kingdome ouer Land: they ſhall doe it freely with our Imperiall Maieſties order, without carrying any Commoditie ouer with them, and they ſhall haue their Letters of Paſſe giuen them in the Embaſſadours Office. And concerning any matters of debate or controuerſie in Merchandize, or iniurie, then they ſhall be iudged by the Keeper of the Seale, and Secretarie* Vaſſily Yacolowich Shelcolou, *doing right and Iuſtice to both parties with equitie and truth. and what cannot be found out by Law, or Inquiſition, there ſhall be vſed Lots. His Lot that is taken forth, ſhall haue right done vnto him. Likewiſe, in what place elſe in all our Kingdome there doe happen any matter of diſcord in Merchandize or by iniurie, then our men of authoritie, or Gouernours, and all manner of our Officers ſhall doe true Iuſtice betweene them: and what cannot be ſought out by Law ſhall be ſought out by Lot: his Lot that is taken out ſhall haue right done vnto him as before mentioned, as alſo they ſhall not take any cuſtome or dutie of them for any Law matter, not in any place in our Kingdome. Moreouer, this our Imperiall Letter in all our Realme and Dominion, our Officers, and all manner of our ſubiects ſhall not diſobey or breake it in any point whatſoeuer, but if there bee any that doth diſobey this our Imperiall Letter of fauour, that then thoſe people ſhall bee in our high diſpleaſure, and executed to death. This our Imperiall Letter of gratitude, is giuen at our Imperiall Palace and Houſe in our Citie of* Mosko, *from the yeere of the beginning of the World* 7107. *in the month of Nouember: being vnderwritten as followeth.*

Lot Law.

By the great Lord Emperour and great Duke Boris Pheodorowich *of all* Ruſſia, *ſelfe-vpholder: his Keeper of the Seale, and Secretarie by name* Vaſſily Yacolowich Sheallcaloue.

§. III.

One pretending himſelfe to be DEMETRIVS, *with the Popes and* Poles *helpes attayneth the* Ruſſian *Empire: his Arts, Acts, Marriage, fauour to the* Engliſh, *and miſerable end.*

HAuing thus preſented you *Boris* his Tragedie out of that printed Author, and his Grant to the *Engliſh* from a written Copie; it ſhall not bee amiſſe to take more leiſurely and mature view of this Pretender, againſt whom *Boris* his deſire of ſecrecie (permitting none guiltie of the murther to ſuruiue) had vnfurniſhed him of Arguments. He produced a Purſe giuen him by his Mother; with the Hiſtorie of his life after that ſending him away and acknowledging another whom ſhe was more willing to act that bloudy

Scene then her own Son: with other particulars which bred ſtrong confidence in ſuch as (weary of *Boris*) were deſirous it ſhould be ſo. But for the death of the yong Emperor, & his mother, it is by moſt aſcribed to *Demetrius*, who ſeeing the people of *Muſco* his friends, and the Emperour and his Mother in hold, pretended he could not come thither whiles his enemies liued, whereupon they in a mutinie ſlue them; to auert the enuie whereof, it is probable that it was made to be their owne act, and their Keepers therefore by him impriſoned. *Boris* his daughter was thruſt into a Nunnerie, and ſo made dead alſo to the ſucceſſion. But as I haue before deliuered out of that diligent, learned and ſincere Hiſtorian *Thuanus*, *Boris* his attayning the Scepter, I ſhall likewiſe intreat your patience out of him to receiue theſe Relations of *Demetrius*.

Thu. li. 135. *Thuanus* writeth that after the murther of that (true or falſe) *Demetrius*, ſome yeeres after in the borders of *Polonia* and *Muſcouia*, appeared one which called himſelfe *Demetrius*, and in teſtimonie thereof, ſhewed a Wart in his face, and one arme ſhorter then the other (noted before in the true *Demetrius*) a man of ſharpe wit, bold courage, liberall mind, gentle behauiour, and of parts compoſed to a Scepter-worthineſſe. Firſt, was he made knowne to the Ieſuites of principall note in *Poland*, to whom he promiſed if he might receiue helpe for the recouery of his juſt Inheritance, his firſt care ſhould be to reduce the *Ruſſians* to the Vnion of the *Romiſh* Church. This thing was commended to the Pope as conducing to the enlarging of the holy See, by his ayde, and furtherance with the *Poliſh* King and Nobilitie, to be promoted; which alſo was done by the Ieſuites themſelues, who brought him to *George Miecinſy Palatine* of *Sendomir* a man potent in that Kingdome, with whom he couenanted alſo to marrie his Daughter if hee ſucceeded in his *Ruſſian* Enterprize. He had lurked awhile in *Liefland*, caſting off his Cowle, and had there learned to ſpeake and write the *Latine* Tongue: and had written to Pope *Clement* the Eighth, with his owne hand not inelegantly. And being by the ſaid *Palatine*, and *Viſnowitzi* his Sonne in Law, brought before King *Sigiſmund*, he made a pithy and Maſculine ſpeech, that he ſhould remember that himſelfe had beene borne in Priſon and Captiuitie, whence Gods mercie had deliuered him, to learne him to ſuccour others afflicted with like diſaſtre.

The Ieſuites firſt authors, or fautors at leaſt of this *Demetrius*.

Sigiſmunds father *Iohn* was impriſoned by King *Ericus* 1564.

Thus by the Kings fauour, the *Palatines* money, the Ieſuites induſtrie (not to mention the Popes Sanctitie) he procured an Armie of ten thouſand Souldiers in *Poland* well furniſhed, and in his *Ruſſian* March, winneth to his partie the *Coſſaks* a kind of men which follow forreigne Warres and prey, and leades with him tenne thouſands of them. Paſſing *Boriſthenes* hee firſt charged vpon *Zerniga*, & ſummoned them to yeeld to the true heire *Demetrius*, which was done by *Iuan Takmeny*, who had before conceiued diſlike againſt *Boris*. *Corelas* commanded the *Coſſaks*, a notorious Sorcerer. He was the Author of the ſiege of *Putinna* a populous Citie, which *Michelowich Soltekoui* held with eight thouſand *Coſſaks*, whom alſo he wrought with, that hee admitted and followed *Demetrius*. Hereupon *Boris* ſends an Army of an hundred thouſand men againſt him. He alſo ſends Ambaſſadors into *Poland*, to put them in minde of the league betwixt both Nations, and earneſtly deſired this counterfeit *Demetrius*, a Prieſts Baſtard and notable Sorcerer, to bee deliuered vnto him aliue or dead, adding threats if they perſiſted, and withall working vnder-hand with the Nobles to deterre the King from his ayde. But by the Popes and Ieſuites preuayling power nothing was effected, the King and the *Poles* reſoluing to aſſiſt him, as thinking it the beſt courſe to accord both Nations.

Coſſaks.

Zerniga.

Putinna yeelded.

The *Palatine* defeated.

Both Armies met at *Nouogrod*, where *Palatine Sendomir* the Generall, in the end of Ianuarie 1605. thinking to find a reuolt in the *Ruſſian* Armie, gaue a raſh on-ſet, & was put to flight, and after returned to *Poland*. *Demetrius* retyred himſelfe to *Rilskie* Caſtle (in the borders) with a few; and forſaken of others, he forſooke not himſelfe. Hee had brought with him two Diuines of the *Ciſtercian* Order which returned home: two Ieſuites alſo, *Nicolas Cherracoui* and *Andrew Louitzi*, which had beene Authors of the Expedition, and now encouraged him by their exhortations and examples of patience. He confident (as hee made ſhew) in the juſtice of his cauſe, when he was to begin battell or skirmiſh, vſed to call vpon God, ſo as he might bee heard of all, with his hands ſtretched forth, and his eyes lifted vp to heauen, in ſuch like words. *O moſt iuſt Iudge, kill me firſt with a Thunderbolt, deſtroy me firſt, and ſpare this Chriſtian blood, if vniuſtly, if couetouſly, if wickedly I goe about this Enterprize which thou ſeeſt. Thou ſeeſt mine innocencie, helpe the iuſt cauſe. To thee O Queene of Heauen I commend my ſelfe and theſe my Souldiers*: Which if they be truly related, and he not the true *Demetrius*, he was either an impudent Iugler, or exceedingly gulled with fortunes daliance and proſperous ſucceſſe, which concluded in a Tragicall period.

Ciſtercians and Ieſuits.

Demetrius his confident Prayer.

Part of *Boris* his Armie was now come to *Rilsky*, where in a battle betwixt the horſemen of both parts, *Demetrius* got the better, and the lately conquered, and preſently fewer, became *Victors*; at the firſt encounter a thouſand being ſlaine, two hundred taken, and the reſt put to flight, leauing their footmen to the ſlaughter, and the baggage to the ſpoyle. Hereupon fiue neighbouring Caſtles with their ſeuerall Territories, yeelded to *Demetrius*, one of which, *Bialogrod* yeelded him a hundred and fiftie Peeces of Ordnance. The Captaynes were deliuered into his hands. Soone after *Iaſeka* and *Leptina* yeelded, in which *Hinsko Otiopeius* that famous Sorcerer was taken: after which all *Seueria*, a large Principalitie, came in, and eight Caſtles; *Demetrius* vſing great modeſtie in this vnexpected victorie. *Boris* meanewhile ſent ſome with large pro-

Demetrius his victorie.

promises to murther him, and the Patriarke excommunicated all which fauoured him. *Demetrius* writ hereof modestly to the Patriarke, and to *Boris* also, offering faire conditions to his Family, if he would resigne his vsurped Empire, which he with indignation rejected. That happened when the Embassadors of *Denmarke* and *Sweden* were in his Court to joyne league with him against the *Pole*. In that consultation *Boris* is said to haue beene in such a chafe, that hee fell downe suddenly, much bloud passing from his mouth, nosthrils and eares; and in the end of Aprill hee dyed; some say of an Apoplexie, others, of poyson which hee drunke: after hee had reigned seuen yeeres. His Wife with her Sonne were aduanced to the Throne after him, and the Nobilitie sworne to them. The dead bodie was buried without any pompe. *Constantine Fidler* a *Liefslander* of *Rie* made an elegant Oration in his prayse, whose brother *Gaspar* serued *Boris*.

Boris dyeth. Some say, that hee had vsed with *Aqua vitæ* to poyson others.

Neque enim lex iustior vlla est, quam necis artifices arte perire sua.

Presently *Peter Basman* was sent away with an Armie. * *Hodunius* (a neere Kinsman of *Boris*) besieged *Crom*, to rayse whom, *Demetrius* vsed this policie. Hee sent a simple man thither, which being deceiued himselfe might deceiue others, with Letters that fortie thousand were comming to ayde the besieged. He being taken (sent by a way which he could not escape) and examined with tortures confesseth the same with his Letters: which caused a tumult in the Campe; and in the end, the besieged taking aduantage of the rumour still increased by some sent purposely with reports that they had seen the new auxiliaries issued with a counterfeit shew of great numbers, and caused the *Russians* to consult of yeelding. *Basman* also the new Generall yeelded and cried out with a loud voyce, that *Demetrius* was the true heire, and therefore all true hearted *Muscouites* should follow his example; which the most followed. *Hodunius* was taken, and refusing to acknowledge *Demetrius* was cast in Prison. In the Tents were huge Ordnance found. After this Campe-alteration, followed the like in *Mosco*, the people resounding the name of *Demetrius*. The Empresse and her sonne were committed to ward, where some write that they poysoned themselues, some that *Demetrius* commanded it. The *Germanes* flying out of the *Borissian* Campe to *Demetrius* drew many with them.

* Some say of 60000. men.

Basman yeeldeth.

From *Crom* doth *Demetrius* now march towards *Mosco*, the people all the way flocking to see their new Prince, who in twentie remoues came thither on the 19. of Iune, and entred with pompous procession of Souldiers & Priests, the *Russian* Priests hauing Banners with the Pictures of the blessed Virgin and their Tutelare Saint *Nicolas*, in the end of al the Patriarch, and after him *Demetrius* by himselfe on a white Palfray with a gallant trayne of attendants. Thus hee goeth to the Temple of our *Ladie*, and after Prayers, from thence to Saint *Michaels* Church in which his Father lay buried, and hearing that *Boris* lay there interred, he presently commanded his body to be taken vp and to be remoued to a meaner Chappell without the Citie. Passing by *Boris* his peculiar House, he could not endure the sight, but sent workemen presently to race the same; saying, they were infamous with Sorceries, and that an image was said to be placed vnder the ground, holding in the hand a burning Lampe, hauing vnderneath store of Gunpouder buried; things so disposed, that the Oyle failing, and the Lampe breaking, the fire should (had it not beene before spied and remoued) blow vp that, and the houses adioyning. Thus had *Boris* impeached him, and he now *Boris* of Magicall arts, which are vsuall accusations in those parts.

Demetrius commeth to *Mosco*, his pompous entrance.

Thence he went to the Imperiall Pallace, and beganne to gouerne the Empire, more inclining to the *Poles* and forreiners, then to the *Russes*: which vntimely expressing himselfe, hastned his ruine. Seuentie noble Families of *Boris* his kindred or faction were exiled, that their Goods might be shared amongst strangers, and new Colonies of men planted, brought into *Russia*. His clemency was remarkable to *Suisky*, who being condemned for not onely refusing to acknowledge this Emperour, but vttering also reproachfull speeches of him (as being of base Parentage, and one which had conspired with the *Poles* to ouerthrow the *Russian* Temples, & Nobility) and now his prayers ended, and the fatall stroake on his knees expected; on the seauenth of Iuly, by vnexpected mercy, euen then receiued his pardon. The last which yeelded to him were the *Plescouites*. Some tell of exceeding Treasures also which hee found laid vp for other purposes, which through his profuseneese soone vanished. The first of September, was designed to his inauguration (being New yeeres day to the *Russes*, as sometimes to the *Iewes*) but for other causes it was hastned, and his Mother was sent for out of a Monasterie (into which *Boris* had thrust her) farre from the Court. An honorable Conuoy was herein employed, and himselfe with great shew of Pietie went to meet her, embraced her with teares, and bare-headed, on foot, attended her Chariot to the Castle; whence afterwards she remoued with her women into a Monasterie where the Noblest Virgins and Widdowes of *Russia* vse to sequester themselues from the World. His Mother was noted to answere with like affection to him, whether true or dissembled on both parts. At his entrance to the Kingdome, after Ceremonies ended, *Nicolas Cnermaconius* a Iesuite made him a goodly Oration: the like was done by the Senate. To the Iesuits was alotted a faire place of entertaynment not far from the Castle, wherein to obserue the *Romish* Rites and Holies: and euen then by their meanes he had declared himselfe in that point, but for feare of *Suiskie* hee stayed till fitter oportunitie.

Poles aduanced.

Clemencie to *Suiskey*.

Respect to his Mother.

Iesuits.

Hauing thus setled things, his care was to recompence the *Poles*, to enter league with that Nation, and to consummate the Marriage. For which purpose hee sent three hundred Horsemen with

Embassage to *Poland*.

Digitized by Google

with *Athanasius* the Treasurer, who in Nouember came to *Cracouia*, had audience of King *Sigismund*, where he with all thankfulnesse acknowledged the Kings forwardnesse with his Nobles to recouer his right, whereto God had giuen answerable successe beyond expectation; that he deplored the *Turkish* insolencies in *Hungary* and other parts: to vindicate which, he would willingly joyne with the *Pole*, and other *Christian* Princes: meane whiles hee was willing to make an euerlasting league with him, aud to that end entreated his good leaue to take vnto himselfe a Wife out of *Poland*, namely, *Anna Maria*, the Daughter of *George Miecinsie* the *Palatine* of *Sendomir*, to whom for money, men, and endangering of his owne life, hee was so much engaged. The eight day after, the Contract was solemnely made by the Cardinall, Bishop of *Cracouia*, and the Embassadour with her Parents feasted by the King. *Demetrius* had sent her and her Father, Iewels worth 200000. Crownes.

Thus farre haue wee followed *Thuanus*, and hee *Iacobus Margaretus* a *French* Captayne of *Demetrius* guard of *Partisans*, which published a Booke hereof. Now let vs present you a little *English* Intelligence touching this *Demetrius* and his respect to men of our Nation in those parts, and first his Letter to Sir *Iohn Mericke*.

The Copie of a Letter sent from the Emperor DEMETRY EVANOWICH, otherwise called GRISHCO OTREAPYOV: the which Letter was sent to Master IOHN MERRICK Agent, out of the Campe, as Master MERRICK was taking his Iournie to the Sea-side, the eighth of Iune, *Anno* 1605.

FRom the great Lord Emperour and great Duke Demetry Euanowich *of all* Russia. *To the* English *Marchant* Iohn Merrick, *wee giue to vnderstand, that by the iust iudgement of God and his strong power, we are raised to our Fathers throne of* Vladedmer, Mosko, *and of all the Empire of* Russia; *as great Duke and sole commander: likewise we calling to memorie the loue and amitie of our Father, the great Lord Emperour and great Duke* Euan Vassilywich *of all* Russia, *and our Brother* Theodor Euanowich *of all* Russia, *which was held, and kept by them and other great Christian Princes, in the same forme and manner doe we likewise intend, and purpose to hold and keepe Loue and amitie: but especially, and aboue all others, doe we intend to send and to haue loue and friendship with your King* Iames, *and all you his* English *Merchants, we will fauour more then before. Further, as soone as this our Letter doth come to your hand, and as soone as you haue ended your Markets at the shipping place of* Michael *the Archangell, then to come vp to* Mosco *to behold our Maiesties presence. And for your poste Horse I haue commanded shall be giuen you; and at your comming to* Mosco, *then to make your appearance in our Chancery, to our Secretarie* Ofanasy Vlassou. *Written in our Maiesties Campe at* Tooly, *in the yeare of the world* Anno *seauen thousand one hundred and thirteene.*

The Copie of the translation of a Passe giuen to Master IOHN MERRICK, which was giuen him in the time of his being in the Campe at *Molodote* with the Emperour DEMETRY EVANOWICH, otherwise called GRISHCO OTREAPYOVE.

FRom the great Lord Emperour and great Duke Demetry Euanowich *of all* Russia, *from* Mosco *to our Cities and Castles, as also to the Castle of Archangell at the Shipping place and hauen to our Generals, Secretaries, and all other our Officers, &c.*

There did make suite vnto vs the English *Marchant* Iohn Merricke *and his Company, that we would gratifie them to be suffered to passe to the new Castle of Archangell, or to the shipping place or hauen, in regard of trafficke of Merchandise.*

Also, that if he doe send home any of his fellowes and seruants from the shipping place, being of the English, *that then they might be suffered to passe into* England. *Also that to whatsoeuer Citie of ours the* English *Marchant* Iohn Mericke, *and his fellowes, doth or shall come vnto; then all yee our Generals, Secretaries, and all other our Officers, shall suffer them to passe euery where, without all delay. And as for our Customes, as for passing by or for head mony, our custome of goods, you shall not take any of them nor of their seruants. Likewise, when the* English *Merchants* Iohn Merricke *with his fellowes and seruants, shall come to the Castle of Archangell, then* Timophey Matphewich Lazaroue, *and our Secretary* Rohmaneum Mocaryoue, Voronoue, *at the foresaid Castle of Archangell, shall suffer and permit the* English *Merchant*, Iohn *and his companie to trade freely. Moreouer, when at the shipping place they haue ended and finished their Markets, and that then the said* Iohn Merricke *shall desire to send into* England *any of his fellowes or seruants with goods, then likewise they shall be suffered to passe. But* Russe *people, and other strangers of* Mosco *shall not be suffered to passe further: that if* Iohn Merricke *with his fellowes and seruants doe not goe for* England: *but after their Market is ended doe purpose to come backe againe to* Mosco; *that then at the Castle of Archangell* Timophey Matphewich Lazaroue,

Digitized by Google

Lazaroue, *and our Secretarie* Rohmaneeu Voronaue; *as also at all other our Castels and Cities, our Generals, Secretaries, and all other our Officers shall let passe the* Englisth *Merchant* Iohn Merricke *with his fellowes and servants, without all stay or hinderance, and as for custome of them, their goods, or their seruants, there shall not be any taken.*

And after the Reading of this our Letter and Passe, you shall keepe the Copie of it by you: but this you shall deliuer backe againe to the said Iohn, *and his companie. Written at our Campe at* Molodone, *the yeare from the beginning of the World* 7113. *the eighteenth of Iune.*

The last of Iuly 1605. at *Archangell.*

The Copie of the translation of a Commission that was sent from the *Mosko*, from the Emperour DEMETRY EVANOWICH, *alias* GRYSHCA OTREAPYOVE by a Courtier named GAVARYLA SAMOYLOWICH SALMANOVE, who was sent downe to the Castle of *Archangell*, to Sir THOMAS SMITH, then Lord Embassadour: as followeth.

THe great Lord Emperour, and great Duke Demetry Euanowich *of all* Russia, *hath commanded* Gauareela Samoylowich Salmanoue, *to goe to* Vologda, *and from* Vologda *to the new Castle of Archangell, or whereseeuer he shall ouertake the* Englisth *Ambassadour Sir* Thomas Smith. *Also when he hath ouertooke the Ambassadour, then* Gauareele *shall send the Ambassadour his Interpreter* Richard Finch, *willing him to certifie vnto the Ambassadour, that the great Lord Emperour and great Duke* Demetry Euanowich, *sole commander of* Russia, *hath sent vnto him one of his Courtiers, in regard of his Maiesties affaires: and after some two houres respite,* Gauareela *himselfe shall ride to the Ambassadour, and deliuer vnto him his Maiesties speeches, as followeth.*

THe great Lord Emperour and great Duke Demetry Euanowich *of all* Russia, *and of many Kingdomes Lord and commander, Hath commanded thee,* Thomas *the* Englisth *Ambassadour, to certifie vnto* Iames, *King of* England, Scotland, France *and* Ireland, *that by the iust iudgement of God, and his strange power, we are come and succeeded into the place of our Father and predecessours: as also we are come to the throne of the great and famous Kingdome of* Vlodemer Mosco, *and to the Empire of* Cazan, Astaracan *and* Siberia, *and of all the Kingdomes of the Empire of* Russia; *being an Empire belonging to the great Lords, Emperours, and great Dukes of all* Russia. *Moreouer, we calling to memorie the sending, loue and amitie betwixt our Father, the great Lord and Emperour, and great Duke* Euan Vasilywich *of all* Russia, *of famous memorie: as also our Brother, the great Lord and Emperour and great Duke* Feoder Euanowich *of all* Russia, *sole commander, with their sister* Elizabeth, *Queene of* England: *in the like manner doe we purpose to haue sendings, and to be in loue with your Lord King* Iames, *and more then hath bin in former time. And in token of our said loue and amitie, we doe intend to fauour all his subiects in our Land, and to giue vnto them freer libertie then they haue had heretofore; and you his Ambassadour, we haue commanded to dispatch without all delay or hindrance. Therefore we would haue you to make knowne vnto your Lord King* Iames, *our Maiesties loue. And as soone as God shall grant the time of our Coronation to be finished, and that we are crowned with the Emperiall crowne of our predecessours, according to our manner and worthinesse; then we the great Lord Emperor, and great Duke* Demeetry Euanowich *of all* Russia *sole Commander, will send our messenger to salute each other, according to the former manner. And concerning those Letters which were sent by you from* Borris Godenoue, *we would haue you deliuer them backe againe to our Courtier* Gauareela, *and after the deliuerie of our speeches to returne him to the Emperour, vnder written by the Chancellour* Ofanasy Euanowich Vlaseou.

The Copie of the Translation of a new Priuiledge that was giuen to the Company, by the Emperour DEMEETRY EVANOWICH, otherwise called GRYSHCA OTREAPYOVE, the which Priuiledge was sent into *England* ouer-land by OLYVER LYSSET Marchant, and seruant to the foresaid Company.

GOD, the Trenitie, before, and without the beginning, the Father, the Sonne, and the holy Ghost, establish vs to hold and keepe our Scepter and Realme for the good of our Land, and the happinesse of our people. Wee the resplendant and manifest, and not the miserable vpholder, but sole commander, the great Duke Demetry Euanowich, *by the mercy of God, Casar and great Duke of* Russia, *and of all the Empire of* Tartaria, *and many other Kingdomes; as also of the great Monarchie of* Mosco, *Lord Emperour and Commander, Haue bestowed, and gratified vnto the* Englisth *Merchants, viz.* Sir Thomas

Thomas Smith, *Knight, Sir* Iohn Spencer, *Knight, Sir* Humfrey Wild, *Knight*, Robert Doue, Robert Chamberline, William Garaway, Iohn Haruey, Richard Stapers, Iohn Merricke, Richard Wryght, Richard Cocks, Thomas Farrington, Richard Wych, George Bowles. Bartholomew Barnes, Richard Bowldra, Iohn Caſten, Edward Chery, Thomas, *the ſonne of* Alexander *alias* Hicks: *we haue giuen them free liberty to come with their ſhips into our Realme and Dominion, and to the Country of* Dwina, *& to the Caſtle of* Archangel, *and to* Colmogro, *with all maner of commodities, and to trade freely, as alſo to come from the ſea ſide by land or by water, to our great dominion and* Cæſars *City of* Moſco, *& great* Nouogrod *and* Vobsko, *and all other cities within our dominions, to trade with all manner of commodities, in the ſame forme and manner, as heretofore was beſtowed on the* Engliſh *Merchants, in the time of our father of famous memory, the great Lord and Cæſar, and great Duke* Euan Vaſſilywich *of all* Ruſſia, *ſole Commander, and as was granted vnto them in the time of our Brother the great Duke* Theodor Euanowich *of all* Ruſſia *ſole Commander. And as for cuſtome of their goods, or for paſſing by, as alſo for the cuſtome of their boates, or for Head-money, or for going ouer bridges or Ferryes, or for entrie of goods, As alſo all manner of Cuſtome whatſoeuer, we command ſhall not bee taken of them: Alſo the* Engliſh *Merchants ſhall not bring nor ſell other mens goods in our Dominion, as their owne: neither ſhall our Subiects buy, or ſell, or traffique for. Alſo our Subiects pawnes they ſhall not keep by them, nor ſend others about the Cities to buy goods: but what Cities they come into themſelues they ſhall trafficke and ſell their owne commodities, and buy* Ruſſe *commodities freely: And when they come into our Dominion of great* Nouogrod *and* Vobsko, *or to any other Cities within our Realme to trafficke with their goods, and that after the market is paſt, they ſhall bee deſirous to paſſe for* Moſco, *or for* England, *then our Gentlemen and Gouernours, and all people ſhall according to this our* Cæſars *Letter, let them paſſe without delay, and as for Cuſtomes for them and their goods they ſhall not take any. And whither ſoeuer they paſſe with their goods, without buying any commodities, or ſelling their owne; Then likewiſe in thoſe Cities they ſhall paſſe, and not take of them any manner of Cuſtome whatſoeuer as before: alſo the* Engliſh *Merchants ſhall trafficke as followeth; They ſhall barter their owne goods, by the whole Salecloth: by the Packe, and by the Clothes: Damaske and Veluet not by the piece, but by the* areſhine *and by retaile and retaile weights they ſhall not barter or ſell. Alſo goods, which is ſold by weight, by retaile, or by the* zolotnicke *they ſhall likewiſe not ſell. And Claret wine they ſhall ſell by the piece, but by retaile, as by the Veader ſtop, or Pot and Charck they ſhall not ſell. Likewiſe they ſhall buy and ſell, and barter their goods themſelues: but the* Ruſſe *Merchant ſhall not ſell nor barter their goods for them; neither ſhall they carry other mens goods in colour of their owne, not to any place whatſoeuer. Alſo if the* Engliſh *Merchants bee minded to make ſale of their commodities at* Colmogro, *or on the* Dwina, *or at* Vologda, *or at* Yeraſlaue, *then they ſhall doe it freely. And for their ſaid goods in all our Cities within our Realme, our Gentlemen and Gouernors, and all manner of our Officers ſhall not of them take any Tole or cuſtome, according to this our* Cæſars *Letter of Fauor. And in all our Cities within our dominion, they ſhall hyre Carryers Boats, and men to row them freely as before. And as the order is of the Merchants within our Realme: ſo likewiſe if the* Engliſh *Merchants be deſirous to goe out of our Realme, into any other Kingdome, or into their owne Countrey: as alſo if they bee deſirous in our Realme to buy any Staple commoditie, and to carry it into their owne Land, then ſhall they likewiſe buy and trafficke freely at pleaſure, and thoſe Staple commodities which are fitting for our* Cæſars *Treaſure, they ſhall likewiſe bring it to our Treaſure freely at pleaſure, and for the ſaid Staple commodities in all our Cities, our Officers ſhall not take any manner of Cuſtome: but they ſhall ſuffer them to paſſe without any ſtaying of them. Alſo when the* Engliſh *Merchants haue ended their market, and ſhall deſire to goe from the* Moſco, *then they ſhall appeare in the Embaſſadours Office, to our Chancellour and Secretarie* Euan Cowrbatou Hramoteenop. *Moreouer, if that by the prouidence of God, the* Engliſh *Merchants haue any ſhipwracke, and that the ſaid ſhip bee brought or driuen to any place within our Realme, then our* Cæſars *commandement to thoſe places where the ſhip is brought in, that our men in office doe ſeeke out the* Engliſh *Merchants goods iuſtly, and to giue them to the* Engliſh *people that ſhall bee at that time in our Land. But if at that time there bee none of them in our Realme, then to gather them together, and to lay them vp in one place: and ſo when the* Engliſh *Merchants doe come there, by our* Cæſars *Order, to deliuer thoſe goods to the ſaid Merchants. And whereas the* Engliſh *Merchants according to their former Letters of Fauor had a houſe in the* Moſco *by the Church of the holy* Maxim *by the market, which was granted vnto them by our predeceſſour the great Lord and* Cæſar *of* Ruſſia, *the ſaid* Engliſh *Merchants ſhall dwell in the ſaid houſe as heretofore they haue done: Keeping one houſe-keeper a* Ruſſe, *or one of their owne ſtrangers, but any other* Ruſſes *they ſhall not keepe. Moreouer the ſaid* Engliſh *Merchants haue houſes in other Cities, a houſe at* Yeraſlaue, *a houſe at* Vologda, *a houſe at* Colmogro, *and a houſe at the ſhipping place at the Caſtle of the* Archangell: *and thoſe houſes they ſhall keepe and hold by them, according to our* Cæſars *Fauour or Gratitude, as in former time they haue done, and for any ſubſidie, rent, dutie, or any cuſtome whatſoeuer for the ſaid houſes there ſhall not be any taken of them: and their other houſes, as at* Yeraſlaue, Vologda, Colmogro *and* Archangell, *they ſhall haue houſe-keepers of their owne countrie-men or* Ruſſes, *but the* Ruſſes *ſhall bee meane men, a man or two at a houſe: And they ſhall lay their goods in thoſe houſes, and likewiſe ſhall make ſale of their goods out of their houſes, to whom they will, according to this our* Cæſars *Letter of Fauour, and their houſe-keepers being* Ruſſes *ſhall not buy or ſell any manner of commodites in their abſence. Alſo they ſhall come with their ſhips to the*

Digitized by Google

the shipping place, as before with their Commodities, and to vnlade out of the shippe their goods; and to lade their shippe with Russe *goods, with their owne hired labourers, as also to carry their owne goods ouer in their owne Boats and Vessels, to their owne house at the Castle of* Archangell. *And what soeuer goods they haue, our chiefe Customer, and Officers, and sworne men, shall take a note of the goods vnder their owne firme, both of goods they bring in, and also of goods they carry out. But they shall not looke ouer, neither vnpacke their packes in any place; as also they shall suffer them to passe in all places, without all stay or delay, according to this our* Cæsars *priuiledge and Letter of fauour. Also whensoeuer the* English *Merchants shall be desirous to send out of our Realme into their owne Land any of their seruants ouerland, or into other Kingdomes, then they shall likewise send their people ouerland with our* Cæsars *order freely, but without carying any Commodities, and their passe shall be giuen them in the Embassadours office. Further, concerning any matter of controuersie that any man shall haue to doe with them either in bargaining, or in iniury, according to this our* Cæsars *order, they shall be iudged by our Counseller and Secretary* Euan Cowrbatou Hramoteeu: *Therefore, as before, whereseoeuer they, or any of their seruants, in all our Realme, in what Citie soeuer, haue any matter of controuersie in Bargaining, or in Iniurie against any man, or that any man haue any matter against any of them, then in all our Cities, our Gentlemen, and Gouernours, and all other our Officers, shall iudge them, doing iustice betwixt either of them with equitie and truth. This priuiledge or letter of fauour was giuen at our* Cæsars *Pallace of* Mosco. *From the world* Anno 7113. *in the moneth of December.*

The Copie of the Translation of a Contract, made by the Emperour DEMETRY EVANOWICH, otherwise called GRYSHCA OTREAPYOVE, and the daughter of the *Palatine* SENDAMERSKO, chiefe Generall of *Poland*, in the time of DEMETRY his being in *Poland*, the which was sent ouer by Master IOHN MERRICK, and translated out of *Russe* into *English* for the Kings Maiestie, as followeth.

A True Translation of a writing out of Polish *into* Russe, *giuen by a Monke who left his habit, called by the name of* Gryshca Otreapyoue, *supposed to be the Son of the Emperour* Euan Vassiliwich, *named* Demeetry Euanowich, *who gaue this assurance vnder his firme, to the* Palatine Sendamersko, *as also hath beene auouched by one* Bewcheesko, *principall Secretary vnto the said* Demetry, *before all the Nobilitie of* Rusia, *that this said writing was written by the Generall his owne hand, as followeth.*

Wee Demetry Euanowich, *by the mercy of God, Prince of all* Russia, *of* Owgleets Demetryuskoy, *and Lord of all the Empire of* Mosco, *and being of the stocke of* Preatroue; *Calling to memorie our former life, being not in that forme and manner, as is in other great Monarchies, as was in the time of our Predecessours, and other Christian people. Neuertheless, by the prouidence of God almightie, from whom proceedeth a beginning and an end, and from whom commeth life and death, wee haue by him espied and made choise vnto our selfe, with good liking, in the time of our being in the Kingdome of* Poland, *of a Companion, of great and honorable birth, and of godly education, and is such a companion, with whom we shall by the mercie of God, liue peaceably: which is the resplendent and Noble Lady* Marina, *daughter to the great* Palatine Sendemersko. *And vpon this occasion haue taken him for our Father, and hauing requested of him to giue vnto vs his Daughter* Maryna *in mariage, and in regard that wee are not yet in our owne Kingdome, therefore doe we purpose hereafter to take order for her comming vnto vs with the Generall* Sendamersko. *Likewise, when I doe come to liue in my owne Kingdome, then shall the* Palatine Sendamersko *remember his faithfull and true promise with his Daughter, the Lady* Maryna *her vow, my selfe remembring my owne vow, and so both of vs to hold it faithfully with loue and affection, and to that end doe we binde our selues by our writings. Likewise, first and principally, in the name of the holy Trinitie, I doe giue my faithfull and true princely promise, that I will take in marriage the Lady* Maryna. *If on the contrary, I doe not, then, I wish that I might giue this as a curse vpon my selfe: also, so soone as I shall make entrance into our Kingdome, and herstage of* Mosco, *then will I giue the* Palatine, *the Lord her Father, a reward of tenne thousand peeces of* Polish *gold. And to the Lady* Maryna *our wife, in consideration of her great and long Iourney, as also for the prouiding and furnishing of her selfe, I will giue out of my Treasure Veluets wrought with Siluer and Gold. And the Messengers that shall be sent to me from the Lord her Father, or from the Lady her selfe, I shall not hold or keepe, but shall let them passe, and will reward them with gifts, which shall be a token of our Princely fauour; and thereunto doe we giue this our Princely promise. Secondly, at soone as we shall come to the Imperiall throne of our Father, then presently will we send our Embassadour to the resplendant King of* Poland *to certifie vnto him, as also to intreate him to take knowledge of this businesse now passed betwixt vs, and withall, that he would be pleased to suffer vs to conclude and effect this our said businesse, without losse or hindrance. Also vnto the forenamed Lady* Maryna *our wife, we giue two Lordships,* viz. Nouogrod

the

Digitized by Google

the great, and Vobsko, *with all the Prouinces belonging to the same, with Counsellors, Gentlemen, and Yeomen, and Priests, fitting for a Congregation, to rule and gouerne freely with full authority in the same forme and manner, as if we ruled. And my selfe to haue no more right or title nor authoritie in the said two Cities of* Nouogrod *and* Vobsko: *and thereunto doe I binde my selfe with this writing, and doe wholly giue and bestow all on the said Lady* Maryna *that is contained in this writing, as soone as by Gods helpe we shall be maried together, and thereunto haue giuen this our writing, sealed with our princely Seale. But if by chance our wife hath not by vs any children, then in those two Lordships before specified, shee shall place men in authoritie of her owne, to gouerne and to doe Iustice: and also it shall be free for the said men in authoritie, to giue Lands and Inheritance to their owne Souldiers, and to trade freely at pleasure, as shall be best liking to them, and as though it were in their owne true and lawfull dominion, and to build Monasteries, and to set vp the* Romish *Religion, and to haue Latine or* Romish *Priests, and Schooles. But she her selfe to abide and remaine with vs. And concerning her Priest, to haue as many as shall be needefull to be kept for her owne godly* Romish *Religion, without all let or hindrance: and as wee our selfe by the mercy of God are already inclined to the same, so will wee likewise with earnest care, seeke by all meanes to bring all the Kingdome of* Mosco *to the knowledge of the* Romish *Religion, and to set vp the Church of* Rome. *Also, if God should not grant vnto vs good successe, whereby this be performed within a yeare; then it shall be at the pleasure of our Father to separate mee and his daughter* Maryna. *But if it please him to forbeare till another yeare, then doe I passe this my Bill, with my owne hand writing, and thereunto I haue sworne my selfe, and giuen a vow according to the holy order, and all in this Bill to hold and keepe carefully: as also that I shall bring all the* Russe *people to the Latine Religion. Written at* Sambore *the fiue and twentieth of May, in* Anno 1604. *Vnderneath was his firme, to all this foresaid as appeareth:* *Prince* Demetry *of* Owglets.

Promise of Romish Religion.

NOw let vs returne with *Thuanus* into *Poland*, where with his Historical eies we see this glorious Spouse, her Father, Vncle, & trayne of women accompanying the *Russian* Embassador in his returne; whom many Merchants out of *Italie* and *Germanie* followed in hope of gaine. In this lingring journey, they continued from the end of Ianuary to the sixe and twentieth of Aprill, before they entred *Mosco*. And the seuenth day after, *Peter Basman* with a great troupe of Courtiers and Nobles, attended the Spouse to the Court, where shee was solemnely entertayned by her Husband, and thence conueighed to the Monasterie where his Mother abode. The fourth day after, all things being prepared, shee was brought into the Palace, and the next day married to him by the Patriarch after Euening Prayer. Both of them also, solemnely crowned, returned with sound of Musick and Ordnance into the Castle, and the night passed with great Iubilee, *Demetrius* his mind being filled notwithstanding with cares. For a conspiracie which had beene hatching sixe moneths, now growing to ripenesse, terrified him: against which hee had armed himselfe with forreigne aides. At first hee had brought a guard of *Germanes* out of *Poland*, which being without example of his Predecessors, and seeing it disliked of his subjects, hee dismissed, together with all forren Souldiers. They being thus sent away without pay, returned with the cashеered *Polanders* to the borders, where they committed many outrages to the greater discontent of the *Russes*. Many of them found grieuances notwithstanding, in his too much respect to the *Poles*: and many made question of his birth. Many were suspected of conspiracie, and diuers tortured, which was but quenching fire with Oyle, the flame growing greater. And now beganne *Demetrius* to repent of his haftie dismissing his guards, and began a new Check-roll of *Liefflanders* and *Germanes*, to which hee added an hundred *English* Halberdiers and as many *Scots* (their Captaynes hee calleth *Matthias Cnotsenius* and * *Albert Lant*) and an hundred *French* vnder *Iaques Margeret* armed with *Partisans*. Then also he inlarged his pay, but too late.

Demetrius his Marriage.

Both crowned.

Conspiracie.

* I suppose this should bee *Gilbert:* for one Captayne *Gilbert* I haue often heard of in that place of seruice, which writ also commentaries of these affaires which I haue much sought to little purpose in our Merchants hands.

Alexander Gosenskie Corninus was sent Embassadour from *Poland* with rich Presents and Letters from King *Sigismund* to *Demetrius*, which because they expressed not the Title of Emperour were not receiued nor opened. In excuse whereof the Embassadour vsed words vnsufferable to *Russian* patience, that he should goe and depriue the great *Turke* of those Titles. *Demetrius* dissembled notwithstanding, in regard of his past experience, and hoped helpes from the *Pole*. The dayes following were spent in pastimes and sloth. Saturday was solemne to the *Russians*, a Feast then happening which they preferre before Easter. The Emperour and Empresse sate crowned in the Hall, and made a great Feast to their owne and to strangers; in which the *Pole* Embassadour refused to be present, except he might sit at the Princes Table, as the *Russian* Embassadour had beene honoured at *Craconia*. The *Russes* denied stiffely, but *Demetrius* at length yeelded. Many peremptorie and licentious passages happened, the *Poles* carrying themselues domineeringly to the *Russes*, as Victors to the conquered. *Demetrius* at first ouer-bold, now beganne to feare, and warned the *Poles* to bee warie, and sent for all his guards. On Friday, the *Russes* preparing for offence, and the *Poles* for their defence (for they and not the Prince, seemed to bee then in danger) in the Euening the Nobles command the people to arme against the next day. The Empresse was this while secure, and made ready a magnificent Feast against Sunday. But on Saturday (the sixteenth of the Kalends of Iune) the Conspirators assemble early, and a great cry is ray-

Bloudie day.

Digitized by Google

rayſed to kill the *Poles* and *Demetrius*. Some greedie of ſpoyle runne preſently to the *Poles* Lodgings, aſſault them and embroyle all with ſlaughters. Others runne to the Caſtle. Few of the guard were there, delay hauing bred ſecuritie in *Demetrius*, nor were any of their Captaynes ſeene. *Margaret* then lay ſicke as he after told me (*Thuanus*) which diſeaſe ſaued his life. Things were done with ſuch furie and celeritie, that many *Ruſſes* in *Poliſh* attire were ſlaine before they were knowne.

Peter Baſman came running forth halfe naked, & was killed by one of his own ſeruants. *Swiskie* their Leader, carrying a Sword in one hand, a Croſſe in the other, cauſed the great Bel to be rung in token of fire that *Demetrius* might be raiſed & come forth of his Parlor. He awaked with the noyſe, now ſeeing a greater danger then fire, taketh a *Turkiſh* Sword, and ſuddenly ſlips downe out of a window, breaking his legge with the fall, whereby he was eaſily taken by the people, and by *Swiskoys* command carried into the greater Hall, where Embaſſadours haue audience. There ſome vpbrayding his impoſtures, he with his ſword layd one on the ground: and then deſired the Nobilitie to permit him to ſpeake to the people, which was denyed. Some ſay that he obtayned of *Swiskey*, that he might be tryed by the teſtimonie of *Vaſilowich* his Wife; which being brought out of the Nunnery, affirmed before the Nobles on her oath, that her Sonne *Demetrius* was many yeeres before murthered by *Boris* his perfidies, which ſhe at firſt ſeeing the peoples fauour, and iuſt reuenge on *Boris*, willingly diſſembled, whereupon they ranne vpon him, and with many wounds ſlue him. Thus writeth *Peter Paterſon* of *Vpſal* which then was in *Ruſſia*. When they had ſlaine him, they thruſt a rope thorow his ſecret parts, and drew him thorow the myre into the Market place, where he remayned foure dayes lying all gorie and myrie on a boord, with *Peter Baſman* vnder it, and an vgly Vizar ouer it, a Bag-pipe in his mouth, with other laſciuious cruelties exerciſed on his dead body.

P. Baſman ſlain.

Demetrius taken and ſlaine.

Contumelious vſage.

The *Palatine Sendomir* (or *Sandamerſko*) was blocked vp in his Houſe, and other *Poles* Houſes rifled, many of which died not vnreuenged, howſoeuer by numbers ouercomne. *Viteneskie* after much ſlaughter of the aſſayling *Ruſſes*, when he ſaw Ordnance brought, ſet forth a white flagge in token of yeelding, bidding his Seruants caſt abroad his money; which whiles the people were gathering, he and his made way with their Swords with great ſlaughter, & yeelded to the *Boiarens* which came from the Caſtle. The miſerable Bride was not only ſpoyled of ineſtimable Treaſure, but of all her Apparell, and Iewels, carefull only of her Father and Vncle, and thinking it a happy purchaſe, if ſhe might ſaue her life and recouer her Countrey. Meanewhile, without her Garment to couer her, without Bed to lye on, without ſecuritie of life, ſhee expected in poore Weeds the iſſue of the peoples furie.

Poles ſlaine.

The Queene.

Many Merchants endured like fates. *Ambroſe Cellar*, beſides the loſſe of thirtie thouſand Crownes, loſt his life. *Iames Win* was with his own Sword beheaded: *Nathan* loſt one hundred and fiftie thouſand Florens: *Nicolas Limborough* fiftie thouſand. Two of *Auſpurg* had ſent two hundred thouſand Crownes to *Demetrius*, which now was not to pay them. *Marcellius* loſt an hundred thouſand Florens. Twelue hundred *Poles* loſt their liues; many were ſaued by the *Boiarens*. Foure hundred *Ruſſes* were ſlayne. At night the tumult ceaſed. Scarſly would the people giue leaue to bury the bodies after three dayes wallowing in the durt, in the *Germane* Church-yard.

Merchants ſpoyled.

Ruſſes ſlaine.

After this tempeſt was calmed, the *Boiarens* aſſembled in counſell about a new Election, where *Swiskey* made ſpeech to them, profeſſing himſelfe ſorrowfull for that had paſſed, in the execution of a iuſt zeale to the Imperiall Family and his Countrey, and in hatred of a cruell Tyrant: that *Iuan Vaſilowich*, how euer injuriouſly taxed by ſome, had left Kingdomes annexed to his Inheritance as Monuments of his great ſpirit; by whom he had beene ſent to *Stephen* King of *Poland* to treate of peace, and euer ſince had ſo carried himſelfe in the State, that none could juſtly blame him: that *Iohn* being dead, *Theodore* ſucceeded, but another ruled, who murthered the yonger brother, and as was thought, after that poyſoned the other; ſo attayning the Empire, which how miſerable was it all his time? that *Demetrius* therefore (whoſoeuer he was) found friends, himſelfe amongſt others, but when their Religion was endangered, Forreiners aduanced, Lawes violated, Exotike faſhions brought in, liberties ſuppreſſed, he withſtood with the peril of his life; which it grieued him to haue enjoyed, as a Theeues benefit, by his grant which had no right to take it: yet ſeeing their forwardneſſe in a cauſe ſo juſt (would God it had not beene ſo bloudy) more regarding his Countreyes ſafety then rumours and reports, hee had beene their Captayne to doe that which God the diſpoſer of Kingdomes by the ſucceſſe had approoued, ſo that now they were freed from a cruel Tyrant, nor had they any Sorcerer or Impoſtor to mock them: that it remayned now, ſeeing the Imperiall Family was extinct, they ſhould now ſeeke one of nobleſt bloud, of wiſeſt experience, of moſt religious zeale, who might eſteeme his peoples hearts his ſtrongeſt Forts, ſuch an one as either is, or is thought to bee the beſt man to become their Prince. Thus was himſefe choſen Emperour the thirteenth of the Kalends of Iune: A writing was publiſhed to juſtifie the killing of *Demetrius*, a runnagate Fryer called *Griſhka*, or *Gregorie Strepy*, profeſſed in the Monaſterie in the Caſtle (which therefore hee would neuer enter leſt hee ſhould bee knowne) with other aſperſions of Hereſie, Sorcerie, affectation of indu-

Swiskeys ſpeech.

He is choſen Emperour.

Digitized by Google

cing Popery (the Popes Letters also challenging his promise produced) to giue the Iesuites Temples, Colledges, and other necessaries; with other ouer-tures to the *Palatine Sandomersko*, for *Smolensko*, and *Nouogrod*; his bringing in *Poles* in *Russian* Roomes, his luxurie, riot, pompe, reseruing *Boris* his Daughter in a Nunnerie with intent of incestuous lust, hauing murthered her Mother and Brother; making a siluer Throne with sixe Lions on each side, and other pride; abusing Nunneries to lust and lasciuiousnesse, &c. But wee shall giue you hereof more authenticke testimonie then this of *Thuanus* in *Suiskeys* Imperiall Letter to His Majestie. Meanewhile touching this *Demetrius* we will produce a few *English* Testimonies extracted out of their Letters and Relations: wherein if some circumstantiall discrepance appeare (in things done both so farre and so foule in tumultuous furie, where men had rather hide themselues then become witnesses, lest whiles they would bee Spectators, they should bee forced to bee Actors, and haue their parts acted in that bloudie Tragedy) it is no maruell. I produce all Witnesses I can, in a cause of so remarkeable consequence, and choose rather to bee prolixe then negligent, that the Reader out of so much euidence may better weigh and examine the truth.

The Deuill is often slandered: and by ill willers, bad is made worse. And so perhaps by *Suiskeys* faction was this *Demetrius*.

The former part of this inteligence I found in Master *Hackluyts* Papers; the later by conference, &c. Son of *Gregory Peupoloy*. See *Suiskeys* Letter following.

THe late Emperour of *Russia* called by the name of *Demetry Euanowich*, is now credibly said (as some of them say) to haue beene the Sonne of a *Russe* Gentleman, named *Gregorie Peupoloy*, and that in his younger yeeres he was shorne a Frier into a Monasterie: from whence hee afterwards priuily got away, trauelled into *Germanie* and other Countreyes, but had his most abiding in *Poland*, in which time he attayned to good perfection in Armes and Military knowledge; with other abilities of sufficiencie; Afterwards finding a conceit taken by the *Russes* of a secret conueying away of *Demetry Euanowich*, brother and heire to *Pheodore Euanowich* Emperour; and that some other should be made away in his steed: And finding also the generall distaste of the gouernment of *Boris* then Emperour, who after a faire beginning, did in his latter yeeres vphold himselfe, and his house with oppression and crueltie: And hauing also many circumstances and oportunities of time and age, and such other likelihoods, to aduantage and second his pretence, began first to broach his Title *(as before)* and by degrees found such a generall acceptation of all sorts of people, that it so daunted *Boris*, that (as it was then rumoured about) hee, first, and afterwards his Wife, and his Sonne succeeding him, made themselues away by Poyson. Though now it goeth for certayne, that the poysoning of them was procured by the Pretender, to make the easier way to the Empire, which thereby he obtayned, entring and continuing the same with all the State, and greatnesse that such a place required: Vntill at length the *Russes* moued rather by other certainties, then by any thing discouered by himselfe, the sixt day after his marriage (which was kept with very great pompe and solemnitie) being the seuenteenth of May last past, taking a time when the *Poles* stood least on Guard; came to the Court with one consent of Nobilitie and Commons about three of the clocke in the morning, and mastring the Guards, drew the Emperour out of his bed from the Empresse, and charging him that hee was not the true *Demetry Euanowich*, but a false Pretender, he confessed the Deceit, and was forthwith hewed in pieces by the multitude: *Peter Basman* resisting was likewise slaine; and both brought into the Market place, where their bodies lay for a time to bee viewed of euery man. The old Queene denied him to bee her Sonne, excusing her former acknowledgement to haue proceeded from feare and the generall acceptance which he found amongst the people. As many *Poles* as made resistance, were slaine to the number of seuenteene hundred. The new Empresse, her Father, his brother with the other *Poles* were committed to safe keeping, to the number of eight or nine thousand.

Occasion of ambition.

Boris ill gouernment.

Demetrius Emperour.

He is slaine.

Suiskey Emperour.

And then proceeding to a new Election they chose Emperour *Vassiloe Euanowich Shoskey*, who not long before was at the Blocke to haue beene beheaded, for reporting that hee had seene the true *Demetry Euanowich* after he was dead, and did helpe to burie him. But the Emperour did recall him, and afterwards aduanced him to the chiefest place of dignitie about his person. He is the next of bloud * liuing, descended of the Race of the old Emperour *Iuan Vasilowich*, of the age of fiftie yeeres or thereabouts, neuer married, but kept vnder during *Boris* time, a Prince of great wisdome, and a great fauourer of our Nation, as did specially appeare by the care hee had to guard the *English* House from rifling, when the late *Demetry* was brought in by the *Poles*.

* This might be rumoured: Others say hee was not of that but of very noble bloud. See *sup.* in *Fletcher* and *Thuanus*.

Demetrius his person described.

The late Pretender was of stature low, but well set, hard fauoured and of no presence; howsoeuer otherwise of a Princely disposition, executing Iustice without partialities; And not remitting the insolencie euen of the *Poles*; well seene in martiall practises, and trayning his Nobilitie to the Discipline of warre, to make them the readier against the *Tartar*, not giuen either to women or drinke, but very liberall and bountifull, which occasioned some grieuous Exactions to maintayne the same. And to conclude, a man in the opinion of such as knew him, not vnworthy of a better gotten, and longer continued Empire, which hee lost chiefly through the greatnesse of his minde, supposing that none of his Subjects durst attempt any such matter against his person, when as in the meane time the practice went on with such a generall Conjuration, that the *Russes* were summoned by the ringing of a Bell to bee readie to enter the Court. And

Some say that he was not like *Demetrius* and that he seemed a dozen yeeres elder: but perhaps they mistake this for an other after Pretender, calling himselfe the same *Demetrius*, &c. as after shall appeare, a deformed man.

to shake off that Gouernment which would haue made them a more noble Nation then formerly they haue beene.

IT is reported by some of Ours, that hee the rather was inclinable to our Nation in the respect he bare to his Majestie, hauing read that his worthy Worke dedicated to Prince *Henrie*. Hee is said also to haue beene a resolute man of his hands, to haue delighted in fighting with the Beare; actiue and strong. I haue likewise heard that hee gaue the command of his Guard consisting of strangers to Captayne *Gilbert* a *Scot*; to haue made one *Buchenskoy* (a Learned and Religious Protestant) his Secretarie; and otherwise to haue beene so alienated from *Russian* manners, and so well affected to Strangers, that they conspired as aforesaid. The people are said to haue entred the Castle (which was a quadrant, hauing a high bricke wall of seuen stories, and another of stone, and a Market place) with stones in their pockets (which are rare thereabouts) and some with weapons.

Captayne *Gilbert.* *Buchenskoy.*

Stones rare about *Moſco.*

Some report from Captayne *Gilberts* Relation, that lying on his bed not long before his death (as hee thought, awake) an aged man came to him, which sight caused him to arise and come to Captayne *Gilbert*, and his guard that watched, but none of them had seene any thing. Hereupon he returned to his Bed, but within an houre after he againe troubled with like apparition called, and sent for *Buchinskie*: telling him that he had now twice seene an aged man, who at the second comming told him, that though for his owne person he was a good Prince, yet the injustice and oppressions of his inferiour Ministers must bee punished, and his Empire should bee taken from him. In this perplexitie his Secretarie gaue him good and holy counsell, saying till true Religion were there planted, his Officers would bee lewd, the people oppressed, and God Almightie offended, who perhaps by that Dreame or Vision had admonished him of his dutie. The Emperour seemed much moued, and to intend that good which that Countrey was not so happy to receiue. For a few dayes after (as that Relation auerreth) his *Russe* Secretarie came to him with a Sword, at which the Emperour jested, and hee suddenly after sawcie speeches assaulted him, with many other *Grandes* of that Conspiracie, and (like another *Cæsar*) slue him, crying *Libertie*, before his guards could apprehend the danger; of which some were slaine, but the most with *Gilbert* their Captayne, got to a place called *Coluga*, which with the helpe of some *Russes* they fortified and held for their defence. *Buchinskie* the Secretarie was taken and imprisoned, the strangers murthered, the *English* except, who haue in all changes been well beloued of the *Russians*; as indeed they deserue, hauing alway done good seruice to the Emperours. And their interest saued the life of that worthy man *Buchinskey*, which they requited with much obseruance to the succeeding Emperour *Suiskey*, who comes next to be spoken of; and first you shall haue his Letter to our Gracious Souereigne.

Captaine *Gilberts* report of a Vision.

Another manner of his death reported.

Coluga.

§. IIII.

SVISKEY *the Successour his Letter to our King, describing the former* DEMETRIVS *his Acts and Tragedie.*

The Copie of the Translation of a Letter sent from the new Emperour *Vassily Euanowich Shoskey* to the Kings Maiestie by Master *Iohn Mericke.*

I find him called *Shoskey*, *Suiskey*, *Ziska*, &c. the iust translation and pronunciation being had.

The loue and mercie of God that guideth vs in the wayes of peace, we glorifie with the Trinitie.

FRom *the great Lord Emperour and great Duke* Vassily Euanowich *of all* Russia, *sole Commander of* Voladomer, Mosko, Nouogrod, *King of* Cazan *and* Astracan, *of* Syberia, *Lord of* Vobsko, *and great Duke of* Smolensko, Twerskoy, Yrahatskoy, Pearmskoy, Vatskoy, Bollharskoy, *and of other: Lord and great Duke of* Nouogroda *of the Low Countrey of* Cherneego, Rezanskoy, Polotskoy, Rostouskoy, Yereslaueskoy, Bealozerskoy, Leeflanskoy, Owdorskoy, Obdorskoy, Condinskoy, *and Commander of all the North parts: also Lord of the Land of* Eeuerskoy, Cartalinskoy, *and ouer the Empire of the* Gorgians *of the Land of* Cabardinskoy, *and* Eeharskoy *Land, likewise of many other Lordships Lord and Commander.*

To our beloued Brother Iames *King of* England, Scotland, France, *and* Ireland, *We giue to vnderstand that* Sigismund *King of* Poland, *and great Duke of* Letto, *in* Anno 7109. *did send vnto the late Emperour* Boris, *his Embassadour named* Lewis Sapeago, *being Chancelor of the great Dukedome of* Poland, *requesting the said Emperour* Boris, *that the former league and peace made and concluded vpon by the great Lord Emperour and great Duke* Theodore Euanowich *of all* Russia, *and*

League with the Pole.

him Sigismond King of Poland, might be stedfastly holden and continued till the time of that league were expired. As also that the Emperour Boris would inlarge the said league for thirtie yeeres more, whereupon the Emperour Boris yeelded thus farre vnto the request of the King of Poland, that hee would continue the old league till the full time were expired, and assent to a new league for twentie yeeres more; and to that effect he tooke an Oath, to hold and keepe all the contents faithfully, mentioned in the said Writing, touching the same league: and instead of the King of Poland, his Embassadour Lewis Sapeagoe was sworne in the presence of the Emperour Boris. And after the Polish Embassadour was departed from the Mosko, the Emperour Boris sent vnto Sigismund King of Poland his Embassadour, being one of the Prinie Councell, called Michailo Zleabowich Salleecoue, with some others to end and finish the aforesaid league, to the which league the King of Poland himselfe was sworne in the presence of the Emperours Embassadour to hold and keepe the said league faithfully, according to the tenour of their Writing.

He taxeth the King of Poland.

Allegations against the pretending Demetrius.

But not long after Sigismund King of Poland, with one Pauarade, entred into such a practise, as he therein falsified his Oath, and made way to the shedding of much Christian bloud: First, by retayning and vpholding one Gryshca Otreapyoue, a Runnagate, a Coniurer, and one that left his profession being a Monke, and ran away out of Russia into Poland; and being come thither, tooke vpon him to be the Son of the great Emperour Euan Vassilawich of famous memorie, and by name Demetry Euanowich: when as it was well knowne in our Kingdome, that before he was shorne a Monke, he was commonly called Yowshco, Son to one Bowghdan Otreapyoue, dwelling at a place called Galitts: and when hee had committed much villanie, to saue his life he shoare himselfe a Frier, and so runne from one Monasterie to another, and lastly, came into a Monasterie called Chowdo, where hee was made one of the Clearkes; being so placed there by the Patriarke of Mosko himselfe: But he did not leaue off his former life; for he continued still in his most Deuillish actions, as he did before he was shorne, committing villany, forsaking God and falling to the studie of the Blacke Arte, and to many such like euils he was inclined. Also there was found by him a Writing which shewed how he was falne from God, and the same was made well knowne to the holy Patriarch of Mosko, and of all Russia, and to the Metropolitanes, Archbishops, and Bishops, and to all the holy Cleargie: whereupon the said Rulers of our true Christian Faith, which is from the Greeke Church Grecian Law, for these his most vngodly works, consulted to send him to perpetuall Prison, there to end his life. Whereupon this notorious Instrument of Satan, perceiuing this his ouerthrow, and that his vile practises were discouered, ran away out of the Kingdome of Mosko, beyond the borders, and into Letto to a place called Keeyeue: thus according to the Deuils instructing of him, as one forsaken of God, he made this his doing manifestly known to all people, leauing off his Monks Habit, and withall by the counsell and aduice of our Enemie the Polish King, and one of his Palatines named Sandamersko Yourya, [m] with Duke Constantine, and Duke Veshneuetskoy and his Brethren with other Polish Lords that were of his Councell, began to call him the Son of the great Lord, Emperour and great Duke Euan Vassilywich, by name Prince Demetry of Owglitts.

Flight to Letto.
m George.

As also by his villanous treacherie and the Deuills perswading of him, he made much trouble in our Land, by sending abroad many of his intising and prouoking Letters, to diuers places vpon the borders of our Countrey: that is, to a place called Done, and to the Volgoe, to our Cossacks and Souldiers, naming himselfe to be the Prince Demetry of Owglitts. Moreouer, there came to our Kingdome of Mosko many Polish Spies, which brought and dispersed Libels both in Citie and Townes, and in the high-wayes, practising to rayse dissention in the Kingdome of Mosko. Also it is well knowne, not only to them in the Empire of Mosko, but likewise in other Kingdomes, that the great Lord Emperour, and great Duke Euan Vassilywich of famous memory, had a Sonne called by the name of Prince Demetry, and after his Fathers decease, there was giuen vnto him and his Mother the Citie of Owglitts. But in the yeere 7095. being in the Reigne of the great Lord, Emperour and great Duke Theodore Euanowich of all Russia, this foresaid Demetry was murthered by the order and appointment of Boris Godenoue. And at his Funerall was his Mother now called the Empresse Martha, with her owne Brethren by name Michaila and Greegory the Sonnes of Theodore Nahoue. Likewise to his burying, there was sent from the Mosko Metropolitanes, and Archimandreets, and Abbots: and the great Lord Emperour, and great Duke Theodore Euanowich sent to his Funerall many Nobles and Courtiers of the Land which saw him buried in the chiefest and principall Church of Owglitts. Moreouer. Martha the Dutches and Empresse his Mother is yet liuing, and many of her Brothers and Vncles, which doe at this present time serue vs the great Lord Emperour, and great Duke Vassily Euanowich, of all Russia sole Commander: Likewise in these last yeeres past, as in Anno 7111. and in Anno 7112. and 7113. concerning that foresaid Traytour and Hereticke, the forsaken of God Gryshca Otreapyoue, many of our Gentlemen, Captaynes and others our Officers did many times write from the North parts of the borders of our Kingdome into Poland and Letto, and to others their inferiour Cities, to the Rulers and Gouernours of the same; as also our spirituall people: the Patriarke, the Metropolitans, Archbishops, and Bishops wrote vnto the spirituall people of Poland, declaring vnto them what that Heretick and Traytor was, likewise from whence he came and what manner of person he was; as also of his demeanour, and likewise of the occasion why hee runne away to them out of the Land, as also the manner of the making away of the Prince Demetry, and withall requested the Rulers and Spirituall people of Poland, that they knowing what Runnagate this was, would not giue credit vnto him, nor to make a breach of the late league concluded vpon.

Letters to Poland.

But

But the Gouernours of the Dukedome of Poland *and* Letto, *as also the spirituall men, according to the King of* Poland *his commandment, gaue no credit vnto our writings, but began, more then before to intice and perswade men to vphold the Traitor, and to aide him. Moreouer, to make trouble and dissention in our Land, they tooke this forsaken of God,* Greeshca *vnto them, and cald him by the name of Prince* Demetry *of* Owglits: *likewise the King gaue vnto him a chaine of gold, with many thousand peeces of* Polish *gold, to the defraying of his charges; as also sent in armes to our borders with one of his Lords, the Palatine* Sendamersko, *and another of his chiefest Lords, with many troopes of* Poles. *But when the Emperour* Boris *vnderstood how that this* Gryshca Otreapyoue *was called, by the name of Prince* Demetry Euanowich *of* Owglits, *and withall, that they did aide and helpe him against the Kingdome of* Russia: *he caused his Counsell to send a messenger, as from themselues, to the* Polish *Lord* Panameerada, *which Messenger was named* Smeernay Otreapyoue, *being Vnckle to the said* Gryshca Otreopyoue *being the Son of one* Iamateen Otrepayou, *onely to declare vnto them what this* Gryshca *was; but that* Polish *Lord* Panameerada *would not suffer him, and his Vnckle to be brought face to face. But he made answer to the said Messenger* Smeernay, *that they did not aide him, neither did they stand for him in any sort.*

Polish aides.

Smeernoy sent.

So after he had sent away the Messenger Smeernay, *the King of* Poland, *and the Lord* Panameerada *did aide* Gryshca Otreapyoue *with men and treasure more liberally then before; purposing to make great strife and trouble, and to shed much bloud in the Kingdome of* Mosco. *Also at the same time* Sigismund, *King of* Poland, *requested the aide of one of the Princes of* Crim *in* Tartaria, *named* Cazi-teera; *and to that end he should aide* Gryshca *with his forces, against the Kingdome of* Mosko; *and he in consideration, did promise to giue vnto the foresaid* Crim, *Prince, what hee would demand. Then the Emperour* Boris *vnderstanding what practises were in hand, being altogether contrary to the league; thereupon purposely he sent to* Sigismund *King of* Poland, *another speciall Messenger, one named* Posnicke Agareoue; *likewise at the same time, the holy Patriarke of* Mosco, *and all* Russia, *with the Metropolitans, Archbishops, and Bishops, with all the rest of the holy Clergie, sent their Messengers with Letters to the State of* Poland, *and so the great Dukedome of* Letto, *to the Archbishops, and Bishops, and to all the Spiritualtie. Moreouer, in the said Letters, the Emperour* Boris *with the Patriarke, and all the holy assembly, wrote vnto the Lord* Panameerada *concerning* Gryshca, *making it knowne vnto them what he was, and wherefore he ranne away into* Poland, *and likewise that the Sonne of the great Lord Emperour, and great Duke* Euan Vasiliwich, *the Prince* Demetry *was dead: And to that intent, that the King* Sigismund *should not giue credit to the said* Gryshca, *and that they should not spill Christian bloud, nor violate the league.*

Crim Tartar.

Another Messenger.

Hereupon Sigismund *King of* Poland *writ vnto the Emperour* Boris, *and further, by word of mouth, both he and* Panameerada *deliuered to the said messenger in his message, that hee did hold and keepe their League, and moreouer, did not violate or breake his oath no manner of way: and likewise did write, that he did not ayde that foresaid* Gryshca, *neither did giue credit vnto him: withall denying that he was with him in his Kingdome: and further he did write, that if there were any out of* Poland *or* Letto *that did aide or assist him, that then they should be executed. But after he had dispatched away the messenger of* Boris, *not regarding his oath, still more and more did aide and helpe this* Gryshca Otreapyoue. *Also the* Palatine Sendamersko, *and* Myhala Ratanisko *came into the Kingdome of* Mosco, *to a place called the Land of* Seeuersko, *putting the people of that Land in feare, and perswading them there, this* Gryshca *was the true Prince, and that the King of* Poland *and* Panameerada, *had found out the certaintie thereof: and therefore they will haue* Poland *and* Letto *stand for him. Also from out of many other Kingdomes they goe to aide and assist him: likewise other inferiour Kingdomes are willing to stand for him: moreouer, that* Gryshca *in the foresaid Land of* Seeuersko, *and in other places of our Borders, by the meanes of his diuelish practises and coniurations did intise and tempt them to fall to him: likewise the people of those foresaid places of the Land of* Seeuersko, *and on the Borders, being simple people, and resorting seldome to the Citie of* Mosco, *and being intised by* Gryshca, *and the rest of the Gouernours, could not withstand, but yeelded them vnto them. Whereupon against those* Polonians *and* Lettoes, *and other enemies that were already entred the Kingdome of* Mosco, *the Emperour sent his Nobles with a great Armie: but by the appointment of God, the Emperour* Boris *deceased; vpon whose death, the chiefest of the Nobles departed the Campe. And after their departure, the Armie hearing of the death of the Emperour, and being drawne thereto by feare and otherwise, at last yeelded themselues ouer vnto* Gryshca, *as the Borderers had done before.*

Also the foresaid Gryshca, *by the helpe of the Diuell, and King* Sigismund, *and* Panameerada, *came into the Citie and Kingdome of* Mosco, *to the great disquietnesse and trouble of the whole Land; by whom the Religion was corrupted, and by him were many true Christians put to exile, for denying his right and interest to the Kingdome of* Mosco. *And shortly after he was setled in the Kingdome, and he tooke to wife the daughter of one* Sandamersko, *as was appointed by the King of* Poland *and* Panameerada: *the which wife of his was in* Mosco *with her Father and Brother* Senatskoy, *and with one* Veshneuetskoy, *with their* Polish *and* Letto *Lords, and other people, by whom Religion was prophaned: as also we were forced and driuen to receiue many wrongs and iniuries, which the people of the Kingdome of* Mosco *could not indure. Also, at last this* Greeshca, *by the counsell of the* Palatine Sandamersko *his Father in Law, and by the counsell of* Veshneuetskoy, *and other* Polish *and* Letto *people, which*

Mutation of Religion.

which he brought in with him, was purposed, by a secret politicke deuise to haue put to death the Metropolitans, Archbishops, and Bishops, and all the holy and spirituall assembly, with the Nobles, and Courtiers, and diuers others which were of the better people, and so to haue sent others into Poland *and* Letto; *withall to haue changed the Religion, and to haue established the* Romish *Religion, for which purpose he brought with him many* Iesuites.

Romish Religion and Iesuites

The which we the great Lord and great Duke Vasily Euanowich, *of all* Russia, *with the Metropolitans, Archbishops, and Bishops, and with all the holy spirituall assembly, and with the Nobles, Courtiers, and Commons of the Kingdome of* Mosco, *well considering, and perceiuing what an alteration this would be to our Christian faith, with the ouerthrow and vtter vndoing to our whole Kingdome: we then earnestly bewail'd and lamented, and withall hartily prayed to the almightie Trinitie our onely Lord God, that liueth and defendeth mankinde, that it would please him to deliuer vs, and the Common-wealth from those vile, cruell, diuellish attempts, and deuises of theirs. Thus desiring the mercy of God, we all returned and stood stedfast to our former vnspotted and true Christian faith, against that vsurper and counterfeit* Gryshca *and his Counsell, with a resolution to stand in the same manfully, and euen to the death, hoping and longing for the time that all people, and warlik men and Souldiors and many others of the Empire of* Mosco *might come to gather themselues together, & that they might likewise perceiue and discern this vsurping Heretick, and his diuellish courses, by which he did decline from the true Christian faith of our Religion. The largenesse of the Kingdome of* Mosco *cannot be vnknowne vnto you our louing Brother, how farre it extendeth it selfe both to the South, and to the West, as also to other places, that in halfe a yeares space they could not gather themselues together. But when as the power and warlike Souldiours, and all other people were gathered together, then through the mercie and fauour of God, this enemy of Gods Commonwealth was discouered to all what he was. And the Empresse* Martha, *being Mother of the true Prince* Demetry Euonowich, *did certifie vnto vs before the Metropolitans, Archbishoppes, and Bishoppes, and before all the holy assembly, as also to the Nobles and Courtiers, and other Officers, and men of worth within our Empire, did shee deliuer, that her Sonne the Prince* Demetry *was murthered beyond reason, at a place cald* Owglits, *by appointment of* Boris Godenoue, *and that he dyed in her armes; yet did this* Gryshca *falsely call himselfe by the name of him that was murthered.*

Large Empire of *Russia.*

Also we found in the custody of this Gryshca, *the Copie of a writing, which was the contract and agreement that he made betwixt him and the* Palatine, *before his comming out of* Poland; *in which was written, that as soone as he did come to the Kingdome of* Mosco, *that then he would take to wife the daughter of the* Palatine, *and would giue her two Prouinces, called great* Nouogrod *and* Vobsko, *with counsell, Courtiers, Gentlemen, and Priests, fitting to a Congregation, with inferior Castles and Lands, freely in those foresaid, to build and set vp Monasteries, and also to set vp the* Romish *Religion; And when he came to the Kingdome of* Mosco, *that then he should giue vnto the* Palatine *tenne thousand pieces of* Polish *Gold, which is by our* Russia *account, three hundred thousand Markes: and to his wife, in consideration of her long Iourney, he promised to giue cloth of Gold, and cloth of Siluer, and of all the best things that was in the Treasurie of the Kingdome of* Mosco. *Likewise, that hee the said* Gryshca, *at his comming to* Mosco, *would take order to bring these things to passe with all diligence, whereby he might draw all the Dominion of* Mosco *from our true* Grecian *Religion, and so to haue turned vs into the* Romish *Religion, and to haue destroyed the holy Church ouer all the Empire of* Mosco, *and so to haue built vp the Religion of the Church of* Rome: *and for the performing of all this, the said* Gryshca *was sworne to the* Palatine Sandamersko, *in the presence of the Teachers of the Land, as beforesaid; that he according to his owne hand writing, would hold all the said couenants with all diligence, as likewise to bring all the Empire of* Mosco *to the* Romish *Religion. The which couenants and agreements the Generall* Sandamersko *himselfe hath confessed to our Maiestie, and Nobles, that the foresaid agreements and couenants betwixt him and the foresaid* Gryshca *were true, and how that they trusted one to another: moreouer, the* Palatine *did certifie vnto our Nobles, how* Gryshca *sent him a Letter vnder his owne hand and Seale, in which he promised to giue him* Smolensko, *with all the Prouinces belonging thereto, and another place called* Seuerow, *as also gaue him liberty to set vp Monasteries, and the Religion of the Church of* Rome. *Further, there was found by him Letters which were sent to him from the Pope of* Rome, *and the Cardinals, and Priests, to that effect, that he should remember and withall be mindefull to take in hand speedily those matters and businesse vpon which he had giuen to* Sigismund, *and the Cardinals his troth and vow, the which was, as beforesaid, to be himselfe of the* Romish *Religion, as also to bring all the people of the Kingdome of* Russia *into the same* Romish *Religion, not onely them that of themselues were willing thereto, but also others by compulsion, and to put them to death that sought to contrary the same. And not onely them of the Kingdome of* Russia, *but likewise other godly people of seuerall Religion: and that doe serue in the Kingdome of* Mosco, *as the Catholicks, and the Caluinists, them likewise he should seeke to bring into the* Romish *Religion with all perswasions. Moreouer,* Gryshca *himselfe, before vs, and our Nobles, and Courtiers, and before our Commons, did acknowledge as much, and thereupon yeelded himselfe to be in fault: as also that he did all with helpe of the Diuell, hauing forsaken God.*

See before.

Popes Letter.

For which these his vile actions, this Gryshca, *according to the true iustice, receiued an end to his life, and was by abundance of people slain in the* Mosco, *where he lay three dayes in the midst of the Citie, to the view*

view of all such like vsurpers, and disturbers. And because his body was loathsome vnto vs, we caused it to be carried out of the Citie, and there to be burnt. Slaine & burnt.

This Enemie thus hauing ended his life, then the Kings sonnes of diuers Countries, now dwelling within our Kingdome, with the Patriarke, Metropolitanes, Archbishops, and Bishops, with the Nobles, Courtiers, and the Commons, made entreaty vnto vs Vasili Euanowich, *to raigne and gouerne ouer them and ouer all the Kingdome of* Mosco, *as their Lord, Emperour, and great Duke of all* Russia. *According to which entreatie made vnto vs by the said Kings sons of diuers Countries, as likewise by our Nobles, Courtiers, Merchants, and all the rest of the Commons of all the Kingdome of* Mosco, *Wee are come to the great Kingdomes of* Volodemar, Mosco, Nouogrod, *and as also of the Kingdomes of* Cazan, Astracan, *and* Siberia, *and ouer all the Prouinces of the Empire of* Mosco: *as also wee the great Lord Emperour, and great Duke of all* Russia, *are crowned with our Imperiall Crown: and for the said Kings sonnes of diuers Religions, and our Nobles, Courtiers, and Souldiers, and all manner of People, doe serue our Imperiall Maiesty with desire and good liking voluntarily, and not by delusions and coniurations, as the* Poles *and* Lettoes *were bewitched by* Grithca. *But we the great Lord Emperour and great Duke* Vasili Euanowich, *with great care stayed and restrayned our People from the spoyle of the* Poles *and the* Lettoes, *defending them from death; and withall haue commanded to let goe many of them into* Poland *and* Letto: *but the chiefest of them that were of the Councell, and that practised to bring trouble and dissention in the Kingdome of* Mosco, *are now taken. And we to doe an honour vnto the dead body of the true* Demetrie, *haue (vpon conference with our Metropolitanes, Archbishops, and Bishops, and all the holy Assembly, our Nobles and Courtiers, and all the Kingdome of* Mosco) *sent to the Citie of* Owglets *a Metropolitan, named* Filareta, *of* Rostoue *and* Yeraslaue, *who was called before he was made Metropolitan,* Theodor Neekete, *which being one of the Nobles in times past, and with him the Archbishops of* Astracan, *called* Feodosia, *and our Nobles the Duke* Euan Michalowich Vorotinskoy, *with the rest of his fellowes, commanding them to bring vp with them the body of the Prince* Demetrie Euanowich, *who was murthered by the appointment of* Boris Godonoue, *and to bring it vp to our Citie of* Mosco *with great honour, which body shall be buried in the principall Church of* Mosco, *called* Michael *the* Archangel, *neare to his father the great Lord Emperour and great Duke* Euan Vasilowich *of famous memorie, and by Gods power his body shall not be touched or abused any manner of way. Likewise will we, by the fauour of God, honour the Funerall of* Demetrie Euanowich *with speciall solemnitie, which body performeth many cures, and worketh miraculously vnto them, that come to him with Faith to be cured of their diseases.* Election of Swisky. Miracles.

And now most louing and deare brother, wee calling well to minde the great amitie and friendship that was betwixt the great Lord Emperour, and great Duke Euan Vasilywich, *and his Sonne* Theodor Euanowich, *the Emperour* Boris, *and the great Lady Queene* Elizabeth: *the like brotherly loue doe we desire to haue with you, most louing and deare brother, to be established and continued betwixt vs, as it was with them, during our liues. Therefore may it please you, our louing brother* Iames, *King of* England, *after the hearing of these great and strange dangers past, to reioyce with vs, that he hath deliuered from such a vile enemy, and that he, our mercifull God, hath diuided and scattered that wicked counsell, and that he hath turned their cruelty vpon their owne head, to their shame and confusion. And concerning your Merchants that were in our Kingdome,* Iohn Merricke *with his fellowes, we haue graced them with our Emperiall presence; as also haue giuen vnto the said* Iohn Merricke *and his fellowes, a new priuiledge, and Letters of fauour, by which they shall come into our Kingdome, and to traficke with all manner of goods freely, without paying any Custome whatsoeuer, and as to them was granted in former time, and this fauour we haue giuen them to manifest vnto you our louing Brother, our Brotherly loue. And the reason that we haue not sent to you, louing brother, our Embassadour, is, because we had not time, in regard of many our Emperiall affaires, but hereafter doe purpose to send, to visite you in your Kingdome. Written at our Emperiall palace and Citie of* Mosco, *from the beginning of the World* Anno 7114. *the fourth day of Iune.* 1606. Sir *Iohn Merricke.* New Patent.

Thus is *Demetrius* painted out by his Enemies, which perhaps were not altogether led with simplicitie of truth, but in many things made him worse, that they might make their owne cause (bad enough) to appeare better. They tell also of great outrages committed by the *Poles*, (like those sometimes here in *England* by the *Danes*) their proud insulting ouer the men, rauishments of women, fetching them out of their houses and husbands bosomes to serue their lusts: neither did *Demetrius*, as they say, punish them; one onely being sentenced, and hee violently rescued from execution by the *Poles*. They say also that *Demetrius* his body was plucked out of the graue and burnt, the ashes throwne into the aire, the seeds, as the sequele seemed to shew, of many *Demetrij* after. *Thu. l.* 135. *Polish* insolencies.

Suiskey is also by some reported to haue beene chosen by lot in this manner. The Nobles cast lots foure times to receiue a Successor, as it were, by diuine sentence in lot-oracle: in euery of which times the lot fell vpon *Suiskey* (for as some say, there were three or foure neerer then hee) he modestly refusing and enforced by constancy of the various lot to accept that Scepter; whereof others thinke him as ambitious, as was modest *Boris* before him. Howeuer, he hath left his name and memorie written in as blacke inke as either *Boris* or *Demetrius*, if Reports bee true, which Choosing by lot.

Digitized by Google

Suiskys vices. which say that he proued a wicked Prince, partly by poison, partly by the *Tartars*, making away all, whose bloud might by Nobilitie threaten a probabilitie of their prouing his Corriuals. Yea, he is said to haue sent for Witches and Sorcerers, *Laps*, *Samoeds*, *Tartars*, or whatsoeuer other Nation yeelded such Hell-hags incarnate Fiends, the Deuils blacke guard, to consult about his Empire and succession; and (the Deuill is a murtherer) to haue sealed their predictions with bloud. Thus being told that one *Michalowich* should succeed, he is said presently to haue plotted the death of three *Grandes* of that name, his best seruants: yet the superstitious people obserue (after much chopping and changing) that in little time the State was settled on one of that Name, which still swaieth the Scepter; Who then being a youth of no State-terror, was his attendant in Court, and bare an Axe (after their custome) before him.

The like is told of K. *Edward* the fourth that vpon prediction of one to succeed, whose name began with *G*, he put to death *George* Duke of *Clarence* his brother, and yet *Gloster* succeeded.

One of his first Acts, was to send into *Poland* an Embassage, which could not bee admitted audience till Ianuarie. Hee thereby complayned of *Sandomerskos* artes which obtruded that Changeling on *Russia*, whereby aboue two hundred of principall Nobilitie had lost their liues: demanding restitution of the moneys which that Impostor had caused to bee transported into *Poland*, and restitution of goods; otherwise hee would with *Charles* of *Sweden* Duke of *Suderman*, enter *Poland* with an Armie to bee reuenged for the league (which they had sworne) broken, &c. *Sigismund* answered modestly, with excuse of their helping the right Heire in their conceits, and that his desire was that peace should continue (being loth in times then tumultuous at home, to prouoke a forreine enemie, so neere in dwelling, so remote in affection) *Sandomersko* still remayned prisoner in *Russia*. But things being better setled in *Poland*, and growing worse in *Russia*, by the dislike conceiued against *Suiskey*, a double danger grew to him both from another reuiued *Demetrius* (yea many pretending that Name and Title did after arise, as out of his dispersed ashes) within *Russia*; and from the *Poles* without, willing both to assist him vnder colour of Reuenge, and with hope of Conquest also, to inuade and fish for themselues in troubled waters.

A printed book 1614. tells of a great man, named *Trigin*, which betraied by one *Glaseo* was arrayned, and to preuent the furie of *Suiskey* stabbed himselfe, &c. Cap. *Gilbert*.

As for that *Demetrius* new risen from the dead (not to mention the others of inferiour note) I shall relate Captaine *Gilberts* reports which knew him and was by him entertayned, as I receiued them of a iudicious friend of mine, which had them from his owne mouth. Hee being at *Coluga* (as before is said) receiued a Letter from this new *Demetrius* *, so written that it appeared to bee of the former *Demetrius* his owne hand: and thus also he vsed to doe to others being able to counterfeit his writing, and to relate such other particulars as seemed impossible to any but *Demetrius* to doe. Hereupon Captaine *Gilbert* went with his Guard of Souldiers to meete him and the *Polake* Generall which came with him. And whiles he was yet a good distance off, *Ah* (this *Demetrius* called to him) *my true seruant, where were you and my Guard, when the villaines hurt me? but if I had followed the counsell which you gaue me such a time in such a place* (relating the particulars) *I had preuented them.* This circumstance had moued him to beleeue this to be the former *Demetrius*, had not he differed from this in person, as night from day. Thus also he said he affirmed to the *Pole* Generall, asking him how he liked this *Demetrius*, that This and That were as like as Night and Day (for the former was of goodly personage, and this a very deformed wretch.) The *Pole* replyed, It is no matter, Captaine, this *Demetrius* shall serue our turne to bee reuenged of the perfidious and bloudie *Russe*. And this *Demetrius* acted the other so neerly, and could so cunningly and confidently relate particular passages of past occurrents, that the Lady of *Demetrius* was by him bedded. Thus was miserable *Russia* ground betwixt these two Mill-stones, the pretending *Demetrius* and the super-intending *Pole*. *Suiskey* is helped not a little by the *English*, which brought him strangely and aduenturously powder and munition to his Castle to *Mosco*, which yet at last by reuolt of the Citizens deliuers vp it selfe and him to the *Poles*. And as for that pretending *Demetrius*, he was afterwards murthered in his Campe by a *Tartar*. But it is meet to take hereof larger view.

* *Thuan* tels that fourteene horses were missing in the Kings stable on the massacre day, and hence was occasioned a suspicion of escape, &c.

A strange Iuggler.

English aide.

Sigismund King of *Poland* layeth claime to *Sweden*, as sonne to King *Iohn* (who is said to haue vniustly depriued *Ericus* of his life and Kingdome) whose yonger brother Duke *Charles* first receiued his Nephew King *Sigismund* (then also elected and still continuing King of *Poland*) but vpon warres which after arose betwixt them, the issue was, that the *Pole* holds the Title; but *Charles* obtayned both Regall Title and Power, wherein his Sonne hath succeeded. *Suiskey* takes hold of this difference, and *Charles* assists him with an Armie sent vnder the command of *Pontus de la Gard* a *French* Coronell, consisting of *English*, *French*, and *Scots*. These march to *Mosco*, which the new *Demetrius* and *Poles* held besieged, and put *Demetrius* into such feare, that not trusting the *Pole*, and fearing his Aduersaries on both sides, he stole away by night with a small retinue: and the *Poles* obtayned Articles of composition and departed. But miserable were the distresses by famine, fire, sword, rapes, and other outrages in other parts of *Russia*, caused by other *Poles*; and yet these but as a beginning and prelude to other following. For the King of *Poland* entred with a huge Armie (some say of an hundred thousand men) inuaded the *Muscouite*, and especially laid siege to *Smolensko*. He is reported thence to haue sent twentie thousand to besiege *Mosco*.

Subscript. CAROLVS.

1200. Souldiers shipped from *England.*

ABout a fortnight before Midsummer, which was *A.* 1609. a companie of Voluntaries, to the number of a thousand and two hundred Souldiers, were at seuerall times shipped from *England* to passe into *Sweden*, to aide the King of that Countrie in his warres against the King of *Poland*. To which aide diuers other Nations did likewise resort, as *French*, high *Dutch*, &c. Of the

Colonel *Caluine.*

English Companies that went thither, the first was commanded by one *Caluine* a *Scot*; who by appointment was made Lieutenant Colonell, and chiefe of the other Captaines ouer the footmen.

After the first Companie was gone, a second number of three hundred men (of which I the Relator of this, was one) were put into one ship belonging to *Sweden*, and came from thence for vs. We were assaulted with a great tempest, and were tossed so long, that all our victuals were almost spent: the miserie of which, threw vs into more desperate feares: now were wee assaulted by double deaths (Famine and Shipwrack) what course to take for our reliefe no man presently knew. Continue without foode it was impossible, and as impossible was it for vs to recouer the Land in any short time, without the assured destruction of vs all. At this season, our Commanders were these; Lieutenant *Benson*, Lieutenant *Walton*, who was Prouost Martiall of the field; and an Ancient of the Colonels companie. The common Souldiers vowed and resolued to compell the Mariners (seeing the present miseries, and no hopes promising better) to set vs all on shoare vpon the first Land that could be discouered. Our Commanders did what they could by dissuasion to alter this generall resolution, because they feared it would bee the losse of the greatest part of our Companies, if they came once to bee scattered: and besides, they knew that it would redound to their dishonour and shame, if they should not discharge the trust imposed vpon them by our Captaines, which trust was to conduct vs and land vs before, whilest our Chieftaines remayned a while behinde in *England*, to take vp the rest of our Companies. Yet all this notwithstanding, Land being discouered, there was no eloquence in the world able to keep vs aboord our ship, but euery man swore if the Master of the ship would not set vs on the shoare, the sailes should be taken into our owne hands, and what was resolued vpon (touching present landing) should in despite of danger be effected. Vpon this the Master of the ship and the Mariners told vs, that if we put to land in that place, we should all either perish for want of victuals, which were not to bee had in that Countrie, or else should haue our throats cut by the people. Wee resolued rather to trie our bad fortunes on the land, and to famish there (if that kind of death must needes attend vpon vs) then to perish on the Seas, which we knew could affoord vs no such mercy: and on shoare wee went, as fast as possibly we could. When our Officers saw, that there was no remedie, nor force to detayne vs aboord, they then disheartned vs no longer, but to our great comforts told it, that the Master of the ship (which thing hee himselfe likewise openly confessed) knew both the Land and Gouernour thereof (as indeed we proued afterwards he did:) and therefore desired they all our companies not to misse-behaue themselues toward the people, for that it was an Iland called *Iuthland*, vnder the Dominion of the King of *Denmarke*, but subiect to the command of a Lord, who vnder the King (as his Substitute) was the Gouernour.

A tempest

Another tempest of the mutinous vulgar.

They land in *Iutland.*

And that we might be the better drawne to a ciuill behauiour towards the Inhabitants, our Officers further told vs, that they would repaire to the Lord Gouernour of the Countrie, and acquaint him with the cause of our vnexpected landing there; vpon which we all promised to offer no violence to the people; neither was that promise violated, because we found the Inhabitants tractable, and as quiet towards vs, as we to them: yet the greater numbers of them ran away with feare, at the first sight of vs, because (as afterward they reported) it could not bee remembred by any of them, that they euer either beheld themselues, or euer heard any of their ancestors report, that any strange people had landed in those places and parts of the Iland: for they thought it impossible (as they told vs) that any ship should ride so neere the shoare, as ours did, by reason of the dangerous Sands.

Our Officers so soone as they were at land, went to the Gouernour of the Iland, whilest the Souldiers (who stayed behind them) ran to the houses of the Ilanders, of purpose to talke with the people, and at their hands to buy victuals for a present reliefe: but when wee came among them, they could neither vnderstand vs nor we them; so that the Market was spoiled, and wee could get nothing for our money, yet by such signes as wee could make, they vnderstood our wants pitied them, and bestowed vpon vs, freely, a little of such things as they had. In the end, a happy meanes of our reliefe was found out by a Souldier amongst vs, who was a *Dane* by birth, but his education hauing beene in *England*, no man knew him to be other then an *English* man.

This *Dane* made vse of his owne native language, to the good both of himselfe and vs, certifying

fying the people (who the rather beleeued him because he spake in their knowne tongue) of the cause that compelled vs to land vpon their Coast, and that we intended no mischiefe, violence, or money: to which report of his they giuing credit, stood in lesse feare of vs then before, and thereupon furnished vs with all such necessaries, as the Countrie affoorded to sustaine our wants. The foode which wee bought of them was onely fish, and a kinde of course bread, exceedmg cheape. Of which foode there was such plentie, that for the value of three pence wee had as much fish as twentie men could eate at a meale, and yet none of the worst sorts of fish, but euen of the very best and daintiest, as Mackrels and Lobsters, and such like. In which our trading with the poore simple people, we found them so ignorant, that many, yea most of them regarded not whether you gaue them a Counter, or a Shilling: for the bigger the piece was, the more fish they would giue for it: but besides fish wee could get no other sustenance from them, or at least, could not vnderstand that they had any other. But obserue what happened in the meane time that we were thus in traffique with the Ilanders for victuals, our Officers (as before is said) being gone to the Lord Gouernour, who lay about twelue *English* miles from the Sea side, the Master of our ship on a sudden hoysed vp sailes, and away he went, leauing one of his owne men at shoare, who accompanied our Officers as their guide, through the Iland. The cause of the ships departure, did so much the more amaze vs, by reason it was so vnexpected, and the reason thereof vnknowne to vs: But wee imagined the Master of the ship and Mariners feared to receiue vs into the Vessell againe, because some of our men at their being at Sea, threatned the Saylers, and offered them abuses before they could be brought to set vs on land.

Fish cheape.

Ignorant Bores.

On the next day following, the Lord Gouernour of the Iland came to vs, bringing our Officers along with him, yet not being so confident of vs, but that (for auoyding of any dangers that might happen) he came strongly guarded with a troupe of Horse-men well armed. And (vpon his first approch) demanding where our ship was, it was told him in what strange manner it stole away and forsooke vs: he then asked what we intended to doe, to which we all answered, that we would be ruled by our Officers: hereupon hee inquired of them, what they would haue him to doe in their behalfes: they requested nothing else at his hands, but onely his fauourable Passe through the Countrie, and a ship to carry vs forward into *Sweden*: to which request hee made answere, that he could grant no such licence vntill he had made the King of *Denmarke* acquainted with our being there, for the Iland belonged to the King, he said, and he was no more but an Officer or Substitute vnder him. Yet in consideration that our ship had so left vs in a strange Land, he promised to doe all that lay in his power to effect our good: but withall told vs, that the people had inward feares, and were possest with suspitions, that our intents of landing vpon such a Coast, were not, as we our selues affirmed, only to get foode, but rather to make a poile of the poore Inhabitants. And therefore, to remoue all such feares and iealousies out of the peoples hearts, he held it most conuenient for the generall safeties of both parties, to separate our numbers, and to spreade vs abroad in the Countrie, one and one in a house, where it was agreed that we should receiue both a lodging, and meate, and drinke, vntill hee had sent to the King of *Denmarke* some of his owne men with our Officers, to vnderstand his Maiesties pleasure, and what should become of vs.

To this we all agreed, and accordingly for that purpose, were by the Lord Gouernour, safely by these armed horse-men which were his guard, conducted to his owne house. To that place were al the people of the Iland summoned together, they came at the appointed day to the number of fiue or six hundred, circling vs round with Bils, Holbards, two-hand Swords, and diuers other weapons: And at the first sight of vs grew into such rage, that presently they would haue cut all our throats, and hewed vs to pieces, but that the authoritie of the Gouernor kept them from offering violence, yet was hee faine to vse the faireſt meanes of perswasion to allay their furie. For they would not beleeue but that our arriuall there was to destroy them. Yet the Gouernour shewed vnto them all our number, which was but three hundred men, and those all vnweaponed, and so consequently, neither likely nor able to vndertake any mischiefe against them: Charging the vnruly multitude, vpon paine of death, not to touch the least finger of vs, but to diuide vs equally into seuerall Villages, as it should seeme best vnto them, and so bestow kinde and louing entertainment vpon vs till they heard further from him, which command of his they accordingly performed.

Immediately vpon this setling of them and vs in quietnesse, one of our Officers with two of the Gouernours men, were sent away to the King of *Denmarke*, to vnderstand his Highnesse pleasure, which Messengers were no sooner dispatched about the businesse, but the Ilanders growing more and more suspitious, came againe to the Gouernour, and neuer would cease or giue ouer troubling him, vntill they had gotten him to make Proclamation (in hearing of vs all.) That if any of vs would freely discouer the true cause of our landing vpon that Coast, and reueale the plots of any dangerous enterprise intended against them, he should not onely be rewarded with great store of money, and haue new apparell to his backe, but also should without tortures, imprisonment, or death be set free, and sent backe againe into his owne Countrie. This Proclamation strucke vs all with feare and astonishment, because albeit we to our selues were not guiltie of

Iealousie of the people.

any

Digitized by Google

any plot, or villany intended to the place or people, yet wee knew this might be a meanes to endanger all our liues, how innocent ſoeuer. Our ſuſpition of danger fell out according to our feares: for one *Thomas Griffyn* a Welch man, one of our owne company, went and kneeled before the Gouernour, and with a face counterfeiting a guiltineſſe and fearefull deſtruction, told him that we came thither onely, and for no other purpoſe, then to ſurpriſe the Iland, kill the Inhabitants, make ſpoile of their wiues and goods, and hauing ſet fire of their Townes and Villages, to flye to Sea againe. Yet for all this would not the Gouernour beleeue him, telling him it was a matter very vnlikely, that ſo ſmall a number, ſo diſtreſſed for want of foode, ſo weather-beaten and ſo diſarmed, ſhould venture vpon an enterpriſe ſo full of dangerous euents; but the villaine replyed, that all thoſe complaints of want, were but ſongs to beguile the people, for that vpon the leaſt Allarum giuen, other ſhips that lay houering at Sea, and furniſhed both with men and armour, would on the ſudaine, and that very ſhortly land for the ſame deſire of ſpoyle, as theſe their fellowes had done, and therefore counſelled the Gouernour to preuent ſuch imminent miſchiefes betimes.

Griffin a baſe coward and traitor to his fellowes.

A wiſe Gouernour.

The Gouernour being thus farre vrged, preſently called before him Lieutenant *Walton*, whoſe lodging was appointed in his houſe, and hauing related to him all that *Griffin* had diſcouered, and withall, demanding of Lieutenant *Walton* what he could ſay to this matter of treaſon and conſpiracie: the Lieutenant at the firſt ſtood amazed, and vtterly denied any ſuch intended villany, proteſting by the faith of a Souldiour, that this report of the Welch-man proceeded from the rancour of a vile traitors heart, and therefore on his knees intreated the Gouernour, not to giue credit to ſo baſe a villaine, who for the greedineſſe of a little money, went about to ſell all their liues, and to make all the inhabitants of the Iland become murderers: The reſt lay ſcattered about and knew nothing of the matter. Now ſoone after, iuſt as the traitor had told the Gouernour, that more ſhips were not farre off, but were ready to ſecond vs vpon our arriuall, it chanced that in the very heat of this buſineſſe, and their feares of danger where none was, two other ſhippes full of armed Souldiers came to the ſame place of the Iland where our ſhippe put in: Theſe two ſhips had brought Souldiours out of the low Countries (a ceſſation of warres being there) and were going into *Swethland*, as we were, but by croſſe windes and fowle weather, lay ſo long at Sea, that wanting victuals, they were driuen in hither for ſuccour. Whoſe ſudaine approach and ariuall being ſignified to the Lord Gouernor, the Welch-mans words were then thought true; all the Iland was preſently vp in Armes, to reſiſt the ſtrength and furie of a moſt dangerous ſuppoſed enemy: and ſo ſecretly did the Inhabitants put on Armes, that we who were kept like priſoners amongſt them, knew not of theſe vproares. But night approaching, the Generall gaue ſpeciall charge that ſecret watch ſhould be ſet and kept ouer euery Souldior that lodged in any mans houſe: which by the common people was as narrowly performed, for they did not onely watch vs as the Gouernor commanded; but amongſt themſelues a ſecret conſpiracie was made, that in the dead of night, when wee ſhould be faſt aſleepe, they ſhould come and take vs in our beds, and there to binde vs with cords: it being an eaſie thing to doe ſo, when our company were diuided one from another ouer the whole Iland. At the houre agreed vpon, the plot was put in force, for they entred our Chambers, and bound euery Souldier as he lay, making them all ready like ſo many ſheepe marked out for the ſlaughter. For mine owne part, I had fiue men and three women to binde me, who ſo cunningly tyed me faſt with cords, whilſt I ſlept, and felt nothing, nor deampt of any ſuch matter, that with a twitch onely I was plucked ſtarke naked out of my bed, and laid vpon the cold earth vnderneath a Table, with my armes bound behinde me, ſo extreamely hard, as foure men could draw them together, my feete tyed to the foote of the Table, and my necke bound to the vpper part or bord of the Table.

Two Ships.

Hard vſage.

In theſe miſerable tortures lay I, and all the reſt (in ſeuerall houſes) all that night, and the moſt part of the next day, our armes and legges being pinched and wrung together in ſuch pittileſſe manner, that the very bloud guſhed out at the fingers ends of many. The enduring of which torments was ſo much the more grieuous, becauſe none knew what we had done that could incenſe them to this ſo ſtrange and ſpitefull cruelty, neither could we, albeit we inquired, learne of our tormenters the cauſe, becauſe we vnderſtood not their language.

Whileſt thus the whole Iland was full of the cries of wretched men, and that euery houſe ſeemed a ſhambles, ready to haue Innocents there butchered the next day, and that euery Ilander had the office of a common cut-throate or executioner; Gods wonderfull working turned the ſtreame of all their cruelty: For the two ſhips that came out of the low Countries, and whoſe arriuall draue ſo many miſerable ſoules almoſt vpon the rocks of deſtruction, hauing in that dolefull and ruinous night, gotten ſome prouiſion aboord, weighed Anchor, and departed towards *Swethland*. Which happy newes being ſerued vp at breakfaſt to the Lord Gouernour betimes in the morning, and that the Shippes had offerd no violence to the Countrey, but had paid for what they tooke: About eleuen of the clocke the very ſame day at noone, wee were all like vnto ſo many dead men cut downe, and bidden to ſtand vpon our legges, although very few had ſcarce legges that could ſtand.

Of one accident more that befell, I thinke it not amiſſe to take note, which began merrily, but ended

Digitized by Google

ended tragically, and in bloud; and that was this: Foure of our company being lodged in one Village, and they being bound to the peace, as you may perceiue the reſt were; it happened that an Hoaſt, where one of them lay, had tipled hard, and gotten a Horſes diſeaſe, called the Staggers: In comes he ſtumbling, to the roome where the poore *Engliſhman* was bound to the Table hand and foote: which thing the drunken Sot beholding, drew his Hatchet, which he wore at his girdle, according to the fashion of the Country, and becauſe hee would be ſure his priſoner ſhould not eſcape, with his Hatchet he cleft his head. And thinking in that drunken murderous humour, he had done a glorious act, away he reeles out of his owne houſe to that houſe where the other three Souldiours lay bound, where beating at the doores and windowes, and the Hoaſt asking what he meant to make ſuch a damnable noyſe; he told him ſo well as he could ſtammer it out, that the Lord Gouernour had ſent him thither to put the three *Engliſh-men* to death. Vpon this, the diuell and he (hand in hand) were let in, the one ſtanding ſo cloſe at the others elbow, that he neuer left him till he had cleft two of their heads, that lay bound: and being then weary (it ſhould ſeeme) with playing the butcher, he neuer ceaſed ſwearing and ſtaring, and flouriſhing with his bloudy Axe about their heads, till the people of the houſe had hung the third man vpon a beame in the roome. But they hauing leſſe cunning in the Hang-mans trade, then will to practiſe it, tyed not the halter ſo faſt about his necke, as to ſtrangle him: ſo that after hee had hung an houre, hee was cut downe, reuiued againe, was well, and afterwards was ſlaine in *Ruſſia*. Effects of drunkenneſſe.

This bloudy feaſt being thus ended, and all ſtormes as we well hoped, being now blowne ouer to our freedome, and ſitting at liberty from our tormentors; on the necke of theſe former miſeries fell a miſchiefe more dangerous to vs then all the reſt: for tidings were brought to the Gouernour, that our Auncient, who trauailed with the Gouernours two men to the King, had trayterouſly murdered thoſe his guides, and then ranne away himſelfe: vpon this rumour, nothing but thundring and lightning flew from the common peoples mouthes: there was no way now with vs but one, and that one was, to haue all our throats cut, or our heads cleft with their Axes. But the Gouernor pittying our misfortunes, laboured both by his authority, & by faire ſpeeches, to keepe that many-headed dogge (the multitude) from barking. And in the end, when he ſaw nothing but the bloud of vs poore *Engliſhmen* would ſatisfie their thirſt, becauſe they ſtill held vs in ſuſpition and feare; he moſt nobly, and like a vertuous Magiſtrate, pawned to the inhumane Raſcals (to my knowledge) his honour, all that euer he was worth, yea, his very life vnto them, that within three dayes the meſſengers ſent to the King, ſhould returne home, and that during thoſe three dayes we ſhould be of good behauiour to the Ilanders: and beſides that, if they did not returne in ſuch a time, that then he would deliuer vs vp into their hands. Our Auncient with the Gouernours two men, came home vpon the third day, to the Gouernours houſe, and brought from the King of *Denmarke* his licence, to carry vs not onely through the Country, but commanding that we ſhould be allowed ſhipping alſo at conuenient place, to carry vs to *Sweueland*, whither we were to goe: And according to this Licence the Gouernour cauſed vs to be called all together the very next day; at which time, *Thomas Griffin* the Welch *Iudas*, who had all this while lyen feaſting in the houſe of the Lord Gouernour, began to tremble and repent him of his villanie, begging moſt baſe forgiueneſſe on his knees, both from the Gouernour, and vs his Countrimen and fellow Souldiours, proteſting that what he did, came out of his feare to ſaue his owne life. But our Officers (vpon hearing him ſpeake thus) had much adoe to keepe the companies from pulling downe the houſe where *Griffin* lay, becauſe they would in that rage haue hewed the villaine in peeces. Cruell cowardiſe and baſe iealouſie. King of *Denmarks* bounty.

But leauing him and all ſuch betrayers of mens bloud to the hell of their owne conſciences, let vs ſet forward out of this infortunate Iland, and not ſtay in any place elſe, till in ſmall Boates wee come by water to *Elzmore* in *Denmarke*, where wee ioyfully got aboard once more; and are hoyſing vp ſailes for *Sweueland*. Yet euen in this ſun-ſhine day a ſtorme fals vpon vs too: for our Officers not hauing ſufficient money to furniſh vs with victuals, wee were enforced to pawne our Auncient and Lieutenant *Walton*, for the ſafe returne of the Shippe, with condition, that they ſhould not be releaſed vntill a ſufficient ſumme of money was ſent to defray all charges. So that we left our Officers behinde vs; but the King of *Sweueland* did afterwards releaſe them, and then they came to vs. But before their comming, wee hauing a good winde, landed at a place called *Newleas* in *Swene*: and from thence were carried to *Stockholme* (the Kings ſeate) and there was the King at the ſame time, betweene which two places, it was a daies march on horſebacke. *Elzinore.* *Stockholme.*

Vpon this our arriuall at *Stockholme*, wee met with the reſt that had gone before vs, and with diuers others of our Countrimen, that came out of the *Low-countries*, as before is related. In this place we lay ſo long, and had ſuch poore meanes, that wanting money to buy foode, wee wanted foode to maintaine life, and ſo a number of vs were readie to ſtarue: till in the end, our miſeries making vs deſperate, we fell together by the eares with the *Burgers* of the Towne: in which ſcambling confuſion and mutinie, euery man got one thing or other, of which he made preſent money to relieue his body withall: yet lay wee at the Miſery after miſery.

Digitized by Google

walles of the Citie, crying out continually for money, money, till our throates grew hoarse with bauling, but the stones of the walles gaue more comfort to vs, then the Inhabitants. One day (aboue all the rest) wee heard, that the King was to ride a Hunting; and wee imagining that all the abuses, wrongs, and miseries, which wee endured, proceeded from some vnder-hand hard dealing, and packing of our Captaines and Officers, resolued to gather about the King at his comming forth, and to cry out for money: but the King being angry (as wee supposed) came riding amongst vs, drawing his Pistoll from the Saddle-bow, as if hee purposed to haue shot some of vs: but seeing none of vs to shrinke from him, nor to be dismayed, hee rode backe againe, wee following him, and desiring, hee would either giue vs money, or else to kill vs out-right; one amongst the rest (whose name was *William Attane*) spake to the King aloud, thus: *I hold it honour to dye by the hands of a King, but basely to starue to death, I will neuer suffer it.* Vpon these our clamours, the King looking better vpon our necessities, sent money the next day, and immediately after gaue vs a moneths meanes in money, and two moneths meanes in cloath, to make vs apparrell.

Captaines cozenage.

Of the cloath wee receiued some part, but the money being payed, was by our Captaines sent into *England* to their wiues; no part of it euer comming to the poore common Souldiours hands: for presently vpon this, wee were commanded aboord the Ships, with promise that when wee were aboord, wee should haue our money. But being in the Shippes vnder hatches, away were wee carried with prouision onely of one moneths victuals; when by reason of the weather, wee were forced to lye eight weekes at Sea: in all which time, wee had nothing but pickelled Herrings, and salt Stremlings, with some small quantitie of hard dryed meates: by which ill dyet, many of our men fell sicke, and dyed. In the Shippe wherein I was, wee liued foureteene dayes without bread, all our best foode being salt Herrings, which wee were glad to eate raw; the best of vs all hauing no better sustenance.

Finland.

At the last, it pleased God to send vs to a place called *Vfrasound* in *Fynland*, where wee landed, (*Fynland* being subiect to the King of *Sweueland.*) From *Vfrasound* wee were to goe to *Weyborough*, a chiefe Towne in the Countrie of *Fynland*: where wee no sooner arriued, but our Souldiors ranne some one way, and some another, so long that the Captaines were left alone with the Shippes: This running away of them, being done onely to seeke foode, so great was their hunger.

Dispersing.

By this careless dispersing themselues, they lost the command of the whole Countrey, which they might easily haue had, if they had beene vnited together: and not onely were depriued of that benefit, but of Horses also, which were allowed by the King for them to ride vpon. So that, what by the reason of the tedious Iourney (which wee were to trauell, being fourescore leagues) and what by reason of the extreame cold, being a moneth before Christmas, at which time the Snow fell, and neuer went off the ground vntill Whitsontide following; but all the Raine, and all the Snow that fell, freezing continually, diuers of our men were starued to death with the Frost. Some lost their fingers, some their toes, some their noses, many their liues: insomuch, that when wee all met at *Weyborough*, wee could make no more but one thousand and foure hundred able men; and yet when we were landed at *Vfrasound*, wee were two thousand strong; the extremity of the cold Countrey hauing killed so many of our Souldiours in so little time.

Distresse by Frost.

At our landing at *Weyborough* wee had good hopes to receiue better comforts, both of money and victuals: for the Inhabitants told vs, the King had allowed it vs, and in that report they spake truth: yet contrary to our expectation, wee lay there about foureteene dayes, and had nothing but a little Rice, of which we made bread, and a little butter, which was our best reliefe. Drinke had we none, nor money: our Captaines gaue vs certaine letherne pelches, onely made of Sheeps skins, to keepe vs from the cold.

Their miserable march into *Russia.*

At this place we receiued armes to defend vs against the enemy, and six Companies that were allowed by the King for Horsemen, receiued Horses there. From thence wee were to march into *Russia*, where our enemies continued. But the iourney was long and vncomfortable: for wee marched from Newyeares day vntill Whitsontide, continually in Snow, hauing no rest, but onely a little in the nights. So that the miseries and misfortunes which wee endured vpon the borders of *Fynland*, were almost insufferable, by reason the number of them seemed infinite. For all the people had forsaken their houses long before wee came, because they were euermore oppressed by Souldiours: by which meanes we could get neither meate nor drinke, but were glad to hunt Cats, and to kill them, or any beasts wee could lay hold on, and this wee baked, and made them serue for daily sustenance. The greatest calamitie of all was, wee could get no Water to drinke, it had beene so long frozen vp, and the Snow so deepe, that it was hard to say, whether wee marched ouer Water, or vpon Land. So that wee were compelled to digge vp Snow, and with stones redde hot, to melt in tubbes, and then to drinke it.

Want of meate and of Water.

This

This affection continued about twelue or foureteene dayes, till we came into *Russia*. Vpon our very first entrance into which Kingdome, we marched ouer an arme of the Sea, that was eight leagues ouer, many of vs starving to death in that passage, by the cold freezing windes that blew the same day. In which frosty iourney, I saw so much bread as a man might buy for twelue pence, sold away in little bits, for the value of fortie shillings. But this misery ended the next day, at our setting foot into *Russia*, where we found plenty both of corne and cattle; onely the people of the Countrey ranne away, leauing all their goods behinde them, but so cunningly hidden, that the best pollicie of ours could hardly finde them out. By this meanes of the peoples running away, we were glad to play the Millers, and to grinde all our corne our selues, to bake our bread, and to dresse our owne victuals. Then marched wee vp to *Nouogrod* (a chiefe Citie in *Russia*) where wee were to receiue all our meanes that rested behinde vnpayed: but our Captaines beguiled vs, and kept it for themselues: yet to stoppe our mouthes, they told vs wee should goe into *Muscouy*, and there all reckonings should be made euen.

Russians runne away.

Nouogrod.

Wee had scarce marched aboue three dayes towards *Muscouy*, but that newes came, how a certaine number of our enemies lay in a sconce by the way; the strength of them was not perfectly knowne, but it was thought they were not aboue seuen hundred, and that we must vse some stratagem to expell them from thence: vpon which relation, our Captaines drew forth to the number of three hundred *English* horsemen, and two hundred *French* horsemen: so that in all we were about fiue hundred that were appointed to set vpon the supposed seuen hundred *Polanders*, (our enemies) that so lay insconsed: vpon whom we went. Our chiefe Commander in that seruice was *Monsier la Veile*, a *French* man, who so valiantly led vs on, that the enemy hearing of our comming, fled ouer a water that was by the sconce; yet not with such speede, but that wee slue to the number of foure hundred of their side, and lost onely three men of our owne; but we tooke the sconce. About the sconce stood a faire Towne called *Ariona*, with a riuer called the *Volga*, running through the middle, but no bridge ouer it; onely a few Boates and Sloates (made and cut out of trees) were there, to carry the people ouer from the one halfe of the Towne to the other. This sconce furnished vs not onely with great store of riches, but also with a number of *Polish* Horses, and as many armes as serued to arme fiue hundred men; our want of that commoditie being as much as of any thing besides: for of those fiue hundred men that went vpon the seruice, there were not three hundred fixed armes; yet through the hand of him that deales victories, or ouerthrowes, as it pleaseth him best, the day was ours.

Polake enemies.

They fled.

Sconce taken with store of Armes.

Ouer this riuer *Volga* the enemies were neuer driuen before, either by the Emperor of *Russia*, or by the King of *Swethland*: for which cause (as afterward wee heard) the next day when they departed from the other side of the Riuer, they burnt that halfe of the Towne on which side they were themselues, and in most bloudy, barbarous, and cruell manner, made hauocke both of men, women and children, albeit (not aboue halfe a yeare before) the Inhabitants on that side had reuolted from their owne Emperour, and turned to them. In which tyrannicall vprore, their custome was, to fill a house full of people, and then (the doores being locked vpon them, that none might issue forth) the house was fired about their eares: and oftentimes were yong children taken by the heeles, and cast into the middest of the flames: This inhumane tyrannie being practised not onely by the *Poles*, that were our enemies, but euen by those *Russes* that were traitors to their owne Emperour, and serued vnder the *Poles*, and were called *Cossakes*, whose cruelty farre exceeded the *Polish*.

Poles cruelties most execrable

The Towne being thus burnt to the earth, all the sixe thousand (which as I said before, fled ouer the Riuer, out of the sconce, and were by vs supposed to be but seuen hundred) came downe in full battalion to the Riuers side with such fierceneſſe, as if presently they and their horses would haue swom ouer, to fight with vs, which being perceiued, our poore fiue hundred stood ready to resist them. But whether they feared our numbers to be greater then they were, and that wee had some other secret forces, I know not: but away they marched, the selfe same day in which they came downe in that brauery, not doing any thing: of which, wee for our parts, were not much sorry; because if the battailes had ioyned, wee knew our selues farre vnable to withstand them. And this was the seruice of the most noate, that wee went vpon.

Two or three other sconces and Townes we tooke from our enemies, they not once daring to resist vs, because they knew nothing of our numbers and force. But the dishoneſt dealings of our Captaines, made the whole Armie discontent; insomuch, that our Souldiors would oftentimes deny to goe forth vpon seruice, because they had beene almost a yeare in the Land, and had receiued no more but one *Rubble* (amounting to the value of ten shillings *English*.) So that vpon these discontents, fiftie of our men ranne away to the enemy at one time, and discouered to them our strength. After which, we durst not be so bold as before we had beene. The fire of a new conspiracie was likewise kindling, but it was perceiued, and quenched with the bloud of the conspirators, of which, the chiefe were hanged. On therefore we went: when

HONDIVS *his Map of* Muſcouia.

we came within fortie leagues of *Muſcouie*, newes was brought, that the enemy had beleaguard ſeuen thouſand *Ruſſes* that were our friends, and that vnleſſe wee forced the ſiedge to breake vp, the ſeuen thouſand *Ruſſes* would euery man be ſtarued where they lay. This ſad report, (albeit we had reſolued neuer to goe vpon any more ſeruice, vntill wee had our pay) ſo wrought in our hearts, that wee much pitied the miſeries of others, becauſe wee our ſelues had taſted of the like.

Our Generall (whoſe name was *Euerhorne*) was a *Fynlander*, and with a company of *Fynland* blades (as they tearme them) well appointed on Horſebacke, was by the King of *Sweueland*, ſent after vs, as our Conuoy, vntill wee ſhould come to *Pontus le Guard*, who was chiefe Generall ouer the whole armie of ſtrangers that came into the Land: ſo that according as he was ſent and charged by the King, hee ouertooke vs before we came to *Arioua*. By the intreatie therefore of this *Fynlander*, and the flattering promiſes of our owne Captaines, we were contented to goe vpon this ſeruice, and to deliuer the *Ruſſes*, or to dye our ſelues in the action. Yet with condition, that (as they promiſed to vs) we ſhould by the way meete our chiefe Generall, *Pontus le Guard*, who with certaine numbers of *Engliſh*, *French* and *Dutch* (which the yeare before were come into the Land) was vpon a march out of *Muſcouy*, not onely to meete vs, but to ioyne with vs, and pay vs all our money which remained good to vs; prouided likewiſe, that ſo ſoone as euer wee ſhould releaſe the ſeuen thouſand *Ruſſes*, our money ſhould be payed downe. On theſe conditions (I ſay) wee yeelded to goe vpon the buſineſſe.

Pontus le Guard

They meet.

At length *Pontus le Guard* met vs (according to the promiſe) and with him was money brought to pay vs, and his word giuen that preſently wee ſhould receiue it. But the lamentable eſtate, in which the poore beſiedged *Ruſſes* were (within the ſconce) being at the point of death for want of foode, required rather ſpeedy execution, then deliberation: ſo that the neceſſities of their hard fortunes craning haſte, on wee went, hauing about nineteene or twenty

thouſand

thousand *Russes*, that were people of the same Countrey, ioyned to our Armie, to aide them in this enterprize. But as we all were vpon a march, the enemy hauing receiued intelligence of our approaching, set forward, to the number of eight thousand Lanciers and more, to intercept vs by the way: and being within one dayes march of the place to which wee were likewise going, they set fire vpon three or foure Villages hard by the place where we lay at Grasse with our Horses, for a token that they were comming. And this was done vpon Midsummer day last in the morning, by breake of day. Then came they thundring with shouts and cries to set vpon vs: but no sooner was the Alarum giuen, when the greatest part of those nineteene or twenty thousand *Russes*, that were ioyned to vs as our aide, fled most basely before any blow was giuen. This sudden cowardize of theirs somewhat amazed vs: but the houre being now come, wherein we were not to talke of dangers, but to goe meete them, with our sixe companies of *English* horse, we brauely resisted the *Polanders*, and with great hurt to them, but with little losse vpon our part, charged them three seuerall times.

An. 1610.

Base *Russe* flight.

At last *Pantus le Guard* (our chiefe Generall) tooke his heeles and fled too, leauing vs vtterly destitute of all direction: which much astonished vs, as not well vnderstanding what to doe: for our greatest strength (being by their flight) taken from vs, none but wee strangers were left in the field, and of vs there was not in all, aboue two thousand, and of that number there were aboue six hundred *French* horsemen, who seeing both the Generall gone, and the *Russes* fled, turned their backs vpon vs, and ranne away too most valiantly, yet not out of the field, but to the enemy.

P. le Guard fleeth.

French flee.

Then were wee not aboue twelue or foureteene hundred at the most left to resist eight thousand at the least: vpon whom notwithstanding, our six companies of *English* horsemen, charged three seuerall times, without any great losse, but with much honor: And at the fourth time, for want of powers to second them (which the *French* should haue done) all our six companies were scattered and ouerthrowne with the losse of few of our colours. The Captaines ouer these sixe Companies of Horse, were these:

English honour.

Captaine *Crale*, of whose company I was. Captaine *Kendricke*, Captaine *Benson*, Captaine *Carre*, Captaine *Colbron*, Captaine *Creyton*.

Which six Captaines had not in all their companies aboue fiue hundred men. In this battaile, Captaine *Creyton* was slaine in the field; Captaine *Crale* was shot in the knee, and within a short time after dyed of that wound; not aboue twelue of his companie escaping. Captaine *Kendrick* was wounded in diuers places of the head, and dyed. Captaine *Benson* was shot in the hand, and wounded in the head, and yet escaped, and liued: onely Captaine *Carre* and his Cornet escaped, but all his companie scattered and lost. Diuers other Officers were slaine, whose names I cannot remember.

Thus were all our *English* horse-men dispersed and ouerthrowne, to the number of fiue hundred and vpwards. Our Generall *Euerhorne* with his companies of *Finland*, or *Finsco* blades, were also put to retrait: so that there was not left in the field aboue sixe or seuen hundred, which were foot-men. And of these, one halfe was *English*, one halfe *Dutch*, who kept onely a certaine place by a wood side, barricadoed about with wagons, hauing with them foure field pieces, with which they did great spoile to the Enemie. But their number being but few, neither durst they venture on the Enemie, nor durst the Enemie enter vpon them, but kept them still (as it were besieged) in that place onely, because they could no wayes escape. The inconuenience of which cooping vp in so narrow a roome, being looked into, and the dangers on euery side well considered, it was held fittest for safetie, to summon the Enemie to a parley. In which parley, the Enemie offered, that if they would yeeld, and fall to their sides, they should haue good quarter kept. And if any man had desire to goe for his owne Countrie, hee should haue libertie to goe with a Pasport from the King of *Poland*. Or if any would serue the King of *Poland*, hee should haue the allowance of very good meanes daly paid him. Vpon these compositions they all yeelded, and went to the Enemie; onely Captaine *Yorke* and his Officers, with some few of their Souldiers, went backe into the Countrie, and came not to the Enemie, as the rest had done: who from thence marched vp to the *Polish* Leaguer, being ten miles distant from the place, and there they continued. But such as desired to trauell to their owne Countries, were sent to the King of *Polands* Leaguer, which lay at that time at a place called *Smolensko*, and there accordingly had their Passe, to the number of one hundred, of which number I my selfe was one. What became of the rest I know not: but I with fiue more held together in trauell, vntill we came to *Dantzicke*, a great Towne in *Prussia*, being distant from *Smolensko* one hundred leagues.

To make an end of this Storie of the Foxe and the Beare, the pretending *Demetrius* and contending *Suiskey*; it is reported, that *Demetrius* seeing these perplexities of *Suiskey*, raysed a great Armie of such *Russes* as voluntarily * fell to him (the *Pole* hauing now reiected him, except some Voluntaries) and againe laid siege to *Mosco*; *Zolkiewsky* for *Sigismund*, beleagred another part thereof with fortie thousand men, whereof one thousand and fiue hundred were *English*, *Scottish*, and *French*. *Suiskey* seeing no hope to withstand them, his Empire renouncing him, hee would

feeme to renounce the Empire firſt, betaking himſelfe to a Monaſterie. But not the ſanctitie of the place, nor ſacred name of an Emperour might protect or ſecure him. The *Muſcouites* yeelded vp their Citie and his Perſon to the *Pole*, and the Caſtle was manned for *Sigiſmund*. All ioyne againſt *Demetrius*, who betaketh him to his heeles, and by a *Tartar* (as before is ſaid) was ſlaine in his campe. *Charles* King of *Sweden* dyed Octob. 30. 1611. and *Guſtauus* his ſonne ſucceeded. *Sigiſmund* obtayneth *Smolensko* alſo after two yeeres ſiege and more: in which time the Defendants had held out ſo reſolutely, that the *Polſh* Peeres and States (which in that Kingdom beare great ſway) had called the King to their Parliament, the rather in regard of the King of *Denmarke* warring vpon *Sweden* (in which warre diuers thouſands of our *Engliſh* voluntaries * aſſiſted the *Dane*) but he firſt deſiring to trie his fortune, carried the Citie with two hundred pieces of Ordnance and other rich ſpoile. Many were ſlaine, and diuers great perſons taken, of which was the Archbiſhop. Many were blowne vp (as was thought) by their owne voluntarie act, by fire caſt into the ſtore-houſe, in which is ſaid to haue beene (if our Author miſtake not) fifteene thouſand veſſels of poulder; whereupon ſeemed to returne the very Chaos, or in ſtead thereof a Hell into the World. It is accounted one of the ſtrongeſt Forts in Chriſtendome, the walls able to beare two Carts meeting in the breadth. It was taken the twelfth of Iuly, 1610.

Suiskey was carried into *Poland* and there impriſoned in *Waringborough* Caſtle, and after the loſſe of libertie and his Empire, expoſed to ſcorne and manifold miſeries, hee dyed in a forraine countrie. But before that Tragedie, the *Poles* are ſaid to haue more then acted others. For when they held him priſoner before his departure from *Moſcouia*, they ſent for many *Grandes* in *Suiskeys* name, as if he had much deſired to ſee them before his fatall farewell, to take a friendly and honourable leaue of them. They come, are entertayned, and in a priuate place knocked on the head and throwne into the Riuer: and thus was moſt of the chiefe remayning Nobilitie deſtroyed. The *Poles* fortified two of the Forts at *Moſco*, and burnt two others, as not able to man them. But the *Muſcouite* alſo there held them beſieged till famine forced them to yeeld: the *Ruſſians* finding there ſixtie barrels of pouldred mans fleſh (it ſeemeth of ſuch as had dyed, or were ſlaine, that their death might giue life to the Suruiuers) a iuſt, but miſerable and tragicall ſpectacle. We ſhall conclude this Diſcourſe with giuing you two Letters, the one taken out of a Letter written from *Colmogro* Sept. 7. (the yeere is not dated) amidſt theſe broiles; the other from Captaine *Margaret* before mentioned by *Thuanus*: and after them, for further illuſtration and profitable vſe of this ſtorie, is added part of a Letter of Doctor *Halls*.

I write briefly to your Worship, because I hope to take my voyage to* France *through* England, *and there to meet with your Worship; intreating your Worship to accept these few lines as a testimony of the seruice I haue vowed to your Worship, &c. and so I end in haste.*

English house burnt.

Thus haue we finished foure Acts of this Tragedie: the first, ending with the end of *Bealas* family; the second, with the ruine of that of *Boris*; the third, with that (whatsoeuer) *Demetrius*; the fourth, with this *Suiskey*, attended with that shadow or ghost of another *Demetrius*. Now as I haue seene sometimes the Spectators of Tragedies whiled with discourse of a *Chorus*, or (as in our vulgar) entertayned with musicke, to remit for a time those bloudie impressions fixed in attentiue mindes; so haue we represented *Phedores* Coronation added to the first; *Boris* his Charter to the *English* to conclude the second; that of *Demetrius* to the third, and for this fourth I haue here made bold with a Letter of my worthy friend (so am I bold to call that good Man, zealous Protestant, elegant Writer, industrious Preacher, learned Doctor, and Reuerend Deane, Doctor *Hall*, a Hall adorned with so rich Arras, and with all the ground, light, life, the *All* of these, Christian humilitie) which may serue as a Letter of commendation to my intent, as it was intended to another worke, which had it beene publike, might haue preuented the greatest part of this: A worke of Master *Samuel Southeby*, in Sir *Th. Smiths* Voyage mentioned, touching those *Russian* occurrents which he in part saw. As a Traueller he deserueth place here. And howsoeuer I haue neither beene so happy to see the Worke nor the Workman, yet this Epistle tells what we haue lost, and my worke easily proclaimes the defect of such a Wardrobe, being (as you see) like a Beggars cloke, all of diuerlity'ed patches; so much more labour to mee, in both getting and stitching them, though so much lesse satisfaction to thee. Once, as I haue placed this long *Russian* storie in the midst of Marine Discoueries, to refresh the Reader a while on Land: so amidst these tragicall, harsh Relations, I thus seeke to recreate thy wearie spirits with this chat of mine, and after these *Minda* gates, more really, with this Letter so vsefull to the present subiect, so pleasing in the stile. The whole, and the next following to *Buchinski*, the Reader may finde in his so oft published Decades of Epistles.

Master Sdi Southeby.

TRauell perfiteth wisedome; and obseruation giues perfection to trauell: without which, a man may please his eyes, not feede his braine; and after much earth measured, shall returne with a weary body, and an empty minde. Home is more safe, more pleasant, but lesse fruitfull of experience: But, to a minde not working and discursiue, all heauens, all earths are alike. And, as the end of trauell is obseruation; so, the end of obseruation is the informing of others: for, what is our knowledge if smothered in our selues, so as it is not knowne to more? Such secret delight can content none but an enuious nature. You haue breathed many and cold aires, gone farre, seene much, heard more, obserued all. These two yeares you haue spent in imitation of Nabuchadnezzars *seuen; conuersing with such creatures as* Paul *fought with at* Ephesus. *Alas! what a face, yea what a backe of a Church haue you seene? what manners? what people? Amongst whom, ignorant Superstition striues with close Atheisme, Treachery with Cruelty, one Deuill with another; while Truth and Vertue doe not so much as giue any challenge of resistance. Returning once to our* England *after this experience, I imagine you doubted whether you were on Earth, or in Heauen. Now then (if you will heare mee, whom you were wont) as you haue obserued what you haue seene, and written what you haue obserued; so, publish what you haue written: It shall be a gratefull labour, to vs, to Posteritie. I am deceiued, if the ficklenesse of the* Russian *State, haue not yeelded more memorable matter of Historie then any other in our Age, or perhaps many Centuries of our Predecessors. How shall I thinke, but that God sent you thither before these broiles, to bee the witnesse, the Register of so famous mutations? He loues to haue those iust euils which hee doth in one part of the World, knowne to the whole, and those euils, which men doe in the night of their secresie, brought forth into the Theater of the World; that the euill of mens sinne being compared with the euill of his punishment, may iustifie his proceedings, and condemne theirs. Your worke shall thus honour him; besides your second seruice, in the benefit of the Church. For, whiles you discourse of the open Tyrannie of that* Russian *Nero,* Iohn Basilius; *the more secret, no lesse bloudy plots of* Boris; *the ill successe of a stolne Crowne, though set vpon the head of an harmelesse Sonne; the bold attemps and miserable end of a false, yet aspiring challenge; the perfidiousnesse of a seruile people, vnworthy of better Gouernours; the misse-carriage of wicked Gouernours, vnworthy of better Subiects; the vniust vsurpations of men, iust (though late) reuenges of God; crueltie rewarded with bloud, wrong claimes with ouerthrow, treachery with bondage; the Reader, with some secret horror, shall draw-in delight, and with delight instruction: Neither know I any Relation whence hee shall take out a more easie Lesson of Iustice, of Loyaltie, of Thankefulnesse.*

But

Digitized by Google

But aboue all, let the World see and commiserate the hard estate of that worthy and noble Secretarie, Buchinsky. *Poore Gentleman! his distresse recalls euer to my thoughts* Æsops *Storke, taken amongst the Cranes: He now nourishes his haire, vnder the displeasure of a forreigne Prince; At once in durance, and banishment. Hee serued an ill Master; but, with an honest heart, with cleane hands. The Masters iniustice doth no more infect a good Seruant, than the truth of the Seruant can iustifie his ill Master. A bad Worke man may vse a good Instrument: and oft-times a cleane Napkin wipeth a foule mouth. It ioyes me yet to thinke, that his pietie, as it euer held friendship in Heauen, so now it winnes him friends in this our other World: Lo, euen from our Iland vnexpected deliuerance takes a long flight, and blesseth him beyond hope; yea rather, from Heauen, by vs. That God, whom hee serues, will bee knowne to those rude and scarce humane Christians, for a protector of innocence, a fauourer of truth, a rewarder of pietie. The mercy of our gracious King, the compassion of an honourable Counsellour, the loue of a true friend, and (which wrought all, and set all on worke) the grace of our good God, shall now lose those bonds, and giue a glad welcome to his libertie, and a willng farell to his distresse. He shall (I hope) liue to acknowledge this; in the meane time, I doe for him. Those* Russian *Affaires are not more worthy of your Records, than your loue to this friend is worthy of mine. For neither could this large Sea drowne or quench it, nor time and absence (which are wont to breed a lingring consumption of friendship) abate the heate of that affection, which his kindnesse bred, religion nourished. Both rareneſſe, and worth shall commend this true loue; which (to say true) hath beene now long out of fashion. Neuer times yeelded more loue; but, not more subtle. For euery man loues himselfe in another, loues the estate in the person: Hope of aduantage is the Load-stone that drawes the yron hearts of men; not vertue, not desert. No Age affoorded more Parasites, fewer friends: The most are friendly in sight, seruiceable in expectation, hollow in loue, trustlesse in experience. Yet now,* Buchinsky, *see and confesse thou hast found one friend, which hath made thee many, &c.*

§. V.

Of the miserable estate of Russia *after* Swiskeys *deportation, their election of the King of* Polands *Sonne, their Interregnum and popular estate, and chusing at last of the present Emperour, with some remarkabe accidents in his time.*

THus haue we seene the *Russian* sinnes vtterly rooting vp so many *Russian* Imperiall Families and persons: the whole Family of *Ivan* extirpate, that of *Boris* succeeding, annihilate; two pretending *Demetrij* and *Suiskie* extinct: and yet haue wee greater abhominations to shew you. No Tyrant, no Serpent, no Dragon is so exorbitant and prodigious as that which hath many heads: and therefore in diuine Visions Monarchies (how euer excessiue and tyrannical) haue beene resembled by simpler and more vniforme beasts, but the Deuill in a great red *Dragon with seuen heads and ten hornes*, and the *Beast* likewise *to which hee gaue his power and his seat and great authoritie, which opened his mouth in blasphemie against God, &c. On which sate the great Whore*, the Antichristian *Babylon. There was no King in Israel*, is both *Alpha* and *Omega*, Preface and Conclusion in Diuine Writ to some misery in *Israel*; as if *all Kings and no King*, were the Circumference of all the lines proceeding from Mischiefes Centre. And now was *Russia* a Monster of many heads, that is, a bodie fallen into many pieces. One man possessed of the Wife of that double *Demetrius*, got to *Astracan*, there seating himselfe to set vp an vsurped shop of Rule; the Southerne parts chose Prince *Vladislaus*, Son of K. *Sigismund* of *Poland*; those of the North thought of other Princes; and at last when neither the *Fig-trees* sweetnesse nor *Olives* fatnesse, nor *cheering Wine* from the *Vine* could take place in their inconstancie, the *Brambles* conceiued *a fire which deuoured the Cedars of Libanus*: a popular gouernment happened, or if you will, a Confusion of the multitude bare sway, which killed and murthered euery Great Man, whom any Rascall would accuse to be a friend to the *Poles*, or to any of the dead Emperours, whom those popular iniudicious Iudges fancied not. And now *Russia* blushed with impudencie, that is with shamelesse sight of the daily effusion and profusion of her best bloud; now euery man was an Actor: and oh had they beene but Actors! too really did they present (not represent) bloudie Tragedies, of which their whole Countrey was becomne the Theatre; the Deuill the *Choragus (a Murtherer from the beginning)* and the whole World Spectator, stupid with admiration, quaking with horrour of so vncouth a sight!

Dan.2.& 7.& 8 Ap.12.3.& 13. 1,2.& 17.1. Iud 17.6.& 18. 1.& 19.1.& 21. 25.

Iud.9. Popular gouernment in *Russia.*

Now for the ouertures betwixt the *Muscouites*, and *Stanislaus Stanislawich Zolkiewskie*, Generall of the *Polakes*, touching their Election of *Vladislaus* Sonne of King *Sigismund*, and the Articles propounded: also the answere of Prince *Vladislaus* to the same Articles, *Anno* 1612. I haue here expressed in *Latine* as I found them; fearing I should be ouer-tedious to translate them, especially seeing the businesse came not to effect: and the *English* Articles following of the *Russian*

laum Sigmuntouiz. *Cum verò iam Serenissimus* Vladislaus Sigmuntouiz *filius Serenissimi Regis* Poloniæ *aduenerit ad Arcem Sedis Imperatoriæ* Moscouiticæ, *tum coronabitur in Imperatorem* Wlodimirienſem, *omniumq; totius* Moscouiæ *Imperiorum, ipsiq; Imperatoria Corona, & Diadema imponetur à venerabili Hermogene Patriarcha totius* Moscouiæ, *& ab vniuerso venerabili Clero* Græcæ *Religionis, secundum priſtinum morem & dignitatem. Factus verò Serenissimus S. R. Maiestatis filius* Vladislaus Sigmuntouiz *Imperator* Moscouiæ, *Templa Dei in* Moscouia *per omnes Arces, Vicos, vniuersumq; Imperium* Moscouiæ *repurgabit, & augebit in omnibus ad priſtinam consuetudinem, & ab omni incommodo tutabitur, tum Sanctis Dei, & Diuorum imaginibus, & castissimæ Deiparæ, omnibus ossibus Sanctorum, quæ magna prodigia in* Moscouia *faciunt, debitum cultum flexis genibus præstare, illaq; adorare tenebitur. Et Politica, nec non Spirituali vtriusq; sexus Christianitati, omnibusq; vere Christianis, vt sint vera Christiana legis* Græcæ *Religionis non prohibebit. Romanæ Religionis aliarumq; diuersarum Sectarum Religionis Templa, aut Synagogas, in* Moscouitici Imperij *Arcibus, & pagis, nullibi ædificare debet vt nihilominus in Arce* Moscouia *præfata, vnum Romanum Templum esse possit, propter homines* Polonos, *& Lithuanos, qui penes Imperatorem filium Serenissimi R.* Polo. *sunt futuri, ea de re cum sacra R. Maiestate, & venerabili* Hermogene *Patriarcha* Moscouiæ, *omnibus spiritualibus, tum Heroibus, & Capitaneis collatio instituenda.*

Religio autem sacrosancta Græca *nullo in puncto violanda, aut perturbanda, vel alia quæpiam innsitata introducenda est, in idq; danda opera, vt sancta, vera, Christiana* Græca *Religio, suum integritatem, & cultum retineat, iuxta morem antiquum, nec Imperium* Moscouiticum, *eiusq; incolæ, veri Christiani, à* Græca *Religione ad* Romanam, *aut aliam quampiam, vi, seu robore, & seruitute, aliisq; his similibus modis abducantur.*

Iudæi *in vniuersum* Moscouiæ *Imperium causa Mercaturæ, aut alterius cuiuspiam rei proficiscendi permittantur. Venerabilia & ossa Sanctorum, ab Imperatore filio Serenissimi R.* Pol. Vladislao Sigmuntouiz *sancta cum veneratione debent venerari. Et venerabilem* Hermogenem *Patriarcham* Moscouiæ, *Metropolitas, Archiepiscopos, Episcopos, Archimandrytas, Hegumenos, Presbyteros, Diaconos, & præsentes spirituales, vniuersumq; Clerum Christiana sacrosancta Religionis* Græcæ, *debito afficere honore, in omnibusq; tutari, spiritualibus negotijs sese immiscendo, alienas sectas præter* Græcam *religionem introducere nullas debet. Quod autem Templis, Monasterijsue non Patrum dicuntur, de variis prouentibus, & qui dabantur antiquorum tempore Imperatorum* Moscouiæ, *vtpotè sacrati panes, legumina, summæ pecuniales, & his de varijs reditibus similia: hos prouentus Ecclesia dicatos, & omnium Imperatorum antiquorum* Moscouiæ, *nec Heroum, aut aliorum hominum donationes, si quas Templis, aut Monasterijs Dei dicauerunt, aut dicaturi sunt, adimere debet, nullo secundum antiquum morem constituta violando. Spirituales, & Regulares status nullo modo infringendo, Dimensarijs omnia pensa spiritualia, & Regularia, quibus antiquitus dabantur, ex fisco Imperatorio omnia reddendo, vt solitum fuit, & ex Imperatorio Thesauro in Templa & Monasteria, stipem variorum redituum augendo. Heroes, Imperatorij Aulici, Capitanei, Primarij Dapiferi, Cubiculary, & cuiusuis generis Tenutarij, in omnibus negotijs, in omnibus Imperialibus, Castrensibus, & terrestribus causis, in Arcibus* Palatini, *Capitanei, siue Tenutarij & Telonarij, aut alij cuiusmodi Præfecti, & omnis conditionis homines, vt antiqua retinent Priuilegia prout constitutum est in* Moscouitico *Imperio, ab antiquis magnis Imperatoribus, in id Serenissimus Imperator incumbet serio.*

Poloni *verò &* Lithuani, *in* Moscouia *nullis in terrestribus, forensibus negotijs, aut Arcibus Palatinorum, Capitaneorumue esse debent, nec successiones Præfecturæ, aut dignitatis in Arcibus illis tribuendæ sunt.*

Quia autem Poloni, *&* Lithuani *ex vtroq; Imperio videtur consultum, vt præficiantur confinibus Arcibus ad absolutum leuamen huius Imperij, ea de re Serenissimus Imperator cum Heroibus collationem instituet suo tempore.*

Iam vero vniuersa Respublica supplex Serenissimum Imperatorem precatur, ne ad executionem perducat hanc conditionem, antequam fuerit hac in parte vtriusq; deliberatum.

Qui verò Poloni *&* Lithuani *penes Serenissimum Imperatorem* Vladislaum Sigmuntouiz *sunt futuri, eos non solum honoraturi, sed etiam contentaturi pecuniali numeratione, & promeriturí secundum vniuscuiusq; merita suntum.*

Moscovitici *Imperij Heroes, Aulices, Imperatorios, Capitaneos, Primarios Dapiferos, Cubiculariosos, Præfectos, Structores, Tenutarios, Arcium Præfectos Sclopetariorum, omnesq; ad Aulam Imperatoriam pertinentes homines, & liberos Heroum, Aduenas, Mercatores, laculatores, velites, Fabros tormentarios, & omnis conditionis bellicosos homines, aliosq; heredes Imperij* Moscovitici, *Serenissimus Imperator debet habere in dignitate, honore, gratia, & amore, vt fuit antiquitus apud primos magnos* Moscoviæ *Imperatores; Nec antiquos mores & status qui erant in Imperio* Moscoviæ *immutare, vel* Moscoviæ *Ducum, Heroumq; viduas Aduenis in patria, vel Tenutis elocare, aut deprimere.*

Tributa pecunialia, stipendia reddere, & hereditates quas aliquis possidebat ad hæc vsq; tempora, is etiamnum, & in posterum possidere debet.

Hereditaria bona à nemine abalienare, sed semper omnibus hominibus Moscovitici *Imperij prouidere perpendendo seruitia eorum, prout aliquis de Republica meritus est.*

Aduenis omnibus qui vocati fuerant ex varijs Nationibus, à primis Imperatoribus Moscoviæ,

ne-

necessarijs prouidere, prout antea solitum fuit: nec stipendia, Tenutas, & possessiones eorum ab ijs abalienare.

Heroibus, Aulicis, Cubicularijs, Dapiferis, & liberis Heroum, omnibusq; Aulæ Imperatoriæ inseruientibus, Imperatoriam beneuolentiam commonstrare, & salaria debita, secundum antiquum morem reddere, Serenissimus Imperator tenebitur.

Quod si verò alicui salaria multiplicabuntur, possessioneſq; aut tenutæ, supra eius dignitatem, vel contra alicui minuentur, præter culpam ipsius, ea de re Serenissimus Imperator conferre, & consultare debet cum Heroibus Primarijs: & prout vnanimes decreuerint, idq; secundum æquitatem, ita sit facturus.

10 *Qui vero Aulici, aut liberi Heroum sumunt beneficio Imperatoris, ex Arcibus omnibus stipendiarijs, quibus beneficia tempore prateritorum Magnorum Imperatorum* Moscoviæ *ob merita ipsorum dabantur, illis quoq; iam & stipendia pecunialia, & alimentaria, ex Mandato Imperatoris danda sunt.*

In Arce dicta Moscovia, *aliisq; Arcibus, Iudicia exequi debent, & obseruari vt solitum, secundum statuta* Moscovitici *Imperij. Quod si verò aliqua essent corrigenda, ad corroborationem Iudiciorum, conceditur Serenissimo Imperatori, sed cum consensu omnium Heroum Vniuersitatis* Moscoviæ, *ita tamen, vt respondeant æquitati.*

Magnus autem Imperator Serenissimus Rex Poloniæ, *Magnus Dux* Lithuaniæ, *eiusq; totius Regni* Poloniæ, *Imperia, necnon Magnus Ducatus* Lithuaniæ, *cum Magno Imperatore filio Regis* Po-
20 loniæ Vladislao, Sigmuntoviz, *cum omnibus Imperijs* Moscoviæ, *in amicitia, societate, amore, æternis temporibus inuiolabiliter, nec contra se inuicem exercitus colligere, & bella concitare nullis modis debent.*

Quod si autem aliquis hostium tentarit impetus facere in Imperium Moscoviæ, *siue etiam in Regnum* Poloniæ, *& Magnum Ducatum* Lithuaniæ: *contra istiusmodi omnes hostes iunctis viribus insurgere vtrumq; Imperium tenebitur.*

Cæterum, in Tartarorum *finibus quod si necessum fuerit seruare vtriusq; Imperij milites, cum iam coronatus fuerit filius Serenissimi Regis* Poloniæ, *Imperator Imperij* Moscovitarum: *hac de re, collatio cum Heroibus instituenda, & cum magno Imperatore Serenissimo* Sigismundo *Rege* Poloniæ, *idq; decenter, animo sincero, absq; vlla machinatione damni alicuius, aut Tyrannidis illationis in homines* Mos-
30 couitici *Imperij: honorem, vitam, aut aliud quippiam istiusmodi nemini adimendo, cuiuscunq; conditionis ille fuerit: Aut si in* Poloniam, *vel* Lithuaniam, *aliaq; Imperia* Moscouitici *Imperij homines transmittendo, aut ex* Lithuania *in locum eorum alicuius alterius generis homines supponendo: Vxores, aut liberos alicuius dolose corrumpendo, vel sobolis procreandæ gratia sumendo, & ad exteras Nationes parentes cum liberis transmittendo.*

Qui autem ex quocunq; Imperio istiusmodi facinoris reus, & pœna dignus inueniretur: Is in Imperatorijs & terrestribus iudicibus prout meruit, puniendus est: & decretum per Imperatorem, aut Heroes, vel Capitaneos de illo ferendum.

Vxores autem eorum & liberi, fratres, & qui istud facinus nec perpetrarunt, nec ipsis fuit cognitum, aut illud perpetrandum consentiêre. Illi vedum puniendi, sed secundum æquitatem Priuilegiorum suo-
40 *rum, patrimonia, tenutas, vitam, aulas, retinere debent.*

Sin verò reus non possit explorari, nemo tum Iudicio Imperatoris, at Heroum iudicari, puniri, proscribi, vel incarcerari, aut ad alienos transmitti debet: sed vnusquisq; in suis Tenutis & Aulis conseruari.

Steriles autem, quia ex hac decesserint vita, bona ab illis relicta, vel consangineis ipsorum, siue cuicunq; ipsi legauerint, tradenda: id tamen non absq; mutua collatione, & consilio esse debet.

Porro quoniam tempore præsentis seditionis multi perire, & multos ex Moscovitis *prostratos constat à* Polonis, *&* Lithuanis, *& contra* Polonos *&* Lithuanos *à* Moscovitis: *istud factum, & nunc, & imposterum, nec commemorandum, nec vlla vindicta vtrinq; pensandum esse debet.*

Qui autem Poloni, *&* Lithuani *Primipoli, Centuriones, aliq; diuersæ sortis homines duxêre captiu-*
50 *nitatem in Imperio* Moscoviæ, *quorum aliqui adhuc in vinculis tenentur, illi ex* Moscoviæ *Imperio reddendi, sine vlla pecuniali liberatione. Tum quoque vice versa Aulici, liberi Heroum, Iaculatores, Velites, Fabri tormentarij, omneſq; seruiles & liberi homines, Aulicorum liberi, Iaculatorum, Fabrorum tormentariorum, Sclopetariorum, & horum similium. Item Matres, Vxores, Liberi, & his similes, ex Imperio* Moscovitarum, *virilis aut muliebris sexus, in præsentem seruitutem præsente primo* Moscovitarum, *virilis aut muliebris sexus, in præsentem seruitutem præsente primo* Moscouitarum *Imperatore* Venceslao *accepti in* Poloniam *vel* Lithuaniam, *illi ab Imperatore Serenissimo Rege* Poloniæ, *restituendi à minimis ad maximos vsq; absq; pecuniali redemptione. Prouentus Imperatorios ex Arcibus, aliisq; possessionibus, tum ex tenutis & arendis census, omneſq; reditus, debet Serenissimus Imperator*
60 *exigere, vt antea fecere Primi Imperatores, & prioris Magistratus mores, & statuta absq; consensu in nullis immutare.*

Arces, aut Ciuitates, quæ bello vastatæ, ad eas mittere debet Serenissimus Imperator, & præcipere, vt conscribantur Registra eorum, quæ per vastationem periere: vt vicissim sumptis prouentibus aliunde, secundum conscripta registra, possint resarciri.

Quorum verò Hæreditates, Possessiones, vel Tenutæ spoliatæ, ijs leuamen dandum, sed non absq;

con-

conſenſu Heroum. Et quæ recens vaſtata Arces, illas quamprimum reſtaurare, conſilio inito cum Heroibus, & Nobilibus.

Mercatores Moſcouitici *Imperij omnium Ciuitatum, in* Polonia, *&* Lithuania, *ſic* Poloni, Lithuani, *in* Moſcouia, Polonia, Lithuania, *merces coemere debent more vſitato, vt antea: Iſtud tamen cauendum, ne inuicem ſibi faceſſent negotia Mercatores, & aly Chriſtiani in* Lithuaniam *ex* Ruſſia, *& ex* Lithuania *in* Ruſſiam, *ſeſe tranſportando cum mercibus Heroes, & Aulici omnes, mancipia debent in ſeruitute detinere, prout ſolitum.*

In Volda, Dona, *&* Tekier *Arcibus, velites, ſi illis opus fuerit, ſeruari debent: de quibus Sereniſſimus Imperator conferre debet cum Heroibus, & Nobilibus, poſtquam coronabitur.*

Arces Moſcouitici *Imperij, ad Imperatorem pertinentes, tum illæ, quæ in tenuitas* Polonis, *&* Lithuanis *traditæ ſunt, vel quas iam* Vor *præfatus ſub poteſtatem ſuam ſubiecit: Ego Primarius Dux exercituum Regni* Poloniæ, *conſtitus cum Heroibus* Moſcouiæ, *quod Sereniſſimus Rex* Poloniæ, *Filio ſacræ ſuæ Regiæ Maieſtatis Sereniſſimo* Vladiſlao Sigmuntouiz, *has arces, cum omnibus quæ ſunt vaſtatæ,* Moſcouitico *Imperio reſtituere debet. Illuſtres vero Legati* Moſcouienſes, *hoc in negotio tractaturi ſunt cum ſacra Regia Maieſtate de ſumptibus, & expenſis ſacræ Regiæ Maieſtatis in milites expoſitis, & de perſoluendis* Polonis, *&* Lithuanis, *ſunt quoque conſulturi, quomodo abſolui poſſint.*

Demetrius ſuppoſititius ſecundus.

Vor *autem præfatus, qui ſeſe Cæſaridem* Moſcouitici *Imperij,* Demetrium Euanouiz *appellat: de illo, mihi Primo Duci Regni* Poloniæ *conſilium ineundum, & omnis cura habenda, vt capi, vel penitus è vita tolli poſſit.*

Qui poſtquam captus, vel occiſus fuerit, Ego Primarius Dux Exercituum Regni Poloniæ, *cum exercitu ſacræ Maieſtatis à primaria Arce, ſedis Imperatoriæ,* Moſcouia *præfata diſcedere ad Arcem* Mozaisko, *vel vbi fuerit opus, poſt collationem cum Heroibus inſtitutam, ibiq; Legatos* Moſcouiæ, *& mandatum ſacræ Regiæ Maieſtatis, præſtolari tenebor. Quod ſi nihilominus* Vor *præfatus contra Imperatoriam arcem* Moſcouiam *ſic dictam tentauerit inſidiari, aut ſeditiones aliquas excitare; Ego Primarius Dux Regni* Poloniæ, *illum profligare, & armis perſequi tenebor.*

Dominum vero Sapieza, *qui ſe* Vor *præfato adiunxit, ab illo & exercitum* Polonicum, *&* Lithuanicum *abducere; Quod ſi idem* Vor *præfatus, ex* Moſcouia *cum* Ruthenis *diſceſſerit, militum autem* Polonorum, *&* Lithuanorum *quoſdam apud ſe detinuerit; Ego Primarius Dux Regni* Poloniæ, *cum exercitu ſacræ Regiæ Maieſtatis, vna cum Heroibus* Moſcouiæ, *ne ſanguicidium impoſterum exoriatur, ſed Imperium pace publica aſſecuratum ſtabiliatur, dabimus operam.*

Demetrij primi ſup. vxor. Palæologilla.

Mulier verò, quæ cum eodem Vor *præfato per* Moſcouiticum *Imperium, cum exercitu paſſim graſſatur, Imperatricem* Moſcouiæ *ſeſe ventilando; Illi prohibendum, ne eandem ſe impoſterum cognominare, vel quippiam iſtiuſmodi, aut aliquas difficultates, contra Imperium* Moſcouiticum *moliri audeat: ſed, quamprimum in* Poloniam *reducenda eſt. Imperator verò Sereniſſimus, filius Regis* Poloniæ Vladiſlaus Sigmuntouiz *in omnibus antiquitus, iura ſancita, & pacta Magnorum Legatorum* Moſcouiæ, *cum Sereniſſimo* Sigiſmundo *Rege* Poloniæ, *& confirmata priuilegia imitari debet.*

Ciuitatem & Arcem Smolinsk *præfatum quod attinet; Ego Dux Primarius exercituum regni* Poloniæ *ſupplicabo apud S. R. Maieſtatem, vt prohibeat, ne milites in Ciuitate tanta homicidia exerceant, & Arcem ſpolient.*

De Baptiſmo repetendo.

De baptiſmate verò, vt illud Imperator Vladiſlaus Sigmuntouiz, *filius ſacræ Regiæ Maieſtatis ſuſcipiat, & baptizetur in illorum Sacroſancta legis Græcæ religione, in illaq; perſeueret, vt & de aliis nondum contractis actis, & conditionibus, & reliquis circumſtantijs antiquitus in Imperio* Moſcouitico, *ad præſentem vſq; expeditionem bellicam obſeruatis: Inter Sereniſſimos Imperatores & Imperia omnium, conſilium & collatio inſtitui debet, vt amor, & amicitia, vtrinq; augeri, & conſeruari poſſit. Qua de re, Ego Primarius Dux militiæ, cum iam à S. R. Maieſtate commiſſa, & mandata nulla habeam, contuli cum Heroibus, quid ipſis reſponſi ſum daturus: ſed primùm cum ſacra Regia Maieſtate hoc in negotio, tum etiam cum Sereniſſimo Imperatore* Vladiſlao Sigmuntouiz *filio ſacræ Regiæ Maieſtatis, conferam.*

Inſuper, Ego Primarius Dux exercituum regni Poloniæ, *in Arcem* Moſcouiam *præfatam,* Polonos, Lithuanos, Germanos, *& omnis generis bellicoſos, qui ſunt mecum, & cum Domino* Sapieza, *abſq; permiſſu Heroum, vel ipſa neceſſitate, intromittere non debeo. In Arcem* Moſcouiam *præfatam, Mercatorum* Polonorum, *&* Lithuanorum, *mercium coemendarum gratia, ex omnibus Prouincijs regni* Poloniæ, *cum meis Imperialibus teſtimonialibus literis non vltra viginti, vel paulo plures ſunt intromittendi: abſq; literis à me datis teſtimonialibus, in Arcem* Moſcouiam *præfatam, aut alibi, nemo proficiſci debet.*

Ob maius verò robur, & confirmationem Pactorum iſtorum, Ego Primarius regni Poloniæ *Dux exercituum,* Staniſlaus Staniſlaides, Zolkiewsky de Zolkwia *ſigillum meum appoſui, & manum propriam ſubſcripſi. Sic etiam Domini Primipoli, & Centuriones exercitus, qui tum temporis mihi aderant, ad hæc mea ſcripta nomina ſua ſubſcripſere. Datum in Caſtris, apud Arcem ſedis Imperatoriæ* Moſcouitici *Imperatoris. Anno* 1610. *Auguſti* 27. *die.*

Responsum ad Pacta inter Primarium Ducem Exercituum Regni *Poloniæ*, & Heroes *Moscouiæ*, Serenissimi Regis *Poloniæ*, & Serenissimi VLADISLAI SIGMVNTOVIZ Filij Sacræ Regiæ Majestatis.

MAgnus Dei gratia *Imperator* Vladislaus Sigmuntouiz, *Filius Serenissimi Regis* Poloniæ, Sueciæ, &c. *Amplissimi* Moscouitarum *Imperij vniuerso venerabili Clero, Ministris Dei vigilantissimis, Heroibus, Capitaneis, Liberis Heroum, Aduocatis velitum, Iaculatoribus, & Velitibus, Aduenis, Mercatoribus, omnibus seruilibus, & liberis hominibus significamus. Nos quandoquidem vobis Imperatorem totius Imperij* Moscouitici, *Cæsarem, & Magnum Principem* Wlodymirienſem, *necnon vniuersarum* Moscouitici *Imperij Prouinciarum coronari petijstis: Nos quoq; post Legatorum vestrorum supplicationem, pro vobis intercessimus apud Serenissimum Tertium Regem* Poloniæ, *Magnumq; Ducem* Lithuaniæ, *Dominum parentem nostrum, vt secundum suæ sacræ Regiæ Maiestatis misericordiam, consuetudinem, vestræ subueniat calamitati, & prout capit, ad finem vsq; vos, & totum* Moscouiticum *Imperium restauret, & pace confirmet: & sanguinem Christianum qui per malos quosdam pacis publicæ violatores, & periuros effunditur, coerceat: Serenissimus itaq; Rex* Poloniæ, *Dominus Parens noster, post vestrum Legatorum supplicationem, & nostram filij sui intercessionem, Decreuit nobiscum filio suo, in* Moscouiticum *Imperium, iter quamprimum suscipere: vt confirmetur Imperium, & sanguinicidium sanguinis vestri cohibeatur, vobis verò pax, & Patria, ex integro restituatur. Et vobis venerabili Clero, Heroibus, Incolis, Capitaneis, & vniuersis cuiuscunq; sortis hominibus, Spiritualibus, & Politicis, istud necessariò sciendum est. Vos autem, qui Serenissimo Regi* Poloniæ, *Domino Parenti nostro, & nobis, ad hoc vsq; tempus fidem inuiolatam conseruastis, iam quoq; nobis Magnis Imperatoribus vestris officia vestra, & promptitudinem animi conseruabitis, aduentumq; nostrum in Imperium* Moscouiticum, *cum gaudio in pace expectabitis. Qui verò malâ de nobis opinione, contumacia, & seductione Vor præfati, repulsam fecere, ijs ne amplius tergiuersentur, promittendo illis nostram beneuolentiam, & amorem, persuadere debetis, & ad nos Imperatores conuertere, vt sint quoq; vobiscum vnanimes, Et Supremi Cancellarij Exercitus, Serenissimiq; Regis* Poloniæ, *Domini Parentis nostri, nostrisq; se adiungant: Et cum supremo Cancellario, de nostris Imperatorijs, & terrestribus negotijs consultent, commodaq; Patriæ curent, vt quamprimum possit Imperium* Moscouiticum, *ad pristinum statum reduci, & paci, ac tranquillitati antiquæ restitui: ac nos, donec venerimus, læti præstolentur. Seditiosis, ac malè de nobis opinantibus, nullam fidem habeant, nec vllis obediant, qui secundum animi sui præsumptionem falsam, se suamq; posteritatem Imperatoribus* Moscouiticis *successuram arbitrantur. Et qui de sacra Regia Maiestate, Domino Parente nostro, nobisq; metipsis, rumores nefarios, scriptis ad Arcium Præfectos literis sparsere, & disseminarunt, verbaq; dolosè excogitata, inter homines dimisere, & iam disseminant: atque hac tyrannide, & malitia sua, recentes seditiones in* Moscouia *concitauerunt, quibus multam copiam sanguinis Christiani frustra effundi passi sunt, & totum Imperium diuiserunt, & hac pertinacia, atque malitia suâ, Dei ter Opt. Max. castissimæq; Deiparæ voluntati, necnon Serenissimi* Sigismundi *Dei gratia Regis* Poloniæ *misericordiæ, & ipsius benenolo erga se animo aducrsantur, Nobisq; Serenissimo Imperatori iuramentum exosculatione vnifici Baptismatis præstitum violant. Quare quosdam eorum iam etiam propterea Deus Omnipotens, iusto suo iudicio, ex hac vita sustulit, & punijt: quosdam verò, eius atrocissima vindicta expectat, nisi à sua contumacia conuersi, apud nos, Magnos Imperatores suos, culpam quamprimum supplices deprecentur. Insuper, omnibus vobis in vniuersum sciendum est, quod ij, qui ad nos Magnos Imperatores suos, & nostram misericordiam, asylumq; confugerint, ijs secundum magnum affectum nostrum Imperatorium, miserebimur: panis remissis condonabimus omnia, & in tutelam eosdem nostrum recipiemus.*

Sacrosanctam quoq; Religionem vestram Legis Græcæ permittimus, earumq; secundum constitutiones Patrum Sanctorum, tuebimur, in nullo puncto violandam, & immutandam. Et vniuersam venerabilium Patrum, Ministrorum Dei Confessariorum vestrorum Coronam, debito in honore sumus habituri. Heroes, Aulicos, & cuiuscunq; sortis alios diligere, promouere, patriam possessionem, pecunialem, aliamque omnem prouisionem, à nemine abalienando: sed suum vnicuique attribuere promittimus, secundum antiquam consuetudinem: & insuper nostra Imperatoria prouisione, vnumquemq; secundum ipsius dignitatem, & merita promouere. Qui autem in malitia, & contumacia sua perseuerare non cessabunt, ij, Deum Opt. Max. & castissimam eius Genitricem, strictissimo illos gladio puniturosq; certo sciant: & nostrum Imperatorium beneuolum animum, in iram, & vindictam mutatum experientur. Non vult enim Deus Omnipotens, vt, ob malitiam, & contumaciam Rebellium, innocentium vlterius sanguis effundatur, Templa Dei spolientur, & gloria sancti Nominis eius, magis, ac magis deprimatur. Vos omnes, apud animum vestrum diligentius perpendite, & his, qui adhuc nobis tergiuersantur renunciate, vt animo mutato, ad veritatis agnitionem redeant, & seditiosos, & pacis publicæ diremptores relinquant.

Iam verò, ad quas Arces, & Ciuitates, hæ literæ nostræ peruenerint, Mandamus, vt earum Capitanei, & Tenutarij, omnia ad victum necessaria, & pecuniam colligant, in paratisq; habeant, ad nostrum aduentum. Interea Exercitus sacræ Regiæ Maiestatis, Domini Parentis nostri, nostriq; proprij, ne vllum detrimentum patiantur, sed vna in fraterno amore, quoad venerimus, viuatis: Et donec Opt. Max.

ex mera gratia ſua, noſtraq; Imperatorium cura, & diligentia, toto Imperio Moſcouitico *firmato, & reſtaurato, vobis potiri conceſſerit. Dabantur* Varſouiæ, *Anno Domini* 1612. *9. die Martij.*

The points of the Embaſſage of the Ruſſian *Meſſenger ſent to his ſacred Maieſtie, briefly collected.*

Ruſſes. BY what manner their naturall Lords ruled ouer them, they alleaged, to wit, beginning from *Borik*, who was of the bloud of *Auguſtus Ceſar*, Emperour of *Rome*, euen vnto the laſt Lord and Emperour *Pheodor Euanowich*, in whom their Race ceaſed.

Pheodor Euanowich. *Boris Godonowe.* That *Boris Godonowe* abiding with *Pheodor Euanowich*, was created (by his owne force and power) Emperour or Lord: but after a little time, the pleaſure of God ſo working, being thruſt out of the Imperiall ſeate, departed this life ſhamefully, and by violent death, together with his Wife and Children.

Gregorij Eutropio, Roſtrige. *Demetrij Euanowich.* Primates. That *Chriſtophorus Otropitij* the *Roſtrige*, being of baſe deſcent, vnder the Name which he did beare of Emperour, otherwiſe *Demetrij Euanowich*, ſlaine at *Owglets*, did fraudulently and by deceit (wherewith he deceiued the common people, and others that beleeued them) obtaine the Imperiall Seate by force, without the conſent of the Spiritualtie, and all the chiefe Biſhops and Lords, and great men of the Kingdome, who durſt not withſtand the ſame, ſeeing the Commons to yeeld thereunto.

Lord *Palatin* of *Sandomire.* How the excellent Lord *Palatin* of *Sandomire*, gaue his daughter in marriage to the *Roſtrige*, and himſelfe (many Gentlemen both of the Kingdome of *Poland*, and great Duchy of *Litow*, accompanying him) came into *Moſcouia*.

Vaſili Euanowich Suiskey. Then, that *Vaſili Euanowich Suiskey*, with his brethren, and many others aſſociated to this attempt, and ſtirring vp other great men of the Land, did kill the *Roſtrige*, with many Gentlemen of *Poland*, and the great Duchy of *Litow*, and put the reſt into diuers Caſtles. And himſelfe was made Emperour, although he were not elected by all the States. Whereupon many of our ſort did not willingly acknowledge him Emperour, and many would not obey him.

The *Wor.* *Coluga.* How another named the *Wor*, did riſe vp at *Kaluſia*, and cauſed himſelfe to bee named *Demetrij*, and ſo accounted. Whereof when many (both *Ruſſes* and *Poles*) heard, they aſſembled vnto him, thinking him to be the true *Demetrij*: and the *Ruſſes* did ſo much the more willingly draw vnto him, becauſe of the murtherers.

Other *Wors*, or pretenders, *Iuan, Peter, Pheodor.* How others called *Wors*, did name and call themſelues ſonnes of the ſlaine Emperour, as *Iuan, Peter, Pheodor*, and by many and diuers other names: and vnder the ſame names, did conſume the State, and ſhead much bloud.

The King of *Poland.* The Lord of *Premiſlaue.* How the Kings ſacred Maieſtie, comming to *Smolenſko*, ſent his Meſſengers the Lord of *Premiſlaue*, and other noble men, who comming vnto the Campe, the forenamed *Wors* fled away: but diuers of the *Ruſſes* came vnto his Maieſtie. And taking counſell with the *Boiarins*, at that time remayning with *Suiskey* in the chiefe Citie, we ſent our Meſſengers to his Maieſtie at that time, being at *Smolenſko*, viz. *Michael Salticowe*, and others, requeſting that his Maieſtie would grant vs his Sonne to be our Lord.

Michael Salticowe. How they were diſpatched away, and what anſwere they brought from his Maieſtie, with conditions engroſſed, and ſigned with his hand and ſeale.

The Articles are before in Latin. How that after the depoſing of *Suiskey*, the noble Lord Generall of the Kingdome, comming into *Moſcouia*, concluded all the ſaid buſineſſes and treaties: and confirmed them with the oath of himſelfe, and his fellow Souldiers. And that they after that oath, likewiſe made their oath for the ſame. Then, that for the greater defence of the ſaid principall Citie from the *Wors*, they ſent Souldiers into the Citie, and ſent alſo their Meſſengers from the whole Countrie *Fudareu*, the *Metropolitan* and *Vaſili Galichin*, with others, vnto the Kings Maieſtie, and required an oath in his Maieſties behalfe, of all the ſeuerall Prouinces.

Vaſili Galichin. How that his Maieſties Souldiers dwelled and behaued themſelues in this capitall Citie of *Moſco*, before the troubles began, without iniuring any man, puniſhing the euill according to their deſerts.

How the *Boiarins* handled other Gentlemen, and principall perſons of the *Ruſſe* Religion, although more inclined vnto them: but eſpecially the Officers and Seruants of the *Wors*, as alſo ſuch as had fled ouer.

It followeth, how they often ſent word vnto the Citie of *Smolenſko*, and willed them to deliuer vp the Citie vnto his Maieſtie, to bee vnder his proſperous gouernment and power. As for the ſecret plots of their Meſſengers, *Galochin* and others, they ſaid, they were ignorant, as alſo of ſome vnknowne practiſes, handled with the *Wor* called *Haluſin*. But they ſaid, that they had written very often to the Citie of *Smolenſko*, and commanded them to doe whatſoeuer ſtood with his Maieſties pleaſure, and liked him, without further effuſion of bloud.

Galochin. *Haluſin a Wor or Pretender.*

How

Digitized by Google

How alſo it befell in the chiefe Citie to *Lepun*, and *Saruſky*, and the other Rebels, when they violated their fidelitie. *Lepun. Saruſki.*

That they certified his Maieſties Souldiers thereof, and that they, with them, did riſe againſt the Rebels, and that euen to this preſent, they doe keepe, and will keepe their oath once made, and their due obedience vnto their Lord.

And, in that *Lepun* was puniſhed of God for his treacherie, and departed this life with ſo ſhamefull a death, wee thinke it to bee for the good example of others, to reduce them into their former eſtate, to reuoke others vnto their fidelitie, and for keeping their oath alreadie giuen.

Therefore, after many circumſtances, they inferred, that they would preſently ſend their Meſſengers to the generall Parliament: but mooued with the perſwaſion of the honorable Lord Generall, to wit, that his Maieſtie would bee contented with their fidelitie once made, and performed vnder oath, and with their griefe for the ſame cauſe, and will cheerefully forgiue them: and doth not refuſe to giue his Sonne to raigne ouer them. Adding withall, that many Kingdomes, to wit, the Kingdome of *Hungarie*, the Kingdome of *Bohemia*, and a great part of *Ruſſia*, doe earneſtly requeſt, that he would receiue them vnder the happy gouernment of his Maieſtie: that they might enioy the priuiledges of *Poland*, and *Litow*, to which, none in the whole world can be compared.

But, becauſe his Excellent Maieſtie, as a Chriſtian Lord, reiecting all other Kingdomes, and Dominions, will graciouſly receiue vnder his Rule and gouernment the ſaid Dominions, and that he is ſorry for their deſtruction: he therefore now admoniſheth them, if they will bee vnder his proſperous Rule, and enter into an vnion together with the Kingdome of *Poland*, and the great Duchy of *Litow*, and liue friendly with them: if they will performe, and conſent therevnto, His Excellent Maieſtie promiſeth to remit their offence, and to receiue them vnder his happy gouernment and authoritie, and refuſeth, and by no meanes will alter or change their faith and conſcience, or places dedicated vnto God, or builded for deuotion: neither will impoſe on them any other Religion, or alter their ancient Manners, or Cuſtomes, but will beſtow on them priuiledges and offices: and that the Rights and Priuiledges, which the *Poles*, with the great Duchy of *Litow* doe enioy, ſhall be conferred on them: and that they ſhall be equalled with the Kingdome and great Duchy of *Litow*, &c. which iuriſdictions and priuiledges, in former times, their Predeceſſors wanted. The King aſſents.

For this perſwaſion therefore of the honourable Lord Generall, which he had in charge from his Maieſtie to make, they yeeld all thankes: but notwithſtanding they propound, and plainly adde, that their oath ſhall be ſo, that his Maieſties ſonne ſhall ſucceed in their gouernment, with certaine additions; to wit, that they will haue none other ouer them but onely his Maieſties ſonne, and that the whole Land doth make it knowne, and propound their iudgement and ſentence, by way of denunciation, that by no meanes, but by offering his Maieſties ſonne, theſe troubles of *Moſcouia* can be extinguiſhed. Adding withall, that at that time, in the firſt troubles, when the honourable Lord Generall came into the Country of *Moſcouia*, and required the oath for the Kings Maieſties ſonne: if his Maieſtie had made any mention thereof, it is certaine, that the Commons and all the Nobilitie, would not haue conſented thereunto by any meanes, and that greater effuſion of bloud had riſen thereupon: And that they had taken for their Prince *Klutzinsky*, called the *Wor*, to whom all were not aſſembled, who alſo at that time had a great power of men, as well of *Poles*, as *Ruſſes* and *Litowes*. They therefore ſeeing the great diſcord amongſt the people, taking counſell, did freely chooſe for their Lord and Emperour his Excellent Maieſties ſonne, vnto whom they had a great affection, and who had a long time before layen in their hearts: aſſuring themſelues alſo, that by this election of his Maieſties ſonne, many troubles and diſſentions would be pacified, and ſo reiected the aforeſaid *Wor Klutzinsky*: As alſo they receiued into their chiefe Citie the chiefe Generall. But, when it was heard that his Excellent Maieſtie, would by no meanes giue vnto them his ſonne for their Lord, and to rule ouer them, they fell into ſuch effuſion of bloud and inſurrections, As alſo the ſame time, the whole Country of *Moſcouia* looked and expected nothing elſe then his Maieſties ſonne. Calling to memorie, for their better aduice, that it was to be feared, leaſt whileſt his Maieſtie came too late with his ſonne, diuers parts of the Land ſhould chooſe vnto themſelues ſeuerall Lords. As to the Southward the Caſtles *Strachen* and others, to the King of *Perſia*; part of *Pomerland* and *Siberia*, to the Kings of *Denmarke* and *England*; *Nouogrod*, *Pleſco*, *Iuanogrod*, and others, to the King of *Sweden*: and that the other Cities would chooſe to themſelues other Lords ſeparate from the reſt. In the meane ſeaſon, they deſire his Excellent Maieſtie, to make a ſpeedy end of theſe warres, according to his Obligation and promiſe ratified by the oath of the honorable Lord Generall, and the whole Armie: and that his Maieſtie himſelfe, with his ſonne, would come into *Moſcouia*. They requeſt alſo, that his Excellent Maieſtie would retayne with himſelfe and his Sonne, Counſellors, and Meſſengers of their Commonwealth, for the ordayning and concluding of perpetuall Conditions. They requeſt alſo, that his Maieſtie, in the name of his Sonne, would ſend vnto all the Inhabitants of the Townes, and write vnto the ſeuerall Cities, ſignifying his

Klutzinsky a *Wor* or Pretender, acknowledged Emperour.

Aſtracan. Laplande.

Digitized by Google

comming into their Dominions, and willing, that out of the ſeuerall Prouinces, all ſorts of men ſend their Meſſengers, to treate and conclude of the affaires of all ſorts of People, and of perpetuall tranquillitie. Promiſing after the ſaid Charge and Letters to all people in generall, and notifying from their ſaid Lord, that (by Gods grace) there may bee throughout the whole Land of *Moſcouia*, tranquillitie, peace, and ſecuritie.

To conclude, they pray heartily vnto the Lord God, to grant vnto his Maieſtie in this buſineſſe begun, a proſperous and ſpeedy end.

Ruſſian Inconſtancy.

Thus haue wee ſeene diſſolute reſolutions, or reſolute diſſoluteneſſe, men onely conſtant in inconſtancy, reſolued vpon irreſolution. As we often ſee ſicke perſons turning euery way, and no way eaſed; in the night time longing for day, and in the day for night; ſuch was now the *Ruſſian* ſickneſſe, they would and they would not, and yet would againe, and againe would not, they ſcarſly knew what or why; fluctuating in an inward ſtorme of diuerſifyed hopes, feares, deſires, diſtracted affections, no leſſe then in that outward broile of State. For it was not long that they looked toward *Poland*, whether for breach of conditions of that part, or out of inueterate hate to the *Pole*, or their Nationall jealouſie and diſtruſt of Strangers, or a naturall inconſtancy; they fell off from that Prince: and their Chancellor (Father to the now raigning Emperour) employed there with others in Embaſſage) were detayned thereupon priſoners. It is alſo reported that they made ſecret ouertures to His Maieſtie of Great *Britaine*, and that Sir *Iohn Merick* and Sir *William Ruſſel* were therein employed: but the ſtrong conuulſions and ſharpe agues and agonies of that State could not, or would not endure the lingring of ſuch remote phiſicke; the wheele of Things being whirled about before ſuch a Treatie might admit a paſſage of Meſſengers to and fro. Once that *Ruſſian* Head grew ſo heady and giddy, that

Many-headed body.

at laſt it bred innumerable Heads, yea the whole Body became Heads in the worſt of tyrannies, a popular (gouernment ſhall I ſay? or) confuſion. Neither were *Hydras* heads (monſtrouſly multiplying two for each cut off) like this: for beſides ſo many *Wor's* after the firſt and ſecond *Demetrius* (which might make vp that compariſon) each limbe, nay almoſt each haire of this *Hydra* (not the Nobles alone, but the baſeſt which had nothing but themſelues, and were nothing but Numbers) became ſo many prodigious Heads; they alſo like *Pharaohs leane kine deuouring the fat*, and vpon light pretences beheading themſelues in cutting off the heads and nobler Perſons amongſt them.

Ianſon. A. 1612.

When they had thus made away almoſt all the *Grandes*, and left the South parts to the ſpoile of the *Poles*, which once againe were drawing neere to *Moſco* to beſiege it; the *Poles* alſo ſuffered ſome diſaſter, their Souldiers mutinying for want of pay, and banding themſelues to returne into *Poland*, there inuaded the Mints and Cuſtome-houſes, and ſome gouernments, detayning them for their pay; ſending alſo threatning Letters to diuers Cities and Townes, forced diuers Nobles and Plebeians to compoſition. The *Turkes* and *Tartars* brake likewiſe into *Walachia*, *Moldauia*, and *Polonia*, ſo that *Zolkiewsky* or *Sulcosky* the Generall was forced to goe againſt them, of whom he made ſo great a ſlaughter, that the Great *Turke* committed the *Polake* Embaſſadour at *Conſtantinople* to Ward, and threatned the *Poles* with inuaſion. Theſe mutinous Souldiers continued meane while that and the next yeere to ſpoile *Poland*, doing much damage to the King and the Biſhops, challenging many millions due, as they ſaid, for pay. Yea they paſſed further into *Pruſſia*, and made ſpoile in euery place, on the eight of Nouember 1613. paſſing with a great prey to *Thorn*, being parted into three Bands, the *Sapians*, the *Sboronians*, and *Smolenskians*. Another companie of them terrified *Sileſia*. The *Tartars* likewiſe made impreſſion and committed great ſpoile in *Podolia*.

Gods prouidence permits not the vtter ruine of *Ruſsia*.

Thus an Armie diuided could not conquer, nor ſo vtterly exterminate *Ruſſia* as otherwiſe opportunity was offered: the *Pole* Souldiers being herein like angry Elephants which ſometime recoyle vpon their owne troupes and doe more ſpoyle then the enemy could either haue effected or expected. But whiles the Inuaders were thus inuaded, the *Ruſſes* were forward to worke thoſe executions on themſelues, which their enemies could haue wiſhed to them; till at laſt awakened with the horrour of their owne euils, ſome began to thinke of a better courſe. In the

Strange alteration of affaires by a Butcher.

North about the *Dwina*, a bold fellow, a Butcher, rayling at the Nobilities baſeneſſe, and the Officers corruptions, ſaid, if they would chooſe a good Treaſurer and pay Souldiers well, they might haue thoſe which would fight and expell the *Poles* their Enemies: prouided, that they would firſt chooſe a worthy Generall, for which place he recommended to them a poore maymed Gentleman, called *Pozarsky*, who had done good ſeruice, but being neglected, now had retyred himſelfe not farre off. The multitude approued the Butchers counſell, and choſe *Pozarsky* for their Leader, and that Butcher for a Treaſurer, deliuering into his hands what money they had, which he ſo faithfully diſburſed, *Pozarsky* alſo diſcharging ſo well the truſt repoſed, that a great Army was gathered, and the ſiege of *Muſco* thereby rayſed. And joyning with *Knes Demetry Maſtroukswich* (a kind of *Tartar* which commanded an Army of *Coſſaks* in ſeruice of the *Ruſſe*) they fell in conſultation with *Boris Licin*, the third Great Souldier of that Countrey, vpon choice of an Emperour. Their mindes herein diſagreeing (ſome naming one, ſome another) ſome named *Maſtroukswich* himſelfe, other for further ſecuritie againſt the *Poles*, and

Pozarsky choſen Generall, and a Butcher Treaſurer.

Boris Licin.

and to recompence the ſufferings and impriſonment of the *Ruſſian* Chancellor in *Poland*, named his young Sonne *Mucallowich*, vnder whoſe Empire (hauing a good Councell appointed) they might liue happily. This was firſt approued by the *Coſſaks*, and then by the other Armies, the Butcher alſo was taken to become a Counſellor, and thoſe three Leaders aforeſaid were made Militarie Commanders for the preſent Emperour againſt the *Poles*. Embaſſadours alſo were ſent to diuers Princes to mediate betwixt them and the *Pole*, and betwixt them and the *Sweden*; and by his Majeſtie of Great *Brittaine* (whom God long preſerue to reigne ouer vs) his countenance and interceſſion, there hath beene ſome agreement, and the young Emperour hath ſetled his Dominions in peace; making at laſt a truce for fourteene yeeres with the *Poles*, obtayning alſo in that Treatie his Father the Chancellour his libertie and returne out of *Poland*, who ſince is conſecrated Patriarke of *Ruſſia*.

Micalowich Son to the Chancellor choſen.

Our Kings mediation.

His Fathers returne and Patriarkſhip.

His Embaſſadour to the Emperour came to *Linetz* in December 1613. and thence was conueighed by the Emperours Officers to the Court, where hee had ſolemne audience, where after rich preſents of Furres and his Letters, he deliuered his ſpeech, that *Michael Phedorowich* was now by vnanimous conſent aduanced to the *Ruſſian Empire*, and willing to entertayne and continue the ancient confederacie betwixt both Empires: deſiring the Imperiall Majeſtie to dehort the *Pole* from his vniuſt attempts, to deliuer the *Ruſſe* Captiues, and not againe to infeſt the recouered *Muſco*, but to enter into peace, and abſtayne from Chriſtian bloudſhed. Likewiſe to ſend an Embaſſadour to his Court, &c. This mediation *Ceſar* promiſed, and gaue the Embaſſadour liberall entertainment, and gentle diſpatch.

Ianſen.

Not long after in May 1614. the *Ruſſian* Embaſſadour had audience with the States of the Vnited Prouinces at *Hage*; and before that in *England*. I was preſent both at his arriuall at *Graueſend*, and his honourable entertaynment into *London*, and ſaw him alſo preſently after the running at Tilt at White-hall, the foure and twentieth of March, admitted to his Maieſties preſence, performing that *Ruſſian* Rite of bowing with his face downe to or neere the ground, &c.

Anno 1615. The *Turkiſh* Embaſſador treated with the *Ceſarean* Majeſtie about the mediation betwixt the *Pole* and the *Muſcouite*, who employed to that purpoſe *Eraſmus Heidel* and the Baron of *Dohn*. The *Pole* notwithſtanding ſent an Army in his Sonnes challenge (who was ſhortly to follow to *Smolensko*) into *Muſcouia*; *Pontus Tellagard* the *Sweden* Commander infeſting alſo the *Ruſſians* at the ſame time. But the next yeere 1616. Sir *John Merike* Knight, a man of great experience in thoſe Northerne parts, was employed his Majeſties Embaſſadour to negotiate betwixt thoſe two Great Princes, the *Moſcouite* and the *Sweden*, the Articles of whoſe compoſition I obtayned by the mediation of Sir *Thomas Smith* (my ancient Benefactor in this kind) and haue here communicated to thee, but in another Chapiter as being now paſt our Tragicke Thunders: as alſo the following *Ruſſe-China* Newes, that you may ſee not only the face of *Ruſſia* waſhed from her bloudy pollutions, but her hands further then euer extended (fortunate in treaty of Commerce) as far as *China*: likewiſe the *Ruſſe* Patent to the *Engliſh*. Sweet is the name of Peace, and the thing it ſelfe a Heauen vpon Earth. BLESSED ARE THE PEACEMAKERS (His Maieſties word elſe-where, here his deed) *for they ſhall be called* (ſaid the only begotten Son) *the Children of God*; euen the God of peace will make them his heires of Heauen, which (models of Deity) ſeeke to eſtabliſh the peace of God vpon Earth. And let it not ſeeme tedious here to preſent theſe His Majeſties Trauels, amongſt our other Trauellers, but in a more glorious manner (I ker to God *vnmoueable* which moueth all things) who hath not only been our Sunne, and with lightſome heate and influence filled our *Britiſh* Hemiſphere, but hath diſperſed his bright rayes of Light, and warmed with ſweet quickning beames of heat, thoſe remoter frozen Climates of *Sweden* and *Ruſſia*, (not to mention, or but to mention the quarrels of *Denmarke* and *Sweden*) and after their long froſtie Night (ſuch is the nature, ſuch was the ſtate of thoſe States) to reduce the faire day-light of Peace, the warmth whereof hath thawed the Icie hardned hearts of Enmity, and filled all things with ſweets, and cheere of a returning Spring. *Nulla ſalus bello, pacem te poſcimus omnes.*

Sir *I. Merikes* negotiation. Sir *Dudley Digs* was alſo ſent Embaſſador in a troubleſome time, when he could not with ſafetie paſſe vp to *Moſco* for the enemie, in the firſt times of *Micalowich*.

CHAP. X.

A briefe Copie of the points of the Contracts betweene the Emperours Maiestie, and the Kings Maiestie of *Sweden*: at *Stolbova* the seuen and twentieth of February, 1616.

Oblivion of former quarels.

IN primis, *and especially that all matters be set aside, forgotten, pacified, and renounced, which passed these former yeeres since the conclusion of peace at* Taffina *in the yeere* 7003. *betweene the former great Lords, Emperours, and great Dukes of all* Russia, *and afterwards our great Lord, Emperour and great Duke* Michaelo Phedorowich *of all* Russia Sam. *his Imperiall Maiestie, and Empire of* Russia; *and betweene their late high, mightie Lord King* Charles *the Ninth of* Sweden, *the aboue named Kings Maiesties highly honored and beloued Father, especially their high mighty Lord King* Gustavus Adolphus *of* Sweden, *his Kingly Maiesty and the Crowne of* Sweden: *As also both the Princes their Dominions, Lands, Cities, and people, chance or hap of the Subiects, which happened or was done by robbery, burning, killing, or other enmities what soeuer might bee, or by whom it was done, that all those griefes and troubles in all matters shall be set aside, and hereafter not be reuenged or remembred of neither party, for euer and by this present strong conclusion of peace betwixt our great Lord Emperour and great Duke* Michaelo Pheodorowich *of all* Russia, Sam. *and betwixt their great mightie Lord, King* Gustavus Adolphus *of* Sweden, *&c. and of other Dominions, Lands, Castles, aswell those of old, as those which by this conclusion of peace are giuen and yeelded vp, and betwixt all the Subiects and people to bee renewed, established, confirmed and held vnremoueable in the manner of a peace for euer and euer; and sure friendship perpetually: Also that the Emperours Maiesty, and the Kings Maiesty shall desire one anothers best in all matters, and neyther seeke a better friend, but to deale faithfully and truly in all matters reciprocally.*

Michaelo Pheodorowich Emperor of *Russia.* *Gustavus Adolphus* King of *Sweden.*

2. Item, *is giuen vnto our great Lord Emperour and great Duke* Michaelo Pheodorowich *of all* Russia, Sam. *his heires, successors and hereafter comming great Lords, Emperors, and great Dukes of all* Russia, *and the Empire thereof, by their great Lord King* Gustavus Adolphus *of* Sweden, *for himselfe, his successors, and hereafter being Kings of* Sweden, *and for the whole Crowne of* Sweden, *doth deliuer and cleere by the power of this conclusion of peace, these Castles of the Empire in* Russia *with the Townes and Suburbs which were taken in these yeeres, namely, great* Nouogrod, Stararouse, Porcoue, Lodiga, Odo, *with their Territories,* Somerskey, Voloft, *with the Villages belonging to the Emperors Houshold, to Metropolie, Monasteries, Gentlemens Lands, Inheritances, Farmes, with all their profits and reuennes according to former Borders and Limits, except those Castles which the Emperours Maiestie doth yeeld by power of this Contract of peace, as hereafter more certainly shall be expresst.*

Great *Nouogrod*, &c. returned to the *Russe.*

3. Item, *The Kings Maiestie of* Sweden *doth giue vnto the Emperours Maiestie, with the aforesaid Castles and Townes, all manner of Church ornaments which are in the Church of* Sophia, The Sapience of God, *and within all Churches and Monasteries in* Nouogrod, *and in other Castles and Townes which the Kings Maiesty hath giuen to the Emperours Maiesty without carrying any thing away. Also the Kings Maiesty doth giue the Metropolite and all the Spiritualtie, with all their goods, as also all manner of* Russe *people what calling soeuer they be, which are in those Townes, Castles, and Territories, dwelling now or planting themselues there with their Wiues, Children, and all their goods what soeuer any hath. As also the Kings Maiesty shall giue all manner of Writings and Bookes, which are in those Castles and Townes to be found in* Roserades *iudgement houses, or elsewhere with all* Russe *Ordnance, Munition, and Prouisions there belonging, and the Bells in those aforesaid Castles and Townes, in such manner as they were the twentieth of Nouember last past, according to agreement made with the Kings most excellent Maiesty of Great* Britaines *Ambassadour Sir* Iohn Merick, *except those Bells which the people of* Nouogrod *themselues did sell after that agreement, for the payment of Souldiers, and were carried away from* Nouogrod, *but those Bells which the Kings seruants and people did take perforce without buying, shall be in right manner sought out and brought backe againe to* Nouogrod *and restored there. Also which Bells the Kings Maiesties people bought at* Nouogrod, *it shall bee free for the* Nouogrod *men to redeeme them backe againe at the same price they sold them for, and the Kings people hereafter shall not buy any more Bells of the people of* Nouogrod *by no meanes what soeuer.*

Churches restored with their goods, &c.

Sir *I. Merike* Ambassador.

4. Item, *the Kings Maiesties people of* Sweden, *at their departure out of the Emperours Maiesties Castles and Towns aforesaid, namely, great* Nouogrod, Stararouse, Porcoue, Lodaga, Somersko, Volotco, *&c. shall vse no violence to the Emperors Maiesties people by burning, robbing, or killing, neyther carry any* Russe *people with them to the Kings Maiesties side, neither men, nor women, nor children, nor any of their goods: and if any goods remayne of the* Swethish *people, at their going out of the aforesaid Towne, which at that time they cannot take all with them, such goods shall be kept in safetie by those with whom they are left, till such time as euery one of them shall come thither for his owne goods, or send some bodie for them, and these people shall haue free libertie to goe without all molestation or let, to come for their goods, and to returne againe at their owne conuenient time.*

Libertie of persons.

5. Item,

Digitized by Google

5. Item, *the Kings Maiesties Gouernours and Officers shall deliuer vnto the Emperours Maiesties* Voyauodes *and Commanders the aboue named Townes and Castles, to say great* Nouogrod, Stararoufe, Porcoue, *with their Territories, and* Somerskey, Voloft *in presence of the great Lords,* Iames *King, &c. his Maiesties great Ambassadour Sir* Iohn Merike *Knight, &c. or the said Kings Maiesties Gentlemen, the which the aboue said great Ambassadour shall send to that end clensing and giuing ouer the said Castles and Townes, two weekes after this contract is confirmed betweene vs both, great Commissionors by Writings, Hand, Seale, and Kissing of the Crosse of our side, and on their part, by oath vpon the holy Euangelists.* Time of delliuerie.

6. *And after that the Castle of* Lodiga *and Territories, shall bee deliuered to the Emperours Maiesties Messengers by the Kings Maiesties Gouernour, three weekes after the confirmation of this contract, in presence of the aboue said great Lords,* Iames *King, &c. his Gentlemen, which to that purpose the great Ambassadour shall send, then the said Castle and Prouince to be redeemed and giuen vp, with all the* Russe *Ordinance, people thereto belonging, none to be carried away, nor no violence to bee offered them by robbing, or otherwise spoyling of them; nor no* Russe *Ordnance to bee carried away. But the Castle of* Odow, *and Prouince, and people is to remayne on the Kings Maiesty* Gustavus Adolphus *of* Sweden, *for a time, till this contract of peace be confirmed by both the Potentates, by their Writings, by the Emperours Maiesty with the Seale of the Empire, and by the Kings Maiesties hand and Seale of the Kingdome of* Sweden, *as also by the Emperours Maiesties kissing of the Crosse, and the Kings Maiesties Oath vpon the holy Euangelists confirmed, and the borders diuided and measured out iustly. And the Ambassadour which both the Princes shall send to that effect hauing beene with both the Princes shall returne againe to the borders, hauing well concluded the busines, as then two weeks after that time the Emperors Maiesties* Voyauodes *and Commanders, which his Maiestie shall send for the receiuing of the said Castle and Prouince of* Odow *from* Vlasquo *shall receiue the said from the Kings Maiesties Gouernours, with all the* Russe *people and Ordnance with all their goods, and what they haue, and as long as the Castle of* Odow *is on the Kings Maiesties side, all the people of* Odow *and the Prouince thereof shall giue vnto the Kings Maiesty their former Corne, and doe seruice as before for the mayntayning of those Souldiers that remayne there, the Kings Maiesties people in the meane time shall do to those people of* Odow *no violence nor robbery, neyther carry any* Russe *people, or Ordnance from thence, nor cause any to be conueighed away.* Odow to remayne cautionary.

7. Item, *the Kings Maiestie* G.A. *&c. best beloued brother Prince* Charles Phillip, *Prince hereditarie of S. &c. shall hereafter lay no claime or challenge to these Castles, and Townes, namely great* Nouogrod, Porcoue, Stararoufe, Somerskey, Voloft, Odow, Ladogo, *and all their confines, borders and Prouinces; nor come vpon them with no manner of Warre, to seeke to attaine them: nor remember any more* that oath *which formerly the people of those places made to the Prince* C. Ph. *Also the Kings Maiestie* G.A. *shall promise not to giue any aide of men or money to his aboue said Brother* C. Ph. *against the aforesaid Castles and Townes in no wise.* Charles Phillip Prince of Sweden not to lay clayme.

8. *And against or in liew of the aboue said our great Lord Emperor, and great* D.M.F. *of all* Russia, Sam. *&c. for himselfe, his successours, and hereafter being great Lords, Zares, and great Dukes of all* Russia, *&c. and for the whole Empire of all* Russia, *&c. especially, for the dominion of* Nouogrod *the great, hath giuen and yeelded vnto their high mighty Lord King* G.A. *of* S. *&c. from the dominion of* Nouogrod, *from himselfe and the whole Empire of* Russia, *especially in respect of loue and friendship, these Castles, Forts, and Land, following, which heretofore did adioyne to the Dominions of* Nouogrod, *as namely* Euanogrod, Yam, Coporea, Orieseke, *with all vnto them adioyning, Townes, Lands, and Prouinces, with all Townes, and Villages in the Countrey to them belonging, and due vnto them, according to their former, iust, and auncient borders, with the people that dwell, and plant themselues there, with all other profits, reuenewes; and paiments, with the shoares of Riuers, with Lakes, nothing exempted, the Emperours Maiestie hath yeelded, and giuen to their Kings Maiestie,* G.A. *of* Sweden *&c. as proper and owne to him and his Maiesties successours, and hereafter being Kings of* Sweden, *and to the Crowne of* Sweden *for an euerlasting propertie for them to hold, without cauillation or any contradiction, by the Emperours Maiestie, or his Maiesties Successours, or hereafter being Emperours, and great Dukes of all* Russia, *as also by the whole Empire of* Russia, *and from the Dominion of* Nouogrod, *for euerlasting times, in all points, as former great Lords, and great Dukes of all* Russia, *held and kept the same; namely the late, of blessed memory, great Lord Emperour, and great Duke* Euan Vasiliwich, *of all* Russia, Sam. *and the great Lord Emperour, and great Duke,* Pheodor Euanowich *of all* Russia, Sam. *and the spiritualty, as Monkes, and all others in those Castles and Townes, as well Gentlemen, as other inhabitants of the said places, two weekes after the conclusion of this contract, when it shall be reuealed vnto them, they shall haue free libertie, all such as desire to goe to the Emperours Maiesties side, with their wiues, children, families, all goods and chattels, which way soeuer they will into the Emperours Maiesties Lands and Townes. And that all* Russe *people, in the said Castles, Forts, and Townes, might know the same: it is here agreed and concluded, that as soone as the conclusion of this peace shall be effected and confirmed betwixt vs both, the great Potentates great Commissioners shall send their Posts and Messengers into all the aforenamed Townes and Castles, which they in presence of the Lord King* Iames *his great Ambassadours, Messengers, shall openly reueale and proclaime, that all spiritualty, with their goods, Courtiers, Gentlemen, Burgesses, and Townesmen, which are desirous to goe from thence within* Zar or Czar, is a Title of the great Duke. Places yeelded by the Muscouite to the Swedes.

two

two weeks after to the Emperors Maiesties side, they shall haue libertie to go from thence with their wiues, children, families, all their goods, and chattles, and none of them to leaue any thing behinde them against their wil, neither to be staied nor violated by the Kings Maiesties people; but moreouer, to haue conuoys and prestanes, to bring them without all feare or wrong to the Emperours Maesties next borders, in such manner that they be neither robbed nor killed, but especially and certainely, it is concluded and agreed on betweene vs both sides great Commissioners, that all Russe *Countrie Priests, and Husbandmen in the said Townes and Countries which are giuen and yeelded by the Emperours Maestie, shall by no manner of meanes be inticed or carried from thence, but shall remaine there with their wiues, children, and familie, vnder the* Swethe *Crowne, as also all Courtiers, Gentlemen, and Burgesses, which doe not remoue from thence, in the foresaid two weekes.*

Money to be giuen to the *Sweden.*

9. *As also from the Emperours Maiestie, great Lord and great Duke* M. F. *of all* Russia, Sam. *&c. the Kings Maiestie, &c. shall haue* 20000. *rubbles, in ready good current vnchangeable Siluer deynings, and those monies immediately as soone as this contract of peace shall be concluded and confirmed betweene vs, shall be giuen to the Kings Maiestie of* Sweden *great Commissioners, by the great Embassadour of the Kings most excellent Maiestie of great* Brittaine *his great Ambassadour Sir* Iohn Merricke, *Knight.*

Ordnance and Munition to remaine.

10. *And as for the* Russe *Ordnance in these Castles which shall be giuen to our Lord Emperour, and great Duke, &c. from the Kings Maestie* G.A. *&c. which Ordnance shall remaine there, shall be giuen to his Maiesties Officers, and what munition of Artillerie, as prouision for Warres, and Bels, and other matters, which their Kings Maiestie hath taken in the Land of* Russia *out of those Castles, before the contract which the Kings Maesties great Commissioners, and the great Lord King* Iames *&c. great Ambassadour Sir* Iohn Merricke, *Knight, did erect, as the twentieth of November, such Ordnance and prouisions shall remaine to the Kings Maesties vse, and Crowne of* Sweden, *without all contradiction or cauilation.*

The cõtract of *V Ester Corelia* and the Territories, confirmed to *Sweden*

11. *And because the late great Lord Emperour, and great Duke* Vasilly Euanowich *of all* Russia, Sam. *did giue and confirme by writings, vnto their high, mighty, late Lord, King* Charles *the ninth of* S. *&c. and to the Crowne of* Sweden *the Castle* Corela, *and the Prouince thereof, for that faithfull and good willing aide which was done vnto him, against the* Polish *people: in like manner doth confirme, and establish the same by this contract of our great Lord Emperour, and great Duke* M.F. *&c. the same yeelding and donation of the great Lord Zare, and great Duke* Vasily Euanowich, *&c. for himselfe, his successours, and hereafter being Emperours, and great Dukes of all* Russia, *and for the whole Empire of all* Russia, *that the said Castle of* Corela, *with all profits, reuenewes, and rents, by Land and by Water, according to their former auncient, and now being borderers, nothing exempted in all, accordingly as it was by former Emperours, and great Dukes of all* Russia, *as they possest and held it, so hereafter it shall remaine to their Kings Maiestie, G.A. of* S. *&c. and to his Maiesties Successours, and hereafter following Kings of* Sweden, *and the Crown of* Sweden, *without all cauilation or contradiction for euerlasting times.*

Commissioners of both sides to meet.

12. *And that hereafter there be no more difficulty or variance concerning the borderers of the Land, it is concluded and agreed vpon, that in this yeare* 7125. *vpon the first of Iune, our great Lord Emperour, and great Duke* M.F. *&c. and their high, mighty King* G.A. *&c, shall send on both sides, speciall good Courtiers, and Notaries, to meete between* Lodiga *and* Oreseke, *at the mouth of the Riuer* Laua, *whence it doth fall into the Lake of* Lodiga, *so that they shall meete vpon the said Riuer, on the midst of the Bridge, which of both sides their people shall make vpon that Riuer, and when there the one shall haue shewed the other their ample Commissions, and shall appeare that they are worthy to measure out the borders thereby, betweene the Emperours Maiestie, and the Kings Maiesties Lands: so that from the borders of* Nouogrod, Lodiga, *and* Odow, *with their Prouinces, and also from* Somerskey, Voloſt, *be deuided from the auncient and former precincts, and borders of* Oreseeke, Copora, Yam *and* Euanogorod, *in iust manner as it ought to be, at the same time next ensuing the first day of Iune, then the said Courtiers and Notaries, three in presence in the said manner on both sides, shall meete together vpon the borders of* Nouogrod, *betweene the Prouince of* Olimets *and* Corela *at* Salomensky *Towne, by the Lake of* Lodiga, *; which Courtiers also shall view the same Prouinces according to the former borders, and as the former are expresst, how they haue bin, and confirme the same, and if they so chance, that they cannot happen vpon the former auncient borders, then shall they, by iust inquisition, make new borders and Land-markes, in such manner, that hereafter there be no further controuersie concerning those borders, and those Courtiers or Gentlemen shall not part asunder of neither side, till they haue sufficiently and friendly ended that businesse in all manner, and what those Courtiers shall finish and effect in this manner, the same according as befitteth there shall expresse by writing vpon parchment on both sides, and confirme the same by their subscription, Seales, kissing of the Crosse, and oath interchangeable: and as concerning the deuiding of borders, and the Gentlemen shall doe it; as namely of* Nouogrod, Lodiga, Odo, Somerskey, Voloſt, *of one part, and also betweene* Oreseke, Copora, Yam, *and* Euanogorod, *on the other side, and also betweene the borders of* Nouogrod *and* Corela, *shall be set downe and written, the same shall be inremoueable and fast for euerlasting times, by our great Lord Emperour, and great Duke* Michall Fedorowich *of all* Russia, *&c. and the Kings Maiestie* Gustauus Adolphus, *&c. and their successours, and hereafter being on both sides, for euerlasting times, according to this contract of an euer-*

lasting

laſting peace: and for more firme confirmation of the ſame, that it ſhall be held and kept; it ſhall be declared further in the Letters of contract, which ſhall be hereafter giuen betweene both Princes, from the Emperours Maieſtie, by kiſſing the Croſſe, and confirmation of his ſaid Letters by his great Seale, and by the Kings Maieſties oath vpon the holy Euangeliſts.

13. *As alſo the former, of bleſſed and moſt famous memory, great Lord Emperour, and great Duke* Fedor Euanowich *of all* Ruſſia, Sam. *our great Lord Emperour, and great Duke* Michall Fedorowich, *of all* Ruſſia, Sam, *&c. Vnckle in concluſion of peace made at* Taviſin, *in the yeare* 7103. *did yeelde and giue ouer all his pretention and claime to the Countrey of* Leifland, *as alſo the great Lord Emperour, and great Duke* Vaſily Euanowich, *of all* Ruſſia, Sam. *in a concluſion of peace made at* Wyburgh, *in the yeare* 7117, *did renounce the ſame; ſo it is now here concluded and agreed, that our great Lord Emperour, and great Duke* M.F. *&c. and his ſucceſſours, and hereafter being Emperours and great Dukes, ſhall at no time for euer challenge vnto themſelues any right, or pretence to the Countrey of* Leifland; *neither ſhall our great Lord Emperour and great Duke* M.F. *of all* Ruſſia, Sam. *nor his ſucceſſours, great Lords, Emperours, and great Dukes of all* Ruſſia, *hereafter write vnto their great Lord, King* Guſtauus Adolphus, *nor his ſucceſſours hereafter, being Kings of* Sweden, *nor to the Crowne of* Sweden, *with the title of* Leifland, *or thoſe Caſtles which the Emperours Maieſtie hath now renounced to the Kings Maieſtie for euer, neither by Letters of confirmation to write themſelues, or name themſelues in them, nor ſuffer his Voyauodes, Seruants and Commanders, to write themſelues with the title of* Leifland, *or the Townes aforeſaid, neither in writing nor ſpeeches, to name themſelues. As alſo our great Lord Emperour, and great Duke* M. F. *of all* Ruſſia, Sam. *his ſucceſſours, and hereafter being great Lord Emperour, and great Duke of all* Ruſſia, *in their writings and ſpeeches, ſhall giue to their Kings Maieſtie, and hereafter being Kings of* Sweden, *their accuſtomed title of* Leifland, *and* Corella. Item, *on both ſides, the great Commiſſioners haue agreed, ſince at this Treatie we could not accord vpon the full title of both the great Potentates; As to intitle the Emperours Maieſtie, and of many other Dominions, Lord and Conquerour, and the Kings Maieſtie, with the title of* Ingermanland, *wee haue of both ſides great Commiſſioners, referred the ſame to both great Potentates liking therein; and if that either Potentate will be pleaſed to write the other with the full title, as to the Emperours Maieſtie, the Kings Maieſtie doth write the full title with the word Conquerour; and that the Emperours Maieſtie alſo doe write to the Kings Maieſtie his full title with* Ingermanland, *then both the Potentates are to ſend thoſe titles by their Ambaſſadours, and nominate the ſame full title in one of their Letters of confirmation, and the other Letter to be written according to this our preſent agreement: and if in both the Letters, the titles be written to the full, as the Emperours Maieſties full title, with Conquerour; and the Kings Maieſtie with* Ingermanland, *then both ſides Ambaſſadours ſhall ſhew one the other the ſaid Letters, and hauing ſhewen them, ſhall goe to each Prince with the ſame; if then on either ſide the Potentate ſhall not like thereof, and ſhall ſend the ſaid Letters of confirmation with the ſhort title, according to this our preſent agreement: the Ambaſſadours of both ſides ſhall in like manner make knowne the ſame one to the other, and ſo proceede therewith to both Potentates.*

The title of *Leifland* reſigned by *V.E.* at *Wiburgh, Anno* 7117. now confirmed.

Title to be giuen.

14. *Alſo it is agreed and concluded, that there ſhall be free commerce of Trade betweene both the great Kingdomes, the Empire of* Ruſsia, *and the Kingdome of* Swethen, *and both Kingdomes ſubiects: ſo that all the ſubiects of our great Lord Emperour, and great Duke* Michael Fedorowich, *of all* Ruſsia, Sam. *Merchants of the Dominions of* Ruſsia, *from* Nouogrod, Pleſco, *and other Cities and Townes, paying their due cuſtome, ſhall haue free liberty without let to trafficke at* Stockholme, Wiburgh, Reuell, Narue, *and other Townes in the Countries of* Swethland, Fynland, *and* Leifland, *and they that dwell and plant themſelues at* Iuangrod, Yam, Copora, Nettingburgh, *and* Coreilla, *what Nation ſoeuer, either* Ruſſe *or other people, ſhall haue free liberty without let to trafficke, and to trade, paying their due cuſtome, in the right Cuſtome houſes, at* Moſco, Nouogrod, Pleſco, Lodiga, *and other Townes of* Ruſsia, *with the Emperours Maieſties ſubiects, and alſo haue libertie to trauell through the Dominions of our great Lord Emperor, and great Duke* M.F. *&c. for their trade of Merchandize within the Dominions of* Ruſsia.

Commerce of Trade.

15. *And by reaſon heretofore our great Lord Emperour and great Duke* Michall Phedorowich, *of all* Ruſsia, *&c. his Maieſties ſubiects Merchants, had their free houſe of merchandize at* Reuell, *alſo now by contract of* Tauſin *and* Wiburgh, *it is concluded they ſhould haue a good place for a houſe, appointed them in* Reuell, *as alſo in other the Kings Maieſties Townes, as at* Stockholme, *and* Wyburgh, *they ſhall haue houſe and Diuine Seruice, according to their Religion, in the ſaid houſes, without let or hinderance, but at* Reuell *in their Church, as formerly they haue done; yet to ſet vp no Church, according to their Religion. And as heretofore their Kings Maieſties his Subiects, haue had a free houſe of trade at* Nouogrod, *now alſo according to the contract of* Tauſina, *and* Wyburgh, *they are to haue a good place for a houſe, prepared them at* Nouogrod, *and the Emperours Maieſties other Cities, as* Moſco *and* Pleſco, *houſe for the ſaid purpoſe, and vſe their Diuine Seruice according to their Religion, in the houſe; but to build no Churches for that vſe any where.*

Merchants of both Kingdoms to haue houſes and Churches in each others Countries.

For breuitie, I haue omitted the following Articles to the 29. the ſubſtance whereof is as followeth. The 16. determineth what debts ſhall be recouerable. The 17. Free paſſage of Subiects thorow each others Territories. 18. Freedome of Priſoners, on both ſides. 19. Liberty of Inhabitants to ſtay in the places ſurrendred. 20. Fugitiues to be redeliuered. 21. Borderers

Digitized by Google

to be restrained from robberies. 22. For ending of quarrels, if any happen. 23. 24. Confirmation of former contracts, of *Tawsina* and *Wiburge*. 25. No priuate or publike practise to be made against each other. 26. Shewing of Letters of confirmation at the meeting of Ambassadours of both sides. 27. Honorable conuoy for Ambassadours on either part. 28. And also for Interpreters free passage.

New Ambassadors in case of new successors.

29. Item, *It is agreed and concluded, that if by the permission and pleasure of God, there happen an alteration of gouernment in* Sweden *or* Russia, *then that Prince which shall newly come to his gouernment first, shall reueale by his Ambassador to the other Prince from himselfe, and after that the other shall visit him by his Ambassadour.*

Place of Ambassadors meeting.

30. Item, *If it so fall out at any time, that of both sides the Princes, as our great Lord, &c. & their great Lord King* Gustavus Adolphus *shall send one to the other their great Ambassadours, to confer of good matters; then those said great Ambassadours vpon the borders shall meet without all controuersie or strife, either betweene* Odow *and* Euangorod: *or betweene* Lodiga *and* Oreseke, *where they shall thinke most fitting for them on both sides, in the midst of the diuision of the borders, and there to conferre of these good matters in friendly and louing sort, eyther by the Princes Commission or other commandement, as they shall haue.*

Case of Shipwracke.

31. Item, *If it happen that the Emperours Maiesties Subiects and Merchants, their Boates, Lodies, and Merchants Vessels shall go to* Reuell, Wybourgh, *or other Townes and Castles of* Swethen, Fynland *or* Liefland, *or ships and other Vessels, whereupon the Emperours Maiesties Ambassadours and Messengers shall be going to the Emperors Maiestie, to the Pope, into* England, *or any other King. dome, by the Kingdome of* Swethen, *or comming backe againe bee cast away and brought to the* Swethish *shoare, eyther vpon the Salt Sea or the Lake of* Lodiga, *by tempests or other meanes, such people shall haue free libertie without hinderance to goe from thence with all the goods they can saue or shall get saued, and the Kings Maiesties people shall helpe them to saue their goods. In like manner if it happen with the Kings Maiestie* Gustavus Adolphus *of* Swethen, *&c. Subiects, and Merchants Boats, and Merchants Vessels with Commodities, or otherwise be cast away and brought to the Emperors Maiesties shoare vpon the* Ladigo *or* Plesco *Lake, then these people shall haue free liberty to goe away with all their goods which they can saue or get to be saued without let or hinderance, and the Emperors Maiesties people shall helpe them to saue their goods.*

Neither party to aide the Pole. &c.

32. Item, *It is concluded and agreed on, that our great Lord, &c. shall not ayde or assist against the Kings Maiesty of* Sweden Gustavus Adolphus, *and the Crowne of* Swethland, *the Kingdome of* Poland *and* Lettow, *nor his Sonne* Ladislaus *and the Crowne of* Poland, *and the Dukedome of* Lettow, *nor all the Dominions of* Poland *and* Lettow, *nor shall helpe him with men or treasure, nor stand for him as one himselfe, nor any other Prince for him shall not practise or seeke any thing against the King of* Sweden. *Those Lands and Castles which belongeth to the Kingdome of* Sweden *of old, or those which now the Emperours Maiesty hath yeelded to the Kings Maiesty by this conclusion of peace, he shall not seeke to get them vnder him, or haue possession of them. In like manner the Kings Maiesty of* Sweden *shall not stand against the Emperours Maiesty &c. to assist the King of* Poland *and* Lettow, *and all the Dominions of* Poland *and* Lettow, *neyther with men nor treasure, and not to be with him as one. Neyther shall the Kings Maiesty by himselfe or other Princes and Gouernours seeke any practise against the Emperours Maiestie and his Lands and Castles which belong to the Emperour of* Russia, *hee shall by no meanes seeke to get vnder him or possesse the same. It is also agreed and concluded betweene vs, that those Ambassadours which the Emperours Maiesty shall send to the Kings Maiesty, and the Kings Maiesty to the Emperours Maiesty, for the confirmation of this conclusion of peace, shall haue full authority to conferre betweene the Emperours Maiesty and the Kings Maiesty of* Swethland *for a vnion and ioynt assistance against* Sigismond *King of* Poland, *and the Crowne of* Poland, *and the great Dukedome of* Lettow *in such manner as shall be thought fit and requisite by both the Princes.*

Confirmation.

33. *And for more certaine and firme assurance, that all this here hath bin concluded, and agreed on betweene vs the aboue said Emperours Maiestie, and Kings Maiesties great, ample, and powerfull Ambassadours, by the mediation and intercession of the great Lord King* Iames *his Maiesties great Ambassadour, in his presence, this conclusion is made, established, and finished, and shall by our great Lord, and great Duke* M. F. *of all* Russia, Sam. *and by his successours, and hereafter being great Lords, Emperours, and great Dukes, be kept faithfully, firmely, and vnmoueable, and shall be followed in all points, and finished without all falshood or deceipt: and our great Lords, Emperours, and great Dukes, &c. by his commandment, wee his great Commissioners,* Ocholuech *and* Namestincke *of* Susdall

Names of the Cõmissioners.

Knese Dannyll Euanowich Mezetskey. *I the Emperours Maiesties* Dwarenni *and* Namestincke *of* Shatskey Olexsey Euanowich Zuzen. *I the Emperours Maiesties Duke,* Michcola, Meketesin Nouokleno. *I the Emperours Maiesties Duke,* Dobrenia Semenou, *haue confirmed this conclusion of peace, with the kissing of the Crosse, and thereunto set our hands and Seales: also the Kings Maiesties of great* Brittaines *great Ambassadour, Sir* Iohn Merricke *Knight, Gentleman of his Maiesties priuie Chamber, for the more witnessing of the same, that this is also concluded here betweene vs, hath firmed with his owne hand and Seale, both these obligations, and a confirmation, which wee the Emperours Maiesties ample Ambassadours, haue giuen to the Kings Maiesties great Commissioners; and against that we haue taken the like writing of confirmation, from the Kings Maiesties great Ambassadours*

dours. Written at Stalbo, *in the yeare from the creation of the World* 7125. *the seuen and twentieth day of February.*

HAuing here presented the fruits of his Maiesties mediation betwixt the *Muscouite* and *Sweden*: I thought good also to adde this other testimonie of *Beati Pacifici*, in the peaceable fruits of his endeuours betwixt the said King of *Sweden*, and the King of *Denmarke*, after bloudy warres betwixt them, in which the *English* voluntaries were so great a part: of whom (if I mistake not) foure thousand serued the *Dane*, vnder the command of the right honorable the Lord *Willoughby*. The Articles of agreement betwixt them are these six, concluded Ianuary 16. 1613. translated out of the *Dutch* Copie, Printed at *Copenhagen* first, and after at *Hamburge*.

1. *That the King of* Sweden *shall haue againe the Citie of* Calmar, *with all that belongeth vnto it, excepting Artillery, which shall be restored to the King of* Denmarke, *or to be sold for his profit.*

2. *That the King of* Denmarke *shall haue* Elsborch *and* Orland, *with all the forces and strength of* Arensborch, *in pawne, for the space of twelue yeares ensuing, for the sum of fifteene Ton of Gold; the which sum of money the King of* Sweden *shall pay vnto the King of* Denmark *within the foresaid twelue yeares, at certaine times, in consideration of his charges during the said warres.*

3. *That the Nauigation and passages by Seas and Land to* Norway *shall be vsed free without any hinderance of those of* Sweden.

4. *That* Lapland *shall be free without giuing of any contribution.*

5. *That the King of* Denmarke *shall haue* Grone-land *free, without paying of any contribution vnto the King of* Sweden.

6. *That the King of* Denmarke *shall beare the three Crownes without any gaine-saying or contradiction of the King of* Sweden *(which was the first and principall cause of these aforesaid bloudy and vnneighbourly warres, and continuall irruptions.)* Both Kings subscribing hereto.

CHAP. XI.

A relation of two Russe Cossacks *trauailes, out of* Siberia *to* Catay, *and other Countries adioyning thereunto. Also a Copie of the last Patent from the* Muscouite. *A Copie of a Letter written to the Emperour from his Gouernours out of* Siberia.

TO our Lord Emperour and great Duke *Michailo Fedrowich* of all *Russia*, your Maiesties Vassals, *Euan Koorakin*, and *Euan Koboolitin*, doe knocke their heads, &c. Lord this present 7127. yeere (or 1619) we writ vnto your Maiestie by a Cozack of *Tobolsko*, *Clement Oboskin*, that there were come to *Tobolsko* Ambassadours out of the Dominions of *Catay*, and from the King of *Altine*, with the people of *Tobolsko*. *Euashko Petlin*, and *Andrashko Madiegene:* And with them together doe go to you great Lord Ambassadours, out of the Dominions of *Labin*, and the *Altine Char*, from *Skiugis* with presents, the which we dispatcht to your Maiestie, with *Burnash Nikonone*, the sixt of July, and before them wee dispatcht to your Maiestie *Euashko Petlin* and *Patoy Kizall*, by whom we sent vnto your Maiestie a Letter from *Tambur*, King of *Cathay*, and a Copie of the King *Altines* Letter translated, with a Card and description of the places, which way *Euashko Petlin*, & *Andrushko Madigene*, passed from the Castle of *Tomae*, into the Dominions of *Catay*, as also in what other Dominions they were. The Letter it selfe which came from *Altine Char*, *Labatharshan* doth carrie to your Maiestie: but as for the Letter out of *Catay*, there is none in *Tobolsko* to translate it.

Ambassadour from *Catay* and from the King of *Altine*. See *sup.* pag. 527. & 552.

None able to translate the *China* Characters.

The Copie of the Altine Chars, *or golden Kings Letter to the Emperour of* Russia.

TO the Lord Emperour and great Duke; The golden King receiued your Letter. In former times (Lord) it came to my hearing, that your Princely good Ambassadours, did seeke a way or passage to come to me, since which time it is now thirteene yeeres, but then the people

ple of *Iskirgi*, *Tubents*, *Mattara*, & black *Kolmaks* did not ſuffer your Princely good Ambaſſadors to come to me, but did rob and ſpoile them. Now ſince ten of your Maieſties people are come to me, and I haue ſent to you *Ichkmen Kichenga*, to do obeyſance vnto your Maieſty, and ſee your Princely eyes, whom your Majeſtie vouchſafed to doe their obeyſance and ſee your Princely eyes. And to me you ſent of your Grace three Cups of Siluer, a Bow, a Sword, two Gunnes, and two Garment Clothes, all which your Princely fauours I haue receiued, and what ſhall bee behouefull for your Majeſty from hence, I will furniſh you withall. As alſo I am to requeſt your Maieſtie in reſpect the Ambaſſadours doe paſſe betweene vs very miſerably, and poore, by reaſon there are now ſome ſmall warres betwixt vs and the blacke *Kolmacks*, and there are but ſmall forces in *Tobolske* Caſtle, and in the Caſtles of *Tomno*, *Tarko*, and from the *Barban* people. Now if ſo be your Majeſtie will fauour me, and defend me with theſe people from *Karakula*; and will bee pleaſed to proceed on warre on your owne ſide, and I on mine, that matter will bee done betweene vs, and all good matters continue betwixt vs. And ſo by your Princely fauour, Ambaſſadors may continually paſſe betweene vs. *Iuan Tarchan Varchies* and *Andrei Tarchan Varchies*, did conduct two of your Maieſties Meſſengers into the Dominions of *Catay*, according to your Majeſties commandement, and they are returned to me againe out of *Catay*. Alſo (Lord) there is come vnto me the *Tarchan* of *Labaia*, and I haue ſent vnto you with my Preſents the ſaid *Tarchan Labar* and *Kitibacſhij Anchaij*, and with them ten men, and two men of *Sirgos*; in their Letter is written that there is ſent vnto your Majeſtie three Leopards with their clawes, an Irbiſh with his clawes, three Lizernes with their clawes, a red and a yellow Damaske vpon a gold ground, a piece of Veluet, and an ambling Horſe. And I am humbly to requeſt your Majeſtie, if it bee your Majeſties fauour to grace mee for your owne honour with a garment of cloth of Gold, and of diuers colours, fiue Garments of fine Cloth, a Head-piece, a ſhirt of Male, a Sword, a Bow, twentie Gunnes, a Flaggon of Gold, a Kettle of Siluer, and fiue ſorts of Precious Stones, of each one, a Iennet, a Dwarſe, and Workmen to make Guns and Powder, and two thouſand pence. Your Maieſties name is growne renowmed and famous euery where, therefore I doe reuerence vnto your Majeſtie, becauſe many Kings of many Countreyes haue ſpread abroad the fame of your Majeſties name euery-where. And I requeſt that Ambaſſadours may ſpeedily paſſe betwixt vs, and now if it be your Maieſties fauour, I deſire you to diſpatch theſe my Ambaſſadours with ſpeed to me backe againe.

Tarchan of *Labaia*.

Three Leopards, &c. for a Preſent.
His requeſts.

Relation of two *Ruſſe* trauellers of their Voyage to *Catay*.

Anno 7128. the three and twentieth of September in the Emperours Dominions at *Soldeta*, a *Cazacke* of *Siberia*, called *Euaſhko Pettlin*, did report, beeing examined of his Trauels. The laſt yeere paſt 7127. hee ſaid that the *Boiaren* and *Voyauod Knez Euan Simonowich Koorockin*, ſent him from the Caſtle of *Tomo*, and his fellow *Andraſhko*, to conduct the Kings *Altines* Ambaſſadours, as alſo to inquire or ſearch the Kingdomes of *Catay*. They went from the Caſtle of *Tomo*, about the ninth of May, and trauelled from *Tomo* to *Kirgis*, with much expedition tenne dayes, and in *Kirgis* is a Duke ſubiect to the Emperours Maieſtie, his name is *Nemi*, who gaue them victuals and poſt. Through this Land of *Kirgis* they went halfe a day, and came to the Dominion of *Mutalla*, to the *Altine* King, who gaue them prouiſions and poſt, and diſpatched them thence: ſo they paſſed through his Land fiue weekes to the Country of *Sheremugaly*; where raigneth a Queene called *Manchika*, who cauſed to haue prouiſion and poſt giuen them. In this Countrey of *Sheromogula* they trauelled foure dayes, and came into the Dominions of *Catay*; called *Crim*, where is a wall made of ſtone fifteene fathomes high, alongſt the ſide of which wall they went ten dayes, where they ſaw pettie Townes and Villages belonging to the Queene *Manchika*; but in thoſe ten dayes they ſaw no people vpon the wall at all. At the end of theſe ten dayes, they came to the gate, wherein lye very great Peeces of Ordnance, ſhooting ſhot as bigge as a mans head, and in the ſaid gate ſtandeth in watch three thouſand men, and they come with their Merchandizes to traffique at the gate. The *Altine* men alſo come to the gate, with their Horſes to ſell to the *Catay* men; but are not permitted to come within the walls, except very few at once. Thus their whole trauell from *Tomo* Caſtle to this gate, was twelue weekes, beſides ſome dayes that they ſtood ſtill; and from the gate to the great Empire of *Catay* tenne dayes, and came to the Citie or Caſtle of *Catay* about the beginning of September; and were lodged in the great Embaſſadors houſe: and hauing beene there in *Catay* foure dayes, there vſed to come vnto them a Secretary with two hundred men vpon Aſſes very well apparelled, and did entertayne and feaſt them with Sacke and other Drinkes made of Grapes, and told them that the Emperour, or King *Tambur* had ſent him to aske them wherefore they were come into the Dominions of *Catay*. Whereupon they anſwered that our great Lord and Emperour had ſent them to diſcouer the Dominions of *Catay*, and ſee the King thereof; but hee anſwered them againe, that without preſents they could not ſee the King, and withall gaue them a Letter, which Letter they brought with them to *Tolboske*, and from thence is ſent to the Emperours Maieſtie by them. Out of *Catay* they went about the twelfth of October, and came to the Caſtle of *Tobolsko* about Whitſontyde the ſame yeere 1619.

A Description of the Empires of Catay *and* Labin, *and other Dominions aswell inhabited, as places of Pasture * called* Vlusses *and Hords, and of the great Riuer* Ob, *And other Riuers and Land passages.*

* Such are the *Tartars* dwellings or fleetings, rather with their beasts.

FRom *Kirgis* to the Riuer *Bakanna* is sixe dayes trauell, and from *Bakanna* to *Kinchike*, is nine dayes trauell, from *Kinchike* to the great Lake, (in which Lake Rubies or Saphires grow) is three dayes trauell, and the compasse of that Lake is twelue dayes trauell on horsebacke. There falleth also into the said Lake foure Riuers, to wit from the East, South, West and North, yet the water doth not increase in the Lake, nor decrease. There falleth yet another Riuer into the said Lake, which commeth from betweene the East and the North, and is called *Kitta*, vpon which we went fifteen dayes to the head of it, where we found the King *Altine* in progresse; the way is very stony. And from the King *Altine* to an *Vlusses* fiue dayes trauell; the *Vlusses* is called *Algunas*, and the Duke in it is called *Tormoshine*; from him to another *Vlusses* fiue dayes, the *Vlusses* is called *Chikursha*, and the Duke in it is called *Carakula*; from thence to an *Vlusses* fiue dayes called *Sulduss*, wherein is a King called *Chaksata*, from him to an *Vlusses* called *Bisut*, fiue dayes, the Dukes name is *Chichim*; from him to an *Vlusses* called *Iglethin*, fiue dayes, the Duke is *Taschils Cherekta*, from him to an *Vlusses* called *Beskuta*, fiue dayes, the Duke is called *Cherkar*; from him to an *Vlusses* called *Girut*, foure daies without water, the Duke is called *Chicheuoas*. From him to an *Vlusses* called *Isut* fiue dayes, the Duke of it is called *Chechen*. From him to an *Vlusses* called *Tulent Vnient* foure dayes, the Duke is called *Tayku, Katin*. From him to the *Vlusses Togerfin* three dayes, there is a King called *Bakshuta*. From thence to an *Vlusses* of the yellow *Mugalls* called *Mugolchin*, wherein is a Dutchesse called *Manchika*, with her Sonne *Ouchai Taichie*, it is within two dayes journey of the Land of *Mugalla*, a very dangerous passage through the cliffes of the Rockes, which being past they came into the Land of *Mugalla*, wherein are two Castles or Cities built of stone, they are called with them *Bashum*, in one of them is a Duke called *Talay Taishen*; and in the other the Duke is called *Egidon Taishen*; there is also a third Citie in it called *Lobin*, wherein doth gouerne a woman called Dutchesse *Manchika* with her Sonne, the said Dutchesse doth command all the Cities of *Mugalla*, and her command extendeth into *Catay*. If any man be to trauell ouer the borders, and into *Catay*, he must haue a Passe vnder her Seale; which if they haue not, they may not passe through *Catay*. The Land of *Mugalla* is great and large from *Bughar* to the Sea; all the Castles are built with stone foure square; at the corners, Towers, the ground or foundation is layd of rough, grey stone, and are couered with Tiles, the gates with counterwards as our *Russe* gates are, and vpon the gates alarum Bels or Watch-bels of twentie poode weight of metall, the Towers are couered with glazed Tiles; the houses are built with stone foure cornerd high, within their Courts they haue low Vaults, also of stone, the seelings whereof, and of their houses are cunningly painted with all sorts of colours, and very well set forth with flowres for shew. In the said Countrey of *Mugalla* are two Churches of Friers, or Lobaes, built of square stone, and stand betweene the East and the South; vpon the tops of them are made beasts of stone, and within the Church iust against the doore are set three great Idols or Images, in the forme of women of two and an halfe fathome long, gilt all ouer from the heads to the feet, and sit a fathome high from the ground vpon beasts made of stone, which beasts are painted with all manner of braue colours. Those Idols haue each in their hand a Vessell, and there burne before them three tallow Candles; on the right side of them are erected eight Idols more in the forme of men, and on the left side eight Idols more in the forme of Maydens, gilt all ouer from the head to the foote, their armes stretched out after the manner as the *Mugall* people, or Religious men vse to pray. And a little way from these Idols stand two Idols more made naked as a man is in all parts, not to be discerned, euen as though he were aliue, hauing before them Candles burning, as small as a straw, and burne without a flame only in an Ember or Corall.

Their seruice or singing in these Churches is thus. They haue two Trumpets of a great length, about two fathomes and an halfe long, and when they sound on these Trumpets, and beate vpon Drummes, the people fall downe vpon their knees and clap their hands againe, casting their armes asunder, they fall to the ground and lye so halfe an houre. Their Churches are couered with glazed Tiles. As for bread in the Land of *Mugalla* there groweth all manner of Graine, as *Prosso*, or *Russe* Rice, Wheate, Oates, Barley, and all sorts of other Graine in abundance, and their Wheate bread is as white as Snow. As for Fruit in *Mugalla* they haue of all sorts, as Apples, Melons, Arbuses, Pompeons, Cheries, Lemons, Cucumbers, Onions, Garlicke. The men are not faire, but the women exceeding faire, and weare for their Apparell, Veluets and Damasks, the Capes of their Garments both of the men and women hang downe to their shoulders. They distill *Aquauitæ* out of all sorts of Graine, without Hops. As for Precious Stones and Gold they haue none, but for Siluer they haue great store out of *Catay*. Their Boots they weare of their

owne fashion. They haue no Horses, only Mules & Asses in abundance; they till and plough their ground with great and small Ploughes, as we doe in *Siberia* at *Tobolske*. Their *Cuttuffs* are in our Language Patriarkes, and both in *Mugalla* and *Catay* are but two *Cuttuffs*; the one was about twentie, and the other thirtie yeeres of age. Within the Churches are made for them high places with seats whereupon they sit: the King doth honour them with bowing downe before them. Their *Lobaes* are in our Language Friers, which are shorne about twentie yeeres of age, and know no women from their Mothers wombe, they eate flesh continually euery day, and shaue both Beards and Mustachoes: their Garments are of Damaske of all sorts and colours, and their Hoods yellow, they say that their Religion and ours are all one, only the *Russe* Monkes are blacke, and theirs white.

Cuttuffs, or Patriarkes.

Lobaes, or Friers Continencie, shauing.

Beyond the Land of *Mugalla* are three other Countreyes or Dominions, stretching towards *Bughar*, the one called *Onus*, the Kings name there is *Enakan*, the Citie is of stone, and the Kingdome rich.

Three Kingdomes. *Onus.*

The other is called Dominions of *Talguth*, the Kings name is *Saualanche*, his Cities are also of stone, and his Kingdome rich.

Talguth.

The third Countrey where the chiefe Citie is, is called *Shar*, and the King thereof is called *Zelleznay*, or Iron King, his Kingdome is rich, and not farre from *Bughar*. From this Iron King come Diamonds, and all these three Kingdomes are vnder the South, and on the other side of the blacke *Mugalls* are the yellow *Mugalls*, stretching all alongst the Sea, aswel Townes as walking people, with their Families and Herds.

Shar.

Blacke *Mugols*, or *Cara Catay.*

From the Countrey of *Mugalla*, where the Dutchesse *Manchika* dwelleth, to the Citie of *Shrokalga* in *Catay*, is two dayes trauell on horse backe: and the bordering or frontier wals stand vnder the South towards *Bughar*, two moneths trauell, all made of Bricke of fifteene fatheme high, whereupon they told about a hundred Towres in sight, on both sides of them, but towards *Bughar*, and towards the Sea, the Towres are not to bee numbred, and euery Towre standeth from another about a flight shot distant. The said wall stretcheth downe towards the Sea foure moneths trauell. The people of *Catay* say, that this wall stretcheth alongst from *Bughar* to the Sea, and the Towres vpon it stand very thicke; it was made, as they say, to be a border betweene *Mugalla* and *Catay*. The Towres vpon it are to the end, that when any enemy appeareth, to kindle fires vpon them, to giue the people warning to come to their places where they are appointed vpon the wall. At the entring without the wall dwell the blacke *Mugalls*; and within is the Countrey and Cities of *Catay*. In the wall to *Catay* are fiue gates, both low, and straight or narrow, a man cannot ride into them vpright on horse-backe, and except these fiue gates there is no more in all the wall; there all manner of people passe into the Citie of *Shrokalga*.

Tower-becons

Cara Catay.

But fiue gates in the wall.

Within the borders or wall is a Citie or Castle of *Catay*, called *Shirokalga*, built of stone, the Gouernour thereof is called Duke *Shubin*, who is sent thither for a time from *Tambur* King of *Catay*, the Castle is very high walled and artificially built; the Towres are high after the manner of *Mosco* Castle, in the Loope-holes or Windowes are Ordnance planted, as also vpon the Gates or Towres; their Ordnance is but short, they haue also great store of small shot, and the Watchmen euery-where vpon the Gates, Towres, and Wals, well appointed; and assoone as they perceiue the Sunne going downe, the Watch discharged their Peeces of Ordnance thrice, as also at the breake of day in the morning, they shoot out of their Pieces thrice, and doe not open the Castle Gates till the sixt houre of the day. Within the Castle are shops built of stone, and painted cunningly with diuers colours, wherein they haue all manner of Merchandizes, as Veluets, Damaskes, Dorogoes, Taffataes, Cloth of Gold, and Tissue of diuers colours, sundry sorts of Sugars, Cloues, &c. in the Gouernours house is a strong Watch of *Partisans* and Halberds, and their Drummes made like great Barrels. When the Gouernour goeth abroad, they carry a Canopie ouer him, and make way before him with Rods, as before our Emperour in *Mosco*.

Shirocalga.

Short Ordnance.

And from *Shirokalga* to the Citie *Yara* is three dayes trauell: this Citie is large, built of stone, and the circuit of it is two dayes trauell, with many Towres, and foure Gates to come in at, the Markets in the Citie are well and richly accommodated, with Iewels, Merchandizes, Grocerie, or Spices, the Citie well inhabited hauing no place void or waste in it. The houses and shops are built with stone, with streets betweene; the Gouernours here are called Duke *Bym* and Duke *Iuchake*, heere they haue Post Stages as wee, their Markets haue a very odoriferous smell with Spices.

Yara.

And from this Citie, to a Citie called *Tayth*, is three dayes iourney, it is built of stone, large, and high walled, & is in compasse two daies trauel about, at the first comming to it are fiue gates barred and bolted with Iron, very thicke and close, fastned with Nailes; the houses and shops, or Ware-houses are all built of stone, wherein are all manner of Merchandizes, Spices, or Grocerie, and precious things more abundant then in the aforesaid Cities, they haue Tauernes or Drinking houses stored with all manner of Drinkes, as *Aquauitæ*, Meade, and Wines from beyond Seas in abundance, there they haue also their Watch, Ordnance, and Munition in great store; the Gouernours of this place are one Duke *Tuga*, and the other Duke *Zumia*, there wee saw Sinamon, Anniseeds, Apples, Arbuzes, Melons, Cucumbers, Onions, Garlicke, Radish, Carrets, Parse-

Tayth.

Digitized by Google

Parſenips, Turnops, Cabbage, Limons, Poppiſeeds, Nutmegs, Rice, Almonds, Pepper, Rubarbe, & many other Fruits, which we know not, ſo that they want nothing whatſoeuer groweth in the World; the ſhops are within the Citie, ſtored of all manner of Commoditie as is ſaid, as alſo victualling and drinking Houſes, ſtored with all manner of Drinkes, where they haue alſo Dicers and Whores, as with vs. Their Priſons in the Citie are of ſtone, for theft they hang the theeues, and for Robberie or Murther they ſtake the Murtherers, or elſe head them.

And from *Shirokalga* to a Citie of *Catay*, called *Shirooan* is a dayes iourney: this Citie is built of ſtone high walled, and large in compaſſe, it is a dayes trauell, it hath twelue Towres; whereupon, as alſo on the Citie Gates is planted Ordnance and ſmall ſhot great ſtore, with a continuall Watch or Guard, night and day, at the firſt comming are fiue Gates well furniſhed with Ordnance and Warlike Munition; and from one Gate to the other through the Citie is halfe a dayes going. The Gouernour of this place is called Duke *Sanchik*. For Victuals and Merchandizes, here is more then in the Cities mentioned, all their ſhops very full, and the Citie ſo populous, that one can hardly paſſe the ſtreets for the throng of people. The Ambaſſadors Houſes are alſo faire built of ſtone, their Wels couered with Braſſe, ſo that this Citie is adorned more with precious things then the former mentioned, and much more populous. *Shirooan.*

Now from the Citie of *Tayth*, to a Citie called *White Caſtle*, is two dayes trauell: this Citie is built of white ſtone, and thereof hath his name, it is high walled and large, being in compaſſe or circuit three dayes trauell, at the firſt entry it hath three Gates vnder one Towre, the Gates are high and wide with ſtrong Iron barres: and the Gates faſtened with Iron Nayles whited with Tinne, it hath great Ordnance in the Gates and Towres: ſome Peeces carrying ſhot of two Poode waight, the ſhops within the Citie reach from Gate to Gate, and betweene them are ſtreets paued with ſtone, all their ſhops and houſes are built of ſtone before their ſhops. They haue grates painted cunningly, with all manner of colours, flowres and ſuch like, and vpon the ſhops are the houſes painted cunningly with Pictures and flowres in diuers colours, and the painting within is vpon Paſtboord adorned with Damaske and Veluets; heere is more abundance of Riches and Commodities then in any of the Cities afore mentioned. The Gouernours names here were Duke *Toyuan*, and Duke *Sulan*. *White Caſtle.*

From this white Citie, or Caſtle, to the greateſt Citie of all *Cataya*, called *Catay*, is two dayes iourney, where the King himſelfe dwelleth, it is a very great Citie, built of white ſtone foure ſquare, and in compaſſe it is foure dayes iourney, vpon euery corner thereof are very great Towres high built, and white, and alongſt the wall are very faire and high Towres, likewiſe white and intermingled with Blue or Azure, vpon the Gates, Wall, and Towres, the Loop-holes or Windowes are well furniſhed with Ordnance, and a ſtrong Watch. In the midſt of this white Citie ſtandeth a Caſtle built of *Magnet*, or Load-ſtone, wherin the King himſelfe dwelleth, called *Tambun*; this Caſtle ſtandeth ſo in the midſt of this Citie, that euery way you haue halfe a dayes going to it from the Gates, through the ſtreets which hath ſtone ſhoppes on both ſides with all manner of Merchandizes; vpon their ſhops they haue their houſes built of ſtone, cunningly painted more then the former Cities. The Caſtle of *Magnet* is curiouſly ſet forth with all manner of artificiall and precious deuices, in the middeſt whereof ſtandeth the Kings Palace, the top whereof is all gilt ouer with Gold. And they would not admit vs to come before their King without Preſents, ſaying, it was not the manner of *Catay*, to come before their King without ſome Preſent, and though (ſaid they) your white Emperour had but ſent with his firſt Ambaſſadours to our King ſome thing of no great value, our King would haue ſent him many precious things, and diſmiſſed you his Ambaſſadours honourably, and haue ſent his Ambaſſadours with you: but now hee only endeth his Letter to your Emperour. The Citie of *Catay*, where the King dwelleth, is built vpon an euen plaine ground, and is incompaſſed round about with a Riuer called *Yonga*, which falleth into the blacke Sea, which is from the Citie *Catay* ſeuen dayes trauell, ſo that there come no ſhips neerer the Citie *Catay*, then ſeuen dayes trauell off, but all things are tranſported in ſmall Veſſels and ſhip-boats. The Merchandizes the King doth ſend into all parts of his Dominions of *Catay*, and from thence are carried ouer the borders, into the Land of *Mugalla*, to the King *Altine*, to the blacke *Kollmakes*, to the Iron King, into *Boghar* and other Dominions, their Patriarkes and Friers, trauell with the Commodities, as Veluets, Sattens, Damaskes, Siluer, Leopard Skinnes, Turkeſſes, and blacke Zenders, for which they buy Horſes, and bring them into *Catay*, for in *Catay* are but few horſes, only Mules and Aſſes, and Cloth they haue none, their Horſes and Siluer goeth into ſtrange Countreyes, or as they ſay, *Nemtſy*, the Siluer is made in Brickes, which they call *Kritſy*, valued each *Kritſy* at fiftie two Rubles, their Apparell they weare with long broad hanging ſleeues, like the Gentlewomens Summer-coats or *Lettinks* in *Ruſſia*, the people are very faire but not warlike, timorous & moſt their endeuour is in great and rich traffick. They told vs that not long before our comming, the people of *Mugalla* had taken two Caſtles from them by deceit, alſo *Catay* greateſt Citie of *Catay*. If *Catay* be the ſame with *China* (as before in *Goes* and the Ieſuites is obſerued) many difficulties ariſe. But this *Ruſſian* Relation and that of *Cheggi Memet* ſeeme to agree to place ſome *Catay*, North from *China*, if this did not ſpeake of the wall. The *Tartar* names ſo differ from thoſe of the *Portugalls*, that it is hard to reconcile them. And the Ieſuits make foure moneths trauell from the wall to *Pequin*, which is here but a few daies: except we ſay the *Ruſſes* entred the wall at the North East part of it: which the

ſhortneſſe of their iourney admits not. Perhaps this chiefe Citie was but the chiefe of that Prouince where the Vice-roy reſided, and they were willing to make the moſt of their trauells *Ruſſica fide*. Yet the neereneſſe of the Sea, there alſo cauſeth ſcruple. I ſuppoſe rather that theſe *Ruſſes* entred *China* but a little way, and receiued the Vice-royes Letter only (there obſerued with Regall Rites) and had much by Relation, of that little which they tell. How euer I haue here offered this to thy view at more leiſure to vſe thy more iudgement.

Digitized by Google

they told vs that their King hath a stone which lighteth as the Sunne both day and night, called in their Language *Sarra*, and in our Tongue *Iachant*, or Rubie; another stone they say hee hath, which driueth away water from it, it is also called a Rubie. There come to them Strangers, or *Nemtsij* euery yeere, with all manner of Merchandizes, and barter for Deere Skinnes, and Loshids, Sables, Beuers, Veluets, Taffataes, and Zendews, or Calico; these strangers, they say, come to them out of the blacke Sea, from the East and the South, also, they say, there is a Riuer called *Kartalla*: which falleth into the great Riuer *Ob*; but they know neyther the head, nor the fall of it, they imagine it commeth out of the blacke Sea, and falleth into it againe, vpon this Riuer dwell many people with walking Herds.

Merchants.

Kartalla Riuer.

Ob.

For a triple testimony of Sir *Iohn Merikes* honourable courtesie, I haue added this succeeding Patent, which howsoeuer in some things it concurre with the former of *Boris* and *Demetrius*; Yet those being obscurely translated or written, this may illustrate them; and it also presenteth both larger Priuiledges, the Patriarkes name ioyned with the Emperours, and the Golden Seale.

WE *the great Lord Emperour and great Duke* Michaell Pheodorowich *of all* Russia, *sole Commander of* Volodemer, Mosco, *and* Nouogrod, *Emperour of* Cazan, *Emperour of* Astracan, *Emperour of* Siberia, *Lord of* Plesco, *and great Duke of* Smolensky, Twensky, Vgorsky, Permesky, Vatsky, Bolgorsky, *and others*; *Lord and great Duke of* Nouogrod, *in the lower Countreyes*, Cheringosky, Rahansky, Rostouskey, Yaraslausky, Belozersky, Vdorskey, Obdorsky, Condinsky, *and of all the Northerne parts Commander, and Lord ouer the Country of* Iuersky, *and* Caberdynland, Cherkaskey, *and of the Dukedomes of* Igorskey, *and of many other Kingdomes, Lord and Conquerour. Together with the great Lord* Philleret Neketich, *the holy Patriarke and Head of the Reuerend Clergie of the Imperiall Citie of* Mosco, *and of all* Russia *by the flesh our naturall Father, and by the power of the Holy Ghost our Spirituall Pastor and Ghostly Father.*

Whereas there was sent vnto vs the great Lord Emperour, and great Duke Michaell Pheodorowich *of all* Russia, *and to our Father, the great Lord, the holy Patriarke of* Mosco, *and of all* Russia, *From our louing Brother* Iames, *by the grace of God, King of* England, Scotland, France, *and* Ireland; *and of many others his Maiesties Ambassadour Sir* Iohn Merike, *Knight and Gentleman of his Maesties Priuie Chamber, vpon both our Princely Affaires.*

The said Sir Iohn Merike, *in the name of our said louing Brother King* Iames *requested our Imperiall Maiestie, and our Father the great Lord, the holy Patriarke, to bee pleased graciously to fauour the* English *Merchants, to grant them leaue to come with their shippes vnto our Port and Hauens of* Archangell, *with all kind of Commodities, and freely to traffique from the Sea side, to our Imperiall Citie of* Mosco, *and to our Patrimonie of great* Nouogrod *and* Plesco, *and vnto all other our Cities, Townes, and Countreyes of our Empire, with all sorts of Commodities, without paying of Custome in as ample manner as formerly hath beene granted to the* English *Merchants, and that our Imperiall Maiestie, together with our deere Father the holy Patriarke, would be pleased to grant a new our gracious Priuiledges vnder our Princely Seale, according as our Predecessors Emperours, and great Dukes of all* Russia, *haue heretofore granted vnto them.*

We therefore the great Lord Emperour, and great Duke Michaell Pheodorowich *of all* Russia, *sole Commander; together with our deere Father the holy Patriarke of* Mosco, *and of all* Russia; *for the loue we beare to our most louing Brother the great Lord King* Iames, *with whom wee are willing and desirous euer to remayne in the strongest bonds of brotherly loue and friendship, haue graciously granted to his Kingly Maesties Subiects the* English *Merchants, Sir* Thomas Smith *Knight, Sir* Iohn Merike *Knight, Sir* Richard Smith *Knight, Sir* William Russell *Knight, Sir* George Bowles *Knight*, Hugh Hamersley *Alderman*, Ralph Freeman, Richard Wytch, Morris Abbot, Robert Bateman, William Stone, Rowland Healing, Iob Hanby, Richard Ironside, Edward Iames, Iohn Casten, Beniamin Deicrow, Fabyan Smith, *and their fellowes free leaue to come with their shippes into our Kingdomes, into our Countreyes of* Dweena, *vnto the Port of* Archangell, *and from thence to our Imperiall Citie of* Mosco, *and of* Nouogrod *the Great, and vnto* Plesco, *and into all other the Cities of our Empire, to trade and traffique with all kind of Merchandizes, free of all Customes, as well the great Customes as Tole: vnlading of Vessels or Boats, passages through any place by water or Land entries, Head-money, Bridge-money, Ferryings, or any manner of Customes, or Duties whatsoeuer can bee named.*

The English *Merchants being thus licensed to trade in our Kingdomes, free of all customes for their owne commodities, shall neither colour nor sell strangers wares, as their owne; neither shall our people sell for them any of their goods, nor yet shall they keepe any of our people vnder their protection: and into what Cities the* English *Merchants themselues, or their Factors, or Seruants shall come with their goods, it shall be lawfull for them freely to traffick and sell their owne commodities, in barter, or otherwise against Commodities of our Countrey.*

And whensoeuer the said Merchants shall come into our Patrimony of great Nouogrod *and* Plesco, *or into any other the Cities of our Empire; Wee straightly command our Nobles in generall, and all o-*

ther

ther our authorized people, that according to this our Imperiall letters of priuiledge, they suffer the foresaid Merchants to passe without all manner of hindrance or lets, & without taking any manner of custome of them for themselues, or for their goods; and into what place soeuer they shall come, or passe with their Merchandize, and shall not desire to buy nor sell with our people; those our authorized people shall freely let them passe without taking any manner of customes, according to this our Imperiall gracious priuiledge.

And whereſoeuer the English *Merchants shall happen to sell or barter any of their commodities with our Merchants, they are to barter and sell them in their owne house by grosse sale, and not by retaile, in small measure and weight, as by the yard, pound and ounce; that is to say, their Cloath by whole Cloathes and Packs: Damaske and Veluets by the Peece; and all other wares that are to be sold by weight accordingly. Also the Wines by the great, viz. by the Butt, the Pipe, the Hogshead, and by the Anme, and not by small measure, as Vaders or Pots.* This doth cleer the doubtfull passages, pag. 760.

And the said English *Merchants are to sell and barter their owne Commodities themselues in our Empire. But the* Russe *Merchants shall neither sell nor barter for them, neither shall the* English *carry or transport to or from any place, any Wares belonging to other Strangers, by way of their owne goods.*

And if the said English *Merchants shall be desirous to sell any of their commodities, at* Colmogro, *or vpon the Riuer of* Dwina, *or at* Vologda *or* Yereslaue, *or other the Townes and Cities of our Empire, they may sell at their pleasures; as likewise at their owne choise and pleasure, they may transport their goods into all or any part of our Dominions, and hire Carriers, Boats, and men at such price as they themselues can agree.*

Also when the English *Merchants themselues, or any of their Factors, doe trauell out of our Dominions into their owne, or other forraigne Kingdomes, and that wee shall be pleased to deliuer them of our Treasure, they shall take it with them, and sell, and barter it for such commodities as wee shall thinke fit and necessarie for our vse, and Treasury: our Gouernours, and all other our Officers, in all our Cities and Dominions, shall suffer them and their people freely to passe without taking any custome of them: but when the* English *Merchants haue done their trafficke, and are going from our Citie of* Mosco, *they shall giue notice thereof vnto the Chancellour of our Office of Ambassadours.*

Further, when any English *Merchants shall come with their Shippes and Vessels by Sea, into our Dominions, and that any misfortune happen vnto them by shipwracke on any of our shoares or coasts, our Gouernours and Officers shall cause search to be made for their goods, and shall aide and helpe them faithfully therein, and the goods gathered together shall be restored to the* English *Merchants, who shall be at that time in our Kingdomes; and if there shall be at that time none of the* English *Merchants, or people in our Kingdomes, the said goods shall be taken and laid vp in safety, and deliuered without delay to the* English *Merchants when they shall come into our Countrey, and shall challenge the same.*

Further, of our gracious goodnesse, we gaue free leaue to the English *Merchants, and Company, to keepe the house in* Mosco *by Saint* Maxsime *behinde the Market place, and shall remaine after their old manner, and therein shall haue one housekeeper a* Russe, *or else one of their owne Seruants; but no other* Russe *people: the houses which the* English *Merchants haue in other places of our Dominions, as at* Yereslaue, Vologda, Collm. *and at Saint* Michaell *Archangell, they shall keepe and vse at their pleasure, according to our former gracious fauour, without paying any duetie, rent, taxe, or any manner of custome whatsoeuer: neither shall the people of the said Townes take any thing of them, or theirs, for any duetie whatsoeuer belonging to their houses: and the said* English *Merchants shall enioy their said houses peaceably to themselues, without the annoyance of any Stranger or other to lodge in them, whether in time of their being there, or in their absence.*

And in their houses at Yereslaue, Vologda, Collmogro, *and* Archangell, *they shall likewise haue a housekeeper of their owne people, or of our Subiects, a man or two of the meaner sort; but so, that those our people be no merchants.*

Their Housekeeper being a Russe *shall not vndertake to meddle or sell any of their wares without themselues be present, and they the* English *Merchants, by vertue of this our gracious Letters of priuiledge, shall lay their wares and commodities in their owne houses, and sell them to whom they please.*

And it shall be lawfull for the said Merchants, when they shall arriue at our Sea Port, to lade and vnlade their Merchandizes, as in times past, at their pleasures: and when they lade or vnlade their Shippes, it shall be lawfull for them to hire any of our Subiects to helpe them, and shall haue leaue to carry their goods to and fro with their owne Vessels, and howse them in their owne Ware-houses: onely they shall giue a note vnder their hand to our Gouernours, Customers, or sworne men, what goods they bring in, and Shippe out; whereby it may be knowne what goods commeth in, and goeth out of our Kingdomes: but in no wise our Officers shall open or vnpacke any of their Wares or Merchandize in any place whereſoeuer.

Also when the English *Merchants shall Shippe or transport any of their Countrie Commodities from Saint* Michaell *Archangell, to our royall Citie of* Mosco, *or* Russe *Commodities, into their owne Countrie: our authorised Officers and Customers, by vertue of this our Imperiall Letters of priuiledge,*

shall suffer them to passe with their goods in and out, without doing them any manner of hindrance.

And whensoeuer any of the said English *Merchants or Factors shall haue occasion to send ouerland, out of our Dominions, any of their people, or Seruants, into their owne Countrie ouerland, they shall freely passe by this our speciall command, onely they are to take a passe letter from our Chancellour of the Office of Embassie.*

And whosoeuer in any of our Cities, shall haue any matter against the English *Merchants by way of contention, we command that none of our Gouernours, nor other of our Officers, doe iudge the* English *Merchants, their Factors or people: neither shall they send Officers for them, except for matter of murther or theft, and that also not to be done, but by manifest token thereof: but the* English *Merchants, their Factors and people, shall onely haue triall, and be iudged in our Imperiall Citie of* Mosco, *by vertue of this our gracious Letters of priuiledge, before our Chancellour in this Office of Embassie, and in no other place or Towne, and he to heare their causes, and to giue iustice betweene both parties, according to equitie and right; and where the truth cannot be found out by Law, it shall be referred to oath and lot, and on whom soeuer the lot fals, to him shall the right be adiudged.*

And if any of the English *Merchants, in any of our Cities within our Kingdomes, doe complaine of any wrong offered them by our people, for debts growing by trade or otherwise: we command our Gouernours, and all other our authorised people, that they presently minister true iustice vnto them. And for any wrong or other matter of controuersie that the* English *Merchant shall haue against any of our Subiects, our Gouernours and other our authorised people vpon their complaint for all controuersies (matters of debt excepted) shall giue our Subiects so offending vpon suretie, setting them time to appeare at* Mosco, *to answere the same with the* English *Merchants, face to face, before our Chancellour in the Office of Embassy: and in these matters our Chancellour shall truely examine the businesse, and minister true iustice: and what by examination cannot be found, shall be referred, as before, to oath and lot: the Iudges and Iustices through our Dominions shall take no kinde of duetie of the* English *Merchants for their matters of Law.*

We will and command, that these our Imperiall gracious Letters of priuiledge, be strictly obserued in all points, in all parts of our Dominions, and by all our Subiects, Gouernours, Secretaries, and other Officers, without disobeying in any thing.

And whosoeuer shall not obey this our Princely and gracious Letters of priuiledge, but shall offer wrong to the English *Merchants, those our Subiects shall be with vs in our high displeasure.*

Sealed with th Golden Seale.

These our gracious Letters of priuiledges, are sealed with our Imperiall Seale of Gold, in our Princely Pallace of our Imperiall Citie of Mosco, *in the yeare from the Worlds creation 7129. in the moneth of May, the eleuenth day.*

Subscribed by our Imperiall Maiesties Chancellour of our Office of Embassy, and our priuie Chancellour Euan Corbatouesin Gramotin.

BVt it is now high time to leaue Russia, *and all that Barbarous shoare, of* Samotees *and* Tartars: *onely we will borrow helpe of some Barbarians to shippe vs thence to Sea. And although* Finch, Gourdon, *and others haue in the former Booke inserted so great light: yet seeing Master* Marsh *hath entertained other guides, we will take Sea by* Ob, *and thence set forth on further discoueries.*

CHAP. XII.

Notes concerning the discouery of the Riuer of Ob, *taken out of a Roll, written in the* Russian *tongue, which was attempted by the meanes of* ANTONIE MARSH, *a chiefe Factor for the* Moscouie *Company of* England, 1584. *with other notes of the North-east.*

FIrst he wrote a Letter from the Citie of *Mosco*, in the yeare 7092. after the *Russe* accompt, which after our accompt was in the yeare 1584. vnto foure *Russes* that vsed to trade from *Colmogro* to *Pechora*, and other parts Eastward: whose answere was:

By writings receiued from thee, as also by reports, wee vnderstand thou wouldest haue vs seeke out the mouth of the Riuer *Ob*; which we are content to doe; and thou must giue therefore fiftie rubbles: It is requisite to goe to seeke it out with two Cochimaes, or companies; and each Cochima must haue ten men: and wee must goe by the Riuer *Pechora* vpwards in the Spring, by the side of the Ice, as the Ice swimmeth in the Riuer, which will aske a fortnights time; and then we must fall into *Onson* Riuer, and fall downe with the streame before we come to *Ob*, a day and a night in the spring. Then it will hold vs eight dayes to swimme downe the Riuer *Ob*, before we come to the mouth: therefore send vs a man that

How to finde out *Ob* from *Pechora*.

Onson Riuer.

can

Digitized by Google

can write; and assure thy selfe the mouth of *Ob* is deepe. On the *Russe* side of *Ob* soiourne *Samoeds*, called *Vgorskai* & *Sibierskie*, *Samoeds*; and on the other side dwel another kinde of *Samoeds*, called *Monganei*, or *Mongaseisky*, *Samoeds*. We must passe by fiue Castles that stand on the Riuer of *Ob*. The name of the first is *Tesuoi Gorodok*, which standeth vpon the mouth of the Riuer *Padon*. The second small Castle is *Nosoro-gorodock*, and it standeth hard vpon the side of *Ob*. The third is called *Necheiour-goskoy*. The fourth is *Charedmada*. The fift is *Nadesneaa*, that is to say, *The Castle of comfort, or trust*; and it standeth vpon the Riuer *Ob*, lowermost of all the former Castles toward the Sea. *Vgorskai* and *Sibierskie*.

Heretofore your people haue bin at the said Riuer of *Obs* mouth with a Ship, and there was made shipwracke, and your people were slaine by the *Samoeds*, which thought that they came to rob and subdue them. The Trees that grow by the Riuer are Firres, and a kinde of white, soft and light Firre, which we call *Yell*. The bankes on both sides are very high, and the water not swift, but still and deepe. Fish there are in it as Sturgeons, and Cheri, and Pidle, and Nelma, a dainty fish like white Salmons, and Moucoun, and Sigi, and Sterlidi: but Salmons there are none. Not farre distant from the maine, at the mouth of *Ob*, there is an *Island*, whereon resort many wilde beasts, as white Beares, and the Morses, and such like. And the *Samoeds* tell vs, that in the winter season, they oftentimes finde there *Morses* teeth. If you would haue vs trauell to seeke out the mouth of *Ob* by Sea, we must goe by the Isles of *Vaygats*, and *Noua Zembla*, and by the Land of *Matpheone*, that is, by *Matthewes* Land. And assure thy selfe that from *Vaygats*, to the mouth of *Ob*, by Sea, is but a small matter to saile. Written at *Pechora*, the yeare 7092. the twenty one of February. A shipwracke at the mouth of *Ob*. An *Island* neere the mouth of *Ob*. The way to discouer *Ob* by Sea *Mattpheone* or *Matthewes* land. After our stile 1584.

Master MARSH *also learned these distances of places and Ports, from* Caninos *to* Ob *by Sea.*

FRom *Canines* to the Bay of *Medemske* (which is somewhat to the East of the Riuer *Pechora*) is seuen dayes sayling. The Bay of *Medemsky* is ouer a day and a halfe sayling. From *Medemske Sanoroft* to *Carareca*, is sixe dayes sayling. From *Carska* Bay to the farthest side of the Riuer *Ob*, is nine dayes sayling. The Bay of *Carska* is from side to side, a day and a nights sayling. *Canines*. *Medemske*. *Carareca*. *Carska*. *Ob*.

He learned another way by *Noua Zembla* and *Matthuschan Yar* to *Ob*, more North-eastward. From *Canines* to the Iland of *Colgoieue*, is a day & a nights sayling. From *Colgoieue* to *Noua Zembla* are two dayes sayling. There is a great *Osera* or Lake vpon *Noua Zembla*, where wonderfull store of Geese and Swannes doe breede, and in moulting time cast their feathers, which is about Saint *Peters* day: and the *Russes* of *Colmogro* repaire thither yearely, and our *English* men venter thither with them seuerall shares in money: they bring home great quantitie of Doune-Feathers, dried Swannes, and Geese, Beares skinnes, and Fish, &c. From *Naromske Reca* or Riuer to *Mattuschan Yar*, is sixe dayes sayling. From *Mattuschan Yar* to the *Perouologli Teupla*, that is to say, To the warme passage ouer-land, compassing or sayling round about the Sands, is thirteene dayes sayling: And there is vpon the Sands at a full Sea, seuen fathomes water, and two fathomes at a low water. The occasion of this highing of the water, is the falling into the Sea of the three Riuers, and the meeting of the two Seas, to wit, *The North Sea*, and *The East Sea*, which make both high water and great Sands. And you must beware that you come not with your Shippe neere vnto the Iland by the Riuer *Ob*. From *Mattuschan Yar* to this Iland, is fiue dayes sayling. *Mattuschan Yar* is in some parts fortie Versts ouer, and in some parts not past six Versts ouer. *Canines*. *Naromske*. *Mattuschan Yar*. The Sands. The two Seas: that is, the North and the East Sea. The bignes of the Cliffe or Isle of *Mattuschan*.

The aforesaid *Anthonie Marsh* sent one *Bodan* his man, a *Russe* borne, with the aforesaid foure *Russes*, and a yong youth, a *Samoed*, which was likewise his Seruant, vpon the discouery of the Riuer of *Ob*, by Land, through the Countrie of the *Samoeds*, with good store of commodities to trafficke with the people. And these his Seruants made a rich Voyage of it, and had bartered with the people about the Riuer of *Ob*, for the valew of a thousand rubles in sables, and other fine Furres. But the Emperour hauing intelligence of this Discouery, and of the way that *Bodan* returned home by, by one of his chiefe Officers lay in waite for him, apprehended him, and tooke from him the aforesaid thousand Markes worth of Sables, and other Merchandises, and deliuered them into the Emperours Treasurie, being sealed vp, and brought the poore fellow *Bodan* to the Citie of *Mosco*, where he was committed to prison, and whipped, and there detained a long while after, but in the end released. Moreouer, the Emperours Officers asked *Anthonie Marsh*, how he durst presume to deale in any such enterprise? To whom he answered, that by the priuiledges granted to the *English* Nation, no part of the Emperours Dominions were exempted from the *English* to trade and trafficke in: with which answere, they were not so satisfied, but that they gaue him a great checke, and forfeited all the aforesaid thousand Markes worth of goods, charging him not to proceede any further in that action: whereby it seemeth they *Anthonie Marsh* sent two of his men vpon the discouery of *Ob* by land with foure *Russes*. *Bodan* Master *Marsh* his man brought to *Mosco*. *Russian* icalousie of discouery

they are very iealous that any Christian should grow acquainted with their Neighbours that border to the North-east of their Dominions, for that there is some great secret that way, which they would reserue to themselues onely. Thus much I vnderstood by Master *Christopher Holmes.*

The report of Master FRANCIS CHERRY *a* Moscouie *Merchant, and Master* THOMAS LYNDES *touching a warme Sea to the South-east of the Riuer* Ob, *and a Note of* FRANCIS GAVLLE.

MAster *Francis Cherry*, one of the chiefe Merchants of the *Moscouy* Companie, which was the Emperour *Iuan Basiliwich* his Interpreter, and hath trauailed in person into *Permia* farre to the East in *Russia*, saith, That he hath eaten of the Sturgeon that came out of the Riuer of *Ob*. And that in those parts it is a common receiued speech of the *Russes* that are great trauailers, that beyond *Ob* to the South-east there is a warme Sea. Which they expresse in these words in the *Russe* tongue; *Za Oby reca moria Teupla*, that is to say, *Beyond the Riuer Ob is a warme Sea.* Furthermore, Master *Thomas Lynde* an honest and discreet *English* Merchant, which hath likewise liued many yeeres in those parts of *Moscouy*, saith, That this Sea beyond *Ob*, is by the report of the *Russes*, that are trauailers, so warme, that all kinde of Sea fowles liue there as well in the Winter as in the Summer, which report argueth, that this Sea pierseth farre into the South parts of *Asia*.

A warme Sea beyond *Ob.*

Master *Thomas Linde.*

Third Volume of *English* voyages, *pag.* 446.

Francis Gaulle that passed the Ocean betweene *Iapan* and *Noua Hispania*, in the Latitude of 37. degrees and a halfe, writeth thus. Prouing a great Sea to come from the North-east parts of *Tartaria*; running thus East and East and by North about three hundred leagues from *Iapan*, we found a very hollow water, with the streame running out of the North and North-west, with a full and very broad Sea, without any trouble or hinderance in the way that we past. And what winde soeuer blue, the Sea continued all in one sort with the same hollow water and streame, vntill we had passed seuen hundred leagues. About two hundred leagues from the Coast of *New Spaine* we began to lose the said hollow Sea, whereby I perswade my selfe that there you shall finde a Channell or straite passage betweene the firme Land of *New Spaine* and the Countrie of *Asia* and *Tartaria*. We found all this way Whales, Tunnies, Bonitos, which are fishes that keepe in Channels, Straits, and running Waters, there to disperse their seede, which further confirmeth me in that opinion.

See of these voyages, *Hak. Tom.* I.

But seeing thus we are shipped from Russia, *and haue againe taken Sea, that which Ice permitted not to* Stephen Burrough, Pet *and* Iackman, *nor others*, English *and* Dutch, *which haue attempted that North-east passage; and that which Master* Baffin *said to me, that if he might haue imployment, he would aduenture to discouer from the Coast of* China *and* Iapan *on the North of* Asia *hitherward; all this shall be suddenly pernious to our swifter and vnstayable thoughts, to set vs in a new discouery by* Danish *and* English *assistance for a North-west passage, so often, not so fortunately attempted, as by Reason it seemeth probable and almost certaine, especially that way where Sir* Th. Button *and* Nelson *left. But we will discouer these Discoueries more methodically and historically to you, that you may see the* English *ancient right, as I may say, to those parts of the new World.*

CHAP. XIII.

Discoueries made by English-*men to the North-west: Voyages of Sir* SEBASTIAN CABOT, *Master* THORNE, *and other Ancients: and of Master* WEYMOVTH.

WE haue before giuen some light of the North-west, in *Hudsons* and other mens Voyages. The desire of Riches in some, of Knowledge in others, hath long whetted mens industries, to finde out a more compendious way to the East *Indies*, by a shorter cut then the vsuall passage, which in going to the places of principall Trade there, and the returning thence by enforced compassings, is made no lesse a Voyage for time, cost, danger and labour, then the immediate compassing of the whole Globe, as in Master *Candishes* circumnauigation (not to mention others) is euident. But if either by the North-east, or North-west, or North, a passage be open, the sight of the Globe (the Image of the site of the World) easily sheweth with how much ease, in how little time and expense the same might be effected, the large Lines or Meridians vnder the Line contayning sixe hundred miles, con-

Digitized by Google

contracting themselues proportionably as they grow neerer the Pole, where that vast Line and Circumference it selfe becomes (as the whole Earth to Heauen, and all earthly things to heauenly) no Line any more, but a Point, but Nothing, but Vanitie. Hence such laborious searches from *Columbus* his first discouerie (that also occasioned by a conceit of finding the East by the West, whereupon he named *Hispaniola Ophir*, thinking he had then arriued at the East *Indies*) especially the *English*, seated commodiously for that discouerie, and to reigne ouer the Northerne and Westerne Ocean, haue herein beene more then industrious.

Doctor *Powell* in his historie of *Wales* saith, that *Madoc sonne of* Owen Guyneth *left the Land in contention betwixt his brethren, and prepared certaine ships with men and munition, and sought adventures by Sea, saying West, and leauing the Coast of* Ireland *so farre North, that hee came vnto a Land vnknowne, where he saw many strange things.* There hee left many of his people *An.* 1170. and returned for more of his owne Nation and Friends to inhabite that large Countrie, going the second time thither with ten sailes. This westerne Land is like to be some part of the West *Indies*, though the vniuersall sauagenes of those parts make it questionable where. But he which seeth how some of our *English* in small time haue growne wilde in *Ireland*, and become in language and qualities *Irish*, few of whom doe in exchange become ciuilized and *English* (euen as healthfull men are easier infected in a contagious aire, then sicke men recouered in that which is wholsome and sound) will not wonder that in so many Ages the halfe ciuilized *Welsh*, amongst *Barbarians*, without succession of Priests and entercourse of these parts, might wholly put on feritie. *Meredith ap Rise* a *Welsh* Poet, which liued before *Columbus* had begun his discouerie, hath these verses.

Some thinke that the *Mexican* Kings (*Mutezuma* the last, professed that they were strangers) were hence deriued.

Madoc wyf, myedic wedd, Iawn Genau, Owyn Guynedd
Ni sinnum dir, fy enaid oedd Na da Mawr, ond y moroedd. that is.

Madoc I am the sonne of *Owen Gwynedd*, With stature large and comely grace adorned,
No lands at home nor store of wealth me please, My mind was whole to search the Ocean seas.

Columbus also sent his brother *Bartholomew* to King *Henrie* the seuenth, to make offer of his seruice in the New-Worlds discouerie, which fell by the way into the hands of Pirats, whereupon pouertie assaulted him with sickneſſe in a forraine Countrie, so that hee was forced to get some- what about him by making of Maps: one whereof had this more ancient then elegant inscription. *D.F. Colon de vita patris Christoph. Col. c.13.*

Ianua cui patria est, nomen cui Bartholomæus Columbus de Terra Rubra, opus edidit istud Londonijs An. Domini 1480. *atq; insuper anno Octauo decimaq; die cum tertia mensis Februarij. Laudes Christo cantentur abundè.*

Whose Countrie *Genua* is, whose name *Bartholomew Colon de Terra Rubra*, this worke set forth new
At *London*, A thousand foure hundred eightie
Februarie thirteenth, sing praise to Christ on height.

One of these Maps hee presented to King *Henrie* with the said offer, who cheerfully accepted the same, and sent to call his brother into *England*, who before he could effect it, was imployed by the Kings of *Castile*.

Columbus his fortunes awakned others industrie, amongst the rest *Iohn Cabota* a *Venetian*, and his three sonnes *Lewis*, *Sebastian*, and *Sancius*, who obtayned a Patent of King *Henrie* the seuenth for discouerie with fiue ships with *English* Masters, Mariners, and Colours also, the same to erect in whatsoeuer Lands vnknowne before to Christians, to hold the same to them and their Heires as Vassals and Lieutenants to the Crowne of *England*, paying the fifth part of their gaine at *Bristoll*, &c. See *Hak. tom. 3. pag. 5.*

In the yeere 1497. Iohn Cabot *a* Venetian, *and* Sebastian *his sonne* (these are the wordes of the great Map in his Maiesties priuie Gallerie, of which *Sebastian Cabot* is often therein called the Authour, and his Picture is therein drawne, with this Title, *Effigies Sebast. Caboti Angli, filij Io. Ca. Venetiani, Militis Aurati*, &c.) *discouered that Land which no man before had attempted Iun.* 24. *about fiue in the morning. This Land he called* Prima vista (primum visam, *or* first seene) *because that was first descried from Sea. That Iland which lyeth out before the land; he called Saint* Iohns *Iland, because on that feast day it was discouered. The Inhabitants weare beasts skins and as much esteeme them, as we doe garments most precious. In their warres, they vse Bowes, Arrowes, Pikes, Darts, Clubs of wood and Slings. The soile is barren in some places and yeeldeth little fruit; but it is full of white Beares and Stags of vnusuall greatnesse. It aboundeth with Fishes and those great, as Seales and Salmons; Soles also an elle long. Especially there is great store of those fishes which they call commonly* Bacallaos. *There breede also Hawkes as blacke as Ravens, Partridges and blacke Eagles.* This Map, some say, was taken out of Sir *Seb. Cabots* Map by *Clem. Adams* 1549.

Thus wee see New-found Land discouered by *English* Ships, Mariners and iurisdiction. Sir *Sebastian Cabot*, for his *English* breeding, conditions, affection and aduancement, termed an *English* man, thus reported of this voyage; That vpon occasion of the admiration of *Columbus* his voyage into the East, where Spices grew, by the West, so rife then in the Court of King *Henrie* the seuenth, there arose in his heart a great desire to attempt some notable thing. And vnderstanding *Ramus. Tom. 2.* See *Hak. Tom. 3. pag. 7.*

Digitized by Google

ſtanding by the Sphere (ſaith he) that if I ſhould ſaile by the North-weſt, I ſhould by a ſhorter Tract come into *India*; I thereupon cauſed the King to be aduertiſed of my deuiſe; who immediately commanded two Caruels to bee furniſhed with all things appertayning to the Voyage; which was, as farre as I remember, in the yeere 1496. in the beginning of Summer. I beganne therefore to ſaile toward the North-weſt, not thinking to find any other Land then that of *Cathay*, and from thence to turne toward *India*. But after certaine dayes I found that the Land turned toward the North, which was to me a great diſpleaſure. Neuertheleſſe, ſayling along by the Coaſt to ſee if I could finde any Gulfe that turned, I found the Land ſtill continent to the 56. degree vnder our Pole. And ſeeing that there the Coaſt turned toward the Eaſt, deſpayring to finde the paſſage, I turned backe againe, and ſayled downe by the Coaſt of that Land toward the Equinoctiall (euer with intent to finde the ſaid paſſage to *India*) and came to that part of this firme land, which is now called *Florida*; where my victuals fayling I returned towards *England*; the tumults and preparations of warres againſt *Scotland* cauſed that then no more conſideration was had to this voyage. Whereupon I went into *Spaine*, &c. By the King and Queene there he was ſet forth and diſcouered the Riuer of *Plate*, and ſayled into it more then ſixe ſcore leagues. After this he made many other voyages, &c. Sir *Seb. Cabot* was after by King *Edward* the ſixt conſtituted grand Pilot of *England* with the annuall ſtipend of one hundred and ſixtie ſix pounds thirteene ſhillings and foure pence, and was Author of the *Ruſſian* and North-eaſterne diſcoueries. *Fabian* in his Chronicle *A. R. Hen.* 7. 14. hath this teſtimonie. This yeere alſo were brought vnto the King three men taken in the New-found Land, in *William Purchas* time being Major. Theſe were clothed in beaſts skins, and did eate raw fleſh, and ſpake ſuch ſpeech that none could vnderſtand them, and in their demeanour like to bruit beaſts, whom the King kept a long time after. Two yeeres after I ſaw two of them at *Weſtminſter*, apparelled like *Engliſh*, &c.

All the Coaſt to *Florida* diſcouered by the *Engliſh*: from 67. deg. 30. min. as he writ to *Ramuſio. R. Preſat. Tom.* 3. as likewiſe he was cauſe of the *Ruſſian* and *Greenland* diſcoueries.

See *ſup. l.* 2. *c.* 1.

W. Purchas.

Thorn and *Eliot* firſt finders of *America.*

Maſter *Robert Thorne* writes, that his Father and Maſter *Hugh Eliot* a Merchant of *Briſtoll*, were the firſt diſcouerers of New-found Land: and if the Mariners would haue beene ruled and followed their Pilots minde, the Weſt *Indies* had beene ours: ſo that it ſeemeth this Diſcouerie was before that of *Columbus*. Maſter *Hakluyt* hath publiſhed the particulars of theſe things more fully, as alſo diuers Treatiſes touching the North-weſt of Sir *Humphrey Gilbert* and others: to which I referre the Reader; and no leſſe for the Voyages made by diuers *Engliſh* into thoſe parts: three by Sir *Martin Frobiſher*, in the yeeres 1576, 77, and 78. Two of Captaine *Iohn Dauies*, in 86, and 87. that of Maſter *Hore*, *An.* 1536. that of Sir *Humphrey Gilbert*, 1583. that of Maſter *Charles Leigh* to *Ramea*, *An.* 1597. and before in 1593. that of *George Drake*; with thoſe of *Iaques Cartier*, and diuers others. My purpoſe is not to ſteale Maſter *Hakluyts* labours out of the World, by culling and fleecing them for our purpoſe, but by this *Index* to inſtruct men where they may haue feſtiuall ſtore in this kinde. I had rather giue you new things. Such are to the World, theſe that you had before in *Hudſons* voyages ſet together, as alſo thoſe of *Greenland*: and ſuch are thoſe of *Waymouth*, *Knight*, *Hall*, *Baffin*, *&c.* And firſt, as Foreman of our Queſt, we will giue you Sir *Humphrey Gilberts* Letter, written with his owne hand from *New-found Land*, whereof he tooke formall poſſeſſion to the Crowne of *England*, and was as a Martyr of thoſe Diſcoueries. It was written to Sir *George Peckham* (a great Aduenturer in that voyage, and a greater in one of longer life, his written Treatiſe of Weſterne planting, extant in Maſter *Hakluyts* third Tome) and I haue here inſerted, it being hitherto vnprinted, as a memorial of both their worths; and after it (though in time before) wee will recreate you with a plaine Mariners Letter endorſed in homely phraſe, To the Honorable Kings Grace of *England*, here (as I thinke) giuen you from the Originall. I haue alſo another written to Cardinall *Wolſey* touching the ſame voyage in Latin, by *Albertus de Prato*; for the antiquitie, rather then any remarkable raritie, worthy here to be mentioned.

Sir George, *I departed from* Plymouth *on the eleuenth of Iune with fiue ſailes, and on the thirteenth the Barke* Rawley *ran from me in faire and cleere weather, hauing a large winde. I pray you ſolicite my brother* Rawley *to make them an example of all Knaues. On the third of Auguſt wee arriued at a Port called Saint* Iohns, *and will put to the Seas from thence (God willing) ſo ſoone as our ſhips will be ready. Of the* New-found Land *I will ſay nothing, vntill my next Letters. Be of good cheare, for if there were no better expectation, it were a very rich demaynes, the Country being very good and full of all ſorts of victuall, as fiſh both of the freſh water and Sea-fiſh, Deere, Pheaſants, Partridges, Swannes, and diuers Fowles elſe. I am in haſte, you ſhall by euery Meſſenger heare more at large. On the fifth of Auguſt, I entred here in the right of the Crowne of* England; *and haue engrauen the Armes of* England, *diuers* Spaniards, Portugals, *and other ſtrangers, witneſſing the ſame. I can ſtay no longer; fare you well with my good Lady: and be of good cheare, for I haue comforted my ſelfe, anſwerable to all my hopes. From Saint* Iohns *in the* New-found Land, *the* 8. *of Auguſt*, 1583.

Yours wholly to command, no man more,

Hvm. Gilbart.

I men-

I mentioned before Master *Thornes* fathers finding *New-found Land*, with Master *Eliot*. These animated King *Henrie* the eight to set forth two ships for discouerie, one of which perished in the North parts of *New-found Land*. The Master of the other, *Iohn Rut*, writ this Letter to King *Henrie*, in bad *English* and worse Writing. Ouer it was this superscription.

Master *Grubes* two ships departed from *Plymouth* the 10. day of Iune, and arriued in the *New-found Land* in a good Harbour, called *Cape de Bas*, the 21. day of Iuly: and after we had left the sight of *Selle*, we had neuer sight of any Land, till we had sight of *Cape de Bas*.

PLeasing your Honorable Grace to beare of your seruant Iohn Rut, *with all his Company here, in good health, thanks be to God, and your Graces ship. The* Mary *of* Gilford, *with all her thanks be to God: And if it please your honorable Grace, we ranne in our course to the Northward, till we came into* 53. *degrees, and there we found many great Ilands of Ice and deepe water, we found no sounding, and then we durst not goe no further to the Northward for feare of more Ice, and then we cast about to the Southward, and within foure dayes after we had one hundred and sixtie fathom, and then wee came into* 52. *degrees and fell with the mayne Land, and within ten leagues of the mayne Land we met with a great Iland of Ice, and came hard by her, for it was standing in deepe water, and so went in with* Cape de Bas, *a good Harbor, and many small Ilands, and a great fresh Riuer going vp farre into the mayne Land, and the mayne Land all wildernesse and mountaines and woods, and no naturall ground but all mosse, and no inhabitation nor no people in these parts: and in the woods wee found footing of diuers great beasts, but we saw none not in ten leagues. And please your Grace, the* Samson *and wee kept company all the way till within two dayes before wee met with all the Ilands of Ice, that was the first day of Iuly at night, and there rose a great and a marualous great storme, and much foule weather; I trust in Almightie Iesus to heare good newes of her. And please your Grace, we were considering and a writing of all our order, how we would wash vs and what course wee would draw and when God doe send foule weather, that with the* Cape de Sper *shee should goe, and he that came first should tarry the space of sixe weeks one for another, and watered at* Cape de Bas *ten dayes, ordering of your Graces ship and fishing, and so departed toward the Southward to seeke our fellow: the third day of August we entered into a good Hauen, called Saint* Iohn, *and there we found eleuen saile of* Normans, *and one* Brittaine, *and two* Portugall *Barkes, and all a fishing, and so we are readie to depart toward* Cape de Bas, *and that is twentie fiue leagues, as shortly as we haue fished, and so along the coast till we may meete with our fellow, and so with all diligence that lyes in me toward parts to that Ilands that we are commanded by the grace of God, as we were commanded at our departing: And thus Iesu saue and keepe your honorable Grace, and all your honourable Reuer. in the Hauen of Saint* Iohn, *the third day of August, written in haste.* 1527.

By your seruant *Iohn Rut*, to his vttermost of his power.

I haue by me also *Albert de Prato's* originall Letter, in Latin stile, almost as harsh as the former *English*, and bearing the same date, and was indorsed, *Reuerend. in Christo Patri Domino Domino Cardinali & Domino Legato Angliæ:* and began, *Reuerendissime in Christo Pater salutem. Reuerendissime Pater, placeat Reuerendissimæ paternitati vestræ, scire, Deo fauente postquam exiuimus à Plemut quæ fuit x. Iunij &c.* (the substance is the same with the former, and therefore omitted) *Datum apud le Baya Saint Iohan in Terris Nouis, die x. Augusti,* 1527. *Reuer. Patr. vest. humilis seruus, Albertus de Prato.* (the name written in the lowest corner of the sheet.)

The voyage of Captaine GEORGE WEYMOVTH, *intended for the discouerie of the North-west Passage toward* China, *with two fly Boates.*

ON Sunday the second day of May, 1602. in the afternoone, I weighed anchor and set saile from *Redcliffe* with two Fly-boates, the one called the *Discouery*, of seuentie Tunnes; and the other called the *God speed*, of sixtie Tunnes, to discouer the North-west passage, hauing in my ships fiue and thirtie men and boyes, throughly victualled and abundantly furnished with all necessaries for a yeere and an halfe, by the right Worshipfull Merchants of the *Moscouie* and *Turkie* Companies: who for the better successe of the voyage prouided mee of a great trauailer and learned Minister one Master *Iohn Cartwright*. The Master vndermee in the Discouerie was one *William Cobreth*, a skilfull man in his profession; and in the *God speed*, one *Iohn Drewe*, and Mate in the said ship one *Iohn Lane*.

Mosc. and *Turkie* Companies. Master *Cartwright* had bin in *Persia* and *Turkie*. See the former Tome, *Buquhamnes*.

The first of Iune, we descried *Buquhamnes* in the Latitude of 57. degrees. The second day we saw the Point of *Buquhamnes* North-west from vs, being a very smooth land; and the land by

by it to the Southward riseth with many Homocks. There lyeth a ledge of Rockes hard by the Nesse, in a sandie Bay faire by the shore. When we came neer the land, we met with a fisher Boat, and I agreed with one of the fisher men to carry me betweene the Isles of *Orkney*, because I was not acquainted with the coast. The fourth day, at ten of the clocke, wee descried the Isles of *Orkney*. Some of those Southerne Ilands are prettie high land; but the Northerne Iland, which is called the *Start*, is very low land. There is no danger, giuing the shore a good birth, vnlesse it be by the Norther point of the *Start*: there doth a ledge of Rockes lye a mile from the shoare. At noone I found my selfe to be in the latitude of 59. degrees and 30. minutes, the point of the *Start* bearing West: and at one of the clocke in the afternoone, we saw a faire Ile, which bare North-east and by North from vs: and at eight of the clocke at night, wee were North of the *Start*: Then I directed my course West and by North. The fifth day about ten of the clocke in the morning, we ranne some tenne leagues, and then we saw two small Ilands, some two leagues off: and at eight and nine of the clocke we saw foure or fiue Boats of Fisher-men, and spake with one of them, and they were *Scottish-men*. The sixt, in the morning fell much raine, and lasted till nine of the clocke: and at ten of the clocke it cleared vp, and became very faire weather, and very temperate and warme, and our course was West. The seauenth, the winde was at East and by North, faire weather, and our course West. The eight, at noone I obserued the Sunne, and found vs to be in 59. degrees and fortie seuen minutes, and we ran West South-west.

Orkney.

The *Start.*

59. degrees 30. minutes.

Faire Ile.

Two small Ilands.

The twelfth day we held our course West, the winde at East North-east, with fogge in the morning: at noone I obserued the Sunne, and found my selfe in 57. degrees, and 55. minutes. the variation here was nothing at all. The thirteenth at noone, our course was West and by North, the winde at North-east, with fogge some three or foure houres, and then cleare againe: the ayre very warme, as in *England* in the moneth of May. The foureteenth was faire weather, and the winde at East North-east, and our course West and by North. The fifteenth much raine all the forenoone, our course West, the winde at East and by North. The sixteenth, the winde was at North North-east, with much raine, winde and fogge. In the forenoone, being very cold, and at noone, I obserued the Sun, and found vs to be in 57. degrees and 35. minutes: we found the variation to be eleuen degrees Westward; and by that meane I found my selfe to be one degree more to the Southward, then we should haue bin by our course; for we could not see the Sunne in 96. houres before this day at noone, and at our last obseruation before this, which was the twelfth day, we could not finde any variation at all. Then we stood close by a winde to the Westward, the winde being at North North-east. The seauenteenth wee ranne North and by West, the winde at North North-east, faire weather. This day we saw many gray Gulles, and some Pigions. The eighteenth at noone I obserued the Sunne, and found our selues to be in the latitude of 59. degrees, and 51. minutes. And then we first descried a great Iland of Ice, which lay North from vs, as farre as we could ken it from the head of our maine topmast: and about two of the clocke in the afternoone, we saw the South part of *Groneland*, North from vs some ten leagues. As we coasted this Ice to the Northward, we found it to be a maine banke of Ice; for we saw the other end of it to beare West North-west from vs; the winde being at South South-west, little winde: Then we ranne West South-west, to cleere vs of the Ice. The nineteenth, the winde was at East South-east, with some small raine. The twentieth, our course was West North-west, the winde being at North and by East, little winde. This day sometimes we came into blacke water as thicke as puddle, and in sailing a little space the water would be cleare againe. Seeing this change of water, so often to be thick, and cleare againe so suddenly, we imagined it had beene shallow water: then we sounded, and could fetch no ground in one hundred and twenty fathomes: and the Sea was so smooth, that we could discerne no current at all. At this time I reckoned the *Cape of desolation* to beare North North-east twentie foure leagues from vs. The one and twentieth, the winde was variable. The two and twentieth, we were in the latitude of 60. degrees and 37. minutes: the winde being at West, wee ranne North and by West. The seauen and twentieth, the winde was at West South-west: then our course was North-west and by North, the weather faire and warme, as in *England*, in the moneth of May. This day we saw great store of Gulles, which followed our Ship sundry dayes.

57. degrees 55. min. no variation.

60. deg. 37. min.

Store of Guls.

The eight and twentieth, the winde being at North and by West, wee directed our course to the Westward; and about twelue of the clocke the same night, we descried the land of *America*, in the latitude of 62. degrees and 30. minutes; which we made to be *Warwicks* foreland. This Headland rose like an Iland. And when we came neere the *Foreland*, we saw foure small Ilands to the Northwards, and three small Ilands to the Southward of the same *Foreland*. The *Foreland* was high land: all the tops of the hils were couered with Snow. The three small Ilands to the Southward were also white, that we could not discerne them from Ilands of Ice: also there was great store of drift Ice vpon the East side of this *Foreland*: but the Sea was altogether voide of Ice: the Land did lye North and by East, and South and by West, being six leagues off length.

America descried in 62. degr. and 30. min.

The nine and twentieth, at sixe of the clocke in the morning, wee were within three leagues of this *Foreland*: then the winde came vp at North-east and by East, a good stiffe gale with fogge,

Digitized by Google

fogge: and wee were forced to ſtand to the Southward, becauſe wee could not wether the Land to the Northward: and as wee ſtood to the Southward along by *Warwicks Foreland*, we could diſcerne none otherwiſe, but that it was an Iland. Which if it fall out to be ſo, then *Lumleys* Inlet, and the next Southerly Inlet, where the great Current ſetteth to the Weſt, muſt of neceſſitie be one Sea; which will be the greateſt hope of the paſſage that way. The thirtieth, the winde was at North-eaſt, with fogge and Snow. This day wee came into a great whirling of a Current, being in the latitude of 61. degrees, and about twelue leagues from the coaſt of *America*.

Warwicks Foreland ſuppoſed to be an Iland.

The greateſt hope of the North-weſt paſſage.

A current Weſtward in ſixtie one degrees.

The firſt day of Iuly, the winde was at Weſt, with fogge and Snow; the ayre being very cold. This day wee came into many Ouerfals, which ſeemed to runne a great current; but which way it did ſet, wee could not well diſcerne. The greateſt likelihood was, that it ſhould ſet to the Weſt. But hauing contrary windes ſome ſixteene or ſeuenteene dayes, we alwayes lay in trauerſe among theſe ouerfals; but could neuer finde any great current by our courſes: wee ſounded ſometimes, but could get no ground in one hundred and twentie fathomes.

A current likely to ſet to the Weſt.

The ſecond day, wee deſcried a maine Banke of Ice in the latitude of 60. degrees: the winde was at North North-weſt, and very faire weather. Wee wanting freſh water did ſayle cloſe to this Land of Ice, and hoyſed out our Boate, and loaded her twice with Ice, which made vs very good freſh water. Within twenty leagues of the coaſt of *America*, wee ſhould often-times come into many great ouerfals. Which doth manifeſtly ſhew, that all the coaſt of *America* is broken Land.

A maine banke of Ice in 60 degrees.

The North coaſt of *America* ſeemeth to be broken land.

The third, the winde was at South-weſt, very foggie: and as wee ſtood toward the coaſt of *America*, wee met with another maine Banke of Ice. The fogge was ſo thicke, that we were hard by the Ice, before wee could ſee it. But it pleaſed God that the winde was faire to put vs cleare from this Ice againe; and preſently it began to cleare vp, ſo that wee could ſee two or three leagues off; but we could ſee no end of the Ice. Wee iudged this Ice to be ſome tenne leagues from the coaſt of *America*. We found the water to be very blackiſh and thicke, like puddle water.

Blacke puddle water.

The eight, the winde was at North North-weſt, very faire weather; wee ſtanding to the Weſtwards met with a mighty maine Banke of Ice, which was a great length and breadth, and it did reſt cloſe to the ſhoare. And at eleuen of the clocke in the forenoone, wee deſcried againe the Land of *America*, in the latitude of 63. degrees and 53. minutes, being very high Land: and it did riſe as Ilands, the toppes being couered with Snow. This Land was South-weſt and by Weſt, ſome fiue leagues off vs: we could come no neerer it for the great quantitie of Ice, which reſted by the ſhoare ſide.

America againe diſcried in 63. deg. 53. min.

The ninth, the winde being at North-eaſt and by Eaſt, blew ſo extreamely, that we were forced to ſtand to the Southward, both to cleare our ſelues of the Land, and of the Ice: for the day before we paſſed a great banke of Ice, which was ſome foureteene leagues to the Eaſtward of vs, when the ſtorme began; but thankes be to God, we cleared our ſelues both of the Land and of the Ice. This day in the afternoone the ſtorme grew ſo extreame, that we were forced to ſtand along with our forecourſe to the Southward.

The ſeuenteenth was very foggie, the winde being at Eaſt: and about two of the clocke in the afternoone, wee ſaw foure great Ilands of Ice, of a huge bigneſſe: and about foure of the clocke we came among ſome ſmall ſcattered Ice, and ſuppoſed our ſelues to be neere ſome great Banke. The fogge was very thicke, but the winde large to ſtand backe the ſame way wee came in; or elſe it would haue indangered our liues very much. And at nine of the clocke at night we heard a great noyſe, as though it had bin the breach of ſome ſhoare. Being deſirous to ſee what it was, we ſtood with it, and found it to be the noyſe of a great quantity of Ice, which was very loathſome to be heard. Then wee ſtood North North-weſt, and the fogge continued ſo thicke, that wee could not ſee two Shippes length from vs: whereupon we thought good to take in ſome of our ſayles; and when our men came to hand them, they found our ſayles, ropes, and tacklings, ſo hard frozen, that it did ſeeme very ſtrange vnto vs, being in the chiefeſt time of Summer.

The loathſome noyſe of Ice.

Sayles, ropes and tackling frozen.

The eighteenth day, the winde was at North-eaſt and by North, the ayre being very cleere and extreame cold, with an exceeding great froſt; and our courſe was North-weſt. This day in the forenoone, when we did ſet our ſayles, we found our ropes and tacklings harder frozen then they were the day before: which froſt did annoy vs ſo much in the vſing of our ropes and ſayles, that wee were enforced to breake off the Ice from our ropes, that they might runne through the blockes. And at two of the clocke in the afternoone, the winde began to blow very hard, with thicke fogge, which freezed ſo faſt as it did fall vpon our ſayles, ropes, and tackling, that we could not almoſt hoyſe or ſtrike our ſayles, to haue any vſe of them. This extreame froſt and long continuance thereof, was a maine barre to our proceeding to the Northward, and the diſcouraging of all our men.

Thick fogge freezing as faſt as it fell.

The nineteenth day, the winde was at North and by Eaſt, and our courſe to the Eaſtwards.

Digitized by Google

Mutinie.

The same night following, all our men conspired secretly together, to beare vp the helme for *England*, while I was asleepe in my Cabin, and there to haue kept mee by force, vntill I had sworn vnto them, that I would not offer any violence vnto them for so doing. And indeede they had drawn in writing, the causes of their bearing vp of the helme, and thereunto set their hands, and would haue left them in my Cabin: but by good chance I vnderstood their pretence, and preuented them for that time.

The twentieth day, I called the chiefest of my Company into my Cabin, before Master *Iohn Cartwright* our Preacher, and our Master, *William Cobreth*, to heare what reasons they could alleadge for the bearing vp of the Helme, which might he an ouerthrow to the Voyage, seeing the Merchants had bin at so great a charge with it. After much conference, they deliuered mee their reasons in writing:

Concluding, that although it were granted, that we might winter betweene 60. and 70. degrees of latitude, with safetie of our liues and Vessels, yet it will be May next before wee can dismore them, to lanch out into the Sea. And therefore if the Merchants should haue purpose to proceede on the discouerie of these North-west parts of *America*; the next yeare you may be in the aforesaid latitudes for *England*, by the first of May, and so be furnished better with men and victuals, to passe and proceede in the aforesaid action.

Seeing then that you cannot assure vs of a safe harbour to the Northward, wee purpose to beare vp the Helme for *England*; yet with this limitation, that if in your wisedome, you shall thinke good to make any discouery, either in 60. or 57. degrees, with this faire Northerly winde, we yeelde our liues with your selfe, to encounter any danger. Thus much we thought needefull to signifie, as a matter builded vpon reason, and not proceeding vpon feare or cowardise.

68. deg. 53. min

Then, wee being in the latitude of 68. degrees and 53. minutes: the next following, about eleuen of the clocke, they bare vp the Helme, being all so bent, that there was no meanes to perswade them to the contrary. At last vnderstanding of it, I came forth of my Cabin, and demanded of them, who bare vp the Helme? They answered me, One and All. So they hoysed vp all the sayle they could, and directed their course South and by West.

They returne frō the North.

Mutiners punished.

The two and twentieth, I sent for the chiefest of those, which were the cause of the bearing vp of the Helme, and punished them seuerely, that this punishment might be a warning to them afterward for falling into the like mutinie. In the end, vpon the intreatie of Master *Cartwright* our Preacher, and the Master, *William Cobreath*, vpon their submission, I remitted some part of their punishment. At twelue of the clocke at noone, wee came hard by a great Iland of Ice: the Sea being very smooth and almost calme, wee hoysed out the Boates of both our Shippes: being in want of fresh water, and went to this Iland to get some Ice to make vs fresh water. And as wee were breaking off some of this Ice (which was verie painefull for vs to doe; for it was almost as hard as a Rocke:) the great Iland of Ice gaue a mightie cracke two or three times, as though it had bin a thunder-clappe; and presently the Iland began to ouerthrow, which was like to haue sunke both our Boates, if wee had not made good haste from it. But thankes be to God, we escaped this danger very happily, and came aboord with both our Boates, the one halfe laden with Ice. There was great store of Sea Foule vpon this Iland of Ice.

A great Iland of Ice cracked like a thunder-clap and was ouerthrowne.

Great store of Sea Foule vpon the Ice.

The fiue and twentieth and six and twentieth, the winde being at East, did blow a hard gale, and our course was West and by South, with fogge. This day in the afternoone I did reckon my selfe to be in the entering of an Inlet, which standeth in the latitude of 61. degrees and 40. minutes.

An Inlet in 61. degrees & 40. minutes.

The seuen and twentieth, the winde was at South South-east, and blew very hard, our course was West. The eight and twentieth and nine and twentieth, our course was West and by South, the winde blowing very hard at East South-east, with fogge and raine. The thirtieth, the winde came vp in a showre by the West North-west, blowing so hard, that wee were forced to put a fore the Sea. Now because the time of the yeare was farre spent, and many of our men in both Shippes sicke, wee thought it good to returne with great hope of this Inlet, to bee a passage of more possibilitie, then through the Straight of *Danis*: because I found it not much pestered with Ice, and to be a straight of fortie leagues broad. Also I sayled an hundred leagues West and by South, within this Inlet; and there I found the variation to be 35. degrees to the Westward, and the needle to decline, or rather incline 83. degrees and an halfe.

The return out of the Inlet.

The variation 35. degrees Westward.

The fifth of August (the winde all that while Westerly) wee were cleare of this Inlet againe. The sixth the winde was at East South-east with fogge. The seauenth, eight, and ninth, we passed by many great Ilands of Ice. The ninth day at night, we descried the land of *America*, in the latitude of 55. degrees, and 30. minutes. This Land was an Iland, being but low land and very smooth: then the night approaching, and the weather being something foggie and darke, we were forced to stand to the Northward againe. This night we passed by some great Ilands of Ice, and some bigge peeces which did breake from the great Ilands: and we were like

An Iland on the coast of *America* in 55. deg. & 30. min.

to

Digitized by Google

to ſtrike ſome of them two or three times: which if we had done, it might haue endangered our Shippes and liues. Our conſort, the *Godſpeede*, ſtrooke a little piece of Ice, which they thought had foundred their Shippe; but thankes be to God they receiued no great hurt, for our Shippes were very ſtrong. The *Godſpeede* ſtroke vpon a piece of Ice.

The tenth day, the winde was at North-eaſt and by North, with fogge and raine: and our courſe was to the South-eaſtward: for we could by no meanes put with the ſhoare, by reaſon of the thickneſſe of the fogge, and that the winde blew right vpon the ſhoare, ſo that we were forced to beare ſaile to keepe our ſelues from the land, vntill it pleaſed God to ſend vs a cleare, which God knoweth we long wanted. At ſixe of the clocke in the afternoone, it was calme; and then I iudged my ſelfe, by mine account, to be neere the Land: ſo I ſounded, and had ground in 160. fathomes, and fine grey Oſie Sand: and there was a great Iland of Ice, a ground within a league of vs, where we ſounded, and within one houre it pleaſed God to ſend vs a cleere. Then we ſaw the land ſome foure leagues South-weſt and by South from vs. This land lyeth East and by South, and Weſt and by North, being good high land, but all Ilands, as farre as wee could diſcerne. This calme continued vntill foure of the clocke in the afternoone of the eleuenth day: the weather being very cleere, we could not diſcerne any Current to goe at all by this Land. This day the Sea did ſet vs in about a league neerer the Land, ſo that wee iudged our ſelues three leagues off. Here we ſounded againe, and had but eightie fathoms. Many Ilands.

The variation of the Compaſſe we found to be 22. degrees and 10. minutes Weſtward. At ſixe of the clocke there ſprung vp a fine gale of winde, at East South-east, and being ſo neere night, wee ſtood to the Southward, thinking the next day to ſeeke ſome harbour. But it pleaſed God, the next day, being the twelfth, to ſend vs a ſtorme of foule weather, the winde being at East and by South, with fogge: ſo that we could by no meanes get the ſhoare. Thus wee were forced to beate vp and downe at Sea, vntill it ſhould pleaſe God to ſend vs better weather. The variation 22. degrees to Weſt. A Storme.

The foureteenth, I thought good to ſtand to the Weſtward to ſearch an Inlet, in the latitude of 56. degrees. I haue good hope of a paſſage that way, by many great and probable reaſons.

The fifteenth the winde continued at the South, with exceeding faire weather, and our courſe was Weſt. We were this day at noone in the latitude of 55. degrees and 31. minutes: and I found the variation to be 17. degrees and 15. minutes, to the Weſtward. And about ſeuen of the clocke at night, we deſcried the Land againe, being tenne leagues to the Eaſtward of this Inlet. This Land did beare from vs South-weſt, ſome eight leagues off: and about nine of the clocke the ſame night, the winde came to the Weſt; which blew right againſt vs for our entring into this Inlet. 55. deg. 31. min. Variation 17. degr. 15. min. They diſcrie the land again.

The ſixteenth, the winde was at Weſt North-weſt, and was very faire weather, and our courſe South-weſt: about nine of the clocke in the forenoone, we came by a great Iland of Ice; and by this Iland we found ſome peeces of Ice broken off from the ſaid Iland: And being in great want of freſh water, wee hoyſed out our Boates of both Shippes, and loaded them twice with Ice, which made vs very good freſh water. This day at noone wee found our ſelues to be in the latitude of 55. degrees and twentie minutes: when we had taken in our Ice and Boates, the weather being very faire and cleare, and the winde at Weſt North-weſt, we bent our courſe for the Land, and about three of the clocke in the afternoone, we were within three leagues of the ſhoare. It is a very pleaſant low Land; but all Ilands, and goodly ſounds going betweene them, toward the South-weſt. This Land doth ſtand in the latitude of 55. degrees; and I found the variation to be to the Weſt 18. degrees and 12. minutes. This coaſt is voide of Ice, vnleſſe it be ſome great Ilands of Ice, that come from the North, and ſo by windes may be driuen vpon this coaſt. Alſo we did finde the ayre in this place to be very temperate. Truely there is in three ſeuerall places great hope of a paſſage, betweene the latitude of 62. and 54. degrees; if the fogge doe not hinder it, which is all the feare I haue. At ſixe of the clocke, wee being becalmed by the ſhoare, there appeared vnto vs a great ledge of rockes, betweene vs and the ſhoare, as though the Sea did flye ouer it with a great height. As we all beheld it, within one houre, vpon a ſudden it vaniſhed cleane away; which ſeemed very ſtrange vnto vs all. And to the Eaſtward of vs, ſome two leagues, we ſaw a great Rocke, lying ſome three leagues off the Land: we then ſuppoſing it to be ſhoald water, by this broken ground, ſounded, but could get no ground in one hundred and ſixtie fathoms. About ſeuen of the clocke, there ſprung vp a gale of winde, by the South South-eaſt, which was a very good winde to coaſt this Land. 55. deg. 20. min. A pleaſant low land, being all Ilands. 55. degrees. The variation 18. deg. and 12. min. Weſtward. Temperate ayre. Great hope of a paſſage in three places. A great ledg of Rocks ſtrangly vaniſhing. A great Rocke

But the ſeuenteenth in the morning, the winde being at the South, it began to blow ſo extreamely, that we durſt not ſtay by the ſhoare, for it was like to be a great ſtorme: then our courſe was East North-eaſt, to get vs Sea roome. This ſtorme ſtill increaſing, our flye-boates did receiue in much water; for they wanted a Sparre-decke, which wee found very dangerous for the Sea. About twelue of the clocke at noone, this day there roſe vp a great ſhowre in the Weſt, and preſently the winde came out of that quarter with a whirle, and taking vp the Sea into the ayre, and blew ſo extreamely, that we were forced alwayes to runne before the Sea, howſoeuer A Whirlwinde taking vp the Sea.

Digitized by Google

euer the winde did blow. And within twelue houres after this storme begonne, the Sea was so much growen, that we thought our fiye Boates would not haue beene able to haue endured it.

The eighteenth, the winde was at North-west, and the storme increased more extreame, and lasted vntill eight of the clocke in the morning of the nineteenth day, so furious, that to my remembrance, I neuer felt a greater: yet when we were in our greatest extremities, the Lord delivered vs his vnworthy seruants. And if the winde, with so great a storme, had bin either Northerly, or Southerly, or Easterly but one day, we had all perished against the Rocks, or the Ice: for wee were entred thirty leagues within a Head-land of an Inlet, in the latitude of 56. degrees. But it pleased God to send vs the winde so faire, as we could desire, both to cleare our selues of the Land and Ice. Which opportunitie caused vs for this time to take our leaues of the coast of *America*, and to shape our course for *England*.

They were entred 30. leagues into an Inlet in 56. degrees.

They returned for *England*.

This Booke was also subscribed by *W. Cobreth* and *Iohn Drew*.

The fourth, in the morning, wee descried the Iland of *Silly* North-east and by East, some foure leagues off vs. Then wee directed our course East and by North: and at tenne of the clocke in the forenoone, wee descried the Lands end, and next day were forced to put into *Dartmouth*.

The lands end.

Chap. XIV.

Iames Hall *his Voyage forth of* Denmarke *for the discouery of* Greenland, *in the yeare* 1605. *abbreuiated*.

May 1605.

IN the name of God Amen, we set sayle from *Copeman-hauen* in *Denmarke*, the second day of May, in the yeare of our redemption 1605. with two Shippes and a Pinnace: The Admirall, called the *Frost*, a shippe of the burthen of thirty or fortie lasts, wherein was Captaine, and chiefe commander of the whole Fleet, Captaine *Iohn Cunningham*, a *Scottish* Gentleman, seruant vnto the Kings Maiestie of *Denmarke*, my selfe being principall Pilot. The *Lyon* Viceadmirall, being about the foresaid burthen, wherein was Captaine, one *Godscaio Lindenose*, a *Danish* Gentleman, and Steereman of the same, one *Peter Kilson* of *Copeman-hauen*. The Pinnace, a Barke of the burthen of twelue Lasts, or thereabouts: wherein was Steereman or commander, one *Iohn Knight*, my Countrie-man. So setting sayle from *Copeman-hauen*, with a faire gale of winde Easterly, wee came vnto *Elsonure*, where we anchored, to take in our water.

Iohn Cunningham.

Iohn Knight, of whom after.

The third day we tooke in our water, at which time, the Captaines, my selfe, with the Lieutenants, and the other Steeremen, did thinke it conuenient to set downe certaine Articles, for the better keeping of company one with another, to which Articles or couenants wee were all seuerally sworne, setting thereunto our hands.

Flecorie.

The sixt we came to *Flecorie*, into which harbour, by Gods helpe, we came at two a clocke in the afternoone. The seauenth day we supplied our wants of wood and water. The eight day, about two a clocke in the afternoone, we set sayle forth of the harbour of *Flecorie*, about six a clock it fell calme, till about eight, about which time, the *Naze* of *Norway*, by the *Danish* men, called *Lyndis-nose*, bare next hand North-west of vs, sixe leagues off; at which time I directed my course West North-west, finding the compasse varied 7. degrees 10. minutes, to the Eastwards of the true North.

The thirteenth, we had sight of the Iland of *Faire Ile*, and also of the South-head of *Shetland*, called *Swimborne head*, which are high Lands: at noone, the Iland of *Faire Ile* bearing West halfe a point Northerly: foure leagues off I made obseruation, and found vs in the latitude of 59. degrees 20. minutes. This night about seuen a clocke, wee came about an *English* league to the Northwards of the North-west end of *Faire Ile*, wee met with a great race of a tyde, as though it had beene the race of *Portland*, it setting North North-west. Being out of the said race, I directed my course West and by North, hauing the winde North-east and by North: this euening *Faire Ile* bearing East South-east foure leagues: *Swimborne head*, North-east and by North eight leagues: the Iland of *Foole*, North-east and by East, seuen leagues. I found by exact obseruation, the compasse to be varied to the East-ward of the true North 60. degrees 10. minutes.

Variation obserued.

A race of a tide

Variation obserued.

The fourteenth in the morning, the winde came to the East South-east, wee steering West and by North away: this morning the Iland of *Faire Ile* did shew in my sight to bee about ten leagues off, at which time we did descrie two of the Westermost Ilands of *Orkney*, which did beare South-west and by South.

The eighteenth, the winde at North-west and by West, wee laid it away South-west and by West, and sometimes South-west. This day at noone wee were in the Latitude of 58. degrees 40. mi-

Digitized by Google

40. minutes. The nineteenth day, the winde at South-weſt and South-weſt and by Weſt, wee lying as the night before, being at noone in the Latitude of 59. degrees and a halfe. The foure and twentieth day, the winde at North-eaſt and by East, we ſteering ſtill with a freſh gale West South-weſt, this euening we looked to haue ſeene *Buſſe* Iland, but I doe verily ſuppoſe the ſame to be placed in a wrong Latitude in the Marine Charts. The ſixe and twentieth at noone, wee were in the latitude of 57. degrees 45. minutes. The thirtieth day in the morning betweene ſeuen and eight, the weather began to cleere, and the Sea and winde to waxe leſſe, wee looking for the *Lion* and the Pinnaſſe, could haue no ſight of them, we ſuppoſing them to bee aſterne off vs, we ſtanding ſtill vnder our courſes. This day the winde came to the North-eaſt and by East, being very cold weather, we lying North North-weſt away. Making my obſeruation at noone, I found vs in the latitude of 59. degrees 15. minutes, our way North North-weſt fortie leagues. This afternoon betweene one and two a clock we deſcried Land, it bearing North North-eaſt off vs about ten leagues off North-eaſt & by North off vs about ten leagues, it being a very high ragged land, lying in the latitude of 59. degrees 50. minutes, lying alongſt South-eaſt and by South, and North-weſt and by North.

Buſſe Iland wrong placed.

First ſight of *Groenland*.

This Head-land wee named after the Kings Maieſties of *Denmarke*, becauſe it was the firſt part of *Groenland*, which we did ſee. This afternoone about one a clock, bearing in for the ſhoare we ſaw an Iland of Ice, which bore West South-weſt of vs three leagues off, ſo hauing the wind at East South-eaſt, we bore in for the ſhoare, where wee found ſo much Ice that it was impoſſible either for vs or any other ſhip to come into the ſhoare without great danger: yet wee put our ſelues into the Ice as wee thought conuenient, being incumbred and compaſſed about with the ſame in ſuch ſort, as the Captaine, my ſelfe, the Boatſwaine with another of our companie, were forced to goe ouerboord vpon an Iland of Ice, to defend it from the ſhip, at which time I thought it conuenient to ſtand off into the Sea againe, and ſo being cleere of the Ice, to double Cape *Deſolation*, to the North-weſtwards of which I doubted not but to find a cleer coaſt, ſo ſtanding away all this night West South-weſt, to cleere vs of the Ice, which lay farre from the ſhoare, being very thicke towards the Land with great Hands of Ice that it is wonderfull. This euening, the Cape *Chriſtian* bearing North-eaſt and by East fiue leagues, I found the Compaſſe varied 12. degrees 15. minutes to the North-weſtwards. Moreouer, ſtanding to Seaward from the foreſaid Cape, we came in blacke water, as thicke as though it had beene puddle water, we ſayling in the ſame for the ſpace of three houres.

Cape *Chriſtian*.

The ſhoare full of Ice.

Cape *Deſolation*.

Compaſſe varied.

Black water.

The one and thirtieth in the morning faire weather, with the winde ſomewhat variable, wee ſteering away North-weſt and by Weſt, betweene foure and fiue in the morning we had ſight of the *Lion* againe, but not of the Pinnaſſe. They being a Sea-boord off and hauing eſpied vs, they ſtood with vs, at which time the Captaine, Lieutenant, and Steereman came aboord vs, earneſtly intreating mee to beſtow a Sea Chart of the Steerman, and to giue him directions if by tempeſtuous weather they ſhould loſe vs, they proteſting and ſwearing that they would neuer leaue vs as long as winde and weather would permit them to keepe companie with vs. By whoſe ſpeechees I being perſwaded did giue them a Sea Chart for thoſe Coaſts, telling them that if they would follow me, that by Gods aſſiſtance I would bring them to a part of the Land void without peſter of Ice, and alſo harbour the ſhips in good Harbour, by Gods helpe; they ſwearing and proteſting, that they would follow mee ſo long as poſſibly they could, with which oathes and faire ſpeeches I reſted ſatisfied, thinking they had thought as they had ſworne, but it fell out otherwiſe. So hauing made an end with vs about noone, they went aboord againe, wee being this day in the latitude of 59. degrees 45. minutes, hauing ſtood all the night before, and this forenoone alſo, ſo nigh the ſhoare as wee could for Ice, the Cape *Chriſtian* South South-eaſt and North North-weſt, and from the Cape to Cape *Deſolation*, the Land lyeth East and by South, and Weſt and by North about fiftie leagues. This day betweene one and two a clocke, the Vice-admirals Boat, being newly gone aboord, it fell very haſie and thicke, ſo that wee could not ſee one another by reaſon of the fog, therefore our Captaine cauſed to ſhoote off certaine Muskets with a great peece of Ordnance, to the intent the *Lion* might heare vs, which heard of them they preſently ſtood with vs, at which time the fogge began ſomewhat to cleere, wee hauing ſight one of another and ſo ſtood alongſt the ſhoare, as nigh as we could for Ice.

Sight of the *Lion*.

The firſt of Iune, wee had a freſh gale of winde at South-weſt, wee ſteering North-eaſt and by North into the ſhoare, about three in the morning there fell a mightie fogge, ſo that we were forced to lye by the lee, for the *Lion* playing vpon our Drum to the intent for them to heare vs, and to keepe companie with vs, they anſwering vs againe with the ſhooting of a Musket, wee trimming our ſailes, did the like to them, and ſo ſtood away North-eaſt and by East: larboord tackt aboord halfe a glaſſe, when we were hard incumbred amongſt mightie Ilands of Ice, being very high like huge Mountaines, ſo I cauſed to caſt about and ſtand to the Weſtwards North-weſt and by Weſt. About twelue of the clocke this night it being ſtill calme, wee found our ſelues ſuddenly compaſt round about with great Ilands of Ice, which made ſuch a hideous noyſe as was moſt wonderfull, ſo that by no meanes wee could double the ſame to the Weſtward: wherefore wee were forced to ſtand it away to the Southwards, South South-Weſt, ſtemming

Iune 1605.

Ilands of Ice.

Mightie incumbrance of Ice.

A mightie current ſetting North North-weſt.

ming the Current, for by the ſame Current wee were violently brought into this Ice, ſo being incumbred and much to doe to keepe cleere of the mightie Ilands of Ice, there being as both I and others did plainly ſee vpon one of them a huge rocke ſtone, of the weight of three hundred pounds or thereabouts, as wee did ſuppoſe. Thus being troubled in the Ice for the ſpace of two or three houres, it pleaſed God that we got thorow the ſame.

The ſecond day in the morning about three a clocke, I came forth of my Cabin, where I found that the Shipper whoſe name was *Arnold* had altered my courſe which I had ſet, going contrarie to my directions North North-weſt away, whereupon hee and I grew to ſome ſpeeches, both for at this time and other times hee had done the like. The Captaine likewiſe ſeeing his bad dealing with we, did likewiſe roundly ſpeake his minde to him, for at this inſtant wee were nigh vnto a great banke of Ice, which wee might haue doubled if my courſe had not beene altered, ſo that we were forced to caſt about to the Southwards, South and by Eaſt and South South-eaſt, with the winde at South-weſt and by South or South-weſt till ten a clocke, when we ſtood againe to the Weſtwards, lying Weſt North-weſt and North-weſt and by Weſt, being at noone in the latitude of 60. degrees 18. minutes, Cape *Deſolation* is, I did ſuppoſe, bearing North and by Weſt three or foure leagues off, the weather being ſo thicke and haſie that wee could neuer ſee the Land.

The fourth day betweene one and two a clocke in the morning, it began to blow a freſh gale Eaſterly, we ſteering away North and North and by Weſt, we being at noone in the latitude of 59. degrees 50. minutes, hauing made a Weſt and by North way foure and twentie leagues. This euening about ſeuen a clocke we had very thicke water, and continued ſo about halfe an houre: about nine a clocke we did ſee a very high Iland of Ice to the windward of vs, and about halfe an houre after with ſome drift Ice, they in the *Lion* thorow the fearefulneſſe of their Commanders preſently caſt about ſtanding away larboord tackt, till they did perceiue that I ſtood ſtill away as I did before, without impediment of the Ice, they caſt about againe and followed vs.

The fift in the morning, being very faire weather with the winde at Eaſt South-eaſt, our courſe North North-weſt, ſome of our people ſuppoſed they had ſeene the Land: our Captaine and I went aboord the Pinnaſſe, when after an houre of our being there wee did ſee the ſuppoſed Land to be an haſie fogge, which came on vs ſo faſt that wee could ſcarce ſee one another. But the *Lion* being very nigh vnto vs, and it being very calme, wee laid the Pinnaſſe aboord of her, and ſo the Captaine and I went aboord of them.

The ninth day about foure a clocke, it began to blow an eaſie gale at South-eaſt and by South, I directing my courſe ſtill North North-weſt, when ſome of our people would not be perſwaded but they did ſee Land, and therefore I ſtood in North and by Eaſt and North North-eaſt, till about three a clocke in the afternoone, when wee met with a huge and high Iland of Ice, wee ſteering hard to board the ſame, and being ſhot a little to Northwards of it, there fell from the top thereof ſome quantitie of Ice, which in the fall did make ſuch a noyſe as though it had beene the report of fiue Cannons. This euening wee came amongſt much drift Ice, being both windwards and to leewards of vs, yet by Gods helpe we got very well through the ſame, when being cleere I directed my courſe againe North North-weſt.

A huge high Iland of Ice.

Noyſe by the fall.

The tenth day the winde at South-weſt and by Weſt, I ſteering ſtill North-weſt and by North. This forenoone alſo wee met with great Ilands of Ice, it being very haſie and thicke weather, the which did driue them in the *Lion* into great feare, and calling to vs very fearfully perſwaded me to alter my courſe and to returne homeward, ſaying that it was impoſſible for vs by any working, and courſe keeping to ſeaſe vpon the Land, which did driue all our companie into ſuch a feare, that they were determined, whether I would or not, to haue returned home, had not the Captaine as an honeſt and reſolute Gentleman ſtood by mee, proteſting to ſtand by me ſo long as his blood was warme, for the good of the Kings Maieſtie, who had ſet vs forth, and alſo to the performing of the Voyage. Which reſolution of his did mitigate the ſtubborneſſe of the people: yet nothing would perſwade thoſe fearfull perſons in the *Lion*, eſpecially the Steerman, who had rather long before this time haue returned home, then to haue proceeded on the action, as before the ſaid Steerman had done when he was imployed eight yeeres before in the ſaid action or diſcouerie. Therefore our Captaine and my ſelfe ſeeing their backwardneſſe now, as before we had done, went our ſelues the ſame euening into the Pinnaſſe, hauing a mightie banke of Ice of our larboord ſide, and ſpake to them very friendly, giuing order both to our owne ſhip and to them, that they ſhould keepe a Seaboord of vs (for I did ſuppoſe this banke of Ice to lye in the narroweſt of the Streight, betweene *America* and *Groenland*, as indeed by experience I found the ſame to be) therefore I determined to coaſt the Ice alongſt till I found it to bee driuen and fall away, by reaſon of the ſwift current that ſetteth very forcibly through the ſaid Strait, and then by the grace of God to ſet ouer for a cleere part of the coaſt of *Groenland*, ſo all this night we coaſted the Ice as cloſe aboord as we could Eaſt North-eaſt and North-eaſt and by Eaſt, till about midnight, when we found the ſaid banke to fall away.

Our people determined to returne backe againe.

Former diſcouenes.

A mightie banke of Ice.

The eleuenth day, being cleere of the Ice, I ſtood away North North-eaſt till ſixe a clocke, when

when we met with another great banke of Ice, at which time the Commanders of the *Lion* being now againe very fearfull as before, came vp to our ship, perswading the Shipper and Com- Another banke of Ice.
panie to leaue vs, and to stand to Seaboord with them. But the Shipper who was also Lieftenant of the ship, being more honestly minded, said, that he would follow vs so long as he could: with which answere they departed, vsing many spitefull wordes, both of the Captaine and mee, saying we were determined to betray the Kings ships, at which time they shot off a peece of Ordnance, and so stood away from vs. I seeing their peruerse dealing let them goe, wee coasting alongst the Ice North North-east with a fresh gale, it being extreme cold with snow and hayse, the Sea also going very high by reason of a mightie current, the which I found to set very forceably through this Strait, which being nigh vnto *America* side, setteth to the Northwards, and on the other side to the contrarie, as by proofe I found. So coasting alongst this mayne banke of Ice, which seemed as it had beene a firme Continent till about eleuen a clocke, when wee espyed the Ice to stretch to windward; on our weather bow wee letting our starboord takes aboord, stood away East and by South with the winde at South and by East, till wee had doubled a Seaboord the Ice, at which time I directed my course directly ouer for the cleere coast of *Groineland*, East and by North, which course I directed all the *Frost* to goe, wee standing away our course all this night, it being very much snow and sleete.

The Lions departing from vs.

A mightie current.

The twelfth day in the morning about foure a clocke, we espyed the Land of *Groenland*, being a very high ragged Land, the tops of the Mountaines being all couered with snow, yet wee found all this coast vtterly without Ice, wee standing into the Land espyed a certaine Mount aboue all the rest, which Mount is the best marke on all this Coast, the which I named Mount *Cunningham* after the name of my Captaine. We comming into the shoare betweene two Capes or Head-lands, the Land lying betweene them North and by East, and South and by West, the Southmost of which Forelands I named Queene *Annes* Cape, after the name of the Queenes Maiestie of *Denmarke*, and the Northermost of the two I called Queene *Sophias* Cape, after the name of the Queene Mother.

Sight of Land.

Mount *Cunningham*.

Queene *Annes* Cape.

Queene *Sophias* Cape.

So standing into the Land, we came amongst certaine Ilands, where sayling in still amongst the same vnto the Southermost foot of the foresaid Mount, wee came into a goodly Bay, which wee did suppose to be a Riuer, being on both sides of the same very high and steepe Mountaines, wee named the same King *Christianus Foord*, after the name of the Kings Maiestie of *Denmarke*. So sayling vp this Bay, which wee supposed to bee a Riuer, the space of sixe or seuen *English* leagues, finding in all that space no anchoring, being maruellous deepe water, till at the length we had sayled vp the Bay the foresaid distance, at length I brought the Ship and Pinnasse to an anchor in sixteene fathom shelly ground, at which time our Captaine and I went aland, giuing thankes vnto God for his vnspeakable benefits, who had thus dealt with vs as to bring vs to this desired Land into so good an Harbour; which done, the Captaine and I walked vp the Hills, to see if wee could see any of the people, hauing our Boat to row alongst with vs. Hauing gone alongst the Riuer side vpon the tops of the Hills the space of three or foure *English* miles, at length looking towards our Boat, wee saw vpon the Riuer side foure of the people standing by their Houses or rather Tents, couered ouer with Seale-skins. Wee comming downe the Hills towards them (they hauing espyed vs) three of them ranne away vpon the Land, and the other tooke his Boat and rowed away leauing their Tents. Wee being come downe the Hills called to our men in the Boat, and entring into her rowed towards the Sauage who was in his Boat made of Seale-skins. Hee holding vp his hands towards the Sunne, cryed *Yota*; wee doing the like, and shewing to him a knife, hee presently came vnto vs and tooke the same of the Captaine. When hee had presently rowed away from vs, wee rowed a little after him, and seeing it was but in vaine wee rowed aland againe and went into their Tents, which wee found couered (as is aforesaid) with Seale-skins. Wee finding by the houses two Dogs being very rough and fat, like in shape to a Foxe, with very great abundance of Seale fish, lying round about their Tents a drying, with innumerable quantities of a little fish like vnto a Smelt (which fish are commonly called *Sardeenes*) of which fish in all the Riuers are wonderfull skuls, these fishes also lay a drying round about their Tents in the Sunne in great heapes, with other sundrie kindes. Then entring into their Tents, wee found certaine Seale skins and Foxe skins very well drest; also certaine Coates of Seale skins and Fowle skins with the feather side inward: also certaine Vessels boyling vpon a little Lampe, the Vessell being made after the manner of a little Pan, the bottome whereof is made of stone, and the sides of Whales finnes; in which Vessell was some little quantitie of Seale fish boyling in Seale oyle; and searching further, wee did finde in another of their Vessels a Dogs head boyled, so that I perswaded my selfe that they eate Dogs flesh. Moreouer, by their houses there did lye two great Boates, being couered vnder with Seales skins, but aloft open after the forme of our Boates, being about twentie foote in length, hauing in each of them eight or ten tosts or seates for men to sit on, which Boates, as afterwards I did perceiue, is for the transporting of their Tents and baggage from place to place, and for a saile they haue the guts of some beast, which they dresse very fine and thin, which they sow together.

Our first sight of the people.

Boat of Seale skins.

Our entring into their Tents.

Eaters of Dogs.

Also

Of the other sort of Boats. There is one of these Boats in Sir *T. Smiths* Hall.

Also the other sorts of their Boats are such as Captaine *Frobisher*, and Master *Iohn Danis* brought into *England*, which is but for one man, being cleane couered ouer with Seale skins artificially dressed except one place to sit in, being within set out with certaine little ribs of Timber, wherin they vse to row with one Oare more swiftly, then our men can doe with ten, in which Boates they fish being disguised in their Coates of Seale skinnes, whereby they deceiue the Seales, who take them rather for Seales then men; which Seales or other fish they kill in this manner. They shoot at the Seales or other great fish with their Darts, vnto which they vse to tye a bladder, which doth boy vp the fish in such manner that by the said means they catch them. So comming aboord our ships hauing left certaine trifles behind vs in their Tents, and taking nothing away with vs, within halfe an houre after our comming aboord, the Sauage to whom wee had giuen the Knife with three others, which we did suppose to be them which we saw first, came rowing to our ships in their Boats, holding vp their hands to the Sunne, and striking of their brests, crying *Yota*. We doing the like, they came to our shippe or Captaine: giuing them bread and Wine, which, as it did seeme, they made little account of; yet they gaue vs some of their dryed fishes, at which time there came foure more, who with the other bartered their Coats, and some Seale skinnes, with our folke for old Iron Nailes, and other trifles as Pinnes and Needles, with which they seemed to be wonderfully pleased, and hauing so done, holding their hands towards the Sunne they departed.

The manner of killing of their great fish or Seales.

Their comming to our ships.

The thirteenth, there came fourteene of them to our ship, bringing with them Seale skinnes, Whale Finnes, with certayne of their Darts and Weapons, which they bartered with our people, as before. This day I made obseruation of the latitude, and found this Road sted in the latitude of 66. degrees 25. minutes, and the mouth of this Bay or Sound, lyeth in the latitude of 66. degrees 30. minutes. Also here I made obseruation of the tydes, and found an East and West Moone to make a full Sea, vpon the Full and Change, more it floweth, three fathome and an halfe water, right vp and downe.

Obseruation of the latitude.

Obseruation of the tides.

The fourteenth and fifteenth dayes we rode still, the people comming to vs, and bartering with vs for pieces of old Iron, or Nailes, Whale Finnes, Seales Skinnes, Morse Teeth, and a kind of Horne which we doe suppose to be Vnicornes Horne, at which time the Captaine went with our Boat, to the place where we had seene their Tents, but found them remoued; and the other fish and the Seale fish lying still a drying: the Captaine taking a quantitie of the Sea fish into the Boat, caused some of the Mariners to boyle it ashoare, the Sauages helping our men to doe the same, the Captaine vsing them very friendly, they hauing made about a barrell and an halfe of Oyle, leauing it aland all night, thinking to bring the same aboord in the morning. But the Sauages the same night let the same forth. Yet notwithstanding, the Captaine shewed no manner of discontent towards them.

The sixteenth day, I went into the Pinnasse, to discouer certaine Harbours to the Northwards, the wind being at East South-east, I loosed and set saile, but instantly it fell calme, and so continued about an houre. When the wind came opposite at the West North-west a stiffe gale, we spending the tide till the floud being come, I put roome againe, and came to an Anchor a little from the *Frost* in twelue fathomes sandie ground. About one in the afternoone, the *Frost* departed from vs further vp the Bay, which we did suppose to be a Riuer, promising to abide our returne two and twentie dayes.

Our departing in the Pinnasse from the ship.

The seuenteenth day, the wind continuing at the West North-west blowing very hard, wee rode still, the people comming and bartering with vs.

The eighteenth day, the winde and weather as before, wee riding still. This forenoone there came to the number of thirtie of them, and bartered with vs as they had done before, which done, they went ashoare at a certaine point about a flight-shot off vs, and there vpon a sudden began to throw stones with certaine Slings which they had without any iniury offered at all; yea, they did sling so fiercely, that we could scarce stand on the hatches. I seeing their brutish dealing, caused the Gunner to shoot a Falcon at them, which lighted a little ouer them, at which time they went to their Boates, and rowed away. About one a clocke in the afternoone, they came againe to vs crying in their accustomed manner, *Ylont*, they being sixtie three in number, the shipper inquired of me whether they should come to vs or not. I willed him to haue all things in a readinesse, they comming in the meane time nigh to the Pinnasse, I did perceiue certaine of them to haue great bagges full of stones, they whispering one with another began to sling stones vnto vs. I presently shot off a little Pistol which I had for the Gunner, and the rest of the folke to discharge, which indeed they did, but whether they did hurt or kill any of them or not, I cannot certainly tell, but they rowed all away making a howling and hideous noise: going to the same point, whereas in the forenoone they had beene, being no sooner come on Land, but from the Hils they did so assaile vs with stones, with their slings, that it is incredible to report, in such sort that no man could stand vpon the Hatches, till such time as I commanded for to lose sailes and bonnets two mens height, to shield vs from the force of the stones, and also did hide vs from their sight; so that we did ply our Muskets and other Peeces such as wee had at them: but their subtiltie was such, that as soone as they did see fire giuen to the Peeces, they would suddenly ducke

The Sauages begin to sling stones at vs.

They sling stones againe.

Digitized by Google

ducke downe behind the Cliffes, and when they were discharged, then sling their stones fiercely at vs againe. Thus hauing continued there till foure a clocke, they departed away.

The nineteeneth day in the morning, about foure a clocke it beeing calme, I departed from this Roadsted, so causing our men to row alongst the shoare, till the tide of the ebbe was bent, at which time it began to blow a fresh gale at North-west and by West, we running downe till about two a clocke, when the tide of floud being come: when I came to an Anchor in an excellent Hauen, on the South side of *Cuninghams Mount*, which for the goodnesse thereof, I named *Denmarks Hauen*. *Denmarks Hauen.*

The twentieth day, in the morning the weather beeing very rainie with a little aire of wind, I loosed and caused to row forth of the foresaid Harbour, and comming forth betweene the Ilands and the maine, the people being as it seemed looking for vs espied vs: making a hideous noise, at which time at an instant were gathered together about seuentie three Boats with men rowing to vs. I seeing them, thought it best to preuent the worst, because we were to come hither againe: therefore to dissemble the matter, I thought it best to enter into barter with them for some of their Darts, Bowes and Arrowes, wee finding euery one of them to bee extraordinarily furnished therwith: so rowing forth to Sea amongst the Ilands, there still came more Boats to the number of one hundred and thirtie persons, they still rowing by vs, made signes to vs to goe to anchor amongst some of the Ilands: but I preuenting their deuices, made certaine Skonces with our sailes, to defend vs from their Stones, Arrowes and Darts. They seeing this, went certaine of them from vs rowing to certaine Ilands, to which they did thinke wee would come: leauing no more but about ten men and Boates about vs, who rowed alongst the space of an houre with vs, making signes of friendship to vs. At length perceiuing, that wee were not minded to goe forth amongst these Ilands, vpon which the rest of their folke were, they threw certaine shels and trifles into the Boat, making signes and tokens to fetch them, the which my Boy called *William Huntries* did. He being in the Boat, they presently shot him through both the buttockes with a Dart, at which time they rowed from vs, they muttering vpon the Ilands to the number of three hundred persons, keeping themselues farre enough from our danger. About sixe a clocke this Euening it began to blow a faire gale Easterly, we getting off to Sea, stood all this night North and by East alongst the Land.

The people come againe.

The subtilitie of the Sauages.

My Boy shot with a Dart.

A Topographicall Description of the Land as I did discouer the same.

NOw hauing proceeded for the discouerie of the Coast and Harbours so farre, and so long time as the time limited to me, therefore I thinke it conuenient, to make a briefe description of the same, according as by my short experience I found the same to be.

The Land of *Groenland* is a very high, ragged and mountainous Countrey, being all alongst the Coast broken Ilands, making very goodly Sounds and Harbours, hauing also in the Land very many good Riuers and Bayes, into some of which I entred sayling vp the same the space of ten or twelue *English* leagues, finding the same very nauigable, with great abundance of fish of sundrie sorts. The Land also in all places whersoeuer I came, seemed to be very fertile, according to the Climate wherein it lyeth; for betweene the Mountaynes was most pleasant Plaines and Valleyes, in such sort as if I had not seene the same, I could not haue beleeued, that such a fertile Land in shew could bee in these Northerne Regions. There is also in the same great store of Fowle, as Rauens, Crowes, Partridges, Pheasants, Sea-mewes, Gulles, with other sundry sorts. Of Beasts I haue not seene any, except blacke Foxes, of which there are very many. Also as I doe suppose there are many Deere, because that comming to certaine places where the people had had their Tents, we found very many Harts Hornes, with the bones of other beasts round about the same. Also going vp into the Land wee saw the footing and dunging of diuers beasts, which we did suppose to be deere, and other beasts also, the footing of one which wee found to be eight inches ouer, yet, notwithstanding we did see none of them: for going some two or three miles from the Pinnasse we returned againe to goe aboord. Moreouer, in the Riuers we found sundry sorts of Fishes, as Seales, Whales, Salmons, with other sorts of fishes in great abundance. As concerning the Coast, all alongst it is a very good and faire Land, hauing very faire shoalding of the same: for being three *English* leagues off the same, I found very faire shoalding in fifteene fathomes, and comming neerer the same fourteene, twelue, and tenne fathomes very faire sandie ground. As concerning the people, they are (as I doe suppose) a kinde of *Samoites*, or wandring Nation trauelling in the Summer time in Companies together, first to one place, and hauing stayed in that place a certayne time in hunting and fishing for Deere and Seales with other fish, streight they remoue themselues with their Tents and baggage to another. They are men of a reasonable stature, being browne of colour, very like to the people of the East and West *Indies*. They be very actiue and warlike, as we did perceiue in their Skirmishes with vs, in vsing their Slings and Darts very nimbly. They eat their meate raw, or a little per-

They eat their meat most part raw.

perboyled either with bloud, Oyle, or a little water, which they doe drinke. They apparell themselues in the skinnes of such beasts as they kill, but especially with Seales skins and fowle skins, dressing the skins very soft and smooth, with the haire and feathers on, wearing in Winter the haire and feather sides inwards, and in Summer outwards.

Of their apparell.

Their Weapons are Slings, Darts, Arrowes, having their Bowes fast tyed together with sinewes; their Arrowes haue but two feathers, the head of the same being for the most part of bone, made in manner and forme of a Harping Iron.

Of their weapons.

As concerning their Darts, they are of sundry sorts and fashions. What knowledge they haue of God I cannot certainly say, but I suppose them to bee Idolaters, worshipping the Sunne. The Countrey (as is aforesaid) seemeth to be very fertile, yet could I perceiue or see no wood to grow thereon. Wee met all alongst this Coast much Drift-wood, but whence it commeth I know not. For coasting all this Coast alongst from the latitude of 66. degrees and an halfe, vntill the latitude of 69. degrees, I found many goodly Sounds, Bayes, and Riuers: giuing names vnto diuers of them, and purposing to proceed further, the folke in the Pinnasse with me did earnestly intreate me to returne to the ship againe, alleaging this, that if we came not in conuenient time, the people in the ship would mutinie: and so returne home before we came: the which indeed had fallen forth, if the Captaine as an honest Gentleman had not by seuere meanes withstood their attempts, who would needes contrarie to their promises haue beene gone home within eight dayes after my departure from them. But the Captaine respecting his promise to mee, would by no meanes consent, but withstood them both by faire meanes and other wayes. So that vpon the seuenth day of Iuly, I returned again into the *Kings* Foord, which they in the ship had found to be a Bay, and comming to the place where wee had left the ship hoping to haue found them there, I saw vpon a certaine point a Warlocke of stones, whereby I did perceiue that they were gone downe the Ford. So the tide of ebbe being come, it being calme we rowed downe the Foord, finding in the mouth of the same amongst the Ilands, many good Sounds and Harbours.

We could see no Wood.

Drift-wood.

Iuly 1605.

The tenth day of Iuly the wind being at North North-west, I beeing in a certaine Sound amongst the Ilands, it being high water I weighed, stood West forth of the Foord going to Sea on the South side betweene a little Iland and the Maine, which Iland at our first comming, we called *Frost Iland*, after the name of the ship: we espied on the South sides certaine Warlockes set vp, whereupon I suspected that the *Frost* might be there, commanded the Gunner to shoot off a Peece of Ordnance, they presently answered vs againe with two other. We seeing the smoake (but heard no report) bore in to them, comming to an Anchor in a very good Sound by them, and found them all in health: the Captaine being very glad of our comming, forasmuch as hee had very much trouble with the company for the cause aforesaid. Also in the time of our absence the people did very much villanie to them in the ship, so that the Captaine tooke three of them; other of them also he slew, but the three which he tooke he vsed with all kindnesse, giuing them Mandillions and Breeches of very good cloth, also Hose, Shoes, and Shirts off his own backe. This afternoone, I with my Boy came againe aboord the ship, taking in this Euening all our prouision of water.

Frost Iland.

Our meeting againe with the ship.

Three of the people taken.

The eleuenth day, the wind being at North North-east, we set saile forth of the Sound which we named *Frost Sound*, but before our comming forth of the same our Captaine commanded a young man whose name was *Simon*, by the expresse commandement of the State-holder of *Denmarke* to bee set aland, wee also in the Pinnasse set another aland, they both being Malefactors, the which was done before our comming away, we giuing to them things necessarie, as victuall and other things also. Thus hauing committed both the one and the other to God, wee set saile homewards, we standing forth to Sea South-west, and South-west and by West till noone, when making obseruation, Queene *Annes* Cape bearing South and by East halfe Easterly some ten leagues, I found my selfe in the latitude of 66. degrees 10. minutes, when I directed my course South South-west till sixe a clocke when wee were amongst much Drift Ice, being to leeward two points vpon our lee-bow, so that I was forst to lie off West North-west till we were cleere of the same, at which time I directed my course South-west and by South, wee saying so all the night following.

Two men set aland.

The twelfth day, the wind at North North-east, wee went away South-west and by South till ten a clocke, when we were amongst more Drift Ice, wee being againe to lie West North-west, to get cleere of the same, which we did about noone, we hauing this day and the Euening before a mightie hollow Sea, which I thought to be a current, the which setteth thorow *Fretum Dauis* to the Southwards, as by experience I proued: for making obseruation this day at noone, we found our selues in the latitude of 62. degrees 40. minutes, whereas the day before we were but in the latitude of 66. degrees 10. minutes, hauing made by account a South and by West way about ten leagues. This afternoone I directed my course South South-west.

A great current setting to the Southwards.

The thirteenth day, the wind as before, we steered still South and by West, being at noone in the latitude of 60. degrees 17. minutes, going at the same time away South and by East. This foresaid current I did find to set alongst the Coast of *Gronland* South and by East. The fourteenth day, close weather, being an easie gale we steering South-east and by East. The fifteenth day,

still

ſtil cloſe weather til noone, we ſteering as before, being in the latitude of 59. degrees. This day at noone I went away East South-east; this afternoone it was haſie and ſtill weather, when we had ſight of ſome Drift Ice. The 16. day, cloſe weather with the wind at North-weſt and by West, our courſe East South-east til about ten aclock, when we met with a mightie bank of Ice to windward of vs, being by ſuppoſition ſeuen or eight leagues long, wee ſteering South South-east to get cleere of the ſame. We met all alongſt this Ice a mightie ſcull of Whales. Moreouer, wee light with a great current, which as nigh as we could ſuppoſe, ſet West North-weſt ouer for *America*. This day at noone, the weather being very thicke, I could haue no obſeruation, this Eueningby reaſon of the Ice, wee were forced to lye South and by West, and South South-weſt, to get cleere of the ſame, amongſt which we came by diuers huge Ilands of Ice.

Drift Ice.
A mighty bank of Ice.
A great ſcul of Whales.

The ſeuenteenth day, being cleere of the Ice, about foure in the morning, I directed my courſe South-east by South till noone, at which time I went away East and by South, the weather being very hayſie and thicke: about midnight it fell calme, the wind comming vp Eaſterly.

A great current.

The eighteenth day, the wind ſtill Eaſterly, we lying East South-east, away vnder a couple of courſes larboord tackt. This day in the forenoone, we ſaw certayne Ilands of Ice. The nineteenth day, the wind ſtill Eaſterly with the weather very haſie.

The firſt day of Auguſt alſo it was very thicke weather, with a faire gale at South-weſt and by West. This forenoone wee met with a ſcull of Herrings, ſo that I knew wee were not farre from the Iles of *Orkney*, ſo hauing a ſhrinke at noone, I found vs in the latitude of 58. degrees 40. minutes, at which time I ſounded with the deepeſt Lead, finding 42. fathomes redde ſandie ground, with ſome blacke dents. This Eueningbetweene fiue and ſixe a clocke wee ſounded againe, when we had no more but twentie fathomes dent ground, whereby I knew that we were faire by the ſhoare, when ſome of our men looking forth preſently, eſpied one of the Ilands of *Orkeney*, it being very thicke, wee caſt about, and ſtood with a ſmall ſayle to Seaboord againe, we lying West North-weſt off all this night.

We fell with *Orkeney*.

The tenth day, about fiue in the morning, we came thwart of the Caſtle of *Elſonuere*, where we diſcharged certaine of our Ordnance, and comming to an Anchor in the Road, the Captaine with my ſelfe went aſhoare, and hearing of his Majeſties being at *Copeman-Hauen*, wee preſently went aboord againe, and ſet ſayle comming thither about two a clocke. The Pinnaſſe alſo which he had loſt at Sea, in which my Countreyman *Iohn Knight* was Commander, came alſo the ſame night about foure a clocke, both they and we being all in good health, praiſed bee Almightie God. *Amen.*

CHAP. XV.

The ſecond Voyage of Maſter IAMES HALL, *forth of* Denmarke *into* Groenland, *in the yeere* 1606. *contracted.*

WE departed from *Copeman-Hauen*, the ſeuen and twentieth of May, in the yeere of our Redemption 1606. with foure ſhips and a Pinnaſſe. The *Froſt* beeing Admirall, wherein went for principall Captaine of the Fleet Captaine *Godske Lindeno* a *Danish* Gentleman with my ſelfe, being vnder God Pilot *Maior* of the Fleet. In the *Lyon* which was Vice-Admirall, went for Captaine and Commander, Captaine *Iohn Cunningham* a *Scottiſh* Gentleman, who was with me the yeere before. In the *Yewren* went *Hans Browne*, a Gentleman of *Norway*. In the ſmal ſhip called *The Gilleflowre*, went one *Caſtine Rickerſon* a *Dane*. In the Pinnaſſe called the *Cat*, went one ſhipper *Andres Noll*, of *Bergen* in *Norway*. So by the prouidence of God, wee weighed and ſet ſaile about ſixe a clocke in the Euening, with a faire gale at South-South-weſt, comming to an Anchor in *Elſonuere* Road to take in our water.

Godske Lindeno.
Captaine *Cunningham.*
Hans Browne a Gentleman of *Norway.*
Rickerſon a *Dane.*
Andres Noll of *Bergen.*

The nine and twentieth in the morning, we ſhot off a Peece of Ordnance, for all the Captaines and Commanders to come aboord of vs, who being come, our Captaine commanded the Kings Orders to bee read, which done, they returned aboord, at which time wee weighed with a faire gale at East North-east, ſtanding away North and by West till I had brought the *Cole* North-east and by East off, when I ſteered away North North-weſt, and North-weſt and by North. This Euening about fiue a clocke, I ſet the *Annold*, it bearing West halfe Northerly, three leagues and an halfe. All this Euening wee ſtood away North-weſt and by North.

The thirtieth day, the wind at East South-east, wee ſteering as before, this morning about ſixe a clocke, the *Leſold* bore West and by North of vs ſixe leagues off. At fiue this Euening, the *Scaw* bearing West South-weſt fiue leagues, I directed my courſe West North-weſt, with the wind at North-east and by East.

The one and thirtieth in the morning, very haſie weather with a ſtiffe gale at East North-east,

Digitized by Google

East, we steering West North-west away, till about nine a clocke, when we had a shrinke of the Land which was the wester gate of *Mardo*, we steering alongst the Land. Wee came to an anchor in *Flecorie*, where we were to make and take in wood and water.

Our comming to *Flecorie*.

The second of Iune we weighed, and came forth of the Harbour of *Flecorie* about sixe in the morning, hauing a fresh gale at East North-east. About eleuen at noone, I set the Nase of *Norway*, it bearing North North-west foure leagues off. The fourth day in the morning about two a clock, we were faire by the high Land of the *Teddoe*, I causing to cast about stood to the Southwards, West and by South and sometimes West. This day at noone, I found my selfe in the latitude of 57. degrees 45. minutes, the Nase of *Norway* bearing East North-east two and twentie leagues off. This day at noone also I cast about and stood to the Northwards, lying North with the stemme, hauing the winde at North North-west. This afternoone dyed one of our *Greenlanders* called *Oxo*. All this euening, and the night following, the winde as before, we lying also North with little winde.

Our departure.

One of our *Groenlanders* dyed.

The seuenth day, the winde at South-west and by South and South South-west, we steering West and West and by North. This day at noone we were in the latitude of 58. degrees 40. minutes. The tenth day about foure in the morning, it began to blow a fresh gale at East and by South, at which time we stood alongst the Land to the Southward, till I had brought the South Head of *Shotland*, called *Swinborne* Head, North-west and by North about three leagues off; and *Faire Ile* next hand South-west and by South eight leagues off, at which time I directed my course away West with a fresh gale at East South-east about halfe an houre to three. I set the South head of *Shotland* it bearing North-east eight leagues off, *Faire Ile* next hand South-east seuen leagues off, foule next hand North foure leagues, wee still steering away West with a fresh gale at East South-east. All this afternoone and the night following it was very thicke and raynie weather, the winde continuing as before. This night at midnight dyed the *Groenlander* which we had aboord vs, named *Omeg*.

The fift and sixt most what calme.

Shotland.

Our *Groenlander* dyed.

The fourteenth day, the winde as the night before a faire gale, we steering as we did before, with hayse weather hauing a shrinke, at noone I found vs in the latitude of 58. degrees 40. minutes, hauing made a West and by South way Southerly two and thirtie leagues, differing to the Westward from the Meridian of the Nase 19. degrees 45. minutes. This afternoone we had a faire gale at South-east with thicke weather, we steering away West.

The fifteenth day, the winde as before, we steering away West, being by my imagination in the latitude of 58. degrees 40. minutes. The three and twentieth day, the winde at the North-east a faire gale, we steering betweene the West North-west, and the West and by North, being at noone in the latitude of 56. degrees 10. minutes, hauing by reason of a Northerly current contrarie to my expectation, made a West way Southerly two and twentie leagues. The Compasse also as I doe suppose, being varied more then a Point to the westwards.

Sight of Land with Ice.

The first of Iuly wee saw Land being eight leagues off, with a great banke of Ice lying off South-west, wee setting our tacks aboord laid off East and by South and East South-east, to double the same, about two a clocke hauing doubled the same, wee went away West and by South all this euening and night following. This Land I did suppose to be *Busse* Iland; it lying more to the Westwards then it is placed in the Marine Charts.

A current.

The Pinnasse came foule of the *Lion*.

The second day thicke weather with the winde at North North-west, we steering West and by North. This afternoone we were in a great Current setting South South-west. The which I did suppose to set betweene *Busse* Iland and *Freseland* ouer with *America*; wee steering West North-west with a faire gale at North. This night about nine a clocke, the Pinnasse came foule of the Vice-admirall, where with her anchor shee tore out about a foot of a planke a little aboue water, and broke downe the beakes head.

South current.

Variation obserued.

The sixth making obseruation, I found vs in the latitude of 58. degrees 50. minutes, contrarie to my expectation, whereby I did see the Southerly Current to bee the principall cause. The seuenth day, the winde at North and by East, we lying West North-west, being at noone in the latitude of 59. degrees 40. minutes, our way North-west two and twentie leagues. This euening I found the North Point of the Compasse to be varied 12. degrees 5. minutes, to the Westward of the true North.

The eight day, the winde came vp more Southerly betweene the South-west, and the South-west and by West with an easie gale, we steering away North-west and by West; being at noone in the latitude of 59. degrees 30. minutes, hauing by reason of the Current and Variation made a West way Southerly about ten leagues.

A current setting South-west.

Sight of *America* in 58. degrees and 30. minutes.

The ninth day close weather, it being calme all the forenoone, wee perceiuing by our ships which lay becalmed, a violent Current setting South-west. This day at noone, we were in the latitude of 59. degrees 40. minutes. The tenth about foure in the morning, the winde came vp to the North North-west. I casting about stood to the Westwards, lying West with the stemme, being in the latitude of 60. degrees 16. minutes. We saw the coast of *America* about nine leagues off, at which time I made obseruation of the variation, and found the Needle varie 24. degrees to the Westwards of the true North.

The

The Hill tops were couered with ſnow, and the ſhoare to the Northwards full with Ice, but to the Southwards it ſeemed cleere. Here I found a great Current to ſet Weſt into the ſhoare, which about midnight did bring vs to bee incumbred with very many Ilands of Ice, hauing much to doe to get cleere off the ſame without danger: but by Gods helpe it being faire weather with a freſh gale at South-weſt, wee got cleere off the ſame, ſtanding Eaſt South-eaſt and South-eaſt and by Eaſt. A Current.

The fourteenth in the morning being cleere of the Ice, I went away Eaſt North-eaſt and North-eaſt and by Eaſt till eight a clocke, when I directed my courſe North-eaſt and by North, being at noone in the latitude of 59. degrees, the Cape or Head land which wee ſaw that night bearing Weſt South-weſt ſixteene leagues off. All this afternoone and night following it was for the moſt part ſtill weather: this euening I found the variation 23. degrees 55. minutes. Variation obſerued.

The ſixteenth faire weather with a freſh gale at Eaſt South-eaſt, our courſe as before, being in the latitude of 60. degrees 20. minutes, the ſhips way North and by Eaſt northerly twentie leagues. This afternoone and the night following the wind as before, we ſteering ſtill North-eaſt and by North.

The eighteenth alſo thicke weather, being forced to ſtand away North North-weſt to double a great banke with great Mountaines of Ice almoſt incredible to be reported, yet by the helpe of God wee paſſed the ſame, ſayling all this day by great and huge mountainous Ilands of Ice, with the winde at South-weſt and by South, being at noone in the latitude of 63. degrees 45. minutes. Wee did ſee our ſelues beſet round about with mightie bankes of Ice, being forced to make more ſaile, and to lye to and againe all this night to keepe vs cleere of great and ſmall Ilands of Ice, where many times we were in ſuch danger, that we did looke for no other thing then preſent death, if God had not beene mercifull vnto vs and ſent vs cleere weather, where by his aſſiſtance we kept our ſelues very hardly and with great difficultie cleere of the Ice. Compaſſed about with Ice.

The nineteenth day in the morning cleere weather with a freſh gale at South-weſt, wee plying amongſt the Ice to ſee if wee could get a gut to get cleere of the ſame, at which time wee ſaw the Land of *America* about the latitude of 64. degrees, it lying next hand South and North, being high ragged Land couered with ſnow, the ſhoare being all beſet with Ice. So lying off and on amongſt the Ice in great perill till about noone, when God of his goodneſſe ſent vs to eſpie a little gut where wee went through; and ſtood South South-eaſt away, comming ſtill by many Ilands of Ice. Land of *America.*

Heere I did finde both by my courſe and reckoning (the variation alſo of the Compaſſe reſpected) that wee were carried with a mightie Current to the Weſtwards, as both now and afterwards wee did probably proone and ſee the ſame. For I ſetting my courſe from the coaſt of *America* in the latitude of 58. degrees and a halfe for the coaſt of *Groenland* North North-eaſt with a compaſſe, whoſe wyers were placed more then two third parts of a Point to the Eaſtwards of the North, the variation being 23. degrees 30. minutes Northweſting and 24. degrees, as by obſeruation I found betweene the latitude of 58. and a halfe and 54. degrees, yet I did finde my ſelfe contrarie either to mine owne, or to any of their expectations which was in the Fleet with mee, carried almoſt foure Points with the Current to the weſtwards ouer our iudgements. A mightie current ſetting to the weſtward. Note.

The twentieth, wee ſtill ſayled to the Eaſtwards by many great Bankes and Ilands of Ice, being ſtill compaſſed in, wee being forced to ſtand to the Southwards to get cleere, where being ſometimes becalmed, wee did plainly ſee and perceiue our ſelues carried into the Ice to the weſtward very violently. This Current ſetteth Weſt North-weſt. The twentieth in the euening I found the Compaſſe varied 23. degrees. Here I did giue direction to the other ſteerman to direct their courſe for *Groenland.*

The one and twentieth day in the morning faire weather, wee eſpyed a gut through the Ice, it ſeeming cleere to the ſouthwards of the ſame, where bearing into the ſame about noone, wee were cleere of all the Ice by the mercifull prouidence of God. Here I obſerued the latitude, it being 63. degrees 33. minutes. Now hauing the one and twentieth day at afternoone cauſed the Admirall to call the other Captaines and Steermen aboord, with whom wee might conferre, and hauing ſhewed briefly my reckoning with the other euents, which contrarie to my expectation had happened, the cauſe whereof at that inſtant they did plainly ſee and perceiue: They confeſſing, the Current as they did now plainly ſee, to bee the cauſe of the ſame. So hauing done, I gaue to the other Steermen directions, that being cleere of the Ice they ſhould goe betweene the Eaſt and the Eaſt and by North ouer for the coaſt of *Groenland* and not to the Northwards of the Eaſt and by North, becauſe of the former euents. And now at this inſtant, by Gods helpe, being cleere I called to them, giuing the ſame directions. This afternoone and the night following it was calme. This euening I found the Compaſſe varied 23. degrees 25. minutes. Variation obſerued. The Current.

The two and twentieth day at noone I found vs in the latitude of 63. degrees 10. minutes. The three and twentieth faire weather, the ayre very cold, as with vs in the moneth of Ianuarie, the winde variable betweene the Eaſt North-eaſt, and the South-eaſt and by Eaſt, being at noone in the latitude of 63. degrees, hauing made a South-eaſt and by South way

Digitized by Google

eleuen leagues. This day at noone I caſt about to the Weſtwards, the other ſhips doing the like, lying North-eaſt and by North with the ſtemme, finding this euening the Needle varied to the Weſtwards 23. degrees 30. minutes.

Variation obſerued.

The foure and twentieth, the winde variable betweene the South South-eaſt and the South-eaſt and by South with raine and fogge. This day about eleuen a clocke wee did ſee much Ice to leeward, wherefore I caſt about to the Southwards, the winde comming to the Eaſt North-eaſt, wee lying South-eaſt with the ſtemme, ſuppoſing the ſhip to haue made a North and by Weſt way halfe Northerly two and twentie leagues. This afternoone, by reaſon of the fogge, we loſt ſight of the *Lion* and the *Gilliflowre*, wee looking earneſtly forth for them, and ſhooting both we and the *Vrin* diuers pieces of Ordnance, but wee could neither ſee nor heare them, at which time the winde came vp Southerly, we ſtanding away our courſe betweene the Eaſt and Eaſt and by North.

Wee loſt the *Lion* and *Gilliflowre*.

The fiue and twentieth, wee had ſight of *Groenland*, being about ten leagues to the Southward of Queene *Annes* Cape. Wee ſtanding away Eaſt South-eaſt in with the Land with the winde at South. All this night it did blow very much, wee ſteering North by Weſt and North North-weſt.

The ſeuen and twentieth day in the morning was reaſonable cleere weather with a freſh gale at South South-weſt. This morning betweene foure and fiue of the clocke, I eſpyed Queene *Annes* Cape to beare Eaſt by South next hand of mee, and King *Chriſtians Foord* South South-eaſt of me, being thwart of *Rumels Foord*, Queene *Sophias* Cape bearing North halfe weſterly, about fiue leagues off. Therefore I thought it conuenient to put into *Cunninghams* Foord where the ſiluer was, both in regard that I had ſworne to his Maieſtie as concerning the ſame; and alſo becauſe wee were expreſſely commanded to bring home of the ſame. So hauing a faire gale at Weſt South-weſt, wee came into the aforeſaid Riuer, anchoring in a very good Sound, hard by the *Vre* in ſixteene fathoms, at the mouth of *Cunninghams* Foord, about fiue of the clocke. There came preſently foure of the Countrie people vnto vs after their old accuſtomed manner. This euening about ſixe of the clocke the *Vrin* anchored by vs. This night the Admirall, my ſelfe, and Captaine *Browne* went on Land to ſee the Myne of ſiluer: where it was decreed, that we ſhould take in as much thereof as we could.

The ſiluer Myne.

The place of the ſiluer Myne.

On Sunday the third of Auguſt, the Sauages ſeeing our curteſie toward them, battered Seales skinnes and Whales finnes with vs: which being done, wee went to our Boat, and rowing away, three of them taking their Boats, rowed with vs vp the Foord, calling to other of the people, telling them and making ſignes to vs, of our dealing towards them. Then they alſo came to vs and bartered with vs for old Iron and Kniues, for Seales skinnes and coates made of Seales skinnes, and Whales finnes, and rowed ſtill all with vs. In the end, hauing rowed fiue or ſixe leagues vp the Foord, and ſeeing it to bee but a Bay, wee returned alongſt many greene and pleaſant Ilands, where wee found good anchoring: the people ſtill followed vs to the number of fiue and twentie perſons till about ſixe of the clocke; when it fell thicke with ſome raine, and the winde being Southerly, wee rowed in among the Sounds, at which time they went from vs: wee rowing our Boat to one of the Ilands went to ſupper. And hauing ſupped, wee rowed ſome three leagues vp an other Foord, where we found very ſhallow water, in which place we ſtayed with our Boat all that night.

Barter for Seales skinnes and Whales finnes.

Many greene Ilands.

Another foord.

The fourth day in the morning about three of the clocke, wee returned to our ſhip againe with a gale of winde Southerly, being ſomewhat thicke and raynie weather, ſayling by the Land among the Ilands, till we came three leagues to the Northwards of Queene *Sophias* Cape, when going without the Ilands, wee met with a very high Sea, ſo that wee had much to doe, but by the prouidence of Almightie God, the Boat was preſerued from being ſwallowed vp of the Sea. In the end, wee got againe among the Ilands, and ſo about noone wee came to our ſhips. The fift day, ſome of our men went on Land among the Mountaines, where they did ſee reine Deere.

Queene *Sophias* Cape.

Reine Deere.

The ſixt day, I caſting about, ſtood into the ſhoare South-eaſt, till wee had brought *Rumels* Foord Eaſt and by North off vs, bearing roome for the ſame Foord. There goeth a very hollow Sea betweene the Ilands of the *Kings Foord* and *Rumels Foord*. The winde being ſomewhat ſtill, wee towed on head with our Boats till wee came thwart of a Bay, in which I was in the *Vrins* Boat, which I named *Fos Bay*, after the name of *Philip de Fos*, Pilot of the *Vrin*. But the Admirals wilfulneſſe was ſuch, that I could by no meanes counſaile him therein though night were at hand, but hee would goe vp the Foord, till wee came on the ſtarboord ſide of the Foord to ſixe and twentie fathomes ſandie ground. The *Vrin* let fall anchor by vs, but the winde comming off the Land (our Captaine and Companie being ſo obſtinate and willfull, that I could by no meanes get them to worke after my will) the ſhip draue into the mid-foord, where wee could haue no ground at an hundred fathoms, till the Tyde of flood came, when the flood ſet the ſhip to the ſhoare: but I laying out a Cage-anchor got the ſhip off; and ſetting our foreſaile, ſtood for another roade vp the Riuer.

Rumels Foord. A hollow Sea.

Fos Bay.

No ground at 100. fathoms in the middeſt of *Fos Bay*.

The eight day about foure in the morning, wee came to an anchor in twentie fathomes ſandie ground,

Digitized by Google

ground, hauing very faire shoalding within vs. About noone the *Vrin* came and anchored by vs. It floweth in this Riuer South-east and North-west, and it standeth in the latitude of 66. degrees and 25. minutes.

Fos Riuer in 66. degrees 25. minutes.

The ninth in the morning, our Captaine with the Captaine of the *Vrin*, went with their Boates vp the Riuer, where they did come to see their winter houses, which were builded with Whales bones, the balkes being of Whales ribbes, and the tops were couered with earth, and they had certaine Vaults or Sellers vnder the earth foure square, about two yards deepe in the ground. These houses were in number about some fortie. They found also certaine Graues made vp of stones ouer the dead bodies of their people, the carkasses being wrapped in Seales skins, and the stones laid in manner of a Coffin ouer them.

A Town found ten leagues vp the Riuer.

This day, in this place we set a man on Land, which had serued our Captaine the yeere before, which for a certaine fault committed by him our Captaine left behinde in the Countrie. About noone our men came aboord againe; and after Dinner some of the people came vnto vs, of whom wee caught fiue with their Boates and stowed them in our ships, to bring them into *Denmarke*, to enforme our selues better by their meanes of the state of their Countrie of *Groineland*, which in their owne language they call *Secanunga*, and say, that vp within the Land they haue a great King, which is carried vpon mens shoulders.

A man left on Land.

Fiue of the people taken againe.

Groenland called by the Inhabitants *Secanunga*.

The tenth of August in the morning, the winde being at East South-east, we weighed and came forth of *Rombes Foord*, but being come forth to Sea amongst the Ilands, the winde came vp to the South-west and by South, the Sea going maruellous high, we lying West and West and by North to Sea, doubling certaine Ilands and Rocks. Where the Sea going so wonderfull high had set vs vpon the Rocks, where we had all dyed, if God of his mercy at that instant, when wee saw nothing before our eyes but present death, had not sent vs a great gale of winde at South South-west, whereby wee lay West North-west away with a flawne sheat, wee doubling of the Ilands and Rocks, were forced to goe betweene certaine little Ilands, which lye off Queene *Sophias* Cape foure leagues into the Sea. The which Ilands I named the yeere before, *Knights* Ilands, after the name of *Iohn Knight*. So hauing passed these Ilands not without great danger, wee found betweene them many blinde Rocks, and being cleere in the Sea. The thirteenth at noone, we were in the latitude of 66. degrees 50. minutes, being off Cape *Sophia* West and by North halfe westerly about sixteene leagues.

Knights Ilands.

The eighteenth about foure in the morning, we got cleere off the Ice, steering South and by West away, it being very thicke weather till noone, when it cleered vp: at which time wee saw the shoare rising like Ilands, being very high and stretching South and by East, and North and by West about foure and twentie leagues, the shoare being beset all full with Ice, so that in that place it is impossible for any ship to come into the shoare. Also of the Southermost of these two Capes, lay such a great banke of Ice stretching into the Sea, that wee were forced to lye West and by North to double the same.

All this afternoone, wee were almost compast with Ice, we bearing to the same, the winde comming vp to the East South-east, we standing South to the Ice were forced to loose for one Iland, and to beare roome for another till about foure a clocke, when by Gods helpe wee got cleere off the same, the winde comming vp to the South-east and by South, wee lay South-west and by South off all this night.

The two and twentieth thicke weather, the winde as before. This morning about seuen a clocke we saw a saile West and by South of vs, we standing to him, for it was our Vice-admirall the *Lion*, who had beene greatly troubled with the Ice, wee being glad to meete one another againe.

We met againe with the *Lion*.

The eight and twentieth about foure in the morning, the storme ceased, the winde comming vp to the West South-west. About three a clocke wee set our sailes standing South-east away. But being vnder saile, we spyed great bankes and Ilands of Ice to leeward of vs, lying off East and by South, which Ice I did iudge to lye off Cape *Desolation* about eight leagues off: the which by reason of the fogge we could not see.

The nine and twentieth about sixe in the morning, the winde came vp to the North-east and by North, we making saile went South South-east away till noone with a stiffe gale, wee seeing in the morning pieces of drift Ice to windward of vs; hauing at noone a shrinke of the same I found vs in the latitude of 59. degrees 46. minutes, hauing from noone to noone made a South-east and by South way eight leagues.

The one and thirtieth, the winde continuing, wee holding still our course with the winde still at North North-west, with faire and cleere weather it blowing very much, so that wee stood away vnder a couple of courses low set, the Sea very much growne, being in the latitude of 59. degrees 10. minutes, hauing made an East South-east way somewhat Easterly foure and thirtie leagues. This afternoone after my obseruation, wee saw some Ilands of Ice with some drift Ice, I something maruelling of the same, knowing both by my account and my noones obseruation, that we were shot too farre from any part of *Groinland*, that was described in the Ma-

Digitized by Google

rine Chart. For the ſouthermoſt part deſcribed therein is not in the latitude of 60. degrees, and we being now in the latitude of 59. degrees ten minutes, Cape *Deſolation* bearing Weſt North-weſt halfe Northerly about ſixtie foure leagues, and Cape *Chriſtian* which was the next known part of *Groenland* North-weſt and by Weſt weſterly eight and thirtie leagues, ſo holding our
Sight of Land. courſe East South-east away, about foure a clocke we had ſight of Land, being very high Land, it lying alongſt East South-east about ſixteene leagues, the weſtermoſt part ſeemed either to fall away East North-east, and the ſouthermoſt point bearing East northerly, fell away East and by North. This Land is very high, hauing the Hills couered with ſnow, the ſhoare being very thicke with Ice: this place becauſe I knew not whether it was of the Mayne or an Iland, I named *Froſt Iland*, after the name of the ſhip.

Froſt Iland.

The firſt of September, at noone, I made obſeruation, and found vs in the latitude of 58. degrees, hauing made a South-east and by South way ſoutherly ſixe and twentie leagues. This day at noone I directed my courſe East and by South, This afternoone about ſixe a clock it fell calme,
Variation obſerued. and ſo continued all the night following. This euening I found the variation 10. degrees 50. minutes Northweſting.

The fourth day the winde at East and by South, we lying South and by East, hauing a ſhrinke of the ſunne about noone, I did ſuppoſe vs in the latitude of 57. degrees 20. minutes, hauing made a South-east and by South way ſoutherly about ten leagues; all this day and the night following we lay as before.

The eight day faire weather, the winde as before, it being almoſt calme, wee going away as before, being at noone in the latitude of 58. degrees 36. minutes, hauing made an East North-
A great Southerne Sea. east way northerly twentie leagues, by reaſon of the great ſoutherly Sea. All this afternoone
Variation obſerued. and the night following it was for the moſt part calme. This euening I found the Compaſſe varied about two degrees 45. minutes northweſting.

The ninth day alſo faire weather, the winde ſoutherly a freſh gale, our courſe ſtill East, being at noone in the latitude of 58. degrees 40. minutes, our way East and by North eaſterly twelue leagues. This afternoone the winde came vp to the South or South and by East with raine. This night about midnight thicke weather with raine, the winde comming to the South-east, we lying East North-east and North-east and by East with the ſtemme.

The tenth day about two in the morning, the winde came vp to the South South-weſt, wee ſteering our courſe East, being at noone in the latitude of 59. degrees 10. minutes, hauing made an East and by North way eaſterly foure and fortie leagues, wee hauing a freſh gale weſterly.
A *Bas* Gooſe. This day wee ſaw one of the Fowle the which are on the Iland of *Bas* in *Scotland*, called *Bas Geeſe*.
Variation obſerued to the North-east. This euening I found the variation 1. degree 4. minutes northeaſting.

The eighteenth, this forenoone about nine a clocke, wee eſpyed land, riſing ſomewhat ragged, the Eaſtermoſt point of the ſame bearing South-east and by South, and the Weſtermoſt part South and by Weſt about eight leagues. Theſe Ilands by my account and obſeruation, I
Sight of *Ferris*. found to be the Ilands of *Ferris*, being at noone in the obſeruation of 62. degrees 5. minutes.

The nineteenth I ſet a little Rocke, called the *Monke*; which lyeth off to the South-east end, it being about fiue a clocke, East South-east of vs three leagues off. This night about ten a clocke it fell calme.

The ſtreame vnder the Ilands of *Farre*. The twentieth, wee did ſee the ſtreame had ſet vs to the Northwards. This ſtreame ſetteth vnder the Ilands of *Farre* next hand East and Weſt. So caſting about wee ſtood to the weſtwards, lying Weſt South-weſt and ſometimes Weſt and by South, and ſometimes South-weſt, it being very raynie weather, about midnight it fell calme and ſo continued all night vnto the morning.

The firſt of October in the afternoone about foure of the clocke, we had ſight of *The Holmes*. The ſecond day, wee ſteered away South-east and by South and South South-east for *The Col*.
Turco. And about eight of the clocke this night wee came into *Turco*, where wee rode all the day following. The third day at night the winde came to the North-east; ſo wee weighed and came into *Elſenor* Road. The fourth day, by the prouidence of God, we arriued in our deſired Port of *Copen Hauen*, 1606.

The ſeuerall burthens and numbers of men employed in the ſhips of the Fleet aforeſaid, were as followeth.

THe *Truſt* being Admirall, was of ſixtie tunnes, had eight and fortie men. The *Lion* Vice-admirall, was of ſeuentie tunnes, had eight and fortie men. The *Vrin* or *Eagle* Reare-admirall, of one hundred tunnes, had fiftie men. The *Gilliflowre* was of fortie tunnes, had ſixteene men. The Pinnaſſe called the *Cat*, was of twentie tunnes, had twelue men. *Bredaranſies Foord* is moſt Northerly: *Cunninghams Foord* is next in ſixtie ſeuen degrees and odde minutes. The Foord wherein they ſaw the Towne ten leagues vp the ſame, is two leagues to the South of *Cunninghams Foord*. The Kings *Foord* is in ſixtie ſixe degrees and an halfe.

William

William Huntris of *Stowborow* in *Yorke*-ſhire, is Maſter *Hall* his man, and is allowed thirtie pound by the yeere of the King of *Denmarke*, for his ſkill in Nauigation.

I haue alſo Maſter Halls *Voyage of the next yeere* 1607. *to* Groenland *from* Denmarke, *written, and with repreſentations of Land-ſights curiouſly delineated by* Ioſias Hubert *of* Hull, *but the* Danes *(enuious perhaps that the glory of the Diſcouery would be attributed to the* Engliſh *Pilot) after the Land ſaluted, mutined, and in fine forced the ſhip to returne for* Iſland. *For which cauſe I haue here omitted the whole.*

CHAP. XVI.

The Voyage of Maſter IOHN KNIGHT, *(which had beene at* Groenland *once before* 1605. *Captaine of a Pinnaſſe of the King of* Denmarke) *for the Diſcouery of the North-weſt Paſſage, begun the eighteenth of Aprill* 1606.

I Set ſayle from *Graueſend* in a Barke of fortie tunnes, called the *Hope-well*, well victualled and manned at the coſt of the Worſhipfull Companies of *Moſcouie*, and the Eaſt *Indie* Merchants, for the Diſcouerie of the North-weſt Paſſage the eighteenth of Aprill 1606. and arriued the ſixe and twentieth of the ſame moneth in the Ile of *Orkney*, in a Sound called *Pentlefrith*. Heere wee were ſtayed with contrary winds at Weſt and North-weſt, and with much ſtorme and foule weather aboue a fortnight. In which meane ſpace, I entertained two men of this Countrey, which are both luſtie fellowes at Sea and Land, and are well acquainted with all the Harbours of theſe North parts of *Scotland*. Theſe men brought vs into a very good Harbour, called Saint *Margarites Hope*, where we had the Sea open to vs for all winds that are good for vs to proceed on our Voyage. In this Countrey we found little worthy of Relation. For it is poore, and hath no wood growing vpon it. Their Corne is Barley and Oates. Their fire is Turffe, their houſes are low and vnſeemely without, and as homely within.

April 18. 1606.

Pentlefrith, in *Orkney*.

Saint *Margarites Sound*.

Vpon Munday the twelfth of May, I ſet ſayle from Saint *Margarites Sound* or *Hope* in *Orkney*, at nine of the clocke in the morning, our courſe being Weſt and by South: and at eight of the clocke at night, the Hill called *Hoyce*, did beare Weſt Southerly eleuen or twelue leagues, and the *Stacke* South and by Eaſt Eaſterly three leagues and an halfe, the winde beeing at Eaſt South-eaſt.

This day was for the moſt part calme, and ſometimes wee had a freſh gale of winde: our courſe was Weſt and by South, halfe a point Southerly. This day I paſſed by two ſmall Ilands. The one of them is called, the *Clete*, and the other the *Run*. They are diſtant foure leagues the one from the other. The courſe betweene them is South-weſt and North-eaſt. The Southermoſt is called the *Clete*, and is the leſſer of the twaine: it is diſtant from the North-eaſt part of *Lewis*, called the *Bling-head*, ſeuen leagues: and the courſe betwixt them is North-weſt and South-eaſt. Alſo this *Bling-head* is diſtant from the *Farro Head*, of the *Hieland* of *Scotland* Weſt and by North halfe a point Weſterly, and is diſtant ſeuenteene leagues. Alſo the courſe betweene *Bling-head* and the North-weſt part of *Lewis*, is Weſt and by South halfe a point Weſterly, and faire low Land without Wood. There is good riding all along the ſhoare, the winde beeing off the Land, and in ſome places are very good Harbours for all winds. From eight to twelue at night, we ran ſixe leagues Weſt South-weſt.

Two ſmall Ilands.

The *Bling-head* the North-eaſt part of *Lewis*.

This morning we had a freſh gale of wind at Eaſt North-eaſt: our courſe was South-weſt and by Weſt two houres fiue leagues. From two to ten South-weſt, and by South 20. leagues. From ten to twelue Weſt South-weſt ſixe leagues. The latitude at noone was 58. degrees 27. minutes.

Fifty eight degrees 27. min.

From Wedneſday at noone till Thurſday at noone, was for the moſt part raine and fogge, the wind at North-eaſt and by Eaſt: our courſe was Weſt halfe a point Southerly: our latitude at noone being Thurſday, 58. degrees 23. minutes. From Thurſday at noone till Friday at noone, being the ſixteenth, our way was Weſt Southerly about twentie leagues: the latitude at noone was 58. degrees 19. minutes. This night the wind was ſometimes variable betweene the South and by Weſt and South-eaſt, with faire weather, the Magneticall Declination 18. degrees: the height of the Pole was 58. degrees 10. minutes. Alſo in the morning the Sunne beeing tenne degrees aboue the Horizon, was diſtant from the Eaſt to the North-wards of the Eaſt twentie two degrees.

Eighteene degrees of variation.

From Friday at noone vntill midnight was little wind Southerly, and ſometimes calme, and from midnight till twelue at noone the next day a ſtiffe gale of wind at Eaſt North-eaſt. This foure and twentie houres I judged our way to be made good Weſt, ſomething Southerly thirtie

Digitized by Google

leagues. The latitude at noone was 58. degrees 10. minutes. Also the sunne did rise fiftie degrees to the Northward of the East.

From Saturday at noone being the seuenteenth, till Sunday at noone being the eighteenth, our course was West and by South a stiffe gale of wind fiftie leagues, being close weather, we made no obseruation of latitude.

From Sunday at noone till Munday at noone I steered away West and West and by South, hauing a storme at East and by North: our course was West and Southerly fiftie leagues.

From Munday at noone till midnight, our course was West and Southerly: and from that time till noone West and by North and West among. I iudged wee sayled fortie leagues these foure and twentie houres, being for the most part foggie. The latitude at noone was 57. degrees 50. minutes.

A current to the Northward

From Tuesday at noone till noone on Wednesday, our course was West and by North fortie fiue leagues, being foggie weather without obseruation. Here wee had a current, which I iudge setteth to the Northwards.

From Wednesday at noone till Thursday at noone, being the two and twentieth, our course was West and by North fiftie leagues with much fogge and close weather, and much winde at North-east and by East.

From Thursday at noone till midnight, our course was West and by North. Then the winde came to the North: wee tooke in our mayne course, and I spooned away with our fore-saile till Friday, the winde being at North North-east, I iudged our way West South-west, the twelue houres that I spooned about fifteene leagues, the other twelue houres West Northerly fiue and twentie leagues. This three and twentieth day, wee saw many Gulles and much Rock-weed.

Many Gulles and much Rock-weed.

A current to the North-east ward.

From Friday at noone till Saturday at noone, I iudged our way to bee made South-west and by West, but it proued West and by South, rather Westerly, twentie leagues by reason of a current, that I iudge setteth to the North-eastward. The latitude at noone was 57. degrees 53. minutes. The variation of the Compasse was about a point to the Westward. This forenoone and all night the wind was at North a very hard gale; wee spooned with our fore-sayle. Also this forenoone, we saw much Sea Tange and Rock-weed.

The variation 13. degrees Westward.

From Saturday at noone till Sunday at noone, our course was Southward about twentie leagues, the wind being Northerly. This day we saw much Rock-weed and Drift-wood. The latitude was fiftie seuen degrees. The variation was to the Westward thirteene degrees or thereabout. The sunne being fiue degrees high in the morning, was twentie foure degrees to the Northward of the East.

An Owle.

From Sunday at noone till two of the clocke the next day in the morning, being Munday, our course was West North-west, we made our way West and by North twentie leagues, hauing a fresh gale at South-east and by East: it fell calme till foure of the clocke: then it blew an easie gale at West South-west, wee stemming North-west, &c. betweene that and North North-east the wind being variable. The wind freshed toward noone. This morning we saw an Owle.

The variation 14. degrees and an halfe to the West.

The latitude at noone the eight and twentieth, was 57. degrees 57. minutes. The variation of the Compasse was fourteene degrees and an halfe to the West. This day wee had blacke water, and many ouer-falls, streame leeches, and sets of currents, as it seemed to the Northward, and some to the Westward.

Fiftie eight degrees of latitude.

The thirtieth, we found our latitude to be fiftie eight degrees. Heere it seemed that we were in a tyde gate, which I iudged to set North and South, or that it was the Eddie of the currents, which we saw the other day. Also wee saw white Fowles, which cheeped like Spar-hawkes. Also we saw driuing many dead Cowes.

Wh te fowles. Dead Cowes.

The one and thirtieth, the sunne being fiftie degrees aboue the Horizon, I found it to bee twentie seuen degrees to the Eastward of the South: againe in the afternoone, the sunne beeing fiftie degrees high, it was distant from the South to the Westward fiftie one degrees: at noone it was 55. degrees 6. minutes, the height of the Pole was 58. degrees 3. minutes. The variation of the Compasse was twentie foure degrees toward the North-west. Our way made these twentie foure houres was not aboue sixe leagues West, being little wind for the most part.

The variation of the Compasse 24. degrees North-westward.

Iune 1.

From Saturday at noone till two of the clocke it was calme: then it began to blow an easie gale at North. At night I obserued the sunne setting, and found it to set twentie one degrees to the Westward of the North, the winde continuing variable betweene the North and the West North-west till noone, being the first of Iune. Then I found my selfe by obseruation to be in the latitude of 57. degrees 35. minutes. I iudged our way from noone to noone West and by South or thereabout thirteene leagues.

From Sunday at noone till ten of the clocke the same Euening, it was calme. Then it began to blow a stiffe gale of wind at South South-east. Our course was West till noone, the next day being Munday, twentie three leagues. This day wee saw many blacke Fowles like Willockes flying in flockes together.

Many blacke wild fowles.

The fourth my latitude at noone, was 56. degrees 40. minutes. The latitude next day at noone

noone was fiftie sixe degrees. The variation of the Compasse by the Scale was twentie degrees, and by my other Instrument twentie foure degrees to the West. The sunne was twentie two degrees and an halfe high, and to the North of the West thirtie degrees by the Instrument, and twentie sixe degrees by the Scale. Latitude 56. degrees. Variation 24. degrees Westward.

Our latitude at noone the eleuenth, was fiftie eight degrees. And at night the sunne did set fourteene degrees to the Westward of the North, and did rise fiftie degrees to the Eastward of the North. Fifty eight degrees.

The thirteenth, the Ice seemed to be dispersed thinner with the wind, or some other accident: then I set sayle with our two courses, but was forced to take them in againe, and moored to another great Iland of Ice, about a mile to the Westward of the other. Here setteth some smal current to the South-westward. For the great flakes of Ice that were somewhat deep, draue to the Southward, and the other small Ice which was flotie draue with the wind, which was variable betwixt the North-west and the North. Here we were in sight of Land, which bore West South-west from vs, shewing in some parts like Ilands. Our latitude at noone was 57. degrees 25. minutes. A small current to the South-west. Sight of Land like Ilands.

From Friday at noone till eight of the clocke at night, wee continued moored to the aforesaid Ice: then it fell calme, and I loosed and rowed to the West-ward with our Oares, hoping to get thorough, till twelue of the clocke, then the Ice grew very thicke. I moored againe till foure of the clocke the next morning. Then we rowed and sayled with an easie gale of wind till eight of the clocke the next morning being Saturday. Then it began to blow a fresh gale Easterly, and we cunned the ship among the Ice with our Oares till noone. Our latitude was fiftie eight degrees. From Saturday at noone till midnight wee guided our shippe to the Westward among the Ice with our Oares, hoping to get thorough: but wee were suddenly compassed about with many great Ilands of Ice, and continued so distressed with a sore storme of wind at South-east, being foggie and thicke weather: we were so bruised betweene mightie great Ilands of Ice, that we were in danger euery minute to be crushed in pieces with force of the heauing and setting of the said Ice with the great Sea that the wind made, had not God of his mercie prouided for vs: for our owne endeuours did little auaile to our helpe, though wee employed all our industries to the vttermost of our powres.

The nineteenth, we descryed the Land of *America*, which riseth like eight Ilands: the Northermost part of it did beare North and by West about fifteene leagues from vs. I obserued the latitude, and found my selfe to be in 56. degrees and 48. minutes. The variation of the Compasse was twentie fiue degrees to the Westward. All this Coast sheweth like broken Land or Ilands; and the tyde of floud commeth from the Northward. The Land of *America* descryed in 56. degrees 48. minutes. *America* here sheweth like broken Ilands.

Tuesday the foure and twentieth all the morning, there blew a storme Northerly, and such a suffe of the Sea, and so much Ice came in, that our fasts brake that were fast on shoare, and our Rudder was driuen from our sterne with the force of mightie Ilands of Ice; so that we were forced to hale close into the bottome of the Coue to saue our clothes, furniture and victuals: wee did our best, but before we had done, our ship was halfe full of water: the night comming vpon vs being wearie, we tooke a little rest.

On Wednesday, we went hard to worke when the ship was on ground, to get the water out of her, and to stop so many of her leakes as we could come by, and to saue so much of our bread as we could; and some went to building our shallop. Also I caused our Boate to be lanched ouer the Iland; and sent my Mate *Edward Gorrell*, with three others, to seeke for a better place where to bring our ship on ground, if it were possible, to mend her againe. But they returned without any certaintie by reason of the abundance of Ice, which choked euery place. They found wood growing on the shoare. *Edward Gorrell* the Masters Mate.

Thursday being faire weather.] *Here Master* John Knight *ended writing in this Iournall.* On this Thursday the sixe and twentieth of Iune in the morning, our Master caused some of our men to goe aboord our ship, to saue what things they could. And hee and *Edward Gorrell* his Mate, and his brother, and three more of our Company tooke the Boate, carrying with them foure Pistols, three Muskets, fiue Swords, and two halfe Pikes for to goe ouer to a great Iland, which was not aboue a mile from our ship, to looke if they could find any Harbour or any Coue, to get our ship into for to mend her. Also he carried an Equinoctiall Diall with him, and paper to make a Draught of the Land. When they were passed ouer to the other side, our Master, his Mate, and his brother, and one more went on shoare, leauing two of vs in the Boate with one Musket, one Sword, and an halfe Pike to keepe it: which two stayed in the Boate from ten of the clocke in the morning, vntill eleuen of the clocke at night, but could heare no newes of them after their departure vp into the top of the Hill. Then did the Trumpettor sound two or three times, and the other did discharge his Musket two or three times, and so they came away to the other side to the West of the Company, where the ship was: where they were watching for our comming; who seeing vs two comming and no more, they maruelled where the rest of the company were. When wee came on shoare, they enquired for our Master and the rest of our company. But we could tell them no newes of them after their departure out of the Boat, but that we did see them goe vp to the top of the Iland. Which report did strike all our men into a great *M. Iohn Knight* with fiue more passeth ouer to a great Iland, where he and three of his company seem to haue bin intercepted by the Sauages. Their Trumpettor.

Digitized by Google

Their Shallop not finiſhed.

They could not paſſe to the great Iland for Ice.

great feare to thinke in what extremitie we were, becauſe we did want our Maſter and three of our beſt men, and our Ship lay ſunke, and we had nothing to truſt to but our Shallop, which was not at that time halfe finiſhed. This night lying on ſhoare in our Tent, which was betweene two Rocks, we kept very good watch, for feare of any peoples ſudden aſſaulting of vs: or if our Maſter and his company had trauailed ſo farre, that they could not come againe that night, and would ſhoote a Muſket, that wee might heare them. But they came not at all.

The next day being Friday, and the ſeuen and twentieth of Iune, wee conſulted to goe ouer ſeuen of vs with our Boate, to try if we could ſee or learne any news of our Maſter, or any of our men; for we were afraid that they were either ſurpriſed by the Sauages of the Countrie, or elſe deuoured by the wilde Beaſts. So we tooke with vs ſeuen Muskets, and Swords, and Targets, and ſuch prouiſion as we had in the Ship, and went downe to the Sea-ſide, but wee could not get ouer for Ice. At length we returned, with much adoe to get on ſhoare, and went to our Ship, to ſaue what things we could all that day.

On Saturday, the eight and twentieth, we did likewiſe ſaue what things we could, and gat all our things out of our Ship, and made her cleane in hold, hauing faire weather, hoping in God to ſaue her, and to mend all things, as well as we could; for ſhe lay vpon hard rocks: wherefore we kept her as light as we could, for beating and bruiſing of her hull. That night about nine of the clocke, it began to raine very ſore, and ſo continued all night: and about one of the clocke at night, our Boate-Swaine and our Steward being at watch, and their watch almoſt out, the Steward went aboord the Ship to pumpe, leauing the Boate-Swaine at watch ſome Muſket ſhot length from our Tent: while he was in pumping, there came ouer the rocks a great ſort of the Countrey people toward the place where the Boate-Swaine was: who when they ſaw him, they ſhot their arrowes at him, running toward him as faſt as they could. Whereupon hee diſcharged his Muſket at them, and fled to our Tent as faſt as hee could, thinking they had beſet vs, they were ſo many of them in ſight. The Steward hearing his Muſket goe off, came out of the Ship, and as he was comming, ſaw the Sauages running to our Shallop, and cryed out to vs that were aſleepe in our Tent, to come to reſcue the Boate-Swaine, and the Shallop. We made what haſte we could; when we came towards them, and ſaw ſo many of them in our Shallop, we were afraid we were betraid. At this time it rained very ſore; yet calling our wits together, we ſent two of our men backe vnto our Tent, the reſt of vs made toward them, and ſhot at them ſome three or foure Muskets: who when they ſaw vs ſhoote, they ſtood in our Shallop, and held vp their hands vnto vs, calling one to another. Then thought we with our ſelues, that we were better to dye in our defence in purſuing of them, then they vs, being but eight Men and a great Dogge. When they ſaw vs marching toward them ſo fiercely, our Dogge being formoſt, they ranne away: but we durſt not purſue them any further, for it was in the night, and they were in ſight aboue fiftie men. Thus we recouered our Shallop. Then we ſent ſome more of our men to our Tent to keepe it; and the reſt followed toward the place whither they fled. But before we could ouertake them, they were gotten into their Boates, and were rowing away through the Ice; which was ſo thicke, that they could not paſſe away, but ſtucke faſt; for their Boates were very great: wee ſeeing them ſticke faſt in the Ice, ſome ſetting with Oares, and ſome rowing, came ſo neere them, as we could, and ſhot at them ſome dozen ſhot, before they could get cleere: which ſhot cauſed them to cry out very ſore one to another; for their Boates were full of men. As farre as we could iudge, they be very little people, tawnie coloured, thin or no beards, and flat noſed, and Man-eaters.

The Sauages of the Countrie aſſault our men at one of the clocke at night.

Our men expulſe the Sauages.

Aboue fiftie Sauages in ſight.

Very great Boates of the Sauages.

The deſcriptiō of the Sauages

On Sunday, the nine and twentieth, all day long we gat ſuch things as we could aboord our Shippe, for feare they ſhould come ouer with more men, and beſet vs, our Ship lying betweene two great Rocks, and all without ſo full of Ice, that we could not paſſe any way to Sea, no not with a Boate. That day, two of our men kept watch vpon the Rocks, to giue vs warning, if they did come ouer with Boats. Then did our Carpenter make what ſhift hee could with our Shallop, and did tench her in ſome places, but neither calked her, nor pitched her. Then did wee take her, and bring her downe cloſe to the Shippe, and there ſhee did ſtand all night.

On Munday, the thirtieth day in the morning we went to worke to cut the Ice with Axes and Pick-axes, to get our Shippe; for all about the Iland was nothing but Ice, and no place to ride free neither with Shippe nor Boate. That night it pleaſed God, that wee got her out, and came away rowing with our Oares; but ſhe was exceeding leake, and our Shallop too: and, which was worſe, we had neuer a Rudder to ſtirre our Ship withall. Wee rowed all that night among the Ice.

The firſt and ſecond dayes of Iuly, we continued alſo rowing vp and downe among the floting and driuing Ice, with little hope of recouering our Countrey.

A great Current ſetting to South.

The third of Iuly, we had a gale of winde at North, and a great current ſetting to the Southward: Then made we faſt our Ship to an Iland of Ice, and went to worke, and to ſtow her things within boord, to make her ſtiffe; for wee had neuer a whit of balaſt in her. Then did our Carpenter make what ſhift he could, to hang our Rudder, hauing nothing conuenient in our Shippe

Ship to make Gudgins, nor Pintels. Then were we forced to breake open our Masters Chest, and to take all the Iron bands off it, to make fast two Pick-axes, for two Pintels, and to binde our Rudder withall. So, as it pleased God, that night we hanged our Rudder, hauing but two Pintels and a Cable through the middle of it, to keepe it to with two tacks. Then were we in good hope to get cleare of the Ice, because wee had some steerage, though it was but bad: for before, we durst beare but little sayle, our Ship being so leake, and her stemme so sore beaten with the rocks and Ice; and hauing no steerage, but were forced to rowe with our Oares, till wee were all sore and weary.

Pintels are small Iron pins made fast to the Rudder, and hung the Rudder to the Stern-post, &c.

The next day about tenne of the clocke in the morning, the winde came to the West North-west, and was faire weather: so we steered away East and by North, to get vs out of the Bay: And at noone, the watch being out, which was the third watch that we had after we came out of the Countrey (for before, continually we did watch all, to keepe our Shippe cleare of the Ice, as neere as we could) we began to Pumpe our Shippe, but could not make her sucke in a thousand stroakes, if she had stood but one halfe houre vnpumped. Then were wee forced to vnrommage our Ship, to see if we could finde our leakes. We soone found a great many of leakes, but not that which caused vs to Pumpe so sore. At the last, we found it close abaft our forefoot, where her keele was splintred in two or three places, where the Sea came running in so fast, that it was not possible to keepe her free with both our Pumps, and wee could not come to it to stop it; for it was vnder the timbers. Then did wee take our maine Bonnet, and basted it with Occom, and put it ouerboord, right against our leake, which eased vs some foure or fiue hundred stroakes in an houre. Then vpon consultation had among our selues, wee resolued to shape our course towards *Newfound Land*, to see if we could get any place to mend our Ship, hoping there to meete with some *English* or *French* men. At this time we had one of our men very sicke, and another had his hand very sore splitted; and most of vs all were so sore with rowing and pumping, that we were scarce able to stirre, but that we must perforce.

They get out of the Bay, where they rode.

Our Shippes Keele was splinted in two or three places.

They consult to touch at *Newfound Land.*

The fift of Iulie, wee shaped our course for *New found Land*, with the winde at West South-west.

The one and twentieth, the winde was at South South-west; and we fell with the Land, being nothing but broken Ilands. Then we stood to the Westward, being in the latitude of 49. degrees and an halfe.

Broken Ilands in 49. degrees and a halfe, of latitude.

The two and twentieth was faire weather, and the winde very variable: and about sixe of the clocke at night, the winde came to the West North-west. Then we steered in among the Ilands, to see if we could finde any harbour to mend our Shippe; for she was very leake. When we were come in among them, we found nothing but broken Ilands, and a great current, which did set from Iland to Iland, and had no ground at an hundred fathoms. That night we were very sore intangled with sunken Rocks, and in great danger of casting away our Ship, hauing very thicke weather: wherefore we kept to and fro all that night.

Many broken Ilands which were the Isles de Fogo.

Sunken Rocks.

The foure and twentieth of Iuly, in the morning, we spied some dozen Shallops, which were fishing some two leagues from vs. Then wee made what way wee could toward them, &c. We remained in this Bay of *Fogo*, in repairing our Shippe, and refreshing of our selues, vntill the two and twentieth of August. Then taking our leaues of our kinde and louing friends, with giuing them most heartie thankes for their goodnesse towards vs, we put forth to the Sea, and with an indifferent and reasonable good passage we arriued safely in *Dartmouth* in *Deuonshire*, and sent word to *London* vnto our owners, of the losse of our Master and his three companions, and of the dolefull successe of our Voyage, the foure and twentieth day of September, 1606.

Twelue Shallops of Fishermen.

The rest of this Iournall, from the death of Master *Iohn Knight*, was written by *Oliuer Browne* one of the Company.

CHAP. XVII.

The fourth Voyage of IAMES HALE *to* Groenland, *wherein he was set forth by* English *Aduenturers*, Anno 1612. *and slaine by a* Greenlander. *Written by* WILLIAM BAFFIN.

WEdnesday, the eight of Iuly, 1612. in the morning I perceiued the Sunne and the Moone, both very faire aboue the horizon, as I had done diuers times before. At which time I purposed to finde out the longitude of that place, by the Moones comming to the Meridian. Most part of this day I spent about finding of the Meridian line; which I did vpon an Iland neere the Sea, hanging at the extreames of my Meridian line two threeds with Plummets at them, instead of an index and sights.

Thursday, the ninth day very early in the morning I went on shoare the Iland, being a faire morning.

morning, and obſerued till the Moone came iuſt vpon the Meridian. At which very inſtant, I obſerued the Sunnes height, and found it 8. degrees, 53. minutes, North: in the eleuation of the Pole 65. degrees 20. minutes. By the which, working by the doctrine of ſphericall triangles, hauing the three ſides giuen, to wit, the complement of the Poles eleuation; the complement of the Almecanter; and the complement of the Sunnes declination, to finde out the quantitie of the angle at the Pole: I ſay, by this working, I found it to be foure of the clocke, 17. minutes, and 24. ſeconds. Which when I had done, I found by mine Ephemerides, that the Moone came to the Meridian at *London* that morning at foure of the clocke, 25. minutes, 34. ſeconds: which 17. minutes, 24. ſeconds, ſubſtracted from 25. 34. leaueth 8. 10. of time, for the difference of longitude betwixt the Meridian of *London* (for which the Ephemerides was made) and the Meridian paſſing by this place in *Groenland*. Now the Moones motion that day, was 12. degrees 7. minutes: which conuerted into minutes of time, were 48. minutes, 29. ſeconds: which working by the rule of proportion, the worke is thus: if 48. minutes, 29. ſeconds; the time that the Moone commeth to the Meridian ſooner that day, then ſhe did the day before, giue 360. the whole circumference of the earth, what ſhall 8. minutes 10. ſeconds giue, to wit, 60. degrees, 30. minutes, or neere there abuut: which is the difference of longitude betweene, the Meridian of *London*, and this place in *Groenland*, called *Cockins Sound*, lying to the Weſtward of *London*.

60. degrees 30. minutes difference of longitude betweene the meridian of *London* and *Cockins Sound* in *Groenland*.

This finding of the longitude, I confeſſe is ſomewhat difficult and troubleſome, and there may be ſome ſmall errour. But if it be carefully looked vnto, and exactly wrought, there will be no great errour, if your Ephemerides be true. But ſome will ſay, that this kinde of working is not for Marriners; becauſe they are not acquainted to worke propoſitions by the table of ſignes, and an inſtrument is not preciſe enough to finde out the houre, minute, and ſecond. For the loſſe of one minute of time, is the loſſe of 7. degrees of longitude. I anſwere, that although the moſt part are not vſed to this worke, yet I know ſome of the better ſort, which are able to worke this and the like propoſitions exactly. And thoſe which yet cannot, and are deſirous to learne, may in ſhort ſpace attaine to ſuch knowledge as ſhall be ſufficient for ſuch things. And how neceſſary it is, that the longitude of places ſhould be knowne, I leaue to the iudgement of all skilfull Marriners, and others that are learned in the Mathematicks.

Obiection.

Anſwere.

This afternoone it was agreed by the chiefe of our Company, that our Maſter, *Iames Hall*, ſhould goe in the ſmaller Ship, farther to the Northward.

The foreſaid Thurſday in the euening, he departed out of the *Patience* into the *Hariſ-eaſe*, to get forth of the Harbor, which our Maſter called *Cockins-ford*, in remembrance of Alderman Cockin one of the Aduenturers: which place, is in the latitude of 65. degrees, 20. minutes. And the variation of the compaſſe is 23. degrees, 58. minutes, to the Weſtward. That euening was very calme, and we towed our Shippe forth with the Shallops and Ships Boat. But within an houre or two after we were got into the Offin; the winde being at North, it blew a great ſtorme, which continued all that night.

Cockins Ford in 65. deg. 20. min.

Variation 23. deg. 58. min.

The foureteenth, our Maſter turned the Ship vp to the Riuer againe, toward the Riuer where the ſuppoſed mine ſhould be. But the tyde was ſo farre ſpent, that we could not get to Sea, but were conſtrained to Anker in a roade at the South ſide of the Riuer, ſome three leagues from the *Patience*, in which place are many good Rode-ſteeds to be found.

Many good Rodes.

Thurſday, the ſixteenth day, the winde was at North-weſt, and blew ſo ſtiffe a gale, that we could not get to Sea that day. That night, eighteene of vs went into the Ilands to looke for ſome Deere, but found none. But we perceiued the foote-ſteps of ſome great Beaſt, which wee ſuppoſed to be of ſome great Elke: the foote was as bigge as any Oxe foote.

Great footing.

Tueſday, the twentie one, the weather ſtill continued in ſuch ſort, that wee could not by any meanes get to the Riuer, where the ſuppoſed Myne ſhould bee. Wherefore our Maſter bare roome for *Ramelsford*, being a Riuer Southward of another, called *Cunninghams ford*, ſome twelue leagues. And we came to an Anchor at the entrance on the Southſide of the Ford, about ſeuen of the clocke.

Ramels Riuer.

Wedneſday, the two and twentieth day, about nine or ten of the clocke, the Sauages came to barter with vs, being about fortie of them, and continued about an houre and an halfe: At which time our Maſter *Iames Hall*, being in the Boate, a Sauage with his Dart ſtrooke him a deadly wound vpon the right ſide, which our Surgean did thinke did pierce his liuer. We all muſed that he ſhould ſtrike him, and offer no harme to any of the reſt: vnleſſe it were, that they knew him ſince he was there with the *Danes*; for out of that Riuer they carried away fiue of the people, whereof neuer any returned againe: and in the next Riuer, they killed a great number. And it ſhould ſeeme that he which killed him, was either brother, or ſome neere kinſman to ſome of them that were carried away: for he did it very reſolutely, and came within foure yards of him. And, for ought we could ſee, the people are very kinde one to another, and ready to reuenge any wrong offred to them. All that day he lay very ſore pained, looking for death euery houre, and reſigned all his charge to Maſter *Andrew Barker*, Maſter of the *Harts-eaſe*, willing him to place another in his roome Maſter of the ſmall Ship.

Iames Hall deadly wounded by a Sauage.

Thurſday.

Digitized by Google

Thurſday, the three and twentieth, about eight of the clocke in the morning he dyed, being very penitent for all his former offences. And after we had ſhrowded him, wee carried him in the Shallop, to burie him in ſome out Iland, according to his owne requeſt while he was liuing. After we had buried him, we went in the Shallop to ſeeke for the mine, which we had expected ſo long. All that day we rowed along toward the North, paſſing by a Cape called, *Queene Sophias Cape.* That night we ſtaied at an Iland, ſome three leagues ſhort of the Riuer.

The death of *Iames Hall.*

Queene *Sophias* Cape.

Friday, the foure and twentieth, in the morning, wee rowed along, and came to the place, which is on the South-ſide of the entrance of *Cunninghams* Riuer: And we found diuers places, where the *Danes* had digged; it was a kinde of ſhining ſtone, which when our Goldſmith, *Iames Carlile*, had tried, it was found of no value, and had no mettall at all in it: but was like vnto *Moſcouie* ſludde, and of a glittering colour. That day after we had dyned, wee rowed vp that Riuer ſome foure leagues, where diuers of our company went vp into the Mountaines, and found a Valley more pleaſant, then they had ſeene in the Countrey. That euening we returned, and came to the place where the *Danes* had digged their ſuppoſed Mine, and tooke ſome of it in our Boate to carry with vs, and returned toward our Ship. That night we rowed and ſailed, and the next morning about nine of the clocke, we came to our Ship.

Cunninghams Riuer.

The ſuppoſed Mine found to be of no value.

A pleaſant Valley.

Saturday, the fiue and twentieth, being Saint *Iames* his day, in the forenoone, we came to our Shippe, lying on the South ſide of the Riuer, called *Ramels* Riuer. And as ſoone as our Maſter found, that the people came no more to trade with vs, he determined to depart with the Shippe into the Kings Ford to the *Patience*: and rowing about the harbour, where we lay to finde ſome neerer way out to the Sea, we found among the Ilands, where many of their winter houſes had bin, and ſome of their Tents were but lately carried away. In which place wee alſo found one of their long Boates, made of wood, and bound together for the moſt part, with ſhiuers of Whales fins, and couered with Seales skinnes, being ſome two and thirtie foote in length, and ſome fiue foote broad, hauing tenne thoughts or ſeates in it. That day about twelue of the clocke we weighed anchor, and departed out of *Ramels Ford*, which lieth in the latitude of 67. degrees, and the variation of the compaſſe is 24. degrees 16. minutes, being a very faire Riuer, and one of the moſt principall, which we ſaw in that Countrey, ſtretching in Eaſt and Eaſt and by South. This night, about one of the clocke, we came to the *Patience*, lying in the Kings Ford.

Many of their winter houſes in *Ramels* Riuer.

The faſhion of their greater Boates.

Ramels Ford in the latitude of 67. degrees.

The variation is 24. degrees 16. minutes.

Sunday, the ſixe and twentieth, Maſter *Andrew Barker*, and our Merchant, Maſter *Wilkinſon*, with other of the Company, were in conference about returning home, becauſe that ſince our Maſter was ſlaine, none of the Sauages would trade with vs, as they were wont.

Wedneſday, the nine and twentieth, we were likewiſe occupied about taking in of ballaſt, for our Shippe was very light: and that euening it was agreed, that *Andrew Barker*, Maſter of the *Harts-eaſe*, ſhould goe Maſter of the *Patience*, which was ſore againſt the minde of *William Gourdon*: and *William Huntrice* was appointed Maſter of the *Harts-eaſe*, and *Iohn Gartenby*, one of the quarter Maſters of the *Patience*, was Maſters mate of the *Harts-eaſe*.

William Huntrice Maſter of the *Harts-eaſe.*

Tueſday, the fourth of Auguſt, in the morning the winde being Northerly, a very ſmall gale we got to Sea, where the winde came to the Southward, and we tacked ſometime on the one boord, and ſometime on the other, making ſmall way on our courſe.

They come out of harbour.

Munday the tenth, was raine and foule weather, as it had continued euery day ſince wee came from harbour, ſauing the ſeuenth day, which was ſomewhat faire: For commonly while the winde is South, it is very thick and foule weather. We tacked ſometimes on one boord, and ſometimes on the other, making a South by Weſt way, at noone ſixe leagues.

Thick and foggie weather, the winde being South.

Wedneſday, the twelfth, it waxed calme, we being ſomewhat Southward of a Cape, called *Burnils* Cape: and about three or foure of the clocke in the afternoone, the winde came to the North and by Weſt, an eaſie gale, with faire weather.

Burnils Cape.

The eighteenth at noone we were in 58. deg. 50. min. The ſeuenteenth day, I tooke the variation of the compaſſe, finding it to be 13. degrees 22. minutes, contrary to the obſeruations of others in this place. And if any doe doubt of the truth thereof, they may with a little paines proue it. The eighteenth of Auguſt, the declination of the Sunne was 9. degrees 58. minutes, for the Meridian of *London*. But we being almoſt foure houres of time to the Weſtward thereof, there are three minutes to be abated from the reſt: and ſo the declination was 9. degrees 55. minutes; and his height aboue the horizon was 24. degrees 40. minutes in the latitude of 59. degrees 0. min. and his diſtance from the South to the Weſtward, by the compaſſe, was 81. degrees. And for truth of the firſt obſeruation, I tooke another ſhortly after, finding them not to differ aboue 4. minutes.

Variation 13. degr. 22. min.

Wedneſday the nineteenth, the winde ſtill continued with thicke and haſie weather, we being at noone in the latitude of 58. degrees 30. minutes, or thereabout, making a South South-eaſt way, about ten leagues.

Thurſday the twentieth, was faire weather, the winde at East North-eaſt, wee ſteered away South-eaſt and South-eaſt and by Eaſt, making at noone a South-eaſt and by South way, about thirtie leagues, being at noone in the latitude of 57. degrees 20. minutes. This day in the afternoone, I tooke the variation of the compaſſe, and found it about 11 degrees 10. minutes.

Variation 11. degr. 10. min.

Friday,

Digitized by Google

Friday the one and twentieth, faire weather, with the winde at North and North by Eaſt, and we made an Eaſt South-eaſt way, halfe Southerly twentie foure leagues, being at noone by obſeruation, in the latitude of 56. degrees 50. minutes.

Saturday the two and twentieth, faire weather, the wind at North and Nrth by Eaſt, wee made an Eaſt way halfe Southerly, ſome twentie two leagues, being at noone in the latitude of 56. degrees 47. minutes.

Sunday the three and twentieth, faire weather, the wind at Weſt North-weſt, we making an Eaſt and Eaſt by North way about twentie foure leagues. This day I tooke the variation of the Compaſſe, and found it to be 7. degrees 23. minutes, being at noone in the latitude of 57. degrees 26. minutes.

Variation 7. degrees 23. minutes.

Munday the foure and twentieth, being S. *Bartholomewes* day, faire weather with an North North-weſt, wee making an Eaſt North-eaſt way, halfe Northerly about twentie ſeuen leagues, and were at noone by obſeruation in the latitude of 58. degrees 4. minutes. This day I obſerued and found the Compaſſe to be varied 7. degrees 20. minutes.

Variation 7. degrees 20. minutes.

Tueſday the fiue and twentieth, faire weather and calme: the winde at North, wee made a North-eaſt and by Eaſt way ſeuenteene leagues, being at noone in the latitude of 58. degrees 30. minutes. This day I found the common Compaſſe to be varied one point, and the true variation to bee 6. degrees 4. minutes.

The true variation 6. deg. 4. minutes.

Wedneſday the ſixe and twentieth faire weather alſo, with the wind North North-weſt, we made a North-eaſt and by Eaſt way halfe about twentie two leagues, being in the height of 59. degrees 10. minutes.

Thurſday the ſeuen and twentieth indifferent faire weather, with a ſtiffe gale of wind at the North North-weſt, we making a North-eaſt way about thirtie one leagues, being at noone in the latitude of 60. degrees 10. minutes.

Friday the eight and twentieth, the wind at South-eaſt with a ſtiffe gale, wee made good about noone a North-eaſt and by Eaſt way about twentie nine leagues. This day in the afternoone it blew ſo great a ſtorme, that wee were in great diſtreſſe, the winde at Eaſt South-eaſt. But about eleuen of the clocke it came to the North-weſt, and North-weſt by North. And we ranne ſome twentie leagues.

Saturday the nine and twentieth, it blew ſo ſtiffe, that wee could beare none but our fore-ſaile, making an Eaſt and by South way halfe Southerly, about thirtie leagues.

Sunday the thirtieth, all the forenoone it blew a very ſtiffe gale, and about noone the winde came Southerly; and it blew a very great ſtorme, which continued all that day and that night in ſuch ſort, that we could not ſaile at all, but all that night lay at hull.

Munday the one and thirtieth, in the morning about foure of the clocke, the winde came to the South-weſt a very ſtiffe gale. At which time we ſet our fore-ſaile. The wind continued all this day and night, we ſteered away Eaſt and by South, making at noone an Eaſt North-eaſt way about thirtie foure leagues.

Tueſday the firſt of September, the wind ſtill continued at South-weſt, blowing a very ſtiffe gale, we ſteered away Eaſt and by South, making an Eaſt way about fiftie leagues. This day at noone we were in the latitude of 60. degrees 45. minutes.

Wedneſday the ſecond faire weather with the wind at South-weſt, wee made an Eaſt and by South way halfe a point Southerly about fortie two leagues, being at noone in the latitude of 60. degrees 10. minutes. This day I obſerued, and found the Compaſſe to be varied three degrees to the Weſtward.

Thurſday the third day faire weather, the wind at South-weſt: wee made an Eaſt by North way at noone about twentie leagues. This day in the after-noone, the winde being at North North-weſt, it blew a very ſtiffe gale for two Watches; and toward ſeuen or eight of the clocke the ſtorme ſo increaſed, that our ſhippe was not able to beare any ſaile. And all that night wee lay at hull.

Friday the fourth, the ſtorme ſtill continued, and we could beare no ſaile all that day till about foure of the clocke in the afternoone, at which time we ſet our fore courſe, and our maine courſe. The night before in the ſtorme, we loſt *The Hartſ-eaſe*. This day wee made ſome twelue leagues Eaſt and by North. And we fell to lee-ward lying at hull ſome fiue leagues South by Weſt.

They loſe company of their conſort, *The Hartſeaſe*.

Saturday the fift calme weather, but very thicke and cloſe all the forenoone: the wind continued ſtill at North North-weſt, we making from the time wee ſet our courſes the day before, about twentie leagues Eaſt halfe Southerly; beeing at noone in the latitude of 59. degrees 53. minutes.

Sunday the ſixt, faire weather, the wind at North North-weſt, we ſteering away Eaſt North-eaſt, and Eaſt and by North, made an Eaſt by North way, halfe Northerly ſome 29. leagues, being at noone in 60. degrees 10. minutes. This day the Compaſſe was varied to the Eaſt ſixe degrees. This afternoone it was almoſt calme: and wee ſounded, and found ground at ſixtie eight fathomes. This Euening about ten of the clocke the wind came to the South-eaſt.

Variation 6. degrees to the Eaſt.

Ground found.

Munday the ſeuenth, very faire weather, the wind South-eaſt and South-eaſt by Eaſt, wee tacked

Digitized by Google

tacked in the morning to the North-ward, and ranne East North-east and East by North vntill seuen or eight in the afternoone: at which time we tacked vp to the Southward, and went away South-west till toward twelue a clocke that night twentie leagues. Land descryed.

Tuesday the eight, in our morning Watch I found our selues to be in 59. degrees 20. minutes: And about fiue of the clocke I espied Land, which we supposed to bee the Iles of *Orkney*, as afterward we found them to be the same. And toward three of the clocke, we came to an Anchor in a Channell running betweene the Ilands; where the people came to vs, and brought vs Hennes, Geese, and Sheepe, and sold them to vs for old clothes and shooes, desiring rather them then money. There are about eighteene of these Ilands, which are called by the name of the *Orkeneis*. The Iles of *Orkney*.

Wednesday the ninth, it was thicke weather, and the winde so Easterly that wee could not weigh Anchor.

Thursday the tenth, faire weather, and the wind came to the North-west, and about noone we weighed Anchor; and toward fiue of the clocke we were cleere off the Iles. The Channell for the most part lyeth North-west and South-east. All that night we stood away South-east. The lying of the Channell in *Orkney*.

Friday the eleuenth, faire weather, with the wind at North North-west. And about nine of the clocke in the morning, we Heered away South South-east. At which time wee had sight of *Buquham-nesse*: And about two of the clocke we were thwart of it. The seuenteenth, we came to an Anchor in *Hull* Road, for which the Lord bee praysed. *Buquham-ness*. They arriue at *Hull*.

Here I thinke it not amisse briefly to relate the state and manners of the people of *Groenland*, forasmuch as I could learne: As also what likelihood there is of a passe into the Sea, which lyeth vpon *Tartarie* and *China*.

The North-west part of *Groenland* is an exceeding high Land to the Sea-ward, and almost nothing but Mountaynes; which are wonderfull high all within the Land, as farre as wee could perceiue: and they are all of stone, some of one colour, and some of another, and all glistering, as though they were of rich value; but indeed they are not worth any thing. For our Gold-smith *Lames Carlile* tryed very much of the Vre, and found it to bee nothing worth. If there bee any Mettall, it lyeth so low in the Mountaynes, that it cannot bee well come by. There are some Rocks in these Mountaynes, which are exceeding pure Stone, finer, and whiter then Alabaster. The sides of these Mountaynes continually are couered with Snow for the most part, and especially the North sides, and the Noth sides of the Valleyes, hauing a kind of Mosse, and in some places Grasse with a little branch running all along the ground, bearing a little blacke Berrie, it runneth along the ground like Three-leafed Grasse heere in *England*. There are few or no Trees growing, as farre as wee could perceiue, but in one place some fortie miles within the Land, in a Riuer, which wee called *Balls* Riuer. There I saw on the South-side of an high Mountayne, which we went vp, and found (as it were) a yong Groue of small Wood, some of it sixe or seuen foot high like a Coppice in *England*, that had beene some two or three yeeres cut. And this was the most Wood that wee saw growing in this Countrey; being some of it a kind of Willow, Iuniper, and such like.

High Mountaynes of stone very pure. No profitable Vre. Continuall Snow. Grasse. No Trees. *Balls* Riuer. A Groue of small wood.

We found in many places much *Angelica*. We suppose the people eate the Roots thereof, for some causes. For we haue seene them haue many of them in their Boats.

There are great store of Foxes in the Ilands, and in the Mayne, of sundry colours: And there are a kind of Hares as white as Snow, with their furre or haire very long.

Also there be Deere, but they are most commonly vp within the Mayne very farre; because the people doe so much hunt them, that come neere the Sea. I saw at one time seuen of them together, which were all that wee did see in the Countrey: But our men haue bought diuers Coates of the people made of Deeres skinnes, and haue bought of their Hornes also. Besides, we haue diuers times seene the footsteps of some beast, whose foote was bigger then the foot of a great Oxe. Furthermore, the Inhabitants haue a kinde of Dogges, which they keepe at their Houses, and Tents, which Dogges are almost like vnto Wolues, liuing by fish, as the Foxes doe. But one thing is very strange, as I thought: for the Pizzels of both Dogges and Foxes are bone.

Foxes. White Hares. Deere. These seeme to be Elkes, or Losshes. Dogges like Wolues. The pizzels of Dogges and Foxes are bone: so also is the Morses pizzle, of which I haue by me one of stone.

The people all the Summer time vse nothing but fishing, drying their fish, and Seales flesh vpon the Rockes for their Winter Prouision. Euery one both man and woman haue each of them a Boate made with long small peeces of Firre-wood, couered with Seales skinnes very well dresst, and sewed so well with sinewes or guts, that no water can pierce them through, beeing some of them aboue twentie foot long, and not past two foot, or two foot and an halfe broad, in forme of a Weauers shittle, and so light, that a man may carrie many of them at once for the weight. In these Boates they will row so swiftly, that it is almost incredible: for no ship in the World is able to keepe way with them, although thee haue neuer so good a gale of wind: and yet they vse but one Oare, who sitting in the midle of their Boate, and holding their Oare in the middle, being broad at each end like our Oares, will at an instant goe backward and forward, as they please. The great swiftnesse of their Boats. Their Oares broad at both ends.

Digitized by Google

Salmons and Morses, &c. Angles and Lines.

In these Boates they catch the most part of their food, being Seales and Salmons, Morses, and other kinds of fishes. Some they kill with their Darts, and other some with Angles, hauing a Line made of small shiuers of Whales Finnes, and an Hooke of some fishes bones: with which Line and Hookes, we also haue caught very much fish.

Their great Boats 32. foot long.

Also they haue another kinde of Boate, which is very long. For wee haue seene one of them thirtie two foot in length, open in the toppe like our Boates; hauing tenne seates in it. In which when they remooue their Dwellings, they carrie their Goods or House-hold-stuffe: for they remooue their Dwellings very often, as their fishing doth serue, liuing in the Summer time, in Tents made of Seales skinnes, and in Winter in Houses some-what in the ground.

They worship the Sunne. Their salutation.

Wee could not particularly learne their Rites or Ceremonies: but generally they worship the Sunne, as chiefe Authour of their Felicitie. At their first approach vnto vs they vsed with their hands to point vp to the Sunne, and to strike their hands vpon their brests, crying *Ilyout*; as who would say, I meane no harme: which they will doe very often, and will not come neere you, vntill you doe the like; and then they will come without any feare at all.

Their burials.

They burie their dead in the Out-Ilands neere the Sea side. Their manner of Buriall is this. Vpon the tops of the Hils they gather a company of stones together, and make thereof an hollow Caue or Graue, of the length and breadth of the bodie, which they intend to burie, laying the stones somewhat close like a wall, that neyther Foxes, nor other such beasts may deuoure the bodies, couering them with broad stones, shewing afarre off like a pile of stones. And neere vnto this Graue where the bodie lyeth, is another, wherein they burie his Bow and Arrowes, with his Darts and all his other Prouision, which hee vsed while hee was liuing. Hee is buried in all his Apparell: and the coldnesse of the Climate doth keepe the bodie from smelling and stinking, although it lye aboue the Ground.

They burne the weapons and all other Furniture of the dead.

They eate all their Food raw, and vse no fire to dresse their Victuals, as farre as wee could perceiue. Also wee haue seene them drinke the Salt-water at our shippes side: But whether it bee vsuall or no, I cannot tell. Although they dresse not their meate with fire, yet they vse fire for other things, as to warme them, &c.

They vse fire.

They are not Man-eaters.

Diuers of our men were of opinion, that they were Man-eaters, and would haue deuoured vs, if they could haue caught vs. But I doe not thinke they would. For if they had bin so minded, they might at one time haue caught our Cooke, and two other with him, as they were filling of water at an Iland, a great way from our ship. These three I say were in the ships Boate without eyther Musket, or any other Weapon, when as a great company of the Sauages came rowing vnto them with their Darts, and other Furniture, which they neuer goe without, and stood looking into the Boate for Nayles, or any old Iron, which they so greatly desire, while our men were in such a feare, that they knew not what to doe. At length our Cooke remembred that hee had some old Iron in his pocket, and gaue each of them some, as farre as it would goe, with his Key of his Chest. And presently they all departed without offering any harme at all. But this I speake not, that I would haue men to trust them, or to goe among them vnprouided of Weapons.

Nailes & old Iron greatly desired of the Sauages.

Men are not to goe among Sauages without their weapons.

CHAP. XVIII.

A true Relation of such things as happened in the fourth Voyage for the Discouerie of the North-west Passage, performed in the yeere 1615. Written by WILLIAM BAFFIN.

The first by *Hudson* in which hee perished; the second by Sir *Thomas Button*, the third by Captaine *Gibbins*.

AFter three sundry Voyages towards the North-west, to the great charge of the Aduenturers: the last being vnder the command of Captaine *Gibbins* (in which was little or nothing performed.) Yet the Right Worshipfull Sir *Dudley Diggs* Knight, Master *Wostenholme* Esquire, Master Alderman *Iones*, with others being not therewith discouraged, This yeere 1615. againe set forth the *Discouery*, a ship of fiftie fiue tunnes or thereabouts, which ship had beene the three former Voyages on the action. The Master was *Robert Bileth*, a man well acquainted that way: hauing beene employed in the three former Voyages: my selfe being his Mate and Associate, with fourteene others and two Boyes.

The sixteenth, we weighed Anchor at Saint *Katharines*, and that tyde came to *Blackwall*, the winde being at South South-west. The seuenteenth, wee went downe to *Graues-end*, and the eighteenth to *Lee*, where we anchored that night.

Vpon

Vpon the ſixt of May, we ſaw Land on the Coaſt of *Groenland*, on the Eaſt ſide of Cape *Farewell*: and that night we had a great ſtorme: ſo wee kept a Southerly courſe to get about the Ice which lay on that ſhoare, and then kept our courſe vntill the ſeuenteenth day of May, all which forenoone we ſayled by many great Ilands of Ice, ſome of which were aboue two hundred foot high aboue water (as I proued by one ſhortly after) which I found to be two hundred and fortie foot high, and if report of ſome men be true, which affirme, that there is but one ſeuenth part of the Ice aboue water, then the height of that piece of Ice, which I obſerued was one hundred and fortie fathomes, or one thouſand ſixe hundred and eightie foote from the toppe to the bottome: this proportion I know doth hold in much Ice, but whether it doe ſo in all, I know not. *Groenland.* Cape *Farewell.* High Icie Ilands.

This ſeuenteenth of May, about noone we were come to the firme Ice, as one would ſuppoſe, being in the latitude of 61. degrees 26. minutes or thereabout, being the latitude of the South part of the *Ile of Reſolution*: we comming to this Ice, our Maſter asked my opinion concerning the putting into the Ice. My iudgement was it would be beſt for vs to ſtand, and ply it vp to the Northwards. Hee anſwered, we were on the North ſide of the South Channell, and much Ice we muſt paſſe through, and if that we could get ſome two or three leagues within the Ice, it would euery tide open, and we ſhould get ſome thing onward of our way, hauing all the Channell to the South-wards of vs. So with this reſolution we put within the Ice, the wind being at Eaſt North-eaſt: this firſt entrance I liked not very well, ſcarce finding any place to put in our ſhips head, and being neere thirtie leagues from the ſhoare, towards Euening wee were faſt amongſt the Ice. *Ile of Reſolution.*

But ſometimes each day the Ice would a little open, we making what way we could towards the North-weſt in for the ſhoare till the two and twentieth day, hauing had the wind all Southerly. Yet we plainly ſaw that we ſet to the Southwards, for all that wee could doe.

The two and twentieth day, the wind came vp at North North-weſt: then our Maſter determined to ſtand forth againe. For if the wind ſhould haue come to the North-eaſt, it would be vnpoſſible for vs to fetch any part of the Channell, ſeeing wee droue ſo faſt to the Southwards, with Southerly winds, and hauing ſo farre into the ſhoare, not hauing ſeene the Land.

Our Maſter was alſo determined to ſpend ſome twentie, or foure and twentie dayes in *Freſum Dauis*, to ſee what hopes would be that wayes, ſuppoſing there would be little good to be done in *Hudſons Streights* for this time limited: then we plying to get to Sea-ward, and ſo by eight a clock at night, the three and twentieth day, we were cleere of the thick Ice: againe, the Lord make vs thankfull, the wind at North-weſt and by North faire weather: but no ſooner were we forth of the Ice, but that our Maſter changed his opinion: and beeing cleere of this thicke Ice wee ſtood to the Northward as much as the Ice and winde would giue vs leaue, running ſome thirteene leagues true North-eaſt by North, being in the latitude of 61. degrees 50. minutes. The foure and twentieth day faire weather: the fiue and twentieth day, alſo faire weather, the wind at North and by Weſt, till ſixe a clocke, we hauing made a North-eaſt by North way about twelue leagues and an halfe, our latitude at noone 62. degrees 20. minutes, at ſixe a clocke the wind was at the North North-eaſt. The ſixe and twentieth day, all the forenoone faire weather and cold: but in the afternoone it blew very hard, being cloſe haſie weather, that about two a clocke this afternoone wee tooke in our ſailes and hulled with our ſhip till the next morning at foure a clocke, all the time that we ſayled this day we paſt through many ledges of Ice hauing great quantitie to the Northward of vs, and hauing runne about twentie one leagues true vpon a Weſt courſe. And note where I put this word *true*, I meane the true courſe, the variation of the Compaſſe, and other accidents allowed.

The ſeuen and twentieth day cloſe foggy weather with much ſnow freezing on our ſhrowds and tackling: the like we had not all this yeare before: but towards foure a clocke in the afternoone it began to cleere vp, and about fiue a clocke we ſaw Land, being the Iland of *Reſolution*, and bearing Weſt from vs about thirteene or fourteene leagues. This morning we ſet ſayle, and ſtood to and fro as the Ice would ſuffer vs, and at ten at night, wee moored our ſhip to a piece of Ice, the wind being at Weſt.

The eight and twentieth day being Whitſunday, it was faire weather, but the winde was at the Weſt, and Weſt by North: al this day we were faſt to the piece of Ice. Yet we plainly perceiued that we ſet a great deale more into the Streights with the floud. Then we ſet forth with the ebbe the nine and twentieth day, the wind was variable, and faire weather: about eleuen a clock we ſet ſaile and tacked to and fro along by the Iland. And about two a clocke the next morning, the wind came to the South South-eaſt, but we had ſo much Ice that we could doe but little good with a faire wind, the wind continued all this day and night a ſtiffe gale: this night (or rather Euening, becauſe it was not darke at all) we were ſet within the point of the Iland: ſo that now we were within the Streights. No night.

The one & thirtieth day alſo faire weather, the wind for the moſt part at North North-weſt, the afternoone being cleere wee ſaw the point of the South ſhoare, called *Buttons Iles*, to beare from vs due South by the Compaſſe, which is indeed South South-eaſt, ſomewhat Eaſtward, becauſe here the Compaſſe is varied to the Weſtwards twentie foure degrees. Variation 24. degrees.

The first of Iune, wee had some snow in the forenoone, but very faire weather in the afternoone, the wind at West North-west. We perceiuing the Ice to be more open close aboord the shoare, made the best way we could to get in, and to come to Anchor, if the place were conuenient; and by seuen a clocke we were in a good Harbour, on the North-west side of the Iland of *Resolution*, where an East South-east Moone maketh full Sea, or halfe an houre past seuen on the change day, as Sea-men account the water doth rise and fall, neere foure fathomes; the Compasse doth vary to the West 24. degrees 6. minutes, and is in longitude West from *London* 66. degrees 35. minutes. The breadth of the South Channell, or the distance betweene the Iland and the South shoare, is sixteene leagues, and the North Channell is eight miles wide in the narrowest place.

Vpon this Iland we went on shoare, but found no certaine signe of Inhabitants, but the tract of Beares and Foxes, Rockes and stonie ground, hardly any thing growing thereon: it is indifferent high Land to the Northward, hauing one high Hill or Hummocke on the North-east side, but to the Southward it falleth away very low.

The second of Iune in the morning the wind came vp at East South-east, with much snow and fowle weather, about noone wee weighed Anchor, and stood vp along by the Iland, so well as the Ice would giue vs leaue to get to the North shoare. Wee continuing our courses so neere the North shoare, as conueniently we could, with much variable weather and windes, but stedfast in continuance among Ice, till the eight day, hauing the wind full contrary to vs, and being somewhat neere a point of Land, or rather a company of Ilands, which after wee called *Sauage Iles*, hauing a great Sound or In-draught, betweene the North shoare and them. At sixe a clocke we came to Anchor neere one of them, being the Eastermost sauing one. But whiles wee were furling our sailes, we heard and saw a great company of Dogges running vp and downe, with such howling and barking, that it seemed very strange. Shortly after we had moored our ship, we sent our Boat somewhat neerer the shoare, to see if they could perceiue any people; who returning, told vs that there were Tents and Boats, or Canowes, with a great many Dogges, but people they saw none. After Prayer, when our men had supt, wee fitted our Boate and our selues with things conuenient: then my selfe with seuen others landed, and went to their Tents, where finding no people, we marched vp to the top of a Hill (being about a flight shot off) where we saw one great Canow or Boat, which had about fourteene men in it, being on the furthest, or North-west point of the Iland, and from vs somewhat more then a Musket shot. Then I called vnto them, vsing some words of *Groenlandish* speech, making signes of friendship. They did the like to vs; but seeing them so fearefull of vs, and we not willing to trust them, I made another signe to them, shewing them a Knife and other Trifles, which I left on the top of the Hill, and returned downe to their Tents againe. There wee found some Whale Finnes to the number of fortie or fiftie, with a few Seale skinnes which I tooke aboord, leauing Kniues, Beades, and Counters instead thereof; and amongst their houses I found a little bagge, in which was a company of little Images of men; one the Image of a woman with a child at her backe, all the which I brought away.

Sauage Iles.

Dogges.

Great Boat with 14. men.

Bagge of Images.

Among these Tents being fiue in number, all couered with Seales skinnes, were running vp and downe, about thirtie fiue or fortie Dogges; most of them muzled. They were of our mungrell Mastiffes, being of a brinded blacke colour, looking almost like Wolues. These Dogges they vse in stead of Horses, or rather as *the Lappians* doe their Deere, to draw their sleds from place to place ouer the Ice: their sleds are shod or lined with great bones of fishes to keepe them from wearing, and their Dogges haue Collars and Furniture very fitting.

Their Dogges described.

These people haue their Apparell, Boots, Tents, and other necessaries much like to the Inhabitants in *Groineland*, sauing that they are not so neate and artificiall, seeming to bee more rude and vnciuill, ranging vp and downe as their fishing is in season. For in most places where wee came ashoare, we saw where people had beene, although not this yeere; but where their Habitation or their abode in Winter is, I cannot well coniecture.

The people described.

This Iland lyeth in the latitude of 62. degrees 30. minutes, and in longitude West from *London*, 72. degrees or neere thereabouts, being sixtie leagues from the entrance of the Streights: here the Compasse doth varie 27. degrees 30. minutes, and a South-east Moone foure degrees East maketh a full Sea: it doth ebbe and flow almost as much water, as it doth at the *Resolution*, and here the floud commeth from the Eastward, although our Master was of opinion to the contrarie.

Situation.

The tenth day in the morning, at sixe a clocke we set sayle, the winde at North, which continued not, but was very variable till noone, and then it came to North-west, we hauing sayled along by the shoare, about some nine leagues and an halfe North North-west, the Ice lying so thicke in the offen, that wee could not well get out of it: then perceiuing a good Harbour betweene two small Ilands and the Mayne, wee went in with our ship, where wee moored her, and stayed till the twelfth day at Euening.

In this place it is high water on the change day, at nine of the clocke, or a South-east Moone maketh a full Sea: the latitude of this place is 62. degrees 40. minutes; and the floud doth come from

Digitized by Google

from the Eastward, although our Master was perswaded otherwise, as well in this place, as at *Salvage* Ilands: for being among Ilands, euery point hath his seuerall set and eddie. But I going to the top of the Iland, plainely perceiued the Ice to come from the South-east, and from the North-west on the ebbe. In this place is no signe of people, as we could perceiue.

The sixteenth day, lying still in the Ice, the weather being very close and hasey, as it hath beene these six dayes: and being neere a great company of Ilands, in the afternoone, the winde being at West North-west, wee stood in amongst these Ilands, and in the euening we moared our Shippe to one of them in a small coue, the better to defend her from the Ice. In this place wee stayed all the seuenteenth day: and vpon the eighteenth, being Sunday, about eleuen a clocke we set sayle, being almost calme, making the best way wee could to get forth. Here are a great company of Ilands, each hath his seuerall set and eddy, that the Ice doth so runne to and fro, and with such violence, that our Shippe was in more safetie further off then in this place: the latitude of the Ile we rode by is 63. degrees 26. minutes, and longitude West from *London*, neere 72. degrees 25. minutes: the Compasse hath variation 27. degrees 46. minutes; and at a quarter of an houre after nine on the Change day, doth make a full Sea. This Euening, and the next morning, wee had a faire steering gale of winde at South-east, wee standing along by the Land, it beeing all small broken Ilands, to a point of Land about twelue leagues in distance from the Ile wee put last from: which Point, I called *Broken Point*, it being indeede a point of broken Iles.

Many Ilands and seuerall tyde Sets.

Broken Point.

On the nineteenth day, by twelue a clocke at noone, wee were about foure miles from the Point before named, fast inclosed with Ice, very faire weather; and well we might haue called this Point *Faireneſſe* or *Faire Point*, for from this day till the thirtieth day, the weather was so faire, and almost, or altogether calme, that in few places elsewhere, finer weather could not be; and till the seuen and twentieth at night, wee were so fast inclosed vp with Ice, that at some times one could not well dippe a paile of water by the Ship sides: while wee were thus fast in the Ice, vpon the one and twentieth day, I saw both the Sunne and Moone at one time, as indeede it is vsuall in faire weather.

This one and twentieth, being faire weather, as afore is said, and I seeing both the Sunne and Moone so faire: I thought it a fit time to make an obseruation for the longitude.

Obseruations of longitude.

But the two and twentieth day being very faire and cleare, and also calme, being almost as steedy as on shoare: it was no neede to bid me fit my instrument of variation to take the time of the Moones comming to the Meridian, hauing also my quadrant ready to take the Sunnes almicanter, it being indifferent large, as of foure foote semidiameter: haue taken the variation of my needle as precisely as possible I could, which was 28. degrees 20. minutes West, and if any be desirous to worke the same, they may, but my worke was as followeth.

The Sunnes almicanter, at the instant when the Moone was on the Meridian, was 26. degrees 40. minutes: and the Sunnes declination for that time 23. degrees 6. minutes. By which three things giuen, I found the houre to be fiue a clocke 4. minutes 52. seconds, 1. third 4. fourths, or 76. degrees, 13. minutes, 16. seconds, of the equinoctiall afternoone: and according to *Searles* Ephemerides, the Moone came to the Meridian at *London* at foure a clocke 54. minutes, 30. seconds: and after *Origanus* the Moone came to the Meridian at foure a clocke 52. minutes, 5. seconds, at *Wittenberge* the same day. Now hauing this knowne, it is no hard matter to finde the longitude of this place sought. For according to the Moones meane motion, which is 12. degrees a day, that is in time 48. minutes: and to this account, if she be on the Meridian at twelue a clock this day, to morrow it will be 48. min. past 12. So I hauing the time found by obseruation at this place, *viz.* 5. houres, 4. minutes, 52. seconds, 1. third 4. fourths: but in this I neede not come so precise: and at *London*, at 4. houres, 54. minutes, 30. seconds: which substracted from the former, leaueth 10. minutes, 22. seconds, 1. third, 4. fourths, now the Moones motion that foure and twentie houres, was 22. degrees, 38. minutes: which conuerted into time, is 50. minutes 25. seconds 20. thirds: then the proportion standeth thus; If 50. minutes, 25. seconds, 20. thirds, giue 360. degrees, what shall 10. minutes, 22. seconds, 1. third, 4. fourths giue? the fourth proportionall, will be 74. degrees 5. minutes, which is West of *London*; because the Moone came later by 10. minutes, 22. seconds, and by the same working by *Origanus* Ephemerides, the distance is 91. degrees, 35. minutes, West of West. But whether be the truer, I leaue to others to iudge: in these workings may some errour be committed, if it be not carefully looked vnto: as in the obseruation, and also in finding what time the Moone commeth to the Meridian, at the place where the Ephemerides is supputated for, and perchance in the Ephemerides themselues: in all which, the best iudicious may erre: yet if obseruations of this kinde, or some other, at places farre remote, as at the Cape *Bonasperanze*, *Bantam*, *Iapan*, *Noua Albion*, and *Magellan* Straits, I suppose wee should haue a truer Geography then we haue. And seeing I am entred to speake of celestiall obseruations, I will note another which I made the twenty sixt of April, being outward bound at Sea, by the Moones comming in a right line, with two fixed Starres; the one was the *Lyons heart*, a Starre of the first magnitude; the other a Starre in the Lyons rumpe, of the second magnitude, as followeth: The circumference or outward edge of the Moone, being in a right or straight line, with those

Digitized by Google

two Starres before named: at the inſtant I tooke the altitude of the South ballance, which was 2. degrees 38. minutes, becauſe I would haue the time: but in this it is good to waite a fit time, as to haue her in a right line, with two Stars not farre diſtant, and thoſe not to be much different in longitude, becauſe the Moon will ſoone alter the angle or poſition, and ſuch a time would be taken when the Moone is in the nintieth degree of the eclipticke aboue the horizon, for then there no paralell of longitude, but onely in latitude: but who ſo is painefull in theſe buſineſſes, ſhall ſoone ſee what is needefull, and what is not: my obſeruations were as followeth:

Lyons heart	Right aſſention 46. deg. 28. min. 30. ſec.	*Lyons tayle*	Right aſſention 163. deg. 23. min. 00. ſe.	
	Declination --- 13. deg. 57. mi. 30. ſec.		Declination --- 22. deg. 38. min 00. ſe.	
	Longitude ---- 24. deg. 29. mi. 45. ſec.		Longitude ----- 5. deg. 53. min. 45. ſec.	
	Latitude ----- 00. deg. 26. min. 30. ſec.		Latitude ----- 14. deg. 20. min. 00. ſec.	
	Almicanter --- 33. deg. 40. min. 00. ſe.			

Moones	Paralax ——— 00. deg. 47. min. 46. ſec.		
	Latitude ——— 03. deg. 20. min. 00. ſec.	North.	
	Almicanter — 37. deg. 00. min. 00. ſec.		
	Latitude of the place —56. deg. 43. min.		

Theſe notes I haue ſet downe, that if any other be deſirous to trie, they may ſpend a little time therein; my ſelfe haue ſpent ſome therein, and more I would haue ſpent, if leiſure would haue permitted: but finding it not to my minde, I haue not here ſet downe my particular worke:
Maſter *Rudſton.* the working of this obſeruation I receiued from Maſter *Rudſton.*

But if it had pleaſed God, we had performed the action we were bound for, I would not feare but to haue brought ſo good contentment to the Aduenturers, concerning the true ſcituation of notable places, that ſmall doubt ſhould haue beene thereof: but ſeeing ſo ſmall hopes are in this place, I haue not ſet downe ſo many obſeruations as otherwiſe I would.

We lying here incloſed with the Ice with faire & calme weather (as before is ſaid) till the ſeuen and twentieth day at euening, at which time we ſet ſayle; the winde at South-eaſt, an eaſie gale: all the eight and twentieth and nine and twentieth dayes, we made the beſt way through the Ice we could; but the nine and twentieth day, the Ice was more open then it had beene theſe ten dayes before, and at noone we ſaw *Salisbury* Iland, it bearing due Weſt from vs.

The firſt of Iuly cloſe foggie weather, with much raine, the winde at South South-eaſt: by noone this day we were ſome three leagues from the Land: but hauing much Ice by the ſhoare, we ſtood along the Iland to the Northward: and the next morning wee were faire by another
Mill Iland. ſmall Ile, or rather a company of ſmall Ilands, which after we called *Mill* Iland, by reaſon of grinding the Ice, as this night we made proofe thereof: at noone, being cloſe to this Ile, wee took the latitude thereof, which is neere 64. degrees. Here driuing to and fro with the Ice all this day, till ſeuen or eight a clocke, at what time the Ice began to open and ſeperate; The Ice, as is ſaid, beginning to open: we had not ſtood along by the Ile, on the Eaſt ſide thereof, an houre; but the Ice came driuing with the tide of floud from the South-eaſt, with ſuch ſwiftneſſe, that it ouer went our Shippe hauing all our ſayles abroad with a reaſonable gale of winde, and put her out of the ſtreame, into the eddy of theſe Iles.

This Iland or Iles, lying in the middle of the channell, hauing many ſounds running through them, with many points or headlands, encountering the force of the tide, cauſed ſuch a rebound of water & Ice (which ran one way, and the ſtreame another) our ſhip hauing met the Ice with the firſt of the floud, which put her ſo neere the ſhoare, that ſhe was in the partition betweene the Ice, which the eddy cauſed to runne one way, and the ſtreame the other, where ſhee endured great diſtreſſe; but God, which is ſtill ſtronger then either Ice or ſtreame, preſerued vs and our Shippe from any harme at all. This continued till towards a high water, which was about one a clocke; then with no ſmall trouble we got into the channell, and ſtood away to the North-weſt ward. After we had paſt ſome diſtance from this Iland, wee had the Sea more open then it was ſince we put firſt into the Straits; and ſailed all the next day through an indifferent cleare Sea, with the winde at South-weſt: but towards eight a clocke at night, wee were come againe into much Ice; this Ice being more thicker and bigger then any wee had beene among: this place where we began to be incloſed againe, is ſixe and twenty leagues diſtant from the ſmall Iland we were at laſt: and our true courſe North-weſt by Weſt: after wee were faſt in the Ice, we made but ſmall way, yet we perceiued a great tyde to ſet to and fro. The next day, wee ſounded, and had ground at one hundred & twentie fathoms, ſoft Oſey ground: ſtanding more Northerly: the next morning we had ground at eightie fathoms, then the winde came to the North, and we ſetting ſomewhat Southward, had ground at a hundred and ten fathoms. Thus ſeeing this great abundance of Ice in this place, and the more we got to the North-weſt ward, the ſhoalder it was, the Ice alſo being foule and durtie, as not bred farre from ſhoare: our Maſter determined to ſtand to the Eaſtward, to be certainely informed of the tide.

The ſixt day in the morning, we brake in a planke and two timbers in our Ships bow, which after we had mended, we proceeded for to get to the Eaſt ſide, which we called the North ſhoare, becauſe it is the Land ſtretching from the *Reſolution*, on the North ſide of the Straits.

The

Digitized by Google

The seuenth day we saw the land, it being but low land, and the Sea is shoald, in respect of other places, hauing ten or twelue fathom about a league off from shoare, some thirty fathoms fiue or six leagues off shore, but further off some twenty or eighteene leagues, there is a hundred or a hundred and fiue fathoms; hauing very good channell ground, as small stones & shels, some twelue or toureteene leagues from shoare, but the further off the more Osey: and also here is a very great tide runneth to the Northward; which this euening we found to be the tyde of ebbe, for comming with our Shippe neere the shoare, about seuen a clocke, we hoysed out our Boate, then I with fiue other went on shoare, and found it to ebbe: we staied on shoare about an houre and a halfe, in which time the water fell about three foote and a halfe; and a South-south East Moone maketh a full Sea, or halfe an houre past tenne, as Sea men account: we saw no signe of people to be here this yeare, but in yeares heretofore they haue beene, as we might well see by diuers places, where their tents had stood: and perchance their time of fishing was not yet come, there being such great abundance of Ice as yet.

The eight day the winde was at West, and the ninth almost calme: wee reeking neere to this shoare the tenth day, our Master determined to stand for *Nottinggams* Iland, to make triall of the tide there; yet the winde was at South-west, so that we were forced to turne, but towards night it came to the North North-west, so that then we stood away to the West wards, leauing the search of *Nottinggams* Ile, hauing a great swelling Sea, come out of the West with the winde which had blowne, which put vs in some hope: the eleuenth day in the morning, we saw Land West from vs, but had no ground at one hundred & thirty fathoms; so standing along by the Land which here lay about North-west by North, the next morne we were thwart of a Bay: then standing ouer to the Northwards towards a faire Cape or head land which we saw, in the afternoone it was almost calme, and being about a league from shoare, we hoysed out our Boat, and sent some of our men in her, to see what tide it was by the shoare, and from whence it came; they went from the Ship at fiue a clock, and came aboord againe at eight, who brought vs word, that it was falling water, and that it had eb'd while they were on shoare somewhat aboue two foot: also they affirmed, that the floud came from the Northward in this place, the which we also perceiued by the setting of our Ship, she setting a pace to the Northward, although no whit of winde: also we might see by the rocks, that the water was now falne: this put vs in great comfort and hope of a passage in this place. *Nottinggams Iland.*

Then our Master called this Cape or head land, *Cape Comfort*, for the reasons beforesaid; also we had one hundred and fortie fathoms in depth, not a league from the shoare: and here a South by East Moone maketh a full Sea: the latitude of this Cape is 65. degrees 00. min. and 85. degrees 20. minutes West from *London*. But this our sudaine comfort was as soone quailed, for the next day hauing doubled the Cape, and proceeded not past ten or twelue leagues, but we saw the land trending from the Cape to the Westward, till it bare from vs North-east by East, and very thicke pestered with Ice, and the further we proceeded, the more Ice, and the more Northerly, the shoulder water and small shew of any tide. At six a clocke this afternoone, we sounded, & had ground in one hundred and thirty fathoms, soft Osey, hauing had at noone one hundred & fiftie fathoms. *Cape Comfort.*

This was the fartheft of our Voyage, being in the latitude of 65. degrees 26. minutes, and longitude West from *London* 86. degrees 10. minutes: for seeing the land North-east by East, from vs about nine or ten leagues off, and the Ice so thicke: our Master was fully perswaded, that this was nought else but a Bay, and so tacked and turned the Shippes head homewards, without any farther search.

The fourteenth day, the winde was for the most part at South-east, that we could make but small way backe againe: and the next morning very foule weather, we comming to an Anchor in a small Inlet, neere the *Cape Comfort*, on the North-west side thereof; here wee found, as on the other side, a South by East Moone, to make a full Sea; but from whence the floud came, we could not well see, it being so foule weather at Sea: in the afternoone the winde came to North by West: then we waied, and stood along to the Southwards by the shoare, with a stiffe gale of winde, and very hasey. By the sixteenth day at noone we met with a great quantitie of Ice, lying some few leagues within the point of the Land: among this Ice we saw a great number of Sea Morse, not seeing any more in all the Straits but here, and these very fearefull, not suffering a Ship or Boat to come neere them: by eight a clock we were come to this Southern point, which I called *Sea Horse point*, where we came to anchor open in the Sea, the better to try the tide: here most apparently we found to all our companies sight, that in this place the tide of floud doth come from the South-east, and the ebbe from the Northwest. We weighed, and stood ouer with a stiffe gale of winde, which continued all this day, and toward night very foule weather & a sore storme: by tenne a clocke we were come to Anchor on the North-west side of *Nottinghams* Ile, where are two or three smal Iles, lyeth off from the greater, which make very good Sounds & Harbors: about this Ile we had store of Ice, but nothing as we had heretofore in other places. We staied about this Iland til the seuen and twentieth day, hauing much foule weather, many stormes, often fogs, and vncertaine windes, many times we weighed anchor to goe to that side of the Ile, where this Ship road when Captaine *Button* was in her: finding in other places of this Ile the tyde of *Sea Horse point.*

floud

floud to come from the South-east ward, and the time of high water on the change day, to be at halfe an houre past ten, and not at halfe an houre past seuen, as they supposed. In these ten dayes we staied about this Ile, we fitted our Ship with ballast, and other necessaries, as we had neede of.

Salisburie Ile. Then proceeded as followeth the sixe and twentieth day, being indifferent faire weather, we passed betweene *Salisburies* Ile and *Nottinghams* Ile at the South Point thereof, I meane of *Nottinghams* Ile, where are many small low Iles, without the which had beene a fit place for vs to haue anchored, to haue found out the true set of the Tyde. But our Master being desirous to come to the same place where they had rode before, stood along by this Ile to the Westward, and came to an anchor in the eddy of these broken grounds, where the ship rode at no certaintie of Tyde.

The seuen and twentieth, the next morning the weather proued very foule with much raine and winde, so that our Reger anchor would not hold the ship at eightie fathoms scope, but was driuen into deepe water, that wee were forced to set saile, the winde being at East, and then come to the East North-east and about noone at North-east, still foule weather, being vnder saile, we stood away towards *Sea horse* Point: our Master (as I suppose) was perswaded that there might bee some passage betweene that Point of Land and that Land which they called

Swan Iland. *Swan Iland:* so this afternoone we saw both *Sea horse* Point and *Nottinghams* Iland, the distance betweene them is not past fifteene or sixteen leagues, bearing the one from the other North-west and South-east.

The eight and twentieth day in the morning, wee were neere to *Sea horse* Point, the Land trending away West South-west so farre as wee saw, and very much pestred with Ice. At seuen a clocke our Master caused vs to tacke about, and stood away South-east and by South.

Digges Ile. The nine and twentieth the next day at eleuen a clocke, we came to anchor at *Digges* Ile, hauing very foule weather. At this place where we rode it lyeth open to the West, hauing two of the greatest Iles, breake off the force of the Flood, till the Tyde be well bent; for after the water were risen an houre and a halfe by the shoare, then would the ship ride truly on the Tyde of Flood all the Tyde after. Now the time of high water on the change day, is halfe an houre past ten or neere thereabout.

The thirtieth day, being faire weather, wee weighed and stood along close by *Digges* Ile,

Saluages. where we presently perceiued the Saluages to bee close on the top of the Rocks: but when they saw we had espyed them, diuers of them came running downe to the water side, calling to vs to come to anchor, which we would haue done if conueniently we could. But in this place the water is so deepe, that it is hard to finde a place to ride in, which we seeing lay to and fro with our ship, while some of our men in the Boat killed about some seuentie fowles, for in this place is the

Willocks. greatest number of fowles (whom we call *Willocks*) that in few places else the like are not seene, for if neede were we might haue killed many thousands, almost incredible to those which haue not seene it. Here also as we lay to and fro with our ship, wee had sufficient proofe of the set of the Tyde: but when our men were come aboord againe, we set all our sailes for homewards, making the best expedition we could; but on the third of August, wee were forced to come to anchor about thirtie leagues within the *Resolution* Ile on the North shoare. The next day wee weighed anchor: And the fifth day in the forenoone, we past by the *Resolution* Iland, but saw it not: Thus continuing our courses (as in the briefe Iournall may be seene) with much contrarie windes and foule weather.

Wee had sight of Cape *Cleere* in *Ireland* the sixt of September: the next morning by day light, we were faire by *Seely*, and that night at two a clocke the next morne, we came to anchor in *Plymouth* Sound with all our men liuing, hauing onely three or foure sicke, which soone recouered.

The next yeere being againe employed in discouerie, amongst other instructions they receiued this. For your course you must make all possible haste to the Cape Desolation, *and from thence, you* William Baffin *as Pilot, keepe along the Coast of* Groenland *and vp* Fretum Dauis, *vntill you come toward the height of eightie degrees, if the Land will giue you leaue. Then for feare of inbaying, by keeping too Northerly a course, shape your course West and Southerly, so farre as you shall thinke it conuenient, till you come to the latitude of sixtie degrees: then direct your course to fall with the Land of* Yedzo *about that height, leauing your farther sayling Southward to your owne discretion, according as the time of the yeere and windes will giue you leaue, although our desires be, if your voyage proue so prosperous that you may haue the yeere before you, that you goe so farre Southerly as that you may touch the North part of* Iapan, *from whence or from* Yedzo, *if you can so compasse it without danger, we would haue you to bring home one of the men of the Countrey, and so God blessing you with all expedition to make your returne home againe.*

CHAP.

CHAP. XIX.

To the Right Worſhipfull Maſter IOHN WOSTENHOLME Eſquire, one of the chiefe Aduenturers for the diſcouerie of a paſſage to the North-weſt.

WOrthy Sir; there neede no filling a Iournall or ſhort Diſcourſe with preamble, complement, or circumſtance, and therefore I will onely tell you, I am proud of any Remembrance, when I expoſe your Worth to my Conceit, and glad of any good fortune, when I can auoid the imputation of ingratitude, by acknowledging your many fauours: and ſeeing it is not vnknowne (ſo your Worſhip) in what eſtate the buſineſſe concerning the North-weſt hath beene heretofore, and how the onely hope was in ſearching of Fretum Dauis, *which if your ſelfe had not beene the more forward, the action had well nigh beene left off: Now it remayneth for your Worſhip to know, what hath beene performed this yeere: wherefore I entreat you to admit of my cuſtome, and pardon me if I take the plaine highway in relating the particulars, without vſing any reſtrained phraſes and eloquent ſpeeches.*

Therefore briefly, and as it were in the forefront, I intend to ſhew you the whole proceeding of the voyage in a word: as namely, there is no paſſage, nor hope of paſſage in the North of Dauis *Streights, wee hauing coaſted all or neere all the Circumference thereof, and finde it to be no other then a great Bay, as the Map here placed doth truly ſhew: wherefore I cannot but much admire the worke of the Almightie, when I conſider how vaine the beſt and chiefeſt hopes of man are in things vncertaine. And to ſpeake of no other matter, then of the hopefull paſſage to the North-weſt; How many of the beſt ſort of men haue ſet their whole indeuours to proue a paſſage that wayes, and not onely in Conference, but alſo in Writing and publiſhing to the World, yea what great ſummes of money hath beene ſpent about that action, as your Worſhip hath coſtly experience off. Neither would the vaine-glorious* Spaniard *haue ſcattered abroad ſo many falſe Maps and Iournals, if they had not beene confident of a paſſage this way, that if it had pleaſed God, a paſſage had beene found, they might haue eclipſed the worthy praiſe of the Aduenturers and true Diſcouerers; and for my owne part, I would hardly haue beleeued the contrarie, vntill mine eyes became witneſſe of that I deſired not to haue found, ſtill taking occaſion of hope on euery little likelihood, till ſuch time as we had almoſt coaſted the Circumference of this great Bay. Neither was Maſter* Dauis *to be blamed in his report and great hopes, if he had anchored about* Hope Sanderſon, *to haue taken notice of the Tydes: for to that place which is in 72. degrees 12. minutes the Sea is open, of an vnſearchable depth, and of a good colour, onely the Tydes keepe no certaine courſe, nor riſe but a ſmall height, as eight or nine foote, and the flood commeth from the Southward, and in all the Bay beyond that place the Tyde is ſo ſmall, and not much to be regarded, yet by reaſon of ſnow melting on the Land, the Ebbe is ſtronger then the Flood, by meanes whereof, and the windes holding Northerly the fore-part of the yeere, the great Iles of Ice are ſet to the Southward, ſome into* Fretum Hudſon, *and others towards* New found Land, *for in all the Channell where the Sea is open are great quantities of them driuing vp and downe, and till this yeere not well knowne where they were bred.*

Howſoeuer the paſſage this way was embayed; yet that former diſcouerie of Sir *Tho. Button* (then by him kept ſecret for ſome intent of his) is both more probable and to the moſt iudicious more then probable; and that by that Tyde argument from the Weſt, as in Maſter *Brigs* his Map and notes appeareth.

Now that the worſt is knowne (concerning the paſſage) it is neceſſarie and requiſite, your Worſhip ſhould vnderſtand what probabilitie or hope of profit might here be made hereafter, if the voyage bee attempted by fitting men. And firſt for the killing of Whales, certaine it is that in this Bay are great numbers of them, which the Biſcainers *call the* Grand Baye Whales, *of the ſame kinde which are killed at* Greenland, *and as it ſeemeth to me eaſie to be ſtrooke, becauſe they are not vſed to bee chaſed or beaten, for we being but one day in* Whale Sound *(ſo called for the number of Whales that wee ſaw there) ſleeping and lying aloft on the water, not fearing our ſhip or ought elſe; that if wee had beene fitted with men and things neceſſarie, it had beene no hard matter to haue ſtrooke more then would haue made three ſhips a ſauing voyage, and that it is of that ſort of Whale there is no feare. I being twiſe at* Greenland, *tooke ſufficient notice to know them againe; beſide a dead Whale wee found at Sea, hauing all her ſinnes (or rather all the rough of her mouth) of which with much labour, we got one hundred and ſixtie the ſame euening we found her; and if that foule weather, and a ſtorme the next day had not followed, wee had no doubt, but to haue had all or the moſt part of them, but the winde and Sea ariſing ſhee broke from vs, and we were forced to leaue her. Neither are they onely to be looked for in Whale Sound, but alſo in Sir* Tho. Smiths *Sound,* Woſtenholme *Sound, and diuers other places.*

Store of *Grand Bay* Whales.

Baffin twice at *Greenland.*

For the killing of Sea Morſe, I can giue no certaintie, but onely this, that our Boat being but once aſhoare in all the North part of this Bay, which was in the entrance of Alderman Iones *Sound, at the returne, our men told vs, they ſaw many Morſes along by the ſhoare on the Ice; but our ſhip being vnder ſaile, and the winde comming faire, they preſently came aboord without further ſearch, beſides the people inhabiting about 74. degrees, told vs by diuers ſignes, that toward the North were many of thoſe beaſts, hauing two long teeth, and ſhewed vs diuers pieces of the ſame.*

Morſes.

As for the Sea Vnicorne, it being a great fiſh, hauing a long horne or bone, growing forth of his forehead or noſtrill (ſuch as Sir Martin Frobiſher *in his ſecond voyage found one) in diuers places we ſaw of them, which if the horne be of any good value, no doubt but many of them may be killed.*

Sea Vnicorne. The horne is ſtill kept in the Robes at *Windſore* (where I haue ſeene it) neere ſeuen foot long and creſſed, &c.

And

Digitized by Google

And concerning what the Shoare will yeeld, as Beach finnes, Morse teeth, and such like, I can little say, because we came not on shoare in any of the places where hope was of finding them.

But here some may obiect and aske, why we sought that Coast no better: to this I answere, that while we were thereabout, the weather was so exceeding foule wee could not, for first wee anchored in Wostenholme *Sound, where presently our ship drove with two anchors a head, then were we forced to stand forth with a low saile. The next day in* Whale *Sound, we lost an Anchor and Cable, and could fetch the place no more; then we came to anchor neere a small Iland, lying between Sir* Tho. Smiths *Sound, and* Whale *Sound, but the winde came more outward, that we were forced to weigh againe: neuertheless if wee had beene in a good harbour, hauing but our Ships Boat, we durst not send her farre from the ship, hauing so few men (as seuenteene in all) and some of them very weake; but the chiefe cause wee spent so little time to seeke a Harbour, was our great desire to performe the Discouerie, hauing the Sea open in all that part, and still likelihood of a passage: but when we had coasted the Land so farre to the Southward, that hope of passage was none, then the yeere was too farre spent, and many of our men very weake, and withall we hauing some beliefe that ships the next yeere would be sent for the killing of Whales, which might better doe it then wee.*

And seeing I haue briefly set downe, what hope there is of making a profitable voyage, it is not vnfit your Worship should know what let or hinderance might be to the same. The chiefest and greatest cause is, that some yeere it may happen by reason of the Ice, lying betweene 72. degrees and a halfe, and 76. degrees no minutes, that the ships cannot come into those places, till toward the middest of Iuly, so that want of time to stay in the Countrey may bee some let: yet they may well tarry till the last of August, in which space much businesse may be done, and good store of Oile made: neuertheless if store of Whales come in (as no feare to the contrarie) what cannot bee made in Oile may bee brought home in Blubber, and the Finnes will arise to good profit. Another hinderance may bee, because the bottome of the Sounds will not be so soone cleere as would be wished, by meanes thereof now and then a Whale may be lost (the same case sometime chanceth in Greenland) *yet I am perswaded those Sounds before named, will all be cleere before the twentieth of Iuly: for we this yeere were in* Whale *Sound the fourth day among many Whales, and might haue strooke them without let of Ice. Furthermore, there is little wood to bee expected, either for fire or other necessaries, therefore Coles and other such things must bee prouided at home, they will bee so much the readier there.*

Thus much I thought good to certifie your Worship, wherein I trust you will conceiue, that much time hath not beene spent in vaine, or the businesse ouer carelesly neglected, and although wee haue not performed what we desired (that is, to haue found the passage) yet what wee promised (as to bring certaintie and a true description) truth will make manifest, that I haue not much erred.

And I dare boldly say (without boasting) that more good discouerie hath not in shorter time (to my remembrance) beene done, since the action was attempted, considering how much Ice we haue passed, and the difficultie of sayling so neere the Pole (vpon a trauerse) and aboue all, the variation of the Compasse, whose wonderfull operation is such in this Bay, increasing and decreasing so suddenly and swift, being in some part (as in Wostenholme *Sound, and in Sir* Tho. Smiths *Sound) varied aboue fiue Points or 56. degrees, a thing almost incredible and matchlesse in all the world beside, so that without great care, and good obseruations, a true description could not haue beene had. In fine, whatsoeuer my labours are or shall be, I esteeme them too little, to expresse my thankefull minde for your many fauours, wherein I shall be euer studious, to supply my other wants by my best endeuours, and euer rest at*

Variation of the Compasse admirable.

Your Worships command,

WILLIAM BAFFIN.

A briefe and true Relation or Iournall, containing such accidents as happened in the fift voyage, for the discouerie of a passage to the North-west, set forth at the charges of the right Worshipfull Sir Tho. Smith *Knight, Sir* Dudly Digges *Knight, Master* Iohn Wostenholme *Esquire, Master Alderman* Iones, *with others, in the good ship called the* Discouerie *of* London; Robert Bileth *Master, and my selfe Pilot, performed in the yeere of our Lord* 1616.

March 26. IN the Name of God, *Amen.* The forenamed ship being in full readinesse vpon the twentie sixe of March, we set saile at *Graueseud*, being in number seuenteene persons, hauing very faire weather, which continued till the second of April: by that time we were off *Portland*, then the winde comming Westward with foule weather, we kept Sea till the fourth day, then being not able to fetch *Plimouth*, bore roome for *Dartmouth*, where wee stayed eleuen dayes, in which time was much foule weather and westerly windes.

The

Digitized by Google

The fifteenth day of Aprill, being cleere of *Dartmouth*, we were forced the next day to put into *Plimouth*. The nineteenth day we set saile from thence, and the twentieth in the morning we past betweene the Lands end and *Silly* with a faire winde. Continuing our course, as in the briefe Table or Iournall is set downe, with euery particular from noone to noone, that here I need not make a tedious repetition, nothing worthy of note hapning, but that we had a good passage, and the first Land we saw was in *Fretum Dauis*, on the coast of *Groinland* in the latitude of 65. degrees 20. minutes. On the fourteenth of May in the forenoone, then sixe of the people being a fishing came to vs, to whom we gaue small pieces of Iron, they keeping vs companie being very ioyfull, supposing wee had intended to come to anchor: but when they saw vs stand off from shoare they followed vs a while, and then went away discontented, to our seeming. *Groinland.*

We prosecuting our Voyage, were loth to come to anchor as yet, although the winde was contrarie, but still plyed to the Northward, vntill we came into 70. degrees 20. minutes: then wee came to anchor in a faire Sound (neere the place Master *Dauis* called *London Coast.*) The twentieth of May at euening, the people espying vs fled away in their Boates, getting on Rocks wondring and gasing at vs, but after this night we saw them no more, leaving many Dogs running to and fro on the Iland. *Men and dogs.*

At this place we stayed two dayes, in which time wee tooke in fresh water and other necessaries: here we had some dislike of the passage, because the Tydes are so small as not arising aboue eight or nine foot, and keepe no certaine course, but the neerest time of high water on the change day is at a quarter of an houre past nine, and the Flood commeth from the South.

The two and twentieth day at a North Sunne, wee set saile and plyed still Northward, the winde being right against vs as we stood off and on. Vpon the sixe and twentieth day in the afternoone, we found a dead Whale, about sixe and twentie leagues from shoare, hauing all her finnes. Then making our ship fast, wee vsed the best meanes wee could to get them, and with much toile got a hundred and sixtie that euening. The next morning the Sea went very high and the winde arising, the Whale broke from vs, and we were forced to leaue her and set saile, and hauing not stood past three or foure leagues North-westward, came to the Ice, then wee tacked and stood to the shoare-ward, a sore storme ensued. *Dead Whale.*

By the thirtieth day in the afternoone, wee came faire by *Hope Sanderson*, the farthest Land Master *Dauis* was at, lying betweene 72. and 73. degrees; and that euening by a North Sunne we came to much Ice, which we put into, plying all the next day to get through it. *Hope Sanderson.*

The first of Iune, we were cleere of the Ice before named, and not farre from shoare, the winde blowing very hard at North North-east, then we put in among diuers Ilands, the people seeing vs fled away in all haste leauing their Tents behinde, and vpon a small Rocke they hid two young Maides or Women. Our ship riding not farre off, we espyed them, to whom our Master with some other of our companie went in the Boate, they making signes to be carried to the Iland where their Tents were close adioyning. When they came thither, they found two old women more, the one very old, to our esteemation little lesse then fourescore, the other not so old. The next time we went on shoare, there was another Woman with a child at her back, who had hid her selfe among the Rocks, till the other had told her how well wee had vsed them, in giuing them pieces of Iron and such like, which they highly esteeme, in change thereof they giue vs Seales skinnes, other riches they had none, saue dead Seales, and fat of Seales, some of which fat or blubber afterward we carried aboord, the poore women were very diligent to carry it to the water side to put into our caske, making shew that the men were ouer at the Mayne, and at an other small Iland something more Eastward. Then making signes to them that wee would shew them our ship and set them where the men were: the foure youngest came into our Boate; when they were aboord they much wondred to see our ship and furniture: we gaue them of our meat, which they tasting would not eate. Then two of them wee set on the Iland, where they supposed the men to be; the other two were carried to their Tents againe. Those that went to seeke the men could not finde them, but came as neere the ship as they could, and at euening wee set them ouer to the other. *Tents, Men and Women.*

This place wee called *Womens* Ilands; it lyeth in the latitude of 72. degrees 45. minutes: here the Flood commeth from the Southward, at nep Tydes the water ariseth but sixe or seuen foote, and a South South-east Moone maketh a full Sea. The Inhabitants very poore, liuing chiefly on the flesh of Seales, dryed, which they eate raw, with the skinnes they cloathe themselues, and also make couerings for their Tents and Boats which they dresse very well. The Women in their apparell are different from the men, and are marked in the face with diuers blacke strokes or lines, the skin being rased with some sharpe instrument when they are young, and blacke colour put therein, that by no meanes it will be gotten forth. *Womens Ilands.* *The people described.* *Women.*

Concerning their Religion, I can little say: onely they haue a kinde of worship or adoration to the Sunne, which continually they will point vnto and strike their hand on their breast, crying *Ilyont*; their dead they burie on the side of the Hils, where they liue (which is commonly on small Ilands) making a pile of stones ouer them, yet not so close but that wee might see the dead body, the aire being so piersing that it keepeth them from much stinking sauour. So likewise I haue seene their Dogs buried in the same manner. *Religion.* *Buriall of Men and Dogs.*

Vpon

Vpon the fourth day we ſet ſayle from thence, hauing very faire weather, although the winde were contrary, and plyed to and fro betweene the Ice and the Land, being as it were a channell of ſeuen or eight leagues broad: then on the ninth day, being in the latitude of 74. degree 4. minutes, and much peſtered with Ice, neere vnto three ſmall Ilands, lying eight miles from the ſhore, we came to anchor neere one of them.

Theſe Ilands are vſed to be frequented with people in the latter part of the yeare, as it ſeemed by the houſes and places where the tents had ſtood: but this yeare as yet they were not come: here the tides are very ſmall, eſpecially the floud, which ariſeth not aboue fiue or ſix foot, yet the ebbe runneth with an indifferent ſtreame, the cauſe thereof (in mine opinion) is the great abundance of Snow, melting on the Land all this part of the yeare.

The tenth day wee ſet ſayle from thence, and ſtood through much Ice to the Weſtward, to try if that further from the ſhoare, wee might proceede; but this attempt was ſoone quailed, for the more Ice we went through, the thicker it was, till wee could ſee no place to put in the Ships head.

Seeing, that as yet we could not proceede, we determined to ſtand in for the ſhoare, there to abide ſome few dayes, till ſuch time as the Ice were more waſted and gone (for we plainely ſaw that it conſumed very faſt) with this reſolution we ſtood in, and came to anchor among many Ilands, in the latitude of 73. degrees 45. minutes. On the twelfth day at night here wee continued two dayes without ſhew or ſigne of any people, till on the fifteenth day in the morning, about one a clocke, then came two and fortie of the Inhabitants in their Boates or Canoas, and gaue vs Seale skinnes, and many peeces of the bone or horne of the Sea Vnicorne, and ſhewed vs diuers peeces of Sea Mors teeth; making ſignes that to the Northward were many of them: in exchange thereof, we gaue them ſmall peeces of Iron, Glaſſe Beads, and ſuch like: at foure ſeuerall times the people came to vs, and at each time brought vs of the aforeſaid commodities, by reaſon thereof we called this place *Horne Sound.*

42. Inhabitants

Vnicornes hornes.

Horne Sound.

Here we ſtayed ſix dayes, and on the eighteenth day at night, we ſet ſayle, hauing very little winde; and being at Sea, made the beſt way we could to the Northward, although the winde had beene contrary for the moſt part this moneth, but it was ſtrange to ſee the Ice ſo much conſumed in ſo little ſpace, for now we might come to the three Ilands before named, and ſtand off to the Weſtward almoſt twenty leagues, without let of Ice, vntill we were more North (as to 74. degrees 30. minutes) then we put among much ſcattered Ice, and plyed to and fro all this month, ſtill in the ſight of ſhoare, and many times faſt in the Ice, yet euery day we got ſomething on our way, nothing worthy of note happening, but that at diuers times we ſaw of the fiſhes with long hornes, many and often, which we call the Sea Vnicornes: and here to write particularly of the weather, it would be ſuperfluous or needeleſſe, becauſe it was ſo variable, few dayes without Snow, and often freezing, in ſo much, that on Midſummer day, our ſhrowds roapes and ſailes were ſo frozen, that we could ſcarſe handle them; yet the cold is not ſo extreame, but it may well be endured.

They ſee many Sea Vnicornes.

Sharp froſt on Midſummer day.

The firſt of Iuly we were come into an open Sea, in the latitude of 75. degrees 40. minutes, which a new reuiued our hope of a paſſage, and becauſe the winde was contrary, wee ſtood off twenty leagues from the ſhoare, before we met the Ice: then ſtanding in againe, when we were neere the Land, we let fall an anchor to ſee what tyde went, but in that we found ſmall comfort. Shortly after the winde came to the South-eaſt, and blew very hard, with foule weather, thicke, and foggie: then we ſet ſayle, and ran along by the Land: this was on the ſecond day at night. The next morning we paſt by a faire Cape, or head land, which wee called Sir *Dudley Digges* Cape, it is in the latitude of 76. degrees 35. minutes, and hath a ſmall Iland cloſe adioyning to it, the winde ſtill increaſing, we paſt by a faire Sound twelue leagues diſtant from the former Cape, hauing an Iland in the midſt, which maketh two entrances. Vnder this Iland we came to anchor; and had not rid paſt two houres, but our Ship droue, although we had two anchors at the ground, then were we forced to ſet ſayle, and ſtand forth: this Sound wee called *Woſtenholme* Sound: it hath many Inlets or ſmaller Sounds in it, and is a fit place for the killing of Whales.

Sir *Dudly Digs* his Cape.

Woſtenholme Sound.

The fourth day at one a clocke in the morning, the ſtorme began againe at Weſt and by South, ſo vehement, that it blew away our forecourſe, and being not able to beare any ſayle, wee lay a drift till about eight a clocke, then it cleared vp a little, and we ſaw our ſelues imbayed in a great Sound: then we ſet ſayle and ſtood ouer to the South-eaſt ſide, where in a little Coue or Bay we let fall an anchor, which we loſt with cable and all, the winde blowing ſo extreamely from the tops of the hils, that we could get no place to anchor in, but were forced to ſtand to and fro in the Sound, the bottome being all frozen ouer; toward two a clocke it began to be leſſe winde, then we ſtood forth.

Whale Sound.

In this Sound we ſaw great numbers of Whales, therefore we called it *Whale Sound*, and doubtleſſe if we had beene prouided for killing of them, we might haue ſtrooke very many. It lyeth in the latitude of 77. degrees 30. minutes. All the fift day it was very faire weather, and wee kept along by the Land till eight a clock in the euening, by which time we were come to a great banke of Ice, it being backed with Land, which we ſeeing, determined to ſtand backe ſome eight leagues,

leagues, to an Iland we called *Hacklуits Ile*, it lyeth betweene two great Sounds, the one *Whale Sound*, and the other Sir *Thomas Smiths Sound*: this last runneth to the North of seuenty eight degrees, and is admirable in one respect, because in it is the greatest variation of the Compasse of any part of the World known: for by diuers good Obseruations I found it to be aboue fiue points or fifty six degrees varied to the Westward, so that a North-east and by East, is true North, and so of the rest. Also this Sound seemeth to bee good for the killing of Whales, it being the greatest and largest in all this Bay. The cause wherefore we minded to stand to this Iland, was to see if we could find any fishes or such like on the shore, and so indeed this night wee came to anchor, but with such foule weather, that our Boat could not land. The next day wee were forced to set sayle, the Sea was growne so high, and the wind came more outward. Two dayes wee spent and could get no good place to anchor in: then on the eight day it cleered vp, and wee seeing a company of Ilands lye off from the shoare twelue or thirteene Leagues, wee minded to goe to them, to see if there we could Anchor. When wee were something neere, the winde tooke vs short; and being loth to spend more time, we tooke opportunitie of the wind, and left the searching of these Ilands, which wee called *Careyes* Ilands, all which Sounds and Ilands the Map * doth truly describe.

So we stood to the Westward in an open Sea, with a stiffe gale of wind, all the next day and till the tenth day at one or two a clocke in the morning; at which time it fell calme and very foggie, and wee neere the Land in the entrance of a faire Sound, which wee called Alderman *Iones* Sound. This afternoone being faire and cleere, we sent our Boat to the shoare, the ship being vnder sayle, and assoone as they were on shoare, the wind began to blow; then they returned againe, declaring that they saw many Sea Morses by the shoare among the Ice, and as farre as they were, they saw no signe of people, nor any good place to anchor in along the shoare. Then hauing an easie gale of wind at East North-east, we ranne along by the shoare, which now trendeth much South, and beginneth to shew like a Bay.

On the twelfth day we were open of another great Sound, lying in the Latitude of 74. degrees 20. minutes, and we called it Sir *Iames Lankasters* Sound: here our hope of passage began to be lesse euery day then other, for from this Sound to the Southward, wee had a ledge of Ice betweene the shoare and vs, but cleare to the Sea ward, we kept close by this ledge of Ice till the foureteenth day in the afternoone, by which time wee were in the latitude of 71. degrees 16. minutes, and plainely perceiued the Land to the Southward of 70. degrees 30. minutes, then wee hauing so much Ice round about vs, were forced to stand more Eastward, supposing to haue beene soone cleare, and to haue kept on the off side of the Ice, vntill we had come into 70. degrees, then to haue stood in againe. But this proued quite contrary to our expectation: for wee were forced to runne aboue threescore leagues through very much Ice, and many times so fast, that wee could goe no wayes, although we kept our course due East; and when wee had gotten into the open Sea, wee kept so neere the Ice, that many times we had much adoe to get cleare, yet could not come neere the Land, till we came about 68. degrees, where indeede we saw the shoare, but could not come to it by eight or nine leagues, for the great abundance of Ice. This was on the foure and twentieth day of Iuly: then spent we three dayes more to see if conueniently wee could come to anchor, to make triall of the tides, but the Ice led vs into the latitude of 65. degrees 40. minutes. Then wee left off seeking to the West shoare, because wee were in the indraft of *Cumberlands* Iles, and should know no certaintie, and hope of passage could be none.

Now seeing that we had made an end of our discouery, and the yeare being too farre spent to goe for the bottome of the Bay, to search for drest Fishes; therefore wee determined to goe for the Coast of *Groineland*, to see if we could get some refreshing for our men: Master *Hubert* and two more, hauing kept their Cabins aboue eight dayes (besides our Cooke, *Richard Wayman*, which died the day before, being the twenty six of Iuly) and diuers more of our company so weake, that they could doe but little labour. So the winde fauouring vs, we came to anchor in the latitude of 65. degrees 45. minutes, at six a clocke in the euening, the eight and twentieth day, in a place called *Cunkin Sound*.

The next day going on shoare, on a little Iland we found great abundance of the herbe called Scuruie Grasse, which we boyled in Beere, and so dranke thereof, vsing it also in Sallets, with Sorrell and Orpen, which here groweth in abundance; by meanes hereof, and the blessing of God all our men within eight or nine dayes space were in perfect health, and so continued till our arriuall in *England*.

* Wee rode in this place three dayes before any of the people came to vs; then on the first of August, six of the Inhabitants in their *Canoas*, brought vs Salmon Peale, and such like, which was a great refreshment to our men: the next day following, the same six came againe, but after that we saw them no more vntill the sixt day, when we had wayed anchor, and were almost cleere of the harbour; then the same six and one more, brought vs of the like commodities, for which we gaue them Glasse Beads, Counters and small peeces of Iron, which they doe as much esteeme, as we Christians doe Gold and Siluer.

Sir *Thomas Smiths* Sound in 78. deg.

Variation of the compasse 56. degrees to the West. Which may make questionable D. *Gilberts* rule. *Tom. 1. l. 2. c. 1.* that where more earth is, more attraction of the compasse happeneth by variation toward it. Now the known continents of *Asia*, &c. must be vnspeakably more then here there can be, and yet here is more variation then about *Iapan* or *Brasil*, *Peru*, &c. *Caries Ilands*.

* This Map of the author for this and the former Voyage with the Tables of his iournall and sayling, were somewhat troublesome and too costly to insert.

Alderman *Iones* Sound.

Sir *Iames Lancasters* Sound.

They see Land and find themselues embaied *Cumberlands* Iles.

Cockin Sound.

Scuruy Grasse.

Six men.

Plenty of Salmon.

In this Sound we saw such great Scales of Salmon swimming to and fro, that it is much to be admired: here it floweth about eighteene foote water, and is at the highest on the change day at seuen a clocke: it is a very good harbour, and easie to be knowne, hauing three high round hils like Piramides close adioyning to the mouth of it, and that in the middest is lowest, and along all this coast are many good harbours to be found, by reason that so many Ilands lye off from the maine.

The sixt of August, by three a clocke in the afternoone, wee were cleere of this place, hauing a North North North-west winde, and faire weather, and the Lord sent vs a speedy and good passage homeward as could be wished: for in nineteene dayes after, wee saw Land on the coast of *Ireland*, it being on the fiue and twentieth day: the seuen and twentieth at noone we were two leagues from *Silly*, and the thirtieth day, in the morning wee anchored at *Douer* in the roade, for the which and all other his blessings the Lord make vs thankfull.

CHAP. XX.

A briefe Discourse of the probabilitie of a passage to the Westerne or South Sea, illustrated with testimonies: and a briefe Treatise and Mappe by Master BRIGGES.

I Thought good to adde somewhat to this Relation of Master *Baffin*, that learned-vnlearned Mariner and Mathematician; who wanting art of words, so really employed himselfe to those industries, whereof here you see so euident fruits. His Mappes and Tables would haue much illustrated his Voyages, if trouble, and cost, and his owne despaire of passage that way, had not made vs willing to content our selues with that Mappe following of that thrice learned (and in this argument three times thrice industrious) Mathematician, Master *Brigges*, famous for his readings in both Vniuersities, and this honourable Citie, that I make no further Voyage of Discouery to finde and follow the remote Passage and extent of his name. Master *Baffin* told mee, that they supposed the tyde from the North-west, about *Digges* Iland was misreported, by mistaking the houre, eight for eleuen: and that hee would, if hee might get employment, search the passage from *Iapan*, by the coast of *Asia*, or (*qua data porta*) any way hee could. But in the *Indies* he dyed, in the late Ormus businesse, slaine in fight with a shot, as hee was trying his Mathematicall proiects and conclusions.

Baffins death.

Now for that discouery of Sir *Thomas Button*, I haue solicited him for his Noates, and receiued of him gentle entertainment and kinde promises: but being then forced to stay in the Citie vpon necessary and vrgent affaires, he would at his returne home, seeke and impart them. Since I heare that weightie occasions haue detained him out of *England*, and I cannot communicate that which I could not receiue: which if I doe receiue, I purpose rather to giue thee out of due place, then not at all. Once he was very confident in conference with me of a passage that way, and said that he had therein satisfied his Maiestie, who from his discourse in priuate, inferred the necessitie thereof. And the maine argument was the course of the tyde: for wintering in *Port Nelson* (see the following Mappe) hee found the tyde rising euery twelue houres fifteene foote (whereas in the bottome of *Hudsons* Bay it was but two foote, and in the bottome of *Fretum Dauis* discouered by *Baffin*, but one) yea and a West winde equalled the nep tydes to the spring tydes; plainely arguing the neighbourhood of the Sea, which is on the West side of *America*. The Summer following he found about the latitude of 60. degrees a strong race of a tide, running sometimes Eastward, sometimes Westward; whereupon *Iosias Hubbard* in his plat, called that place *Hubbarts Hope*, as in the Map appeareth. Now if any make scruple, because this discouery was not pursued by Sir *Thomas Button*, let him consider, that being Prince *Henries* Seruant, and partly by him employed (whence I thinke he named the Country *New Wales*) the vntimely death of that Prince put all out of ioint; nor was hee so open, that others should haue the glory of his discouerie.

The King satisfied touching the passage.

Hubbarts hope.

And if any man thinke that the passage is so farre, as the Maps vse to expresse *America*, running out into the West: it is easily answered, that either of negligence, or ouer-busie diligence, Maps by *Portugals* in the East, and *Spaniards* in the West, haue beene falsely proiected. Hence that fabulous strait of *Anian*, as before by *Francis Gaules* testimonie and nauigation is euident: And hence the *Portugals* to bring in the *Moluccas*, to that moity of the world agreed vpon betwixt the *Spaniards* and them, are thought to haue much curtalled *Asia*, and the longitude of those Ilands, giuing fewer degrees to them then in iust longitude is requisite. So the older Maps

of

Digitized by Google

of *America* make the Land from the *Magelane* Straits to the South Sea, runne much West, when as they rather are contracted somewhat Easterly from the North. The like is iustly supposed of their false placing, *Quiuira*, and I know not (nor they neither) what Countries they make in *America*, to run so farre North-westward, which Sir *Francis Drakes* Voyage in that Sea (his *Noua* Albion*, being little further Westward then *Aquatulco*) plainely euince to be otherwise. Yea the late Map of *California* found to be an Iland, the Sauages discourses in all the Countries Northwards and Westwards from *Virginia*: fame whereof filled my friend Master *Dermer* with so much confidence, that hearing of strange Ships which came thither for a kinde of Vre or earth, the men vsing forkes in their diet, with Caldrons to dresse their meate, &c. things nothing suitable to any parts of *America*, hee supposed them to come from the East, neere to *China* or *Iapan*, and therefore he made a Voyage purposely to discouer: but crossed with diuers disasters, hee returned to *Virginia*, frustrate of accomplishment that yeare, but fuller of confidence, as in a Letter from *Virginia* he signified to me, where death ended that his designe soone after. But how often are the vsuall Charts reiected by experience in these Nauigations, in this worke recorded? Painters and Poets are not alwayes the best Oracles.

* This easily appeareth in obseruing his Voiage, & comparing that before of *Fr. Gaul* therewith.

For further proofes of a passage about those parts into the West Sea (or South, as it is called from the first discouery thereof to the South, from the parts of *New Spaine*, whence it was first descried by the *Spaniards*) there is mention of a *Portugall* (and taken in a Carricke in Queene *Elizabeths* dayes, of glorious memory) confirming this opinion; Sir *Martin Frobisher* also from a *Portugall* in *Guinie*, receiued intelligence of such a passage, he saying he had past it. The Pilots of *Lisbone* are said generally to acknowledge such a thing; and the Admirall of D. *Garcia Geoffroy Loaisa* of *Cite-Real*, in the time of *Charles* the fifth, is reported by the Coast of *Baccalaos* and *Labrador*, to haue gone to the *Molucas*. *Vasco de Coronado* writ to the Emperour, that at *Cibola* he was one hundred and fiftie leagues from the South Sea, and a little more from the North. *Antonio de Herera*, the Kings *Coronista Maior* (part of whose worke followeth) maketh with vs also, in the distances of places by him described. But to produce some authority more full, I haue here presented *Thomas Cowles* a Marriner, and Master *Michael Locke* Merchant, and after them, a little Treatise ascribed to Master *Brigges*, together with his Map. And if any thinke that the *Spaniard* or *Portugall* would soone haue discouered such a passage: these will answere, that it was not for their profit to expose their East or West *Indies* to *English*, *Dutch*, or others, whom they would not haue sharers in those remote treasures by so neere a passage. First, *Thomas Cowles* auerreth thus much.

Some of our Merchants are said not to be so willing for like causes with this discouerie.

I Thomas Cowles *of* Bedmester, *in the Countie of* Somerset, *Marriner, doe acknowledge, that six yeares past, at my being at* Lisbon, *in the Kingdome of* Portugall, *I did heare one* Martin Chacke, *a* Portugall *of* Lisbon, *reade a Booke of his owne making, which he had set out six yeares before that time, in Print, in the* Portugale *tongue, declaring that the said* Martin Chacke *had found, twelue yeares now past, a way from the* Portugall Indies, *through a gulfe of the* New found Land, *which he thought to be in 59. degrees of the eleuation of the North Pole. By meanes that hee being in the said* Indies, *with foure other Shippes of great burden, and he himselfe in a small Shippe of fourescore tunnes, was driuen from the company of the other foure Shippes, with a Westerly winde: after which, hee past alongst by a great number of Ilands which were in the gulfe of the said* New found Land. *And after hee ouershot the gulfe, he set no more sight of any other Land, vntill he fell with the Northwest part of* Ireland; *and from thence he tooke his course homewards, and by that meanes hee came to* Lisbone *foure or fiue weekes before the other foure Ships of his company that he was separated from, as before said. And since the same time, I could neuer see any of those Books, because the King commanded them to be called in, and no more of them to be printed, lest in time it would be to their hindrance. In witnesse whereof I set to my hand and marke, the ninth of April.* Anno 1579.

A Note made by me MICHAEL LOK *the elder, touching the Strait of Sea, commonly called* Fretum Anian, *in the South Sea, through the North-west passage of* Meta incognita.

WHen I was at *Venice*, in Aprill 1596. happily arriued there an old man, about threescore yeares of age, called commonly *Iuan de Fuca* but named properly *Apostolos Valerianos*, of Nation a *Greeke*, borne in the Hand *Cefalonia*, of profession a Mariner, and an ancient Pilot of Shippes. This man being come lately out of *Spaine*, arriued first at *Ligorne*, and went thence to *Florence* in *Italie*, where he found one *Iohn Dowglas*, an *Englishman*, a famous Mariner, ready comming for *Venice*, to be Pilot of a *Venetian* Ship, named *Ragasona* for *England*, in whose company they came both together to *Venice*. And *Iohn Dowglas* being well acquainted with me before, he gaue me knowledge of this *Greeke* Pilot, and brought him to my speech: and in long talke

Digitized by Google

talke and conference betweene vs, in presence of *Iohn Dowglas*: this *Greeke* Pilot declared in the *Italian* and *Spanish* languages, thus much in effect as followeth.

First he said, that he had bin in the West *Indies* of *Spaine* by the space of fortie yeeres; and had sailed to and from many places thereof, as Mariner and Pilot, in the seruice of the *Spaniards*.

Also he said, that he was in the *Spanish* Shippe, which in returning from the Ilands, *Philippinas* and *China*, towards *Noua Spania*, was robbed and taken at the Cape *California*, by Captaine *Candish Englishman*, whereby he lost sixtie thousand Duckets, of his owne goods.

Captaine *Candish.*

Also he said, that he was Pilot of three small Ships which the Vizeroy of *Mexico* sent from *Mexico*, armed with one hundred men, Souldiers, vnder a Captain, *Spaniards*, to discouer the Straits of *Anian*, along the coast of the South-Sea, and to fortifie in that Strait, to resist the passage and proceedings of the *English* Nation, which were feared to passe through those Straits into the South Sea. And that by reason of a mutinie which happened among the Souldiers, for the Sodomie of their Captaine, that Voyage was ouerthrowne, and the Ships returned backe from *California* coast to *Noua Spania*, without any effect of thing done in that Voyage. And that after their returne, the Captaine was at *Mexico* punished by iustice.

Also he said, that shortly after the said Voyage was so ill ended, the said Viceroy of *Mexico*, sent him out againe *Anno* 1592. with a small *Caruela*, and a Pinnace, armed with Mariners onely, to follow the said Voyage, for discouery of the same Straits of *Anian*, and the passage thereof, into the Sea which they call the North Sea, which is our North-west Sea. And that he followed his course in that Voyage West and North-west in the South Sea, all alongst the coast of *Noua Spania*, and *California*, and the *Indies*, now called North *America* (all which Voyage hee signified to me in a great Map, and a Sea-card of mine owne, which I laied before him) vntill hee came to the Latitude of fortie seuen degrees, and that there finding that the Land trended North and North-east, with a broad Inlet of Sea, betweene 47. and 48. degrees of Latitude: hee entred thereinto, sayling therein more then twentie dayes, and found that Land trending still sometime North-west and North-east, and North, and also East and South-eastward, and very much broader Sea then was at the said entrance, and that hee passed by diuers Ilands in that sayling. And that at the entrance of this said Strait, there is on the North-west coast thereof, a great Hedland or Iland, with an exceeding high Pinacle, or spired Rocke, like a piller thereupon.

Land trending in 47. degrees.

Also he said, that he went on Land in diuers places, and that he saw some people on Land, clad in Beasts skins: and that the Land is very fruitfull, and rich of gold, Siluer, Pearle, and other things, like *Noua Spania*.

And also he said, that he being entred thus farre into the said Strait, and being come into the North Sea already, and finding the Sea wide enough euery where, and to be about thirtie or fortie leagues wide in the mouth of the Straits, where hee entred; hee thought he had now well discharged his office, and done the thing which he was sent to doe: and that hee not being armed to resist the force of the Saluage people that might happen, hee therefore set sayle and returned homewards againe towards *Noua Spania*, where hee arriued at *Acapulco*, *Anno* 1592. hoping to be rewarded greatly of the Viceroy, for this seruice done in this said Voyage.

The mouth of the Straight where he entred 30. or 40. leagues broad.

Also he said, that after his comming to *Mexico*, hee was greatly welcommed by the Viceroy, and had great promises of great reward, but that hauing sued there two yeares time, and obtained nothing to his content, the Viceroy told him, that he should be rewarded in *Spaine* of the King himselfe very greatly, and willed him therefore to goe into *Spaine*, which Voyage hee did performe.

Also he said, that when he was come into *Spaine*, he was greatly welcommed there at the Kings Court, in wordes after the *Spanish* manner, but after long time of suite there also, hee could not get any reward there neither to his content. And that therefore at the length he stole away out of *Spaine*, and came into *Italie*, to goe home againe and liue among his owne Kindred and Countrimen, he being very old.

Also he said, that hee thought the cause of his ill reward had of the *Spaniards*, to bee for that they did vnderstand very well, that the *English* Nation had now giuen ouer all their voyages for discouerie of the North-west passage, wherefore they need not feare them any more to come that way into the South Sea, and therefore they needed not his seruice therein any more.

Also he said, that in regard of this ill reward had of the *Spaniards*, and vnderstanding of the noble minde of the Queene of *England*, and of her warres maintayned so valiantly against the *Spaniards*, and hoping that her Maiestie would doe him iustice for his goods lost by Captaine *Candish*, he would bee content to goe into *England*, and serue her Maiestie in that voyage for the discouerie perfectly of the North-west passage into the South Sea, and would put his life into her Maiesties hands to performe the same, if shee would furnish him with onely one ship of fortie tunnes burden and a Pinnasse, and that he would performe it in thirtie dayes time, from one end to the other of the Streights. And he willed me so to write into *England*.

The straight to be discouered in 30. dayes.

And

And vpon this conference had twise with the said *Greeke* Pilot, I did write thereof accordingly into *England* vnto the right honourable the old Lord Treasurer *Cecill*, and to Sir *Walter Raleigh*, and to Master *Richard Hakluyt* that famous Cosmographer, certifying them hereof by my Letters. And in the behalfe of the said *Greeke* Pilot, I prayed them to disburse one hundred pounds of money, to bring him into *England* with my selfe, for that my owne purse would not stretch so wide at that time. And I had answere hereof by Letters of friends, that this action was very well liked, and greatly desired in *England* to bee effected; but the money was not readie, and therefore this action dyed at that time, though the said *Greeke* Pilot perchance liueth still this day at home in his owne Countrie in *Cefalonia*, towards the which place he went from me within a fortnight after this conference had at *Venice*.

And in the meane time, while I followed my owne businesse in *Venice*, being in Law suit against the Companie of Merchants of *Turkie*, and Sir *Iohn Spencer* their Gouernour in *London*, to recouer my pension due for my office of being their Consull at *Aleppo* in *Turkie*, which they held from me wrongfully. And when I was (as I thought) in a readinesse to returne home into *England*, for that it pleased the Lords of her Maiesties honourable Priuie Counsell in *England*, to looke into this Cause of my Law suit for my reliefe: I thought that I should be able of my owne purse to take with me into *England* the said *Greeke* Pilot. And therefore I wrote vnto him from *Venice* a Letter, dated in Iuly 1596. which is copied here-vnder.

Al Mag^co. Sig^or. Capitan IVAN DE FVCA Piloto de *Indias*, amigo mio char^mo. en *Zefalonia*.

MVy honrado Sennor, siendo yo para bueluerme en Inglatierra dentre de pocas mezes, y accuerdandome de lo trattado entre my y V. M. en Venesia, sobre el viagio de las Indias, me ha paresçido bien de scrinir esta carta à V. M. paraque si tengais animo de andar con migo, puedais escribirme presto, en que maniera quereis consertuos. Y puedais embiarme vuestra carta, con esta nao Ingles que sta al Zante (sino hallais otra coientura meier) con el sobrescritto que diga, en casa del Sennor Eleazar Hycman *Mercader Ingles, al tragetto de San* Thomas *en Venisia. Y Dios guarde la persona de V. M. Fecha en Venesia al primer dia de Iulio, 1596. annos.*

Amigo de V. M. *Michael Lok* Ingles.

And I sent the said Letter from *Venice* to *Zante*, in the ship *Cherubin*. And shortly after I sent a copie thereof in the ship *Mynyon*. And also a third copie thereof by *Manea Orlando Patron de Naue Venetian*. And vnto my said Letters he wrote mee answere to *Venice* by one Letter which came not to my hands. And also by another Letter which came to my hands, which is copied here-vnder.

Al Illmo. Sig^or. MICHAEL LOCH *Ingles*, in casa del Sig^or. LASARO Mercader *Ingles*, al tragetto de San THOMAS en *Venesia*.

MVy Illustre Seg^or. la carta de V. M. receui à 20. dias del Mese di Settembre, por loqual veo Loche *V. M. me manda, io tengho animo de complir* Loche *tengo promettido à V. M. y no solo yo, mas tengo vinte hombres para lieuar con migo, porche son hombres vaglientes; y assi estoi esperando, por otra carta che auise à V. M. parache me embiais los dinieros che tengo escritto à V. M. Porche bien saue V. M. como io vine poner, porche me glieuo Capitan* Candis *mas de sessanta mille ducados, come V. M. bien saue: embiandome lo dicho, ire à seruir à V. M. con todos mis compagneros. I no spero otra cossa mas de la voluntad è carta de V. M. I con tanto nostro Sig^or. Dios guarda la Illustre persona de V. M. muchos annos. De Ceffalonia à 24. de Settembre del* 1596.

Amigo & seruitor de V. M.
Iuan Fuca.

And the said Letter came to my hands in *Venice*, the 16. day of Nouember, 1596. but my Law suite with the Companie of *Turkie* was not yet ended, by reason of Sir *Iohn Spencers* suite made in *England* at the Queenes Court to the contrarie, seeking onely to haue his money discharged which I had attached in *Venice* for my said pension, and thereby my owne purse was not yet readie for the *Greeke* Pilot.

And neuertheless, hoping that my said suite would haue shortly a good end; I wrote another Letter to this *Greeke* Pilot from *Venice*, dated the 20. of Nouember, 1596. which came not to his hands. And also another Letter, dated the 24. of Ianuarie, 1596. which came to his hands. And thereof he wrote me answere, dated the 28. of May, 1597. which I receiued the first of August

Digitized by Google

1597. by *Thomas Nordey* an *English* Merchant yet liuing in *London*, wherein he promised still to goe with me into *England*, to performe the said voyage for discouerie of the North-west passage into the South Sea, if I would send him money for his charges according to his former writing, without the which money, he said he could not goe, for that he said he was vndone vtterly, when he was in the ship *Santa Anna*, which came from *China*, and was robbed at *California*. And yet againe afterward I wrote him another Letter from *Venice*, whereunto he wrote me answere, by a Letter written in his *Greeke* language, dated the 20. of October, 1598. the which I haue still by me, wherein he promiseth still to goe with me into *England*, and performe the said voyage of discouerie of the North-west passage into the South Sea by the said streights, which he calleth the *Streight* of *Noua Spania*, which he saith is but thirtie daies voyage in the streights, if I will send him the money formerly written for his charges. The which money I could not yet send him, for that I had not yet recouered my pension owing mee by the Companie of *Turkie* aforesaid. And so of long time I stayed from any furder proceeding with him in this matter.

The Ship *Santa Anna*.

The Streight of *Noua Spania* thirtie dayes iourney in the Streight.

And yet lastly, when I my selfe was at *Zante*, in the moneth of Iune 1602. minding to passe from thence for *England* by Sea, for that I had then recouered a little money from the Companie of *Turkie*, by an order of the Lords of the Priuie Counsell of *England*, I wrote another Letter to this *Greeke* Pilot to *Cefalonia*, and required him to come to me to *Zante*, and goe with mee into *England*, but I had none answere thereof from him, for that as I heard afterward at *Zante*, he was then dead, or very likely to die of great sickenesse. Whereupon I returned my selfe by Sea from *Zante* to *Venice*, and from thence I went by land through *France* into *England*, where I arriued at Christmas, *An.* 1602. safely, I thanke God, after my absence from thence ten yeeres time; with great troubles had for the Company of *Turkies* businesse, which hath cost me a great summe of money, for the which I am not yet satisfied of them.

A Treatise of the North-west passage to the South Sea, through the Continent of Virginia, *and by* Fretum Hudson.

THe noble plantation of *Virginia* hath some very excellent prerogatiues aboue many other famous Kingdomes, namely, the temperature of the aire, the fruitfulnesse of the soile, and the commodiousnesse of situation.

The aire is healthfull and free both from immoderate heate, and from extreme cold; so that both the Inhabitants and their Cattell doe prosper exceedingly in stature and strength, and all Plants brought from any other remote climate, doe there grow and ffuctifie in as good or better manner, then in the soile from whence they came. Which though it doe manifestly proque the fruitfulnesse of the soile, yeelding all kindes of Graine or Plants committed vnto it, with a rich and plentifull increase; yet cannot the fatnesse of the earth alone produce such excellent effects, vnlesse the temperature of the aire be likewise so fauourable, that those tender sprouts which the earth doth abundantly bring forth, may bee cherished with moderate heate and seasonable moisture, and freed both from scorching drought, and nipping frost.

These blessings are so much the more to be esteemed, because they are bestowed vpon a place situated so conueniently, and at so good a distance both from *Europe*, and the *West Indies*, that for the mutuall commerce betwixt these great and most rich parts of the habitable world, there cannot bee deuised any place more conuenient for the succour and refreshing of those that trade from hence thither: whether they be of our owne Nation, or of our Neighbours and Friends; the multitude of great and nauigable Riuers, and of safe and spacious Harbours, as it were inuiting all Nations to entertaine mutuall friendship, and to participate of those blessings which God out of the abundance of his rich Treasures, hath so graciously bestowed some vpon these parts of *Europe*, and others no lesse desired vpon those poore people: which might still haue remayned in their old barbarous ignorance, without knowledge of their owne miserie, or of Gods infinite goodnesse and mercy; if it had not pleased God thus graciously both to draw vs thither with desire of such wealth as those fruitfull Countries afford, and also to grant vs so easie, certaine, and safe a meanes to goe vnto them: which passage is in mine opinion made much more secure and easie by the commodious Harbours and refreshing which *Virginia* doth reach out vnto vs. The coasts of *Florida* to the West, being not so harberous; and of *New England* to the East, somewhat more out of the way, amongst so many Flats and small Ilands not so safe. Neither is the commodiousnesse of *Virginia's* situation onely in respect of this West *Atlanticke* Ocean, but also in respect of the *Indian* Ocean, which we commonly call the *South Sea*, which lyeth on the West and North-west side of *Virginia*, on the other side of the Mountaines beyond our Falls, and openeth a free and faire passage, not onely to *China*, *Iapan*, and the *Molucaes*; but also to *New Spaine*, *Peru*, *Chili*, and those rich Countries of *Terra Australis*, not as yet fully discouered. For the Sea wherein Master *Hudson* did winter, which was first discouered by him, and is therefore now called *Fretum Hudson*, doth stretch so farre towards the West, that it lyeth as farre West-

ward

ward as the Cape of *Florida:* So that from the Falls aboue *Henrico* Citie, if we shape our iourney towards the North-west, following the Riuers towards the head, wee shall vndoubtedly come to the Mountaines, which as they send diuers great Riuers Southward into our Bay of *Chesepiock*, so likewise doe they send others from their further side North-westward into that Bay where *Hudson* did winter. For so wee see in our owne Countrie, from the ridge of Mountaines continued from *Derbishire* into *Scotland*, doe issue many great Riuers on both sides into the East *Germane* Ocean, and into the Westerne *Irish* Seas: in like sort from the Alpes of *Switzerland* and the *Grizons*, doe runne the *Danubie* Eastward into *Pontus Euxinus*, the *Rhene* into the North *Germane* Ocean, the *Rhosne* West into the *Mediterrane* Sea, and the *Po* South into the *Adriatike* Sea. This Bay where *Hudson* did winter, stretcheth it selfe Southward into 49. degrees, and cannot be in probabilitie so farre distant from the Falls as two hundred leagues; part of the way lying by the Riuers side towards the Mountaines from whence it springeth: and the other part on the other side cannot want Riuers likewise, which will conduct vs all the way, and I hope carry vs and our prouisions a good part of it. Besides that Bay, it is not vnlikely that the Westerne Sea in some other Creeke or Riuer commeth much neerer then that place: For the place where Sir *Thomas Button* did winter, lying more Westerly then Master *Hudsons* Bay by one hundred and ninetie leagues in the same Sea, doth extend it selfe very neere as farre towards the west as the Cape of *California*, which is now found to bee an Iland stretching it selfe from 22. degrees to 42. and lying almost directly North and South; as may appeare in a Map of that Iland which I haue seene here in *London*, brought out of *Holland*; where the Sea vpon the North-west part may very probably come much neerer then some doe imagine: who giuing too much credit to our vsuall Globes and Maps, doe dreame of a large Continent extending it selfe farre Westward to the imagined Streight of *Anian*, where are seated (as they fable) the large Kingdomes of *Cebola* and *Quiuira*, hauing great and populous Cities of ciuill people; whose houses are said to bee fiue stories high, and to haue some pillars of *Turquesses*. Which relations are cunningly set downe by some vpon set purpose to put vs out of the right way, and to discourage such as otherwise might be desirous to search a passage by the way aforesaid into those Seas.

Gerardus Mercator, a very industrious and excellent Geographer, was abused by a Map sent vnto him, of foure *Euripi* meeting about the North Pole; which now are found to bee all turned into a mayne Icie Sea. One demonstration of the craftie falshood of these vsuall Maps is this, that Cape *Mendocino* is set in them West North-west, distant from the South Cape of *California*, about seuenteene hundred leagues, whereas *Francis Gaule* that was imployed in those discoueries by the Vice-roy of *New Spaine*, doth in *Hugo Linschotten* his booke set downe their distance to be onely fiue hundred leagues.

Besides this, in the place where Sir *Thomas Button* did winter in 57. degrees of latitude, the constant great Tydes euery twelue houres, and the increase of those Tydes whensoeuer any strong Westerne winde did blow, doe strongly perswade vs that the mayne Westerne Ocean is not farre from thence; which was much confirmed vnto them the Summer following; when saying directly North from that place where they wintered, about the latitude of 60. degrees, they were crossed by a strong Current running sometimes Eastward, sometimes Westward: So that if we finde either *Hudsons* Bay, or any Sea more neere vnto the West, wee may assure our selues that from thence we may with great ease passe to any part of the East *Indies:* And that as the World is very much beholding to that famous *Columbus* for that hee first discouered vnto vs the West *Indies*; and so to the *Portugal* for the finding out the ordinarie and as yet the best way that is knowne to the East *Indies*, by Cape *Bona Speranza:* So may they and all the world be in this beholding to vs in opening a new and large passage, both much neerer, safer, and farre more wholesome and temperate through the Continent of *Virginia*, and by *Fretum Hudson*, to all those rich Countries bordering vpon the South Sea, in the East and West *Indies*. And this hope that the South Sea may easily from *Virginia* be discouered ouer Land, is much confirmed by the constant report of the Sauages, not onely of *Virginia*, but also of *Florida* and *Canada*; which dwelling so remote one from another, and all agreeing in the report of a large Sea to the Westwards, where they describe great ships not vnlike to ours, with other circumstances, doe giue vs very great probabilitie (if not full assurance) that our endeuours this way shall by Gods blessing haue a prosperous and happy successe, to the encrease of his Kingdome and Glorie amongst these poore ignorant *Heathen* people, the publique good of all the *Christian* world, the neuer-dying honour of our most gracious Soueraigne, the inestimable benefit of our Nation, and the admirable and speedie increase and aduancement of that most noble and hopefull Plantation of *Virginia*; for the good successe whereof all good men with mee, I doubt not, will powre out their prayers to Almightie God.

VOYAGES, AND TRAVELS TO AND IN THE NEW WORLD, CALLED *AMERICA*: RELATIONS OF THEIR PAGAN ANTIQVITIES AND OF THE REGIONS AND PLANTATIONS IN THE NORTH AND SOVTH parts thereof, and of the Seas and Ilands adiacent.

THE FIFTH BOOKE.

CHAP. I.

A Description of the West Indies, by ANTONIO DE HERRERA * *his Maiesties Chiefe Chronicler of the Indies, and his Chronicler of* Castile.

To the Licentiate PAVL of *Laguna*, President of the Royall and Supreme Councell of the *Indies*.

THe Licentiate Iohn *of* Obando, *Predeceſſor of your Lordſhip' (in whoſe time the Office of chiefe Chronicler of the Indies was inſtituted, for writing with greater authoritie, foundation, and truth, the Acts of the* Castilians *in the New World, and to ſee and examine that which the other Chroniclers ſhould write (for I finde that almoſt to all that is written no credit could be giuen, for ouer-much licence, wherewith vntill then it was done) hee vſed great diligence in gathering the moſt certaine Relations that were found as well in the* Indies, *as in* Spaine, *of that which happened in the Diſcoueries of thoſe Regions, the foundations of thoſe Townes and Cuſtomes of the people. And many yeers being paſt after his death, without making any beginning of this Hiſtory, your Lordſhip being prouided for Preſident of the Royall and Supreme Councell of the* Indies, *knowing how much it behoued, that deeds ſo worthy*

* I found this Worke translated in M. *Hakluyts* Papers; but I can ſcarſly call it *Engliſh*, it had ſo much of the *Spaniſh* garbe, in litterall and verball affectation and obſcuritie. I haue examined it with the *Spaniſh* Orginall, and compared it alſo with the *Latine* Translation, with great paines for thy greater pleaſure & profit, correcting and illuſtrating the phraſe and ſence; being before very rude, obſcure and in very many places vtterly ſenceleſſe. But hauing none to write for mee but my owne hands, I rather choſe to amend this as I could, then to tranſlate it anew. I haue ſeene it alſo in *French*. The *Latine* is exceeding falſe in ſome numbers, as 2000. for 20000. diuers times, &c. which I note for their ſakes which reade that and haue not the *Spaniſh*. I haue not contracted this (as I haue done diuers other Relations) becauſe it is a briefe contraction of the *Spaniſh-Indian* Contractation, preſenting the *Spaniſh* Proceedings, Colonies, Townes, Officers and Gouernment Spiritual and Temporall in the *Indies*. This Author hath written eight Decades of the *Spaniſh* Acts in the Weſt *Indies*, which giue great light to thoſe parts, but would be too long for this Worke.

of

of memorie should no longer be buried, and that they should be written by a Royall Chronicler *(seeing so much fruit is gotten of Historie, that it exceedeth so much the Picture, as the soule, the bodie, against the opinion of a moderne Writer.) Prouiding all the meanes necessarie with liberalitie and diligence, haue beene the meere and onely Instrument; following the opinion of S.* Augustine, *that this Historie, and the Description that followeth hath come to the present estate. And because it hath not beene of least importance to honour the Author, animating him to goe forward with so great a labour, conforming your selfe with the vniuersall opinion of the much that is due to the watchings, and labours of the Writers; placing this Office of Chiefe Chronicler in that point and reputation that so noble an Exercise deserueth, (as the most famous men of the World haue iudged it, and it is esteemed and talked of among all Nations be they neuer so barbarous) your Lordship shall be praysed eternally, and thanked of all that are interessed in it; by which is procured the making mention of their Fathers, and Predecessors with their Names and Countrey, all that hath beene possible, against the barbarous and most vniust opinion of* Iohn Baptista Ramusio, *in his Proeme in the third Volume of the Nauigations, where hee saith to bee a vaine thing, and ridiculous, that the* Spanish *Authors should take paines in writing the names and Countrey of those which serued in the matters of the* Indies. *Wherein he sheweth the venime of the enuie conceiued of the glorious deeds of these Catholike Kings, and of the* Castillian *Nation, seeing the Chronicles doe serue to honour the good, and to reproch the euill, for an example of those to come; which could not be obtayned with the opinion of this* Ramusius, *whom the saying of* Cato *against the* Grecians *doth fit. But the opinion of your Lordship hath beene according to your prudence and valour, of the which as it is inst, there will be a perpetuall memorie, and for that which this Nation is indebted vnto you for the same, you shall bee reknowledged of it eternally. God keepe your Lordship, from* Vallyadolyeede *the fifteenth of October* 1601.

Ramusio vncharitably taxed: for he doth but blame the folly of *Spanish* Authors which are more curious to set downe the names, &c. of those which haue there done any thing though but rebellions, then the description of the beasts, fishes, fowles, plants, Earth, Heauen, &c. in the *Indies*: for which hee there commends *Oniedo*.

Chap. 1. Of the bounds and diuision of the West *Indies*.

THe compasse of the Earth is 360. degrees, which being reduced to leagues of *Castile* are 6300. and by the compasse of the Earth is vnderstood the Sea together with it, which two Elements make the Globe; whose vpper face in part is Earth, and in part is Sea: The Ancients diuided the Earth in three parts, and gaue to euery one his name. The first they called *Europe*, more celebrated then any of the other. The second *Asia*, which is greater then the rest, and contayneth the great Kingdome of *China*. The third. *Africa* And men being in a supposition that the World contayned no more then was rehearsed, not contenting themselues with it, entred in the Art of Nauigating, and in the inuention of ships of high building, fitting them in such order that they might abide the force of the waues of the Sea, & in this Art [1] the *Spaniards* haue surpassed all the Nations of the World. For whiles there reigned *Ferdinand* in *Castile* and in *Lyon*, the famous Kings Catholike *Ferdinando* the Fift, and *Isabella* a most wise, prudent, and most puissant Queene; and *Don Iohn* the Second, called the *Pellican*, raigned in *Portugall*, (hee that euer will be worthy of memory) *Don Christopher Colon*, first Admirall of the *Indies*, hauing liued many yeeres married in *Spaine*; with the counsell of *Martin* of *Bohemia*, a *Portugall* borne in the Iland of *Fayall*, a famous Astrologian; and especially a Iudiciarie, and of others with whom he communicated it, gaue a beginning to the Discouery of that which at this day is counted the fourth part of the World, and the greatest of them all, and taking his course toward the Sunne setting, going from *Pallos* a Village of the Earle of *Miranda*, in the Coast of *Andaluzia*, he sayled so much by the Ocean, that hee found this great Land, which the Equinoctiall Line cutteth in the middest, and it goeth so farre toward the South, that it reacheth to fiftie two degrees and an halfe, and goeth so high to the North, that it hides it selfe vnder the Pole Articke, without [m] knowing any end.

1 The *Spaniards* haue surpassed all Nations of the World, in Nauigation of high built ships. *Remember that a* Spaniard *speakes it.)*

Pallos, is to say staues, or sticks.

The greatnesse of this fourth part hath set the people in great admiration, whose description shall here be handled, vnder the name of *Ilands*; and firme Land of the Ocean Sea, because they are compassed with this Sea, and placed to the West, and are commonly called, the *West Indies*, and the *New World*, and comprehended within the limits of the Kings of *Castile* and of *Lyon*. Which is an Hemisphere, and halfe of the World, of 180. degrees, beginning to reckon from a Meridian Circle, which passeth by thirtie nine, or by fortie degrees of longitude, Occidentall from the Meridian of *Toledo*, through the mouth of the Riuer *Maragnon*, and to the Orientall, through the Citie of *Mallaca*, in sort, that at twentie leagues sayling for a degree, these bounds haue from the one part to the other 3900. *Castillan* leagues, euery one of 3000. paces, of fiue foot of a *Castillan* yard, which men say are sixtie *Italian* miles, from the Orient to the Occident, which the Sea-men doe call East and West. And this account of twentie leagues to a degree, is according to *Ptolomie*, and to the opinion of many curious men. It hath seemed to others that the miles of euery degree are seuentie, and that they make no more then seuenteene leagues and an halfe of *Castile*, which is held for the truest account.

m The *Spaniards* did not, or would not know any Passage.

The degrees of longitude, which are those that are reckoned by the [n] Equinoctiall, which goeth from East to West, through the middest of the Orbe, and Globe of the Earth, haue not beene able to bee taken well, because there is no fixed signe in the Heauen. Degrees of altitude are those which are taken, and reckoned from the Pole which fall out certayne, because it is a fixed

n How the degrees of longitude are reckoned.

the coast of *Terra firme*, where the Brises are almost perpetuall, and contrarie to the returne, and the Southerne windes continuall in Summer, and the Northerne in Winter, which are crosse windes. They doe reknowledge by the way the Cape *de Vella*, between *Santa Martha* and [a] *Venezuela*, and the Cape [b] *del Aguja* neere *Cartagena*, where they vnlade the merchandise that are to goe to *New Kingdome*; and those which are to passe to *Peru*, are carried to *Porte bello*, whitherto from *Cartagena* are ninetie leagues, foure or sixe dayes sayling, reknowledging the Point of *Captina*, and from the *Canaries* to *Cartagena* is fiue and thirtie dayes sayling.

a Or little *Venice.*
b Or of the Needle.

Those that goe to *Honduras* and *Guatemala*, goe in companie with them of *Nona Espanna*, vnto Cape *Tiburon*, the vtmost Westerne part of *Espannola*, from whence running along by the Iland of *Iamayca* on the North side, vnto the Point of the [c] *Negrillo*, the vttermost of it, they put to Sea in demand of the Cape of the *Camaron*, the beginning of the Gulfe and Prouince of *Honduras*, from whence they goe to anker to *Truxillo* fifteene leagues to the West from the Cape, where the merchandize are vnladen that are to remaine there, and the rest doe passe to the Port of *Canallos*, and to *Golfo Dulce*, along the coast by the Gulfe of *Honduras*, to transport them to *Guatemala*.

The voyage of *Honduras* and *Guatemala.*
c Or little black Moore.

Chap. 3.

THe returne from the *Indies* to *Spaine*, cannot be made by the course which they take in going thither; and therefore they must come to a greater height, going out of the Tropicks to seeke fresh windes which doe blow from towards the North; all the Fleetes doe meete in the Port of *Hauana*, about the moneth of Iune, to come to *Spaine* before Winter; for the East winde is against them, and is trauerse in the Channell, and the South also is trauerse in the Coast from the Cape Saint *Vincent* to Saint *Lucar*. The fleet of *Terra firme*, departeth from May forward from *Porte bello*, when the North windes doe alreadie cease; and returneth to *Cartagena* to take the freight of Siluer and Gold from the new Kingdom of *Granada*: and also for to auoid the Coast of *Veragua*, and the streame of *Nicaragua*, whence they can hardly get out if they ingulfe themselues by reason of the Brises, and contrarie and dangerous Currents that are in the way. From *Cartagena* they goe for Cape Saint *Antonie*, the furthest West of *Cuba* about two hundred leagues, voyage of ten dayes, with care of the shoales that are in the way of *Serrana* and *Serranilla*, and [d] *Quitasueno*, and from the Cape of Saint *Antonie* to the *Auana*, are neere fiftie leagues: and the ships that come from *Honduras*, doe come also to reknowledge the Cape of Saint *Antonie*.

Wherein hee prosecuteth the Nauigations of the *Indies.*
The Fleets doe returne to *Castile* by another way.
When the fleets ought to depart to come for *Castile*
Whither the Fleets doe goe from *Cartagena.*
d Or take away sleepe.
The ships of *Honduras* reknowledge the Cape of Saint *Antonie.*

The fleetes of *Nona Espanna* doe depart in the beginning of May, while the North windes doe last, which doe serue for the returne to the *Auana*, ascending a little in altitude vnto the Sound, which they call *las Tortugas*, vnto which place they saile about three hundred leagues in fifteene dayes.

The ships of *Santa Martha* and *Venezuela*, to come to *Castile*, came out betweene *Cuba* and *Hispaniola*, to reknowledge the Cape of Saint *Nicholas* in the Western part of it, from whence through the middest of the Iles of the *Lucayos*, they goe take the course of the fleets, and when they come in sight of the Cape of Saint *Antonie*, they goe to the *Auana* for feare of Pirates.

When the Fleets of *Nona Espanna* doe depart thence.

From the *Auana* to *Castile*, hauing past the Channell of *Bahama* (which the Pilot *Antonie* of *Alaminos* sayled first of all, the yeere 1519.) they doe saile through the Gulfe which is called of the *North*, or of the *Sagarzo*, about nine hundred or a thousand leagues or more (a sayling of fiue and twentie or thirtie dayes with ordinarie windes) by two wayes, one for Summer, in a greater height, till they come to thirtie eight or thirtie nine degrees, in the which stand the Ilands of *Azores*; and another for Winter, by a lesser height, because of the stormes and showres which doe come alwayes neere vnto it, whereby they goe vnto thirtie nine degrees no more, wherein standeth the Iland of *Santa Maria*, one of the Iles of *Azores*, and they ascend one degree more for to touch in the *Tercera*, where the fleets doe alwayes come to take refreshing, without permitting any one to goe ashoare. And from the Ilands of *Azores* vnto Saint *Lucar* of *Barrameda*, the Mariners make three hundred leagues of Nauigation in fifteene dayes, others in thirtie for the many Brises that doe reigne in this Gulfe of the *Azores*, whereby they saile till they come vpon the Coast of *Portugal*, and the doubling of the Cape Saint *Vincent*; and after in sight of the Coast vnto the Port of Saint *Lucar*.

The voyage of them of *Santa Martha* and *Venezuela.*
Nauigation from the *Auana* to *Castile.*
Nauigation from the Ilands of *Azores* vnto Saint *Lucar.*

The Nauigation from *Castile* to the Riuer of *Plata* (whitherto there is one thousand and sixe hundred leagues, and to the Streight of *Magelanes* neere two thousand) hath beene much longer in the time then in the distance of the way, because being necessarie to come to those Prouinces in their Summer, which is from September forward, they cannot depart from *Castile* at such time as not to passe the Equinoctiall by Iune or August, when in it the Calmes are many and very great, and therefore they stay fiue moneths in the Voyage, which might bee made in two or three, if from *Siuil* they did depart by August or before: and touching in the *Canaries* they goe North and South, to eight or nine degrees on the other side of the Equinoctiall, from whence some doe saile East and West, to reknowledge the Cape of Saint *Augustine* in *Brasile*, and afterward in sight of the Land vnto the Riuer of *Plate* and the Streight. Others from the eight degrees haue gone straight through the South Sea to the Streight, although few haue come to passe

Nauigation to the Riuer of *Plata.*

Digitized by Google

it, before the Summer bee ended, which is very short and full of stormes, because it stands in so great a height, whereby this Nauigation is very difficult.

Nauigation of the South Sea.

The Nauigation of the South Sea hath alwayes beene along the Coast, and because the South windes are very continuall, and the Current of the Streight ordinarie to the North; The Nauigation of *Panama* to the Citie of *The Kings*, is wont to continue two moneths, and the returne lesse then thirtie dayes, and the same from the *Kings* to *Chile*, from whence to *Panama* are sayled nine hundred leagues in lesse then two moneths, eight being needfull for the going, which is alreadie shorter then it was: for putting to the Sea they finde better windes to performe it.

Nauigation of *Panama* to the Citie *de los Reyes.*

Nauigation of the West *Indies.*

The Nauigation to the Westerne Ilands, *Maluccas* and *Philippinas*, from *Castile* to the Streight of *Magellane* passeth foure thousand leagues, and so for being so long as for the difficultie of passing the Streight of *Magellanes*, it is held for difficult to vse it, and from *Noua Espanna* through the Westerne Gulfe, which is in the South Sea. This Nauigation was made from the Port of the *Nativitie* in the Coast of *Noua Espanna*; at this time it is made from the Port of *Acapulco*, from whence to the *Maluccas* and *Philippinas*, they doe make a voyage of one thousand sixe hundred, or a thousand and seuen hundred leagues, which is sayled in two moneths, or two and a halfe, departing in November which is the time most free from calmes. And the returne to *Noua Espanna* is longer, because not being able to returne the way they went, it is necessarie to ascend to 39. degrees, and depart in May and Iune, when the Brises bee lesse, and they stay foure moneths in sayling two thousand leagues that may bee in the iourney.

Chap. 4. Of the *Indies* of the North. Here was inserted a Map of the North parts of *America*. But Master *Briggs* hath in the former booke giuen you a farre farre better, to which I referre you.

NAture hauing diuided these western *Indies* in two parts, by the Isthmos or narrownesse from *Porte bello* to *Panama*, placed the one to the North, and the other to the South; wherefore wee will call them the *Indies* of the North, and of the South. The Kings of *Castile* and *Lion*, with the aduice of the supreme Councell of the *Indies*, haue ordayned, that in each place there bee a Vice-roy, Courts, and Gouernments, and Bishopricks, as hereafter shall bee shewed. And first shall be entreated of the Northerne *Indies*, which commonly they call *Noua Hispania*, because the first discouerers (which were *Iohn Grijalua* and his Companions) hauing not seene in the Ilands houses of stone, nor other things as in *Spaine*, which here they found with people apparelled, and more ciuill; They named it *New Spaine:* which exceedeth the other part of the *Indies* in pastures, and therefore they haue innumerable Cattle of all sorts: and it exceedeth also in husbandrie and fruits: it hath no wine, because generally the grapes doe not ripen with perfection, the raines of Iuly and August not suffering them to ripen. The * vpper Ilands haue also great Pastures, and a pleasant prospect: for all the yeere they are greene and flourishing, with great pleasantnesse, and great *Arcabucos*, which are very thick Groues and Inclosures, and in the Playnes are great Lakes and Quagmires. Neither Bread nor Wine grow in them; for the great rankenesse of the ground doth not suffer it to ripen nor eare: the Riuers for the most part haue gold. *Florida*, *Nicaragua*, and *Guatimala* are almost in this manner, as of all more particularly wee will rehearse in their place, and in the Table following shall the bounds of these Northern *Indies* bee seene.

Here was inserted a Map of the North parts of *America*. But Master *Briggs* hath in be former booke giuen you a farre farre better, to which I referre you.

Which bee the *Indies* of the North and which of the South.

Wherefore it was called *New Spaine.*

Great pastures in *New Spaine.*

* The weathermost or vpper Ilands.

Chap. 5. Of the bounds of the iurisdiction of Saint *Dominicke.*

THe Court of the Iland *Hispaniola*, which in time and place is the first, being neerest vnto *Castile*, it hath of bounds East and West fiue hundred and fiftie leagues, and North and South more then three hundred, wherein are included the Ilands and Gouernments of *Hispaniola*, *Cuba*, Saint *Iohn*, *Iamayca*, *Margarita*, and the fishing of the Pearle: the Prouince and Gouernment of *Venezuella*, and for neerenesse the Prouinces of new *Andaluzia*, *Guayana*, and *Florida*, with all the Ilands of the North Sea, which doe passe a hundred which are named, and are aboue sixe hundred great and small: and those which doe leane toward the Coast of *Terra firme*, the Mariners doe call *of the Leeward*, and the other to the *Weatherward*. The temperature of them all is commonly moist and exceeding hot, and although they be plentifull in Pastures and Trees, they are not so of the Seedes of *Castile*, nor of Wheat, Barly, Vines, nor Oliues: but there is great store of great Cattell and small, as Kine, Mares, Swine, and Sheepe, and therefore their principall trafficke is Hides and Sugar, for there is great store; and although in the most of them there is gold; it is not sought for.

Chap. 6. Of the Iland *Hispaniola* and of *Cuba.*

THe Countrie-men called the Iland of *Hispaniola*, *Ayti* and *Quisqueya*, which signifieth *Roughnesse*, and *a great Countrie*. The figure of it is like a Chesnut leafe: it stands in nineteene degrees and a halfe of elevation of the Pole, it compasseth about foure hundred leagues and somewhat more, and hath in length East and West an hundreth and fiftie, and North and South from thirtie to sixtie where it is broadest, it is very plentifull of Sugar, and Cattell, and of *Yuca*, the roote whereof maketh the *Cazabi*, the bread of the Countrimen. They haue no Millet nor Wheat, although they begin to reape some in the inward parts and coldest. It is rich of Copper mynes and other metals, and some veine of Gold though but little is gotten, for want of workemen: it hath ten *Spanish* Townes.

Cazabi bread.

Santa Marie of the Port, ſeated on the Weſterne coaſt of the Iland, is fiftie or ſixtie leagues from Saint *Dominicke*, as betweene the North and the Weſt; the chiefe Knight *Nicholas* of *Ouando* did people it.

Concecion de la Vega. The Citie of the *Conception of the Valley*, is in the Kingdome of *Guarinoex*, which the firſt Admirall *Don Chriſtopher Collon* built, neere to the which he obtayned the victorie in the great battaile of the *Valley Royall:* it is twentie leagues from Saint *Dominicke* to the North-eaſt, where is a Cathedrall Church (although there is no Prelate, for it is vnited to the Church of Saint *Dominicke*) it hath one Monaſterie of religious *Franciſcans*, where is the wood of the Croſſe which the *Indians* could not burne, cut, nor ouerthrow, which hath done many miracles.

The wood of the Croſſe of the Valley.

Saint Iago de los Caualleros. Saint *Iago de los Caualleros* is ten leagues from the Citie *de la Vega* directly to the North-eaſt; it was firſt a Fortreſſe which the firſt Admirall made in the Countries of the *Cacique Guanacouel*, for the ſecuritie of the Valley, and the Fort *Magdalene* which was foure leagues off.

Puerto de Plata. The chiefe Knight of *Alcantara*, *Nicholas* of *Ouando*, *An.* 1502. did people the Port of *Plate* in the North coaſts, fiue and thirtie or about fortie leagues from Saint *Dominicke*, becauſe the ſhips of *Caſtile* might more commodiouſly trafficke, and becauſe it was no more then ten leagues from the great *Valley*, where in other ten leagues ſtood the Village of Saint *Iames*, and the *Conception* within ſixteen, and within twelue the Mynes of *Cibao*, and it was of the Biſhoprick of the *Valley*, the Port of *Plate* ſtands in little more then twentie degrees. The Village of *Monte-Chriſte*, is in the coaſt of the North fourteene leagues, to the Weſt of Port of *Plate*, and fortie from Saint *Dominicke*, is of the Biſhoprick of the *Valley*; it hath a good Hauen, and certaine ſalt Pits in it; *Nicholas* of *Ouando* did build it.

Monte Chriſte.

La Iſabella. There was in old times in this Iland the Citie of *Iſabella*, now diſinhabited, which the firſt Admirall built the yeere 1493. the Village of *Verapaz* in *Xaragua*, which *Iames Velazques* built in the yeere 1503. and the ſame yeere peopled alſo *Saluatierra* of the *Zabana*, which ſignifieth *Playnes* and *Paſtures*, in the *Indian* language: and that Prouince is plaine and faire. Hee alſo peopled (betweene the two mightie Riuers *Neyba* and *Yaqui*) the Village of Saint *Iohn* of the *Maguana*, in the middeſt of the Iland, where the Church continueth yet; and heere reigned *Coanabo*, who tooke *Alfonſo de Oieda*. Hee alſo planted *Villanneua de Yaquimo* vpon the Hauen, where *Oieda* caſt himſelfe to ſwim, being priſoner in a ſhip, with two paire of fetters; and it ſtands in the South coaſt, which the Admirall did call the *Coaſt and Hauen of Braſile*. The Village of *Bonao* is neere vnto *Cotuy*, which the firſt Admirall alſo built, where hee made a Fort for the ſecuritie of the Mynes, which were the firſt that were found in this Iland. The Village of *Bonauenture* is eight leagues from Saint *Dominicke* to the North, and *Lares de Guahaba*, which *Nicholas* of *Ouando* peopled, being *Comendador Lares*.

14000. *Spaniards* there were in the *Hiſpaniola* at her beginning.

This Iland flouriſhed ſo much, that there were in it fourteene thouſand *Caſtillanes*, many of them Noble people, and the Plantations of other parts which happened afterward, cauſed it to be diſinhabited; for from it, and from the Iland of *Cuba*, went all the ſubſtance for the new Countreyes that were found.

Ports & Points moſt notable.

The Ports, Roades, Capes, and Points moſt famous, and the Ilands pertayning to the Coaſt of this Iland, are in the South Coaſt, the Point of *Nizao*, ten leagues from Saint *Dominicke* to the Weſt. The Port of *Ocoa*, eighteene, which is a Bay where the Fleets which goe for *Nona Eſpania* doe anchor and take refreſhing, when they doe not anchor in the nooke of *Zepezepin*, which is neere vnto it, or in another which they call the *Faire Hauen*, two leagues before they come to *Ocoa*. *Azua* a Port and Towne twentie-foure leagues beyond *Ocoa la Calongia*, a large Point thirtie leagues, right againſt the Ilands of *Boata* and *Altobelo*, fiue leagues from the Coaſt, and the *Beatados*. *Yaquimo* about thirtie foure more to the Weſt, and *Abaque*, an Iland neere the Cape of *Tiburon*, the furtheſt Weſt of *Hiſpaniola*: *la Nabaza* ten leagues to the Sea Eaſt and Weſt from the Cape, and Cape *Rojo* twelue leagues from it to the North: the *Rookes*, or *Hermanos Trees*, *Iſle Oucillos* neere the Coaſt that turneth to the Eaſt: *Caymito* another little Iland betweene theſe, and *Guanabo* another Iland of eight leagues in length, in the nooke of *Yaguana*. The Port and Cape of Saint *Nicholas*, the furtheſt Weſt on the North ſide of the Iland. A little further the Port of * *Moſquitos*, in the North Coaſt, and twentie leagues forward the Port of *Valparayſo*, or of the Conception, North and South, with the *Tortuga* an Iland neere the Coaſt of fiue leagues in length: Port *Royall* twelue leagues to the Weſt from *Monte-Chriſte*, which is as much, or a little more before *Iſabela*, and this from the Port of *Plate*, other twelue leagues: *Cabo Frances*, and *Cabo del Cabron*, in the turning, which the Coaſt maketh to the Eaſt, before the Gulfe of *Samana*, which entreth fiue or ſixe leagues the Land inward, vnto the place where the Towne of *Santta Cruz* ſtood. And in the Riuer of *Samana*, was the firſt time that Armes were taken againſt the men of the *Indies*; becauſe they would haue done violence to the firſt Admirall. The Cape of *Deceit*, (*Cabo del Enganno*) is the furtheſt Weſt of the Iland where the Coaſt returneth by the South to the Weſt, at the beginning of the which ſtands the *Saona*, an Iland which the fleets doe reknowledge, when they goe, and ſomewhat more towards Saint *Dominicke* is another little Iland, which is called Saint *Katherine*; and all the names rehearſed were giuen by the firſt Admirall.

* Or Gnats.

Where they tooke armes the firſt time againſt Indians.

The

Cuba.

The Iland of *Cuba* which first was called *Iuana*, or *Ioane*, by the Father *Don Iuan*, and after it was commanded to be called *Fernandina* by his Father. The Captaine *Sebastian* of *Ocampo*, made an end of compassing the yeere of our Lord 1508. by order of *Nicholas* of *Ouando*: for vntill then it was not wholly beleiued that it was Land, and the yeere 1511. the President *Iames Velazques* went ouer with three hundred *Spaniards*, by order of the second Admirall to pacifie it. It hath two hundred and thirty leagues from the Cape of Saint *Antonie*, vnto the Point of *Mayzi*, going by Land, although by the Sunne, and by water there are not so many. It hath in breadth from the Cape of *Crosses*, to the Port of *Manati*, fortie fiue leagues, and then it beginneth to streighten, and goeth to the last Cape, or Occidentall Point, where it is narrow, of twelue leagues, little more or lesse, from *Matamano* to the *Auana*. Her situation is within the Tropicke of Cancer, from twentie to twentie one degrees, the Countrey is almost all plaine, with many Forrests, and thicke Woods: from the Easterne Point of *Mayci*, for thirtie leagues it hath most high Mountaynes, and likewise in the middest it hath some, and there runne from them to the North, and to the South, very pleasant Riuers, with great store of fish. On the South side it hath the little Ilands, which the first Admirall called the *Queenes Garden*, and the other on the North side, which *Iames Velazquez* called the *Kings Garden*, the trees are of many differences, and wild Vines as bigge as a man: they gather no Wheate nor other Seedes of *Spaine*, but great abundance of Cattle: it hath great Copper Mynes, and of Gold, and is it found in the Riuers, though it be base in the touch.

S. Iago.

Iames Velazquez peopled first the Citie of Saint *Iames* in the South Coast, fortie leagues from the Cape of *Tiburon*, which is in *Hispaniola*, and two leagues from the Sea, neere to a Port, one of the best in the World, for securitie and greatnesse. The Citie came to haue two thousand Inhabitants; now it hath few with a Gouernours Deputie: the Cathedrall Suffragane to Saint *Domingo*, is resident in it, and a Monastery of *Franciscan* Friers. The Village of *Baracoa*, is a Towne furthest East of the Iland of *Cuba*, at the beginning of the North Coast 60. leagues from the Citie of S. *Iames* toward the East North-east, which was also an inhabiting of the President *Iames Velazquez*. The Village of *Bayamo*, which *Iames Velazquez* also built, is 20. leagues from S. *Iames* to the North-west, it is the foundest Town of the Iland, of a more open soyle, and of a good disposition. The Village and Port of the Prince, in the Coast of the North, is about fortie leagues from Saint *Iames* to the North-west. The Village of *Sancti Spiritus*, is a Port on the South side, betweene the *Trinidad*, and the *Cayo de Basco Porcallo*, of *Figueroa*, about fiftie leagues from Saint *Iames*, a Colonie of *Iames Velazquez*.

Baracoa.

Bayamo.

Puerto del Principe.

Sancti Spiritus.

The Village and Port of Saint *Christopher* of the *Abana*, is in the North Coast, almost opposite to *Florida*, in twentie two degrees and an halfe in height, of more then sixe hundred Houholds; where the Gouernour resides and the Officers Royall. The Port is maruellous in greatnesse and securitie, especially since that King *Philip* the Second, the prudent, sent the Campe-master *Iohn* of *Texeda*, and *Baptista Antonelli*, to fortifie it: in it all the Fleetes of the *Indies* doe meete for to come for *Spaine* in company. It was first called the Port of *Carennas*: and *Iames Velazquez* built this Village, and all the rest of the Iland, with the assistance of the Father *Bartolome de las Casas*, which afterward became a *Dominicke* Frier, and Bishop of *Chiapa*.

El Albana, or the *Hauana.*

Puerto de Carennas.

The Ports and Capes, and point of the Coast of *Cuba*, and the Ilands belonging to it besides those which are rehearsed are in the South Coast, the Port of the Citie of Saint *Iames* in twentie degrees, and twentie fiue leagues to the West: the Port of *Sancti Spiritus*, *Cape of the Crosse* twelue leagues forward, and the *Queenes Gardens*, which is a great shelfe of Ilands and shoales: the Port of *Trinitie* in twentie one degrees, about thirtie leagues from the *Cape of the Crosse*, and ten more to the West, the Gulfe of *Xagua*, a great defence with some Ilands, in the middest, and forward the *Two Sisters*, two Ilands at the beginning of the great shelfe, and Ilands, and shoales, which they call *Camarco*, betweene the Coast and the Ilands, which is of ten leagues in length, and seuen in breadth twelue leagues from the *Cape of Correntes*, which is as many from the *Cape of Saint Antonie*, the furthest West of this Iland. In the North Coast standeth the Port of *Abana*, and thirtie leagues to the East is the Port of *Slaughters* where was a Towne, and was called *de Matanças*, *of the Slaughters*, because the *Indians* killed certaine *Spaniards*, which they carried in their *Canoose* vnder securitie to the other side, only one escaping, and two women whom they kept sometime with them. From the * *Matanças* to the Port of *Yucanaca*, are fiftie leagues to the *Kings Garden*, which is a great shelte of little Illets and shoales, and at the end of the Iland *Obahana*, eight leagues before the Port of the Prince, foure or six from the Port of *Fernando Alanso*, and six to the East of this, *Cubana* which is a point. The Port of *Varocoa* is about twentie leagues before the point of *Mauzi*, the farthest West of *Cuba*, and the hidden Port and Gulfe neere to Cape † *Roio*, in the South-coast, about twentie leagues from the Port of *Pidgeons*, which is about ten leagues from the Port of Saint *Iames*.

Wherefore it was called the Slaughters.

* Or *Slaughters.*

† Or *Red.*

Chap. 7. Of the Ilands of *Iamayca*, S. *Iohn*, the *Lucayos*, & the *Caniballs.*

THe Iland of *Iamayca* was so abundant of victuals, and breedings, that it gaue great prouision of Cotton, Horses, Swine, and *Cozabi*, for the new Discoueries, and the first Admirall called it Saint *Iames*, when hee discouered it: and the first that passed to inhabit it, was the Captayne *Iohn Esquiuell*, the yeere 1509. by order of the second Admirall *Don Diego Colon.* It stands in seuenteene degrees and an halfe of altitude in the middest of it, and twentie leagues from *Cuba* to the South, and as many from *Hispaniola*, direct to the West. It hath in compasse one hundred and fiftie leagues, it hath East and West fiftie, and twentie in breadth. There are in it three Villages, *Siuill* in which is the Seat of the Colledge, toward the North Coast somewhat Westerly; *Iohn Squiuell* a Gentleman of *Siuill* peopled it: *Melilla*, which stands in the North Coast, fourteene leagues from *Siuill* to the East: *Oristan* in the South Coast towards the West fourteene leagues from *Siuill*, and are Plantations of the President *Francisco de Garay*, which gouerned in it. But of the Towne *de la Vega*, whence the Admirals Lords of this Iland tooke the Title of Dukes, nor of other two Plantations painted in some Maps, there is no notice.

Siuill, Melilla, & Oriston, inhabitings of *Iamayca.*

Cape of *Morauta.*

There is in the Coast of this Iland, the Point of *Morauta* the vttermost West of it, by the North Coast ten leagues to the West, the Port of *Iauta*, and tenne leagues forward the Port of *Melilla*, where they say the first Admirall arriued, and called it *Santa Gloria*, when hee returned lost from *Veragua*; and heere happened to him the mutiny of the *Porras* of *Siuill*: and it was the first Ciuill Warre of the *Indies.* Other ten leagues thence standeth the Port of *Siuill*, before the Point *Negrillo*, from whence the Coast windeth, vnto the *Cabo de Falcon*, neere to *Oristan*, and goeth by the South to the Port of *Guayano.* And fiue leagues from this Coast, are the *Harmingas*, a dangerous shoale, and seuen leagues further *las Viuoras*, small Ilands compassed with shoales, and to the South of them the *Serrana*, and a little Iland compassed with shoales, with other foure or fiue neere vnto it, and to the North-west of it, the *Serranilla*, and to the West of it the *Roncador*, another Rocke, and to the South-west of it, Saint *Andrewes*, an Iland compassed with shoales North and South, with *Nombre de Dios*, about fortie leagues from it, and neere from thence another called *Santa Catilina*; the [n] *Caymanes* directly West from *Iamayca*, twentie fiue leagues from the *little* [•] *Blackmoore*, which are two little Ilands sixe leagues the one from the other, and the great *Cayman* another Iland of seuen leagues in length, fifteene leagues from the *Caymanes* to the West, and to the North Coast, betweene *Cuba* and *Hispaniola*, another shoale which is called [p] *Abre-oio.*

The first ciuill warre among the *Spaniards*, was in *Iamayca.*

n Or *Lizards.*
• Or *Negrillo.*
p Or open the eye.

S. *Iuan de puerto Rico.*

The Iland of Saint *Iohn of Port Rico*, which the *Indians* called *Barriquen*, lyeth betwixt twelue and fifteene leagues from *Hispaniola*, to the East, of fortie fiue leagues in length, East and West, and from North to South, betwixt twentie and thirtie, very plentifull of all that *Hispaniola* hath, and of Millet, Yuca, and of Mynes of Gold. The temperature is good, and almost one all the yeere, except in December and Ianuary. There is in it three *Spanish* Townes with a Gouernment, and a Bishoppricke: the President *Iohn Ponce* of *Lion* passed to discouer this Iland the yeere 1508. being Gouernour in the Prouince of *Tguey*, for *Nicholas* of *Ouando* in *Hispaniola*, and returned the yeere 1510. by order of the King to people it. The Citie of Saint *Iohn*, is in the beginning of the North Coast, on the East side in eighteene degrees of height, and they call it of *Port Rico*, for the excellencie of the Hauen. The Bishop and the Gouernour are resident in it, and the Officers of the Kings Reuenues: and it is Suffragane to Saint *Domingo.* *Arrecibo* stands thirtie leagues to the West from Port *Rico*: the Towne of *Guadianilla*, or Saint *German the New*, in the Westerne Coast three and thirtie leagues from Port *Rico* to the South-west.

S. *Iohn.*

The *Arrecibo.*
Guadianilla.
S. *German.*

There was in old time in this Iland another Towne which was called *Guanica*, in the South Coast, at the end of it where now is the Port of *Mosquitos*, which is very good, from whence it was remoued to another situation of the Westerne Coast, which they call *Aguada*, or the *Watering*, with name of *Soto-Mayor*: there is in this Iland a row of Mountaynes, that diuide it in the middest East and West vnto the Sea, and Borders of Saint *German*, and heere is found the Tree called *Tabernaculo*, which yeeldeth white Rozen, like Gumme-*Anime*, and it serueth for Pitch for the ships, and for fire or light, and it is medicinable to take out the colde or numnesse, and to cure wounds.

The tree Tabernacle.

There are few Ports in this Iland, for all the Coast of the North is very foule with shoales, and Rockes: those that are, are to the East from the Port of Saint *Iohn.* The Riuer of *Luysa*, and that which they call *Canoba*, and *la Cabeça*; the farthest East point of the Iland, neere to the Hill of the *Loquillos*, and in it a Port which they call Saint *Iames*; three leagues further is another called *Yabucoa*, and three leagues from the Coast, on this side of the passage, is a little Illet, and at the beginning of the South passage, another which they call *Boyqui*, and forward the Iland of Saint *Anne*, *Guayama* a Port, and afterward the Riuers *Neabon*, and *Xania*, six leagues before the Port of *Guadianilla*, two leagues to the East of the Riuer of *Mosquitos*, in whose mouth is the Riuer called *Guanica*, and six leagues from it, the Cape *Roio*, the furthest West of the South Coast: and to the West of it, toward *Hispaniola* is the Iland of *Mona*, and to the North of it the

The hauens of this Iland.

Digitized by Google

the *Manico*, and *Zecheo*, other two little Ilands: the Port of *Pines*, and the Port of *Mayaguez*, and the Bay of Saint *German* the old, and the mouth of the Riuer *Guanabo*, or the *Watering*, and that of *Guahataca* more forward, and afterward in the North Coast, that of *Camay*, and of *Cibuco*, and *Toa*, neere to Port *Rico*, and in the middest of the Coast of the South Sea, leaning vnto it the *Haberianas*, foure or fiue little Ilands. There is also much Ginger gathered in this Iland, which is a Root like vnto Madder, or Saffron, which the *Portugals* brought from the East, to this Iland of *Barlouento*. Who carried the Ginger to the Ilands of *Barlouento*.

The Ilands which are to the North of Saint *Iohn*, *Hispaniola*, and *Cuba*, of which none is inhabited with *Spaniards*, are called the *Lucayos*. One the most Septentrionall, is aboue twentie seuen degrees of altitude, which is called *Lucayoneque*, or *Tucayoneque*, which hath almost to the West *Bahama* another Iland in twentie sixe degrees and an halfe, of thirteene leagues in length, and eight in breadth, from whence the Channell of *Bahama* betweene *Florida* and the shoales *Delos Mimbres* taketh the name, whereby the Currents of the Sea doe goe so swift to the North, that although the wind be prosperous the ships cannot enter it, and although they be contrary they goe with the Currents. The Ilands of the *Lucayos*. Where the Channell of *Bahama* is. Admirable Current.

The shelues of *Bemini*, are so called of an Iland in the middest of them, of fiue leagues in length, which the first Admirall gaue the name the first time he came to *Cuba*, and it is that which *Iohn Paul* of *Lyon* did agree to inhabit. *Abacoa*, is another in the middest of the said shelfe of twelue leagues in length: *Cigateo* of twentie fiue. *Curateo*, another small Iland in twentie sixe degrees: and *Guanima* fifteene leagues of length, and ten in breadth, and neere vnto it *Guanahani*, the first Land of the *Indies*, which the first Admirall discouered, which he called Saint *Sauiour*; *Yuma* of twentie leagues, and eight in breadth, in twentie foure degrees and an halfe, which the Admirall named *Isabella*, in honour of the famous Queene *Donna Isabella* his particular Protectresse, and that gaue him this Discouerie. *Inmeto* in twentie three degrees and an halfe, fifteene leagues in length, to the North of *Hispaniola*. *Samana* seuen leagues ouer, betweene *Inmeto* and *Guanima*, three square of eight leagues in length, in twentie foure degrees, *Yabaque* of ten leagues, in twentie two degrees and an halfe. *Mira-par-vos*, are three little Ilands in triangle, compassed with shelues, to the South of *Inmeto*. *Mayaguana*, twentie leagues in length and ten in breadth, in twentie three degrees. *Yuagua* of ten leagues, in twentie degrees and an halfe. The *Caycos*, an Iland of fiue leagues, in twentie one degrees, and to the North of it is another, called *Hamaua*, and another *Conéina*. *Maçarey* stands in twentie degrees compassed with shelues. *Abreoio* is a great shelfe of fifteene leagues, the middest of it in twentie degrees, and among these Ilands are many little ones without name. Bahos de Bimini. *Guanahani* the first Land that was discouered in the *Indies*.

The Ilands that are from the Iland of Saint *Iohn* of *Porte-Rico*, to the East of it, toward the coast of *Terra firme*, were called the *Canibals*, by the many * *Caribes*, eaters of humaine flesh that were in them: and in their language, *Canibal*, is to say *Valiant man*; for they were held for such of the other *Indians*. All these Ilands are dangerous for shelues, and the neerest to Saint *Iohn*, are *Sancta Cruz*, to the South-west from it, in 16. degrees, and a halfe of sixteene leagues, and *Saba las Virgines*, two little illets compassed with shelues, and other eight or ten Ilands, the greatest of ten leagues: *Virgen gorda*, and the *Blancos* or *White Ilands*, Westward from *Virgen gorda*, *La Anegada*, of seuen leagues in length, in 18. degrees and a halfe compassed with shelues, as *Sambrero* is, a little Iland neere vnto it: and these Ilands which are called the *Weather Ilands* or *Barlouento*, the first Admirall discouered: and in particular, the men of *Sancta Cruz*, and others, had a custome to goe and hunt for men to the Iland of Saint *Iohn*, for to eate, and at this day they of *Dominica* doe it. They did eate no women, but kept them for slaues. Now they say, that within this little while, they of *Dominica* did eate a Fryer, and that all they which did eate his flesh, had such a fluxe, that some dyed, and that therefore they haue left eating humane flesh: and it may be, because instead of men, with lesse danger, they steale Kine and Mares, for the great quantitie there is of them, and with this they satisfie their raging appetite. The *Canibals*. * Or *Indian Canibals*. What a *Canibal* signifieth. Men hunters. Frier vnwholsome food.

Anguilla hath ten leagues of length, it standeth in 18. degrees. Saint *Martin* in 17. degrees and a halfe, it is of sixteene leagues, compassed with little Illets: and neere vnto it Saint *Eustace*, Saint *Bartholomew*, and Saint *Christopher*, euery one of tenne leagues. The *Barbada* in 17. degrees and a halfe, compassed with shelues, neere to the *Redonda* and the *Snower* or *Nieues* and of *Mouserrate*, of fiue leagues euery one, in 15 degrees and a halfe. The *Antigua*, *Guadalupe*, and *Todos Santos*, from 14. to 15. degrees. The *Desseada* to the East of *Guadalupe*, about sixe leagues, the first which the Admirall *Don Christopher* discouered, in the second Voyage that he made to the *Indies*, in 14. degrees and a halfe, for which the fleete goe alwayes from the *Canaries*. *Marigalante*, the name of the Shippe the Admirall had, fiue leagues to the South-west from the *Desired*, and from the *Dominica*, in 13. degrees, twelue leagues in length, where the Fleetes take in water and wood, for it hath good roades, although with danger of the *Canibals*. Neere vnto *Dominica* to the South, stands *Matinino*, *Sancta Lucie*, and the *Barbudos*, the which because they fall on the left hand of the Fleetes, when they goe, they call them already of the Ilands of the *Leeward* (*de Sotauento*) which appertaine to the coast of *Terra firme*: and of them the greatest, the first, and the most Orientall is the *Trinidad*, neere two hundred leagues from

Hispa-

Digitized by Google

Hiſpaniola, North and South with the *Dominica*, about ſixtie leagues from it. It hath fiftie leagues in leangth East and Weſt, and almoſt thirty in breadth. The Admirall diſcouered it the yeare 1498. the third Voyage that he made to the *Indies*, and called it the *Trinitie*, becauſe hauing great trouble in the Voyage, he had promiſed to God to giue ſuch a name to the firſt Land that he ſhould finde, and preſently the Mariner that was in the top, ſaw three points of Land, whereby the name fitted euery way to his vowe: then hee diſcouered alſo the mouthes of the *Dragon*, and of the *Serpent*, the gulfe of *Paria*, and all the firme Land vnto *Cumana*, which iniuſtly *Americus Veſputio* claimes to himſelfe, whoſe name vnworthily is giuen to the port which they call *Peninſula Auſtralis* or *Indies* of the South. This Iland of *Trinidad* is knowne that it is no good Countrie, though it hath many *Indians*; it hath thirtie fiue leagues of longitude, and others ſay more, and twentie fiue of latitude, it ſtands in 8. degrees: the moſt orientall part of it, is a point on the North ſide, which is called *de la Galera*: and to the North of it a ſmall Iland, compaſſed with little Iles, which they call *Tabago*: and in the South coaſt a Cape which they call the *Round Point*: at the East, the point of *Anguilla*, at the Weſt in the gulfe of *Paria*, which is that that is from the Iland to *Terra firme*, which may be eight leagues of diſtance, becauſe the firme Land maketh an oblique ſemicircle, as a Diadem; and in the entrance of the East is the diſtance recited; in the entrance of the Weſt, the ſtraightnes is much, and with great depth, and two little Ilands at the end of the North coaſt; by the Weſt, which is called the *Dragons mouth*: and to the North S. *Vincent*, and *Granada*, other two little Ilands.

The diſcouery of the Iland of the Trinitie, the yeare 1498

Arrogancie of *Americus Veſpucius.*

The Iland of *Margarita*, ſo named by *Chriſtopher Colon*, the firſt Admirall (as alſo all the reſt, a moſt ſufficient proofe of the Finder, to the confuſion of thoſe which depriued him of the glory of the diſcouerie of the firme Land, attributing it to themſelues, although changing the times) it is twentie leagues from *Trinidad* Weſtward, and one hundred and ſeuenty from *Hiſpaniola*: it hath ſixteen leagues in length East and Weſt, and yet ſome ſay twenty, and the halfe in breadth; it hath no ſtore of water, although it is very plentifull of Paſtures for Cattle. There is in it two Townes, one neare the Sea, which reacheth to a fortreſſe where the Gouernour is reſident, and another two leagues within the Land, which is called the Valley of *Santta Lucie*: there is in his coaſt a good port, and a nooke, and many beds of Pearles, whither the fiſhing of them is remoued, which before was in *Cubagua*, and they ſay it went away from thence, for the rumour of the ordnance of the many Shippes that reſorted to this Iland, to the trafficke of the Pearles, which was very great. *Cubagua* ſtands one league from *Margarita* to the East, there is no water in it, and yet the new *Cadiz* was built there, and they carried their water ſeuen leagues, from the Riuer of *Cumana*. To the East of *Cubagua*, are foure little Illets, cloſe by the ſhoare, which the firſt Admirall called *Los * Frayles*: and to the East, betweene them and *Granada*, other foure or fiue, which he called (*Los Teſtigos*) the *Witneſſes*, and to the Weſt after *Cubagua*, another little Iland which he named (*Tortuga*) the *Tortoyſe*, neere to the point of *Araya*: and from hence the diſcouery being made from below *Paria*, he went to *Hiſpaniola*, with a purpoſe to finiſh the diſcouery of *Terra firme*: and as here after ſhall be ſeene, hee went after to diſcouer, and found the Ilands of the *Guanaios*, and from before *Veragua*, vntill he paſſed *Nombre de Dios*. The Officers and Royall treaſure are in *Margarita*: and it, and the Iland of *Cubagua*, are in eleuen degrees, a little more.

Wherfore men do ſay that the fiſhing of the Pearles paſſed from the Iland of *Cubagua* to the *Margarita*. Iland of *Cubagua*.

* Or the Friers

Chap. 8.

Of *Venezuela*, riuer of *Hacha*, new *Florida*, and Gulfe of *Noua Hiſpania*, which is the reſt that remaineth of the limits of this Counſell.

THe Gouernment of *Venezuela* parteth the bounds in the coaſt of *Terra firme*, to the East, with the new *Andaluzia*, from whence to the Riuer of *Hacha*, and Gouernment of *Santta Martha*, with which it ioyneth by the Weſt, is an hundred and thirty leagues, and within the Land about eightie, vnto the bounds of the new Kingdome of *Granada*. In this Countrie are vaines of Gold of more then two and twentie carracts and a halfe: it is plentifull of Wheate, becauſe there is two haruells in the yeare, and moſt abundance of all kinde of Cattle, great and ſmall. There goeth from this Prouince great ſtore of Meale, Bisket, Cheeſe, Bacon, and much Cotten-linnen: and in the port of *Guayra*, in the Prouince of *Caracas*, are laden many Cowe-Hides, and *Sarſaparilla*. There is in it eight *Spaniſh* Townes: and the name *Venezuela* was giuen it, becauſe when the *Belzares*, *Almaines*, went to gouerne in this Prouince the yeare 1528. by a couenant which they made with the Emperour, they thought to inhabit in a Rocke and hils that are in the mouth of the Lake of *Maracaybo*, where it falleth in the Sea, a Towne which they named *Venezuela*. It ſtands in 8. degrees, a little more, and from hence the Couernment tooke the name. His firſt Towne is the Citie of *Coro*, which the *Indians* call *Coriana*, which commonly they call now *Venezuela*, it ſtands in 11. degrees of altitude, and 79. degrees one third part from the Meridian of *Toledo*, one thouſand and fiue hundred leagues from it: here the Gouernor is wont to be reſident, and there is the Cathedrall Church ſuffragane to the Archbiſhop of S. Dominicke: *Iohn* of *Ampues* built firſt this Citie, and then thoſe that went for the *Belzares* made their abode in it, the firſt was *Ambroſe Alfinger*: it is ſo healthfull, and of ſo good an ayre, that there is no neede of Phyſitians.

Wherefore it was called *Venezuela*, or little *Venice*.

The Citie of *Coro*.

The ſecond place is our Lady of *Carualleda*, in the Prouince of *Caracas*, neere to the Sea, East from *Coro* eightie leagues, and with a bad Hauen: *Don Franciſco Faiardo* built it the yeare 1560. which

Out Lady of *Carualleda*.

Digitized by Google

which went for that purpoſe from the *Margarita*. *S. Iames* of *Lyon* in the ſame Prouince, ſeuen leagues within the Land, and three from *Carualleda* to the South, and ſixtie from *Coro*, where at this time the Gouernour is moſt reſident. The new *Valencia* ſixtie leagues from *Coro*, and twentie fiue from *S. Iames* of *Lyon*, ſeuen from the port of *Burburata*. The Captaine *Villacinda* peopled it. The new *Xerez* about fifteene leagues, almoſt South from the new *Valencia*, and twentie from the new *Segouia*, and ſixtie from *Coro* to the South-eaſt, a new Towne. The new *Segouias*, in the Prouince of *Bariquizimito*, twentie leagues from *Xerez* to the South, and tenne from *Tucuyo*, and eightie from *Coro* to the South-eaſt, where the Officers royall, the Gouernour, and the Lieuetenant are reſident at times: *Iohn* of *Villegas* peopled it in the yeare 1552. The Citie of *Tucuyo* is famous, becauſe in it they ſlew the tyrant *Lope* of *Aguirre*, it ſtands tenne leagues from *Segouia*, to the South-weſt, eightie fiue from *Coro*; it is the habitation of the Captaine *Caruajal*. *Truxillo*, or our *Ladie of Peace*, in the Prouince of *Cuycas*, about eightie leagues almoſt to the South, direct from *Coro*, ſomewhat to the Eaſt, and twentie fiue from *Tucuyo*, directly to the Weſt.

S. Iago de Leon. *Xerez.* *Segouia.* *Tucuyo.* *Trucillo.*

The Auditor *Vallejo* diſcouered this the yeare 1549, the Bacheller *Tolloſa* being Gouernour in it: and the yeare 1559. the Captaine *Iames Garcia* of *Paredes* inhabited *Truxillo*: and there may be in this Gouernment more then 100000. *Indies* tributaries, and in them are not comprehended from eightéene vnder, nor aboue fiftie yeares, becauſe the ſupreme Counſell of the *Indies* hath prouided, that in no place of this Orbe, theſe doe pay tribute: and becauſe daily they increaſe and diminiſh in number, it cannot be ſaid preciſely and perfectly how many there are.

The Lake of *Maracaybo*, which the *Caſtilanes* call of our *Lady*, is of freſh water, it entreth fortie leagues within the Land, from the Sea, and hath more then tenne in breadth, and eighty in compaſſe, with many Townes vpon his Borders: in the end of it entreth a Riuer that deſcendeth from the new Kingdome of *Granada*, by the which, and the Lake, Marchandiſe are tranſported which came to the new Kingdome of *Caſtile*, and to other places; ſome of the men of this Lake doe liue in Boates, their houſes being made in the Trees within the water, and at the Border, whence it tooke alſo at the firſt, the name of *Venezuela*; ſayling by ſome parts of this Lake, ye can ſee no Land: there enter into it other great Riuers, it runneth to the Sea, it hath about halfe a league of mouth, and in it the ſhoale and rocks aboueſaid.

The Lake *Maracaybo.*

The Ports, Capes, and Points of the coaſt of this Gouernment, and thoſe annexed vnto it, are to the Weſt, *Marcapana*, the *Vrchila*, an Iland againſt the Riuer *Oynare*, neere to another called *Rocke of the Ilets*, and afterward the Cape of the *Codera*, and *Puerto Flechardo*, and the hauen of *Sardinas* or *Pilchers*: and oppoſite the Ile of *Aues* or *Birds*, before *Burburata*, a maruellous hauen, which the Bachiler *Toloſa* peopled, and is a Scale or Port for the new Kingdome (*Nueuo Reyna*) & Prouinces of *Peru*, and after that is *Gulfo triſte*, and to the North of the *Bonayre*, an Iland of ten leagues in length, and eight in breadth, and afterward *Punta ſeca*, and right againſt it *Curacao*, and a little forward *Curacaute*, foureteene leagues in length, right againſt the Cape of *S. Roman* to the South of the Iland of *Aruba*. *S. Roman* entreth twentie leagues into the Sea, it ſtandeth twelue from *Coro*, the *Indians* doe call it *Paraguana*, it lacketh a little to be an Iland: it may haue in compaſſe twenty fiue leagues and more of plaine ground, with a Mountaine almoſt in the middeſt: it is diſcouered a great way into the Sea. There is at the beginning of the Gulfe of *Venezuela*, the entrance and channell of the Lake of *Maracaybo*, and at the entrance of it the Riuer *Mitare*, and to the Weſt the *Monkes*, three little Ilets cloſe by the Point and Cape of *Coquibocoa*, where onely in all the *Indies* was found waight and touch for the Gold, and afterwards the deepe *Baye* (*Balna Honda*) and the *Portete*, the Cape *de Vela*, which the Captaine *Alfonſus* of *Ojeda* named, when *Americo Veſpucio* went with him the firſt time, much after that the Admirall diſcouered this coaſt, which ſtands in 12. degrees, ſomewhat more. And there is from the Cape *de Vela*, to the Riuer of *Hache* eighteene leagues, without any ſtone in them, nor water, but raine water. This Gouernment remained deſtroyed, ſince the time of the *Almaines*, becauſe they would not inhabit, onely ſeeke to make ſlaues, and to waſte the Countrie.

The ports and points of the Gouernment of *Venezuela.*

They called firſt the Riuer of *Hache*, *our Ladie of the Snowes*, and after of the *Remedies*, neere vnto the Sea, betweene *Venezuela*, and *Sancta Marta*, to the Eaſt, thirtie leagues from it, and ſixtie from *Coro* to the Weſt, North and South with the Cape *de Vela*, with eight leagues of bounds betweene *Venezuela* and *Sancta Marta*, without ſhowes of Gold. It is gouerned by *Alcaldes* immediate to the Counſell of *Hiſpaniola*, and the Spiritualtie is of the Biſhopricke of *Sancta Marta*. The Towne is 1000. paces from the Sea, on a little hill: the Hauen hath the North for trauers, it is a moſt fertile Countrie, and yeeldeth whatſoeuer is in *Caſtile*: there are many Tigers, Beares, Ants, and Lizards in the Riuers, much Gold, and Stones of diuers vertues, for the Spleene, the Kidneys, for the Milt, and Flix, and they haue good Salt-pits. *Nicolas Federman* for the *Belzares*, was he that began to inhabit this Towne. The gouernment of *Serpa*, which they call the new *Andaluzia*, and in the *Indian* Language *Guayana*, extends the limits. From the Iland of *Margarita* vnto the riuer *Marauyon*, three hundred leagues to the Eaſt, and as many North and South within the Land, wherein the *Indians Omagues* are included, and the *Omygas*, with

with the Prouinces of *Dorodo*, to the ſouth of this Gouernment, wherein falleth by the Coaſt the Prouince of *Maracapana*, in the bounds of *Venecuela*, where the mouths of *Santta Fe* were inhabited, in whoſe Borders is the knob of *Unare*, and neere vnto it a great Lake with great ſtore of fiſh and ſalt, and the *Indians* which are called of *Perſio*, twentie leagues within the Land, and the *Indians Paleuques*, ſo called for the Poles where with they fortified themſelues, and the Prouince of *Cumana*, North and ſouth with the *Margarita*, where is a Towne of *Spaniards*, which is called new *Cordoua*, which the Captayne *Gonçalo* of *Ocampo* built, when he went to chaſtiſe the *Indians* of *Cumana*, for the deſtruction of the Monaſtery of the Religious *Franciſcans*. And to the Eaſt or the Iland of *Trinidad*, and the Riuer of Saint *Iohn* of the *Amazones*, is the Prouince of the *Indians Aruacas*, part of the *Caniballs*, and all Warlike, that neuer are quiet or peaceable.

After the point of *Paria*, which ſtands in ſeuen degrees, and the *Dragons Mouth* neere vnto *Trinidad* ſtands the point *Del Gallo*, or *Anegada*, to the South of the *Trinitie*, and the Riuer of *Paria*, or *Oriuico*, which ſome call *Yuyapari*; and others will haue that theſe two, and the Riuer of Saint *Iohn*, and of *Orellana* be all one thing, and alſo the *Marauyon*; but in this they are deceiued. There be other Riuers in the Prouince of the *Aruacas* that are well knowne, the Riuer of Saint *Iohn*, or of *Orellana* ſpringeth in the *Andes* of *Peru*, right againſt *Cuzco*, from whence it runneth fifteene hundred leagues, or more, winding vnder the Equinoctiall, by Countreyes well inhabited, though not well diſcouered, till it came to run into the North Sea, whoſe mouth hath in breadth fiftie leagues; and in the firſt fiue hundred from the mouth vpward, many Ilands inhabited; and eightie or a hundred leagues more to the Weſt, ſtands the Riuer of *Morauyon*, almoſt in the bounds whereby paſſeth the Line of the Diuiſion betweene *Caſtile* and *Portugall*, and is great and terrible, hauing fifteene leagues of mouth, and the ſtreame commeth from the parts of the South, and the Prouinces of *Braſill*, and they ſay that the ſpring is vnder *Popayan*, and the bounds of the new Kingdome of *Granada*.

Riuer *Morauion*

The Iland of *Cubagua*.

Seuen leagues from *Cumana* ſtands the Iland of *Cubagua*, where ſtood as was ſaid, the new *Cadiz*, which was diſinhabited becauſe the fiſhing for Pearles fayled: this Iland had no water that could be drunke, nor trees, nor beaſts; for all is brackiſh, except thoſe Hogges that haue the Nauell in their backe-bone, and ſome ſmall Conies, and hauing ſo great inhabiting, they went ſeuen leagues to the riuer of *Cumana* for water, although there was an opinion that it bred webbes in the eyes. In this Riuer and coaſt, hapned in the yeare 1530. the firſt of September, the hauen being cleare, the Sea did riſe foure fadomes from his ordinary courſe, and entring into the earth it began to ſhake, and the fortreſſe which the Captaine *Iacome* of *Caſtellon* had built by order of the Counſell of *Hiſpaniola*, fell, and the earth did open in many places, whereout ſprang much ſalt water as blacke as inke, and did ſtinke of brimſtone, and the mountaine of the gulfe of *Cariaco* remained open with a great rift: many houſes fell, many people died drowned, and with feare, and taken with the earth quake. *Margarita* one league from *Cubagua* a more pleaſant Iland, the Bachiller *Marcelo* of *Villalobos* did people it.

Strange Hogs.

An earthquake in the coaſt of *Terra firme*, the yeare 1530. very admirable.

Margarit.

Florida.

The Prouince and Gouernment of *Florida*, bordering on the Counſell of *Hiſpaniola*, according to the Gouernment of *Peter Melendez*, is all that which lyeth from the Riuer of *Palmes*, which doth confine with the Gouernment of *Panuco* in new *Spaine*, limits of the Counſell of *Mexico*, which is neere the tropicke in 22. degrees, vnto the point of *Bacallaos*, which falleth in 48. degrees, and a halfe, in the which are 1258. leagues of Coaſt, and from thence to 73. degrees of altitude to the North by the Coaſt, and within the Land all that which hee diſcouereth. Of this hath beene coaſted and diſcouered, from the Riuer of *Palmes* vnto the Point of *Santta Helena*, and the Riuer *Iordan*, which are about 600. leagues, it is a firme Land of a good climate, plentifull, and well inhabited in many places, as thoſe that went through it with *Hernando* of *Soto* did know it, the yeare 1536. and 1537. *Iohn Pardo* borne in *Cuenca*, went by Land from *Florida* to new *Spaine*, in leſſe then two yeares, and it is the neereſt Europe of any part of the *Indies*, & from the Bay of S. *Ioſeph*, which is eightie leagues from *Panuco*. There is alſo diſcouered vnto *New found Land*, but that which is particularly taken for *Florida*, is the point that goeth into the Sea North and South, with the Iland of *Cuba*, of a hundred leagues in length, and twentie fiue in breadth Eaſt and Weſt, and (when it is moſt) thirtie. *Iohn Ponce* of *Lyon* diſcouered it *Anno* 1512. on Eaſter day, and for this cauſe he called it *Florida*: and afterward returned the yeere 1521. and retired wounded to *Cuba*, where he dyed, leauing a report that he ſought the Fountaine or Riuer which the *Indians* ſaid that old men waſhing themſelues therin, became yong. This Prouince is according to the temperature of *Caſtile*, and many fruits were found there like the fruits of *Spain*, and it ſeemeth fit for Cattle and Corne. There is no Gould, neither ſeemeth that the *Indians* did know it, nor Siluer; for it hath beene ſeene that they haue found the Cheſts with bars of it and money in their coaſts, and made no account of it: yet *Hernando de Soto*, within the inward parts of the great Riuer, found great abundance of Pearles.

The ſpring which *Iohn Ponce* did ſeeke that renued the old men.

They of *Florida* knew neither Gold, Siluer, nor Monie.

There are but two Fortreſſes in this Prouince with men in Gariſon, both in the Coaſt that looketh to the Eaſt: the one is called Saint *Marke*, in the point of Saint *Helena*, about one hundred leagues from the *Hauana*, and another of Saint *Auguſtin*, which is the principall, becauſe the

HONDIVS *his Map of* Florida.

the hauen is good, and is neere the channell of *Baliama*. It ſtands about fiftie leagues from *los Martyres*, which are many little Ilands inhabited, which are neare the point of *Florida*, whereby it ioyneth moſt with the Iland of *Cuba*, a league and a halfe, and leſſe, the one from the other, with a ranke of ſhelues with mouthes, in twentie three or twentie foure leagues, which theſe *Martyres* haue in length; whoſe beginning on the Weſt ſide, is called the *Point of the Martyres*, and to the Eaſt, the *Head of the Martyres*; and there is an Iland of foureteene leagues in length, and very narrow, the Point of it is the firſt of *Terra firme* to the Eaſt, in 24. degrees and a halfe, where a Towne of *Spaniards* was built, which continued not, and to the North, almoſt direct the Riuer *Ays*, and more Northward in 28. degrees, the Point of the *Canes*, and forward the Riuer of * *Gnats*, before the Riuer of *Matanca*, which is ſo called by that which *Peter Melendez* did to the Captaine *Ribao*, and his *Frenchmen*: and the Point of S. *Auguſtin* in 29. degrees three quarters, and ten leagues from thence the Riuer of S. *Mathew*, from whence the Coaſt turneth to the North North-eaſt, all with the Ilands and Bays leaning vnto it vnto the Cape, or Point of Saint *Hellen*, which ſtands in 32. degrees and a halfe, which was diſcouered by chance the yeare 1520.

Ports, Capes, and Points of *Florida*.

* Or *Moſquites*. Slaughter of the *French* in *Florida*. See *Hak.* 103.

In all the reſt of the Coaſt that is betweene the point of *Sancta Helena*, by *New found Land* and the *Bacallaos*, vnto the Land of *Labrador*, which reacheth and paſſeth the height of *England*, there is no Towne nor Gouernment of *Spaniards*, although by diuers times and Nations, it hath beene diſcouered and Nauigated, and it is knowne there is aboue one thouſand leagues iourney of Land without gold, and the more in height the worſe, and leſſe habitable. There be many Riuers, and Ports, that becauſe they are not well knowne nor frequented, there is no mention made but of the Riuer of the * *Stages*, by another name of *Sancta Marie*, which is a very great and maine Riuer, almoſt in the midſt of the Coaſt betweene the *Bacallaos*, from whence the great Riuer *Ochelago* entreth within the Land toward the Weſt, which diuers times the ſtrangers haue nauigated, beleeuing to haue found that way paſſage to new *Spaine*. And in the Coaſt of *Florida*, which looketh to the Weſt, are the * *Tortoyſes*, ſeuen or eight Ilands together: and to the

The Coaſt of the North vnto the *Bacallaos*.

*Or *Los Gamos*. The great Riuer of S. *Marie*.

* *Las Tortugas*.

Digitized by Google

the North of the point of *los Mariyes*, the *Musſa in terra firme*. And thirteene leagues to the
Bahia de Carlos. North, the *Bay of Charles*, by another name of *Iohn Ponce of Lyon*, and as much more forward, the *Bay of Tampa*, thirtie three leagues from the *Bay of Tocobaga*, by another name, *of the Holy Ghoſt*, or *de Merueio*, in twentie nine degrees and an halfe of height; where beginneth that which properly is called *Florida*. Many haue thought, that by this ſide of *Florida*, toward the land of *Labrador*, there might a ſtreit be found to communicate the North & the South Seas together, ſaying that as it had beene found to the South, there ſhould be one to the North: but experience doth ſhew, that the South paſſage is no ſtreight, at the leaſt it is already in doubt, and by the North vntill now, though it hath beene much ſought for it hath not beene found, and hee that went neereſt to it was the Preſident *Peter Melendez*, by ſome conjectures. 61

The Gulfe of nova Eſpania. All the Coaſt on the Weſt ſide, vnto the Gouernment of *Panuco*, which is aboue 300. leagues, is called *The Gulfe of New Spaine*, wherein is no Towne of *Spaniards*, though it was giuen for a gouernment to *Pamphilo* of *Narnaez*, and to *Hernando* of *Soto*, and firſt to *Franciſco de Garay*, and of his people in particular. The Country is very poore of victuals, and the people miſerable, and although in it are many Riuers and Ports, no mention is made of them, becauſe they are not well knowne. This Gulfe hath two entrances: by the one the currents doe enter furiouſly, be-
The Channell of Bahama. tweene *Yucatan* and *Cuba*, and goe out with a greater force betweene the ſame Iland of *Cuba*, and the point of *Florida*, and running doe make the channell of *Bahama*, which taketh his name of the Iland rehearſed.

20

Chap. 9. THe ſecond Audience which was ſetled in the *Indies*, is that of *New Spaine*, and *Nunyo de Guzman Cauallero de Guadalaiara* was the firſt Preſident, till a Gouernour were prouided, and becauſe he gaue no ſatisfaction, there was another new Councell quickly ſent, and for Preſident of it *Don Sebaſtian Ramirez* of *Fuenleal*, which of a Iudge of the Chancerie of *Granada*, went for Preſident of the Councell of Saint *Dominicke*, and Biſhop of the Citie of the *Conception of the Valley*, a perſon of great Learning, Vertue, and Valour. Hee had the charge of the Gouernment, Iuſtice, and diſpoſition of the goods Royall, the Warre remayning at the charge of the Marqueſſe of the *Valley*, with order to communicate with the Preſident, that which appertayned thereto; and betweene them was alwayes great conformitie. The bounds of this Councell, on the one ſide doth not comprehend that which commonly is called *New Spaine*, and on the other it comprehendeth more, becauſe the new *Gallicia*, which is a Councell by it ſelfe, is part of *New Spaine*.

Of the limits of the Councell of *Mexico*.
Don Sebaſtian Ramirez Iudge of *Granada* goeth for Preſident of S. *Dominicke*.
Great conformity betweene *Don Sebaſtian Ramirez* and *Don Hernando Cortes*.

30

The Prouince of *Yucatan*, falleth within the bounds of it, which as now it is, may haue in length about foure hundred leagues, from the furtheſt East of *Yucatan*, vnto where it parteth bounds with the Councell of new *Gallozia*, and North and South, about two hundred from the end of the Gouernment of *Panuco* vnto the South Sea, his bounds remayning open on the North ſide, whoſe principall Prouinces are the Archbiſhopricke of *Mexico*, the Biſhoprickes of *Mechoacan*, and that of *los Angelos*, or *Tlaſcala*, and of *Guaxaca*, and of *Chiapa*, and the Gouernments of *Panuco* and *Yucatan*, with that of *Toboſco*, and for circuit or commerce, the Ilands *Philipinas*, and the diſpatch of the Nauigation of *China*.

40

New Spaine. *New Spaine* is one of the beſt Prouinces of the new World, and the moſt habitable in a good temper, hauing abundance and plentie of Corne, Millet, and Cattle, and all other neceſſaries for humane life, except Oyle and Wine, and although in many places of it there is Gold, Siluer is moſt generall, whereof there are many good Mynes.

The Archbiſhopricke of *Mexico*, falleth betweene the Biſhopricke of *los Angelos*, and that of *Mechoacan*, it hath in length North and South, one hundred and thirtie leagues, and in breadth eighteene, which it hath by the Coaſt of the South Sea, vnto ſixtie within the Land, wherein are included the Prouinces of *Mexico*, and to the North-eaſt of it *Lateotlalpa*, *Mezxtitlan*, *Xilotepeque*, and *Panuco* the moſt diſtant: and to the Weſt, *Matalzingo* neere to *Mexico*, and *Cultepeque* the furtheſt off: and to the Eaſt, *Tezcuco* neere to *Mexico*: and to the South-eaſt, *Chalco*, neere to that of *Mexico*: and to the South of it *Suchimilco*, the firſt, and after *Tlaluc*, and betweene South and South-weſt *Coyxca*, and *Acapulco*, the furtheſt to the South. There are no more in all but foure Townes of *Spaniards*, although in the Prouince of *Mexico* are many *Spaniards* dwelling in the Townes of the *Indians*. They called *Mexico* in old time, *Tenoxtitlan*; it ſtands in nineteene degrees and an halfe of altitude, and one hundred and three degrees of longitude from the Meridian of *Toledo*, from whence it may be diſtant by a direct Line, one thouſand ſeuen hundred and fortie leagues, which are eight houres of * Sunne: it ſtands in the middeſt of two great Lakes that doe compaſſe it, the one of ſalt water, becauſe his bottome is Salt-petriſh; the other freſh hauing fiſh, and voydeth into the Salt one; each is of fiue leagues in breadth, and eight in length, and both doe compaſſe thirtie three leagues. They goe into the Citie by three cauſies of halfe a league in length, and there are in it foure thouſand *Spaniards*, and thirtie thouſand Houſes of *Indians* or more. In the foure ancient ſtreets wherein the Citie was diuided, in the time of their Paganiſme, which at this day is called of Saint *Iohn*, Saint *Mary* the Round, Saint *Paul*, and Saint *Sebaſtian*; and the *Tlatelulco* is the principall ſtreet which they call Saint *Iames*.

50

HONDIVS *his Map of* New Spaine.

40 The Councell is Resident in *Mexico*, and the Vice-roy gouerneth in it, and three Iudges, the Officers of the Reuenue and Royall Treasure, a Founding House, and a Mint House, and the Archiepiscopall Metropolitane, that hath for Suffraganes the Bishoprickes of *Tlascala*, *Guaxaca*, *Mechoacan*, new *Gallicia*, *Chiapa*, *Yucatan*, *Guatemala*, *Verapaz*, and the *Phillipinas*. And *Don Fernando Cortes* was he that built this great Church, and set for Bases of the Pillars certayne Idols of stone which are seene to this day, and the Bishop, President and Gouernour of *New Spaine*, *Don Sebastian Ramirez* of *Fuenleal*, continued the building with great speed. The first Bishop of *Mexico* was Frier *Iohn de Zumarraga* of the Order of Saint *Francis*, of great vertue and example, borne in *Durango*, in the Lordship of *Biskeye*, which also was the first Archbishop.

Suffraganes of the Archbishopricke of *Mexico*.

50 There are in *Mexico* Monasteries of *Dominican*, *Franciscan*, and *Austine* Friers, the company of *Iesus*, *El Carmen*, *la Merced*, the Bare-foot, and Trinitarie Friers; ten Monasteries of Nunnes, one Colledge of *Indian* children, and another of *Arrepentidas*, the *Repentantes* [m] and [n] *Recogidas*, or *Retyred*, and the Vniuersitie, where curious and learnedly the Sciences are read with other Colledges and Hospitals. And the *Spaniards* which inhabit the bordering Townes of the *Indians*, and Granges, are about three thousand, and there are reckoned about two hundred and fiftie Townes of *Indians*, in which the chiefe places of Doctrine are one hundred and fiue: and in them and thereabouts are six thousand Granges, more then fiue hundred thousand tributarie *Indians*, and more then one hundred and fiftie Monasteries of *Franciscan*, *Dominican*, and *Austine* Friers. And the *Doctrines* (or Schooles) of Priests and Friers, to teach the Faith Catholike to the *Indians*, are 60 without number, besides the Fathers of the Company, and *Mercenarie Friers*: there is also Resident in *Mexico*, the holy Office of the Inquisition, whereof we will intreat hereafter.

m *Sc.* of the life they led in the Stewes.

n From the World.

In the Coast bounding on this Archbishopricke towards the South Sea, and the Prouince of *Acapulco*, is the good Port of *Acapulco*, in seuenteene degrees height, sixe leagues from the Riuer *Topes*, whereby the Archbishopricke is joyned with the Bishopricke of *Tlascala*. And other

* *Los ciento y cinco cabeceras de doctrina.* I thinke he meaneth some Parishionall diuision, in each of which the *Indians* had their peculiar Priests and Schooles of priests to teach them religion. After in *cap.* 28 he cals them *beneficios curados*, Benefices, with Cure, as Personages.

Digitized by Google

eight more to the West, the Riuer of *Citala*, and other foure, the Riuer of *Mula*. In the Coast of the North, it hath that which falleth in the Gouernment of *Tanuco*. In the limits of this Councell are the Mynes of *Puchuca*, fourteene leagues from *Mexico*, and the Mynes of *Tasco* twentie two, those of *Ysmiquilpo*, which are of Lead, twentie two, the Mynes of *Talpuiua* twentie foure, the Mynes of *Temazcaltepeque* eighteene, those of *Cultepeque* 22. those of *Zacualpa* twentie, those of *Zupanguo* 40. those of *Guanaxato* sixtie, those of *Commaia*, seuen. From *Guanaxuato*: those of *Achichica*, eighteene from the Citie of *los Angelos*, and those of *Gantla*, or *Zumatlan*, and Saint *Lewes of the Peace*, and in them all there may bee aboue foure thousand *Spaniards*, which with industrie and labour doe attend these Mynes, all of Siluer except one, which as hath beene said, is of Lead, and procuring that the *Indians* taking example of them, may liue politickly: and the first that with marueilous cunning and wisdome, brought in the breedings of cattell and tillages, which haue beene the mightiest meanes for the preseruation of the Mynes, was the aboue said President *Don Sebastian Ramirez* of *Fuenleal*, originall and the foundation of all the good of those Realmes.

Don Sebastian Ramirez brought in the breeding and ploughing.

The Prouince of *Panuco* to the North of *Mexico*, *Nunno* of *Guzman* had in gouernment: it hath fiftie leagues in breadth, and in length, and after it was incorporate with the limits of the Councell or Audience of *Mexico*. The Countrey that looketh toward *New Spaine* is the best, plentifull of victuals, and hath some Gold. That which runneth toward *Florida* is miserable, from whence till yee come to his bounds, are more then fiue hundred leagues. This gouernment hath three *Spanish* Townes, *Panuco*, in somewhat more then twentie three degrees, and by another name the Village of Saint *Stephen* of the Hauen, which *Gonçalo* of *Sandouall* built, by order of the Marquesse *Don Fernando Cortes*, when they went to resist *Francisco Garay*, and to pacifie the *Indians* of *Chila*, the yeere 1520. and it standeth sixtie fiue leagues from *Mexico* to the North North-east, eight leagues from the Sea, neere to a Riuer whose entry is a Hauen: it is a chiefe *Alcaldia*, or Iusticeship, prouided by the Vice-roy of *New Spaine*. The Village of Saint *Iames of the Valleyes*, twentie fiue leagues from *Panuco* to the West. The Village of Saint *Luys de Tampico*, eight leagues from *Panuco* to the North-east, neere to the Sea: and although in the Coast of this gouernment are many Riuers, & some rode vnto the Riuer of *Palmas*, they are not knowne in the Gulfe of *New Spain*, but the Riuer of *Panuco*, & his hauen, which is not very good.

Gouernment of Panuco.

S. Iago de los Valles.

Los Angelos.

The Bishopricke of *Tlascala*, which by another name is called *de los Angelos*, betweene the Archbishopricke of *Mexico*, and the Bishopricke of *Guaxaca*, is of 100. leagues, and more in length, from the Coast of the South to that of the North, and betwixt the confines of the Archbishopricke, and of *Guaxaca* 80. and as many in breadth, by the Coast of the North Sea, and no more then 18. or 20. by that of the South. There is not in it all more then three *Spanish* Towns, which is the City or Towne of the *Angels* 22. leagues from *Mexico* to the East, somewhat inclining to the South, of 1500. houshelds in foure streets: it is a Chiefe Iustice-ship where the Cathedral Suffragane to the Archbishoprick of *Mexico* is Resident, with Monasteries of *Dominicks*, *Franciscan*, and *Austine* Friers, one of Nuns, & one Colledge of more then 500. *Indian* children, to be instructed, with 10000. Pezos rent, which the Bishop *Don Sebastian Ramirez* built, which sent the Batchelor *Salmeron* Auditor of the Councell to build this City, and although he had determined to haue made it in *Tlascala*, he left it because he would not endamage the *Indians*, nor touch their Lands; for he had a great regard in generall to the good of the *Indians*, and in particular for those of *Tlascala*, being so well deseruing of the Crowne Royall.

The Bishop *Don Sebastian Ramirez* built the Citie of the *Angels*.

The Citie was built in the bounds of *Cholula*, from whence went 25000. men to warre, and it was seated in a Plaine called *Cuetlaxcoapa*, neere to a Valley called *Atlisco*, on the border of a small Riuer that commeth out of the *Vulcan*, where they gather Wheate, Wine, and all the Fruits of *Castile*, Sugar and Flaxe, and all manner of Herbs. For it is a temperate Countrey, more hot then cold, although the Corne of the grounds neerest the Citie, are somewhat blasted: and a little space from *Tlascala*, spring Fountaynes whence groweth a Riuer that when it commeth betweene the Citie of the *Angels* and *Cholula*, it goeth very great and without fish, it passeth through the Prouinces of *Mechoacan*, and entreth into the South Sea by *Zacatula*, and there bee in it so many *Caymanes*, or Crocodiles, that they haue dispeopled some places.

Vulcan or *Bolcan*, is a place whence fire issueth, as *Etna*, *Hecla*, &c

Tlascala.

In *Tlascala* to the North of *the Angels*, which stands in more then twenty degrees in height, where the Cathedrall Church was till the yeere 1550. when it was remooued to the Citie: the first Bishop was Frier *Iulian Garces*, the Valley of *Atlisco*, which may haue in breadth about one league and an halfe, where the Corne is neuer blasted, and there is gathered in it aboue 100000. *Haueges*, and there are more then 1000. *Spaniards* that do traffick in it, and 7. leagues from the Citie to the East, is the Valley of *Ocumba*: and in the Prouince of *Tepeaca*, the Marquesse of the Valley built a *Spanish* Towne, which he called *Segura*: and in the Valley of *S. Paul*, may be other 1300. houshelds of *Spaniards*, in Farmes and Grangeries of cattle, that multiply so much, that there were men that with two shag-haird sheepe came to haue aboue 40000.

The Valley of *Atlisco* famous.

La Veracruz, San iuan de Vlua.

The Citie of *Veracruz*, one way stands sixtie leagues from *Mexico*, and by another sixtie fiue, it stands one quarter of a league from the Sea, it is of more then two hundred *Spanish* houshelds. There is in it Treasurie Royall, and House of Contractation. The Port is called Saint *Iohn of Vlua*,

na, a name which the Captayne *Iohn Gryalua*, which discouered it the yeere 1518. and the frame of the Key that it hath, the Vice-roy *Don Antonie of Mendoça* began. It is fiue leagues from the mouth of the Riuer of *Veracruz*, between the Coast and the little Iland, which is about one league in compasse, compassed with shelues, and so low that the tydes doe couer it right against the mouth of the Riuer of Saint *Iohn of Vlua*. They goe into this Hauen by two Channels: the most frequented is that of the Flat, the other is called the *Gallisian* Channell, which is very deepe, and there the ships doe fasten themselues to a great wall of more then foure hundred foot with Rings of Iron and Brasse, and when the North winds are very strong, they are not very sure. The *Veracruz* stands in eighteene degrees, somewhat more, and there was wont to be the vnloading of the Fleets, and they stayed foure or fiue monethes in vnloading, because it stands fiue leagues from Saint *Iuan of Vlua*, therefore it is now made in the Port of *Buytron*, which is from the Port of Saint *Iohn of Vlua* about eight hunded paces, and it is finished in one moneth and an halfe, and it is called *Buytron*, by a House that was there of one called *Buytron*; and they begin to make a Towne there in that situation.

There are in this Bishopricke two hundred chiefe Townes of the *Indians*, and one thousand subiect, although there may be two hundred fiftie fiue thousand Tributarie *Indians*, in thirtie six charges of * Doctrine of Priests, and thirtie Monasteries of *Dominicke*, *Franciscan*, and *Austine* Friers: and in the Coast of this Bishopricke on the North Sea, is the Riuer of *Aluarado*, where the bounds of the Bishopricke of *Guaxaca*, and the Riuer of *Almeria* doe ioyne neere to the Riuer of Saint *Iohn of Vlua*, where the Towne of *Medellin* was built by *Andrew of Tapia*, the yeere 1522. when the Marquesse *Don Fernando Cortes* sent the said *Andrew of Tapia*, and *Gonçalo of Sandouall*, to conferre with *Christopher of Tapia*, which had Warrants to take away the Gouernment of *New Spaine* from the Marquesse, and the Factor *Salazar*, and the Ouer-seer *Peralmindez* dispeopled. The Riuer of *Almeria* springeth in the long *Rowe*, in the Prouinces of *Totonaques*, and *Micantle*, and betweene Mountaynes it goeth into the North Sea, and against this Riuer is the *Iland of Sacrifices*, which the Captayne *Gryalua* gaue the name vnto, and the Riuer of *Zempoala* to the North from *Veracruz*, and vpward the Riuer of Saint *Peter* and Saint *Paul*, which springeth in the same *Rowe*, and the Riuer of the *Cazones*, *Tuspa*, and *Tamiagua*, neere the Gouernment of *Panuco*.

* A kinde of Parish or Schoole diuision, *Spa. partidos de doctrina.*

Chap. 10. Of the Bishopprickes of *Guaxaca*, *Mechoacan* and *Yucatan*: & of the Prouince of *Tabasco*, which is the rest of the bounds described.

THe Bishopricke of *Guaxaca* (so called by the Prouince wherein it is, and *Antequera* by the Citie where the Cathedrall is resident betweene the Bishopricke of the *Angels*, and the Bishoprickes of the Councell of *Guatemala*) is of one hundred and twentie leagues, from the one Sea to the other, by the Confines of the Bishopricke of *Tlascala*, and sixtie by the Confines of *Chiapa*, and one hundred in breadth by the Coast of the South Sea, and fiftie by the North Sea, wherein are included the Prouinces of *la Misteca*, high and low; the high fortie leagues from *Antequera* to the West, & the low more to the South Sea. *Iohn Nunnez Sedenno*, and *Fernandez de Badaioz* inhabited first the Citie of *Antequera*: and after the first Councell of *Mexico* inhabited it againe; the only Iudges therein were Batchelour *Iohn Ortiz of Matienzo*, and *Delgadillo*, which was the first, that as a man of *Granada*, began to breed Silke in *Mexico*. The President and Gouernour, the Bishop *Don Sebastian Ramirez*, began the Cathedrall Church, the beginning of the good of those Kingdomes: the Church hath all the Pillers of Marble of one piece, very great and bigge, and the Citie hath about foure hundred *Spanish* Households.

This Valley of *Guaxaca*, from whence the Marquesse of the *Valley* taketh his Title, beginneth from the Mountayne of *Cocola*, in the bound of *Guaxoloticlan*. In it is gathered much Silke, Corne, and Millet; it hath the *Zapoteca* Tongue. There hath beene in it good Mynes of Gold. The situation of the Citie of *Antequera* (which as hath beene said) they call *Guaxaca*, was inhabited with people of *Mexico*, which lay in Garrison by order of the second *Motezuma*, and the many Garrisons that the Kings of *Mexico* had through their Empire made general in it the *Mexican* Tongue. The Riuer of this Citie doth sinke vnder the ground, against *Cimatlan*, and riseth two leagues off, at the Mountaynes of *Coatlan*, other two from *Guaxaca*; and at a halfe a league from the Citie right against a Hill that stands to the North, is a point of a little Hill, and there goeth a glade of a Valley all plaine, for the space of eight leagues, which is the abouesaid faire Valley of *Guaxaca*, pleasant, and temperate, and of a most healthfull Ayre, where plentifully are gathered all kind of things, and especially fruits of *Castile*, most pleasant. To the South-west stands the Prouince of *Tutepeque*, which hath many Townes by the Sea-coast, and is of more then sixtie leagues: and that of the Riuer of *Aluarado*, betweene the North and North-east: and that of the *Zapotecas* to the North-east from *Antequera*, and *Guazacoaloco* in the Confines of *Tabasco*, all rough Countrey, & notwithstanding the rich Mynes of Gold, little is gotten because of the roughnesse. There are foure *Spanish* Townes. The said Citie of *Antequera* is eightie leagues from *Mexico*, to the South-east in the high way of *Chiapa*, and *Guatemala*: and the first that entred to pacifie this Prouince, was *Iohn Nunnez of Mercado*, the yeere 1522. by Commission of *Don Fernando Cortes*, and from thence were men of War sent to serue the King *Quantimoc*, in the defence of *Mexico*, when *Don Fernando Cortes* subdued it.

Guaxaca Title of the Marquesse of the Valley.

S. *Alifonſo* of the *Zapotecas.*

The Treaſurer *Alfonſo* of *Eſtrada*, when he did gouerne in *Mexico*, inhabited the Village of Saint *Alifonſo de los Sapotecas*, twentie leagues from *Antequera*, toward the North-eaſt. They liue in it by Gold, Cotton-wooll, and Millet, there are aboue thirtie thouſand *Indians* tributaries. It ſtands betweene moſt high Hils. Saint *Iago de Nexapa* is in the Valley of *Nexapa*, twentie leagues from *Antequera* to the Eaſt, in the way of *Chiapa*, and *Guatemala*. The Village of the *Holy Ghoſt* in the Prouince of *Guazacoalco*, at the Coaſt of the North Sea, in the Confines of *Tabaſco*, is ninetie leagues from *Antequera*. *Gonçalo* of *Sandoual* inhabited it in the yeere 1522. It hath about fiftie Townes of *Indians*, it ſtands on the border of the Riuer, on the ſide of *Chiapa*: this Riuer ſpringeth in the Mountaynes of the *Mixes*, and *Choutales*, neere to *Tecoantepeque*, and with the waters of the Neighbour Prouinces of *Chiapa*, and the *Chontales*, it goeth into the North Sea, there enter into it ſhips of one hundred tun.

S. *Iames* of *Nexapa.*

El Eſpirito Santo.

Golden Riuers

In all this Biſhopricke there is no Riuer that doth not yeeld Gold, and the *Indians* doe liue without want if they will worke, for they lacke nothing for backe nor belly: and they haue the *Cacao*, a Fruit like Almonds, which ſerueth for Money, and they make Wine of it, and it is eaten toſted, and is held for a great ſuſtenance. They are wholſome Countreyes, and pleaſant. The Silke was before nouriſhed by the *Caſtilians*, with the Mulberie Trees of the Countrey, wherewith the *Indians* ſerued themſelues, for to make Paper of the ſecond barke: and the *Spaniards* haue planted ſo many of *Caſtile*, that they grow infinitely: and if the *Indians* did pay tithe of it, and of other things, fiue Biſhoprickes might be made; but none doe pay tithe but the *Caſtilians* onely.

Cacao-money and Wine.

The *Indians* ſhould pay no Tithes.

This Biſhopricke hath three hundred and fiftie Head-townes of *Indians*, and in them, and in three hundred Granges of more then an hundred & fifty thouſand tributary *Indians*, & one hundred and twentie Monaſteries of *Dominicke* Friers, and the reſt Schooles of Prieſts for Doctrine.

Riuer of *Aluarado.*

The Coaſt of the North Sea of this Biſhopricke, beginneth in the Riuer of *Aluarado*, that commeth from the Mountaynes of the *Zapotecas*, and betweene many other it goeth to the Prouince of *Chinautla*, and croſſing ouerthwart the Mountaynes whence it ſprung, goeth out into the North Sea, betweene the Riuer of *Guazacoalco*, and Saint *Iohn of Vlua*, and there is alſo the Riuer called *Agualulco*, whoſe mouth may ſerue for a Hauen; and the diuided Rocke, a point of the Land that commeth from the Mountaynes of Saint *Martine*, named by ſhips that haue bin loſt vpon a ſhoale full of Rockes vnder water, which lye along the Coaſt right againſt them in the Coaſt of the South Sea. This Biſhoprick hath the Hauen of *Guatulco* in fifteene degrees and an halfe, great, good, and frequented. The Preſident *Don Peter* of *Aluarado* ſet this Prouince of *Guatulco* in obedience, and the Port of *Tecoantepeque* is neere, which alſo is reaſonable; and the Towne is great, and there is in it a great fiſhing for Shrimps, and other fiſh which they carrie to *Guaxaca*, and in the high way of *Cuyztata* is a Myne of Chriſtall-borill. *Tecoantepeque* is fortie fiue leagues from *Antequera*, they paſſe by the Mountaynes of the *Chontales*, *Nixapa*, and *Mexalpeque*, whitherto this Biſhopricke extendeth, and hath many Townes ſubiect by the Coaſt of the Sea.

Guatulco.

The Biſhopricke of *Mechoacan* (which is a Prouince betweene the Archbiſhopricke of *Mexico*, and the new *Galicia*) hath in breadth by the Coaſt of the South Sea, about eightie leagues, and ſixtie within the Land, with open bounds, by the Septentrionall parts: in it are included the Prouinces of *Zacatula*, and of *Colima*, both in the Coaſt of the South Sea. The Citie of *Mechoacan*, or *Pazcuaro*, in little more then nineteene degrees, and fortie ſeuen leagues from *Mexico*, of plaine way. In *Guayangareo* called *Vallodolid*, is Reſident the Cathedrall Suffragane to *Mexico*, with two Monaſteries of *Franciſcans*, and *Auſtine* Friers. The Maſter of the field *Chriſtopher* of *Olid* built *Mechoacan*, the Cathedrall was firſt Reſident in *Zinzonza*, vnto the yeere 1544. that he remoued it to *Pazcuaro*. The Biſhop was *Don Baſco de Quiroga*, and it hath one Monaſterie of *Franciſcan*, another of *Auſtine* Friers, and it ſtands ſeuen leagues from *Mechoacan*, to the Eaſt.

The Biſhopricke of *Mechoacan.*

Pazcuaro.

Zinzonza.

The Mynes of *Guanaxuato*, are twentie eight leagues from *Mechoacan*, to the North, toward the *Zacatecas*, wherein there are about ſixe hundred *Caſtilians*, in two Campes * which they haue with their chiefe *Alcade* or Commiſſioner, and the ſeate and dwelling of thoſe that follow the Mynes is a *Reall* or Campe. The Village of Saint *Michaell*, in the Prouince of *Mechoacan*, is thirtie fiue leagues from *Pazcuaro*, to the North-eaſt, in a rough Countrey. And the Village of the Conception of *Salaya*, which was built by commandement of the Vice-roy, *Don Martin Enriquez*, the yeere 1570. for to aſſure the way of the *Chichimecas*. The Village of Saint *Philip* fiftie leagues off *Mechoacan*, toward the North, and ſixtie two from *Mexico* to the North-weſt, with one Monaſterie of *Auſtine* Friers, in a barren ſoyle and cold; it was built for the ſecuritie of the way of the *Zacatecas*.

Guanaxuato.

* *Reales.*

Village of S. *Michaell.*

The Conception of *Salaya.*

The Village of S. *Phillip.*

The Prouince and Village of *Zacatula*, in the Coaſt of the South Sea, ſtands in more then 18. degrees, and fortie leagues from *Mechoacan*, to the South-weſt, neere the Sea; *Iohn Rodriguez* of *Villanorte*, and *Sinon* of *Cuenca*, built it the yeare 1523. it ſtands ninetie leagues from *Mexico*, and the Prouince and Village of *Colima*, in little more then 18. degrees, in the Coaſt of the South Sea, and in the confines of new *Galicia*, fiftie leagues from *Mechoacan*, to the South-weſt, with a chiefe

Zacatula.

Colima.

Digitized by Google

chiefe Commissioner, in a hot soyle, and plentifull of *Cacao*, and *Cassia Fistola*, with Gould, and well conditioned people. *Gonçalo* of *Sandoval* built it in the yeare 1522. All the Countrie of *Mechoacan* is most plentifull of Wheate, Millet, and all kinde of *Spanish* Fruites, and Cattle, stored of Fish: it hath Graine, Cochinilla, and Cotten wooll, and the people is industrious, and giuen to labour.

There are in this Bishopricke one hundred and thirtie Townes, the nintie foure head Townes with Schooles of Doctrine: this Bishopricke reacheth no Coast of the Sea of the North, in the South Sea are many Riuers, and in the furthest West of the Prouince, almost in the border of the new *Galicia*, is the port of *Nauidad*, in the height of 19. degrees, good and frequented, from whence the Nauigation is made to the *Phillipinas*; and more to the East, neere the Port of Saint *Iames*: there are very good Copper Mines in these bounds, of the which the *Indians* make very curious Vessels, for it is pleasant, and other so hard that they digge the ground with it instead of Iron, which they could neuer doe till the *Spaniards* taught it.

The Prouince and Gouernment of *Yucatan* (which tooke this name when the Captaine *Franciscus Fernandez* discouered it, and our *Ladie of the Remedies*, when *Iohn* of *Grijalua* discouered *Cozumel*) was at the first held for an Iland, because it was almost compassed with Sea, in sort that it may be called *Peninsula*, and it compasseth more then two hundred and fiftie leagues: it is in length where it extends it selfe East and West, about one hundred leagues, and as many North and South, from the Coast that looketh to the North, vnto the part that doth confine with the Prouinces of *Guatemala*, whereby it hath ouerthwart about fiue and twentie leagues. The temperature is hot, and very moist, and though there be no Riuer, nor running water in it all, the water is so neare for Wels, and they finde so many shels of Sea-fish vnder the stones, that this, and the Coast being so low, hath giuen occasion to suspect that it hath beene Sea in other times: it is much compassed with Wood: they gather no Corne, nor seedes of *Castile*, there is no Gould, nor any other kinde of Mettall, whence is knowne the inuention (or deceit) of those which said that there were found in this Prouince, when the *Spaniard* entred in it, Crosses of Latten, which was neuer found in any Prouince of the *Indies*: it is very plentifull of game, especially wilde Boares and Deere, they breede vp in it great store of Poultrie: they gather much Cotten wooll, and Azure, the people multiplieth and liueth long; a man there was which attained to three hundred yeares: it hath all the kinde of Cattle of *Spaine*, and good Horses.

Yucatan.

It was a deuise of those which said the Crosses were found of Latten in *Yucatan*, whereas there neuer was Crosse in the *Indies* before the *Spaniards*.

A Man of 300. yeare old.

There are in this Gouernment without that of *Tabasco*, which goeth ioyntly with it, foure *Spanish* Townes, and one Bishopricke: and the Townes are buildings of the first Gouernour, the President *Don Francisco* of *Monteio*. The Citie of *Merida* is in twentie degrees height, almost in the middest of the Prouince, neerer to the coast of the North Sea, twelue leagues within the Land. In it are resident the Gouernour, the Officers of Reuenues, and treasure Royall, and the Cathedrall suffragane to *Mexico*, with a Monasterie of *Franciscane Fryers*, they called it *Merida*, for the great and auncient buildings that it hath like *Merida* in *Castile*, and it causeth admiration, that hauing no kinde of Mettall in this Prouince, so great Stones could be wrought, in the which were found engrauen naked men, with eare-rings, whereof is inferred that they were Temples, and that it was a very famous Countrie. The Village of *Valladolid* is thirtie one leagues from *Merida*, toward the South-east with a most sumptuous Monasterie of *Franciscan* Fryers, and 15000. tributarie *Indians* in the limits. The Village and port of Saint *Franciscus* of *Campeche*, in 20. degrees, in the Coast that looketh to new *Spaine*, about fiftie leagues from *Merida* to the West, declining to the South, it hath a reasonable Hauen, though little depth for being a Bay. *Don Franciscus* of *Monteio* gaue it the name. The Village of *Salamanca* the President called so by his owne Countrie. In the Prouinces of *Bacalar*, and *Chetemal*, seuentie leagues from *Merida*, North and South, leaning to the West, and other seuentie from *Valladolid*, neere to the Coast of the gulfe of *Honduras*: there are in this Prouince Monasteries of *Franciscanes*, and six Schooles of Priests for Doctrine.

Merida.

Valladolid.

Campeche.

Salamanca.

The Coast of all this Prouince is so shallow, that in few parts ye can ride at anker at lesse then foure or fiue leagues from the Land, and so there is no Port but for small Shippes, and it floweth and ebbeth more in this Coast then in any other place of these Prouinces of new *Spaine*. The Ports that are, be these: *Ciclo*, and *Telichaque*, *Cical* and *Canquil*: the Riuer with two mouthes, *Campeche* in the Coast that looketh to new *Spaine*, and in it the small Cape from whence the Coast beginneth to winde to the East, and neere to the Point a little Iland which is called *la Desconocida* or *the Vnthankefull*, compassed with shelues: and to the West from this, about eighteene leagues, another which they call the *Zarza*, and the *Triangle*, which are three small Ilands, close by another little Iland compassed with shelues, other sixteene leagues from [a] *Cabo Delgado*, Ilands *de Arenas* (of *Sandes*) and the *Redde* (*la Bermeia*) and another Iland thirtie leagues from the said Cape to the North, and *los Negrillos*, three little Ilets compassed with shelues, to the East from the [b] *Redde*, about thirtie fiue leagues, and the [c] *Scorpiones* twentie leagues of the coast North and South, with *Merida*, and the Cape of *Cotoche*, the Point most to the East of *Yucatan*, from whence goe foure little Ilands, which are called *de Mugeres* of *Women*, leaning to the Coast in the which is the Iland of *Cozumel*, named by the famous Idoll Place in it, whither

all the people of the Prouince went in Pilgrimage; it stands foure leagues to the Sea, at the beginning of the Gulfe of *Honduras*, almost North and South with *Valladolid*, more inward to the Gulfe, other three little Ilets with shelues, almost ouer against the Lake of *Bacalal*, which is within the Land thirtie leagues from the Lake of *Chetemall*, in the Coast that goeth painted with Ilands vnto *Salamanca*, which is the first *Pantoia*, neere one shelfe called *Quitasneuno*, and another *Zaratan*, and another *Lamanay*, and the last *Ylbob*.

* Or take away sleepe.

Tabasco.

The Prouince of *Tabasco*, which goeth with the Gouernment of *Yucatan*, and falleth vpon the Coast of the North Sea in the gulfe of new *Spaine*, hath in length East and West, about fortie leagues, from the confines of *Yucatan*, vnto the confines of *Goazacoalco*, wherewith it ioyneth on the East, and as much North and South from the North Sea, vnto the confines of *Chiapa*. It is all plaine ground of Marshes, Lakes and Quagmires, and so they goe ouer it in Boates, and Canoes; it is very moist, and hot, and therefore very plentifull of Pastures for Kine, and of Millet and Cacao, which is the greatest stocke or substance of this Prouince, wherein is onely one Town, which is *Tabasco*, and by another name, the Village of our *Lady of the Victorie*, so called for the Victory that *Don Hernando Cortez* had there of the *Indians*, when hee went to new *Spaine*, the yeare 1519. The tribute which the *Indians* doe pay in this Prouince, is two thousand Xiquipiles of *Cacao*, and euery Xiquipill are eight thousand Almonds, and one load maketh three Xiquipiles or Terces. In the Coast of this Prouince besides other Riuers and Marishes, is found the Lake of *Xicalango*, or *Port Royall*, great and capable, with two little Ilands at the mouth, and it was the Captaine *Lewis Martin*, that by order of *Don Fernando Cortes*, made an end of pacifying this Prouince.

Chap. II. Of the bounds of the Counsel of *Guadalaiara.*

THe bounds of the Counsell of new *Gallicia* or of *Xalisco* (which *Nunno* of *Guzman* said hee had discouered, and *Don Fernando Cortes*, that the Captaine *Goncalo* of *Sandouall*, did it in his name, when hee sent him to pacifie the *Colimas*) it parteth bounds with the Counsell of new *Spaine*, neere by the Port of the Natiuitie, and the Lake of *Chiapala*, going toward the North-east, whereby (and by the North, and somewhat of the West, for it is not all discouered) it hath the bounds open, for the rest to the West is all Sea: that which is inhabited on the one side, and the other, may come to one hundred leagues, wherein are comprehended the Prouinces of *Guadalaiara*, *Xalisco*, the *Zacatecas*, *Chiametla*, *Culiacan*, the new *Bizkey*, and *Cinoloa*; and for Circuit the discouerie of the Prouinces of *Cibola*, and of *Quibira*.

Guadalaiara.

The temperature of the Prouince, and borders of *Guadalaiara*, is good, and the Countrie plentifull of Corne, and Millet, and other Seedes of *Spaine*, and many Vaines of Siluer: there are in it *Spanish* Townes. *Nunno* of *Guzman* peopled the Citie of *Guadalaiara*, the head of this Kingdome, the yeare 1531. and gaue it the name of his Countrie: it stands in 106. degrees and a halfe of longitude from the Meridian of *Toledo*, 1780. leagues by a direct Voyage, & in 20. degrees one third part in height, eightie seuen leagues from *Mexico*, betweene the North and the West, more toward the West: in it is resident the Counsell, the Officers of the reuenues, & Royall treasurie, and the Cathedrall suffragan to *Mexico*, since the yeare 1570. for before it was commanded to be built in *Compostella*: it hath one Monasterie of *Franciscan*, another of *Austins* Friers. *Nunno* of *Guzman* built also the Village of the *Holy Ghost* in *Tepique*: and the Village of *Santta Marie* of the Lakes, stands thirtie leagues from *Guadalaiara* to the South-east, with the chiefe Commissioner. It was built for to be sure of the *Chichimecan Indies*, that are in Countries between the North and the East, a barbarous people, which liue scattered in the field, without any taste of humanitie or policie, liuing in Canes, & in the Groues like sauage beasts; they liue vpon wilde chase and fruits, they know no riches, nor pleasure; they goe naked, and some couered with Beasts skins: their weapons are Bowes and Arrowes, they are well bodied, great eaters, they make wine of certaine rootes wherewith they drinke themselues drunke.

The *Holy Ghost.* *Santta Marie* of the Lakes.

The *Chichimecas* Sauages.

Xalisco.

In the Prouince of *Xalisco*, which is plentifull of Millet, more then of Sheepe, or Horses, there is onely the Citie of *Compostella* neere the Sea, three and thirtie leagues from *Guadalaxara*, to the West, where the Counsell was at the first, and commanded to build the Cathedrall, vntill the yeare 1560. that they remoued to *Guadalaiara* to be more in the borders: there is in it a Monasterie of *Franciscan* Friers; and it was also inhabited by *Nunno Guzman*, the yeare 1531. which trauelled two yeares in these Countries, which they called the *greater Spaine*, in emulation of *Don Fernando Cortes*, in all that time nothing being knowne of him in *Mexico*. The Village of the *Purification*, to the South-west, from *Guadalaiara*, and thirtie leagues from it, neere the port of the *Natiuitie*, in the confines of the bounds of this Counsell, and of that of *Mexico*, in a very hot and sickly Countrie: and vnto the end of the yeare 1531. *Nunno* of *Guzman* discouered one hundred and fiftie leagues of Land by the Coast of *Xalisco*, which stand in somewhat more then 22. degrees.

The Zacatecas.

In the Prouince of the *Zacatecas*, are rich mines of Siluer, and want of Water, Corne and Millet: there are three Townes of *Spaniards*, and foure Camps appointed of mines: those which they call of the *Zacatecas* are the principall, fortie leagues from *Guadalaxara* to the North, and eightie

Digitized by Google

eightie from *Mexico*, wherein are ordinarie more then fiue hundred *Spaniards*, fiue hundred Slaues, one thousand Horses and Mules, and one Monasterie of *Franciscane* Fryers; and there is resident alwayes one of the Officers Royall of *Guadalaiara*. In this Prouince also are the Mines of *Auino*, in the confines of the *Zacatecas*, and those of Saint *Martin* seuen and twentie leagues from the *Zacatecas*, to the North-west, wherein are wont to be about foure hundred *Spaniards*, and *Xerez* of the Frontier, thirtie leagues from *Guadalaxara*, to the North, and tenne from the mines of the *Zacatecas*, in the way to them. There are besides these other Reales or Campes, whereof no mention is made, because they are so famous. The Village of the *Erena*, & the Mines called *of the little* * *Hat*, are fiue and twenty leagues from *Zacatecas* to the North-west, neere to those of Saint *Martin*, and others that are in the limits. The Village of * *Nombre de Dios*, is sixtie eight leagues from the Citie of *Guadalaiara*, and tenne from the Mines of Saint *Martin* to the North, with a Monasterie of *Franciscan* Friers, aboundant in Corne, and Millet, and good Mines in his Borders. The Village of *Durango*, in the Borders of the Mines of Saint *Martin*, and the Valley of Saint *Saluador*, eight leagues from *Nombre de Dios*, a wholesome Countrie, & many Riuers, with whose watering they gathered great store of Corne, and Millet, and of other Prouisions, and in the Borders are the Mines of Saint *Luke*, and a very good Salt-pit. And the *Indians* of this Kingdome in many places were in armes, and the *Chichimecas*, and *Guachachiles* did great hurt in the way of *Guadalaiara* to the *Zacatecas*, and this warre was very costly, and tedious, and was ended, the Marquesse of *Villamanrique* being Viceroy. The *Indians* are diuided in this precinct in one hundred and foure partitions or tribes.

The Erena.
*Or Sombrerete
*The Name of God.

The Prouince of new *Bizkie*, is North-west ward from the *Zacatecas* fiftie leagues from them; a Countrie of Prouisions, and much Cattell, and of good Siluer Mines, the Mines of *Hindehe* are in it, of *Sancta Barbola*, and of Saint *Iohn*, and in it is the Prouince of *Topia*; and in this discouery, and inhabiting, *Franciscus Tbarra* did many seruices. The Prouince of *Chiametla*, twenty leagues broad and long, in the Coast of the South Sea, about fortie leagues from *Xalisco*, hath Mines of Siluer, and in it stands Saint *Sebastian*, a Village of *Spaniards*, which was first of the Counsell of *Mexico*, and it stands in more then 22. degrees. *Culiacan* is a gouernment in the South Sea, more to the East, and West from *Chiametla*; it is a plentifull Countrie of Victuals, and showes of Siluer Mines, whereof there is a Campe peopled, which they call of the *Virgins*. The Village of Saint *Michael*, eightie leagues from *Compostella*, and one hundred and three from *Guadalaiara*, *Nunno* of *Guzman* inhabited it the yeare 1531.

Nueua Vizcaya.
Chiametla.
S. Michael.

The Prouince of *Ciualoa*, the last, and most Septentrionall of the new Kingdome of *Galicia*, two and fortie leagues from *Culiacan*, one hundred and fiftie from *Guadalaiara*, to the North, was a Towne built in it that was called Saint *Iohn* of *Cinaloa*, of *Spaniards*, and could not be kept. This Prouince was discouered, *Don Antonie* of *Mendoca* being Viceroy in new *Spaine*, and they said there was a Citie seene wrought with stone, which they called *Granada*, and that those *Indians* were warriers, and that in the Countrie was great store of Victuals. *Quibira*, stands in fortie degrees, of a temperate and fruitfull soyle. *Cibola*, stands thirtie leagues from *Culiacan*, toward the North, and *Quibira* two hundred from *Cibola* to the East; it is all of poore people; for that they haue no Cotten, they weare Deere skinnes, and of the Countrie Kine, which haue a lumpe on the ridge of the backe, and long haire in the fore parts, the hornes lesser then ours; and in them consisteth the greatest part of the sustenance of the people, for of the skinne they cloathe, and make Shooes, and Cords; they eate the flesh, and make tooles of the bones: they haue sundry languages in this Prouince, because they communicate little the one with the other.

Ciualoa.
Quibira.
Cibola.

California is a great point of the Land that putteth out to the Sea in the vttermost West of new *Spaine* in two and twentie degrees height, from whence it extendeth to the North-west, neere about two hundred leagues, although of it there is no certaine notice, nor of the Ports, and Ilands of the Gulfe *California*, which is made betweene the said point, and Gulfe of new *Spaine*, which goeth along that way, as to the North-west; in the which although there be many Riuers, Capes, and Points, and landing-places, there is no particular notice had of them, because they are not much frequented. At the beginning, and entrance of this Gulfe are very long and narrow Ilands along the Coast, and very close with it, which is called the *Guayanall*, that reacheth from the Riuer of our *Ladie*, or of *Sebastian* of *Bora*, vnto the Riuer of *Christmas* in *Culiacan*. The Riuer of the Village of Saint *Michael* is called *Cignatlan*; and neerer to new *Spaine* is the Riuer of *Pastla*, and against it the *Desart* Iland, and afterward the Riuer of the *Holy Ghost*, and the port of *Xalisco*, and to the South of the point of *California*, is *Annublada* or the *Cloudie* Iland, and the Iland of Saint *Thomas*, and the Iland of *Flores*, and another which is called *Las Monias*.

California.

Chap. 11. Of the Bounds of the Counsell of S. Iames of Guatemala.

IT was first called the Counsell of *Guatemala* of the confines, because it was commanded first to be built in the confines of the Prouinces of *Nicaragua*, and *Guatemala*, without assigning any certaine Towne. It hath in length East and West two hundred and fortie leagues, and from the Meridian from 84. to 98. of longitude, and North and South, in breadth one hundred and eighties,

tie, from 9. to 10. degrees of height, vnto eighteene or nineteene, in the which are comprehended the Prouinces of *Guatemala*, *Soconuſco*, *Chiapa*, *Suchitepeque*, the [a] *Verapaz*, *Honduras* and *Cacos*, Saint *Sauiour*, and Saint *Michael*, *Nicaragua*, *Chiuluteca*, *Taguzgalpa*, and [b] *Coſtarica*, and in euery one of theſe Prouinces they alter in ſpeech: and according to the opinion of Religious men, it was the worke of the Diuell, for to plant diſſentions and diſcord betweene theſe Nations which were bloody and reuengefull. The Gouernment and Prouince of *Guatemala* on the South Sea coaſt, in length of it may be about ſeuentie leagues, and in breadth North and South thirtie: it is a Countrie of a good temperature, plentifull of Millet, Cotten wooll, Corne and other fruits, though they preſerue not the Seede of one yeare for the other: the waters are few, but when it raineth they are very violent from Aprill to October, the windes are North and South, and the North laſteth but fifteene or twentie dayes, and it is very cold, and furious. There are in it fiue *Spaniſh* Townes, buildings of the Preſident *Don Pedro* of *Aluarado*, in the yeare 1524. and 25. The Citie of Saint *Iames* of *Guatemala*, whoſe ſituation was called *Cuchequil*, which ſignifieth an *Eagle*, becauſe the Generall of this Nation, when hee went to warre, did beare an Eagle for his Plume: it is the head of the Gouernment, where the Counſell is reſident, in 24. degrees and a halfe of height, and 93. degr. from the Meridian of *Toledo*, from whence it may bee diſtant by a greater circle of one thouſand ſixe hundred and ſixtie leagues, and it is twelue from the Sea, and a towne of ſixe hundred *Spaniſh* houſholds: the Officers of the goods and Royall Treaſure, are reſident there, the melting houſe, and the Cathedrall Suffragane to *Mexico*, with one Monaſterie of *Dominicans*, and another of *Mercenarie* Friars, and one Hoſpitall, and in the bounds fiue and twentie thouſand tributarie *Indians*. This Citie is ſeated in a very pleaſant Valley, with fruits of diuers ſorts, and all kinde of prouiſion and dainties.

a Or true Peace.
b Or Rich coaſt.
Guatemala.
Saint *Iames.*
Saint *Saluador.*

The Citie of Saint *Sauiour*, which in the *Indian* language is called *Cuzcatlan*, is fortie leagues from Saint *Iames* to the South-eaſt, with one Monaſterie of *Dominicans*. The Village of the *Trinitie*, which in the *Indian* tongue was called *Conzonate*, ſixe and twentie leagues from Saint *Iames* to the South-weſt, foure leagues from the Port of *Axacutla*. It is a chiefe Commiſſionerſhip with title of his Maieſtie, with one Monaſterie of *Dominicans*, in a plentifull ſoile of Cacao, and the *Indians* of it are of the iuriſdiction of Saint *Iames*, it is a place of great trafficke, and the Port a touch for the ſhips of *Peru*, and of *New Spaine*. The Village of Saint *Michael* ſixtie two leagues from Saint *Iames*, and two and twentie from Saint *Sauiour* to the South-weſt, two leagues from the Sea and Bay of *Fonſeca*, which ſerueth it for Hauen, and in the bounds are eightie Townes of *Indians*. The Village of *Xerez of the frontier*, in the *Indian* ſpeech called *Chiuluteca*, in the confines of *Guatemala* and *Nicaragua*, eightie leagues from Saint *Iames*, and twentie from Saint *Michael* to the South-eaſt, both plentifull of Cotton wooll and Millet. Neere the Citie of Saint *Iames* is that * *Volcan* ſo famous of *Guatemala*, and in all the *Indies* are many of theſe *Volcanes* (but the moſt famous are thoſe of *Guatemala*, which hath burſt out diuers times, caſting fire, ſtones, and aſhes, with great hurt of the Countrie.) That of *Arequipa*, of *Tlaſcala*, *Quito*, and others. In this Countrie are many ſprings of water, hot, and of ſundrie properties and colours; there is much and good Balme, which the *Spaniards* knew without learning it of the *Indians*, againſt the which ſome Author ſpeaketh, and alſo liquid Amber, Gumme-*anime*, Copall, and Suchicopall, and other Gummes, and Liquoris moſt perfect, and beaſts that breed the Bezar ſtone, they gather great ſtore of Cacao, which is great riches: it is a meane Tree, the leaues like a Cheſnut though bigger, it giueth flower and fruit euery Moone, and the ſame doe in that Countrie the Orange trees. The Cacao is a tree that loueth moiſture better then the Sunne, and therefore they plant neere him another tree to ſhadow him.

Saint *Michael.*
Xerez.
* Or fierie mouthes like *Ætna.*
Cacao deſcribed.

The Ports of this Gouernment in the South Sea, beſide the rehearſed, are the Bay of *Fonſeca* neere to Saint *Michael*, in twelue degrees and a halfe of height, *Gil Gonçales* of *Auila* gaue it the name in the yeere 1522. for the Biſhop *Iohn Rodrigues* of *Fonſeca*, Preſident of the Councell of the *Indies*. And within the Bay is an Iland which he named *Petronilla*, by a Neece of the Biſhop. The Port of *Acaxutla*, neere to the *Trinitie*, in twelue degrees height, is the beſt of this Gouernment for *New Spaine* and *Peru*, and the Bay of *Guatemala* twelue leagues from it, and the Riuer of *Xicalapa* ſeuen leagues from the Bay to the Weſt. On the North ſide this Prouince hath no coaſt, for it commeth not to the Sea by fortie leagues, vnto a landing place which they call the *Port of the freſh Gulfe*, from whence the merchandize that goe from *Spaine*, are conueighed by the Gulfe of *Honduras*, into the Land with carriages vnto *Guatemala*, Saint *Sauiour*, and the *Trinitie*, and twelue leagues before *Guatemala*, in the high way of *Mexico*, is the great Lake of *Atitlan*, of ten leagues in compaſſe, and foure in breadth, without bottom.

Ports of this Gouernment.
Bottomleſſe Lake.

The Prouince and Gouernment of *Soconuſco* is the furtheſt Weſt from *Guatemala* vpon the coaſt of the South Sea, of length and breadth about foure and thirtie leagues, plentifull of Cacao (the greateſt trafficke of it, and of all that in it is ſowne except Wheat) there is no more then one *Spaniſh* towne, which is called *Guenetlan*, founded by *Don Pedro de Aluarado*, where the Gouernour is reſident; her coaſt which is in the South Sea, beginneth ſeuen leagues from the Riuer of *Ayutla* to the Weſt, and preſently the Riuers *Coatlan*, *Capanercalte*, *Colatl*, *Hazatlan*, *Amitue*, and *Quizatatlan*.

Soconuſco.

The

Chiapa. * The Prouince and Bishoprick of *Chiapa* is Mediterranean, betweene *Soconusco* by the South, and the vttermost of *New Spaine* by the West, and by the North and the East, betweene *Tabasco* and * *Verapaz*, in length East and West about fortie leagues, and some lesse in breadth, some lesse fertile of Wheat and Millet, and other Seedes, and of Cattell, except Sheepe that are not many. It hath one Towne of *Castilians*, which is called *Citie Royall*, seuentie leagues from Saint *Iames* of *Guatemala* toward the North-east, which by a particular priuiledge is gouerned by ordinarie Iustices. The Cathedrall is resident here with one Monasterie of *Dominicke* Friars, and many *Indian* Townes in her limits: *Chiapa* is the principallest Towne of them, from whence the Prouince tooke the name. The Countrie-men haue skill in breeding of Horses, that those of this Countrie become the best that are in *New Spaine*: they are Musicians and Painters, and learne any Trade that doth consist in arte: they were in old time of *Nicaragua*, and the Captaine *Iames* of *Mazariegos*, the yeere 1531. built this Citie in a Valley where now it stands, round, of a marueilous situation in 18. degrees and a halfe, sixtie leagues from the North Sea, and as many from the South.

* Or true peace.

Verapaz. The Prouince of *Verapaz* (a name which the *Dominicke* Friars gaue it, because they pacified it with preaching) is also Mediterranean betweene the bounds of *Sotomusco*, *Chiapa*, *Yucatan*, *Honduras*, and *Guatemala*, of thirtie leagues ouer, and as many from Saint *Iames* of *Guatemala*; a moist Countrie, and therefore the better for the Millet that in it is gathered twice a yeere, and for Wheat. There is Cotton wooll, and some Cacao, and much Fowle of those that giue the coloured feathers for the pictures which the *Indians* doe make, which is a merchandize of this Prouince, and the Kings of *Mexico* carried them from this Prouince, which was the most esteemed thing they had, and it was iudged for a great sinne to kill these Fowles, but to plucke them and to let them flie. There is in this Countrie but one Monasterie of *Dominicke* Friars, with one *Indian* Towne of seuenteene *Indian* children that are there, by order of the religious men for to instruct them the better; for before they liued scattered and like sauages, and now they liue like Christians, and in temporall things politikely.

Picture feathers.

In this Prouince there is no Gouernour, but a chiefe Iustice, prouided by the Councell. The Riuer of *Zacatula* diuideth this Prouince from the Prouince of *Guatemala*, from the which it extendeth vnto the fresh Gulfe, whither all the Riuers of it doe runne, whereby and by the many falls of waters that descend from most high Hils, the Countrie was so moist, that the Millet rotted; but it is bettered in the temperature, since the cutting downe of the Woods: it hath many Lions, Tigres, and Buffes, whose flesh the *Indians* doe eate although it be luscious and soft; it is called the *Fresh Gulfe*, for the multitude of the Riuers which on that side doe enter into the Sea. The water is fresh, and there are exceeding great Fishes, and specially the *Manati*, which is the Sea calfe, which swimmeth so delicately, that being very great he maketh no noyse; when hee fleeth he goeth to the Deepe, and waxeth angrie and fierce against them that seeke him, and giueth great strokes; his flesh is very fat like vnto fat beefe.

Golfo dolce.

Manati a fish described.

Chap. 13. Of *Honduras*, *Nicaragua*, and *Costa Rica*, or the *Rich Coast*.

THe Prouince and Gouernment of *Honduras* hath in length East and West, by the coast of the North Sea, more then one hundred and fiftie leagues, and in bredth from the Sea vnto the bounds of *Costa Rica* and *Guatemala*, in parts eightie: it hath many Hills, and is plentifull of Millet, Wheat, and all sorts of Cattell, and some Mynes of gold and siluer: there is in it sixe *Spanish* Townes in one Bishopricke, and the first Bishop was Friar *Iohn* of *Talauera*, Prior of *Prado*, of the Order of Saint *Ierome* of *Spaine*.

Honduras.

The Citie of *Valladolid*, in the *Indian* language, is called *Comayagua*, in more then sixteene degrees, stands sixtie leagues from Saint *Iames* of *Guatemala* to the East, and about fortie from the North Sea: in it is the Gouernour resident, and the Cathedrall, since the yeere 1558. when it went from *Truxillo*, whereat first it was; and one Monasterie *de la Merced*. The Captaine *Alonso* of *Caceres* pacified this Countrie, by order of *Don Peter* of *Aluarado*: it stands in the midest of the two Seas, and from the one to the other are three and fiftie leagues, from the Port *de Canallos* or of *Horses* in the North Sea, vnto the Bay of *Fonseca* in the South Sea, and the Inginer *Baptista Antoneli* visited this way, by order from the King; because many thought that by it the trafficke of the North Sea was more easie to the South Sea, and hee found that it had many inconueniences.

* Or of our Lady of the Fauour.

Visitation of the Inginer *Baptista Antoneli* of the way of the Port of *Canallos* or *Horses*, to the Bay of *Fonseca*.

The Citie of * *Gracias à Dios*, is thirtie leagues from *Valladolid* almost to the West; the Captaine *Gabriel* of *Rojas* peopled it 1530. for the benefit of the Mynes of gold that were thereabouts, and had great encounters with the *Indians*, which assaulted him many times in a Fort that he had. But the Gouernours of *Honduras* and *Nicaragua*, not succouring him by reason of grudges betweene them, hee was forced to forsake it. And in the yeere 1536. Captaine *Gonçalo* of *Aluarado*, inhabited this Citie againe. The Village of Saint *Petro* is thirtie leagues from *Comayagua* to the North, somewhat aside to the West, and eleuen from the Port of *Canallos*, where the Officers Royall are resident, because the Port of *Canallos* is sickly, whither the dispatches of the ships doe come. The President *Don Peter Aluarado* built it 1536.

* Thankes bee to God.

Saint Peter.

The Village of Saint *Iohn* of the Port *de Canallos* is in 15. degrees of altitude, eleuen leagues from

Saint *Iohn*.

Digitized by Google

from Saint *Peter*, foure from *Comayagua*, it is inhabited with Factors of the Merchants, and with Black-moores, becauſe it is an vnwholſome Port; for although it be a Bay, it is a good one, it was called the Port of *The Horſes*, becauſe ſome were caſt in the Sea by a ſtorme. The Citie of *Truxillo*. *Truxillo* is ſixtie leagues from *Comayagua* to the North-eaſt, and fortie from the Port of *Horſes* to the Eaſt, and one from the North Sea: the Cathedrall was here, the Hauen is called Saint *Gil*, it is good, though it be a Bay dead and ſheltered, where the ſhips that goe for *Guatemala* doe touch firſt. *Franciſco de las Caſas*, began to inhabit this Citie 1524. and becauſe they were all people of *Eſtremadura*, he called it *Truxillo*, and *Don Hernando Cortes* ended the inhabiting of it when he went to the *Ybueras*. Saint *George*. The Village of Saint *George* of *Olancho*, is fortie leagues from *Comayagua* to the Eaſt, of fortie houſholds, and in her borders ſixteene thouſand tributarie *Indians*, and much gold, chiefly in the Riuer of *Guayape*, ten leagues from this Towne. Valley of *Olancho*. This Valley of *Olancho* is very pleaſant and profitable, and in it was much gold gotten, and the Gouernours of *Honduras* and *Nicaragua*, had in other times great differences: for euery one would haue it in his iuriſdiction, and therefore here it was where *Gil Gonçales Dauila* tooke one hundredand twentie thouſand *Peſos* of gold of *Hernando* of *Soto*, and diſmiſſed the people which *Pedrarias Dauila* had for his defence; and here *Gabriel* of *Rojas* defended the entrance of *Gonçalo* of *Sandoual*, for *Don Hernando Cortes* did ſend him from *Truxillo*, and here the *Indians* killed *Iohn Grijalua*, a very famous Captaine, and others.

Points and Ports of this Gouernment. The coaſt of this Prouince is all in the North Sea, in the Gulfe which they call *de Honduras*, which is all the Sea coaſt betweene this Prouince and *Yucatan*, to the place where it ioyneth with it by *Verapaz*, where it was called the Gulfe of *Guanajos*, the firſt Point is of the *Ybueras*, ſo called, becauſe they firſt found many pompions on the Sea, which they call *Ybueras* in the language of *Hiſpaniola*; it ſtands in ſixteene degrees of height. Neere to the *Freſh Gulfe* a Port for *Guatemala*, where Saint *Gil* of *Bonauiſta* was built, neere to the Cape of *Three Points* to the Eaſt from the *Freſh Gulfe*, and *Gil Gonçales Dauila* peopled it 1524. And more to the Eaſt is the Riuer *Piche*, and *Rio Baxo*, and the Riuer of *Vlua*, by another name *Balahama* before the Port of *Horſes*, which ſtands in fifteene degrees. And afterward the Riuer and Point *de la Sal*, and *Triumpho de la Cruz*, a Cape of three points, where the yeere 1524. the Maſter of the field *Chriſtopher* of *Olid* planted; and the Riuer *Hulma* or of *Xagua*, and to the North of his mouth the Iland of *Vtila*; and to the North-eaſt, *Guayana*, *Helen*, and *Guanaja*, and Saint *Franciſe* North and South with the Point of *Truxillo*, which are the Ilands of the *Guanajos*. The ſaid Point is called by another name, *Cabo Delgado*, the *Small Cape*, or of *Honduras*, from whence to the Cape of * *Camaron*, in ſearch whereof they goe from *Iamayca*, are thirteene Riuers, and at the Point of the Cape a plazell or great ſhelfe of more then twentie leagues into the Sea, and in the middeſt of it neere to the Coaſt a great Iland, which is called the Iland *de los Baxos* (of the ſhelues) and another to the North, neere the ſhelfe called Saint *Millan*, and hauing paſſed the ſhelfe, the Bay of *Cartago*, and the *Deepe Bay*, before the *Cape of thanks be to God*, which ſtands in fourteen degrees one third part, and to the North of it three Ilands, which they call the *Vicioſas*, and *Quita ſueno* or *Take away ſleepe*, and *Roncador*, the *Suerter*, two dangerous ſhelues, and hauing paſſed the Cape, the Gulfe of *Nicueſa*, where hee was loſt in the yeere 1510. and the Riuer of *Yare* in thirteene degrees, where the Gouernments of *Honduras* and *Nicaragua* are ioyned.

* Or *Shrimpe*.

Babia honda. *Cabo de Gracias a Dios*.

The Ilands of the *Guanajos*, which are the rehearſed, the firſt Admirall *Don Chriſtopher Colon* diſcouered 1502. in the laſt voyage he made to the *Indies*, when he diſcouered *Terra firme* in the coaſt of *Veragua*, where his ill lucke appeared; for if as he went to *Veragua*, hee had gone to the other ſide, he had diſcouered *New Spaine*.

Nicaragua. The Prouince and Gouernment of *Nicaragua*, which the Gouernour *Iames Lopez* of *Salzedo*, called the *New Kingdome of Lion*, on the Weſt ioyneth with *Guatemala*, and on the North with *Honduras*, and on the South with * *Coſta Rica*. It is of one hundred and fiftie leagues Eaſt and Weſt, and eightie North and South, a plentifull Countrie of Millet, Cacao, Cotton wooll, ſtore of Cattell, without Corne or Sheepe, it hath fiue *Spaniſh* Townes. *Lion* of *Nicaragua* is one hundred and foure leagues from Saint *Iames* of *Guatemala* about the South-eaſt, and twelue from the South Sea, neere to the great Lake of *Nicaragua*, where the Gouernour is reſident, the Royall Officers, and the Cathedrall, and *Iames Aluarez Oſſorio* was the firſt Biſhop. It hath fiue Monaſteries of Mercenaries, and in her bounds one hundred and twentie thouſand tributarie *Indians*.

* Or rich Coaſt.

Granada. The Citie of *Granada* is ſixteene leagues from *Lion*, which and *Lion* were built by the Captaine *Franciſcus Hernandez* 1523. and *Granada* ſtands by the border of the great Lake, and foure and twentie leagues from the Port of *Realeio*, beſides the great Lake, ſtands the Lake of *Lindiri*, and the famous *Vulcan* or *Fierie mouth* of *Maſſayatan*. The great Lake ebbeth and floweth, it hath many Ilands, it runneth into the North Sea, by the Riuer which is called *El Deſaguadero*, or *The Voyding*, it hath great ſtore of Fiſh and many Lizards. At two leagues from it, and ſeuen from *Granada* is the great fierie mouth of *Mombacho*, very high with many Groues of diuers fruits, of which much refreſh the Countrie. A Friar perſwading himſelfe that that maſſe of fire that in ſo many yeeres burned without conſuming within the mouth of *Maſſaya* was gold, hauing made by a certaine arte certaine Cauldrons with their chaines to draw it, they ſcarcely came at the fire, when the Cauldron and the Chaine were melted like Lead.

Lake of *Nicaragua*. *Volcan* of *Maſſayatan* and *Mombacho*.

The

The new *Segouia* which was the beginning of *Peter Arias* his plantation, is thirtie leagues from *Lion* to the North, and as many from *Granada*, somewhat Northward also, in which limits much gold is gotten. And *Iaen* a Citie is thirtie leagues from the North Sea, in the end of the great Lake, whereby the Riuer which they call the *Voyding*, and the merchandize which are carried from *Nombre de Dios*, and now from *Porte bello*, are conuayed in it. The Village of *Realejo* one league from the Port of the *Possession*, which commonly is called of the *Realejo*, stands in eleuen degrees and a halfe, and is one of the best Ports and surest in all that Coast, wherein are made good ships by reason of the good prouision of Timber there. *Segouia.* *Iaen.* *Realeio.*

There are in this Gouernment many Townes of *Indians*, and in them store of tributaries, and in the Confines of this Gouernment, and of *Costa Rica*, and of *Nicoya* eight and fortie leagues from *Granada*, in the South coast, is a Corregidorship; in which, and in the Iland of *Chyra*, which is of the iurisdiction thereof eight leagues to the Sea, are many tributarie *Indians* of the Crowne Royall, subiect in other times to the Councell of *Panama*, vnto the yeere 1573. at which time it was incorporated in *Costa Rica*; whose Gouernour placeth a Deputie, and the Bishop of *Nicaragua* a Vicar. There is in it a reasonable Port, in the coast of this Prouince on the North Sea. After this is the Riuer *Tare* that diuideth it from that of *Honduras*, the Riuer of *Tairepa*, before the Riuer and Port of Saint *Iohn*, which is called the *Voyding* or *Desaguadero*, with a great Iland at the mouth, and after, some other Riuers common to *Costa Rica*. In the South Sea, it hath besides the *Realeio*, the Port of Saint *Iames*, before the *Chira*, and the Port of *Paro* right against *Nicoya*, in the Gulfe called of the *Salt-pits*, before the Point of Saint *Lazarus*, and the Cape of *Borrica*, at the East side whereof are the Ilands of Saint *Marie*, Saint *Martha*, *Cobaya*, and *Sebaco*, neere to the bounds of *Veragua*, common to *Costa Rica*. Ports and Riuers of this coast. *De Salinas.*

In the Coast of *Nicaragua*, on the South side, the Village of *Bruxelles* was peopled 1529. and *Iames Loges* of *Salcedo* disinhabited it, because they had receiued in it *Pedro de los Rios*, Gouernour of *Castilla del Oro*, which went to take the Gouernment of *Nicaragua*, where *Salcedo* had thrust himselfe, and had gone from *Honduras* his owne Gouernment vnto it. Captaine *Francisco Hernandez* planted it 1524. in the doubtfull Streight, in the seate of *Vritina*, and on the one side it had the Sea, on the other the Playnes, and on the third side the Mountaine of the Mynes, and in all this Orbe there are no *Indians* more expert in the *Castillan* tongue then those of *Nicaragua*. *Bruxelles.*

The Prouince and Gouernment of *Costa Rica*, the furthest East of the Northerne *Indies*, and Councell of *Guatemala*, hath in length East and West ninetie leagues from the Confines of *Veragua* vnto those of *Nicaragua*, with which it ioyneth by the North, and by the West. In it are two Townes, it is a good Countrie, with many showes of Gold, and some of Siluer. The one Towne is the Village of *Aranjues* fiue leagues from *Chomes Indianes*, a Towne of the iurisdiction of *Nicoya*. The Citie of *Cartago*, fortie leagues from *Nicoya*, and twentie from the Sea almost in the middest of the Prouince, hath a Port and landing place in the Coast of the South Sea, and the North Sea, wherein there is some Riuers betweene *Nicaragua* and *Veragua*, common to this Gouernment, and the Bayes of Saint *Ieromo* and of *Caribaco*, neere the limits of *Veragua*. *Costa Rica.* *Aranjuez.* *Cartago.*

Chap. 14.

THe part of the *Indies* of the South is vniustly called *America*, it is all that is discouered from *Nombre de Dios* and *Panama* to the South, wherein is included *Terra firme*, the Kingdomes of *Piru*, the *Piru Chile*, which the *Indians* call *Chille*; The Prouinces of the Streight, the Riuer of *Plate* and *Brasile*, where are fiue Councels of *Panama*, new Kingdome of *Granada*, Saint *Francise* of *Quito*, *Lima*, the *Charcas*, and the eleuen Gouernments: part of their Coast toucheth in the North Sea, and part in the South: in the which for the most part reigneth the South and the South-west, which contrarie to his nature is there pleasant, and doth mitigate the great heate, whereby that Countrie may bee inhabited, although it neuer rayneth nor hayleth in it, but in a very little distance. And the two rowes of Mountaines that runne equally through all these *Indies*, haue a great difference, though they are in one altitude of the Pole: for the one is well repleniſhed with Trees and it alwayes rayneth in it, and it is hot: the other is all bare, and cold in Summer and Winter. These rowes are called *Andes*, and *Sierra* or the *Mountayne*; they haue most high Hils, and goe in sight the one of the other one thousand leagues, almost equally. In the Hill are bred sundrie beasts, and in the parts where they open they make Valleys, which is excellent dwelling, as that of *Xauxa*, and *Guaylas*, and *Yucay*. In the *Andes* also are bred sundrie beasts, and past the Citie of *Cuzco*, these rowes doe diuide themselues, leauing in the middest a great champaine Countrie, which is the Prouince of *Collao*, where are infinite Riuers, Lakes, and Pastures, without Trees or Wood, for the distemperature of the Countrie, though wholesome and much inhabited. There followeth after it the Prouince of the *Charcas*, hot and of great plentie, with very rough Hills of great riches of Mynes: and the figure of these *Indies* is seene in the Table before going. *Chap.* 14. Of the *Indies* of the South. A great difference of temperature in the two rowes of *Piru*. The two rowes doe runne almost 1000. leagues equall. Qualities of the Prouince of *Collao*.

HONDIVS *his Map of* America Meridionalis.

THe limits of the Counsell of *Panama*, which was first called *Castilla del Oro*, and afterwards *Terra Firme*, are very small, for the Counsell is principally resident there, for the dispatch of the Fleetes, and Merchants, which goe and come to *Piru*: it hath in length East and West, about nintie leagues, from the confines of the gouernment of *Cartagena*, and *Popayan*, vnto the Castle of *Veragua*, and in breadth from the South Sea to the North sixtie leagues, and thence downeward vnto eighteene by *Nombre de Dios*, or *Porto bello* to *Panama*: it is a ground generally very rough with Mountaines, full of quagmires, the ayre close with vapours, moist, hot, and for this cause very sickly from May vnto Nouember, a barren soyle, and destitute of many things: for there groweth nothing but Millet, and very little, though there be good Pastures for Kine, and breeding of Cattle. The gouernment of *Veragua* stands in the bounds of this Counsell, and in it, and in that of *Panama* these Townes following.

Quantities of the Countrie of *Panama*, and her bounds.

Panama.

The Citie of *Panama* is in the coast of the South Sea, neere vnto it, in 9. degrees of latitude, and 82. of longitude from the Meridian of *Toledo*, from whence it is distant by direct way one thousand fiue hundred and sixtie leagues. It is a Towne of six hundred households, the most are Merchants and dealers. And with the Counsell are resident the Kings Officers, and Royall treasurie, which doe goe already to *Portobello*, when there is any Fleete to the dispatching of it, and likewise the Cathedrall suffragan to the Archbishopricke *of the Kings (delos res)* is here resident with three Monasteries, of *Dominicke*, *Franciscans* and *Merced* Friers. The Port of this Citie is reasonable, although at low water the Ships remaine dry, and therefore in Summer they ride in the strand, and in winter in the hauen of *Perico*, two leagues from the citie. *Pedrarias Dauila* peopled it, being Gouernour of *Castillo, del Oro, or of the Gold*, against the will of the dwellers of *Sancta Marie*, the auncient of *Darien*, the yeare 1519. and a little after the Cathedrall Church was remoued thither; and it might haue had a better seate, and more wholesome, and to the purpose

purpose for the trafficke of the South Sea, not going very farre from whence the Citie now stands.

The Citie of *Nombre de Dios*, was by *Iames* of *Nicuesa* first planted 1510. and afterward by *Iames* of *Albitez*, by order of *Pedrarias*, and he was the first Admirall that discouered her port. It is remoued to *Portobelo*, for the first Admirall discouered it, and gaue the name, becausse it was more wholesomer, and fitter for the loading and vnloading of the Fleetes, and for their securitie, and of the new Citie of Saint *Phillip*, which is built there: the Inginer *Baptista Antonelli*, hath made a Castle, and appointed another on the other side the hauen, for to keepe the entrie. The Merchandize are carried from *Portobelo* to *Panama* by two wayes, one by Land with carriage, which is eighteene leagues of lesse difficultie then by the way of *Nombre de Dios*: the other by Sea, and the Riuer of *Chagre*, whose mouth is eighteene leagues from *Portobelo*, to the West, whereby the Merchandize goe vp when the water reacheth to the vent of the Crosses, and from thence they go in carriages fiue leagues to *Panama*. *Portobello.*

The Village of *Nata* stands thirtie leagues from *Panama* to the West, in the Coast of the South Sea, Captaine *Franciscus* Companion peopled it, by order of *Peter Arias*, for the warre with the *Casique Urraca*. The inhabiting of *Acla*, and Captaine *Gabriel* of *Roias* finished by commandement of *Peter Arias*, in the Coast of the North Sea, and entrance of the Gulfe of *Vraba*, right against the Iland of *Pinos*, whereof at this present there is no more memory then that there was the death of that famous Captaine, whose memory will last eternally, the President *Basco Nunnez* of *Balnoa*, and of his company. In the breach of *Almagro*, and in the head of the Riuer *Chiepo*, there is Gold, and in times past was much gotten. In all these Riuers are many Lizards or Crockadiles, and very great, which put the first discouerers and pacifiers to great trouble, and did deuoure some men. It happened that a man being in a Boate neere to the Kings House in *Panama*, a Lizard came and snatched him from the Stearne of the Boate, and carried him away to eate him on certaine Rockes, and hauing begunne to teare him in pieces, they shot at him with a Caliuer and killed the Lizard, so that he before his death receiued the Sacraments of the Church. Saint *Iames* of *Nata.* *Acla.* A strange case of a Lizard.

The Prouince of *Veragua*, which stands in somewhat more then tenne degrees, doth confine with *Costarica*, on the West side: it hath in length East and West fiftie leagues, and in breadth fiue and twentie: a Mountainous Countrie, full of bushes, without Pastures or Cattle, Wheate, Barley, little Millet or little Pulse; but full of Gold with many vaines of it, and rich Mines in the Riuers, and breaches, and those *Indians* that are, are in warre: it hath the Citie of the *Conception* fortie leagues from *Nombre de Dios*, to the West, where the Gouernour and the Officers (which they of *Panama* at this present doe prouide) are resident. The Village of *Trinitie* stands six leagues to the East of the *Conception* by Sea (for yee cannot goe by Land) neere to the Riuer of *Bethleem*, at three leagues from the Sea. The Citie of *Sancta Fe* stands twelue leagues from the *Conception* to the South, with melting houses, and Deputie Officers. The Citie of *Charles*, in the coast of the South Sea, neere to the Sea, fiftie leagues from the Citie of *Sancta Fe*, to the East: all the *Indians* of this gouernment are in warre. *Veragua.* The *Conception.* The *Trinitie.* **Holy Faith.* *Charles.*

There is no Port of name in the two Coasts South, and North, of this gouernment, and in all the bounds of the Counsell, are the Riuers, Ports, and points following. The Bay of *Carabaco*, or of Saint *Hierome*, in the coast of the North Sea, and the confines of *Veragua*, and to the East of it, and of the Riuer of the *Trinitie*, of the *Conception*, and of *Bethlehem* (where was the first inhabiting that the first Admirall made in *Terra firme*, of all that Orbe, in the yeare 1503. which continued not: and right against the *Shield*, an Iland, and the Riuer of *Chagre*, and more to the East a league the *Portete*, to the place where the Admirall came discouering the same yeere, and the Ports of [a] *Langostas* twelue leagues from *Nombre de Dios*, to the West, and the Port *de Gallinas* or of *Hennes* nine degrees, and the Port of *Bonauenture* six, *Portobelo* fiue, and right against it the Ilands of the [b] *Lookings*, and those of the *Prouisions* or *Bastimentos*: and hauing *Nombre de Dios* two leagues, the Riuer of [c] *Sardinilla*, and the Iland of [d] *Sardina*, foure; and the Riuer of *Millet* or *Mayz*, and the Riuer of *Snakes*, or *Culebras*, eight; and at the entry of the Gulfe of *Vraba*, where in the yeare 1509. the Bachiller *Enciso* built the Citie of *Sancta Maria* of *Darien*. This Bachiller *Enciso* was he that published that in the Prouince which was called *Castilla del Oro*, there were places where the gold was fished with nets, which encouraged many people to goe to the *Indies*, which passed in the yeare 1514. with *Peter Arias Danila*: and the President *Basco Nunnez* of *Balboa*, went 1513. from the *Darien* in demand of the South Sea, and discouered it. The Point of the Iland of *Captina*, stands right against the Mountaines of Saint *Blas*, and the Iland of *Comagre*, and the Iland of *Pinos*, more within the Gulfe of *Vraba*, and in the inward Port of it, the Port of *Nilcos*, neere to the mouth of the Riuer of *Darien*, which diuideth the bounds of this Counsell, and those of the Gouernement of *Cartagena*, and there is *Culata de Vraba*, where in the yeare 1510. *Alonso* of *Oieda* inhabited Saint *Sebastian* of *Vraba*. This Gulfe stands in 8. degrees, it hath foureteene leagues of longitude into the Lands, and in the entrie it hath six in breadth, and a little forward fiftie, The Ports. a Or *Locusts.* b *Las Miras.* c Or *Little Pilcherd.* d Or *Pilchard.*

Digitized by Google

and at the end foure, and fiue leagues within was the Citie of *Sancta Marie*, the auncient of *Darien*.

In the South Sea ſtands the Cape of *Sancta Marie*, and point (*de Guerra*) of Warre, and toward *Panama*, the Gulfe of *Parita*, or *Paris* where ſtands *Nata*, the point of *Chiame*, the Countrie of that *Cazique Chiapes*, the friend of *Baſco Nunnez* of *Balboa*, which holpe him in his diſcouery: and paſſed the Port of *Panama*, the Riuer of *Chepo*, and the *Balſa*, or of *Congos* in the inner part of the Gulfe of Saint *Michael*, North and South from the Iland of *Pearles*, and the Point or Port of *Pinyas*, at the entrie of the Gulfe on the South ſide, which is fiftie leagues from *Panama*, and twentie ouerthwart to the Gulfe of *Vraba*, and *Puerto Quemado*, or *Burnt Hauen*, neere to the Cape of *Corrientes*, in 5. degrees of altitude *Septentrionall*. 10

Chap. 16. The limits of the Counſell of *Sancta Fe* of *Bogota*: which is the new Kingdome of *Granada*.

THe bounds of the Counſel of the *New Kingdome* hath in length Eaſt and Weſt, three hundred leagues, and as many North and South, wherein are comprehended the Prouinces of the *New Kingdome*, the gouernments of *Sancta Martha*, and *Cartagena*, and part of that of *Popayan*; & for borders the Prouinces of the *Dorado*, or new *Stremadura*: the Prouince of *New Kingdome*, which is that which the Counſell gouerneth: it hath in length from Eaſt to Weſt foureteen leagues, and eightie in breadth North and South of plaine ground, for the moſt part with Valleys and hils, and good Paſtures for all ſort of Cattle, which are in abundance, and in many places, Wheate, Millet, and the fruits of *Caſtile*, and generally much Gold and very fine, and Mines of Copper & Steele: and the Countrie men for the moſt part are able men, great traffickers, and doe weare Cotten cloath. And the Townes that be in the Kingdome of *Spaniards*, are the Citie of **Sancta Fe* of *Bogota*, which was built at the foote of *Bogota*, ſo called by the *Cazique* which was called *Bogota*, which the Preſident *Gonçalo Ximenez* of *Queſada* built, and gaue the name to the Citie and to the Kingdome, becauſe he was of *Granada*, though in the diſcouery the Preſident *Belalcazar*, and *Nicholas Federman* had part: it ſtands 72. degrees and a halfe of longitude from the Meridian of *Toledo*, which by a greater circle may be one thouſand foure hundred and fortie leagues, and 4. degrees on this ſide of the Equinoctial, it hath more then ſix hundred houſholds, in it is reſident the Counſell, the Kings Officers and Royall treaſurie, and Melting houſe, the Cathedrall Metropolitane, whoſe ſuffragans are, *Popayan*, *Cartagena* and *Sancta Marta*, with a Monaſterie of *Dominicke* and another of *Franciſcane* Friers, and in her borders more then fiftie thouſand tributarie *Indians* and the Lake of *Guatauita*, which was a worſhipping place of the *Indians*, where it is reported that they did caſt great ſummes of Gold in offring to the Idols. 20 30

* *Holy Faith.*

Lake of *Guatauita.*

Saint *Michael.*

The Village of Saint *Michael* in the bounds of *Sancta Fe*, twelue leagues from it to the North, was built for trafficke with the *Pauche Indians*, becauſe being of a hot Countrie it did them hurt to goe to *Sancta Fe*, which is cold. The Citie of *Tocayma* fifteene leagues from *Sancta Fe*, to the Weſt, ſomewhat inclined to the North, with a Monaſterie of *Dominicke* Friers, was inhabited the yeare 1545. by the Captaine *Hernando Vanegas*, in the border of the maine Riuer *Pati*, which runneth into the Riuer *Magdalene*. It hath no gold, and is moſt hot, and by night there falleth no Deaw in it. In all the Kingdome there is no generall tongue, that which is moſt vnderſtood, is that of the *Pauches*. In the Prouince of the *Muſos*, and *Colimas*, which by another name are called *Canupeis*, fiue and twentie leagues in length, to the North-weſt of *Bogota*, a rough Countrie, found, plentifull of Paſtures, Gold, and Emeralds: there are two Townes; the Citie of the *Trinitie* twentie leagues from *Sancta Fe*, to the North-weſt, which the Captaine *Lanchero* inhabited the yeere 1582. when hee went to warre with the *Indians* * *Moſcas*, a quicke and fearefull Nation: and in theſe bounds ſtands the rich Mine of the Emeralds, with many *Indians* which yet are peaceable, and in the Prouince of *Chiagnachi*, which ſignifieth Snailes, for there be many. 40

Tocayma.

The *Trinitie.*

* Or *Flies.*

The *Palma.*

The Village of *Palma* in the *Colimas*, of a temper hotter then cold, fifteene leagues from *Sancta Fe* to the North-weſt, the Captaine *Don Gutierre* of *Oualle* built it 1572. in the Prouince of *Tunia*, which tooke the name of the *Cazique*, almoſt to the North, direct to that of *Bogota*, and in all like vnto it: The Citie of *Tunia* ſtands two and twentie leagues from *Sancta Fe*, to the North-eaſt, on a high hill, a ſtrong ſcituation, for the warre with the *Indians*. There goe out of this Citie aboue two hundred Horſe-men, and it is the moſt aboundant of Victuals of all the Borders, and there is the greateſt Market in all the Realme: it hath one Monaſterie of *Dominicke*, another of *Franciſcane* Friers. The Captaine *Gonçalo Xuarez Rondon* built it, for the Preſident *Gonzalo Ximenez* of *Pulſada*. The Citie of *Pamplona* ſeuenty leagues frum *Sancta Fe* to the North-eaſt, hath one Monaſterie of *Dominick* Friers; much Gold is gotten in it, it hath abundance of Cattle: the Bachiller *Michael Diaz* of *Armendariz* peopled it. The Village of Saint *Chriſtopher* is thirteene leagues from *Pamplona* to the North, the Captaine *Franciſco* of *Caceres* built it neere the Prouince of * *Grita*, ſo called becauſe the *Indians* came out of the high wayes to ſhoute and crie after the *Spaniards*, and to kill them: little Gold is gotten in it, and it hath commoditie, for to breede Cattle. 50 60

Gould, and of Wheate. The Citie of *Belez* thirtie leagues from *Sancta Fe* to the North, and fifteene from *Tunia*, hath one Monasterie of *Franciscane* Fryers: the Captaine *Goncalo Ximenez Roudon* inhabited it. *Belez.*

It is a Countrie where many thunderboults fell, and there fall not so many since the holy Sacrament of the Altar is there abiding: it hath one *fierie mouth* that casteth many stones. Thunderbolts.

The Citie of *Mariquita* of *Thague*, by another name Saint *Sebastian of the Gould*, is fortie leagues from *Sancta Fe* to the North-west, the Captaine *Pedroso* peopled it 1551. in certaine Meadowes, leaning to the hill, the temper is very hot. *Mariquita.*

The Citie of *Thague* is three hundred leagues from *Sancta Fe*, almost to the West: it is the first Towne of the *New Realme*, that doth confine with *Popayan*, the Captaine *Andrew Lopez* of *Galarza* peopled it 1551. by commission of the Counsell, for to eschew the harmes these *Indians* did with those of *Tocayma*, and *Cartago*, and for to open the way to the gouernment of *Popayan*, it hath a Monasterie of *Dominicke* Friers. *Thague.*

The Citie of the *Victorie of the Remedies*, fiftie leagues from *Sancta Fe*, to the North-west, is very rich of Mines. The Citie of Saint *Iohn* of the *Plaines*, fiftie leagues from *Sancta Fe* to the South, is a Countrie of much Gould. The Citie of *Tudela* which the Captaine *Peter* of *Vrsua* built, by order of the Bachiller *Don Michael Diuz* of *Armendariz* was disinhabited, because the *Indians* * *Moxcas* receiued hurt by it. *Victorie de los Remedios.* Saint *Iohn of the Plaines.* * Or Flyes.

And there are of the limits of the Counsell of the new Realme, seuen Townes of the gouernment of *Popayan*, *Sancta Fe* of *Antiochia*, *Caramanta*, *Arma*, *Anzerma*, *Cartago*, Saint *Sebastian of the Siluer*, and Saint *Vincent de las Pazes.*

The Merchandize enters this Kingdome, by the great Riuer of *Magdalene*, from the * *Baranca* of *Malamba*, of the iurisdiction of *Cartagena*, and the first that sent to discouer this Riuer, was *Garcia* of *Lerma*, Gouernour of *Sancta Martha* 1531. It entreth into the Sea so broad and strong, that at the passing, the Ships are wont to be in danger, if they goe not somewhat distant, for the combat of the current, and working of the Sea. It hath an Iland in the mouth, it is nauigated more then one hundred and fiftie leagues, and in more then three hundred it is not waded: it commeth from aboue *Popayan* from two Fountaines that are fortie leagues distant, by which ioyning the Riuer is made: it was called of *Magdalene*, because on that day was the mouth discouered, in 12. degrees of height, and six and twenty leagues from *Cartagena.* * Or Watercourse. *Rio Grande* or *Magdalen* Riuer.

The Prouince and Gouernment of *Sancta Martha* in the coast of *Terra firme* is seuentie leagues in breadth and length, betweene *Carthagena* and the Riuer of *Hache*: it is a plentifull Countrie of Millet, and Potatoes, much Gould, and Copper, and some Emeralds, and other Stones: in it are fiue *Spanish* Townes; and though there be many of the Countrie-men, the most are in warre. The President *Bastidas* peopled the Citie of *Sancta Martha* 1525. neere to the Sea, in 10. degrees of latitude, and 74. of longitude, one thousand foure hundred and twentie leagues from *Toledo*, where is resident the Gouernour, and Officers Royall, and the Cathedrall suffragan to the *New Kingdome*. The Port is reasonable. This Gouernment hath foure Prouinces, *Pozignay*, *Betona*, *Chimica*, and *Tayrona*, which signifieth *a Forge*, and with great reason, because in that Countrie are an infinite quantitie of diuersitie of Mettals, and Stones of great esteeme and value. *Sancta Martha.*

Tenerife stands by the border of *Rio Grande* or the great Riuer (which is that of *Magdelene*) fortie leagues from *Sancta Martha* to the South-west, part by the Sea, and part by Land: *Franciscus Enriques* did people it, by order of *Gonçalo Perez* which gouerned in *Sancta Martha*, by Commission of the President *Lugo*. *Tamalameque*, or Village of the *Palmes* is sixtie fiue leagues from *Sancta Martha* to the South, and twentie from *Tenerife*, two leagues from the *Great Riuer*: the Captaine *Bartholomew Dalua* peopled it 1561. The Citie of *los Reyes* in the Valley of *Vpari*, is plentifull of Millet, Prouision, and Cattle, and of much Copper, to the South-east of *Sancta Martha*, fiftie leagues from it, and thirtie from the Riuer of *Hache*: the Captaine *Sanct Anne* peopled it, by commandement of the Bachellor *Michael Diuz*, * *La Ramada* was built before, called first new *Salamanca*, fortie leagues from *Sancta Martha* to the East, and eight from the Riuer of *Plate*, at the ouerflowings of the Snowie Mountaine. It stands in the Valley of *Vpani*, where there is as much Copper as Stone. The Merchandize of this Gouernment goeth vp to the *New Kingdome* by the marsh of this Citie, which is eight leagues from it by the Sea, and afterward twelue vnto the *Barranca* of *Malambo*, in the great Riuer. *Ocanna* is also in this Gouernment, which the Captaine *Franciscus Hernandez* inhabited 1572. and was first called *Sancta Anne*. There is in the Coast of this Gouernment the Riuer of *Buhia*, neere *Ramada*, and the Riuer of *Piras*, and that of b *Palomino*, where a Captaine of this name was drowned, and the Riuer of *Don Iames*, the c *Ancones* of *Buritaca*, and the Cape of d *Aguia* neere *Sancta Martha*, right against the hill of *Bonda*, and the Riuer of *Gayra*, to the West. *Tenerife.* *Tamalameque.* The Kings. * *Sancta Ramada.* *Ocanna.* b Or *Long Pigeon.* c Or *Nookes.* d Or the *Needle.*

The Prouince and Gouernment of *Cartagena*, in the Coast of *Terra firme*, and the North Sea, hath in length East and West, from the Riuer of the *Magdalene*, vnto the Riuer of *Darien*, eightie leagues North and South, and as many vnto the confines of the *New Kingdome*, though men say it is more in Voyage. The Countrie is Mountainous of Hils and Valleys, of high Trees, rainie and moist: the seedes of *Castile* beare no seede, there is no Wheate, nor Gould, but in some places. *Cartagena.*

Digitized by Google

There is much rozen made in ſome Mountaines of this Gouernment, and Gums arromaticke, and other liquors which they get out of the Trees, and great quantitie of *Sanguis Draconis*, and a very fragrant balme of great vertues.

Citie of *Cartagena.*

The Citie of *Carthagena* ſtands neare the Sea, two leagues from the Point of *Canoa*, to the Weſt, in tenne degrees of latitude, and ſeuentie ſix of longitude, one thouſand foure hundred and ſixtie leagues from *Toledo*, of more then fiue hundred houſholds, among them aboue two thouſand women. In it is reſident the Gouernour, the Kings Officers, & treaſurie Royall, and the Cathedrall ſuffragan to the *New Realme*, with Monaſteries of *Dominick* and *Franciſcan* Friers. The ſcituation is plain, and almoſt like an Iland, the Sea compaſſeth it on the North ſide, & it is a rough coaſt, and very ſhallow; and on the land ſide it hath an arme of the Sea which reacheth to a Mariſh, which is the Lake of *Canapote*, which ebbeth & floweth after the order of the Sea, & at the ſame houre, and they paſſe from the Citie to *Terra firme*, by a Bridge and a manner of a Cauſie, which hath aboue two hundred and fiftie paces. The Citie is built on Sand, & within two fathoms they finde freſh water, though ſometimes it is vnwholeſome, not ſo much as the coaſt of *Nombre de Dios*; for the ayres in reſpect of the Mariſh are wont to cauſe diſeaſes, but for the moſt part it is wholſome. The Hauen is one of the leaſt of the *Indies*, though the great Ships doe ride farre from the Citie. It hath at the entrie an Iland like that of *Eſcombrera* in *Cartagena* of *Caſtile*, whereby they called it *Cartagena*, and the Iland was called *Codego*, now they call it *Caxes*, it hath two leagues in length, & little more then halfe a league in bredth: it was wont to be inhabited with *Indian* Fiſhers, & it hath no water. The firſt that ſaw *Carthagena*, in the year 1502. was *Roderick Baſtidas*, & the year 1504. *Iuan de la Coſa* or *Iohn of the Thing* went a ſhore, and found *Lewes Guerra*, and they were the firſt that began the warre with the *Indians*, which were proud and bould, and both men and women fought, with venomed arrows. Afterward returned *Alonſo* of *Oieda*, with *Iohn of the Thing* for Pilot Maior, & *Americo Veſpucio* for Mariner, & ſome years after *Gregorio* of *Obiedo* took vpon him to inhabit *Cartagena*, & performed it not. The year 1532. went *Don Pedro* of *Eredia* born in *Madrid*, and inhabited it, and pacified a great part of the Countrie, though with labour and cunning, becauſe the people were very warlike, and there was a woman that before they could take her, being about eighteene yeeres old, ſlew with her Bow eight *Spaniards*.

Amazonian women.

Valiant *Virago.*

Saint *Iames* of *Tolu.*

The Village of *Marie.*

The Village of Saint *Iames* of *Tolu*, is ſix leagues from the Sea to the South-weſt of *Cartagena* two leagues from it, part by Sea (for by Land it cannot be gone) and part by the Mariſhes and Mountaines. It is a ſound Countrie, of great breedings, and tillage, and fruits of *Caſtile*: the Preſident *Don Peter* of *Heredia* peopled it. The Village of *Marie* thirtie two leagues from *Cartagena*, to the South, is alſo the inhabiting of *Don Peter* of *Heredia*, in the yeare 1534. The Village of * *Sancta Cruz* of *Mopox* is ſeuentie leagues from *Cartagena* by the Sea and Riuer of *Magdalene*, neere whoſe border it ſtands, & whereby they goe about more then halfe the way; it is not ſound being among Quagmires. A Captaine of *Don Peter* of *Heredia* peopled it 1535. The yeare of 1509. the Bachiller *Euſico* (as hath been ſaid) inhabited *Sancta Marie*, the auncient of the *Darien*, which is in this Gouernment, forſaking the Village of Saint *Sebaſtian* of *Bona viſta*, which the ſame Captaine *Alonſo de Oieda* had inhabited, in the furtheſt place of *Vraba*: & afterward the Captain *Alonſo* of *Heredia* inhabited Saint *Sebaſtian* againe, for the Preſident his Brother, in certaine little hils, almoſt halfe a league from the Sea. And in the yeare 1537. the Bachiller *Iohn* of *Vadillo* went out of Saint *Sebaſtian* with a good number of Souldiours, and paſſing many troubles, & moſt rough Mountains, & thick woods, came to the Citie of *Antioquia*, of the gouernment of *Popayan*, & there was a Souldior that from thẽce came to the Citie of the *Plate*, in the *Charcas*, which is 1200. leag.

* Holy Croſſe.

Saint *Sebaſtian.*

The *Barranca.*

* Or *Water-courſe.*

The * *Barranca* of *Malambo*, which is a Cuſtome houſe of the iuriſdiction of *Cartagena*, thirtie leagues from it, on the border of the great Riuer, and twenty from *Sancta Martha*, & ſix from the Sea, where the Merchandize that are carried by Land to the *New Realme* are vnloaden, & from the *Barranca* are carried vp by the Riuer in *Canooes*. Lower then *Nopox* entreth the Riuer of *Cauca* into the Riuer of *Magdalene*, which alſo ſpringeth about *Popayan*: & more toward *Cartagena* and to the Weſt, ſtandeth the *Knobbe*, and the point of *Zamba*, and *Butria del gato* or *Arbolera*, and the ſeuen cottages, and the point of the *Canowe*, two leagues from *Cartagena*, and the point of *Tacaes* at the entrie of the port, right againſt the Iland of *Carex*, and the point of the Ship in *Terra firme*; at the other leſſer entrie of the port, and almoſt to the North, is a little Iland which is called *Sardina*, and in the coaſt of *Tolu* the Ilands of *Baru*, which are ſix, and at the entrie of the Gulfe of *Vraba* the ſix, which are called of Saint *Bernard*, right againſt the Riuer *Zenu*: and more within the Gulfe, the ſtrong Iland, and the *Tortoyſe*. The port of *Zenu* ſtands fiue and twenty leagues from *Cartagena*, it is a great Bay that hath his entrance by the Eaſt, it is ſecure: here they make ſtore of Salt, and it tooke the name of the Towne *Zenu*, which ſtandeth on the Riuer.

El Dorado. Guiana.

In the Prouinces of the *Dorade*, or new *Eſtremadura* (which circuit pertaines to the bounds of the Counſell of the *New Realme*) many Captains haue entred by Sea, and by ſundry parts of the Land, and haue neuer found the riches which the ſame promiſeth. They fall on the other ſide of the Riuer of Saint *Iohn* of *Amazones*, by another name *Orellana* (which ſome erroniouſly wil haue to be the *Meranyon*) and here is the *Orinico*, and other great Riuers, and the Gulfe of *Paria* which maketh the firme land, with the Land of the *Trinitie*, & the mouthes of the *Serpent*, & the *Dragon*,

which

which the first Admirall named, where he saw himselfe in great danger, for the conflict which the fresh waters make there with the salt, whereof he had yet no notice, and here beginneth the flowing of the Sea to be very great, vnto the streight of *Magellan*, and goeth continuing through all the coast of *Piru*, and *New Spaine*. Great Tydes.

The Prouinces of *Piru* (whose name hath extended it selfe more then it was at the beginning) include all the Empire of the *Ingas*, or more; for when it was won it was diuided in two gouernments, that of *Don Franciscus Picarro*, called the *New Castile*, from the *Quito* vnto the *Cuzco*, sixtie leagues below the *Chincha*: and that of *Don Iames* of *Almagro*, called the *New Toledo*, two hundred leagues toward the Streight from *Chincha*; which gouernments were distinct vntil the Councell *de los Reyes* was established, and a Vice-roy prouided for the Kingdomes of *Piru*, in whose gouernment are included, the Councell of Saint *Francis* of the *Quito*, that of *Lima* (or *de los Reyes* of *the Kings*) that of the *Charcas*, the gouernment of *Chile*, & countries of the *Streights*, the Ilands of *Salomon* to the West, and for borders the Prouinces of the Riuer of *Plate*, and that which determinately is comprehended vnder the gouernment of the Vice-roy. It hath in length North and South from two thousand leagues vpward, and East and West, that which is discouered from the South Sea to the North Sea. The two *Rowes* that haue beene spoken of, doe passe through all the Prouinces of *Piru* North and South, that of the *Andes* from *Popayan*, and yet many will haue, that from *Terra firme* and *New Spaine*, till it ends in the * *Streight*, and the other lesse, from the *Quito* vnto *Chile*, along the coast, twelue leagues distant, little more or lesse. *Piru*, or *Peru*. The two *Rowes* of the *Indies* of the South. * Of *Magellan*.

The two wayes passed betweene these two Mountaines, the one which they called of the *Ingas*, by the *Andes* from *Pasto* vnto *Chile*, which hath nine hundred leagues in length; and fiue and twentie foote of Cawsie, and euery foure leagues very sumptuous houses, which they call *Tambos*, where was prouision of victuals and apparell, and euery halfe league men that were in postes for to carry messages, and orders from hand to hand. The other way went through the middest of the Playnes, along the coast of fiue and twentie foote broad, betweene two walls of a mans height, from *Piura* vnto *Chile*, where both the wayes met. And it is to be noted, that all the *Indies* of the South are not to be vnderstood by *Piru*, for as hath beene said, it is not but that which beginneth from Saint *Francis* of *Quito*, which is vnder the Equinoctiall Line, and runneth along vnto *Chile*, going out of the Tropicks, which may bee sixe hundred leagues, and fiftie in breadth, though toward the *Chachapoyas* there is more, and it is diuided in three parts: *The Playnes*, which haue ten leagues in breadth, and in parts lesse, they are the coast of the Sea: *The Hills*, which haue about twentie, and is all Hills and some Valleys: and the *Andes* other twentie, which are most thicke Groues and Woods, and in so little space as fiftie leagues equally distant from the Line and Pole: there is so great diuersitie, that in the one place almost it rayneth alwayes, and in the other almost neuer, which is the Coast, and in the third which is the Mountaines that fall in the middest of these extreames, sometime it rayneth, and sometime not, for it hath his Summer and Winter as in *Castile*: and the causes of not rayning in the Coast, and rayne in the *Andes*, are spoken of in the beginning of the Historie. The two great wayes of *Piru*. Postes. *Piru* is not all the *Indies* of the South. *Los Llanos*. *Las Sierras*. Diuersitie of nature.

Chap. 17. Of the Councell of Saint *Francis* of the *Quito*.

THe bounds of the Councell resident in *Quito*, and confining Northward with that of *Panama*, in the Port of *Bonauentura*, and on the North-east with the *New Realme*, and on the South with that of *Lima*; hath in length by the South coast, which is the place where it lengthens most, about two hundred leagues from the Port of *Bonauenture*, which is in the Gulfe of *Panama*, or of Saint *Michael*, the Port of *Payta* in the coast of *Piru*, and from thence crosse to the vttermost of *Popayan*, more then other two hundred and fiftie, the limits remayning open on the East side: in it is included three Gouernments, besides those of the Councell, which are *Popayan*, *Quixos*, *la Canela*, and that of *Iuan de Salinas*, of the *Pacamoros*, and *Gualsango*, diuided in two Bishopricks. * Or Cynamon.

The Prouince and Gouernment of *Quito*, which the Councell gouerneth, hath in length eightie leagues, from neere the Equinoctiall to the other side, and in it these Townes of *Spaniards* following. The heauen and earth thereof, although it stands vnder the Equinoctiall, is like to that of *Castile*, cleere and faire, rather cold then hot, and in parts where the snow continueth all the yeere, it rayneth from October to March, which they call the winter; and in the other moneths they cut their Grasse, which though it be not long it is fit for the Cattell of *Castile*, whereof there is great store; and of Wheat and Barley, and gold in some places: and in this Region they liue pleasantly, for there is nothing more pleasant for humane life, then to enioy a wholesome and cleere skie, for they haue no Winter to trouble them with cold, nor Summer to molest with heat. The Townes are, the Citie of Saint *Franciscus* of *Quito*, where *Athaualpa* Emperour of *Piru* was borne, it stands in halfe a degree of height from the Equinoctiall, and eightie two from the Meridian of *Toledo*, by a greater circle one thousand sixe hundred eightie sixe leagues from it, and sixtie from the South Sea; it is of fiue hundred housholds: In it is resident the Councell for matters of Iustice, for those of the Gouernment are at the Vice-roy his charge. There are also in this Citie the Officers of the Kings Rents and treasurie Royall, and the Cathedrall of this Bi- *El Quito*. Aire and seasons. *Athaualpa* or *Atabalipa*.

shopricke, Suffragane to the Archbishop of *The Kings (los Reyes)* there are three Monasteries of *Dominicke*, *Franciscan*, and *Mercenarie* * Friars: and in her iurisdiction eightie seuen Townes, or parcialities of *Indians*. In the situation where this Citie was built, were certaine great lodgings which the King *Topaynga* built, and his sonne *Guaynacapa* beautified, and were called *Quito*, from whence the Citie tooke the name; the President *Sebastian* of *Belalcaçar*, a souldier of *Don Franciscus Piçarro* built it, a loyall man to the King, by order of the President *Don Iames* of *Almagro*, which left him for Gouernour of the Prouince when hee went vnto it, hauing ended the agreement with the President *Don Peter* of *Aluarado*.

* Friars *de la Merced*, or *our Lady of Grace*.

Riuer *Bamba*.

The Riuer *Bamba* in the Prouince of the *Peruues*, is a Countrie to *Castile* in the temperature, of herbes, flowres, and other things: it is a towne of shepheards, it stands fiue and twentie leagues to the South-west of Saint *Francisce* of *Quito*, the way to the *Kings*, wherein are fortie thousand head of cattell, the greatest part sheepe. Here the *Yugas* had certaine Royall houses, and here the President *Belalcazar* had a tedious battaile with the *Indians*, and ouercame them, and in this place was the agreement rehearsed of *Don Iames* of *Almagro* and *Don Peter* of *Aluarado*, and in it was the Citie of *Quito* first built.

Cuenca.

The citie of *Cuenca* (which the Marques of *Canyete* commanded to be built, being Vice-roy of *Piru*, which by another name is called *Bamba*, one and fiftie leagues from *Quito* to the South) is a Corregidorship prouided of the Vice-roy, with one Monasterie of *Dominicke*, another of *Franciscan* Friars. In her iurisdiction are rich mynes of gold, some of siluer, and rich mynes of quicksiluer, copper, Iron, and Brimstone. The citie of *Loxa*, otherwise called *la Zarça*, eightie leagues from the citie of *Quito* toward the South, and thirtie from *Cuenca*, is a Gouernourship prouided by the Vice-roy; it hath Monasteries of Saint *Dominicke* and of Saint *Francis*, it stands in the way from *Cuzco* to *Quito*, from whence it is eightie leagues, in the faire Valley of *Cuxibamba*, betweene two Riuers. Captaine *Antonie* of *Mercadillo* built it in the yeere 1546. for to pacifie the countrimen which were somewhat disordered. The citie of *Zamora*, which is called of the *Alcaydes*, is ninetie leagues from *Quito* South-eastward, hauing passed the *Rowe* of the *Andes*: it is a Gouernment prouided by the Vice-roy: it hath a Monasterie of *Franciscans*; they reape no Wheat becausse the countrie is very raynie: it hath rich Mynes of gold, wherin they find graines of foure pound waight and more: the Captaine *Mercadillo* peopled it the yeere 1549. by a couenant with Captaine *Benauente*; It stands twentie leagues from *Loxa*, hauing past the *Rowe* which diuideth the bankes of the South Sea from the North, the *Indians* did call it *Zamara*: that part of the countrie is called *Poroauca*, which signifieth *Indians of warre*: much gold is gotten there, and there hath beene graines brought to his Maiestie of twelue pound waight, and there are Salt-pits of salt-water.

Loxa.

* Or Briar.

Zamora.

Iaen.

The citie of *Iaen* is fiue and fiftie leagues from *Loxa*, and thirtie from the *Chachapoyas*; Captaine *Iames Palomino* built it 1549. in the Prouince of *Chiquimayo*, in that of *Chacaynga*. The citie of Saint *Michael* of *Piura* is in the Prouince of *Chila*, one hundred and twentie leagues from *Quito* South-eastward, and fiue and twentie from the Port of *Payta*, where the bounds of this Councell doth end. It is a Gouernment at the prouiding of the Vice-roy: it hath one Monasterie of *Mercenaries*. Though in this countrie rayne is holden for a wonder, there are good watered grounds, that beare good Wheat and Millet, and the seedes and fruits of *Castile*. The port of *Payta* stands in the iurisdiction of this Citie, in fiue Southerne degrees, which is good, great, and secure, where the ships that goe from *Guatemala* to *Piru* doe touch. The Marques *Don Franciscus Piçarro* built it in the yeere 1531. the first of these Kingdomes, and where the first Temple was erected in the honour of God, and the holy Mother Church of *Rome*. All the Prouince and borders of the Valleys of *Tumbez* are drie, and the high-way of the *Ingas* passeth through these Valleys of *Piura*, betweene trees and pleasant shadowes, and betweene the principall Valley are ioyned two or three Riuers: the Citie was built at the first in *Tangazala*, from whence it was remooued becausse it was a sickly situation, and now it stands betweene two Valleys, and yet is somewhat sickly, especially for the eyes, for the great windes and dusts of the Summer, and great moistures of the Winter.

Saint *Michael* of *Piura*.

Raine a wonder.

Payta.

High-way admirable.

The Citie of Saint *Iames* of *Guayaquil*, by another name *las Culata*, sixtie leagues from *Quito*, and fifteene from the Sea to the South-west, it is a Gouernment prouided by the Vice-roy: the President *Belalcazar* peopled it, and many of the *Indians* hauing rebelled, and slaine many *Spaniards*, the Captaine *Franciscus* of *Orellana* peopled it againe 1537. it is a most plentifull and pleasant Countrie, and hath great store of hony in the hollow places of trees: The waters of this Riuer which runne almost vnder the Equinoctiall, are thought healthfull for the *French* disease, and other such like. Many people went to the Riuer to recouer health, for the multitude of the rootes of *Zarçaparrilla* that are in the Riuer: it is not very great, nor those that run to the South Sea are so bigge as those that runne into the North Sea, becausse they runne but a little way; but notwithstanding they are strong and with sudden flouds, becausse they fall from the Mountaine. The *Indians* doe vse many shifts for to passe them; they haue in some places a rope ouer it, and a basket on it, and the passenger being put into it, they pull him from the other side. In other Riuers the *Indian* goeth riding on a trusse of straw, and carrieth the passenger behinde him: in other

San Iago de Guayaquil.

The Riuers that goe to the North Sea are greater then those that goe to the South Sea.

How the riuers are passed in *Peru*.

Digitized by Google

ther places they haue a great Net of gourds, vpon the which they lay the cloathes and the persons, and the *Indians* fastened with certaine coardes goe swimming and pulling as coach-horses; and a thousand other artes they vse for to passe the Riuers. The Port of this Citie stands neere vnto it, for the Riuer is very broad, whereby they bring vp the merchandise from the Sea, and they goe by land to *Quito*. The yeere 1568. Captaine *Contero* planted the citie of *Castro*, in the Valley of *Vili*, the Licentiate *Lope Garcia* of *Castro* being Gouernour. *Vili* is in the Prouinces of *Bunigando*, *Imdiuono*, and *Gualapa*, which they call the *Prouince of the Emeralds*, and he went about it from *Guayaquil*, and discouered all these Prouinces from *Passao* vnto the Riuer of Saint *Iohn*, which entreth into the South Sea. *Castro.* *Vili.*

10 The Citie of *Puerto Viejo* is about eightie leagues from Saint *Francis* of *Quito* to the West, though not of open way, and other fiftie from Saint *Iames* of *Guayaquil*, whereby yee goe from *Quito*: in her borders stands the *Passao*, which is the first Port of the countrie of *Piru*, and from it, and from the Riuer of Saint *Iames*, began the gouernment of the Marques *Don Francisco Picarro*: and because this countrie is so neighbour to the Equinoctiall line, that it stands in one degree; some beleeue it is vnwholsome, but in other parts as neere the Line men liue with much health, plentie and abundance of all things for the sustenance of man, against the opinion of the ancient: and so it is that the *Indians* of this countrie doe not liue long, and in many of them there breede certaine red warts in the foreheads and noses, and other parts, which beside the disease being grieuous, it disfigureth them very much, and it is beleeued that it proceedeth of eating some filth. * Or old Port.

20 In these bounds stands the towne of *Manta*, whither great riches haue beene brought from within the Land; and it is held for certaine, that here is a Myne of Emeralds, which are the best of the *Indies*, and they grow in a stone like Cristall, and they making like a veine, and by little and little congealing and refining themselues, and of halfe white and halfe greene, they goe ripening and recouering their perfection. The Captaine *Franciscus Pacheco* peopled this citie 1535. by order of *Don Iames de Almagro*: it hath many *Indians* in warre: there is in it a Monasterie of *Mercenarie* Friars, they gather no Wheat, for it rayneth the eight moneths in the yeere from October forward, and there are many good showes of gold. *Manta.* How the Emeralds do grow.

In the coast of this Gouernment are the Ports, Ilands, and Points following. The [c] *Ancon* of [d] *Sardinas*, before the Bay of Saint *Iames*, which is fifteene leagues from the Point of *Manglares* to the South, and then the Bay of Saint *Matthew*, and after the Cape of Saint *Francis*; and past it *Quixmies*, foure Riuers before *Portete*, where the blacke *Moores* that saued themselues of a ship that was cast away, ioyned with the *Indians*, and haue made a towne; the *Passao*, a Point or Port of *Indians*, where they say the Equinoctiall line passeth, neere the Mountaine of *Quenque*, and the Bay of *Carta* which is before old Port, one degree from the Equinoctiall to the South, and fiue leagues from thence the Cape of Saint *Laurence*; and neere from thence the Iland of *Plate*, and forward the Ports of *Calle*, and *Calango*, before the Point of Saint *Helen*, in two degrees hight; the Riuer of *Tumbez* in foure degrees, and the Iland of the *Puna* neere vnto it, and the Iland of *Sancta Clara* somewhat more to the Sea, and *Cabo blanco* fifteene leagues from *Tumbez* to the South, and then the Point of *Parina*, and to the South the Iland of [e] *Lobos*, foure leagues from the Port of *Puyta* abouesaid, and *la Silla*, before the Point *del Aguia*, and the Port of *Tangora*. Ports & Points of the coast of this gouernment. c Or Nooke. d Or Pilchers. e Or white Cape. f Or woolues.

The men of this countrie say, that in old time there came by Sea in Balsas (which are many pieces of timber fastened one vpon another) men so bigge that had as much from the knee downward, as an ordinarie man in all his body, and that they made certaine Wells most deepe in a quicke Rocke, which at this day are seene very fresh and cold in the Point of Saint *Helen*, and that because that they vsed most abominable sinnes, fire fell from heauen and consumed them all, and now are found in that situation exceeding great bones of men, and pieces of teeth of fourteene ounces weight, and in *New Spaine* in the bounds of *Tlascala*, are bones found of the like bignesse. There are in this Point of Saint *Helen*, eyes and veine of Tarre, so perfect that they might calke with it, and it commeth out very hot. The Giants of the Point of *Santa Helena*.

Chap. 18.

Of *Popayan*, *Quixos*, *Caneid*, *Pacamoros*, and *Gualsongo*, which are the rest of the bounds of the Councell of *Quito*.

THe gouernment of *Popayan* one hundred and twentie leagues North and South, from the confines of the Prouince of *Quito*, vnder the Equinoctiall vnto the confines of *Cartagena* by the North, and another one hundred from the confines of new *Realme* by the East vnto the South Sea, wherein are some *Spanish* townes, part of the Councell of *Quito*, and part of the new *Realme*. The countrie is commonly rough and very raynie, and therefore they haue little Millet, and lesse Wheat, and no store of Cattell, but it is rich of Mynes of gold, and the Townes are these following.

The Citie of *Popayan*

The citie of *Popayan* stands in two degrees and a halfe to the Septentrionall part of the Equinoctiall, and 78. and a halfe of longitude, one thousand fiue hundred and eightie leagues from *Toledo*: in it is resident a Lieftenant Gouernour, the Cathedrall, and one Monasterie of *Mercenarie* Friars. The President *Sebastian* of *Belalcazar* peopled this citie 1537. the people of these Prouinces are farre different from that of *Piru*, for these are of greater vnderstanding, and liued in more policie: the men of this gouernment liued as in liberties. It was called *Popayan*, of the name of

the

the *Cazique* Lord of it: it hath part in the coast of the South Sea, and high Mountaines that goe Eastward: and on another side the *Row* of the *Andes*, and on both sides spring many Riuers, and the Riuer of the *Magdalene* is one, which runneth into the North Sea: in this gouernment are many coole and wholesome townes, and others hot and sickly.

Cali. The Citie of *Cali* stands in foure degrees, and two and twentie leagues from *Popayan*, and eight and twentie from the South Sea, it was inhabited 1537. by the Captaine *Michael Munioz*; and *Sebastian* of *Belalcazar* made it first in the townes which are called the * *Gorrones*; it hath the seate in a plaine Valley, leaning to the foot of a Hill, the temper is hot, the Gouernour, the Officers, and the Kings treasure are resident in it; a melting house, a Monasterie of *Mercenaries*, another of *Augustine* Friars. The Port of *Bonauenture* falleth in his iurisdiction in three degrees and a halfe of altitude: in it are some households resident for to receiue the merchandize. The *Indians* of *Cali* are of a good condition, and good Christians, their old Lord was called *Lisupete*.

* Or great Cappes.

Antiochia The village of Saint *Fe* of *Antiochia*, is more then an hundred leagues from *Popayan* to the north-east, in the borders of the Riuer *Cauca*, of the bounds of the Councell of the *New Realme*, and Bishopricke of *Popayan*, rich in Mynes of gold, neere to the Hill of *Buritaca* famous for the much gold that was in it; it is seated in certaine Plaines. The countrie people are good folkes, well made and white, and the temperature is such that they goe to sleepe on the houses, without any offence of the deaw: they breede much Cattell, many fruits, and fish in the Riuers and Plashes: the Captaine *Gaspar* of *Rhodes* inhabited it by commission of the President *Belalcazar*, the yeere 1541.

Caramanta. The Village of *Caramanta* is sixtie or seuentie leagues from *Popayan* to the North-east, neere to the great Riuer *Cauca*, of the bounds of the *New Realme*, gouernment and Bishopricke of *Popayan*, plentifull of Millet and other seedes, without Wheat, and with little Cattell, though they haue many Swine, they goe by the Riuer in fiue or sixe houres to *Antiochia*, though it bee fiftie leagues; for it runneth very swift: it is the plantation of the President *Belalcazar*.

Arma. The village of Saint *Iames* of *Arma*, which hath many Mynes of gold, is fiftie leagues from *Popayan* to the North-east, declining to the East, it is of the *Councell of the new Realme*, the gouernment and Dioceese of *Popayan*; without Wheat or seedes of *Castile*, but plentifull of the countrie seedes. The President *Belalcazar* inhabited this village, and here hee beheaded the Marshall *George Robledo*.

Canibals. Inhumanitie of the *Indians* of the borders of *Arma.* It stands sixteene leagues from *Ancerma*: the people of the countrie are so butcherly that the quicke are the sepulchre of the dead, for it hath beene seene the husband to eate the wife, the brother the brother or sister, the sonne the father, and hauing fatned any captiue, the day that they are to eate him, they bring him forth with many songs, and the Lord commandeth that an *Indian* doe goe cutting off euery member, and so aliue they goe eating him, and after the inhabiting of *Arma* they haue eaten more then eight thousand *Indians*, and some *Spaniards* haue also suffered this martyrdome.

Ancerma. The village of Saint *Anne* of *Ancerma* is fiftie leagues from *Popayan* to the North-east, in the border of *Cauca*, of the *Councell of the new Kingdome*, gouernment and Bishopricke of *Popayan*, without Cattell or Wheat, very much annoyed with thunder-bolts: the Captaine *George Robledo* built it by order of *Laurence* of *Aldana*. Likewise the men of this countrie are eaters of humane flesh; they goe naked, they haue no Idols, nor any thing to worship: there are in this iurisdiction good Mynes of gold; the climate is hot, and many thunder-bolts doe fall.

Cartago. The citie of *Cartago*, fiue and twentie leagues from *Popayan* about the North-east, is of the Councell of the *New Realme*, Gouernment and Bishoprick of *Popayan*, without Wheat or any seedes of *Castile*: it is a temperate and wholesome countrie, of little gold, it rayneth much, they breede no other cattell but Kine, and Mares: they haue many Mountaines, in the which breede many Lions, Tigres, Beares, and * Dantas, and wilde Boares: they haue a Monasterie of *Franciscan* Friars: the Captaine *George Robledo* inhabited it, and it was called *Cartaga*, becaus all the inhabiters were of *Cartagena*.

* Or Buffes.

Timana. The village of *Timana* is fortie leagues from *Popayan* to the South-east, and sixtie from *Santa Fè* of *Bogota*, and thirtie from the Prouinces of *Dorado*; here is a Lieftenant of the Gouernour, which also hath at his charge Saint *Sebastian de la Plata*: the *Indians* of their borders doe decay, for they are so inhumane that in many places they haue publike shambles of men which they take captiue. They haue their seate in the beginning of the Valley of *Neyua*, the temper is most hot: in their bounds is a Mountaine where they digge the Load-stone, and the *Indian Paezes* are neere, and the *Pixaos*, which also are * *Caribes*.

Inhumanitie of these *Indians.*

Where the Load-stone is found.

The Citie of *Guadalaiara* of *Buga*, is fifteene leagues from *Popayan* to the North-east, is of the bounds of the Councell of *Quito*, and Dioceese of *Popayan*. The Citie of Saint *Sebastian* of the *Plate*, in the confines of this Gouernment is thirtie fiue leagues from *Popayan*, and thirtie to the South-west from *Santa Fe*, Dioceese of *Popayan*, where are many Mynes of siluer, and in her borders twentie foure repartitions: it is three leagues from the Port of *Onda*, in the great Riuer of *Magdalen*, where those that come vp from *Cartagena* doe land: it is built in a Plaine, neere to the Riuer *Guala*: there are many Earthquakes, and in Winter it is more hot then cold. The Country-men goe to decay, because the ° *Caribes* which they call *del Rincon* do eate them and haue publike shambles of them, without any remedie for it: and the President *Belalcazar* built this Citie.

* Or eaters of humane flesh.

Buga.

Saint *Sebastian* of the *Plate.*

The Citie of *Almaguer* is twentie leagues from *Popayan* to the South-east; it is plentifull of Wheate and Millet, and other ſeeds, and cattle, and it hath Gold: the Captaine *Alonſo* of *Fuenmayor*, by order of the Licentiate *Briceuyo* Gouernour, and [d] *Iudge of Accounts*, of *Popayan* peopled it, being ſeated in a Hill of *Zabana*, and the climate is freſh, and the people doe weare Cotton-cloth. *Almaguer.* [d] *Hiſp.* Iudge of *Reſidencia.*

S. *Iohn of Truxillo*, and by another name *Yſcauce* is thirtie leagues from *Popayan* to the South-east. The Citie of *Madrigall*, or *Chapanchica*, thirtie fiue from *Popayan* about the South, a rough Countrey, where they neither reape Wheate, nor breed cattell, though they gather Millet twice a yeere in their iuriſdiction: and for the roughneſſe of the Countrey, the men are euill to pacifie, and in this Citie, and in the Citie of *Agreda*, and *Almaguer*, are Mynes of Gold. *Agreda*, and by another name *Malga*, ſtands fortie fiue leagues from *Popayan* to the South-weſt. The Citie of Saint *Iohn of the Paſture*, ſo called becauſe it is a Countrey of many Paſtures, it ſtands fiftie leagues from *Popayan*, about the South-weſt, and as many from *Quito* about the North-east, and in one degree from the Equinoctiall Dioceſſe of *Quito*, in a good ſoyle, of a good climate, and plentifull of Millet, and other prouiſions, with Mynes of Gold; In her borders are 24000. *Indians* of fee, which are not *Caniballs*, but of euill viſages, filthy, and ſimple: they had no Idols in the time of their Paganiſme, they beleeued that after death they ſhould goe to liue in more ioyfull places. The Riuer which they call Whoate, is betweene *Paſto*, and *Popayan*, it is of a very delicate water, and paſſed this Riuer is the Mountayne whither *Gonçalo Piçarro* did follow the Vice-roy *Blaſco Nunyez Vela*, and vnto the Riuer *Augaſmayo*, which is in this Prouince came the King *Guaynacapa*. *Truxillo.* Agreda. Saint *Iohn de Paſtor.* Religion.

Beyond the Riuer *Caliente* or hot Riuer in a Mountayne, is a *firie mouth*, that caſteth ſtore of ſmoake, and it brake forth in ancient times, as the Countreymen doe ſay. The Philoſophers being willing to declare what theſe firie mouthes or *Ætnaes* are, doe ſay, that as in the Earth are places, that haue vertue to attract a vaporie ſubſtance, and to conuert it into water, whereof the continuall ſprings are made: there are alſo places that doe attract to themſelues dry and hote exhalations, which are conuerted into fire and ſmoake, and with the force of them they caſt alſo another groſſe ſubſtance, which is diſſolued into aſhes, or into ſtones, and theſe are the fierie mouthes. Saint *Iohn de Paſto* hath Monaſteries of *Dominicke*, *Franciſcan*, and *Mercenarie* Friers: it is a cold Countrey, with abundance of victuals, it hath Sugar Mils, and many Fruites of the Countrey and of *Caſtile*: when the Captaine *Lawrence of Aldona* built it, hee called it [e] *Villa vicioſa de Paſto*, it ſtands fortie leagues from the South Sea, towards the Iland *Gorgona*. What the *Ætnaes* are, and whereof they proceede. [e] Or the ranke Village of Paſture.

There hath beene diſinhabited, or diminiſhed in this Prouince, the Citie of *Antiochia*, the Village of *Neyua* in the Valley of *Neyua*, twentie leagues from *Tumaina*, and it was through the rigour of the *Indian Paezes*, and *Pixaos*, and for the *Manipos*, in the Valley of *Saldanya*, and the Citie of Saint *Vincent* of the *Paezes*, ſixtie leagues from Saint *Iohn of the Plaines*, in the confines of *Popayan*, which *Domingos Lozano* built, and the Citie of *los Angelos*, twentie two leagues from *Tocayma*, and nine from *Neyua*. There is in the Coaſt which this gouernment extendeth on the South Sea, from the *Cape of Corrientes*, that ſtands in fiue degrees Septentrionall from the Line, the Riuer of *Solimas*, betweene the *Cape of Corrientes* and the Iland *of the Palmes* in foure degrees one third part, and in the Coaſt that lyeth vnto *Gorgona*, the Riuer of Saint *Iohn* among many other which make the Countrey boggie, and right againſt the mouth, the Iland of *Gorgona*, two leagues compaſſe, where *Don Franciſcus Piçarro* was forſaken of all his men, with his thirteene companions. The Riuer of Saint *Lucar*, and the Riuer of *Nicardo*, before the Riuer of [f] *Zedros*, in two degrees from the Line, in which ſtands the Ile *del Gallo*, and after the Port *of the Croſſe*, and the point of *Manglares*, where beginneth the Coaſt of *Quito*. Neyua. Saint *Vincent.* The Angels. Riuers, Capes, and Points of the Coaſt of this gouernment. [f] Or Cedars.

Of the gouernment of the *Quixos*, and *Canela*, there is no more notice, but that it falls to the Eaſt of the Prouince of *Quito*, and part of the South, toward the gouernment of *Iohn of Salinas*; there are in it three *Spaniſh* Townes, with a Gouernour which the Vice-roy of *Piru* prouideth, and in ſpirituall reſpect it is of the Biſhopricke of *Quito*: the Countrey is rough and Mountaynous, without Wheate, and little Miller, with certayne Trees which ſeeme of Cinnamon. The firſt Towne is *Baeça*, eighteene leagues from Saint *Francis of Iuito*, toward the South-eaſt, where the Gouernour is Reſident: the Citie of *Archidona* is twentie leagues beyond *Baeça*: the Citie of *Auila* ſtands to the North of *Archidona*.

The gouernment and Prouince of *Pacamoros* and *Gualſango*, or of *Iohn* of *Salinas* whoſe bounds and limits are one hundred leagues, which were aſſigned him to the Eaſt, from twentie leagues before the Citie of *Zamora*, in the *Rowe* of the *Andes*, and as many more North and South. It is a good Countrey in temper and diſpoſition for Wheate, ſeeds, and cattle, of rich Mynes of Gold where they haue pieces of great bigneſſe: there are in it foure Townes of the Biſhopricke of *Quito*, for the Captaine *Iohn of Salinas* did build them. The Citie of *Valladolid* is in ſeuen degrees height, twentie leagues from *Loxa* to the South-eaſt, hauing paſt the *Rowe* of *Piru*, the Citie of *Loyola*, or *Cumbinamia* is ſixteene leagues to the Eaſt from *Valladolid*: the Citie of Saint *Iames* of the Mountaynes, fiftie leagues from *Loyola*, toward the Eaſt, and in her borders much gold, and very high in touch, and as touching the gold we need not intreat of his excellencies, being *Pacamoros* and *Gualſango.*

In how many sorts the gold is gotten out in *Piru*, and other places.

being holden for the Supreame power in the World. It is gotten in these Mynes in three manners: The first is in *Pippens*, which are whole pieces without mixture of any other Metall, that need not to be purified by fire, and these graines commonly are like a Pompeon Seed, and sometimes bigger: of this gold is found but litle, in respect of the rest. The second sort is in *stone*, which is a vaine that groweth in the stone it selfe, and these stones are found in the gouernment of *Iohn* of *Salinas* very great, all passed through with gold, and some which are halfe Gold, the which is found in Pits and Mynes, and it is hard to worke. The third, is gotten in *powder*, and is the greatest quantitie, and this is found in Riuers, or in places where some streame of water hath passed, and the Riuers of these *Indies* haue many, especially in the Kingdoms of *Chile*, *Quito*, *New Realme of Granada*, and in the beginning of the Discoueries, there were many in the *Weather Ilands*. The highest in touch is that of *Carabaya* in the *Piru*, and that of *Valdiuia* in *Chile*; for it reacheth to twentie three Charracts and an halfe, and yet it passeth.

Barleuento.

Chap. 19. Of the bounds of the Councel or Audience of *The Kings*, or *los Reyes.*

THat which is called *Piru*, is proper and particularly the bounds of the Councell of *los Reyes*, and is comprehended North and South, from sixe vnto seuen Southerne degrees of altitude, which are two hundred and twentie leagues, though in Voyage they put three hundred from the point *del Aguia*, beyond *Payta*, whereby it ioyneth with the Councell of *Quito*, till passing the Citie and Port of *Arequipa*, where beginneth the Councell of the *Charcas*, East and West. The inhabited part of this Councell hath about one hundred leagues from the Coast of the South Sea toward the East, whereby her bounds remayne open vnto the Prouinces of the Riuer of *Plate*, and of *Brasil*, that which is from the *Rowe*, where, as hath beene said, it rayneth continually, vnto the Sea, they call the *Plaines of Piru*, in the which it neither rayneth nor thundreth, because the great height of the Mountain doth shelter the Plaines in such sort, that it permitteth no wind from the Earth to blow, whereby the Sea wind reigneth, which hauing no contrary doth not represse the vapours that doe arise to make raine, in sort that the shelter of the Hill hindereth the thickning of the vapours: and this want of matter causeth that in that Coast the vapours are so thinne, that they make no more then a moyst or dankish mist, which is profitable for their sowings, which haue not without the [h] mist so much vertue, be they neuer so much watered. The Countrey is all sandie grounds, except the Valleyes which are made by courses of the Riuers, that descend from the Mountayne, where much Corne is gathered by the waterings, Wine, Oyle, Sugar, and the other Seeds, and Fruits, of *Castile*, and of the Countrey. In the skirts and hils sides of the Mountayne, are great Pastures and breedings of cattell, and the temper variable, and as would be desired; for the height is cold, and the low hot, and the middlemost partakers of the extreames, as they are more or lesse neere them. The gouernment of this Councell, and of *Quito*, and of the *Charcas*, is in the charge of the Vice-roy, and there are the Townes following in the circuit of this Councell.

Mountaines cause that it rayneth not in the *Playnes* of *Piru*.

h Some are of opinion that all plants and trees are nourished by vapours: yea that the vapours of the bloud nourish liuing Creatures. So *Gen.* 2. a mist in Paradise, &c. The Sunne as Head of the World, the Hart as Sunne in the Body, causeth nourishment by vapours.

The Citie of the Kings (or of *Lima*, because the Valley is so called, which was the name of the *Cazique*, and it is the greatest and broadest Valley, of all those that are from *Tumbez* vnto it) stands neere the South Sea, in twelue degrees of Southerne altitude, and eightie two from the Meridian of *Toledo*, distant from it about one thousand eight hundred and twentie leagues by a greater circle: it hath aboue three thousand households: the Marques *Don Franciscus Picarro* built it, in the beginning of the yeere 1533. because suspecting that the President *Don Peter* of *Aluarado* would come downe to the Sea coast, when hee went with an Host from *Guatemala* meanewhile that *Don Iames* of *Aluarado* went to resist him to the Prouinces of *Quito*, hee went to intercept him the passages of the Sea. Neere this citie, on the East side, passeth a Riuer from whence all the houses doe take water, and their gardens, wherein are excellent fruits of *Castile* and of the Countrie, and it is one of the best Climates of the World, seeing there is neither famine nor pestilence; nor doth it rayne or thunder, nor fall there any thunder-bolts or lightnings, but the Heauen is alwayes cleere and very faire.

The Citie of *The Kings*, or *los Reyes.*

In this Citie is resident the Vice-roy, the Royall Councell, an assembly of chiefe Iustices, the Officers of the Kings Rents, and treasurie Royall, the Tribunall of the holy and generall Inquisition, which was founded when the Inquisition of *New Spaine* was. The Inquisitor generall in these Kingdomes was then the Cardinall *Don Iames* of *Espinosa* Bishop of *Siguença*, it hauing proceeded with mature deliberation, for the augmenting of our holy Catholike Faith, and Christian Religion. There is also in this Citie an Vniuersitie, where very learnedly the Sciences are read, and Schooles of diuers languages of the *Indians*, in the which the Fathers of the Companie of Iesus are very diligent, to reape fruit in the preaching of the Gospell. In this Citie is the Archepiscopall resident, whose Suffraganes are the Bishops of *Chile*, *Charcas*, *Cuzco*, *Quito*, *Panama*, *Nicaragua*, and the *Riuer of Plate*. There are three Parishes, and fiue Monasteries of the foure Orders, and of the Companie of Iesus, and two of Nunnes. *Callao* which is her Port, is two leagues from it, great, capable, and very good, where are store of houses, one of Iustice, a custome House, one Church, and one Monasterie of *Dominicke Friars*: here hath beene seeene the Wine and the Water set to coole in the Sea in flaggons, whence it is inferred that the Ocean hath the vertue to temper and refresh the ouer-much heate. Many doe affirme that in this Citie are twelue

Such holinesse of faith, such meanes to establish it, forcegluing lips and Lettice together, as *Acosta* complayneth. Vniuersitie and Iesuites. Sea cooleth.

twelue thousand Women of all Nations, and twentie thousand blacke-*Moores*. Women and Negros.

The Village of *Arnedo* in the Valley of *Chancai*, is ten leagues from *The Kings*, and halfe a league from the Sea, with a Monasterie of *Dominicke* Friars, rich of Vines: the Earle of *Nieua* built it. The Village of the * *Parrilla*, or *Santa*, is by the Valley where it stands, fiftie fiue leagues from *The Kings*, and fifteene from *Truxillo* neere the Sea, neere to a great and faire Riuer, with a good Hauen, in nine degrees, where the ships that saile by the coast of *Piru* doe touch. The Citie of *Truxillo* is in the Valley of *Chimo*, which *Don Iames* of *Almagro* plotted first, and afterward the Marques *Don Franciscus Piçarro* built it in the yeere 1533. It hath many Vines and fruits of *Castile*, and Wheat: it is all watered ground, and a wholesome Countrie, and there bee great Orchards of Oranges, and breeding of Poultrie. It stands in seuen degrees and a halfe, eightie leagues from *Lima* neere the Sea, with Monasteries of Saint *Dominicke*, Saint *Francis*, and Saint *Augustine*, and another of the *Mercenaries*, and Officers Royall, prouided by the Vice-roy: and in her bounds about fiftie thousand tributarie *Indians*, in two and fortie repartitions. The Port is two leagues off in an open Bay, euill, and of little securitie. The Village of *Miraflores* is in the Valley of *Zana*, ninetie fiue leagues from the Citie of *The Kings* to the North side, and neere to the Sea. The Citie of *Chachapoyas*, or Saint *Iohn* of the Frontier, is aboue one hundred and twentie leagues from the Citie of *The Kings* to the North-east, it hath one Monasterie of the *Mercenaries*, and another of the *Franciscans*: in her bounds are Wheat, Millet, and Flaxe, many Mynes of gold, and more then twentie thousand tributarie *Indians*, which held out valorously a long time against the *Ingas*, but in the end they were ouer-come, and for greater quietnesse of the Countrie they carried many of them vnto *Cuzco*, and they inhabited in a Hill which is called *Carmenga*. These are the whitest and best fauoured *Indians* of all the *Indies*, and the Women very faire. The Marshall *Alfonsus* of *Aluarado*, entred in this Prouince the yeere 1536. by order of the Marques *Don Francisco Piçarro*, and pacified it, and built the said Citie in a strong situation called *Leuanto*, and afterward he passed to the Prouince of the *Guancas*.

* Or *Gridiron*.

Truxillo.

Miraflores.

Chachapoyas.

Faire *Indians.*

The Citie of Saint *Iames* of the Valleys, or *Moyobamba*, more then one hundred leagues from *The Kings* North-eastward, and fiue and twentie from Saint *Iohn* of the Frontier, stands in a very rayne soile, and plentifull of Cattell: The Citie of *Lion* of the *Guanuco*, fiftie leagues from the Citie of *The Kings* to the North, neere the high-way of the *Ingas*, somwhat distant towards the East, hath Monasteries of *Dominicans*, *Franciscans*, and *Mercenaries*, and in her bounds thirtie thousand tributarie *Indians*, *Anno* 1539. for the warre that the Tyrant *Ylotopa* made to this Prouince, the Marques *Don Franciscus Piçarro* sent Captaine *Gomez* of *Aluarado* which built it, and afterward it was disinhabited, and *Peter Barroso* reedified it, and after the battell of *Chupas* the Licentiate *Vaca de Castro*, sent Captaine *Pedro de Puelles* to make an end of the plantation. It stands in a good and wholesome situation; abundant of victuals and Cattell: it hath Mynes of siluer, and the people is of good capacitie. They reape much Wheat, for the *Indians* haue learned to be good husbandmen: for as before in these *Indies* there was no Wheat, nor Barley, nor Millet, nor Panick, nor any seede of the bread of *Castile* of *Europe*, and they knew other kindes of Graine and Rootes, only of the which Mayz or Millet was the principall, being found in all the *Indies*; the Countrimen haue since delighted much in it, and haue receiued it well in those places where it is gathered, because the Mayz is not so strong nor of so much substance as the Wheat: it is fatter, and hot, and engendreth bloud, it groweth in Canes, and beareth one or two bunches, and some *Spaniards* doe eate it where they haue no other shift.

Saint *Iames* of the Valleys.

Lion of *Guanuco.*

Qualities of the Millet.

The Citie of *Guamanga*, or Saint *Iuan* of the Victorie, sixtie leagues from *Lima* to the South-east, in the way of the *Ingas*, Bishoprick of *Cuzco*, hath Monasteries of *Dominicans*, *Franciscans*, and *Mercenaries*, and one of Nunnes, and in her bounds more then thirtie thousand tributarie *Indians*: it is plentifull of Wheate and Wine, and rich of siluer Mynes. The Marques *Don Franciscus Piçarro* built this Citie 1539. and placed it the first time in a towne of *Indians* called *Guamanga*, neere to the great *Row* of the *Andes*, and left for his Lieftenant the Captaine *Francisco de Cardenyas*. Afterward it was remoued to the Playne where now it is, neere to certaine small Hills on the South side, and nigh to a Brooke of good water. In this Citie are the best houses in *Piru*, of stone and bricke; the seate is healthfull, without offence of the Sunne, the Aire, the Deaw, or the Moisture, or the Heate. There are found in her borders certaine great buildings (which the *Indians* say certaine white men with beards, which came thither before the *Ingas*, did build) much differing from the building of the *Ingas*: the most of the Countrimen of this Countrie are *Mitmaes*, which is to say, *Transplanted*; for the *Ingas* did vse for the greater securitie of the Empire, to take from one Prouince the people they did not trust, and send them to liue in another.

Guamanga.

Great buildings.

Transplanting as of *Egyptians* *Gen.* 43. 24. the *Israelites*, 2. *Reg.* 17. *Iewes* to *Bab.* &c.

Guamanga is sixtie leagues from *Cuzco*, and in the way are the Hills and Playne of *Chupas*, where *Vaca de Castro*, and *Don Iames de Almagro* the yonger did fight; and forward are the buildings of *Vilcas*, in the high way in *Andahaylas*, eleuen leagues from *Guamanga*, which was the centre of the *Ingas*; and here was the great Temple of the Sunne. The Prouince of the *Andahaylas* is long and hath much tame Cattell, and victuals; from thence they come to the Riuer of *Abancay*, nine leagues neerer *Cuzco*, where the President *Don Iames* of *Almagro* the elder ouer-

Temple of the Sunne.

threw

threw and apprehended *Alfonso* of *Aluarado*, Generall of the Marques *Don Francisco Picarro*. There followeth the Riuer of *Apurima*, eight leagues from *Passado*, or the *Passage*, which is very great; and then the Hill of *Vilcaconga*, where the said Presidente *Almagro* ouer-came a great battell of the *Indians*, before he won *Cuzco*, and the Valley of *Xaquixaguana* is neere betweene two rowes of Hills, not broad nor long, where the Presidente *Pedro la Gasca*, by the vertue of those valiant and faithfull Captaines *Tuojosa*, *Peter* of *Valdibia*, *Gabriel* of *Rojas*, *Alfonsus* of *Aluarado*, and others (of the which in their place shall be made mention particularly) did ouer-throw *Gonçalo Picarro*, and tooke him: and from this Valley to the Citie of *Cuzco* are fiue leagues: and in this Valley they gather great store of Wheat, and haue great store of Cattell.

Chap. 20. Of that which remayneth of the Councell of the Kings.

EIght or ten leagues from the Citie of *Guamanga*, some what North-westward, are the Mynes of *Guancabelica*, which they call *El Assiento de Gropesa*, where ordinarily are resident more then three hundred *Spaniards*. The *Indians* did worke in them to take out the red Oaker, to paint themselues when in the time of their Paganisme they went to warre, which is the Vermillion: and the Licenciate *Lope Garcia* of *Castro*, gouerning in *Piru* in the yeere 1566. a *Portugall* called *Henrie Garces*, considering that of the Vermillion the quick-siluer is gotten, went to make a triall, and found it to be so. This metall the *Romanes* carried from *Castile* in stone, and out of it they got quick-siluer, and held it for great riches. The *Indians* knew it not, nor minded any more then the vermilion. The greatest profit it yeeldeth, is to purifie the siluer from the earth,

Profit of quick siluer.

Lead, and Copper, wherewith it groweth: it eateth all the other metals, and pierceth them as the Tin, Iron, and Lead, and therefore they carry it in leather, or vessels of earth. Quick-siluer serueth also for other effects, and medicinall matters.

Spring turning into stone, and killing.

In this seat of *Guania Velica* is a spring, that as it springeth it congealeth in a soft stone; of the which they make their houses, and the Men or Beasts that doe drinke it, die: for within the body it conuerteth into a stone. In the Bathes that are called of *Inga* neere the *Cuzco*, are

Hot and cold Bathes.

two spouts of water the one neere the other, the first is hot, and the second cold, that it seemeth God did place them there for to temper themselues. In the same bounds is a Spring, that

Salt spring.

as it springeth it becomes good and white salt: in this place the two great *Rowes* doe begin to

Cordilleras or rowes diuided.

separate themselues, and make in the middest a great Champaine ground, which is called the

Collao.

Prouince of *Collao*, where are very many Riuers, and there is the great Lake of *Titicaca*, and great pasture grounds. Though it be a plaine Countrie, it hath the same height and distemperature of the Hills; it hath no Trees, nor Wood; the bread that is eaten are rootes that are called *Papas*, which grow also in all *Piru*; it is a healthfull Countrie, and much inhabited, and multiplieth euery day; it hath store of Cattell of all sorts.

The Lake *Titicaca.*

The Lake of *Titicaca* compasseth eightie leagues, and in some places it hath eightie fathom deepe, and in this, and in the waues are raysed when there is any winde, so that it seemeth as a Bay of the Sea, from which it stands about sixtie leagues, twelue or thirteene Riuers enter into it, and many Brookes, and from it goeth a Riuer into another Lake, which they call the *Aulagas*, which hath no voyding place, though because some *Eyes* of water haue beene seene that vnder ground goe into the Sea, it is iudged that it might bee the water of these Lakes did goe, opening a way through the entrailes of the Earth vnto the Sea. Round about the great Lake are many Townes, and in it great Ilands, with great Tillage in them, and there were the *Indians* wont to keepe their most precious things for greater securitie.

Cuzco.

The great Citie of *Cuzco*, Seate Royall of the *Ingas*, and Head of their Empire (and now of the Kingdomes of *Piru*, by a Title which it hath of it from the Kings of *Castile* and *Lion*) stands in thirteene degrees and a halfe height, seuentie eight of longitude, one hundred and fiue and twentie leagues from the Citie of *The Kings* to the South-east, of more then one thousand *Spanish* housholds; the Marques *Don Francisco Picarro* founded it. It hath eight Parishes, and foure Monasteries of the foure Orders, of Saint *Dominicke*, Saint *Francis*, Saint *Augustine*, the *Mercenaries*, and the Companie of Iesus, and one of Nunnes. Heere is resident the Cathedrall, Suffragane to the Archbishoprick of *The Kings*. There goe from this Citie since the

Foure high wayes most admired.

time of the *Ingas* from the Market place foure high wayes towards the foure parts of the world; one called *Chinchasuyo* to the North, toward the Playnes and Prouince of *Quito*: another *Condesuyo*, to the West toward the Sea: the third called *Collaosuyo*, to the South and *Chile*: and the fourth to the East, which they call *Andesuyo*, which goeth to the *Andes* and skirts of the Mountaine. It stands in a soile of a good temper, moderately fresh and healthfull, free

No venemous wormes.

from all venemous wormes, and plentifull of all things, with a thousand kindes of fruits of *Castile*, and smelling herbes and flowres at all times which are of great delight. In her iurisdiction is the Valley of *Toyma*: there is great trafficke of Coca, and showes of Gold, Siluer, and Quick-siluer; and there may bee in her borders about an hundred thousand tributarie *Indians*. In all the parts of these *Indies* the *Indians* haue a great delight in carrying ordinarily in the mouth Rootes, Boughes, or Herbes, and that which they most vse in all *Piru*, is the

Coca a tree.

Coca, for as they say, they feele little hunger, and finde themselues with great vigour

chewing

Digitized by Google

chewing it alwaies, though it rather seemeth a custome inherited, or a vice. This is planted, and groweth to small trees, which are cultivated and cherished, and yeeld a leafe like myrtle, and dried they carry it in baskets to sell, and much mony is gotten by it.

In the Valley of *Vilcabamba*, stands Saint *Francis of the victorie* in *Andesuyo*, between the *Row* of the *Andes*, about twentie leagues from *Cuzco* to the East side, with a Gouernour prouided by the Vice-roy: it is of the Bishopricke of *Cuzco*, in a rough ground, and of great Mountaines. Saint *Francis* of the victorie.

The village of Saint *Iohn del Oro*, is in the Prouince of *Carabaya* eightie leagues from *Cuzco* to the East South-east, and thirtie to the East from the Lake of *Collao*, and it is called *del Oro, of the Gold*, for the great store that is in her borders. The Citie of *Arequipa* is in sixteen degrees somewhat more, one hundred and thirtie leagues from the Citie of *The Kings*, almost to the South-east as the Coast runneth, and sixtie from the Citie of *Cuzco*, of the Bishopricke of *Cuzco*: it hath Monasteries of *Dominicks*, *Franciscans*, and *Mercenaries*; it hath fiftie thousand tributarie *Indians*, and is of most pleasant temperature to liue in of all places in *Piru*. They gather in her borders great store of Wine, and Wheat. The Port is at the entrie of the Riuer *Chile*, which passeth neere the Citie where the merchandize is vnladen. Saint *Iohn* of the Gold. *Arequipa*.

Arequipa stands in the Valley of *Quilca*, fourteene leagues from the Sea. In her iurisdiction is the Prouince of *Condesuyo*, the Townes of the *Hubinas*, *Gollaguas*, *Chiquiguanita*, and *Quimsfaca*; the Marques *Don Francisco Picarro* built it 1534. it is very subiect to earth-quakes as all these *Indies*, especially the Sea coasts. In the yeere 1582. there was an earth-quake that almost ruinated this Citie, and since there hath beene another, and a breaking out of a *fierie mouth*, whereof they tell strange things, in the yeere 1586. There was another in the Citie of *the Kings* the ninth of Iuly, which ran one hundred and seuentie leagues in length by the Sea side, and fiftie within the Land; it spoyled the Citie, indangered few people, because they went out into the fields, and a little after the earth-quake was past, the Sea went out of her bounds, and entred a great way within the Land fourteene fathom deepe. Such another earth-quake was in *Quito* the next yeere, in the Citie of *la Paz* in the yeere 1581. a great high Rocke fell which tooke vnder it a great many *Indian* witch trees, and the earth which fell did run one league and a halfe. In *Chile* was another great earth-quake that ouer-threw Mountaines and Valleys, stopped the Current of the Riuers, brought the Sea out of her limits the space of some leagues, cast downe whole Townes, and slue many men. The Philosophers say that the earth-quake proceedeth from the heate of the Sunne, and of other celestiall Bodies, which not onely doe draw the exhalation to themselues, and the vapour of the superficies of the earth, but that also which is in the bowels of it, which comming out engendreth windes and rayne; and if it happen that the earth is so close that the exhalation cannot come out any way, then it mooueth from one part to another through the pores of the earth, with great violence breaking forth, as the powder in a Myne, tearing with such a furious rage, that it quaketh the earth where it is, and openeth it selfe a way with great furie, and so much more furious it is, how much more the exhalation inclosed is greater. Earth-quakes in the *Indies* very terrible and strange. From whence the earth-quakes doe proceede.

The Village of Saint *Michael de la Ribera* is sixe leagues from the Sea, in the Valley of *Camana*, one hundred and thirteene leagues from *The Kings*, two and twentie from *Arequipa* to the part of the Equinoctiall, of the Bishopricke of *Cuzco*. The Village of *Valuerde* in the Valley of *Yca*, fiue and thirtie leagues from the Citie of *The Kings*, ten from the Port of *Saugalla*, is of the iurisdiction of *The Kings*, and of the Archbishopricke; her borders are plentifull of Wheat, Millet, and Fruits, and of much Wine. Saint *Michael* of the *Riber*. *Valuerde*.

The Village of *Caueta*, or of *Guarco*, by the Valley where it stands, is distant from *The Kings* fiue and twentie leagues to the South, one league and a halfe from the Sea: her bounds are plentifull of bread the best of this Kingdome, whence is carried great quantitie of meale to *Terra firme*. Before the comming to this Valley, are the Valleys of *Chilca*, and *Mala*; in the first it neuer rayneth, neither passeth any Fountaine nor Brooke through it, and they drinke of the Wells, and it is full of arable grounds, and fruits, which grow onely by the deaw of the Heauen. They catch many Pilchards in the Sea, and with euery graine of Millet they put into the hole where it is sowen one or two of the heads, and with that moysture it groweth well. In the Valley of *Mala*, *Don Iames* of *Almagro*, and *Don Francisco Picarro* being in quarrell, the father *Bonadilla* of the *Merced* or *Mercenarie* Order, as an Arbitrator resolued their differences; through this Valley passeth a great Riuer, which doth them great pleasure. Fiue leagues forward is the Riuer of *Guarco* in a Valley most plentifull in all things, where the Countrimen maintayned the warre foure yeeres against the *Ingas*, and to preserue it they caused to build a Citie, and called it *Cuzco*, and erected for the triumph of the victorie a great Fortresse on a Hill, that the waues of the Sea doe beate vpon the stayres. Sixe leagues from *Guarco* is the Valley of *Chincha*, famous, pleasant, and very plentifull, where a Monasterie of *Dominicke* Friars was built in stead of the Temple of the Sunne which the *Indians* had, with the Monasterie of the Virgins. Then followeth the Valley of *Yca*, which is no lesse, nor lesse plentifull, going out of the Valleys, and Riuers of the *Nasca*, and the principall is called *Caxamalca*, where excellent Wines are made. They goe from these Valleys to that of *Huaura*, where stands *Guaura*, *Camana*, and *Quilca*, which is the Port of the Citie of *Arequipa*, and forth are the Valleys of *Chule*, and *Tambo*. Fertilitie without raine. Pilchards. *Guaura*.

Tambopalla, and the *Deylo*, and them of *Tarapaca*, Riuers and plentifull, with good Mynes of siluer, and neere the Sea: the *Indians* of the Ilands of *The Seules* doe carry great store of Fowles dung for their grounds, wherewith of a barren, they make a plentifull ground.

Ports, Capes, and Points of these Bounds of the Counsel of *The Kings*.

There are in the coast of this Councel from the Point *del Agoia*, of *the Needle*, where it ioyneth with that of *Quito*, in sixe degrees of Southerne altitude, the Ilands and Ports following; two Ilands which they call *de Lobos* in seuen degrees, the one foure leagues from the Coast, and the other more to the Sea; and forward another called of Saint *Rocke* to the South-east, neere to *Pazcamayo*, and forward *Puerto de Mal Abrigo*, ten leagues before the Port of *Truxillo*, in seuen degrees and a halfe, and seuen leagues from the Port of *Guanape*; and of *Santa* in nine degrees, and fiue leagues from this to the South, *Porte Ferrol*; and sixe from it that of *Casma*; and afterward eight leagues the Port of *Guarmey* at the mouth of a Riuer; and the *Barrancas* twentie leagues to the South; and the Port of *Gaura* where is a very great Salt-pit; and after this the Iland of *Lima*, at the entrie of the Port of *Callao*; and twentie leagues to the South the Point of *Guarco*, and one Iland *de Lobos Marinos*, or *Seale fishes* neere to it, and the Point of *Chica* in fifteene degrees, and neere to the *Nasca*; and forward the Point of Saint *Laurence*, in the Valley of *Quilca*, and neere the Riuer of *Arequipa*, and the Creeke of *Chuliou*; and afterward the Riuer of *Nombre de Dios*, where the limits doe ioyne by the Coast of the Counsels of *The Kings*, and of *Charcas*.

Chap. 21. Of the Bounds of the Counsel or Audience of the *Plate*, or of *Charcas*.

THe bounds of the Counsell of *Charcas* (which passeth limits with that of *The Kings*, stands in twentie degrees and a halfe of Southerne altitude, by the Riuer of *Nombre de Dios*, and the beginning of the Lake of *Collao*) hath in length three hundred leagues vnto the Valley of *Copiapo*, beginning of the Prouince of *Chile* in eight and twentie degrees of height, though in voyage they are reckoned neere foure hundred leagues East and West, that which is betweene of the South Sea vnto the North Sea, or South which answereth to the Prouinces of the Riuer of *Plate*, which though it is not altogether discouered, it is vnderstood that by placing all the Countrie of this Counsell in such altitude, it is more cold then hot.

The Gouernment of this Counsell, is at the charge of the Vice-roy of *Piru*, as that of the Counsell of *Quito*, and of *The Kings*: there are two Gouernours, and two Bishopricks, that of *Charcas* and *Tucuman*. The Prouince of the *Charcas* (which commonly is named that which is from the bounds of the Counsell of *The Kings*, till they passe *Potosi*) hath in length North and South about one hundred and fiftie leagues, and as many East and West; a Countrie not very plentifull, though abundant of Cattell, especially in *Collao*, that is from the Lake of *Titicaca* vnto *Charcas*, where the Winter and Summer are contrarie to *Europe*: it is a plentifull Countrie of all Cattell, especially of sheepe, which are many, and of a very fine wooll.

In this Prouince are foure Townes of *Spaniards* of one Bishopricke, which are the Citie of the *Plate*, which the Captaine *Peranzures* inhabited, in the yeere 1583. by order of the Marques *Don Francisco Picarro*. It stands in seuentie two degrees of longitude from the Meridian of *Toledo*, from whence it may be distant by a greater circle one thousand seuen hundred and eightie leagues, and in nineteene degrees of latitude, one hundred seuentie fiue leagues from *Cuzco* to the South, or Antartick Pole within the Tropicks, in the vttermost of the Torrid Zone. There are in the borders of this Citie in *Chacaras* (which are manured grounds) eight hundred *Spanish* housholds. It is a Countrie extreme cold, whereas it should be temperate or hot, according to the height of the Pole ie stands in: the Counsell and the Cathedrall is resident in this Citie, and there are Monasteries of *Dominicks*, *Franciscans*, *Augustines*, and *Merciemarie* Friars, and in her iurisdiction sixtie thousand tributarie *Indians*, diuided in nine and twentie repartitions, and the feedes of *Castile* doe grow well, and there are many rich mynes of siluer.

Heredades de grangerias.

Our Lady of the Peace.

The Citie of our *Lady of the Peace*, by another name the *New Towne*, and *Chuquiabo*, in the middest of the *Collao*, one hundred leagues from *Cuzco*, and eightie from the *Plate*, hath Monasteries of *Franciscans*, *Augustines*, and *Merciemaries*, with store of Wines and Cattell. Captaine *Alfonsus* of *Mendoça* built it 1548. when was President the Gouernour of *Piru*, the Licenciate *Pedro de la Gasca*, afterward Bishop of *Siguença*. The Prouince of *Chicuito* in *Collao*, somewhat North-east from the Prouince of *Plata*, more then an hundred leagues from it, inhabited by *Indians*, with a *Spanish* Gouernour, of the Bishopricke of *Charcas*, and one Monasterie of *Dominicks*, hath much Cattell, and it stands at the border of *Titicaca*.

Chicuito.

Oropesa.

Oropesa, is a plantation of the Vice-roy *Don Francisco de Toledo*, in the Valley of *Cochabamba*, twentie leagues from the Citie of *la Plata*; their husbandrie is crops of Wheat, Millet, and Cattell.

Potosi.

The Imperiall Towne of *Potosi* is in nineteene degrees of altitude, eighteene leagues from the Citie of the *Plate*, and about eight from the Lake of the *Aulagas* to the East, in the skirt of the Hill of *Potosi*, that looketh to the North-east; it hath fiue hundred housholds of *Spaniards* which doe attend the mynes, and of Merchants, and about 50000. *Indians* of ordinarie goers and commers to the traffique of the siluer. And though it be a Towne of it selfe, it hath no Rolle, but that of the citie *de la Plata*. There reside the Officers, and Royall treasurie of this Prouince, for the mynes of the Hill of *Potosi*, which a *Castillano* discouered 1545. called *Villarel*, by meanes of certaine

taine *Indians*; and it is called *Potosi*, because the *Indians* doe so call Hills and high places; and the siluer was so much that they got at the beginning in the yeere 1549. euery Saturday, that when they cast it, there came to the Kings fifts from fiue and twentie to thirtie thousand Pesos. The Hill is flat and bare, their habitation drie and cold, vnpleasant, and altogether barren. It bringeth forth no fruit, graine or herbe, and because of the siluer it is the greatest inhabiting of the *Indies*, which hath about two leagues in circuit, and where all kinde of dainties are found, and plentie, though brought thither by carriages. The colour of the ground of the Hill draweth towards red, darke. The forme is like a Sugar loafe, that ouer-peareth all the other Hills that are neere it: the going vp is rough, and yet they goe vp on horse-backe; it extendeth a league, and from his top to the foote is about a quarter of a league. It hath on all sides rich veines of siluer, from the top to the foote, and the Port of *Arica* whereby the merchandize come, and the siluer of this Hill is carried, is from it about ninetie leagues, almost West. *Arica.*

Sixe leagues from the aforesaid Hill in the way of the Port of *Arica*, is the Hill of *Porco*, an ancient seate of Mynes of siluer: whence it is affirmed the *Ingas* got the greatest part of the siluer that was in the Temple of the Sunne of *Curiancho*, whence yet is and will much siluer be gotten. *Porco.*

Santa Cruz de la Sierra stands one hundred leagues from the *Charcas* to the East, in the way whereby they goe from the *Charcas* to the *Assumption*, in the Prouinces of the Riuer of *Plate*, whitherto they make three hundred leagues iourney, with a Gouernour prouided by the Viceroy, of the Diocesse of the *Charcas*, and one Monasterie of *Mercenaries*, in a Countrie scarce of water, though plentifull of Wheat, Wine, and Millet. This Prouince hath neighbourhood with many Nations of Infidell *Indians*, and many of them are alreadie baptized, and the first that strooke a deuotion in the Countrimen, was a *Spanish* Souldier, * that was among them, fled for faults; which for a great anguish they were in for water made them a great Crosse, and perswaded them to worship with great deuotion that same Crosse, and to aske water; and God for his mercy heard them, and sent them much raine in the yeere 1560. The Captaine *Nuflo* of *Chaues* went out of the Citie of the *Ascention* in the Riuer of *Plate*, to discouer, and comming to *Sancta Cruz* of the Hill, hauing made great discoueries, the people came vnto him, and seeming to him that hee was neere to *Piru*, went to the Citie of *The Kings*, where the Marques of *Canyete* was Vice-roy, and with his order, and for Lieftenant of his sonne *Don Garcia* of *Mendoça*, the Captaine *Nuflo* of *Chaues* went againe to inhabit this Citie, though he came out of the Riuer of *Plate*, with purpose to discouer the Prouinces of the *Dorado*. The holy crosse of the Hill. * This Apostle after his miracles, many was for wickednes hanged at *Potozi*. See *Acd.* 7. *c.* 27.

In the Coast of this Councell, which beginneth in seuenteene degrees and a halfe in the Riuer of *Nombre de Dios*, or *Tambopalla*, is the Port of *Hilo* neere to a Riuer, in eighteene degrees and a halfe, and more to the South, *El Morro de los Diablos*, and the Port of *Arica* in nineteene degrees one third part, and that of *Tacama* in one and twentie, and the Point of *Tarapaca* to the South, and more forward the Riuer of *Pica*, and that *de la Hoia*, or *of the Leafe*, and of *Montelo*, the Port of *Mexillones*, and more to the South the Point of the *Beacones*, or *Morto Moreno*, before the Bay and Riuer of *Sancta Clara*, and more to the South the *Breach*, and the *White point*, and the *Deepe breach*, and the Riuer of *Sancta Clara*, about thirtie leagues from the Riuer of *Copiapo*, where the Coast of *Chile* beginneth, and the Coast of the *Charcas* endeth. The Prouince and Gouernment of *Tucaman*, is all Mediterrane; her bound begins from the Countrie of the *Chichas*, which are of the iurisdiction of the Imperiall village of *Potosi*: it stands in the same Line of the Citie of the *Assumption* of the Riuer of *Plate*, about an hundred leagues from the South Sea coast; it doth confine with the Prouince of *Chile*, it is a Countrie of a good temper, reasonably plentifull, and vntill now without Mynes of siluer, or gold. There is in it some *Spanish* Townes in one Bishopricke, which are of the Citie of Saint *Iago del Estero*, which at the beginning they named *del Varco*, or *of the Boate*, in eight and twentie degrees of altitude, one hundred eightie fiue leagues from *Potosi* to the South, declining somewhat to the East: the Gouernour and the Officers of the goods, and treasurie Royall, and the Bishop, and the Cathedrall are resident here. Ports & Points of this Counsell. *Las Farallones.* *Punta Blanca.* *Quebrada Honda.* Prouince of *Tucaman.* Saint *Iames* of the Marsh.

The Citie of Saint *Marie* of *Talauera*, is fiue and fortie leagues from Saint *Iames* to the North, and fortie from *Potosi* in sixe and twentie degrees. The Citie of Saint *Michael* of *Tucuman* eight and twentie leagues from Saint *Iames* to the West, in the way of the *Charcas* in seuen and twentie degrees. There were inhabited in this Gouernment in the time of *Don Garcia* of *Mendoça*, his father the Marques of *Canyete* being Vice-roy, the *New London*, and *Calchaque*, which they called h *New wisedome*, in the Prouince of the *Iuries*, and *Diaguita*, which afterward were dishabited within a few yeeres. The people of this Countrie goeth clothed in woollen, and in wrought leather, made by arte like the guilt or wrought leather of *Spaine*: they breed much Cattell of the Countrie, by reason of the profit of their wooll: they haue the Townes very neere the one to the other, and the Townes are small, because there is but one kindred in euery one, they are compassed round about with l *Cardones*, and thornie trees for the warres that they had among themselues. They are great husbandmen, and it is a people that is not drunke, for they are not giuen to drinke, as other Nations of the *Indies*. There are in the Prouince seuen mayne Riuers, and more then eightie Brookes of good waters, and great pastures: the Winter and *Talauera.* Saint *Michael.* *New London.* h *Hist. Nueua Cordura.* l A kinde of Thistle that groweth euery stemme foure inches square, and as high as a man on horse backe, and taketh much ground, for there grow many out of one roote.

and the Summer are at ſuch times as in *Spaine*: it is a healthfull Countrie and of a good temper, and the firſt that entred in it, were the Captaines *Diego de Rojas*, *Philip Gutierres*, and *Nicolas de Heredia*; they diſcouered on this ſide the Riuer of *Plate* vnto the Fortreſſe of *Gabota*.

Chap. 22. Of the bounds of the Kingdome of *Chile*.

DOn *Diego de Almagro* was prouided the yeere 1534. in *Toledo* for Gouernour of two hundred leagues of ground beyond the Gouernment of the Marques *Don Franciſco Piçarro*, toward the Streight of *Magellan*, intituling this part, *The new gouernment of Toledo*. Hee went to pacifie this Countrie, and becauſe he forlooke it, it was giuen in charge to the Marques *Don Franciſco Piçarro* 1537. and he commended it 1540. to the Captaine *Peter* of *Valdinia*; who went thither with one hundred and fiftie *Spaniards*. All the Countries of this Kingdome lye to the South of the Equinoctiall, in a more Southerne altitude then the Kingdome of *Piru*, and her Prouinces within the Torride, from the Equinoctiall vnto the Tropicke of *Capricorne*, which paſſeth a Deſart, which they call of *Atacama*, which is from twentie three to twentie ſixe degrees, and then beginneth the Kingdome of *Chile*, which the *Indians* call *Chille*; and before the inhabited Countrie is the Riuer of *The Salt*, in three and twentie degrees and three quarters, which from the Eaſt ſide of the *Row* of Mountaines, runneth to the Weſt into the Sea, through a very deepe Valley, and though it hath the water very cleere; all that the Horſes are wet with it when they drinke, is congealed with the heate of the Sunne; and it is ſo meere ſalt that it cannot bee drunke, and in the borders it is congealed: the Riuer is before the entring in the firſt Prouince of *Chile* two and twentie leagues where the *Xagueyes* are, which are Wells of water, for there is no other in the two and twentie leagues, and all the Kingdome ſtands within the Zone, which the ancient men called *Deſerte*, which is inhabited with white *Indians*, and it is ſituated on the borders of the South Sea, which is *Mare Magnum*, which is included betweene her Coaſt and the Coaſt of *China*.

Rio de la Sal.

This Gouernment taken largely vnto the Streight, hath in length North and South, from the Valley of *Copiapo* where it beginneth in ſeuen and twentie degrees, fiue hundred leagues, and in breadth Eaſt and Weſt, from the South Sea to the North Sea, from foure hundred to fiue hundred of ground to be pacified, which doth ſtraighten it ſelfe, till it remayneth by the Streight in ninetie or in an hundred leagues. That which is inhabited of this Gouernment, may bee three hundred along the North Sea coaſt, and the breadth of it twentie leagues and leſſe, vnto the *Rowe* of the *Andes*, which doe end neere the Streight, and it paſſeth through this Kingdome very high, and almoſt couered at all times with ſnow. All the Countrie is plaine, at the leaſt there is no great roughneſſe, except where the *Rowe* of *Piru* doth reach, and doth end within two or three leagues of the Coaſt.

The temper and qualitie of it (though it bee not without ſome difference for the varieties of the heights it ſtandeth in altogether) is of the beſt, and moſt inhabitable that is in the *Indies*, in temperature like vnto *Caſtile*, in whoſe oppoſite altitude it falleth almoſt all, and in abundance and goodneſſe of victuals, and plentie of all things, riches of Mynes and Metals, and force and vigour of the Countrimen, which for being ſo great warriors haue alwayes beene euill to pacifie, and there bee many out in the Mountaines, and Breaches of the end of the *Rowe*, the Prouinces of *Arauco*, *Tucapel*, and the Valley of *Puren*, the bounds and borders betweene the Citie of the *Conception*, and *los Confines*, and *la Imperial*.

In this Gouernment are eleuen *Spaniſh* Townes, with a Gouernour placed in the matters of the Gouernment to the Vice-roy, and Councell of *Piru*, after the Councell that was in the Countrie was taken away; and there is in it two Biſhopricks Suffragans to the Archbiſhoprick of *the Kings*. In the Biſhopricke of Saint *Iames* are foure Townes. The Citie of Saint *Iames* in the time of the firſt inhabiting of *Chile*, founded by Captaine *Peter* of *Valdinia*, it ſtands in thirtie foure degrees and a quarter of altitude, ſeuentie ſeuen of longitude, one thouſand nine hundred and eightie leagues from *Toledo* by a direct Line, fifteene from the Sea, and ten beyond the Valley of *Chile*, which they named at the firſt *New Extreame*. In it is the Cathedrall reſident with Monaſteries of *Dominicke*, *Franciſcan*, and *Mercenarie* Friars, in a plentifull ſoile of wheat, Wine, and other things, and of very rich Mynes of gold, and in her iuriſdiction more then eightie thouſand *Indians* in ſixe and twentie repartitions. This Citie is ſerued of the Port of *Valparayſo* at the mouth of the Riuer *Topocalma*, which paſſeth neere vnto it.

Saint *Iames*.

Captaine *Valdinia* peopled alſo *la Serena* in the yeere 1544. neere to a good Hauen; it is the firſt Towne of *Spaniards*, at the entrie of *Chile* ſixtie leagues from the Citie of Saint *Iames*, ſomewhat North-weſt neere to the Sea in the Valley of *Coquimbo*, with Monaſteries of *Franciſcan*, and *Mercenarie* Friars. It rayneth in it but three or foure times a yeere, and in the Countries before it, it neuer rayneth. The Port which they call of *Coquimbo*, ſtands in two and thirtie degrees, it is a good Nooke where the ſhips of *Piru* doe make a ſtay. In the Prouince of *Chucuito*, which is on the other ſide of the *Rowe* of the *Andes*, in a cold and barren Countrie, doe ſtand the Citie of *Mendoça*, and of Saint *Iohn* of the Frontier; for *Don Garcia* of *Mendoça* peopled them both. The Citie of *Mendoça* is of the ſame height with Saint *Iames*, about fortie leagues from it, of a difficult way, for the ſnow that is in the *Andes*. The Citie of Saint *Iohn* of the Frontier ſtands to the South of the Citie of *Mendoça*.

The *Serena*.

Raines ſeldom and neuer. *Coquimbo*.

Mendoça.

Saint *Iohn* of the Frontier.

In

In the Biſhopricke of the Imperiall are ſeuen *Spaniſh* Townes, which are the Citie of the *Conception* in ſeuen and thirtie degrees of height, ſeuentie leagues to the South of the Citie of Saint *Iames*, neere to the Sea, *Peter Valdinia* inhabited it in the yeere 1550. The Gouernours are reſident in it, ſince the Councell (that was there from the yeere 1567. vnto 1574.) was taken away. There are Monaſteries of *Dominicans*, *Franciſcans*, and *Mercenarie* Friars. The Port of this Citie ſtands in a nooke at the ſhelter of an Iland. The Citie of the new village of *los Infantes*, or *los Confines*; *Don Garcia* of *Mendoça* peopled it, and the Gouernour *Villagran* commanded it to be called *de los Confines*. It ſtands ſixteene leagues from the *Conception* to the ſide of the Streight, eight leagues from the *Row* of the *Andes*, and foure from that which goeth along the Coaſt. It hath one Monaſterie of *Dominicans*, another of *Franciſcan* Friars. The warlike *Indian* come to the bounds of this Citie, and the mayne Riuer *Biobio* by them, and others which doe enter into it, and the Riuer *Ninequeten*.

Now village of the *Infants*.

Peter of *Valdinia* peopled the Citie of the *Imperiall* 1551. which is in nine and thirtie degrees of height, nine and thirtie leagues from the *Conception* toward the Streights ſide, three leagues from the Sea, where the Cathedrall is reſident with one Monaſterie of *Franciſcans*, another of *Mercenarie* Friars; and in her bounds are more then eightie thouſand *Indians*, with many other that in her bounds are in armes. The Riuer *Cauten* paſſeth neere it, which is nauigable to the Sea, though the Hauen bee not good nor ſecure. Captaine *Valdinia* peopled alſo the * *Rich Village*, ſixteene leagues from *Imperiall*, about the South-eaſtward, and about foure and fortie from the *Conception*, neere to the *Snowy Row* d, with one Monaſterie of *Franciſcans*, another of *Mercenaries*, in a Countrey cold and barren of Bread and Wine.

The Imperiall.

* *Hiſt. Villarica.*

d *Cordillera Nevada.*

The Citie of *Valdinia* is two leagues off the Sea, and fiftie from the *Conception* to the Streight ward: peopled alſo by Captaine *Valdinia*, with Monaſteries of *Dominicans*, *Franciſcans*, and *Mercenaries*, in a plentifull Countrie of Wheat, and Seedes, and in places of good paſtures for Cattell, and without Vines. The merchandize comes vp by the Riuer of *Valdinia*, which paſſeth neere it, and the Port ſtands in the mouth of it in fortie degrees of height. The Citie of *Oſorno*, *Don Garcia* of *Mendoça* peopled, ſixtie leagues or more from the *Conception* to the port of the Streight, ſeuen leagues from the Sea. It hath one Monaſterie of *Dominicans*, another of *Franciſcans*, with another of Nunnes, in a cold Countrie, ſcarce of victuals, but of much gold, and in her bounds two hundred thouſand *Indians* of repartition. The Citie of *Caſtro*, which was inhabited by the Licenciate *Lope Garcia de Caſtro*, being Gouernour of the Kingdomes of *Piru*, the which is called in the *Indian* tongue *Chilue*, which is the laſt of the inhabited in *Chile*, in an Iland of thoſe that are in the Lake of *Aucud*, or *Chilue*, and the *Archipelagus* ſtands in three and fortie degrees of altitude, one and fortie leagues to the South of *Oſorno*, with a Monaſterie of *Franciſcans*, with twelue thouſand *Indians* of repartition in her bounds, for it is an Iland of fiftie leagues in length, and from two vntill nine in breadth, which the Sea made with other great ones, tearing the Land vnto the *Row* of the *Andes*. It is a mountaynous Countrey, and cloſe, plentifull of Wheate, and of Millet, and Mynes of flying g Gold, on the Strand a thing fewe times, or ſeldome ſeene.

Valdinia.

Oſorno.

Caſtro.

g *Oro boladar*.

The Gouernour *Villagran* tooke away the name of the Citie which was *Cauyete*, that *Don Garcia* of *Mendoça* inhabited, and commanded to call it *Tucapel*, and afterward diſinhabited it. There are in this Gouernment which beginneth in two and twentie degrees, the Port and Riuer of *Copeapo*, and to the South of it, the Port of *Guaſcoin* another Riuer, and the Riuer of *Coquimbo* in two and thirtie degrees: and paſt this the Port of the *Cigua* in the Riuer, and the Port of *Quintero* at the mouth of the Riuer of *Concagua*, before the Port of Saint *Iames*, or *Valparayſo*, and the Port of *Topocalma* in the Riuer of *Maypa*: and paſt the Riuer of *Maule* the Port of the • *Herradura*, at the mouth of the Riuer *Itata*, before the Port of the *Conception* in the great Riuer of *Biobio* to the North, the Iland of Saint *Marie* right againſt the State of *Aranco*, and the Port of *Cauyete*, and the Iland of *Mocha* more to the South, and the Port of *Cauten*, which is that of the *Imperiall*, and to the South the landing place and the Riuer of *Tolten* before the Port of *Valdinia*, and paſt this the Point of the Galley, and more to the South the great Bay or Port of *Oſorno* in the Riuer *de las Canoas*, and to the South of it about thirtie leagues to the Lake *de los Coronados* the broadeſt Riuer of this Realme, and at the end of this Realme the Lake of *Aucud*.

Ports and Riuers of this gouernment.

e Or Horſe-hooe.

MEn doe call the Streight of *Magellanes*, that which is paſt the Riuer of *Plate* by the South Sea; from the laſt of *Chile*, vnto the Streight two hundred leagues before it, from two and fortie or three and fortie degrees of altitude, vnto two and fiftie and more, for although men haue ſayled through both the Seas diuers times, and ſeene people in them vnto the Streight it ſelfe, it hath not beene pacified, nor made inhabiting, but that which the fleete that *Diego Flores de Valdes* carried to the Streight left in the mouth of the Streight on the North ſide, in the yeere 1582. which was called the Citie of Saint *Philip*, which for being in ſo much altitude could

HONDIVS *his Map of the* MAGELLAN *Streight.*

not be preserued for the great cold, and therefore that nauigation is difficult and dangerous for the continuall tempests, and great stormes of windes that are at all times. 40

Ports, Capes, and Points of these two Coasts.

The Ports, Capes, and Points of the Coast of the one and the other Sea vnto the Streight, although they be many, and some are not pointed in the Cardes of Nauigation, it appeareth not wholly, neither is there any certaine relation of all. And the most knowne of the Coast from *Chile* vnto the Streight, which runneth from *Valdiuia* about an hundred leagues to the West South-west are, the Cape of Saint *Andrew* in seuen and fortie degrees, from whence the Coast turneth directly to the South vnto the Streight, by the Cape of Saint *Roman* in eight and fortie degrees, and neere vnto it the Iland of Saint *Catalina*, neere to the great Bay which they call

g *Hisp. Alcarchofado*, of the colour of an Artichoke. Or *Ferdinando* of *Gallicia*.

Hartichoked, and within it the Bay of our *Lady*, and the Iland of *Santa Barbara*, and more forward the Ports of *Hernan Gallego* in eight and fortie degrees two third parts, and the Bay of *The Kings* eighteene leagues from the Port of *Hernan Gallego*, and the Bay of Saint *Iohn* in fiftie degrees one third part, the Cape of Saint *Francisco* in one and fiftie, whereby some Channels doe enter into the Land, and the Iland *de la Campana*, or of the Bell, eleuen leagues from Saint *Francis*: also with some Channels which haue not beene nauigated within the Land, and the Bay of Saint *Lazarus* in two and fiftie degrees, with Channels on the sides, which enter very broad and long to the one and the other parts, which haue not beene nauigated, and a great Sea of Ilands which alwayes was said to bee at the South side neere to the mouth of the Streight, the which Sir *Richard Hawkins* denyeth; for hee saith, That at this mouth of the Streight on the South side, he found no more then foure small Ilands, and one in the middest like a Sugar loofe, and that at the least they are distant from the mouth of the Streight sixe leagues, and the great Sea is on the one side, and he holdeth for certaine it is that which they say is the firme Land of the South side of the Streight, and that there is no firme land. The Streight though they haue past it from the South to the North side, by order of the Vice-roy *Don Franciscus* of *Toledo*, *Peter Sarmiento*, and *Antonie Pablo Corso*, and it is knowne it stands from 52. to 53. degrees of altitude, where it draweth most to the South, and that in length it hath one hundred and ten

50

60

Sir *Richard Hawkins.*

Streight of *Magellan.*

leagues,

Digitized by Google

leagues, or one hundred and fifteene, little more or lesse, and in breadth from one to tenne: it hath neuer beene nauigated to an end from the South Sea to the North Sea, nor the Pyrats that haue past it from the North to the South, are vnderstood to haue returned by it. The aboue said Sir *Richard Hawkins* saith, that he sailed many dayes by the Straight, and affirmeth that all the Countrie on the South side is no firme Land, but many Ilands which reach to 56. degrees; the which he might know, because he sayled to the same 56. degrees through the middest of those Ilands, and seeing he found nothing but Sea, hee followed his course againe through by the Straight, and that this cannot be so farre, the differences of Seas, which the many entrings doe cause that are among those Ilands, and that the habiting of them is of people on the North side, which doe passe to those Ilands to sustaine themselues of fishings, and in their seasons returne to their Countries; and that he comprehended this of many things especially of not hauing seene any seated inhabitating, but some Cabbins which the *Indians* doe make for a time. The same said Sir *Francis Drake*, that it hapned him when he passed the Straight, the yeare 1579. who after his comming out into the South Sea, he ran along with tempests compassing this Sea, vnto the mouth of the North Sea, and by the same way he had runne, he made sure his nauigation to the South Sea.

This is not true: for Captaine *Winter* & others haue done it; which howsoeuer he cals Pirats, yet they haue better descouered these Straights then the *Spaniards*.

The parts most famous of the Straight at the entring of the South are the Cape *Desseado*, or *Desired*, in 53. degrees, and the Channell of all *Saints*, two and twentie leagues from the mouth, very broad, and large, and past it the port of the *Treason*, and afterward another great large Channell which runneth to the North-west, and *Rowlands Bell*, a great Rocke in the middest at the beginning of a Channell. They gaue it this name of one of *Magellanes* fellowes called *Rowland*, who went to reacknowledge it, which was a Gunner: the point of possession which is foure leagues from the Cape of *Virgenes*, at the entring of the North Sea in 52. degrees and a halfe of altitude, when *Peter* * *Sarmiento*, and *Antonie Pablo Corso* by order which they had to reknowledge the Straight, for it had beene commanded long before for to see if it were a more easie nauigation to the South Sea, then that of *Panama*: they viewed the two narrow places, that at the entrie of the North, and it seemed to *Peter Sarmiento* that the one was so narrow, that with Artillerie it might be kept, and so much he perswaded it, that although the Duke of *Alua* affirmed it was impossible, the Armie which *Iames Flower* carried vnfruitfully was sent about it, and in the end was knowne that that nauigation is dangerous, and the flowing of two Seas which come to meete in the middest of the Straight, doe withdraw themselues with such furie, ebbing in some places more then sixtie fathoms, that when the Shippes did carry nothing but Cables to preserue themselues from loosing that which they had sayled, they would goe full froaghted.

* Or *Vine Twig*.

Or *Ordinance*.

In foure hundred leagues, there is of Coast from the mouth of the Straight, vnto the Riuer of *Plate*, which runneth altogether North-east and South-west, there is the Riuer of Saint *Ilefonsus* twelue leagues from the Cape of the *Virgenes*, the * *Gallizian* Riuor, and the Bay of Saint *Iames*, foureteene leagues from the Riuer of *Santta Cruz*, in 50. degrees, and at the mouth an Iland called of the *Lyons*, and the Port of Saint *Iulian* in 49. degrees, and the Riuer of *Iohn Serrana* to the South of the Ilands of *Duckes*, in 47. degrees, the Riuer of *Cananor* in 45. degrees, the Cape of Saint *Dominicke*, before the Cape of three Points, and the Land *de los Humos* or of the *Smoakes*, in 38. degrees, the Point of *Santta Hellene*, and of Saint *Apollonia*, in 37. degrees before the White Cape, at the entrie of the Riuer of *Plate* on the South side.

* *Hispalio Gallego*.

Chap. 24.

Of the Prouinces of the Riuer of *Plate*, & of *Brasile*. *Sebastian Gabote* remaineth in the Riuer of *Solis*, which is called of the *Plate*. He was an *English man* by breeding, borne a *Venetian*, but spending most part of his life in *England* and *English* imployments. See the former Booke.

Iohn Dias de Solis discouered the Riuer of *Plate* 1515. and *Sebastian Gaboe* an *English-man*, going with an Armie by order of the Emperour, in pursuit of the Fleete which Frier *Garcia de Loaysa* Commander, had carried to the Ilands of the *Maluces*, and conceiuing hee could not ouertake them, he thought good to busie himselfe in something that might be profitable; and entred the yeare 29. discouering the Riuer of *Plate*, where he was almost three yeares; and being not seconded, with relation of that which he had found, returned to *Castile*, hauing gone many leagues vp the Riuer, he found Plate or Siluer among the *Indians* of those Countries, for in the warres which these *Indians* had with those of the Kingdomes of *Piru* they tooke it, and from hence it is called the *Riuer of Plate*, for before it was called the Riuer of *Solis*. These Prouinces are ioyned with those of *Brasil*: by the line of the markes they haue no determined bounds, but by the Coast of the Sea that falleth to the North, and entrance of the Riuer of *Plate*, of the which the Countrie hath taken the name, and the mouth of this Riuer may stand sixteene hundred leagues from the Bay of Saint *Lucar* of *Barrameda*.

All these Prouinces are very plentifull of Wheate, Wine, and Sugar, and all other seedes and fruites of *Castile* doe grow well: they haue great Pastures for all sorts of Cattle, which haue multiplied infinitely, especially the Horses, and though they haue beene many yeares without thinking there were any Mines of Gold, or of Siluer, they haue already found a showe of them, and of Copper, and Iron, and one of very perfect Amathists. All these Prouinces are of one Gouernment, with title Royall, subordained for neareneſſe to the Vice-roy of *Piru*, with one Bishopricke wherein are three *Spanish* Townes, and a great multitude of the Countrie men, of big bodies,

Plentifulneſſe of the Prouinces of the Riuer of *Plate*.

Digitized by Google

The Assumption.

bodies, and well conditioned. And the Townes are; the Citie of our *Lady of the Assumption*, the first inhabiting, and the head of this Prouince, it stands in 25. degrees and a halfe of altitude: the Captaine *Iohn* of *Salazar* built it by order of the Gouernour *Don Peter Mendoça*. The territory thereof was first called *Gurambare*: it hath *Brasil* at the right hand two hundred and eightie leagues, and in this compasse it hath the Citie Royall at eightie leagues, which the *Indians* call *Guayra*. And on the side of *Piru*, which is East and West, it hath at foure hundred and eightie leagues, the Citie of *la Plata*, and at two hundred and eightie, the Citie of *Sancta Cruz de la Sierra* or *of the Hill*, which *Nuflo* of *Chanes* built. To the South side which is toward the Straight of *Magelane*, it hath very great and rich Countries, and this Citie stands three hundred leagues from the mouth of the Riuer of *Plate*, built neere to the Riuer *Paraguaye*, on the East side, with foure hundred *Spanish* Housholds, and more then three thousand children of those that were borne to them in the Countrie (which they call *Mestizos*) in it are resident the Gouernour, and Officers Royall, and the Cathedrall which is called the *Bishopricke of the Plate*, suffragan to the Archbishoprick of the *Kings*, and in her iurisdiction more then 400000. *Indians*, which doe increase daily.

Note.

Citie Royall was called by another name *Ontioueros*, built by *Ruidias de Melgareio*; it stands eightie leagues from the *Assumption* North-east, toward the Land of *Brasil*, neere to the Riuer *Parana*; it stands in a good soyle of Victuals, and Vines, and much good Copper, and great number of *Indians*, which also doe much increase. In this Riuer *Parana*, neere the Citie Royall, there is a great fall, that no man dare come neere it by Land within two hundred paces, for the great noyse, and mist of the water, and by the Riuer no Canoe, nor Boate dare come neere by a league; for the furie of the water doth carry it to the fall, which is aboue two hundred fadomes off a steep Rock, and it is so narrow, and the water goeth so close, that it seemes ye may throw ouer it with a dart.

Ciudad real.

Fall or Cataract very terrible.

* Or *Good ayres*

* *Buenos ayrès* is a Towne which in old time was disinhabited neere the place where now it is built againe, in the Prouince of the *Morocotes*, in the borders of the Riuer of *Plate*, in a plentifull soyle, where all things of *Castile* doe grow very well; the Gouernor *Don Peter* of *Mendoça* built it 1535. which caused all that which *Gabote* forsooke to be discouered. All this Countrie is commonly plaine: for except the *Cordilleras* or *Rowes* (which are on the Sea coast, and may be twentie leagues toward *Brasil*, afterwards compassing all the Countrie toward the Riuer *Maranyon*) and the *Rowes* of the Kingdomes of *Peru*, all is plaine, except some small hils.

Ports and Points of this Coast.

There are knowne in the Coast of these Prouinces from the Land of *Brasil*, vnto the Riuer of *Plate* fiue or six reasonable Ports, the Port of Saint *Vincent*, in 33. degrees height, right against *Buenabrigo*, an Iland where the line of the repartition passeth; and six leagues to the South the Riuer *Vbay*, and the Port, and the Iland *de la Cananea* in 35. degrees; and forward the Riuer *de la Barca*, before the Port of *Babia* or Riuer of Saint *Francis*, and the Iland of *Sancta Catalina*, by another name the Port of *Vera*, or Port of the *Duckes* (*de Peros*) and the Port of *Don Roderigo*, twentie leagues to the South from *Sancta Catalina*, an Iland 29. degrees and more to the South, fiue leagues a *Close Hauen*, and fifteene the b *Inhabited Riuer*, and as much the *Deepe-Bay* from this, and the Riuer *Tiraqueri*, in 32. degrees and a halfe, before the Cape of Saint *Marie*, which is in 35. degrees at the entrie of the Riuer of *Plate*.

Hisp. Puerto cerrado. Riopoblado. Babia onda.

Riuer of *Plate.*

This Riuer is called in the *Indian* language *Paranaguazu*, and commonly *Parana*, hath his entrie and mouth in the South Sea, from thirtie fiue vnto thirtie six degrees of altitude, between the Capes of Saint *Marie*, and Cape *Blanke*, which is from the one to the other about thirtie leagues of mouth, and from thence inward other tenne leagues in breadth, with many Ilands in the middest, and many very great maine Riuers, which enter into it by the East and West side, vnto the Port of the *Kings*, which is a great Lake called of the *Xarayes*, little lesse then three hundred leagues from the Riuer of *Plate*, where enter many Riuers that come from the skirts of the *Andes* and they may be of those Riuers that proceede in the Prouinces of the *Charcas* and *Cuzco*, which runne toward the North, whereby entreth another maine arme into the said Lake, which hath giuen occasion to thinke that this Riuer doth communicate with the Riuer of Saint *Iohn* of the *Amazones*; others say that it commeth from the Lake of the *Dorado*, which is fifteene iournies from the Lake of the *Xarayes*, though there be opinions that there is no *Dorado*.

The chance of the Captaine *Salazar* with a Tigre.

The Captaine *Salazar* gouerning in these Prouinces by the death of *Don Peter Mendoça*, in the yeare 1545. a *Spaniard* being in his bed and his wife by him on the out side, in the night there came a Tigre and gaue the man a blow that he killed him, and carried him away, and betweene certaine Caues he did deuoure him: in the morning the Captaine *Salazar* went forth with fiftie Souldiours to seeke the Tigre, and going through a wood, hee went alone by a path, and as soone as hee discouered the Tigre, hee being fleshed set vpon him, and at the time hee lifted vp the pawe for to strike him, the Captaine let flee the Shaft out of his Crosse-bowe, and strooke him to the heart, and he fell downe dead: an exploit of great courage, heede and dexteritie.

Tigre killeth and is killed.

The

THe Prouinces and Countrie of *Brasil* in the Coast of the North Sea, and *Terra firme*, is called all that which falleth to the East from the line of the repartition, from twentie nine degrees of longitude from the Meridian of *Toledo*, vnto thirtie nine, which are two hundred leagues from East to West, and foure hundred and fiftie North and South, from two degrees of Southerne altitude, by the Cape *de Humos* or of *Smoakes*, vnto fiue and twenty, by the Iland of *Buenabrigo* or *Good-harbour*. And from the first inhabiting, vnto the last of *Brasil*, there are three hundred and fiftie leagues. *Vincent Yanes Pinzon* discouered first this Countrie by commandement of the Kings Catholike, and presently after him *Iames* of *Lepe*, in the yeare 1500. and six moneths after *Peralnarez Cabral*, going with a *Portugall* armie to *India*, which to auoide the Coast of *Guinea* did put so much to the Sea that he found this Countrie, and called it *Santta Cruz*, because on that day he discouered it. All of it is very hot in Winter and Summer, and very rainie, and compassed with Woods and Mists, vnhealthfull, and full of venemous Wormes, plentifull in Pastures for Cattle, and not for Wheate, nor Millet; there are in it great showes of Siluer and Gold, but as the *Portugals*, haue no stocke to make any profit of the Mines, they leaue them as they are.

Chap. 25. Of the Prouinces and Countrie of *Brasil*.

Vincent Yanes Pinzon, borne in the Village of *Palos* discouered the *Brasil*, and then *Diego de Lepe*.

The principall foode of this Countrie is the *Cazabi* which they make of the *Yuca*, and the greatest trafficke is Sugar, and Cotten Bumbast, and Brasil Wood, which was it that gaue it the name. There are in all the Prouince nine Gouernments, which are called Captainships, and in them seuenteene *Portugal* Townes: in it may be about three and thirtie hundred households, and great multitude of warlike *Indians*, which haue not suffered the *Portugals* to build but on the Coast, in which are many Riuers, Landings, and many Ports, and very safe, where any Ships may come in, be they neuer so bigge.

The Colonie of the first Captainship, and the most auncient is *Tamaraca*, the second *Pernambuco*, fiue leagues from *Tamaraca* to the South, in eight degrees of altitude, and there is a house of the Fathers of the Companie of *Iesus*: the other is, that of all *Saints*, one hundred leagues from *Pernambuco* in thirteene degrees, and there the Gouernour, the Bishop, and the Auditour generall of all the Coasts are resident, and it hath a Colledge of the Company: the fourth Captainship of the Ilands is thirtie leagues from the Bay of *All Saints*, in foureteen degrees & two third parts, it hath a House of the Fathers of the Companie. In this Captainship is found a Tree where out they take a precious Balme. The Captainship of the *Sure-haueu* is thirtie leagues from the Ilands in sixteene degrees and a halfe: it hath three Inhabitings, and a House of the Fathers of the Compania. The Captaineship of the *Holy-Ghost* fiftie leagues from *Puerto seguro*, in twentie degrees, where they gather much Brasil, and there is one house of the Company. The Captainship of the Riuer of *Genero* is sixtie leagues from the *Holy-Ghost*, in twentie three degrees and one third part, with a house of the Fathers of the Company, and they cut in their iurisdiction much *Brasil* Wood; the Riuer is very faire, with fine and profitable borders. The last Captaineship is Saint *Vincent*, sixtie leagues from the Riuer of *Genero*, in foure and twentie degrees, it hath a fortresse in an Iland for a defence against the *Indians* and Pirates, and a house of the said Fathers, which haue done great profit in the inhabiting of this Countrie, and conuersion of the *Indians*, and their libertie. The Cattle that are in these Prouinces are many, and great breeding of Swine, and Hens, they gather much Amber which the Sea casteth vp with stormes at the spring tides, and many persons haue inriched themselues with it. Their Summer is from September to February, and the Winter from March vnto August; the dayes are almost as long as the nights, they increase and diminish onely an houre, in the winter the winde is alwaies at South and South-east, in Summer North-east and East North-east.

Inhabitings of the Coast of *Brasil*.

Many *Iesuites* Colledges.

Puerto seguro.

Ambar.

There are in this Coast eight or tenne Ports more principall then the rest, which are the Riuer of Saint *Dominicke* and *de las Virtudes* to the North-east of *Pernambuco*, and *Tamaraca*, which is an Iland, and as it is said, the first Plantation, and before the Cape of Saint *Austine*, which stands in nine degrees, the Riuer of Saint *Francis* in ten degrees and a halfe, which is great and mightie: the Bay of *All Saints* three leagues broad, and thirteene into the Land vnto Saint *Saniour*, the Riuer and Port *Trenado*, where the Ships doe touch that goe this Voyage, and the Riuer of *Canamum* in thirteene degrees and a halfe, the Riuer of the *Beades* or of Saint *Austine* is fouteteen degrees and a halfe; and the Riuer of the *Virgenes* in sixteene. *Porte secure* in seuenteen degrees: the Riuer of *Parayua* in twentie degrees, neere to *Sancts spiritus*: the Riuer of *Genero* neere to Saint *Sebastian*, and *Cold Cape* in three and twentie degrees beyond Saint *Vincent*.

The principall Ports of this Coast.

Cabo Frio.

Chap. 26. Of those which men call the *Indies of the west*, which are the Ilands *Philippinas*, coast of *China*, *Iapan*, and the *Lequios*.

INdies of the West, are all the Ilands and firme Land comprehended within the markes of the Crowne of *Castile* and of *Lyon*, at the Occidentall end of the said bounds; whose line as is said passeth on the other side the world, through the Citie of *Malaca* from whence toward the East, and *New Spaine*, is a great Gulfe of infinite Ilands great and small, and many pieces of Coasts, and firme Land, which are diuided into the Ilands of the Spicerie, or of the *Malucos*, Ilands *Philipinas*, the Coast of *China*, Ilands of the *Lequios* and *Iapones*, Coast of the new *Guinea*,

Ilands

Digitized by Google

Ilands of *Salomon*, and of *Ladrones* or the *Theeues*: the temper of all theſe Ilands and Lands in generall is moiſt, and temperately hot, plentifull of Victuals, and Beaſts, with ſome Gold, but baſe, no Siluer, ſtore of Wax, and the people of ſundry colours, and the ordinary colour like *Indians*, and ſome white among them, and ſome cole-blacke.

The Ilands of the Spicerie (which properly are called ſo, becauſe all the Pepper, Cloues, Sinamon, Ginger, Nutmegs, and Maſticke that is ſpent in *Europe*, is brought from them) are many, though the moſt famous of that Gulfe are fiue ſmall Ilands vnder the Equinoctiall in one hundred nintie foure degrees from the Meridian of *Toledo*, included in the morgage which the Emperor *Charles* the fift made of them to the King of *Portugall* for three hundred and fiftie thouſand Duckets, which are *Terrenate* of eight ornine leagues compaſſe, with a Port called *Talangame*, and in it raigned *Corala*, which yeelded himſelfe for ſubiect to the King of *Caſtile*, when the Shippes that remained of *Magelanes* fleete found theſe Ilands. The Iland of *Tidore* ſtands one league from *Terrenate* to the South, it hath tenne leagues compaſſe. The Iland of *Matil*, or *Mutier* is of foure leagues compaſſe, and is vnder the Equinoctiall; and *Maquin* three leagues to the South, of ſeuen in compaſſe, and tenne leagues to the South. *Batan* or *Baquian* is twentie leagues in compaſſe. In the Iland of *Tidore* raigned *Almanzor*, which alſo gaue himſelfe for ſubiect of the King of *Caſtile*, the which, and *Carala* did write and *Iohn Sebaſtian* of the *Cano*, borne in the Village of *Guitarca*, in the Prouince of *Guipuzcoa* brought their Letters; the which departing from *Tidore* in the yeare 1522. touched in the Iland of *Zamatia*, and going vp to almoſt fortie two degrees toward the Antarticke Pole, he arriued at the Iland of Saint *Iames* of the *Greene Cape* or *Cabo Verde*, and from thence to *Siuill* with the Shippe called the *Victoria*, hauing ſpent ſeuen moneths time little leſſe in comming from the Iland of *Tidore*. *Patian* is the fift Iland like the other; Moores inhabited in it, and Gentiles alſo, which knew not the immortalitie of the ſoule. And when the Shippe of the fleete of Fryer *Garcia* of *Loayſa* came, *Reiami* raigned in *Tidore* of thirteene yeares of age, and againe acknowledged the King of *Caſtile*, and alſo the King of *Gilolo* called *Sultan Abderta meniani*, and confirmed it with an oath. *Gilolo* is an Iland vnder the line foure leagues diſtant from thoſe rehearſed; it is of two hundred leagues compaſſe, without Spicerie: the Iland of *Ambon* in three degrees and a halfe to the South, from the Iland of *Gilolo* without Spicerie. The Ilands of *Bandan* are in foure degrees of Southerne altitude, where the Nutmegge is gathered, and Mace; and the *Burro*, which is to the Weſt of *Ambon*, and *Timor*, another Iland to the South-weſt from *Bandan*, almoſt one hundred leagues, without Spicery, but rich of *Sandalo*, *Zeinda*, fiftie leagues from *Timor*, to the North-weſt of forty leagues compaſſe, plentiful of Pepper, and the Iland of *Celebes*, which is very great, & *Borney* greater, neere the ſtraight of *Malaca*, which is made in the firme Land; & *Zamatia*, which in old time they called *Taprobana*. There be other manie great Ilands, and ſmall, which remaine to the South ſide, neere *Iaua Maior* & *Minor*, and to the North toward the coaſt of *Chyna*: the *Portugals* haue a fortreſſe in *Terrenate*, and other in the Citie of *Malaca* at the entrie of the *Archipelagus*.

Of theſe ſee *l. 4. c. 1.* and other *Engliſh* voiages in the firſt *Tome*.

See *Magelanes* Voyage. *Tom. 1. l. 2.*

Certaine Tree bearing a kind of Date.

The Ilands *Philippinas* are a Sea of thirtie or fortie great Ilands, beſides many other ſmall ones which are together in leſſe then two hundred leagues in length North and South, and one hundred in breadth betweene *New Spaine*, and the Gulfe of *Bengala*, and they are about ſeuenteene hundred leagues from the Port of the *Natiuitie* in *New Spaine*, from ſix to fifteene or ſixteene degrees of Septentrional altitude, of a reaſonable temperature, and plentifull of victuals, ſpecially of Rice, and ſome baſe Gold in ſome places, and in ſome Ilands are Cinamon trees, and long Pepper. The Countriemen are of a good ſhape, and in ſome Ilands they are blacke, and thoſe which liue in the center of the Countrie are whiter then thoſe that liue in the Sea coaſts. There are good Ports, and Timber for Shipping, the names of the principalleſt Ilands are *Mindano*, which is the greateſt, and moſt Southward, of a hundred leagues in length, and three hundred in compaſſe, a rough Countrie, but plentifull of Millet, Waxe, Rice, Ginger, and ſome Cinamon, and Mines of Gold, with good Hauens, and Rodes: the Iland of *Good-tokens*, and Saint *Iohn* leaning to *Mindanao*, on the Eaſt ſide, of twenty leagues in length North and South; *Behol*, ten leagues more to *Mindanao* on the North ſide, nineteene leagues in length.

Cinamon and long Pepper.

The Iland of *Buglas* or of *Negros*, by reaſon of thoſe that are in it, is in the middeſt of that Sea to the Weſt, of fortie leagues in length North and South, and foureteen in breadth, and in her coaſt are ſome Pearles: the Iland of *Zubu* in the middeſt of all, of thirtie leagues in length North and South, and in it a *Spaniſh* Towne, called the Village of *Ieſus*, on the Eaſt ſide, with one good Hauen, beſides other that are in the Iland, the Captaine *Ferdinando Magellanes* diſcouered this Iland, in the yeare 1520. the King yeelded then himſelfe for ſubiect to the Crowne of *Caſtile*, and before he diſcouered the Ilands, which he called *de las Velas Latinas*, becauſe they ſailed in their Shippes with ſayles of Mats made of Palme tree leaues after the *Latine* faſhion; and from *Zubu Magellanes* went with the King, to warre againſt the King of *Matan*, in a little Iland cloſe to that of *Zubu* on the South ſide, where being too valiant and confident he was ſlaine; and the *Spaniards* following their Voyage in demand of the Ilands of the Spicerie, they diſcouered *Quepindo*, *Puluan*, and *Burney*, which is a great, rich, and plentifull Iland of Rice, Sugar, Goates, Swine, Cammels: it wants Wheate, Aſſes, and Sheepe; it hath Ginger, Camphire, Mirabolans, and

In *Matan* it was where *Ferdinando Magelanes* was ſlaine.

Digitized by Google

and other Drugges. *Aluaro* of *Saauedra* discouered also the *Philippines*, and tooke possession of them in the yeare 1527. for the Crowne of *Castile*, which by order of the Marquesse of the *Valley* went from the Port of *Guatlauco* in *New Spaine*, in demand of the Ilands of the *Spiceria*, and particularly he was in *Mindanao*: and this digression hath not bin out of purpose.

Aluaro of Saauedra tooke possession of the *Philippine* for the Crowne of *Castile*, in the yeare 1527.

Returning to the order of the *Philippines*, there followeth the aboue said *Abuyo*, or *Bubay* thirtie leagues in length North and South, and tenne in breadth, in which are good Mines, and Pearles, in her coast: *Tandayala* most famous of all, which for being first discouered, is called *Phulipine*, of which all take the name, in memory of the inuincible King *Don Philip* the second, the *Prudent*. It hath fortie leagues on the North side, and of the East North North-east, and South South-west, and twelue leagues in breadth where most, with good Hauens and Roades: *Masbat* a meane Iland to the West of *Tandaya*, of seuenteene leagues in length, and fifteene in breadth, with one Hauen: *Mindoro* of fiue and twentie leagues in length North and South, and halfe in Breadth; there is Pepper in it, and Mines of Gold: the Iland of *Luzon*, called the *New Castile*, as great or greater then *Mindanao*, the most Septentrionall of the *Philippines*, in the which is built *Manila*, a Citie of *Spaniards*, with title of *Famous*, where the Gouernour, Officers of the goods, and cheft Royall, and the Cathedrall are resident: it is a plentifull soyle of Victuals, with many Mines of Gold: the Hauen of this Citie is bad, and for all that there is great trafficke with the *Chynas*, which bring Porcelane Vessell, Tinsels, coloured silkes, and other Merchandize: *Luçon* hath in length two hundred leagues, and it is very narrow.

The Citie of *Manilla*.

In all these Ilands are many *Mahometanes*, wither they came by the East *Indes*, and could easily plant their falshood amongst those blinde *Gentiles*. Captaine *Magellanes* as aboue said discouered these Ilands, the yeare 1520. going with an Armie of the Crowne of *Castile*, in search of the Ilands of the *Malucoes*, and tooke possession of them, and afterward *Michael Lopez of Legaspi* made an end of discouering them, the yeare 1564. with an Armie which hee tooke from *New Spaine*, by order of the Vice-roy, *Don Lewis of Velasco*: it is iudged that those Ilands doe amount to eleauen thousand great and small. There are pacified about fortie of them, and conuerted more then a Million of men vnto the Catholike Faith, with so many expences of the Crowne Royall, not hauing had vntill now any profit from those Countries; for euery Religious man of those that are sent thither, doth cost to set there one thousand Duckets. Those which hitherto haue laboured in that Vineyard, with most great fruite of the soules, are the Religious *Dominicans*, *Franciscans*, *Barefooted*, and *Austins* Fryers, and the Company of *Iesus*; and from these Ilands hath beene begun to bridle the *Mahometans*, which from the Coast of *Affa* went by little and little extending through these, and other Ilands, and also to the *Chinas* and *Iapones*; and the *Portugals* had already lost the Ilands of the *Maluas*, if the *Spaniards* of the Prouinces of the *Philippines* had not holpen and succoured them diuers times and many wayes.

His voiage you haue before. 11000. Ilands.

Since, the *Hollanders* haue expelled the *Portugals*.

There is already a plainer notice had of the *Chynas*, by the commerce of the *Philippines*, and their riches and plenty is knowne: it is of the richest and mightiest Kingdomes of the World, and from *Manila* may be to the coast of *China* three hundred leagues, of eight dayes sayling, and the coast of that Countrie goeth running as to the North-east, more then seuen hundred leagues, from twentie one to twenty two degrees of Septentrional latitude, and vpward, and it is knowne that crosse ouer the Countrie inward is a *Voyage* of fiue or sixe moneths, to the confines of *Tartaria*; being a Countrie of great Cities, with many Townes, and the people politicke, and prepared for their defence; but not warlike, and the Coast much inhabited with maine Riuers, and good Hauens: it extends from seuenteene vnto fiftie degrees North and South, and East and West it occupieth two and twentie: the Citie of *Paquin*, where the King hath his Court, stands in fortie eight degrees of our Pole, it is diuided in fifteene Prouinces, saue *Maritime*, and nine *Mediterranes*, and the one are diuided from the other with certaine Mountaines, like the *Pirineis*, and there are but two passages whereby they doe communicate.

China: see our former Relation.

Tomas Perez Ambassadour of the King of *Portugall*, was from *Cantan* to *Nanquin* fortie Moneths, trauelling alwayes to the North: and to the largenesse of this Kingdome is ioyned the plentie of the Countrie, which is great, for the which the multitude of the nauigable Riuers that do water it, are a help, wherewith it seemes a pleasant Forrest or Garden, and the abundance is doubled by many wayes, for the Kings spare no cost to make the Countrie watered in euery place, cutting great hils, and making great Valleys plaine; and the peace not wanting in any place, for all the Countrie almost is contained in the bounds of the temperate *Zone*, nor the maisture by the clemencie of nature, and by the industrie of men it is incredibly all multiplied, and all being compelled to busie themselues in something, there is not one foote of ground left vnprofitable. In *Cantan* among other notable things they say there are a great number of blinde men that doe labour in something, euery one as he is able, and being forbidden the going out of the Kingdome without licence, the which is neuer granted, but for a limited time: it is necessary that the prouision increasing continually, the number of the people be without end, especially that they yeeld for a certaine, that for fiue persons that doe dye, there are seuen borne; and the pureneſse of the ayre is so much, that they doe not remember, there hath beene any vniuersall

The Prouinces and Kingdoms of *China*.

uerfall plague, and with all these good things they haue their troubles also, for there are earthquakes that destroy whole Cities, disinhabit the Countrie, and suppresse the auncient Riuers, and raise others, and doe make great Mountaines plaine, with a miserable misfortune of that people.

The yeare 1555. there burst out of the intrailes of the earth such abundance of water, that it ouer-flowed the space of sixtie leagues, and destroyed seuen Cities with their iurisdictions. And this as touching the continent of *China*. There is through all the Coast a multitude of Ilands, the greater part are vnto vs vnknowne. Not farre from *Nanqui*, is the Cape of *Lampo*, the Iland of *Auenga*, *Abarda*, *Sumbar*, *Lanqui*, and the Iland of *Horses*, of the which no particular notice is had. Passing the Citie of *Chinchee*, stands *Lamao*, and a great number of Ilands are seene about *Cantan*, and these are the most celebrated, *Lantao*, *Macao*, *Keuiaga*, where is the Port of *Tamo*, *Lampacao*, *Sancoan*, in all the which the King of *China* hath Garrisons on Sea and Land, except in *Lampacao* which is not inhabited.

Macao. In *Macao*, by another name *Macan*, the *Portugals* haue a Towne, and the *China* knowing the valour of the *Portugals*, and the fauour they haue of the *Castillans* of the *Philippines*, suffer it with an euill will, but the *Portugals* seeke to preserue themselues, for their profitable commerce in *China*. *Sancon* is thirtie leagues from *Cantan*, where sometimes the *Portugals* haue touched, and no Iland of *China* is of greater importance then *Anian* in the mouth of the Gulfe of *Cauchinchina*, fiue leagues from the *Firme Land, and one hundred and eightie from the *Philippines*, and it is so bigge, that they affirme it to haue thirtie Fortresses; in it is a fishing for small Pearles. It is abundant of Victuals, and of many Fruits: vnder the Gouernment of *Cantan*, the principall Port of *China*; and the Countrie men are grosse and rude people.

Anian.

*Or Terra firme

Iapon. *Iapon* is many Ilands diuided with small armes of the Sea, in three and thirtie Kingdomes whose head is the Citie of *Meaco*, distant variable from *China*, and they count from the Iland of *Goto* in *Iapon* to *Liampo* in *China* sixtie leagues, which is the neerest. The *Iapones* doe greatly molest the *Chinas*, more with piracies, and thefts, then with iust war, because *Iapon* being diuided in sundry Ilands, and diuers Princes, they can make no warre against the *Chinas*, but with weake forces. They are more warlike and valiant then the *Chinas*: it is a temperate Countrie, plentifull of Seedes, Cattle and Fowle of Europe, it hath Mines of Iron and Steele: the Countrie men are strong, valiant, and for much labour: those Ilands stand in thirtie fiue degrees of the Pole, little more or lesse, according to the distance of euery Iland. The *Iapones* doe not vnderstand the *Chinas* but by writing, because of the Characters, or Letters being one for them all, and though they signifie the same, they haue not the same name, for they are to declare things, and not words, as the figures of Arithmeticke, that if a 9. be set, the *French*, the *Castillan*, and the *English* man doe vnderstand it, that it signifieth 9. but euery one doe name it after their owne fashion.

Characters as Ciphers.

By another side the *Iapones* doe confine with the *Philippines*, from whence there is commerce with them, and a great incouragement is giuen to the Fathers of the Company for to labour in the conuersion of the people of those Kingdomes, where notable fruite hath beene gotten, for the which these Ilands are much celebrated in the world, and by the comming of the Ambassadours of the new Christendome to the Pope, and to the King *Philip* the second, the *Prudent*, and so as nature placed them in a situation separated from the rest of the Land, the men of that Region are differing in customes from other people. In the yeare 1592. *Nobunanga* which caused himselfe to be called Emperour of *Iapon*, interprised with eight Vessels, and 20000. men, certaine Prouinces tributarie vnto *China*, and wan it.

From the Iland of *Sino*, which is among them of *Iapon* the greatest, is extended a row of small Ilands, called the *Lequios*, and doe prolong themselues toward the Coast of *China*; the two greater, which is euery one of fifteene or twentie leagues, neere the Coast of *Iapon*, are called the greater *Lequio*, and other two also great, though not so much, which are at the end of the Rowe, they call *Lequio* the lesser: some are inhabited of well shapen people, white, politicke, well apparelled, warlike, and of good reason, they abound in Gold more then others of that Sea, and not lesse in Victuals, Fruits, and good Waters. Neere vnto the lesser *Lequio* stands *Hermosa*, *or the beautifull Iland*, which hath the same qualitie, and say it is as big as *Sicilia*.

Lequios.

Chap. 27.

Of the new Guinea, Ilands of Salomon, and the Theeues, wherewith endeth that which they cal West Indies. The Lequios. Sir R. Hawkins.

THe Coast of new *Guinea* beginneth one hundred leagues to the East of the Iland of *Gilolo*, a little more then one degree altitude, on the other side of the Equinoctiall, from whence it is prolonged toward the East three hundred leagues, till it come to fiue or six degrees. It hath beene doubted vntill now, whether it be an Iland or firme Land, because it doth enlarge in such great a Voyage from being able to ioyne with the Countries of the Ilands of *Salomon*, or Prouinces of the Straight of *Magellanes* by the South side; but this doubt is resolued with that which those doe affirme that sailed on the South side of the Straight of *Magalanes*, that there is not a continent, but Ilands, and that presently followeth a spacious Sea, and among those navigations is Sir *Richard Hawkins*, an *English* Knight, which was fiue and fortie dayes among the same Ilands.

From

From the Sea the Land of this coast of *Guinea* seemeth good, and the men that haue been seene are cole black, and in the coast are many Ilands with good roads, and ports whereof is no particular notice; for hauing sailed it few times, those which are found in some cards are *Aguada* or the watering to the East thirty fiue leagues from the first Land, is in one degree of Southern altitude; and eighteene forward the port of Saint *Iames*, and the Iland of the *Cresps* of sixteene leagues long neere the coast, right against the Port of Saint *Andrew*, and neere to it the Riuer of Saint *Peter*, and Saint *Paul*, before the Port of Saint *Ierom*, and a small Iland neere the [a]*thrust out Point*, 40. leagues from S. *Austin*, which they call of *Good-peace*, and more forward from it, the [b] *Shelter*, and *Euill people*, two little Ilands, and the Bay of Saint *Nicholas*, fiftie leagues from *Puntasalida*, and among other Ilands one of white men, and the *Mother of God* before *Good Baye*, and of the *Natiuitie of our Lady*, the last of that which is discouered, and as to the North from it the *Caymana*, an Iland without in the Sea among others which haue no name.

Ilands and Ports of the coast of *Guinea*.

c *Abrigo.*

The Meridionall coast is not yet known, the first that discouered the new *Guine* was *Aluaro* of *Saauedra*, being lost with many stormes from his course, returning to new *Spain*, when in the yeare 1527. the Marques of the *Valley* sent him that on that side he should seek the Ilands of the *Spicerie*.

The Ilands of *Salomon* are eight hundred leagues from *Piru*, & the opinion that is held of their riches, gaue them this name, the which properly are called *of the West*, because they fal to the West from the Prouinces of *Piru*, from the place that *Aluaro* of *Mendoça* made discouery of them by order of the Licentiate *Lope Garcia de Castro* his Vnckle, Gouernor of the Kingdomes of *Piru*, in the yeare 1567. the first that saw the Land of these Ilands was a yong man, called *Treto*, in the top of a Ship: they are from seuen degrees of altitude on the other side of the Equinoctiall about 1500. leagues from the Citie of the Kings, they are many in quantity & greatnes, and eighteen the most famous, some of 300. leagues in compasse, and two of 200. and of 100. and of 50. and thence downward, besides many which are not yet made an end of coasting, and they say that they might be a continent with the coast of the new *Guiney*, and the Countries to be discouered toward the West of the straight: the Countrie of these Ilands seemeth of a good temper, and habitable, plentifull of victuals, and Cattell: there were found in them some fruits like those of *Castile*, Swine & Hens in great number: the Countrie men some of a brown colour like *Indians*, others white & ruddie, and some cole blacke, which is an argument of continuance with the Countries of the new *Guinie*, whereby there may so many differences of people be mingled of those which resort to the Ilands of the *Spicery*.

Ilands of *Salomon*.

The greatest and most renowned are *Santa Ysabel*, from eight to nine degrees of altitude, of more then 150. leagues in length, and eighteene in breadth, and one good port called of the *Star*: Saint *George* or *Borbi* to the South of S. *Isabel* one league and a halfe, of thirty leagues compasse; Saint *Marcos*, or Saint *Nicholas* of one hundred leagues compasse to the South-east of Saint *Isabel*; the Iland of the [c] *Shelues* as great as the former to the South of Saint *Isabel*, and Saint *Ierome* to the West of 100. leagues compasse; and *Guadalcanall* to the South-west greater then all: and to the East of Saint *Isabel*, the Iland of [d] *Buenauista*, and Saint *Dimas*, and the Iland of *Florida* of twenty leagues circuit euery one; and to the East of it, the Iland of [e] *Ramos* of 200. leagues compasse, and neere to it *Malayta*, and [f] *Atregnada* of thirty, and the three *Maries*, certaine little Ilands, & the Iland of Saint *Iohn* of twelue leagues compasse betweene the *Atregnada* and the Iland of S. *Iames* to the South. *Malata* of 100. leagues circuit, and to the South-east of it, the Iland of Saint *Christopher* as bigge as it: and Saint *Anne*, and Saint *Catherine*, two small Ilands fast by it: the *Name of God*, a small Iland distant from the other fiftie leagues, in seuen degrees of altitude, and in the same *Rumbe* to the North of Saint *Isabel*, the *Shelues*, which they call of [g] *Candelaria*.

There is in the voiage that is made from *Piru* to the Ilands of *Salomon*, an Iland called of S. *Paul*, in fifteen degrees of altitude, 700. leagues from *Piru*, nineteen degrees, 300. leagues of Land, others which may be those that they called of *Salomon*, and they say also that they might be others which this little while haue beene discouered in the same Rombe of *Chile*.

The Ilands of the *Theeues* are a row of 16. smal Ilands together which runne North and South, with the middest of the coast of *Guiney*, from twelue degrees of altitude vnto seuenteene Septentrionall or more, not farre from the *Philippinas* to the East. They are all barren ground, and miserable, without Cattle, or Mettals, scarce of Victuals, inhabited with poore people, well shapen, naked, and much inclined to steale, euen to the nayles of the Shippes that came there, whereby *Magelane* named them of the *Theeues*, in the yeare 1520. when he came to them going in demand of the *Spicerie*. Their names are, the *Englisb*, the most North, and after it *Ota Mao*, *Chemechoa Gregua*, *Agan*, or *Pagan*, *Oramagan*, *Gugnan*, *Charegnan*, *Natan*, *Saepan*, *Bota*, *Volia*. There are among these Ilands *Phillipines*, other eighteene or twenty, called of the *Kings*, *Archipelagus*, or Ilands of the *Corrall*, and the *Gardens*, another quantity of little Ilands, and *Pialogo*, Saint *Vilan*, another little Iland, the *Gardens*, and the Iland of the *Matalotes*, and that of the *Shelues*, and of Saint *Iohn*, or of *Palmes*, neere the *Malucos*, and on the North side of the *Theeues*, fiue or six little Ilands together, called the [h] *Volcanes*, where is store of Cochinilla; and [i] *Malpelo* another small Iland, where are [*] Cualoes very fine, and on the East side of the *Theeues*, the two Sisters, two little Ilands in ten degrees, and Saint *Bartholomew* in foureteene and more

Chap.28. Of the uprem Counſel of the *Indies*, and of the ſpirituall gouernment, and Eccleſiaſticall Royall Patronage.

THe Catholike King of *Caſtile*, and of *Lyon* continuing in their auncient, and Chriſtian pietie, preſently after theſe new Countries were diſcouered, and ioyned with this faire Monarchie, procured to plant, and ſettle the Catholike Religion in them, and temporall pollicie, with ſo much care and aduice of the wiſeſt men of theſe Kingdomes. For as the diſcoueries did increaſe the buſineſſes, they formed a particular Counſell with Preſident and Councellours, that buſying themſelues in no other thing, with more diligence they might reſort to that which ſo much pertained to the ſeruice of our Lord God, and gouernment of that Orbe. And becauſe hereafter mention ſhall be made of the perſons which from the beginning haue laboured, and ſerued in the ſupreame Counſel of the *Indies*, which hath carried ſo great a waight vnto this preſent houre, firſt ſhall be ſpoken of the ſpirituall and temporall gouernment, and the reſt worth the knowing, that the order of that Monarchie may be vnderſtood, with all breuitie.

Counſell of the *Indies.*

The firſt thing that theſe godly Kings did charge and command the firſt Diſcouerer, and from man to man commanded the other Diſcouerers and Gouernours of that new World with very ſtraight orders, was, that they ſhould procure that the people which they carried, with the Chriſtian life, and with their good cuſtomes, ſhould giue ſuch example to the *Indians*, that they might be glad to imitate them, and ſhould binde them vnto it, entring firſt according to the Euangelicall Law, the religious men preaching it, that ſo rather with the ſweetneſſe of it, then with the force and noyſe of Armes it ſhould be admitted, and that iuſtice ſhould be adminiſtred with ſuch equalitie to all men, that it might be much reſpected & eſteemed. All went forward, the townes went augmenting in ſuch manner, that with the zeale of the ſeruice of God, and good of the men it hath come to ſuch a point, that at this day there are found built and eſtabliſhed in all that Orbe of this Crowne poſſeſſed, as before hath beene ſeene, *fiue Archbiſhopricks*, *twentie ſeuen Biſhopricks*, *two famous Vniuerſities*, where with great learning and doctrine al the Sciences are read, more then *foure hundred Monaſteries* of religious *Dominicks*, *Franciſcans*, *Auguſtines*, *Mercenaries*, and the Companie of Ieſus, with ſome *Monaſteries of Nunnes, and Colledges, infinite Hoſpitals, and Fraternities*, innumerable ſtore of *beneficed Cures*, which are called *Doctrines*, for to teach thoſe new Conuerts, and *Heremites*, and *Chappels in the high-way erected on pillars, hauing Crucifixes in them*, without number. All the which was begun at the charge of the Crowne, and at this day it goeth forward where there is no maintenance for it. In effect, this Catholike pietie by the clemency of God goeth from good to better, augmenting with ſo much reuerence and honour of God, that in no place of Chriſtendome it is done with more order or care, by the care of the ſupreme Councell of the *Indies*. Of the which is inferred, that the *Conceſſion* of the Apoſtolike *Roman* Sea made to the *Crowne of Caſtile*, and of *Lion*, of the Patronage Eccleſiaſticall of that new World was a very great remedie, in the which our Lord God (as Hee which onely is Hee that ſeeth, and preuenteth all things to come) did a thing worthy of His greatneſſe, ſeeing Hee hath ſhewed the experience that if this had beene gouerned otherwiſe, it had beene impoſſible to haue proceeded with the harmonie, and euen concent as it hath, of Religion, Iuſtice, and Gouernment, with ſo much obedience and quietneſſe.

How many Archbiſhopricks, Biſhopricks, Monaſteries, and Schooles of Doctrine are in the *Indies*.

So *Humilladeros* is ſaid to ſignifie the tranſlator had, *Shrines*: the latine hath *Pœnitentiarij*.

The Eccleſiaſticall Patronage is gouerned in the ſame manner that in the Kingdome of *Granada*, the Kings Catholike preſenting to the chiefe Biſhop onely the Archbiſhops, and Biſhops, that from his holy hand they may receiue theſe Prelacies, and may diſpatch their Bulls, procuring alway that they be perſons of a religious life, and great learning. All the other Dignities and Benefices are prouided by the King, and conſultation of the *ſupreme Councell of the Indies*, and they go not to *Rome* for Buls: and their rents conſiſt in tithes and firſt fruits which ariſe of the *Spaniſh* inhabiters. For in the moſt places of theſe *Indies* the Countrie men paie not, and where the tithes are wanting, it is ſupplied out of the goods royall: and touching the tithes and firſt fruits that are to be paied, many ordinances and rates are made according to the ſtile of theſe Kingdomes, that the men of each Colony, it is iuſt it ſhould follow her cuſtomes. And though the Kings of *Caſtile*, and of *Lyon*, are Lords of the tithes by Apoſtolike conceſſion, & might take them to himſelfe, ſupplying where it wanteth with that which in other places doth exceede, he leaueth them to the Prelates & Churches, prouiding of his own goods Royall with the liberality of ſo Catholik Princes, to all the neceſſities of the poore Churches, giuing to euery one that is built anew the greateſt part of that which is ſpent in the building, with a Chaliz, a Bell, and a painted * Table.

How the Eccleſiaſticall Patronage is gouerned.

* Of Images or Pictures.

That the diſtribution of that which proceedeth of the tithes, and of that which is beſtowed out of the goods Royall in maintenance of the Prelates, Dignities, and Canons of the Cathedrall Churches, and Benefices, Cures, and perſons that are occupied in the diuine Seruice, and inſtructing of the *Indians*, may be fruitfully imploied according to the holy intention of the Kings; the ſupreme Counſell hath made good ordinances. Firſt, that all the ſaid perſons be of an approued life and cuſtomes, & eſpecially thoſe that doe meddle in the *Doctrines*, being firſt examined touching

Las Leyes.

* learning,

Digitized by Google

learning, and after in the language of the *Indians*; for it would little auaile, that the Diſciples ſhould not vnderſtand the Maiſter: and that theſe do continually reſide: and that no Curate, or Teacher may haue two Benefices; and that thoſe which ſhall from theſe parts paſſe to the *Indies* be more approued, it is commanded that no Prieſt doe paſſe without licence of his Prelate and of the King, and that if any be there found without it, preſently they ſhould ſend him to *Spaine*.

He continueth the gouernement of the Eccleſiaſticall Patronage.

And that the manner how the Royall Patronage is gouerned may better be vnderſtood, ſeeing it appertaineth to this Crowne, becauſe that it hath diſcouered and acquired that *New World*; and hath alſo built and endowed, out of the goods Royall, ſo many Churches, & Monaſteries, as by the Apoſtolike conceſſion, that for no cauſe the ſaid patronage, nor any part of it, either by cuſtome, or preſcription, or other title may be ſeparated from it: it is ordained what care the Vice-roies, Counſels, Gouernors, & Rulers, are to haue in it, and what penalties the tranſgreſſors ſhould incur. Firſt, that no Cathedrall or Pariſh Church, Monaſterie, Hoſpitall, nor votiue Church, ſhould be founded without conſent of the King. That when in the Cathedrall Churches there are not foure *Beneficed men reſident, prouided by royall preſentation, & canonicall prouiſion of the Prelate, becauſe the other Prebends be voide, or abſent for more then eight moneths (though for a lawfull cauſe.) The ſaid Prelate, till ſuch time as the King doth preſent, may chuſe to the accompliſhing of the foure Clarks (beſides thoſe that are prouided and reſident) of the moſt ſufficient of thoſe that ſhall offer themſelues, without that the ſaid prouiſion be in *Titulo* (to be remoueable at pleaſure) & that they haue no ſeate in the Quire, nor voice in Counſell. That no Prelate may make canonicall inſtitution, nor giue poſſeſſion of any Prebend, or Benefice, without preſentation Royall, & in ſuch a caſe that without delay they make the prouiſion, and command to reſort with the fruits. That in all the dignities, & Prebends, the learned be preferred before the vnlearned, and thoſe which haue ſerued in the Cathedral Churches of *Caſtile*, and haue more exerciſe of the ſeruice of the Quire, before them that haue not ſerued in them. That at the leaſt there be preſented for euery Cathedrall Church a graduate Lawyer, & a Diuine for the Pulpet, with the obligation that in theſe Kingdoms the doctoral Canons, & Magiſtrates haue; & another learned Diuine to read the ſacred Scriptures and another Lawyer or Diuine for the Cannonſhip of Pennance, according to the ſacred Counſell of *Trent*. That all the other Benefices, Cures, and ſimples, ſecular, and regulars, and the Eccleſiaſticall Offices that ſhall be voide, or prouided anew. That they may be made with leſſe delay, and the Royall patronage may be preſerued, it is commanded that they be made in the forme following. That any of the aboueſaid Benefices, or Offices being voide, the Prelate ſhall command to make edicts with a competent tearme, and of thoſe that ſhall offer themſelues hauing examined them, and being informed of their behauior, ſhall name of the beſt; and the Vice-roy or Gouernor of the Prouince, ſhal chuſe one and remit the election to the Prelate, that he make the prouiſion, Collation, and Cannonicall inſtitution by way of recommendation, and not in a perpetuall title, ſo that when the King doth make the preſentation, and in it ſhal be expreſſed that the collation be made in a perpetuall title, the Canonicall inſtitution ſhall be in title, and not in recommendation: and the preſented by the King be alwayes preferred before the preſented by his Miniſters.

* Or *Pentionary*.

Prouiſion of the Prebends, and Benefices.

That in the repartitions, and Towns of the *Indians*, and other places where they haue no benefice to elect, or means to place one to adminiſter the Sacraments, the Prelates ſhall procure there be one to *teach the Doctrine*, making an edict, and hauing informed himſelfe of his ſufficiency and goodnes, he ſhall ſend the nomination to the Miniſters Royal, that they do preſent him one of the two nominated, and if there be but one, that, and in the vertue of ſuch a preſentation the Prelate ſhall make the prouiſion, giuing him the inſtruction how he is to teach, and commanding him to giue notice of the fruits. That in the preſentations of all the dignities, offices, and benefices, the beſt deſeruing, and that moſt exerciſed in the conuerſion of the *Indians*, and the adminiſtration of the Sacraments ſhall be prouided; which, & thoſe that beſt ſpeak the language of the *Indians*, ſhall be preferred before the other. That he which ſhall come or ſend to requeſt his Maieſtie to preſent him to ſome dignitie, office, or benefice, ſhall appeare before the Miniſters of the Prouince, and declaring his petition, he ſhall giue information of his kindred, learning, cuſtomes & ſufficiency, and the Miniſter ſhall make another of his office, and with his opinion to ſend it, and that the pretendant do bring alſo an approbation from his Prelate; for without theſe diligences thoſe that come ſhall not be admitted. That none may obtaine two Benefices, or dignities in one, or in ſundry Churches. That the preſented not appearing before the time contained in the preſentation before the Prelate, it ſhall be voide, and they may not make him a Cannonicall inſtitution.

Chap. 29.
Of the Spirituall Gouernement, Goods of Men deceaſed: of the married: and of the holy office of the holy and general Inquiſition. Building of an Hoſpitall.

BEſides that which is rehearſed, it is prouided that they doe not permit any Prebendary in the Cathedrall Churches, to enioy the rents of it, except it be ſeruing & being reſident; and that the Benefices of the *Indians* be Cures, and not ſimples, and that in the new diſcoueries, and plantations that ſhall be made, there be preſently an Hoſpitall built for the poore, and ſicke perſons, of ſickneſſes that are not contagious, which ſhall be placed neere the Temple, and for a Cloyſter of the ſame; that for the ſicke of contagious diſeaſes, the Hoſpitall ſhall be ſet that no hurtfull winde paſſing by it doe ſtrike in the other inhabiting, and if it be built on a high place it will be better. And becauſe the King being informed that goods of the deceaſſed in thoſe parts do not come

Digitized by Google

comp so wholly as they might, nor so soone to the hands of the heyres, by will of the said deceased, for many causes, whereby the heires receiued great damage, and the testaments were not performed: for a remedy, it was prouided, that whatsoeuer *Spaniard* shall come to any Village, or Towne of these parts, he shall present himselfe before the Clarke of the Counsell, where he shall Register the name, and surname of such a one, with the place of his abode or birth, that his death happening, it may be knowne where those that are to be his heires may be found. That the ordinary Iustice, with the most auncient Ruler, and the Clark of the Counsell shall take charge of the goods of the persons that shall dye, and shall set them in an Inuentorie, before a Scriuener and Witnesses: and the debts that he did owe, and were owing him, and that which is in Gold & Siluer, small Pearle, and other things shall be sold, and put in a Chest of three Locks, whose Keyes the three persons abouesaid shall keepe. That the goods be sold in a publike out-cry, with the Testimony of a Scriuener: that if neede be, an Atturney shall be constituted. That the said Iustices doe take accompt of all those that haue charge of dead mens goods, and recouer all that they are behinde hand without any appeale, and doe put it in the Chest of the three Keyes. That hauing any Will of the deceased where he dyeth, and the Heires or Executors, the Iustice shall not meddle in any thing, neither take the goods, taking only notice who be the Heires of the said deceased. That the said Iustices, Rulers, and Scriueners doe send also to the *Contratation-house* of *Seuill*, all that which they shall recouer of the goods of the deceased, declaring the name, surname, and abode of of euery one deceased, with the Copy of the Inuentory of his goods, that they may be giuen to his Heires, by the order that touching the same is giuen. That when they take accompt of those that haue had goods of men deceased, it shall be sent to the supreme Counsell of the *Indies*, with a very particular relation, and reason of all. That the Iustices doe with care enforme themselues carefully of those which haue in possession the goods of men deceased, whether they haue done any fraude, and preiudice to the goods they haue had in possession, & send to the Counsel notice thereof, that they may giue accompt with paiment to the Iustices aboue said. That accompt be giuen euery yeere, and the memoriall of the dead that haue beene that yeere shall be shewed to the Gouernor of the Country, & of the goods they had, that they may be sent to *Seuill*, & be giuen to his heires, and the Testaments be fulfilled, with good accompt and reason that is behouefull. For in euery Counsell, one of the Iustices is Iudge of the goods of the deceased, the one succeeding another, from the yongest to the eldest, by their turne, which doth send his Commissaries through the bounds to take accompt of the houlders, and there be any carelessenesse, the Iustices are charged therewith in the visitations which are made of them, and before when there are any Plaintifes.

Orders for the goods of the deceased.

Touching married men.

Those Catholike Kings being informed that in the *Indies* were many married *Spaniards*, which liued separated from their wiues, of the which, besides the offence that was done to our Lord God, there followed a great inconuenience to the Plantation of those Countries, for that such not liuing seated in them, were not continued, neither did they attend to build, plant, breed, nor sowing, nor doing other things, which the good inhabiters are wont to doe, whereby the Townes doe not increase, as is behoofefull, and as they would do if there came inhabitors with their wiues & children, as true Townsmen; being willing to remedy the abouesaid, commanded that all and euery person or persons that should be found to be married, or betrothed in these Kingdomes, should come vnto them for their wiues, and not returne to the *Indies* without them, or with sufficient proof that they are dead. And the same order was giuen for all the Kingdomes, of that new world, and sundry times hath beene reiterated, and commanded to be executed vpon grieuous penalties.

The holy Office of the Inquisition.

Proceeding from the yeare 1492. when the discouery of this Orbe was begun, in directing and setling the spirituall gouernment, as hath beene seene, for greater perfection, and enduring of it: The Catholike King *Don Phillip* the second, called the *Prudent*, considering that among the great benefits that the *Indians* haue receiued, their illumination to receiue the Euangelicall Doctrin was the greatest, which hath extended it selfe, and considering also the singular grace which God for his mercy hath vsed with them, in giuing them knowledge of our holy Catholike Faith; that it was necessary to haue a speciall vigilancy in the conseruing of the deuotion, and reputation of the inhabitors, and *Castillans* pacifiers, which with so many labours procured the augmenting of the Religion, and exalting of the Catholike Faith (as in those parts like faithful & Catholik Christians, and good naturall and true *Castillans* they haue done) & seeing that those which are out of the holy Catholike & Apostolike *Roman* Church, obstinate, and stubborne in their errors, and heresies, do alwayes procure to peruert the faithful Christians, labouring to draw them to their false opinions, scattering certain damned Books, wherof hath followed great hurt to our sacred Religion; and hauing so certain experience that the best meanes to preuent these euils, consisteth in the separating the communication of heretical persons, punishing their errors, according to the disposition of the sacred Canons & laws of these Kingdoms (which by this holy means, by the diuine clemency haue beene preserued from this wicked contagion, and is hoped they will be preserued hereafter) to the end that the Orbe doe not receiue so much hurt, where the inhabiters of these Kingdomes haue giuen so good example of Christianity, & the Country-born haue not peruerted themselues with erronious doctrines of the hereticks: It seemed good to his Maiestie, with the aduice of the Cardinal D. *Iames* of *Espinosa*, Bishop of *Siguença*, Inquisitor generall in these Kingdoms, a man of great prudence,

Digitized by Google

prudence, and of many rare parts and vertues, for the which he made election of his person, to help him to beare the burden of so many Kingdomes, and Lordships, and of the Counsels of the holy, and generall Inquisition, and of the supreame Counsell of the *Indies* (for it behoued to place one Counsell of the holy Office in *Mexico*; for the Kingdomes of *New Spaine*, and the rest of the *Indies* of the North, and another in the Citie of the Kings, for the Kingdomes of *Piru*, and the adherents, which are called the *Indies* of the South) which the authority that the Councels of these Kingdomes haue, so that as yet they should not meddle with the cases of the *Indians*, but onely of the *Castillanes*, & other Nations that should be found in the *Indies*, and so that the appeals should come to the supreame Counsell that is resident in this Court, as it is done in *Spaine*, and in the accomplishing thereof, in the yeare 1570. the King *Don Phillip* the second, called the *Prudent*, gaue a generall power to the Towne of *Madrid*, the 16. of August, that the Apostolike Inquisitours that should be named for the present, and for hereafter against the hereticall peruersnesse, & Apostacie; and the Officers and Ministers necessary for this holy Office, which was commanded to be seated in the Cities of *Mexico*, and of the *Kings*, should exercise & vse their Offices, and royall warrants, that *Don Martin Enriques*, and *Don Francisco* of *Toledo*, Viceroyes, and Captains generall in the Kingdomes of *New Spaine*, and *Piru*, and the Counsels, and Iustices, Gouernours, and other persons should giue all aide, and fauour to the holy *Officio*, and the Inquisitors, and Officers were nominated, as in their owne place shall be spoken more at large.

Chap. 30. Of the forme of the gouernment of the supreame Counsell of the *Indies*, and of the Institution of the Counsels, and Chanceries royall of those parts.

THese Catholike Kings, most wisely constituted the *Supreme Counsell of the Indies*, that they might helpe them to beare so great a burden, as is already the gouernment of that Orbe, and the Counsell consisteth in one *President*, and eight or more *Counsellors*, as necessitie requireth, with one *Atturney*, *Secretaries*, *Clerkes of the Chamber*, *Relators*, and other *Officers*, and an *Office of Accompts*, where a notice is had of all the goods Royall of those parts. And that proceeding might be according to rule and order, they declared first that the Counsell should meet three houres euery day in the morning, and two in the afternoone, three dayes in the weeke that bee no holy dayes, and that they should firme the Warrants that should be deliuered for these Kingdoms; but that those that were for the *Indies*, should haue the seale Royall: and that in those parts it should haue supreme iurisdiction, and might make Lawes, and Decrees, to see and examine whatsoeuer Statutes, Constitutions of Prelates, Senates, Chapters, and Conuents of the Religious, and of the Vice-royes, Courts, and Counsels; and that in the *Indies*, and in these Kingdoms, in matter dependant of them it should bee obeyed: that the gouernment of the *Indies* should bee like this of these Kingdomes, and that more in particular the Counsell doe occupie it selfe in the matters of gouernment. That in Suites remitted those of the *Councell Royall* shall come to giue their voyces to that *of the Indies*, and that two voyces shall make a Sentence in suites of 500. [d] Pesos, or vnder. That there be a second Supplication in a case of 10000. Pesos: that they deale not in the reparti-

Appeales.

[d] Which is 100. pound *English*, taking two Ryals for one shilling.

tions of the *Indians* in those parts, but the Processes well perused in the Courts according to a Law, called of *Malinas* (for there it was made) they shall come to the *Supreme Counsell*: touching order to be held in matters of seruices, that the Counsell doe see them all; and in matters of rewards, that which the greatest part doth determine, shall be done, and that in these there be a Supplication, and that no expedient suite be seene the third time: and that in the matters they doe resolue with breuitie, that the charges be giuen to the best deseruing, and that they be not giuen to the allied and kinsmen of them of the Counsell; neither may such bee Solicitors, nor Atturneys; in the prouidings of the Offices no price shall be admitted: nor that they of the Counsell haue any *Indians* of repartition, and they shall assist in their houses, that the Suiters may find them there, when they goe not to Counsel: and that due secrecy be kept in all things, and aboue all that the Counsell haue a particular care of the Conuersion and good Instruction of the *Indians*, and of the spirituall gouernment; and that of [e] 600000. Marmediz vpward the appeale shall come to the Counsell; that they may appeale from the Sentences in the fiue Cases of naturall death, or mayming of a member, or other bodily punishment, publike shame, or racking, and the appeales shall come to the Counsell, with many other laudable orders, which are omitted for breuities sake.

[e] Which as we accompt 441. pound 3 shillings and one third part of a pennie.

That the President being a learned man, shall haue a voice in matters of Gouernment, gratuities, and fauours, visitations, and accompts, and not in suits, because he may be the more free for the gouernment of the Counsell; and being vnlearned he shall haue no voice, but in matters of grace, gouernment, and fauour, and that he may assemble the Counsell in his owne house, and haue a noate of the businesses, and that the Counsellours doe not accompany with the Suitors. And because it seemed a necessary thing that one *Fiscad* or Atturney should assist in Counsell, it was commanded he should haue the same stipend that the Counsellours, and that they deliuer him the dispatches of the Office, that he haue a care to know how that is accomplished which is prouided for the *Indies*; that necessary Papers be giuen him for his Office, that he doe see the visitations before Counsell: that he haue a book to register all the capitulations that are taken with the King, another wherein he may set down the Atturneys Pleas: that he delay not the suits; that his demands, or those that are against him be admitted, if the Counsel think it good: that he keep a book of that which is concluded for the cases; that he haue a care to know the Officers that doe omit to send a relation euery yeere to the Counsell.

He continueth the orders of the supreame Counsell.

Digitized by Google

Institution of the Courts royall of the *Indies.*

Hauing ordained all that which appertaineth to the Counsell, which is the head of this Gouernment, with many other orders which are not rehearsed for breuitie; they proceeded in ordering all the Prouinces of the *Indies*, in the matters of iustice, as neede required: and these Catholike Kings desiring the common good of that new world, that their subiects that should possesse it, hauing a zeale to the seruice of our Lord God, good, profit, & ease of the said Subiects, & to the peace, and quietnesse of the Towns, as the King is bound vnto God, and to them, for to accomplish with the Office that he hath in earth, hee thought good to command to place the Courts and Royall Chanceries, that (as hath beene said) are in the *Indies*, with the Statutes, and orders that hath beene giuen them, that the Ministers may doe their office, and iustice be well administred, and the Townes obtained the benefit pretended.

The Court of the *Hispanyola.* * Or *Ordinary Iustice, &c.*

The first Court that was established, was in the Citie of Saint *Dominicke* in the Iland *Hispaniola*, with one President a learned man, though now becausc of the warre he is a Souldiour, with title of Captaine Generall, and foure Iustices that beare rods, like an * *Alcalde*, and deale in ciuill and criminall matters, in a degree of apeale, and in the instance in matter of Court, and the Gouernment is onely commended to the President (which now is in *Don Antonio Osforio*) and the limits thereof.

The Court of *Mexico.*

The second Court was established in the Citie of *Mexico*, in *New Spaine*: the first President which was *Nunyo* of *Guzman*, had no authoritie, for he was placed but for a season: with the second Court, the Bishop D. *Sebastian Ramirez* (for he was so in the Court of *Hispanyola*) he had the Gouernment of the Kingdomes, and the supreame authoritie, and hee left that, established that which belonged vnto it, and vnto iustice, as at this present it is. The President of this Court is the Vice-roy (which now is the Earle of *Monterrey*) there are eight Iustices, which doe iudge in ciuill matters, and in the appeale of the cases of gouernment which the Vice-roy establisheth. There are three Iustices of criminall cases, which beare rods, and deale in criminal cases, and two Atturnies, one of ciuill, another of criminall causes, and hee prouideth the Rulers charges that are not reserued to the King, and the other Officers, and helpes of cost in releases, and vacations in the limits of this Court of *Mexico*, and in that Counsell of new *Galicia*.

The Court of *Panama.*

The third Court was that of *Panama* in *Terra firme* (for this name was giuen to it, because it was the first place where from the Ilands the *Castillanes* went to inhabit, and as their common speech was to say that they went and came from the *Firme Land*, though other Prouinces were found in the firme land of that Orbe) this Prouince continued this name, loosing that of *Castilla del Oro*, wherewith the Kings commanded it should be called: and when the affaires of *Peru* grew greater, in the yeare 1542. It was thought good that this Court should be remoued to the Citie of *The Kings*, where the Vice-roy (which now is *Don Lewis* of *Velasco*) hath at his charge the gouernment of these limits, and that of the Courts of the *Charcas* and *Quito*.

Wherefore it was called *Terra firme.*

Court of the Citie of the Kings.

There is in this Court of the *Kings* eight Iustices, three Iustices of Court, and two Atturneys, in the same order as in *Mexico*: and the Vice-roy is resident in the Citie of the *Kings*, and is the President of this Court, and shall be in the other two, when he is present in them, and doth diuide all the repartitions of *Indians* that are voide in the bounds of them.

The Court of *Guatemala.*

The fourth Court was established in the Prouince of the *Confines*, and seeming it was needlesse it was dissolued, and the yeare 1570. it was established againe in the Citie of Saint *Iames*, of the Kingdome of *Guatemala*: in it is one President which is the Doctor *Criado* of *Castile*: foure Iustices with rods, and one Attorney. They sit on ciuill and criminall cases, in appeales, and in the first instance: in matters of Court the President onely hath the Gouernment, and assigneth the *Indians*, prouideth the Rulerships, and other Offices temporall.

The Court of the new Kingdome.

The fift Court was established in the Citie of *Sancta Fe de Bogata*, in the new *Kingdome* of *Granada*, with one President (which now is the Doctor *Francisco de Sande*) foure Iustices with rods, and one Atturney, with the same authority that the former.

The Court of the new Kingdome of *Galicia*

The sixt was established in the Citie of *Guadalaiara*, of the new Kingdome of *Gallicia*, with one Regent, three chiefe Iustices, which dispatched a great while without Seale, and the matters increasing, the Seale was giuen, and a Register, and a President was placed, which now is Doctor *Sanctiago de Vera*: and three Iustices with rods, one Atturney, and the Viceroy of *New Spain* hath the Gouernment.

The Court of *Quito.*

The seuenth Court, was placed in the Citie of Saint *Francis* of *Quito*, of the Prouince of *Piru*, where there was also a Regent, chiefe Iustices without Seale, and afterward the Court was established with a President (which now is the Licentiat *Miguel de Vuarar*) with three Iustices with rods, & one Atturny with the same faculty of *Guadalaiara*, the gouernment, & the rest remaining to the Vice-roy of *Piru*, as aboue said.

The Court of the *Charcas.*

The eight Court was in the Citie of the *Plate*, in the Prouince of the *Charcas*, with a Regent and chiefe Iustices: after there was placed a President, foure Iustices with rods, Atturney, Seale, and Register, and now is President the Licentiat *Cepeda*, with reseruation of the prouiding the charges, and the rest to the Vice-roy of *Piru*.

Counsell of *Panama.*

The ninth Court, is that which was established againe in the Citie of *Panama*, with a President of Sword and Cloake, because of the matters of warre, which is now *Don Alonso de Sotomayor*, with the title of Captaine Generall of *Terra firme*: there are three Iustices with roddes, which doe deale in Appeales of ciuill and criminall cases, and at first instance in matters of Court, and it hath onely the Gouernment.

* *Sc.* a Soldiour.

The Court of the *Phillipines.*

In the Citie of Saint *Iames*, of the Prouince of *Chile*, was placed the tenth Court, and because it seemed needelesse, it was dissol-

ued,

ned, and a Gouernour was prouided, which dependeth on the Viceroy of *Piru*. In the Citie of the *Philippinas*, called *Manila*, was a Court, and it was dissolued, because it seemed needelesse a few yeares since it was established againe, with a Captaine Generall which is *Don Peter* of *Acuna* which is President, and foure Iustices, and one Atturney, with the same authoritie that the other Courts. For the Catholike Kings of *Castile*, with the aduise of the Supreme Councell of the *Indies*, doe alwayes prouide with a sincere and iust minde, that which is conuenient for the preseruation, and augmenting of the spirituall and temporall things of those parts, without any spare of expences, or labor: and euery Court hath according to the vse of these Kingdomes, Secretaries, Relators, Sergeants, Porters, and the Officers which are necessarie.

Chap. 3 1. Of the things that are prouided in the supreme Councell of the *Indies* with consultation of the Kings.

THE harmonie and agreement of this great Monarchie, is such, that to euery Minister hath beene giuen the authoritie that as well by reason of estate, as for the reputation of iustice hath seemed to be conuenient, reseruing to the supreme Maiestie that which hath beene iudged to be necessarie to his authoritie. For to the Vice-royes and Presidents, that they may haue to reward the well-deseruing, and they be more respected, there are Offices assigned which they may prouide, and matters wherein they may gratifie, and to the prouiding of the Person Royall haue remayned, with consultation of the supreme Councell of the *Indies* the offices following.

The gouernments which the King prouideth in the *Indies*.

For the Kingdome of *Chile* a Gouernour and a learned Iustice, with faculte to incommend or authorise the *Indians*: another for *Tucuman*, with the same faculte: another for the Prouinces of the Riuer of *Plate*, for *Popayan*, *Santa Martha*, *Cartagena*, and *Veragua*, with their Gouernour in euery one with the same power. In the Prouinces of *Nicaragua*, and the *Rich Coast*, one in the Iland of *Cuba*, one Gouernour, and Captaine which is resident in the Citie of Saint *Christopher* of the *Antans*: there are besides the Gouernours of the Iland of Saint *Iohn* of *Porto-rico*, *Venezuela*, *Soconusco*, *Yucatan*, *Cozumel*, and *Tabasco*, which is all one gouernment with authoritie to commend the *Indians*. His Maiestie prouideth also the gouernments of *Honduras*, the *Margarite*, *Florida*, new *Bisquie*, *Darado*, those of the *new Realme of Leon*, and that of *Pacamores*, *Yguasango*, which are for terme of life, and the same in the Prouinces of *Choco*, *Quixos*, the *Cynamom*, Ilands of *Salomon*, *Santa Cruz of the Hill*, and the last is that of the new *Andalusia*.

The Rulerships that his Maiestie doth prouide,

Likewise there are prouided by his Maiestie the Rulerships following. The *Cuzco*, the Citie of the *Plate*, and the seate of the mynes of *Potosi*, and the prouince of *Chicuito*, the *Andes* of *Cuzco*, the citie of *Truxillo*, *Arrequipa*, Saint *Iames* of *Guayaquil*, *Guamanga*, the citie of the *Peace*, *Chiquiabo*, Saint *Iohn* of the Frontier, *Lion* of *Guanuco*, *Old Hauen*, *Zamora*, the inhabiting of the mynes of the *Zacatecas* in new *Galicia*, *Cuenca*, *Loxa*, *Tunja*, the citie of *Mexico*, the citie of *the Kings*, the prouince of *Nicoya*. Chiefe Iusticeships, are those of the village of Saint *Sauiour* of the prouince of *Guatemala*, the inward part of *Hispaniola*, *Nombre de Dios*, the village of *Chuluteca*, prouince of the *Chiapa*, *Zapotlan*, the village of *Nata*, *Santa Marie* of the victorie in *Tabasco*. And the chiefe Bayliwickes are, in the citie of Saint *Dominicke* in *Mexico*, in *Guadalajara*, Saint *Iames* of *Guatemala*, *Panama*, holy *Faith* of *Bogota*, Saint *Francis* of *Quito*, the citie of *the Kings*, the *Plata*. In the Cities recited in euery one is a chiefe Bayliefe, which hath a voice in Councell as a Ruler, and Deputies named, for the vse of his Office, and in euery Court is another chiefe Bayliefe with faculte to name other two Deputies.

* Or the name of God.

For the gouernment of the goods Royall are prouided by his Maiestie, with the opinion of the supreme Councell of the *Indies*, many Officers, Factors, Treasurers, Tellers, and Ouer-seers, which all doe giue assurance in *Castile* and in the *Indies*, of good and faithfull administration: and because this new Commonwealth doth augment so much, it seemed behoofefull to the seruice of God, and of the King, to ennoble and authorize it more, with placing two Vice-royes, one in *New Spaine*, another in the Kingdomes of *Piru*, that in the Kings name they should gouerne and prouide the things belonging to the seruice of God, and of the King, and to the conuersion and instruction of the *Indians*, sustayning, continuing, inhabiting, and ennobling of the said Kingdomes, which experience hath shewed, that it hath beene conuenient: to the which Vice-royes instructions are giuen very particular of that which is recited, and that they may haue in protection the holy office of the Inquisition, and with their strong arme to defend and protect it, that this conformitie as a fast knot, may be the pure and true preseruation of the spirituall and temporall Estate, which is the best and truest estate, and most according to the Euangelicall estate.

That which is forbidden the Vice-royes, and Iudges.

The Vice-royes are commanded also, and likewise the Iudges, not to haue houses proper, nor to trafficke, nor contract, nor be serued of the *Indians*, neither haue any * Grangeries, nor meddle in Armies, nor Discoueries; that they receiue no guifts nor presents of any person; nor borrow mony, nor any thing to eate; nor pleade, nor receiue arbitrements. That no Lawyer may plead where his father, father in law, brother in law, cousin, or sonne is Iudge. That no Vice-roy, President, Iustice, Iudge of the criminall Cases, Solicitor, nor their children may marry in the *Indies*. That no Gouernours, Rulers, nor their Deputies, may buy Lands, nor build Houses, nor trafficke in their iurisdiction. That they may not farme the Bayliwickes, nor Iaylorships, nor other offices. That no Gouernour, Ruler, nor chiefe Bayliefe, during the time of his office, may marry in the bounds of his iurisdiction. That no Iudge be prouided for a Ruler, neither shall the said

* Where herds of Cattell are bred.

Digitized by Google

ſaid Iudges, or Bayliefs, haue any charge in which they are to make any abſence from their offices: neither ſhall any office of iuſtice be giuen to the ſonnes, ſonne in law, brothers in law, nor fathers in law of Preſidents, Iuſtices, nor Solicitors, nor to the Officers of the Courts, and of the goods Royal, neither to ſeruants nor allied of theirs: and the ſame is commanded the Vice-royes. And that none of the abouesaid Miniſters, doe accept warraant for recoueries nor other things, nor ſerue themſelues of the *Indians* without paying them. That no Aduocate, Scriuener, nor Relator, doe dwell in the houſe of Iudge, nor Bayliefe, nor the Suiters ſerue the Iudges. That the Iudges of *Panama*, doe not accompanie themſelues with the Dealers, nor giue leaue to their wiues to accompanie them. And that no Iuſtices of all the Courts, ſhall haue much communication with the Suiters, Aduocates, nor Atturneys: neither in body of a Court to goe to Marriages, Funerals, nor Spouſals, except it be a very weighty matter: neither viſite any Neighbour for any cauſe. That they doe not meddle in matters of the Commonwealth, nor any Iuſtice, nor other miniſter of the Court, may haue two offices in it. And beſides theſe many other Ordinances, and good Lawes, which are all concerning adminiſtration of iuſtice.

Chap. 32. Wherein hee continueth the matter of the good gouernment of the Indies.

AND becauſe theſe Catholike Kings haue left nothing which moſt wiſely they haue not prouided for according to their dutie, the firſt thing they command the Vice-royes, and all the Miniſters in generall and particular is, the good vſage of the *Indians*, and their preſeruation, and the accompliſhing of the Orders which are made as touching this, for to puniſh the Offenders with great rigour: and as the *Indians* doe learne the *Caſtillan* policie, and can complaine, and know in what things they receiue wrong, for their greater eaſe it is prouided, that they giue no place that the ordinarie writings be made in the ſuites betweene, or with the *Indians*, neither make any delayes, as it is wont to happen, by the malice of ſome Aduocates, and Atturneys, but that ſummarily they be determined, keeping their vſes and cuſtomes, not being manifeſtly iniuſt, and that by all meanes poſſible, they doe prouide the good and ſhort diſpatch of them. And hauing notice that in the interpretation of the *Indians* languages, there were ſome fraudes; for to preuent all, it was ordayned, that euery interpretation be made by two Interpreters, which ſhall not confer both together about that which is controuerted by the *Indian*: and that before they be receiued to the vſe of the office, they ſhall take their oath to adminiſter it faithfully, and that they receiue no guifts of the *Indians* ſuiters, nor of others. That they doe aſſiſt at the Agreements, Courts, and viſitations of the Priſons. That in their houſes they heare not the *Indians*, but to carry them to the Court. That the Interpreters be not Solicitors, not Atturneys of the *Indians*. That they aske them nothing. And for their greater good, it is prouided, that the Atturney of the ſupreme Councell of the *Indies*, bee Protector of the *Indians*, and defend them in their ſuites, and aske in the Councell all the neceſſarie things for his inſtruction, preſeruation, and politike life: and now there are appointed Protectors in the Kingdomes of *Piru*, and *New Spaine*, with new orders for their better vſage.

Interpreters.

Schooles for Indians to learne the Spaniſh tongue.

It is alſo commanded, to ſet vp Schooles of the *Caſtillane* tongue, that the *Indians* may learne it, and may doe it from their childhood; and that no vagabond *Spaniard* doe dwell or remayne in the Townes of the *Indians*, nor among them, but that the Vice-royes and the Courts, doe put all diligence in driuing ſuch out of the Land, ſhipping them for *Caſtile*: and the * Countrie borne be compelled to ſerue and to learne Trades. And as well to the Prelates, as to the Vice-royes, Courts, Gouernours, and Rulers, and other whatſoeuer Iuſtices, is ordayned, and particular care is had they doe accompliſh it, that they doe prouide how the offences that were done to God may ceaſe, in the *Indians* marrying whiles they are children, without hauing reſpect of age: the *Caziques* marrying with more then one woman, though he be an Infidell: in hindering that when ſome *Caziques* did die they ſhould kill another to bee buried with him, and other like abominable vſes. That it be permitted to the *Indians* that they may diſpoſe of themſelues what they liſt, as free men, and exempted from all manner labour, though it ſhall bee procured that they doe labour and not be idle, and may haue libertie to diſpoſe of their goods, the Lands being ſet to ſale by out-cry thirty dayes, and the moueable nine, the Iuſtice being preſent. That the Lands remayning of any *Indian* deceaſing without a Will, ſhall remayne in the Townes where they dwelt. That they make the Markets freely, and ſell in them their merchandize. That their good vſes and ancient cuſtomes be approued. That they may ſend to theſe Kingdomes *Indian* Atturneys for three yeeres. That the * Reſidencies be publiſhed in the *Indian* Townes, to ſee if any will demand iuſtice. That in euery Towne of the *Indians* there bee an Hoſpitall with the things neceſſarie.

* *Se.* of the *Caſtillanes*, and the Countriwomen.

* Or accompts of the Iudges, or Iuſtices.

That they be no ſlaues.

In this matter of the *Indian* ſlaues, there were in the beginning of the Diſcoueries diuers opinions, and orders, gouerning themſelues as the time required and the ſtate of the things: but after the Biſhop *Don Sebaſtian Ramirez* came for Preſident of *New Spaine*, this vſe was abſolutely aboliſhed, notwithſtanding the ancient one which the *Indians* had to make themſelues ſlaues one to another: neither might they buy of them, nor receiue them, neither that any perſon may bring to theſe Kingdomes any *Indian* in title of a ſlaue, though he be taken in lawfull warre: and for this are ſo ſtraight orders giuen that they are effectually kept, and ſo in no place of the *Indies*

are

Digitized by Google

are *Indian* slaues, though they be out of the bounds of *Castile* and *Lion*. And to eschew this inconuenience the more, the bringing *Indians* to these parts for whatsoeuer title it bee, is forbidden.

And the quietnesse for the Commonwealth being aboue all very necessarie, facultie is giuen to the Vice-royes, Presidents, Gouernours, and other Iustices, that they may driue away, and banish from the *Indies* all vnquiet persons, and send them to these Kingdomes, iudging it so to bee conuenient for the quietnesse of those, but that it bee not for hatred or passion, nor for any such reason. About vnquiet persons.

And that it may be some bridle to the Superiors, they are commanded, that they hinder no man the writing to the King, to his Councell, and to other persons, what they will: neither open, nor take any papers, or letters, vnder great penalties, and that they permit to passe and repasse through the Countrie them that will, prouiding wayes and bridges in the places where they are wanting.

As touching the matters of Warre, it is also prouided with great deliberation, for the Vice-royes greater authoritie, facultie is giuen them to haue a Guard on foot, and on Horse-backe: to make a casting place for Ordnance and Bullets, and a building for munitions, to leuy men, arme ships, and make fortifications, and prouide all the rest conuenient for the defence of those Kingdomes, and how the excesses of the Souldiers may be eschewed, as well by Land as by Sea, and to them that goe in the fleetes, committing the punishing of them to whom it belongeth, for to excuse competencies of iurisdiction. Matters of warre.

It hath already beene said how all the Gouernment of this Orbe, depends of the supreme and Royall Councell of the *Indies*, that are neere the Person Royall. But as it is necessarie that the executions of those parts haue correspondence in these; and here also there be they that may prouide in effecting that is behoofefull for the matters there: it was necessarie to place in *Siuil*, where all the trafficke of the *Indies* doth come, a house Royall of contratation of it, that medleth not but in the dispatching of those businesses, and dependants of them, without any person nor Iustice doe intermeddle in any thing belonging to the *Indian* affaires: and it is in substance, a Tribunall of great authoritie, in the which is a President, which now is *Don Bernardino Delgadillo* of *Anellaneda*, a Teller, a Treasurer, one Factor, three learned Iudges, one Solicitor, one Relator, one Sergeant, Scriueners, Porter, Taylor, and other Officers. In the Ilands of *Tenerife* and *Palma*, are placed two learned Iudges, called Officers Royall, or Iudges of the Registers, to cause Orders to be kept that are giuen for the lading and Registers of those Ilands, and Nauigation of that voyage. The house of the Contratation hath her instruction and ordinances, how her iurisdiction is to be gouerned and exercised, and the learned Iudges haue it also for their vse and exercise, keeping in the seeing of the plea, betweene parties, the order that is held in the Courts of *Valladolid*, and *Granada*: and because the particular care of the officers of this house, is the dispatch of the Fleetes and Armies, that they may depart in due times, they employ themselues in it with great diligence, and in receiuing them that come, and setting in safeguard the Gold, Siluer, Iewels, and other things that doe come, with a distinction of the waight and carracts, charging themselues with all, that there may be more account and reason, and for to make the prouisions of the Fleetes and Armies. There are so good orders giuen, that neither the Ministers doe exceed, nor the Subiects receiue wrong, for all passeth very conformable to the intention of these Godly and Catholike Kings, by meanes of the great diligence of the supreme Councell of the *Indies*. The house of contratation of *Siuil*.

And because the businesses of the *Indies* haue increased so much, that the supreme Councell could not dispatch them with the breuitie conuenient to the good gouernment of that Orbe, and the benefit of the Suiters, with the aduice of the President and supreme Councell; the King *Don Philip* the third our Lord, in imitation of his Catholike and Godly Predecessors, for the greater good of his subiects, hath instituted a *Priuie Councell*, where all the businesses of spirituall and temporall warrants, fauours and rewards may bee conferred and dispatched: and besides this, there are two Halls instituted, where on dayes appointed they may intreat of matters of warre, with the President and three Counsellors of the *Indies*, and two or three of the Counsell of warre, and other dayes, of the matters of the goods, by the President and Counsellors of *Indies*, and two of the Counsell of the goods, Atturney, and Secretarie of the Counsell of the *Indies*, the President naming those that he shall thinke best for it. Instruction of the Councell of *Camara*, or of Houshold.

And as these Catholike Kings doe alwayes looke to the benefit of the people of that Orbe, considering that the propagation of the holy Gospell in no part of it could goe more prosperously by any other hands then his, nor bee attended for his preseruation, and to haue the Conquerours and Inhabiters of those parts more satisfied, seeing all were his Subiects, and borne in these Kingdomes, declared by their Royall warrants, dated the yeere 1520. in *Valladolid*, and in the yeere 1523. in *Pamplona*, that their Maiesties, nor any of their Heires, in no time shall alienate from the Crowne Royall of *Castile* and *Lion*, the Ilands and Prouinces of the *Indies*, Towne, or any part of them, and so they promised it and gaue their Royall word. That the *Indies* shall not bee alienated.

The

The Preſidents, Counſellors, Secretaries, and Atturneys, which vnto this preſent day haue ſerued, and doe ſerue in the Supreme Councell of the Indies, *from their firſt Diſcouerie.*

PRESIDENTS.

IOhn *Rodriguez* of *Fonſeca*, brother to the Lord of *Coca* and *Alaejos*, Archbiſhop of *Roſano*, and Biſhop of *Burgos*, being Deane of *Siuil*, gouerned that which appertayned to the diſpatching of the Fleets and Armies of the *Indies*, till the Catholike King *Don Fernando* V. called him, to the end that in his Court hee might take charge of the *Indian* affaires, and he did it till the Emperor came to reigne, which commanded that the Doctor *Mercurino Gatinara* his great Chancellor, ſhould be Superintendent of all the Councels, and all the diſpatches paſſed through his hands, and intermedled in all the Aſſemblies that were made.

Friar *Garcia* of *Loayſa* Generall of the Order of Saint *Dominicke*, the Emperours Confeſſor, Biſhop of *Oſma*, which was Archbiſhop of *Siuil*, and Cardinall.

Don Garcia Manrique, Earle of *Oſorno*, which being Aſſiſtant of *Siuil*, did gouerne till the Cardinall came from *Rome*.

Don Lewis Hurtado of *Mendoça*, Marques of *Mondejar*, which after was Preſident of the Royall and ſupreme Councell of *Caſtile*.

The Licenciate *Don Franciſcus Tello* of *Sandoual*, which hauing beene of the Councell of the *Indies*, went for Preſident of the Royall Chancerie of *Granada*, and from thence came to gouerne in the Councell of *Indies*.

The Licenciate *Don Iohn Sarmiento* was alſo of the Councell of the *Indies*, and after went to gouerne in the Royal Chancerie of *Granada*, from whence he returned to be Preſident of the Royall and ſupreme Councell of the *Indies*.

Lewis Quixada, Lord of *Villagarcia*, and of the Councell of Warre.

The Licenciate *Iohn* of *Obando*, of the ſupreme Councell of the holy Inquiſition, did preſide in the Councell of the *Indies*, and of the goods Royall.

The Licenciate *Don Antonio de Padilla*, of the Royal and ſupreme Counſell of *Caſtile*, paſſed to be Preſident of the Councell of the Orders, and after to the ſupreme Councell of the *Indies*.

The Licenciate *Hernando* of *Vega* and *Fonſeca*, of the ſupreme Councell of the holy and generall Inquiſition, paſſed to the Councell of the goods Royall, and from it to the Royall and ſupreme Councell of the *Indies*.

The Licenciate *Don Pedro de Moya* of *Contreras*, the firſt Inquiſitor that went to *Mexico* for to ſeate the holy Office in that Citie. Hee was Archbiſhop of that Citie, and Preſident of the ſupreme Councell of the *Indies*.

The Licenciate *Paul* of *Laguna*, of the Royall and ſupreme Councell of *Caſtile*, and of the holy and generall Inquiſition, paſſed to gouerne in the Councell of the goods Royall and Tribunals of it, and was after Preſident of the ſupreme Councell of the *Indies*: and in his time began the Royall Councell of the Houſe-hold.

COVNSELLORS.

HErnando of *Vega*, Lord of *Grajal*, which was chiefe Knight of *Leon*, and Preſident of the Councell of Orders. Licenciate *Lewis Zapata*. Licenciate *Moxica*. Doctor S. *Iames*. CHAP.

CHAP. II.

Obseruations gathered out of the First, Second, Third, and Fourth bookes of IOSEPHVS ACOSTA *a learned Iesuite, touching the naturall historie of the Heauens, Ayre, Water, and Earth at the west* Indies. *Also of their Beasts, Fishes, Fowles, Plants, and other remarkable rarities of Nature.*

§. I.

Of the fashion and forme of Heauen, at the new-found World, and of the Ayre and Windes.

Lib. 1. cap. 5. MAny in *Europe* demand, of what forme and fashion Heauen is in the Southerne parts, for that there is no certaintie found in ancient Books, who although they grant there is a Heauen on this other part of the World, yet come they not to any knowledge of the forme thereof, although in truth they make mention of a goodly great Starre seene in those parts, which they call *Canopus*. Those which of late dayes haue sayled into these parts, haue accustomed to write strange things of this Heauen; that it is very bright, hauing many goodly Starres: and in effect, things which come farre, are commonly described with encrease. But it seemes contrarie vnto me, holding it for certaine, that in our Region of the North, there is a greater number and bigger starres; finding no starres in these parts, which exceede the *Fisher* or the *Chariot* in bigneſſe. It is true, that the *Crosse* in these parts is very faire and pleasing to behold: we call the *Crosse*, foure notable and apparant starres, which make the forme of a crosse, set equally and with proportion. The ignorant suppose this crosse to be the Southerne Pole, for that they see the Nauigators take their heigth thereby, as wee are accustomed to doe by the North starre. But they are deceiued, and the reason, why Saylers doe it in this sort, is for that in the South parts there is no fixed starre that markes the Pole, as the North starre doth to our Pole. And therefore they take their heigth by the starre at the foote of the Crosse, distant from the true and fixed Pole Antarticke thirtie degrees, as the North starre is distant from the Pole Articke three degrees or little more. And so it is more difficult to take the heigth in those parts, for that the said starre at the foote of the Crosse must be right, the which chanceth but in one houre of the night; which is in diuers seasons of the yeere in diuers houres, and oftentimes it appeareth not in the whole night, so as it is very difficult to take the height. And therefore the most expert Pilots regard not the Crosse, taking the height of the Sunne by the Astrolabe, by which they know in what height they are: wherein commonly the *Portugals* are more expert, as a Nation that hath more discourse in the Arte of Nauigation then any other. There are also other starres in these Southerne parts, which in some sort resemble those of the North. That which they call the *Milken way*, is larger and more resplendent in the South parts, appearing therein those admirable blacke spots, whereof we haue made mention.

Plin. lib. 6. c. 22.

See Magellans Voyage.

Height taken by the Sunne.

Via lactea.

Considering with my selfe oftentimes, what should cause the Equinoctiall to bee so moist, as I haue said; to refute the opinion of the Ancients, I finde no other reason, but the great force of the Sunne in those parts, whereby it drawes vnto it a great abundance of vapours from out of the Ocean, which in those parts is very great and spacious: and hauing drawne vnto it this great abundance of vapours, doth suddenly dissolue them into raine, and it is approued by many tried experiences, that the raine and great stormes from Heauen proceed from the violent heate of the Sunne: first (as we haue said before) it raines in those Countries, when as the Sunne casts his beames directly vpon the earth, at which time he hath most force: but when the Sunne retires, the heate is moderate, and then there falls no raine: whereby wee may conclude, that the force and heate of the Sunne is the cause of raine in those Countries. Moreouer we obserue, both in *Peru*, new *Spaine*, and in all the burning *Zone*, that the raine doth vsually fal in the afternoone, when as the Sunne beames are in their greatest force, being strange to see it raine in the morning. And therefore Trauellers foreseeing it, begin their iourneys early, that they may end and rest before noone, for they hold that commonly it raines after noone. Such as haue frequented and trauelled those Countries, can sufficiently speake thereof. And there are, that (hauing made some abode there) say, that the greatest abundance of raine is, when the Moone is at the full; but to say the truth, I could neuer make sufficient proofe thereof, although I haue obserued it. Moreouer, the dayes, the yeere, and the moneths, shew the truth hereof, that the violent heate of the Sunne causeth the raine in the burning *Zone*: experience teacheth vs the like in artificiall things, as in a Limbecke, wherein they draw waters from herbs and flowers; for the vehemency

Shewing the reason why the Sunne without the Tropicks, causeth greatest quantitie of waters when it is farthest off; and contrariwise, within them it breedeth most, when it is neerest. *l. 2. chap. 7.*

Digitized by Google

mency of the fire forceth and driueth vp an abundance of vapours, which being preſſed, and finding no iſſue, are conuerted into liquor and water. The like wee ſee in gold and ſiluer, which we refine with quick-ſiluer, the fire being ſmall and ſlow, we draw out almoſt nothing of the quick-ſiluer, but if it be quick and violent, it doth greatly euaporate the quick-ſiluer, which encountring the head aboue, doth preſently turne into liquor, and begins to drop downe: Euen ſo the violent heate of the Sunne produceth theſe two effects, when it findes matter diſpoſed, that is, to draw vp the vapours on high, and to diſſolue them preſently, and turne them into raine, when there is any obſtacle to conſume them. And although theſe things ſeeme contrarie, that one Sunne within the burning Zone, being neere, ſhould cauſe raine, and without the Zone afarre off ſhould breed the like effect; ſo it is, that all well conſidered, there is no contrarietie. A thouſand effects in naturall cauſes proceed of contrarie things by diuers meanes: we drie linnen by the fire, and in the aire, and yet the one heats and the other cooles; Paſtures are dried and hardened by the Sunne and with the Froſt; moderate exerciſe prouokes ſleepe, being too violent, it hindereth: if you lay no wood on the fire, it dyeth; if you lay on too much, it likewiſe quencheth: for the onely proportion entertaines and makes it to continue. To well diſcerne a thing, it muſt not be too neere the eye, nor too farre off, but in a reaſonable diſtance proportionable; being too farre off from any thing we loſe the ſight, and too neere likewiſe we cannot ſee it. If the Sunne beams be weake, they draw vp no fogge from the Riuers, if they be violent, hauing drawne vp the vapours, they preſently diſſolue and conſume them; but if the heat be moderate, it drawes vp and preſerues it: for this reaſon the vapours riſe not commonly in the night, nor at noone, but in the morning, when as the Sunne begins to enter into his force. There are a thouſand examples of naturall cauſes vpon this ſubiect, which wee ſee doe often grow from contrarie things: whereby we muſt not wonder, if the Sunne being neere, engenders raine, and being farre off, works the like effect: but being of a moderate and proportionable diſtance, cauſeth none at all. Yet there remaines one doubt, why the neerneſſe of the Sunne cauſeth the raine vnder the burning Zone, and without when it is fartheſt off. In my opinion the reaſon is, that in Winter without the Tropicks, the Sunne hath not force ſufficient to conſume the vapours which riſe from the Land and Sea; for theſe vapours grow in great abundance in the cold Region of the aire, where they are congealed and thickned by the extremitie of the cold; and after being preſſed, they diſſolue and turne into water. Therefore in Winter when the Sunne is fartheſt off, the dayes ſhort, and the nights long, his heat hath ſmall force: but when the Sunne approcheth, which is in the Summer time, his force is ſuch as it drawes vp the vapours, and ſuddenly conſumes and diſperſeth them; for the heat and the length of the dayes grow through the neerneſſe of the Sunne. But within the Tropicks vnder the burning Zone, the farre diſtance of the Sunne workes the ſame effects that the neerneſſe doth without the Tropicks; by reaſon whereof, it raines no more vnder the burning Zone when the Sunne is farre off, then without the Tropicks when it is neereſt, for that in this approching and retyring, the Sunne remayns alwayes in one diſtance whence proceedes this effect of cleerneſſe. But when the Sunne is in the period of his force in the burning Zone, and that he caſt his beames directly vpon the Inhabitants heads, there is neither cleerneſſe nor dryneſſe, as it ſeemes there ſhould be, but rather great and ſtrange ſhowers: for that by this violent heat, he drawes vp ſuddenly a great abundance of vapours from the Earth and Ocean, which are ſo thicke, as the winde, not able eaſily to diſperſe them, they melt into water, which breedeth the cold raine in ſo great abundance: for the exceſſiue heat may ſoone draw vp many vapours, the which are not ſo ſoone diſſolued: and being gathered together through their great abundance, they melt and diſſolue into water. The which wee may eaſily diſcerne by this familiar example: roaſt a piece of Porke, Mutton, or Veale, if the fire be violent, and the meate neere, wee ſee the fat melts ſuddenly and drops away, the reaſon is, that the violent heat drawes forth the humour and fat from the meat, and being in great abundance cannot diſſolue it, and ſo it diſtils more away: But when the fire is moderate, and the meat in an equall diſtance, wee ſee that it roaſts handſomly, and the fat drops not too ſuddenly, for that the moderate heat drawes out the moiſtneſſe which it conſumes ſuddenly. And therefore Cookes make a moderate fire, and lay not their meate too neere nor too farre off, leſt it melt away. The like may bee ſeene in another experience in candles of tallow or waxe, if the wike bee great, it melts the tallow or the waxe, for that the heat cannot conſume the moiſtneſſe which riſeth, but if the flame bee proportionable, the wax melts nor drops not, for that the flame doth waſte it by little and little as it riſeth.

But this is not to hinder the exceptions which Nature hath giuen to this Rule, making ſome Regions of the burning Zone extremely drie. The which is reported of *Ethiopia*, and wee haue ſeene it in a great part of *Peru*, where all that Land or Coaſt, which they call *Playnes*, wants raine, yea, land waters, except ſome Vallies where Riuers fall from the Mountaines; the reſt is a fandie and barren ſoile, where you ſhall hardly finde any Springs, but ſome deepe Wells. But with the helpe of God, we will ſhew the reaſon why it rayneth not in theſe Playnes (the which many demand;) for now I onely pretend to ſhew, that there are many exceptions to naturall Rules, whereby it may happen, that in ſome part of the burning Zone it raines not when the Sunne

Exceptions to generall rules.

Sunne is neereſt, but being fartheſt off, although vnto this day I haue neither ſeene nor heard of it: but if it be ſo, we muſt attribute it to the particular qualitie of the Earth: and alſo, if ſometimes the contrarie doth chance, we muſt haue regard that in naturall things there happens many contrarieties and lets, whereby they change and diſſolue one another. For example, it may be the Sunne will cauſe raine, and that the windes will hinder it, or elſe cauſe more abundance then hath beene vſuall.

The Authors experience.

When I paſſed to the *Indies*, I will tell what chanced vnto mee: hauing read what Poets and Philoſophers write of the burning Zone, I perſwaded my ſelfe, that comming to the Equinoctiall, I ſhould not indure the violent heate, but it fell out otherwiſe; for when I paſſed, which was when the Sunne was there for Zenith, being entred into *Aries*, in the moneth of March, I felt ſo great cold, as I was forced to goe into the Sunne to warme me: what could I elſe doe then, but laugh at *Ariſtotles* Meteors and his philoſophie, ſeeing that in that place, and at that ſeaſon, when as all ſhould be ſcortched with heat, according to his rules, I, and all my companions were a cold? In truth there is no Region in the world more pleaſant and temperate then vnder the Equinoctiall, although it be not in all parts of an equall temperature, but haue great diuerſities.

Various and diuerſified tempers of the Torrid Zone.

The burning Zone in ſome parts is very temperate, as in *Quito*, and on the playnes of *Peru*; in ſome parts very cold, as at *Potozi*, and in ſome very hot, as in *Ethiopia*, *Breſil*, and the *Molucques*. This diuerſitie being knowne and certaine vnto vs, wee muſt of force ſeeke out another cauſe of cold and heat then the Sunne beames, ſeeing that in one ſeaſon of the yeere, and in places of one height and diſtance from the Pole and Equinoctiall we finde ſo great diuerſitie, that ſome are inuironed with heat, ſome with cold, and others tempered with a moderate heat.

Cauſes of temperateneſſe vnder the Line and within the Tropicks.

Conſidering this matter generally, I finde two generall cauſes, which maketh this Region temperate: the one is that before mentioned, for that this Region is very moiſt and ſubiect to raine, and there is no doubt but the raine doth refreſh it, for that the water is by nature cold; and although by the force of the fire it be made hot, yet doth it temper this heat proceeding onely from the Sunne beames. The which wee ſee by experience in the inner *Arabia*, the which is burnt with the Sunne, hauing no ſhowres to temper the violence thereof. The cloudes and miſts are the cauſe that the Sunne offends not ſo much, and the ſhowres that fall from them, refreſh both the Aire and the Earth, and moiſten likewiſe how hot ſoeuer it be. They drinke raine water, and it quencheth the thirſt, as our men haue well tried, hauing no other to drinke. So as reaſon and experience doth teach vs, that raine of it ſelfe doth temper the heat; and hauing by this meanes ſhewed, that the burning Zone is much ſubiect vnto raine, it appeares that there is

Second cauſe.

matter in it, to temper the violence of the heat. To this I will adde an other reaſon, which deſerues to be knowne, not onely for this matter, but for many others; for although the Sunne be very hot and burning vnder the Equinoctiall, yet is it not long, ſo as the heat of the day being there ſhorter and of leſſe continuance, it cauſeth not ſo violent a heate; the which it behooues to ſpecifie more particularly. Such as are practiſed in the knowledge of the Spheare teach very well, that the more the Zodiake is oblique and trauerſing our Hemiſphere, the more vnequall are the dayes and nights; and contrariwiſe, where the Spheare is ſtraight, and the ſignes mount directly, there the dayes and nights are equall. And therefore in all that Region which is betweene the two Tropicks, there is leſſe inequalitie then without them, and the more wee approch the Line the leſſe inequalitie we finde, the which wee haue tried in thoſe parts. Thoſe of *Quito*, for that they are vnder the Line, haue not throughout the whole yeere the dayes and nights more ſhort at one ſeaſon then at an other, but are continually equall. Thoſe of *Lima* being diſtant almoſt twelue degrees, finde ſome difference betwixt the dayes and the nights, but very little, for that in December and Ianuarie the dayes increaſe an houre or little leſſe. Thoſe of *Potozi* finde much more difference both in Winter and in Summer, being almoſt vnder the Tropicke. But thoſe that liue without the Tropicks finde the dayes in Winter ſhorter and in Summer longer: the more remote they are from the Equinoctiall and come neere the Pole, as wee ſee in *Germanie* and in *England*, the dayes are longer in Summer then in *Italie* and in *Spaine*. It is a thing which the Spheare doth teach, and experience doth plainly ſhew vs. Wee muſt adde an other Propoſition, which is likewiſe true and very conſiderable for all the effects of Nature to vnderſtand the perſeuerance and continuation of the efficient cauſe to worke and mooue. This preſuppoſed, if any one demand of me, why vnder the Equinoctiall Line the heat is not ſo violent in Summer, as in ſome other Regions (as in *Andelouſia* in the moneths of Iuly and Auguſt) I will anſwere, that in *Andelouſia* the dayes are longer and the nights ſhorter; and as the day being hot, inflames and cauſeth heat; ſo the nights being cold and moiſt, giue a refreſhing. According to the which, at *Peru*, there is no ſuch great heat, for that the dayes in Summer are not long, nor the nights ſhort; ſo as the heat of the day is much tempered by the freſhneſſe of the night.

That there bee other reaſons beſides the former mentioned, which ſhew, that the burning Zone is temperate, eſpecially alongſt the Ocean. *Chap.* 11.

Being a thing concluded, that the two fore-named properties are common and vniuerſall to all the Region of the burning Zone: and yet in the ſame there are found ſome places very hot, and other exceeding cold: Alſo, that the temperature is not there equall in all places, but vnder one climate, one part is hot, another cold, and the third temperate, all at one ſeaſon; wee are forced

forced to seeke out other reasons, whence this great diuersitie should proceede in the burning Zone. Discoursing therefore vpon this question, I doe finde three apparant and certaine causes, and a fourth more obscure and darke. The apparant and certaine causes bee: The first, is the Ocean: the second, the situation of the Land: and the third, the nature and propertie of many and sundrie windes. Besides these three which I hold for manifest, I beleeue there is a fourth hidden and lesse apparant, which is the propertie of the same Land inhabited, and the particular influence of the Heauens. Among the speciall causes and reasons, I haue first placed the Sea, for without doubt, the neerneſse thereof doth helpe to temper and coole the heat: for although the Water be salt, yet is it alwayes water, whose nature is cold.

But if wee shall yet search more particularly, wee shall not finde in all this Land an equall temperature of heate, although it bee in equall distance from the Sea, and in the same degree, seeing that in some parts there is great heate, and in some very little. Doubtlesse, the cause thereof is, that the one is lower, and the other higher; which causeth that the one is hot, and the other cold. It is most certaine, that the tops of the Mountaines are colder then in the bottome of the Vallies, the which proceedes, not onely for that the Sunne beames haue greater repercussions vpon lower places, although it be a great reason; yet there is another, which is, that the Region of the aire is colder when it is farthest from the ground. The cause why the middle Region of the aire is more cold, hath beene shewed before: for that the Region of the aire next to the fierie exhalation, the which (according to *Aristotle*) is vpon the Spheare of the aire, repells and thrusts backe all the cold, the which retires it selfe into the middle Region of the aire, by *Antiperistasis*, as the Philosophers speake. Now, if any one should question with me in this manner; If it be so that the aire is hot and moist, as *Aristotle* holds, and as we commonly say; whence then proceedes the cold which is congealed in the middle Region of the aire, seeing it cannot come from the fierie Spheare? For if it come from the Water, or the Earth, by this reason the lower Region of the aire should be colder then the middle. *Arist. Met.*

To answere truly what I thinke, I will confesse, that this Argument and Obiection is so difficult, as I am almost readie to follow the opinion of such as reproue the qualities, agreements and disagreements which *Aristotle* giues vnto the Elements, saying, they are but imaginations, who for this occasion hold the aire to bee cold by nature. And to this end they vse many arguments and reasons, whereof we will propound one very familiar and well knowne, leauing the rest apart. In the Canicular dayes we are accustomed to beate the aire with a fan, and wee finde that it doth refresh vs; so as these Authors affirme, that heate is no priuate propertie of any other Element, but of fire onely, which is dispersed and mingled with all things (as the great *Denis* doth teach vs.) But whether it be so, or otherwise (for I will not contradict *Aristotle*, but in that which is most certaine) in the end they agree all, that the middle Region of the aire is colder then the lowest next to the Earth, as experience doth shew vs; seeing that in this middle Region are congealed, Snow, Haile, Frosts, and other signes of extreme cold. The middle Region then which they call the burning Zone, hauing on the one side the Sea, and on the other the Mountaines, we must hold them for sufficient causes to temper and coole the heate. *Dionys. c. 1. §. de cœl. hierar.*

The temperature of this Region ought chiefly to be attributed to the propertie of the winde that blowes in that Country, the which is pleasant and fresh. The prouidence of the great God Creator of all things hath beene such, as he hath ordayned fresh and coole windes in that Region where the Sunne makes his course (which seemes should be burnt vp) that by their coolenesse the excessiue heate of the Sunne might be qualified. Wee see in one climate, some Regions and Cities hotter then others, onely for that they feele lesse winde to refresh them. The like is in other Countries where no winde blowes, the which are all on fire like vnto a furnace. If we shall neerly looke into the consideration of the winde, whereof we haue spoken, we may resolue many doubts which some obiect, and which seeme strange and wonderfull: wherefore the Sunne casting his beames vpon the burning Zone, and particularly at *Peru*, and that more violently then in *Spaine* in the Canicular dayes, yet they defend the heat with a light couering, so as with a slender couering of mats or straw, they are better preserued from the heate, then in *Spaine* vnder a roofe of wood, or a vault of stone. Moreouer, why are not the nights in Summer at *Peru* as hot and troublesome as in *Spaine*? Wherefore on the highest tops of Mountaines, euen amongst the heapes of snowe, you shall sometimes feele great and insupportable heat? Wherefore in all the Prouince of *Colao*, when yee come into the shade, how little soeuer, you feele cold: But comming into the Sunne beames, you presently finde the heate excessiue? Euery morning the winde from the Sea doth cease, and the Sunne begins to cast his beames; and for this reason they feele the greatest heat in the morning, vntill the returne of the same windes, which otherwise they call the tyde or winde of the Sea, which makes them first to feele cold. Wee haue tried all this, whilest wee were at the Ilands of *Barlouante*, where in the mornings wee did sweat for heat, and at noone we felt a fresh aire; for that then, a North Easterly winde which is fresh and coole, doth commonly blow.

That the cold windes bee the principal cause to make the burning Zone temperate. *Chap. 13.* It is noted by trauellers that there is a hot winde sometimes neere to *Balsara* and *Ormus*, which swalloweth mens breath and suddenly kils them. *Linschoten* obserues at *Goa* the wind to blow twelue houres from the Sea, and other twelue constantly from the land.

Considering with my selfe, the pleasing temperature of many Countries at the *Indies*, where they know not what Winter is, which by his cold doth freeze them, nor Summer which doth trouble Temper of the *Indies*.

Digitized by Google

trouble them with heat, but that with a Mat they preſerue themſelues from the iniuries of all weather, and where they ſcarce haue any neede to change their garments throughout the yeere. I ſay, that often conſidering of this, I find that if men at this day would vanquiſh their paſſions, and free themſelues from the ſnares of couetouſneſſe, leauing many fruitleſſe and pernicious deſignes, without doubt they might liue at the *Indies* very pleaſant and happily: for that which other Poets ſing of the *Eliſean* fields & of the famous *Tempe*, or that which *Plato* reports or feignes of his *Atlantike* Iland; men ſhould finde in theſe Lands, if with a generous ſpirit they would chooſe rather to command their ſiluer and their deſires, then to remayne to it ſlaues as they are.

Of the windes, their differences, properties, and cauſes in generall *lib. 3. cap. 2.*

Hauing diſcourſed in the two former Bookes of that which concernes the Heauens, and the habitation of the *Indies* * in generall, it behooues vs now to treat of the three elements, Aire, Water, and Land, and their compounds, which be metals, plants and beaſts; for, as for the fire, I ſee no ſpeciall matter at the *Indies* which is not in other Regions; vnleſſe ſome will ſay, that the manner to ſtrike fire in rubbing two ſtones one againſt another, as ſome *Indians* vſe, or to boile any thing in gourds, caſting a burning ſtone into it, & other ſuch like things, are remarkable, whereof I haue written what might bee ſpoken. But of thoſe which are in the *Vulcans* * and Mouthes of fire at the *Indies*, worthy doubtleſſe to be obſerued, I will ſpeake in their order, treating of the diuerſitie of grounds, whereas they finde theſe fires or *Vulcans*. Therefore to begin with the windes, I ſay, that with good reaſon, *Salomon* in the great iudgement which God had giuen him, eſteemes much the knowledge of the windes; and their properties being very admirable; for that ſome are moiſt, others drie; ſome vnwholſome, others ſound; ſome hot, others cold; ſome calme and pleaſant, others rough and tempeſtuous; ſome barren, and others fertile, with infinite other differences. There are ſome windes which blow in certaine Regions, and are, as it were, Lords thereof, not admitting any entrie or communication of their contraries. In ſome parts they blow in that ſort, as ſometimes they are Conquerors, ſometimes conquered; often there are diuers and contrarie windes, which doe runne together at one inſtant, diuiding the way betwixt them, ſometimes one blowing aboue of one ſort, and another below of an other ſort; ſometimes they incounter violently one with another, which puts them at Sea in great danger: there are ſome windes which helpe to the generation of Creatures, and others that hinder and are oppoſite. There is a certaine winde, of ſuch a qualitie, as when it blowes in ſome Countrie, it cauſeth it to raine Fleas, and in ſo great abundance, as they trouble and darken the aire, and couer all the Sea-ſhoare: and in other places it raines Frogs. Theſe diuerſities and others which are ſufficiently knowne, are commonly attributed to the place by the which theſe windes paſſe. For they ſay, that from theſe places they take their qualities to be cold, hot, drie, or moiſt, ſickly or ſound, and ſo of the reſt, the which is partly true, and cannot be denyed; for that in a ſmall diſtance you ſhall ſee in one winde many diuerſities. For example, the *Solanus* or Eaſterne winde is commonly hot and troubleſome in *Spaine*, and in *Murcia* it is the cooleſt and healthfulleſt that is, for that it paſſeth by the Orchards, and that large champaine which wee ſee very freſh. In *Carthagene* which is not farre from thence, the ſame winde is troubleſome and vnwholſome. The Meridionall (which they of the Ocean call South, and thoſe of the Mediterranean Sea, *Mezo giorno*) commonly is raynie and boyſterous, and in the ſame Citie whereof I ſpeake, it is wholeſome and pleaſant. *Plinie* reports that in *Africke* it raines with a Northerne winde, and that the Southerne winde is cleere. He then that ſhall well conſider what I haue ſpoken of theſe windes, he may conceiue, that in a ſmall diſtance of Land or Sea, one winde hath many and diuers qualities, yea ſometimes quite contrarie; whereby wee may inferre, that hee draweth his propertie from the place where it paſſeth, the which is in ſuch ſort true (although we may not ſay infallibly) as it is the onely and principall cauſe of the diuerſitie of the windes. It is a thing we eaſily find, that in a Riuer containing fiftie leagues in circuit (I put it thus for an example) that the winde which blowes of the one part, is hot and moiſt; and that which blowes on the other, is cold and drie. Notwithſtanding this diuerſitie is not found in places by which it paſſeth, the which makes me rather to ſay, that the windes bring theſe qualities with them, whereby they giue vnto them the names of theſe qualities. For example, we attribute to the Northerne winde, otherwiſe called *Cierco*, the propertie to be cold and drie, and to diſſolue miſts; to the Southerne winde his contrarie, called *Leueſche*, we attribute the contrarie qualitie, which is moiſt and hot, and ingenders miſts. But it is needfull to ſeeke further, to know the true and originall cauſe of theſe ſo ſtrange differences which we ſee in the windes. I cannot conceiue any other, but that the ſame efficient cauſe which bringeth forth and maketh the winds to grow, doth withall giue them this originall qualitie: for in truth, the matter whereon the winds are made, which is no other thing (according to *Ariſtotle*) but the exhalation of the interior Elements, may well cauſe in effect a great part of this diuerſitie, being more groſſe, more ſubtill, more drie, and more moiſt. But yet this is no pertinent reaſon, ſeeing that we ſee in one Region, where the vapours and exhalations are of one ſort and qualitie, that there riſe windes and effects quite contrarie. We muſt therefore

* We haue abbreuiated and to preuent tedioufneſſe cut off a great part of *Acoſtas* obſeruations in the two former bookes, as hauing handled the ſame in our Pilgrimage 18. where we haue ſhewed whence men and beaſts might come thither, and that the opinion of the worlds vnhabitableneſſe betwixt the Tropicks is falſe: for the daily raines when the Sunne is neereſt, the long nights & therein great dewes, the brecezes and conſtant courſe of the windes, the great Lakes & Riuers, height of Hills, &c. make thoſe parts not onely habitable, but more temperate then others and fitter for mans life: there being more heat at, and on this ſide the Tropicks then vnder the Line. We here doe but cull out choiſe things for better vnderſtanding the naturall hiſtorie of thoſe parts; for other things referring the Reader to the Authour himſelfe. Occaſionally our notes ſhall elucidate thoſe things alſo, which are in the Text omitted. * *Vulcans*, as *Aetna*, *Hecla*, &c. ſulphurous earth whence fire iſſueth. Generall windes. Monſons. Windes receiue their qualities from the places by which they paſſe.

referre

referre the cause to the higher and celestiall Efficient, which must be the Sunne, and to the motion and influence of the Heauens, the which by their contrarie motions, giue and cause diuers influences. But the beginnings of these motions and influences are so obscure and hidden from men, and on the other part, so mightie and of so great force; as the holy Prophet *Dauid* in his prophetical Spirit, and the Prophet *Ieremie* admiring the greatnesse of the Lord, speake thus, *Qui profert ventos de thesauris suis.* Hee that drawes the windes out of his Treasures. In truth these principles and beginnings are rich and hidden treasures: for the Author of all things holds them in his hand, and in his power; and when it pleaseth him, sendeth them forth for the good onchastisement of men, and sends forth such windes as he pleaseth: not as that *Eolus* whom the Poets doe foolishly feigne to haue charge of the windes, keeping them in a Caue like vnto wilde beasts. We see not the beginning of these windes, neither doe we know how long they shall continue, or whither they shall goe. But wee see and know well the diuerse effects and operations they haue, euen as the supreme Truth, the Author of all things hath taught vs, saying, *Spiritus ubi vult spirat, & vocem eius audis, & nescis unde veniat, aut quo vadat.* *Psalme* 134. *Ieremie* 10.

It is true, that the Northerne winde is not vsually cold and cleere there as here. In some parts of *Peru*, as at *Lima*, and on the Playnes, they finde the Northerne windes troublesome and vnwholsome, and all along the Coast which runnes aboue fiue hundred leagues, they hold the Southerne windes for healthfull and coole, and (which is more) most cleere and pleasant: yet is neuer raines, contrarie to that wee see in *Europe*, and of this side the Line. Yet that which chanceth vpon the coast of *Peru* is no generall rule, but rather an exception, and a wonder of Nature, neuer to raine vpon that coast, and euer to haue one winde, without giuing place to his contrarie, whereof we will hereafter speake our minde. It is no generall rule there, that the Northerne winde is neither hot nor raynie there, as the South winde is on this side; but contrariwise, it raines when as the South winde blowes there, as wee see in all the *Sierra* or mountaine of *Peru*, in *Chile*, and in the Countrie of *Congo*, which is on the other side of the Line, and farre aduanced into the Sea. And in *Potozi* likewise, the winde which they call *Tomabon* (which is our North) if my memorie faile me not, is extremely cold, drie, and vnpleasant, as it is here with vs. Yet doth not the Northerne winde disperse the cloudes vsually there, as it doth here: but contrariwise, if I be not deceiued, it doth often cause raine. There is no doubt, but the windes doe borrow this great diuersitie of contrarie effects, from the places by which they passe, and the neere Regions where they are bred, as wee see by daily experience in a thousand places. But speaking in generall of the qualitie of the windes, we must rather looke to the coasts or parts of the World from whence they proceede, then to obserue, whether they be on this side or beyond the Line, as it seemes the Philosopher held opinion. These capitall windes, which be the East and West, haue no such vniuersall qualities, nor so common in this Continent, nor in the other, as the two former. The *Solanus* or Easterne winde, is commonly here troublesome and vnwholsome, and the Westerne or *Zephirus*, is more milde and healthfull. At the *Indies*, and in all the burning Zone, the Easterne winde which they call *Briso*, is contrariwise very healthfull and pleasant. Of the West, I cannot speake any thing certaine or generall, for that it blowes not at all, or very seldom in the burning Zone, for in all the nauigation betwixt the two Tropicks, the Easterne winde is ordinarie. And for that it is one of the admirable workes of Nature, it shall bee good to vnderstand the cause and the beginning thereof.

Herera hath shewed the height of the Hills to bee the cause of the windes constancy and raines rarity.

Eastern winde raineth betwixt the Tropicks.

The wayes at Sea are not as at Land, to returne the same way they passe. It is all one way (saith the Philosopher) from *Athens* to *Thebes*, and from *Thebes* to *Athens*; but it is not so at Sea, for wee goe one way and returne by another. The first which discouered the East and West *Indies*, laboured much with great difficultie to finde out their course, vntill that Experience (the Mistresse of these secrets) had taught them, that to saile through the Ocean, is not like the passage in *Italie*, through the Mediterranean Sea, where in their returne, they obserue the same Ports and Capes they had sight of in their passage, attending still the benefit of the winde, which chanceth instantly, and when that failes, they haue recourse to their Oares; and so the Gallies goe and come daily, coasting along the shoare. In some parts of the Ocean, they may not looke for any other winde then that which blowes, for that commonly it continues long. To conclude, that which is good to goe by, is not fit to returne with: for in the Sea beyond the Tropicke, and within the burning Zone, the Easterly windes raine continually, not suffering their contraries. In the which Region there are two strange things, the one is, that in that Zone (being the greatest of the fiue, into the which the World is diuided) the Easterly windes (which they call *Brisas*) doe reigne, not suffering the Westerne or Southerne (which they call lower winds) to haue their course at any season of the yeere: The other wonder is, that these Easterly windes neuer cease to blow, and most commonly in places neerest to the Line (where it seemes that Calmes should be more frequent, being a part of the World, most subiect to the heat of the Sunne, but it is contrarie, for you shall hardly finde any Calmes there, and the winde is cold and continues longer, which hath beene found true in all the Nauigations of the *Indies*. This is the reason, why the voyage they make from *Spaine* to the West *Indies* is shorter, more easie, and more assured, then the returne to *Spaine*.

That the burning Zone, the Brises, or Easterly windes, doe continually blow, and without the Zone the Westerne, and that the Easterly are ordinarie alwayes there. *Chap. 4. Iuan de Cacos in Decade 1. lib. 4. cap. 6.*

They goe one way to the *Indies* and return another, why.

Digitized by Google

The Fleetes parting from *Siuil*, haue more difficultie to passe the *Canaries*, for that the gulfe of *Tegnes* or of *Mares*, is variable, being beaten with diuers windes, but hauing passed the *Canaries*, they saile with a Westerne winde vntill they come to the burning Zone; where presently they finde an Easterly winde, and so they saile on with full windes, so as they haue scant any need to touch their sailes in the whole voyage: for this reason they called this great gulfe, the gulfe of *Dames*, for the calmnesse and pleasantnesse thereof. Then following their course, they come to the Ilands of *Guadelupe Dominique*, *Desired*, *Marigualante*, and the rest, which in that place, be as it were, the Suburbs of the *Indies*. There the Fleetes separate and diuide themselues, whereof some (which goe to new *Spaine*) take to the right hand towards *Hispaniola*; and hauing discouered Cape Saint *Anthony*, they passe vnto Saint *Iohn Delua*, alwayes vsing the same Easterly windes. Those for the mayne Land, take the left hand, discouering the high mountaine of *Fayrey*, then hauing touched at *Carthagene*, they passe vnto *Nombre de Dios*, from whence they goe by Land to *Panama*, and from thence, by the South Sea to *Peru*. But when the fleetes returne to *Spaine*, they make their voyage in this sort: The fleete of *Peru* discouers Cape Saint *Anthony*, then they enter into the *Hauana*, which is a goodly Port in the Iland of *Cuba*. The fleete of new *Spaine* doth likewise touch at the *Hauana*, being parted from *Vera Cruz*, or from the Land of Saint *Iohn Delua*, the which is not without difficultie, for that commonly Easterly windes blow there, which is a contrarie winde to goe to the *Hauana*. These fleetes being ioyned together for *Spaine*, they seeke their height without the Tropicks, where presently they finde Westerly windes, which serue them vntill they come in view of the *Azores*, or *Terceres*, and from thence to *Siuil*. So as their voyage in going, is of a small height, not aboue twentie degrees from the Line, which is within the Tropicks. But the returne is without the Tropicks, in eight and twentie or thirtie degrees of height at the least, for that within the Tropicks, the Easterne windes continually blow, the which are fittest to goe from *Spaine* to the West *Indies*, for that their course is from East to West; and without the Tropicks (which is in three and twentie degrees of height) they finde Westerly windes, the which are the more certaine and ordinarie, the farther you are from the Line, and more fit to returne from the *Indies*; for that they are windes blowing from the South and West, which serue to runne into the East and North.

The like discourse is of the Nauigation made into the South Sea, going from new *Spaine* or *Peru*, to the *Philippines* or *China*, and returning from the *Philippines* or *China* to new *Spaine*, the which is easie, for that they saile alwayes from East to West, neere the Line, where they finde the Easterly windes to blow in their Poope. In the yeere 1584. there went a ship from *Callao* in *Lima* to the *Philippines*, which sayled two thousand and seuen hundred leagues without sight of Land, and the first it discouered, was the Iland of *Luson*, where they tooke Port, hauing performed their voyage in two moneths, without want of winde or any torment, and their course was almost continually vnder the Line; for that from *Lima* (which is twelue degrees to the South) he came to *Manilla*, which is as much to the North. The like good fortune had *Aluaro de Mandana*, when as he went to discouer the Ilands of *Salomon*, for that he had alwayes a full gale, vntill he came within view of these Ilands, the which must bee distant from that place of *Peru*, from whence hee parted, about a thousand leagues, hauing runne their course alwayes in one height to the South. The returne is like vnto the voyage from the *Indies* vnto *Spaine*: for those which returne from the *Philippines* or *China* to *Mexico*, to the end they may recouer the western windes, they mount a great height, vntill they come right against the Ilands of *Iapon*, and discouering the *Caliphornes*, they returne by the coast of new *Spaine* to the Port of *Acapulco*, from whence they parted. So as it is proued likewise by this Nauigation, that they saile easily from East to West, within the Tropicks, for that their Easterly windes doe raine: but returning from West to East, they must seeke the Westerne windes without the Tropicks, in the height of seuen and twentie degrees. The *Portugals* proue the like in their Nauigations to the East *Indies*, although it be in a contrarie course.

Sayling 2700. leagues without sight of Land in two moneths. See *Candishes* voyage.

Let vs now speake of that which toucheth the Question propounded, what should be the reason why vnder the burning Zone we saile easily from East to West, and not contrarie: wherein we must presuppose two certaine grounds. The one is, that the motion of the first Mouer, which they call *Diurnall*, not onely drawes and mooues with him the celestiall Spheares, which are inferiour vnto him, as wee see daily in the Sunne, the Moone, and the Starres; but also the Elements doe participate of this motion, insomuch as they are not hindered. The Earth is not mooued, by reason of her heauinesse, which makes it immoueable, being farre from this first motor. The Element of water mooues not likewise with this Diurnall motion, for that it is vnited to the Earth and make one spheare, so as the Earth keeps it from all circular motion. But the other two Elements of Fire and Aire, are more subtill and neerer the heauenly Regions, so as they participate of their motion, and are driuen about circularly, as the same celestiall bodies. As for the Fire, without doubt it hath his spheare (as *Aristotle* and other Philosophers haue held) but for the Aire (which is no point of our subiect) it is most certaine that it mooues with a motion Diurnall, which is from East to West, which wee see plainly in Comets that mooue from the East vnto the West, mounting, descending, and finally turning in the hemispheare in the same

Cause of the Brises.

Motion of the *Primum Mobile* carrieth the inferiour aire with it.

Digitized by Google

same sort as the Starres moue in the firmament; for otherwise these Comets being in the region and sphere of the ayre, whereas they ingender, appeares consum'd. It should be impossible for them to moue circularly, as they doe, if the element of the aire doth not moue with the same motion that the first motor doth. For these elements being of a burning substance, by reason they should be fixt; without mouing circularly, if the sphere where they are did not moue; if it be not as we faine, that some Angell or intellectuall Spirit doth walke with the Comet, guiding it circularly. In the yeare 1577. appeared that wonderfull Comet (in forme like vnto a feather) from the horizon almost to the middest of heauen, and continued from the first of Nouember, vntill the eight of December: I say from the first of Nouember, for although in *Spaine* it was noated but the ninth of Nouember (according to the testimonie of Writers of that time) yet at *Peru*, where I was then, I remember well, we did see it, and obserue it eight dayes before, and all the time after. Touching the cause of this diuersitie, some may delate vpon it particularly: I will onely shew, that during those fortie dayes which it continued, wee all obserued (both such as were in *Spaine*, and we that liued then at the *Indies*) that it moued daily with an vniuersall motion, from East to West, as the Moone and other Planets, whereby it appeares that the sphere of the aire, being its Region, the element it selfe must of necessitie moue after the same sort. We noted also, that besides this vniuersall motion, it had another particular, by which it moued with the planets from West to East; for euery night it turned more Eastward, like vnto the Moone, Sunne, and Planets of *Venus*. We did also obserue a third particular motion, whereby it moued from the Zodiacke towards the North; for after some nights it was found neerer vnto the Septentrionall signes. And it may be this was the reason why the great Comet was sooner seene by those that were Southerly, as at *Peru*, and later discouered by them of *Europe*: for by this third motion (as I haue said) it approached neerer the Northerne Regions. Yet euery one may well obserue the differences of this motion, so as we may well perceiue, that many and sundry celestiall bodies, giue their impressions to the sphere of the ayre. In like sort it is most certaine, that the ayre moues with the circular motion of the heauen, from East to West, which is the first ground before mentioned. The second is no lesse certaine, which is, that the motion of the ayre in those parts that are vnder the Line, or neere vnto it, is very swift and light, the more it approacheth to the Equinoctiall; but the farther off it is from the Line, approaching neere the Poles, the more slow and heauie this motion is. The reason hereof is manifest; for that the mouing of the celestiall bodies, being the efficient cause of the mouing of the ayre, it must of necessitie be more quicke and light, where the celestiall bodies haue their swiftest motion.

The Comet 1577. seene eight dayes sooner in *Peru* then in *Spaine*.

Alonso Sanches was of opinion that this motion of the ayre was not a winde, but the ayre moued by the Sunne. This is learnedly spoken, yet can wee not deny it to be a winde, seeing there are vapours and exhalations of the Sea; and that we sometimes see the *Brise*, or Easterly windes stronger, sometimes more weake, and placed in that sort, as sometimes they can hardly carry all their sayles. We must then know (and it is true) that the ayre moued, draweth vnto it the vapours it findes, for that the force is great, and findes no resistance, by reason whereof the Easterne and Westerne windes are continual, and in a manner alwayes alike, in those parts which are neere the Line, and almost vnder all the burning Zone, which is the course the Sun followes betwixt the two circles of *Cancer* and *Capricorne*.

The Brize (or motion of the aire with the heauens) is a winde.

Who so would neerely looke into what hath bin spoken, may likewise vnderstand, that going from the West to the East, in altitude beyond the Tropikes, we shall finde Westerne windes, for that the motion of the Equinoctiall being so swift, it is a cause that the ayre moueth vnder it according to this motion, which is from the East to West, drawing after it the vapours and exhalations that rise of either side the Equinoctiall or burning Zone, incountring the course and motion of the Zone, are forced by the repercussion to returne almost to the contrary, whence grow the South-west windes so ordinary in those parts. Euen as we see in the course of waters, the which (if they be incountred by others of more force) returne in a manner backe: So it seemes to be like in vapours and exhalations, whereby it growes that the windes doe turne and separate themselues from one part to another. These Westerly windes doe commonly raine in a meane altitude, which is from twenty and seuen to thirty and seuen degrees, though they be not so certaine nor so regular as the *Brises* that are in a lesse altitude. The reason is, for that the South-west winds are no causes of this proper and equall motion of the heauen, as the *Brises* are, being neere to the Line. But (as I haue said) they are more ordinary, and often more furious and tempestuous. But passing into a greater altitude, as of fortie degrees, there is as small assurance of windes at Sea as at Land; for sometimes the East or North winde blowes, and sometimes the South, or West: whereby it happeneth their nauigations are more vncertaine, and more dangerous.

Why without the Zone, in a greater altitude, we finde alwaies Westerly windes. *Chap. 7.* Eddy windes.

Of the exceptions to the foresaid Rules, & of the winds and calmes both at Land and at Sea. *Chap. 8.*

That which we haue spoken of windes, which blow ordinarily within and without the Zone, must be vnderstood of the maine Sea, and in the great gulphes; for at land it is otherwise, where we finde all sorts of windes, by reason of the inequalitie which is betwixt the Mountaines and the vallies; the great number of Riuers and Lakes, and the diuers scituations of Countries, whence the grosse and thick vapours arise, which are moued from the one part or the other, according

Cause of the variety of windes.

cording to the diuerſitie of their beginnings, which cauſe theſe diuers windes the motion of the ayre, cauſed by the heauen, hauing not power enough to draw and moue them with it. And this varietie of windes is not onely found at land, but alſo vpon the Sea coaſt, which is vnder the burning Zone, for that there be forraine or land windes which come from the land, and many which blow from the Sea; the which windes from the Sea, are commonly more wholeſome and more pleaſant then thoſe of the land, which are contrariwiſe troubleſome and vnwholeſome, although it be the difference of the coaſt that cauſeth this diuerſitie: commonly the land windes blow from mid-night to the Sunne riſing, and the Sea windes vntill Sunne ſetting. The reaſon perhaps may be, that the earth, as a groſſe ſubſtance, fumes more when as the Sunne ſhines not vpon it, euen as greene wood, or ſcarſe dry, ſmoakes moſt when the flame is quenched. But the Sea, which is compounded of more ſubtile parts, engenders no fumes, but when it is hot, euen as ſtraw or haie, being moiſt and in ſmall quantitie, breedes ſmoake when it is burnt, and when the flame failes, the fume ſuddenly ceaſeth. Whatſoeuer it be, it is certaine that the Land winde blowes by night, and that of the Sea by day. So that euen as there are often contrary, violent, and tempeſtuous windes vpon the Sea coaſt, ſo doe we ſee very great calmes. Some men of great experience report, that hauing ſailed many great paſſages at Sea vnder the Line, yet did they neuer ſee any calmes, but that they alwayes make way little or much, the ayre being moued by the celeſtiall motion, which is ſufficient to guide a Shippe, blowing in poope, as it doth. I haue already ſaid, that a Shippe of *Lima* going to *Manilla*, ſailed two thouſand ſeuen hundred leagues, alwayes vnder the Line, or not aboue twelue degrees from it, and that in the moneths of February and March, when as the Sunne is there for Zenith, and in all this ſpace they found no calmes, but alwayes a freſh gale, ſo as in two moneths they performed this great voyage. But in the burning Zone and without it, you ſhall vſually ſee great calmes vpon the coaſts, where the vapours come from the Ilands, or maine land. And therefore ſtormes and tempeſts, and the ſudden motions of the ayre, are more certaine and ordinary vpon the coaſts, whereas the vapours come from the Land, then in full Sea, I meane vnder the burning Zone, for without it and at Sea, there are both calmes and whirlewindes. Notwithſtanding, ſometimes betwixt the two Tropickes, yea, vnder the Line, you ſhall haue great raine and ſudden ſhowers, yea farre into the Sea; for the working whereof, the vapours and exhalations of the Sea, are ſufficient, which mouing ſometimes haſtily in the ayre, cauſe thunder and whirlewindes, but this is more ordinary neere to the Land and vpon the Land. When I ſailed from *Peru* to new *Spaine*, I obſerued, that all the time we were vpon the coaſt of *Peru*, our voyage was (as it was ordinary) very calme and eaſie, by reaſon of the Southerne winde that blowes, hauing alwayes a fore winde, returning from *Spaine* and new *Spaine*. As we paſſed the gulph, launching farther into the Sea, almoſt vnder the Line, we found the ſeaſon coole, quiet, and pleaſant, with a full winde, but comming neere to *Nicaragua*, and to all that coaſt, wee had contrary windes, with great ſtore of raine and fogges. All this Nauigation was vnder the burning Zone: for from twelue degrees to the South, which is *Lima*, we ſailed to the ſeuenteenth, which is *Guatulco*, a port of new *Spaine*: and I beleeue, that ſuch as haue obſerued their nauigations, made vnder the burning Zone, ſhall finde what I haue ſaid, which may ſuffice for the windes which raigne at Sea, vnder the burning Zone.

Simile.

Note.

It were a very difficult matter, to report particularly the admirable effects which ſome windes cauſe in diuers regions of the world, and to giue a reaſon thereof. There are windes, which naturally trouble the water of the Sea, and makes it greene and blacke, others cleere as Chriſtall, ſome comfort and make glad, others trouble and breede heauineſſe. Such as nouriſh Silke-wormes, haue great care to ſhut their windowes, when as the South-weſt windes doe blow, and to open them to the contrary: hauing found by certaine experience, that their wormes diminiſh and dye with the one, and fatten and become better with the other: and who ſo will neerely obſerue it, ſhall finde in himſelfe, that the diuerſities of windes, cauſe notable impreſſions and changes in the body, principally in ſicke parts and ill diſpoſed, when they are moſt tender and weake. The holy Scripture calleth one a burning winde, another, a winde full of dewe and ſweetneſſe. And it is no wonder if we ſee ſuch notable effects of the winde, in Plants, Beaſts, and Men, ſeeing that we ſee it viſibly in Iron, which is the hardeſt of all mettals. I haue ſeene Grates of Iron in ſome parts of the *Indies*, ſo ruſted and conſumed, that preſſing it betwixt your fingers, it diſſolued into powder, as if it had beene hay or parched ſtraw, the which proceedes onely from the winde which doth corrupt it, hauing no meanes to withſtand it. But leauing apart many other great and notable effects, I will onely make mention of two. The one, although it cauſeth pangs greater then death it ſelfe, yet doth it not breede any further inconuenience. The other takes away life without feeling of it. The ſickneſſe of the Sea, wherewith ſuch are troubled as firſt begin to goe to Sea, is a matter very ordinary; and yet if the nature thereof were vnknowne to men, we ſhould take it for the pangs of death, ſeeing how it afflicts and torments while it doth laſt, by the caſting of the ſtomacke, paine of the head, and other troubleſome accidents. But in truth this ſickneſſe ſo common and ordinary happens vnto men by the change of the ayre and Sea. For although it be true that the motion of the Ship helpes much,

Sea ſickneſſe whence.

Agitation and Sea ayre.

in

in that it moues more or leſſe: and likewiſe the infections and ill ſauours of things in the Ship: yet the proper and naturall cauſe, is the ayre and the vapours of the Sea, the which doth ſo weaken and trouble the body and the ſtomacke, which are not accuſtomed thereunto, that they are wonderfully moued and changed: for the ayre is the Element, by which we liue and breath, drawing it into our entrailes, the which we bathe therewithall. And therefore there is nothing that ſo ſuddenly, and with ſo great force doth alter vs, as the change of the ayre we breathe, as we ſee in thoſe which dye of the plague. It is approued by many experiences, that the ayre of the Sea, is the chiefe cauſe of this ſtrange indiſpoſition; the one is, that when there blowes from the Sea a ſtrong breath, we ſee them at the Land as it were Sea-ſicke, as I my ſelfe haue often found. Another is, the farther wee goe into the Sea, and retyre from Land, the more wee are touched and dazeled with this ſickneſſe. Another is, that coaſting along any Iland, and after lanching into the maine, we ſhall there finde the ayre more ſtrong. Yet will I not deny, but the motion and agitation may cauſe this ſickneſſe, ſeeing that we ſee ſome are taken therewith paſſing Riuers in Barkes: others in like ſort going in Coaches and Caroaches, according to the diuers complexions of the Stomacke: as contrariwiſe, there are ſome how boiſterous and troubleſome ſoeuer the Sea be, doe neuer feele it. Wherefore it is a matter certaine, and tried, that the ayre of the Sea, doth commonly cauſe this effect in ſuch as newly goe to Sea. I thought good to ſpeake this, to ſhew a ſtrange effect, which happens in ſome parts of the *Indies*, where the ayre and the winde that raigns makes men dazle, not leſſe, but more then at Sea. Some hold it for a fable, others ſay it is an addition: for my part I will ſpeake what I haue tried.

There is in *Peru*, a high mountaine which they call *Pariacaca*, and hauing heard ſpeake of the alteration it bred, I went as well prepared as I could, according to the inſtructions which was giuen me, by ſuch as they call *Vaquianos*, or expert men: but notwithſtanding all my prouiſion, when I came to mount the *degrees*, as they called them, which is the top of this mountaine, I was ſuddenly ſurprized with ſo mortall and ſo ſtrange a pang, that I was ready to fall from the top to the ground: and although we were many in company, yet euery one made haſte (without any tarrying for his companion,) to free himſelfe ſpeedily from this ill paſſage. Being then alone with one *Indian*, whom I intreated to helpe to ſtay me, I was ſurprized with ſuch pangs of ſtraining and caſting, as I thought to caſt vp my heart too; for hauing caſt vp meate, flegme, and coller, both yellow and greene; in the end I caſt vp blood, with the ſtraining of my ſtomacke. To conclude, if this had continued, I ſhould vndoubtedly haue dyed; but this laſted not aboue three or foure houres, that wee were come into a more conuenient and naturall temperature, where all our companions (being fourteene or fifteene) were much wearied. Some in the paſſage demanded confeſſion, thinking verily to dye: others left the Ladders and went to the ground, being ouercome with caſting, and going to the ſtoole: and it was told me, that ſome haue loſt their liues there with this accident. I beheld one that did beate himſelfe againſt the earth, crying out for the rage and griefe which this paſſage of *Pariacaca* had cauſed. But commonly it doth no important harme, onely this, paine and troubleſome diſtaſte while it endures: and not onely the paſſage of *Pariacaca* hath this propertie, but alſo all this ridge of the Mountaine, which runnes aboue fiue hundred leagues long, and in what place ſoeuer you paſſe, you ſhall finde ſtrange intemperatures, yet more in ſome parts then in other, and rather to thoſe which mount from the Sea, then from the Plaines. Beſides *Pariacaca*, I haue paſſed it by *Lucanas* and *Soras*: in another place, by *Collegnas*, and by *Canaras*. Finally, by foure different places, going and comming, and alwayes in this paſſage I haue felt this alteration, although in no place ſo ſtrongly, as at the firſt in *Pariacaca*, which hath beene tried by all ſuch as haue paſſed it. And no doubt but the winde is the cauſe of this intemperature and ſtrange alteration, or the ayre that raignes there. For the beſt remedy (and all they finde) is to ſtoppe their noſes, their eares, and their mouthes, as much as may be, and to couer themſelues with cloathes, eſpecially the ſtomacke, for that the ayre is ſubtile and piercing, going into the entrailes, and not onely men feele this alteration, but alſo beaſts that ſometimes ſtay there, ſo as there is no ſpurre can make them goe forward. For my part I hold this place to be one of the higheſt parts of land in the world; for we mount a wonderfull ſpace. And in my opinion, the Mountaine *Nenade* of *Spaine*, the *Pirenees*, and the *Alpes* of *Italie*, are as ordinary houſes, in regard of hie Towers. I therefore perſwade my ſelfe, that the element of the ayre is there ſo ſubtile and delicate, as it is not proportionable with the breathing of man, which requires a more groſſe and temperate ayre; and I beleeue it is the cauſe that doth ſo much alter the ſtomacke, and trouble all the diſpoſition. The paſſages of the mountaines *Nenade*, and other of *Europe*, which I haue ſeene, although the ayre be cold there, and doth force men to weare more cloathes, yet this colde doth not take away the appetite from meate, but contrariwiſe it prouokes; neither doth it cauſe any caſting of the ſtomacke, but onely ſome paine in the feete and hands. Finally, their operation is outward. But that of the *Indies*, whereof I ſpeake (without moleſting of foote or hand, or any outward part) troubles all the entrailes within: and that which is more admirable, when the Sunne is hot, which maketh me imagine, that the griefe wee feele comes from the qualitie of the ayre which wee breathe: Therefore that is moſt ſubtile and delicate, whoſe cold is not ſo ſenſible, as piercing. All this ridge

Strange paſſion at *Pariacaca* by the ayre there.

Height of *Pariacaca*.

Aire too ſubtile for mens bodies. So we ſee Horſes to beate the water with their feete to make it more groſſe and thereby more agreeable to their bodies.

ridge of mountaines is, for the most part, desart, without any Villages or habitations for men, so as you shall scarce finde any small Cottages to lodge such as doe passe by night: there are no Beasts, good or bad, but some *Vicunos*, which are their Countrie Muttons, and haue a strange and wonderfull property, as I shall shew in his place. The Grasse is often burnt, and all blacke with the ayre, and this Desart runs fiue and twenty or thirty leagues ouerthwart, and in length aboue fiue hundred leagues.

Vicunos.

Great Desart.

There are other Desarts or places inhabited, which at *Peru* they call *Punas* (speaking of the second point we promised) where the qualitie of the ayre cutteth off mans life without feeling. In former time the *Spaniards* went from *Peru*, to the Realme of *Chille* by this Mountaine, but at this day they doe passe commonly by Sea, and sometimes alongst the side of it. And though that way be laborious and troublesome, yet is there not so great danger as by the Mountaine, where there are Plaines, on the which many men haue perished and dyed, and sometimes haue scaped by great hap, whereof some haue remained lame. There runs a small breath, which is not very strong nor violent, but proceeds in such sort, that men fall downe dead, in a manner without feeling, or at the least, they loose their feete and hands: the which may seeme fabulous, yet is it most true. I haue knowne and frequented long the Generall *Ieronie Costilla*, the auncient peopler of *Cusco*, who had lost three or foure toes, which fell off in passing the Desart of *Chille*, being perished with this ayre, and when he came to looke on them, they were dead, and fell off without any paine, euen as a rotten Apple falleth from the tree. This Captaine reported, that of a good armie which he had conducted by that place, in the former yeares, since the discouery of this Kingdome by *Almagro*, a great part of the men remained dead there, whose bodies he found lying in the Desart, without any stinke or corruption; adding thereunto one thing very strange, that they found a yong Boye aliue, and being examined how hee had liued in that place, hee said, that he lay hidden in a little Caue, whence hee came to cut the flesh of a dead Horse with a little Knife, and thus had he nourished himselfe a long time, with I know not how many companions that liued in that sort, but now they were all dead, one dying this day, & another to morrow, saying that he desired nothing more then to dye there with the rest, seeing that hee found not in himselfe any disposition to goe to any other place, nor to take any taste in any thing. I haue vnderstood the like of others, and particularly of one that was of our company, who being then a secular man, had passed by these Desarts: and it is a strange thing, the quality of this cold ayre, which kils, and also preserues the dead bodies without corruption. I haue also vnderstood it of a reuerend religious man, of the Order of Saint *Dominike*, and Prelate thereof, who had seene it passing by the Desarts: and which is strange, he reported, that trauelling that way by night, was forced to defend himselfe against that deadly winde which blowes there (hauing no other meanes) but to gather together a great number of those dead bodies that lay there, and made thereof, as it were, a rampire and a bolster for his head: in this manner did hee sleepe, the dead bodies giuing him life. Without doubt this is a kinde of colde so piercing, that it quencheth the vitall heate, cutting off his influence; and being so exceeding colde, yet doth not corrupt nor giue any putrifaction to the dead bodies, for that putrifaction groweth from heate and moistnesse. As for the other kinde of ayre which thunders vnder the earth, and causeth earthquakes, more at the *Indies*, then in any other Regions, I will speake thereof in treating the qualities of the Land at the *Indies*. We will content our selues now with what we haue spoken of the winde and ayre, and passe to that which is to be spoken of the water.

Punas ayre killing.

Strange Story.

The same confirmed by a *Iesuites* report, and a *Dominicans.*

Such effects of cold we haue obserued in *Russia*, and other Northern parts: and the like Master *Kniuet* will tell vs at the *Magelan* Straits.

§. II.

Of the Ocean that inuirons the Indies, *and of the North and South Seas, their ebbing, flowing, Fishes, fishing, Lakes, Riuers, and Springs.*

AMong all waters the Ocean is the principall, by which the *Indies* haue beene discouered, and are inuironed therewith; for either they be Ilands of the Ocean Sea, or maine Land, the which whereseuer it ends, is bounded with this Ocean. To this day they haue not discouered at the *Indies* any Mediterranean Sea, as in *Europe*, *Asia*, and *Affrica*, into the which there enters some arme of this great Sea, and makes distinct Seas, taking their names from the Prouinces they wash: and almost all the Mediterranean Seas continue and ioyne together, and with the Ocean it selfe, by the straight of *Gibraltar*, which the Ancients called, the Pillers of *Hercules*, although the *Red Sea* being separated from the Mediterranean Seas, enters alone into the *Indian* Ocean; and the *Caspian* Sea ioynes not with any other: so that at the *Indies* we finde not any other Sea then this Ocean, which they diuide into two, the one they call the North Sea, and the other the South; for that the *Indies* which were first discouered by the Ocean, and reacheth vnto *Spaine*, lies all to the North, and by that Land thereafter discouered a Sea on the other side, the which they called the South Sea, for that they decline vntill they haue passed the Line; and hauing lost the North, or Pole-articke, they called it South.

No Mediterranean Sea of great note in *America.*

For

Digitized by Google

For this cause they haue called all that Ocean the South Sea, which lyeth on the other side of the East *Indies*, although a great part of it be seated to the North, as all the coast of new *Spaine*, *Nuaragna*, *Guatimala* and *Panama*. They say, that he that first discouered this Sea, was called *Blascowunes* of *Bilbo*, the which he did by that part which we now call *Maine Land*, where it growes narrow, and the two Seas approach so neere the one to the other, that there is but seuen leagues of distance: for although they make the way eighteene from *Nombre de Dios* to *Panama*, yet is it with turning to seeke the commoditie of the way, but drawing a direct line, the one Sea shall not be found more distant from the other. Some haue discoursed and propounded to cut through this passage of seuen leagues, and to ioyne one Sea to the other, to make the passage from *Peru* more commodious and easie, for that these eighteene leagues of Land betwixt *Nombre de Dios* and *Panama*, is more painefull and chargeable then 2300. by Sea, whereupon some would say, it were a meanes to drowne the Land, one Sea being lower then another. As in times past we finde it written, that for the same consideration, they gaue ouer the enterprize to winne the red Sea into *Nile*, in the time of King *Sesostris*, and since, in the Empire of the *Othomans*. But for my part, I hold such discourses and propositions for vaine, although this inconuenience should not happen, the which I will not hold for assured. I beleeue there is no humaine power able to beate and breake downe those strong and impenetrable Mountaines, which God hath placed betwixt the two Seas, and hath made them most hard Rockes, to withstand the furie of two Seas. And although it were possible to men, yet in my opinion they should feare punishment from heauen, in seeking to correct the workes, which the Creator by his great prouidence hath ordained and disposed in the framing of this vniuersall world.

Terra firma.

Straight of land but eight leagues betwixt North & South Seas.

Herodotus.

Iouius.

Leauing this discourse of opening the Land, and ioyning both Seas together, there is yet another lesse rash, but very difficult and dangerous to search out. Whether these two great gulfes doe ioyne in any other part of the world, which was the enterprize of *Fernando Magellan* a *Portugall* Gentleman, whose great courage and constancie in the research of this subiect, and happy successe in the finding thereof, gaue the name of eternall memory to this straight, which iustly they call by the name of the discouerer *Magellan*, of which straight we will intreate a little, as of one of the greatest wonders of the world. Some haue beleeued, that this Straight which *Magellan* had discouered in the South Sea, was none, or that it was straightned, as *Don Alonso d'Arsile* writes in his *Auracane*: and at this day there are some that say, there is no such Straight, but that they are Ilands betwixt the Sea and Land, for that the maine Land ends there, at the end whereof are all Ilands, beyond the which the one Sea ioynes fully with the other, or to speake better, it is all one Sea. But in truth it is most certaine, there is a straight and a long and stretched out Land on either side, although it hath not yet beene knowne how farre it stretcheth of the one side of the straight towards the South. After *Magellan*, a Shippe of the Bishop of *Plaisance* passed the straight, *Don Guiteres Carnaial* (whose Maste they say is yet at *Lima*, at the entrie of the Pallace) they went afterwards coasting along the South, to discouer the Straight, by the commandement of *Don Garcia* of *Mendoca*, then Gouernor of *Chille*, according to that which Captaine *Ladrillero* found it and passed it. I haue read the discourse and report he made, where he saieth, that he did not hazard himselfe to land in the Straight, but hauing discouered the North Sea, he returned backe, for the roughnesse of the time, winter being now come, which caused the waues comming from the North, to grow great and swelling, and the Sea continually foming with rage. In our time, *Francis Drake* an *Englishman*, passed this Straight. After him, Captaine *Sarmiento* passed it on the South side. And lastly, in the yeere 1587. other *Englishmen* passed it, by the instruction of *Drake*, which at this time run along all the coast of *Peru*.

Experience in *Drakes* and *Maires* voyage haue found them no straights but broken Ilands to the South, contrary to our Author here.

See of this Sir *Francis Drakes* Voyage, *to.* 1. *l.* 2 I haue omitted *Sa. micntoes* voiage. &c.

Euen as *Magellan* found out this Straight vpon the South, so some haue pretended to discouer another Straight, which they say is in the North, and suppose it to be in *Florida*, whose coast runnes in such sort, as they know no end thereof. *Peter Melendez* the *Adelantade*, a man very expert at Sea, affirmeth for certaine, that there is a Straight, and that the King had commanded him to discouer it, wherein he shewed a great desire: he propounded his reasons to proue his opinion, saying, that they haue seene some remainders of Ships in the North Sea, like vnto those the which the *Chinois* vse, which had beene impossible, if there were no passage from one Sea vnto another. Moreouer, hee reported, that in a certaine great Bay in *Florida* (the which runs 300. leagues within the Land) they see Whales in some season of the yeare, which come from the other Sea.

The supposed Straight in *Florida*.

One of the most admirable secrets of Nature is the ebbing and flowing of the Sea, not onely for this strange property of rising and falling, but much more for the difference there is thereof in diuers Seas, yea in diuers coasts of one and the same Sea. There are some Seas that haue no daily flowing nor ebbing, as we see in the inner Mediterranean, which is the *Thyrene* Sea, and yet it flowes and ebbes euery day in the vpper Mediterranean Sea, which is that of *Venice*, and iustly giueth cause of admiration, that these two Seas being Mediterranean, and that of *Venice* being no greater then the other, yet hath it his ebbing and flowing as the Ocean, and that other Sea of *Italie* none at all. There are some Mediterranean Seas, that apparantly rise and fall euery moneth;

Of the ebbing and flowing of the *Indian* Ocean. *Chap.* 14.

The Philosophers in searching the cause of ebbing and flowing haue easily erred, following the *Greekes* and *Latines* which knew not the Ocean, and could not therefore know the cause.

Digitized by Google

moneth; and others that neither riſe in the day, nor in the moneth. There are other Seas, as the *Spaniſh* Ocean, that haue their flux and reflux euery day; and beſides that, they haue it monethly, which commeth twice, that is to ſay, at the change, and at the full of euery Moone, which they call *Spring-tides*. To ſay that any Sea hath this daily ebbing and flowing, and not monethly, I know not any. It is ſtrange, the difference we finde of this ſubiect at the *Indies*; for there are ſome places whereas the Sea doth daily riſe and fall two leagues, as at *Panama*, and at a high water it riſeth much more. There are other places where it doth riſe and fall ſo little, that hardly can you finde the difference. It is ordinary in the Ocean Sea to haue a daily flowing and ebbing, and that was twice in a naturall day, and euer it fals three quarters of an houre ſooner one day then another, according to the courſe of the Moone: ſo as the tide fals not alwaies in one houre of the day. Some would ſay, that this flux and reflux proceeded from the locall motion of the water of the Sea; ſo as the water that riſeth on the one ſide, fals on the other that is oppoſite vnto it: ſo that it is full Sea on the one ſide when it is a low water on the oppoſite, as we ſee in a Kettle full of water, when we moue it, when it leanes to the one ſide the water increaſeth, and on the other it diminiſheth. Others affirme, that the Sea riſeth in all parts at one time, and decreaſeth at one inſtant: as the boyling of a Pot, comming out of the centre it extendeth it ſelfe on all parts, and when it ceaſeth, it fals likewiſe on all parts.

This ſecond opinion is true, and in my iudgement, certaine and tried, not ſo much for the reaſons which the Philoſophers giue in their Meteors, as for the certaine experience wee may make. For to ſatisfie my ſelfe vpon this point and queſtion, I demanded particularly of the ſaid * Pilot, how he found the tides in the ſtraight, and if the tides of the South Sea did fall when as thoſe of the North did riſe. And contrariwiſe (this queſtion being true) why the increaſe of the Sea in one place, is the decreaſe thereof in another, as the firſt opinion holdeth. He anſwered that it was not ſo, but they might ſee plainely, that the tides of the North and South Seas riſe at one inſtant, ſo as the waues of one Sea incountred with the other, and at one inſtant likewiſe they began to retire, euery one into his Sea, ſaying, that the riſing and falling was daily ſeene, and that the incounter of the tides (as I haue ſaid) was at threeſcore and tenne leagues to the North Sea, and thirtie to the South. Whereby we may plainely gather, that the ebbing and flowing of the Ocean is no pure locall motion, but rather an alteration: whereby all waters really riſe and increaſe at one inſtant, and in others, they diminiſh, as the boyling of a Pot, whereof I haue ſpoken. It were impoſſible to comprehend this point by experience, if it were not in the Straight, where all the Ocean, both on th'one ſide, and on th'other ioynes together: for none but Angels can ſee it, and iudge of the oppoſite parts: for that man hath not ſo long a ſight, nor ſo nimble and ſwift footing as were needefull, to tranſport his eyes from one part to another, in ſo ſhort a time, as a tide will giue him reſpite, which are onely ſix houres.

* *Hernando Alonſo* which with *Sarmiento* had gone to the Straights to ſeeke Captaine *Drake*.

At the Downes on our coaſt two tides meet one from the Weſterne Sea or ſlewe, the other from the North, which there cauſe much varietie.

Of ſundry Fiſhers, and their manner of fiſhing at the *Indies*.

There are in the *Indian* Ocean, an infinite number of fiſhes, the kindes and properties whereof the Creator onely can declare. There are many ſuch as we haue in the Sea of *Europe*, as Shads, and Aloſes which come from the Sea into the Riuers; Dorads, Pilchards, and many other. There are others, the like I doe not thinke to haue ſeene in theſe parts, as thoſe which they doe call *Cabrillas*, which doe ſomewhat reſemble the Trowt, and in new *Spaine* they call them *Bobos*, they mount from the Sea into the Riuers. I haue not ſeene any *Beſugues* there, nor Trowts, although ſome ſay there are in *Chille*. There are *Tonins* in ſome parts vpon the coaſt of *Peru*, but they are rare, and ſome are of opinion, that at a certaine time they doe caſt their ſpawne in the Straight of *Magellan*, as they doe in *Spaine* at the Straight of *Gibraltar*, and for this reaſon they finde more vpon the coaſt of *Chille*, although thoſe I haue ſeene there, are not like to them in *Spaine*. At the Ilands (which they call *Barlouente*) which are *Cuba*, Saint *Dominicke*, *Port rique*, and *Iamaique*, they finde a fiſh which they call *Manati*, a ſtrange kinde of fiſh, if we may call it fiſh, a creature which ingenders her yong ones aliue, and hath teates, and doth nouriſh them with milke, feeding of graſſe in the fields, but in effect it liues continually in the water, and therefore they eate it as fiſh; yet when I did eate of it at Saint *Dominique* on a friday, I had ſome ſcruple, not for that which is ſpoken, but for that in colour and taſte it was like vnto morſels of Veale, ſo is it greene, and like vnto a Cowe on the hinder parts. I did wonder at the incredible rauening of the *Tiburons*, or ſharkes, when as I did ſee drawne from one (that was taken in the Port) out of his gullet, a Butchers great Knife, a great Iron hooke, and a piece of a Cowes head with one whole horne, neither doe I know if both were there, or no. I did ſee in a creeke made with that Sea, a quarter of a horſe for pleaſure hanging vpon a ſtake, whither preſently came a company of theſe *Tiburons*, at the ſmell thereof: and for the more pleaſure, this Horſe-fleſh was hung in the ayre, I know not how many hand breadth from the water; this company of fiſh flocke about it, leaping vp, and with a ſtrange nimbleneſſe cut off both fleſh and bone off the Horſe legge, as if it had beene the ſtalke of a lettuce; their teeth being as ſharpe as a raſour. There are certaine ſmall fiſhes they call *Rambos*, which cleaue to theſe *Tiburons*, neither can they driue them away, and they are fed with that which falles from the *Tiburons*.

The *Manati* a ſtrange fiſh. The Whales alſo bring forth their yong aliue, and nouriſh them with their breſts, being in that huge creature ſcarce twice ſo big as the breaſts of a woman, and farre leſſe then thoſe of many women. Their foode is alſo Sea weedes.

Sharking ſharkes.

Digitized by Google

Taburons. There are other small fishes, which they call flying fishes, the which are found within the tropickes, and in no other place, as I thinke: they are pursued by the *Ducades*; and to escape them they leape out of the Sea, and goe a good way in the ayre, and for this reason they are called *flying Fishes*: they haue wings as it were of linnen cloath, or of parchment, which doe support them some space in the ayre. There did one flye or leape into the Ship wherein I went, the which I did see, and obserue the fashion of his wings.

They haue rough heads whereby they cleaue and sticke fast to the Sharke, which thus are forced to ca ry them with their swift motion, of whose offall also they liue.

In the *Indian* Histories there is often mention made of *Lezards* or *Caymans* (as they call them) and they are the very same which *Plinie* and the Auncients call Crocodiles, they finde them on the Sea side, and in hot Riuers, for in cold Riuers there are none to be found. And therefore they finde none vpon all the coasts of *Peru* vnto *Payta*, but forward they are commonly seene in the Riuers. It is a most fierce and cruell beast, although it be slow and heauie. Hee goes hunting and seekes his prey on the Land, and what he takes aliue, he drownes it in the water, yet doth he not eate it, but out of the water, * for that his throate is of such a fashion, as if there entred any water, he should easily be drowned. It is a wonderfull thing to see a combat betwixt a Caymant and a Tigre, whereof there are most cruell at the *Indies*. A religious man of our company told me that he had seene these beasts fight most cruelly one against the other; vpon the Sea shoare the Caymant with his taile gaue great blowes vnto the Tygre, striuing with his great force to carry him into the water: and the Tigre with his pawes resisted the Caymant, drawing him to Land. In the end the Tigre vanquished, and opened the Lezard, it seemes by the belly, the which is most tender and penetrable, for in euery other part he is so hard, that no Lance, and scarce a harquebuze can pierce it. The victory which an *Indian* had of a Caymant was yet more rare: the Caymant had carried away his yong childe, and sodainely plunged into the Sea, the *Indian* moued with choller, cast himselfe after him, with a knife in his hand, and as they are excellent swimmers and diuers, and the Caymant swimmeth alwayes on the toppe of the water, hee hurt him in the belly, and in such sort, that the Caymant feeling himselfe wounded, went to the shoare, leauing the little infant dead.

* Yet so as euer and anon hee dipsit in the water his tongue being so short, that otherwise he could not swallow it.

Tigre kils a Crocodile.

Indians exploit on a Crocodile

But the combat which the *Indians* haue with Whales is yet more admirable, wherein appeares the power and greatnesse of the Creator, to giue so base a Nation (as be the *Indians*) the industrie and courage to incounter the most fierce and deformed beast in the world, and not onely to fight with him, but also to vanquish him, and not to triumph ouer him. Considering this, I haue often remembred that place of the Psalmes, speaking of the Whale, *Draco iste quem formasti ad illudendum eum*: What greater mockerie can there be, then to see an *Indian* leade a Whale as bigge as a Mountaine, vanquished with a cord? The manner the *Indians* of *Florida* vse (as some expert men haue told me) to take these Whales (whereof there is great store) is, they put themselues into a Canoe, which is like a barke of a tree, and in swimming approach neere the Whales side, then with great dexteritie they leape to his necke, and there they ride as on horse-back expecting his time, then he thrusts a sharpe and stong stake (which he carries with him) into the Whales nostrill, for so they call the hole or vent by which they breathe, presently he beates it in with another stake as forcibly as he can; in the meane space the Whale doth furiously beate the Sea, and raiseth Mountaines of water, running into the deepe with great violence, and presently riseth againe, not knowing what to doe for paine: the *Indian* still sits firme, and to giue him full paiment for this trouble, hee beates another stake into the other vent or nosthrill, so as he stoppeth him quite, and takes away his breathing, then he betakes him to his Canoe, which he holds tied with a cord to the Whales side, and goes to Land, hauing first tied his cord to the Whale, the which he lets run with the Whale, who leapes from place to place, whilest he finds water enough: being troubled with paine, in the end he comes neere the Land, and remaines on ground by the hugenesse of his body, vnable any more to moue; then a great number of *Indians* come vnto the Conquerour, to gather his spoiles, they kill him, and cut his flesh in peeces, the which is bad enough: this doe they dry and beate into powder, vsing it for meate, it doth last them long: wherein is fulfilled, that which is spoken in another Psalme of the Whale, *Dedisti eum escam populis Æthiopum*. *Peter Mendez* the *Adelantade* did often speake of this kinde of fishing. Whereof *Monardes* makes mention in his Booke.

Whale killed by the Sauages

There is another fishing which the *Indians* doe commonly vse in the Sea, the which, although it be lesse, yet is it worthy the report. They make as it were faggots of bul-rushes or dry sedges well bound together, which they call *Balsus*: hauing carried them vpon their shoulders to the Sea, they cast them in, and presently leape vpon them: being so set, they lanch out into the deepe, rowing vp and downe with small reedes of either side: they goe a league or two into the Sea to fish, carrying with them their cords and nets vpon these faggots, and beare themselues thereon. They cast out their nets, and doe there remaine fishing the greatest part of the day and night, vntill they haue filled vp their measure, with the which they returne well satisfied. Truely it was delightfull to see them fish at *Callao* of *Lima*, for that they were many in number, and euery one set on horse-backe, cutting the waues of the Sea, which in their place of fishing are great and furious, resembling the *Tritons* or *Neptunes*, which they paint vpon the water, and being come to Land, they draw their barke out of the water vpon their backes, the which they presently

presently vndoe, and lay abroad on the shoare to drie. There were other *Indians* of the Vallies of *Yca*, which were accustomed to goe to fish in leather, or skins of Sea-wolues, blowne vp with winde, and from time to time they did blow them like bals of winde, lest they should sinke. In the vale of *Canete*, which in old time they called *Guaroo*, there were a great number of *Indian* fishers; but because they resisted the *Ingua*, when he came to conquer that Land, hee made shew of peace with them, and therefore to feast him, they appointed a solemne fishing of many thousand *Indians*, which went to Sea in their vessels of reeds: at whose returne, the *Ingua* (who had laid many Souldiers in ambush) made a cruell butcherie of them, so as afterward this Land remained vnpeopled, although it be aboundant and fertile. I did see another manner of fishing, whereunto *Don Francis* of *Toledo* the Viceroy did leade me, yet was it not in the Sea, but in a Riuer which they call great in the Prouince of *Charcas*, where the *Indians Chiraquanas* plunged into the water, and swimming with an admirable swiftnesse, followed the fish, where with darts and hookes (which they vse to carry in their right hand, onely swimming with the left) they wound the fish, and so hurt they brought them forth, seeming in this more like vnto fishes then men of the Land. But now that we haue left the Sea, let vs come to other kinde of waters that remaine to be spoken of.

Of Lakes and Pooles that be at the *Indies*. *Chap.* 16.

In place of the Mediterranean Sea, which is in the old world, the Creator hath furnished this new with many Lakes, whereof there are some so great, as they may be properly called Seas, seeing the Scripture calleth that of *Palestina* so, which is not so great as some of these. The most famous is that of *Titicaca*, which is at *Peru*, in the Prouince of *Callao*, the which as I haue said in the former booke, containes neere foure score leagues in compasse, into the which there runs ten or twelue great Riuers. A while since, they began to saile in it with Barkes and Ships, wherein they proceeded so ill, that the first Ship was split with a tempest that did rise in the Lake. The water is not altogether sower nor salt, as that of the Sea, but it is so thicke, as it cannot be drunke. There are two kindes of fishes breede in this Lake in great abundance, the one they call *Suches*, which is great and sauorous, but phlegmaticke and vnwholesome: and the other *Bogos*, which is more healthfull, although it be lesse and fuller of bones: there are great numbers of wilde-ducks and Wigens. When as the *Indians* will feast it, or shew delight to any one that passeth along the two bankes, which they call *Chucuyto* and *Omasuyo*, they assemble a great number of *Canoes*, making a circle and inuironing the fowle, vntill they take with their hands what they please: and they call this manner of fishing *Chaco*. On the one and the other banke of this Lake, are the best habitations of *Peru*. From the issue thereof there growes a lesser Lake, although it be great, which they call *Paria*, vpon the bankes whereof, there are great numbers of cattell, especially Swine, which grow exceeding fat with the grasse vpon those bankes. There are many other Lakes in the high Mountaines, whence proceede Brookes and Riuers, which after become great flouds. Vpon the way from *Arequippa* to *Callao*, there are two Lakes, vpon the Mountaines of the one and other side the way, from the one flowes a brooke, which growes to a floud, and fals into the South Sea; from the other, they say the famous Riuer of *Aporima* takes her beginning; from the which some hold that the renowned Riuer of *Amazons*, otherwise called *Maragnon* proceedes, with so great an assembly and abundance of waters, which ioyne in these Mountaines. It is a question may be often asked, why there is so many Lakes in the tops of these Mountaines, into the which no riuer enters, but contrariwise, many great streames issue forth, and yet doe we scarce see these Lakes to diminish any thing at any season of the yeare. To imagine that these Lakes grow by the Snow that melts, or raine from heauen, that doth not wholly satisfie me: for there are many that haue not this abundance of Snow, nor raine, and yet wee see no decrease in them, which makes me to beleeue they are Springs which rise there naturally, although it be not against reason, to thinke that the Snow and raine helpe somewhat in some seasons. These Lakes are so common in the highest tops of the Mountaines, that you shall hardly finde any famous riuer that takes not his beginning from one of them. Their water is very cleere and breedes little store of fish, and that little is very small, by reason of the cold which is there continually.

Thicke water.

Fishes and fishing.

Originall of Lakes.

Greatest riuers flow from Lakes.

Notwithstanding, some of these Lakes be very hot, which is another wonder. At the end of the Vallie of *Tarapaya* neere to *Potozi*, there is a Lake in forme round, which seemes to haue beene made by compasse, whose water is extreamely hot, and yet the Land is very cold: they are accustomed to bathe themselues neere the banke, for else they cannot endure the heate being farther in. In the midst of this Lake, there is a boiling of aboue twentie foote square, which is the very Spring, and yet (notwithstanding the greatnesse of this Spring) it is neuer seene to increase in any sort: it seemes that it exhals of it selfe, or that it hath some hidden and vnknowne issue, neither doe they see it decrease; which is another wonder, although they haue drawne from it a great streame, to make certaine engines grinde for mettall, considering the great quantitie of water that issueth forth, by reason whereof, it should decrease.

Hot Lake, and many wonders thereof.

But leauing *Peru*, and passing to new *Spaine*, the Lakes there, are no lesse to be obserued; especially that most famous of *Mexico*, where we finde two sorts of waters, one salt Lake like to that of the Sea, and the other cleere and sweete, by reason of the Riuers that enter into it.

Lakes of *Mexico* salt and fresh.

In

In the midſt of this Lake, is a rocke very delightfull and pleaſant, where there are bathes of hot water that iſſue forth, the which they greatly eſteeme for their health. There are Gardens in the middeſt of this Lake, framed and fleeting vpon the water, where you may ſee plots full of a thouſand ſorts of hearbes and flowers, & they are in ſuch ſort as a man cannot well conceiue them without ſight. The Citie of *Mexico* is ſeated in the ſame Lake, although the *Spaniards* haue filled vp the place of the ſcituation with earth, leauing onely ſome currents of water, great and ſmall, which enter into the Citie, to carrie ſuch things as they haue neede of, as wood, hearbs, ſtone, fruites of the Countrie, and all other things. When *Cortez* conquered *Mexico*, hee cauſed *Brigandins* to be made, yet afterwards he thought it more ſafe not to vſe them: therefore they vſe *Canoes*, whereof there is great ſtore. There is great ſtore of fiſh in this Lake, yet haue I not ſeene any of price: notwithſtanding, they ſay the reuenue of this Lake, is worth three-hundred thouſand Duckets a yeere. There are many other Lakes, not farre from this, whence they bring much fiſh to *Mexico*. The Prouince of *Mechoacan* is ſo called, for that it aboundeth greatly with fiſh. There are goodly and great Lakes, in the which there is much fiſh, and this Prouince is coole and healthfull. There are many other Lakes, whereof it is not poſſible to make mention, nor to know them in particular, onely wee may note by that which hath beene diſcourſed in the former Booke, that vnder the burning Zone there is greater abundance of Lakes, then in any other part of the world.

Rich Lakes.

There is at the *Indies* as in other parts of the world, great diuerſitie of Springs, Fountaines, and Riuers, and ſome haue ſtrange properties. In *Guancauilica* of *Peru* (where the Mines of Quick-ſiluer be,) there is a Fountaine that caſts forth hot water, and in running, the water turnes to rocke, of which rocke or ſtone, they build in a manner all the houſes of the Village. This ſtone is ſoft, and eaſie to cut, for they cut it as eaſily with Iron as if it were wood, it is light and laſting. If men or beaſts drinke thereof, they dye, for that it congeales in the very entrailes, and turnes into ſtone, and for that cauſe ſome Horſes haue died. As this water turnes into ſtone, the which flowes, ſtoppes the paſſage to the reſt; ſo as of neceſſitie it changeth the courſe, and for this reaſon it runnes in diuers places, as the rocke increaſeth. At the point of Cape Saint *Helaine*, there is a Spring or Fountaine of Pitch, which at *Peru*, they call *Coppey*. This ſhould be like to that which the Scripture ſpeakes of the ſauage Valley, where they did finde pits of Pitch. The Marriners vſe theſe Fountaines of Pitch or *Coppey*, to pitch their ropes and tackling, for that it ſerues them as Pitch and Tarre in *Spaine*. When I ſailed into new *Spaine* by the coaſt of *Peru*, the Pilot ſhewed me an Iland, which they call the *Ile of Wolues*, where there is another Fountaine or Pit of *Coppey* or Pitch, with the which they anoint their tackling. There are other Fountaines and Springs of *Goultrauezen*, which the Pilot (an excellent man in his charge) told me he had ſeene, and that ſometimes ſailing that waies, being ſo farre into the Sea, as he had loſt the ſight of Land, yet did he know by the ſmell of the *Coppey*, where he was, as well as if he had knowne the Land, ſuch is the ſauour that iſſues continually from that Fountaine.

Of many and diuers Springs and Fountains *Chap.* 17.

Hot Spring turning into Stone.

Fountaine of Pitch.

At the Bathes, which they call the Bathes of *Ingua*, there is a courſe of water, which comes forth all hot and boiling; and ioyning vnto it, there is another whoſe water is as cold as Ice. The *Ingua* was accuſtomed to temper the one with the other; and it is a wonderfull thing to ſee Springs of ſo contrarie qualities, ſo neere one to the other. There are an infinite number of other hot Springs, ſpecially in the Prouince of *Charcas*, in the water whereof, you cannot indure to hold your hand the ſpace of an *Ave Maria*, as I haue ſeene tried by wager. In a Farme neere to *Cuſco*, ſprings a Fountaine of Salt, which as it runnes turnes into Salt, very white and exceeding good, the which (if it were in another Countrie) were no ſmall riches, yet they make very ſmall account thereof, for the ſtore they haue there. The waters which runne in *Guayaquel*, which is in *Peru*, almoſt vnder the Equinoctiall Line, are held to be healthfull for the *French* diſeaſe, and other ſuch like, ſo as they come from many places farre off to be cured. And they ſay the cauſe thereof is, for that in that Countrie there is great aboundance of rootes, which they call *Salepareille*, the vertue and operation whereof is ſo knowne, that it communicates her propertie to the waters wherein it is put to cure this diſeaſe. *Bilcanota* is a Mountaine the which (according to common opinion) is in the higheſt part of *Peru*, the top whereof is all couered with Snow, and in ſome places is blacke like coale. There iſſueth forth of it, two Springs in contrary places, which preſently grow to be very great brookes, and ſo by little and little become great flouds, the one goes to *Cuſco*, into the great Lake *Titicaca*; the other goes to the Lands, and is that which they call *Yucay*, which ioyning with another runnes into the North Sea, with a violent and furious courſe. This Spring, when it comes out of the rocke *Bilcanota*, as I haue ſaid, is of the colour of lie, hauing an aſhie colour, and caſts a fume as a thing burnt, the which runs far in this ſort, vntil the multitude of waters that run into it, quench this ſmoak and fire which it drawes from the Spring. In new *Spain* I haue ſeene a Spring as it were Ink, ſome what blew, in *Peru* another, of color red like blood, where vpon they cal it the red Riuer.

Cold and hot Springs together.

Salt Spring which yeeldes Salt without boiling.

Pocke-ſpring.

Smoak Spring.

Inke, &c.

Of Riuers. *Chap.* 18.

Amongſt all Riuers, not onely at the *Indies*, but generally through the world, the Riuer *Maragnon*, or of *Amazons*, is the chiefe, whereof we haue ſpoken in the former Booke. The *Spaniards*,

Maragnon or *Amazons*.

Digitized by Google

niards haue often ſailed it, pretending to diſcouer the Lands, which by report are very rich, eſpecially thoſe they call *Dorado* and *Paytiti, Iean de Salnies*, the *Adelantade*, made a memorable entrie, though of ſmall effect. There is a paſſage which they call *Pongo*, one of the moſt dange-
Water-fall. rous in all the world; for the Riuer being there ſtraightned, and forced betwixt two high ſteepe Rocks: the water fals directly downe with ſo great a violence, that comming ſteepe downe, it cauſeth ſuch a boyling, as it ſeemeth impoſſible to paſſe it without drowning: yet the courage of men durſt attempt to paſſe it, for the deſire of this renowmed *Dorado*: they ſlipt downe from the top to the bottome, thruſt on with the violence and currant of the floud, holding themſelues faſt in their Canoes or barkes: and although in falling they were turned topſie turuie, and both they and their Canoes plunged into the deepe, yet by their care and induſtrie they recouered themſelues againe; and in this ſort the whole armie eſcaped, except ſome few that were drow-
Golden thirſt. ned. And that which is more admirable, they carried themſelues ſo cunningly, that they neither loſt their Powder nor Munition. In their returne (hauing ſuffered many troubles and dangers) they were forced, in the end, to paſſe backe that ſame way) mounting by one of thoſe high Rocks, ſticking their Ponyards in the Rocke,

Captaine *Peter d'Orſua* made another entrie by the ſame Riuer, who being dead in the ſame Voyage, and the Souldiers mutinied; other Captaines followed the enterpriſe, by an arme that comes into the North Sea. A religious man of our company told vs, that being then a ſecular man, he was preſent in a manner at all that enterpriſe, and that the tides did flow almoſt a hundred leagues vp the Riuer, and whereas it enters into the Sea (the which is vnder the Line, or very neere) it hath ſeuenty leagues breadth at the mouth of it, a matter incredible; and which exceeds the breadth of the Mediterranean Sea, though there be ſome others, who in their deſcriptions giue it but twenty fiue or thirty leagues breadth at the mouth.

Riuer of *Plata*, increaſing as *Nilus*. Next to this Riuer that of *Plata*, or of Siluer holds the ſecond place, which is otherwiſe called *Paraguay*, which runs from the Mountains of *Peru*, into the Sea, in thirty fiue degrees of altitude to the South: it riſeth (as they ſay) like to the Riuer of *Nile*, but much more without compariſon, and makes the fields it ouerflowes like vnto a Sea, for the ſpace of three moneths, and after returneth againe to his courſe, in the which Shippes doe ſaile many leagues againſt the ſtreame. There are many other Riuers that are not of that greatneſſe, and yet are equall: yea they ſurpaſſe the greateſt of *Europe*, as that of *Magdalaine*, neere to Saint *Marthe*, called *the great Riuer*, and that of *Aluarado* in new *Spaine*, and an infinite number of others. Of the South ſide, on the Mountaines of *Peru*, the Riuers are not vſually ſo great, for that their current is not long, and that many waters cannot ioyne together, but they are very ſwift, deſcending from the Mountaines, and haue ſodaine fals, by reaſon whereof they are very dangerous, and many men haue periſhed there. They increaſe and ouerflow moſt in the time of heate. I haue gone ouer twenty and ſeuen Riuers vpon that coaſt, yet did I neuer paſſe any one by a foord.

How they paſſe their Riuers. The *Indians* vſe a thouſand deuiſes to paſſe their Riuers. In ſome places they haue a long cord that runnes from one ſide to th'other, and thereon hangs a basket, into the which he puts himſelfe that meanes to paſſe; and then they draw it from the banke with another cord, ſo as he paſſeth in this basket. In other places the *Indian* paſſeth, as it were on Horſe-backe, vpon a bottle of ſtraw, and behinde him he that deſires to paſſe; and ſo rowing with a peece of a boord, carries him ouer. In other places they make a floate of gourds or pompions, vpon which they ſet men with their ſtuffe to carry ouer, and the *Indians* hauing cords faſtned to them, goe ſwimming before, and draw this floate of pompions after them, as Horſes doe a Coach: others goe behinde thruſting it forward. Hauing paſſed, they take their barke of pompions vpon their backe, and returne ſwimming: this they doe in the Riuer of *Saint* at *Peru*. We paſſed that of *Aluarado* in new *Spain* vpon a table, which the *Indians* carried vpon their ſhoulders, and when they loſt their footing, they ſwamme. Theſe deuiſes, with a thouſand other wherewith they vſe to paſſe their Riuers, breede a terrour in the beholders, helping themſelues with ſuch weake and vnſure meanes; and
Haire and Straw Bridges. yet they are very confident. They doe vſe no other bridges but of haire or of ſtraw. There are now vpon ſome Riuers bridges of Stone, built by the diligence of ſome Gouernours, but many fewer then were needefull in ſuch a Countrie, where ſo many men are drowned by default thereof, and the which yeeldes ſo much Siluer, as not onely *Spaine*, but alſo other ſtrange Countries make ſumptuous buildings therewith. The *Indians* doe draw from theſe flouds that runne from the Mountaines to the Vallies and Plaines, many and great Brookes to water their Land, which they vſually doe with ſuch induſtrie, as there are no better in *Murcia*, nor at *Millan* it ſelfe, the which is alſo the greateſt and onely wealth of the *Plaines* of *Peru*, and of many other parts of the *Indies*.

§. III.

Of the qualitie of the Land at the Indies *in generall. Properties of* Peru *and of new* Spaine, *and other parts: Of* Vulcanes *and Earthquakes.*

WE may know the qualitie of the Land at the *Indies*, for the greatest part (seeing it is the last of the three Elements, whereof we haue propounded to treate in this Booke) by the discourse we haue made in the former Booke of the burning Zone, seeing that the greatest part of the *Indies* doth lye vnder it. But to make it knowne the more particularly, I haue obserued three kindes of Lands, as I haue passed through those Regions: whereof there is one very low, another very high, and the third which holds the middle of these two extreames. The lower is that which lyeth by the Sea coasts, whereof there is in all parts of the *Indies*, and it is commonly very hot and moist, so as it is not so healthfull; and at this day we see it lesse peopled, although in former times it hath beene greatly inhabited with *Indians*, as it appeareth by the histories of new *Spaine* and *Peru*, and where they kept and liued, for that the soile was naturall vnto them being bred there. They liued of fishing at Sea, and of seeds, drawing brooks from the Riuers, which they vsed for want of raine, for that it raines little there, and in some places not at all. This low Countrie hath many places vnhabitable, as well by reason of the Sands which are dangerous (for there are whole Mountaines of these Sands) as also for the Marishes which grow by reason of the waters that fall from the Mountaines, which finding no issue in these flat and low Lands, drowne them, and make them vnprofitable. L. 3. C. 19.

And in truth the greatest part of all the *Indian* Sea coast is of this sort, chiefly vpon the South Sea: the habitation of which coasts is at this present so wasted and contemned, that of thirty parts of the people that inhabited it, there wants twenty nine; and it is likely the rest of the *Indians* will in short time decay. Many, according to the varietie of their opinions, attribute this to diuers causes: some to the great labour which hath beene imposed vpon these *Indians*; others, vnto the change and varietie of meates and drinkes they vse, since their commerce with the *Spaniards*: others, to their great excesse and drinking, and to other vices they haue: for my part, I hold this disorder to be the greatest cause of their decay, whereof it is not now time to discourse any more. In this low Countrie (which I say generally is vnhealthfull, ond vnfit for mans habitation) there is exception in some places which are temperate and fertile, as the greatest part of the Plaines of *Peru*, where there are coole vallies and very fertile. The greatest part of the habitation of the coast entertains all the traffike of *Spain* by Sea: whereon all the estate of the *Indies* dependeth. Vpon this coast there are some Towns well peopled, as *Lima* and *Truxillo* in *Peru*, *Panama* and *Carthagena* vpon the maine Land, and in the Ilands Saint *Dominique*, *Port Ricco*, and *Hauana*, with many other Towns which are lesse then these, as the *True Crosse* in new *Spain*, *Yca*, *Arigua* and others in *Peru*: the Ports are commonly inhabited, although but slenderly. The second sort of Land is contrary, very high, and by consequent, cold and dry, as all the Mountaines are commonly. This Land is neither fertile nor pleasant, but very healthfull, which makes it to be peopled and inhabited. There are Pastures and great store of Cattle, the which, for the most part, entertaines life, and by their Cattell, they supply the want they haue of Corne and Graine, by trucking and exchange. But that which makes these Lands more inhabited and peopled, is the riches of the Mines that are found there, for that all obeys to Gold and Siluer. By reason of the Mines there are some dwellings of *Spaniards* and *Indians*, which are increased and multiplied, as *Potozi* and *Gancauelicqua* in *Peru*, and *Cacatecas* in new *Spaine*. There are also through all these Mountaines great dwellings of the *Indians*, which to this day are maintained; yea some will say they increase, but that the labour of the Mines doth consume many, and some generall diseases haue destroyed a great part, as the *Cocoliste* in new *Spaine*: yet they finde no great diminution. In this extremitie of high ground they finde two commodities, as I haue said, of Pastures and Mines, which doe well counteruaile the two other that are in the lower grounds alongst the Sea coast, that is, the commerce of the Sea, and the abundance of Wine which groweth not but in the hot Lands. Betwixt these two extreames there is ground of a meane height, the which, although it be in some parts higher or lower one then other, yet doth it not approach neither to the heate of the Sea coast, nor the intemperature of the Mountaines. In this sort of soyle there groweth many kindes of Graine, as Wheate, Barley, and Mays, which growes not at all in the high Countries, but well in the lower; there is likewise store of Pasture, Cattell, Fruits, and greene Forrests. This part is the best habitation of the three, for health and recreation; and therefore it is best peopled of any part of the *Indies*, the which I haue curiously obserued in many Voyages that I haue vndertaken, and haue alwayes found it true, that the Prouince best peopled at the *Indies* be in this scituation. Let vs looke neerely into new *Spaine* (the which without doubt is the best Prouince the Sunne doth circle) by what part soeuer you doe enter, you mount vp; and when you haue mounted a good height, you begin to descend,

Decay of people in the *Indies* by the *Spaniards*.

Corn grounds.

descend, yet very little: and that Land is alwayes much higher then that along the Sea coast.

All the Land about *Mexico* is of this nature and scituation; and that which is about the *Vulcan*, which is the best soile of the *Indies*, as also in *Peru*, *Arequipa*, *Guamangua* and *Cusco*, although more in one then in the other. But in the end, all is high ground, although they descend into deepe Vallies, and clime vp to high Mountaines: the like is spoken of *Quitto*, *Saint Foy*, and of the best of the *New Kingdome*. To conclude, I doe beleeue that the wisedome and prouidence of the Creator would haue it so, that the greatest part of this Countrie of the *Indies* should be hillie, that it might be of a better temperature: for being low, it had beene very hot vnder the burning Zone, especially being farre from the Sea. Also all the Land I haue seene at the *Indies*, is neere to the Mountaines on the one side or the other, and sometimes of all parts: So as I haue oftentimes said there, that I would gladly see any place, from whence the horizon did fashion it selfe and end by the heauen, and a Countrie stretched out and euen, as we see in *Spaine* in a thousand champaine fields; yet doe I not remember that I haue euer seene such sights at the *Indies*, were it in the Ilands, or vpon the maine Land, although I haue trauelled aboue seuen hundred leagues in length. But as I haue said, the neerenesse of the Mountaines is very commodious in this region, to temper the heate of the Sunne. To conclude, the best inhabited parts of the *Indies* are as I haue said: and generally, all that Countrie abounds in Grasse, Pastures, and Forests, contrary vnto that which *Aristotle* and the ancients did hold. So as when we go out of *Europe* to the *Indies* we wonder to see the Land so pleasant, greene and fresh. Yet this rule hath some exceptions, and chiefly in the Land of *Peru*, which is of a strange nature amongst all others, whereof we will now proceede to speake.

The *Indies* mountainous, and thereby temperate.

Of the properties of the land of *Peru*. *Chap.* 20

We meane by *Peru*, not that great part of the world which they call *America*, seeing that therein is contained *Brasil*, the Kingdome of *Chille*, and that of *Grenade*, and yet none of these Kingdomes is *Peru*, but onely that part which lies to the South, beginning at the Kingdome of *Quitto*, which is vnder the Line, and runs in length to the Realme of *Chille*, the which is without the Tropickes, which were six hundred leagues in length, and in breadth it containes no more then the Mountaines, which is fiftie common leagues, although in some places, as at *Chachapayas*, it be broader. This part of the world which wee call *Peru*, is very remarkeable, and containes in it strange properties, which serueth as an exception to the generall rule of the *Indies*. The first is, that vpon all the coast it blowes continually with one onely winde, which is South and South-west, contrary to that which doth vsually blow vnder the burning Zone. The second is, that this winde being by nature the most violent, tempestuous, and vnhealthfull of all others, yet in this Region it is maruellous pleasing, healthfull, and agreeable: so as we may attribute the habitation of that part thereunto, without the which it would be troublesome and inhabitable, by reason of the heate, if it were not refreshed with the winde. The third propertie is, that it neuer raines, thunders, snowes, nor hailes in all this coast, which is a matter worthy of admiration. Fourthly, that a little distance from the coast it raines & snowes terribly. Fiftly, that there are two ridges of Mountaines which runne the one as the other, and in one altitude, notwithstanding on the one there are great Forrests, and it raines the greatest part of the yeare, being very hot; and the other is all naked and bare, and very cold: so as winter and summer are diuided on those two Mountaines, and raine and cleerenesse it selfe. For the better vnderstanding hereof, we must consider that *Peru* is diuided as it were into three parts, long and narrow, which they call *Lanos*, *Sierras*, and *Andes*; the *Lanos* runs alongst the Sea coast; the *Sierras* be all hils, with some vallies; and the *Andes* be steepe and craggie Mountaines. The *Lanos* or Sea coast, haue some ten leagues in breadth, in some parts lesse, and in some parts a little more. The *Sierra* containes some twenty leagues in breadth: and the *Andes* as much, sometimes more, sometimes lesse. They run in length from North to South, and in breadth from East to West. It is a strange thing, that in so small a distance as fiftie leagues, equally distant from the Line and Pole, there should be so great a contrarietie, as to raine almost continually in one place, and neuer in the other. It neuer raines vpon the coast or *Lanos*, although there fals sometimes a small dew, which they call *Guarua*, and in *Castill Mollina*, the which sometimes thickens, and fals in certaine drops of water, yet is it not troublesome, nor such as they neede any couering. Their couerings are of mats with a little earth vpon them which is sufficient. Vpon the *Andes* it raines in a manner continually, although it be sometimes more cleere then other. In the *Sierra* which lies betwixt both the extreames, it raineth in the same season as it doth in *Spaine*, which is from September vnto Aprill, but in the other season, the time is more cleere, which is when the Sunne is fartheste off, and the contrary when it is neereste. That which they call *Andes*, and *Sierra*, are two ridges of most high Mountaines, which runne aboue a thousand leagues, the one in view of the other, and almost equally. There are an infinite number of *Vicagues*, which breede in the *Sierres*, aud are properly like vnto wilde Goates, very nimble and swift. There are also of those beasts which they call *Guanacos* and *Pacos*, which are sheepe, which we may well tearme the Asses of that Countrie; whereof we shall speake in their place. And vpon the *Andes* they finde Apes, very gentle and delightfull, and Parrots in great numbers.

One winde onely.

The Plaines, the hils, and the *Andes*. See *sup.* in *Herera*.

Raine almost euer, and almost neuer.

Diuers Beasts.

Digitized by Google

numbers. There also they finde the herbe or tree which they call *Coca*, that is so greatly esteemed by the *Indians*, and the trafficke they make of it, is worth much mony.

That which they call *Sierre*, causeth Vallies, where as it opens, which are the best dwellings of *Peru*, as is the Valley of *Xauxa* of *Andaguaylas*, and *Yucay*. In these Vallies there growes Wheat, Mays, and other sorts of fruits, but lesse in one then in the other. Beyond the Citie of *Cusco* (the ancient Court of the Lords of those Realmes) the two ridges of Mountaines separate themselues one from the other, and in the midst leaue a Playne and large Champaigne, which they call the Prouince of *Callao*, where there are many Riuers and great store of fertile Pastures: there is also that great Lake of *Titicaca*. And although it bee a full soile, and in the same height and intemperature, that the *Sierre*, hauing no more Trees nor Forrests, yet the want they haue of bread is counteruailed with the rootes they sow, the which they call *Papas*, and they grow in the earth. This roote is the *Indians* foode; for dry ing it and making it cleane, they make that which they call *Chugno*, which is the bread and nourishment of those Prouinces. There are other rootes and small herbes which they eate. It is a healthfull soile, best peopled, and the richest of all the *Indies*, for the abundance of Cattell they feede, as well of those that are in *Europe*, as Sheepe, Neat, and Goates, as of those of the Country, which they call *Guanacos* and *Pacos*, and there are store of Partridges. Next to the Prouince of *Callao*, is that of *Charcas*, where there are hot Vallies very fertile, and very high Rocks, the which are very rich in mynes, so as in no part of the World shall you finde better nor fairer.

Their bread.

For that it is rare and extraordinarie to see a Country where it neuer raines nor thunders; men desire naturally to know the cause of this strangenesse. The reason which some giue that haue neerly looked into it, is, that vpon that Coast there rise no vapours, sufficient to engender raine for want of matter; but onely that there bee small and light vapours, which cannot breede any other then mists and deawes, as wee see in *Europe*, oftentimes vapours doe rise in the morning, which are not turned into raine, but into mists onely: the which growes from the substance, which is not grosse and sufficient enough to turne to raine. They say, the reason why that which happens but some times in *Europe*, falls out continually vpon the Coast of *Peru*, is, for that this Region is very drie, and yeelds no grosse vapours. The drinesse is knowne by the great abundance of Sands, hauing neither Wells nor Fountaines, but of fifteene Stades deepe (which is the height of a man or more) and that is neere vnto Riuers, the water whereof, piercing into the Land, giues them meanes to make Wells. So as it hath beene found by experience, that the course of Riuers being turned, the Wells haue beene dried vp, vntill they returned to their ordinarie course: and they giue this reason for a materiall cause of this effect, but they haue another efficient, which is no lesse considerable, and that is the great height of the *Sierre*, which comming along the Coast, shadowes the *Lanos*; so as it suffers no winde to blow from the Land, but aboue the tops of these Mountaines. By meanes whereof, there reignes no winde, but that from the Sea, which finding no opposite, doth not presse nor straine forth the vapours which rise to engender raine; so as the shadow of the Mountaines keepes the vapours from thickning, and conuerts them all into mists. There are some experiences agree with this discourse; for that it raines vpon some small Hills along the Coast, which are least shadowed, as the Rocks of *Atico* and *Arequipa*. It hath rained in some yeeres when as the Northerne or Easterly windes haue blowne: yea, all the time they haue continued, as it happened in seuentie eight, vpon the *Lanos* of *Trugillo*, where it rained abundantly, the which they had not seene in many ages before. Moreouer, it raines vpon the same Coast in places, where as the Easterly or Northerne windes be ordinarie, as in *Guayaquil*, and in places where as the Land riseth much, and turnes from the shadow of the Mountaines, as in those that are beyond *Ariqua*. Some discourse in this manner, but let euery one thinke as he please. It is most certaine, that comming from the Mountaines to the Vallies, they doe vsually see as it were two Heauens, one cleere and bright aboue, and the other obscure, and as it were a gray vaile spread vnderneath, which couers all the Coast; and although it raine not, yet this mist is wonderfull profitable to bring forth grasse, and to raise vp and nourish the seed: for although they haue plentie of water, which they draw from the Pooles and Lakes, yet this moisture from Heauen hath such a vertue, that ceasing to fall vpon the Earth, it breedes a great discommoditie and defect of graine and seedes. And that which is more worthy of admiration, the drie and barren Sands are by this deaw so beautified with grasse and flowers, as it is a pleasing and agreeable sight, and very profitable for the feeding of Cattell, as we see in the Mountaine called *Sandia*, neere to the Citie of *Kings*.

The reason why it raines on the *Lanos*, along the Sea coast, *Chap.* 21.

New *Spaine* passeth all other Prouinces in pastures, which breedes infinite troopes of Horse, Kine, Sheepe, and other Cattell. It abounds in fruit and all kinde of graine. To conclude, it is a Country the best furnished and most accomplished at the *Indies*. Yet *Peru* doth surpasse it in one thing, which is Wine, for that there growes store and good; and they daily multiply and increase, the which doth grow in very hot Vallies, where there are waterings. And although there be Vines in new *Spaine*, yet the grape comes not to his maturitie, fit to make Wine. The reason is, for that it raines there in Iuly and August, when as the grape ripens: and therefore it comes

Of the propertie of new *Spaine*, of the Ilands, and of other Lands. *Chap.* 22.

Peru wine.

not

not to his perfection. And if any one through curiositie would take the paines to make wine, it should be like to that of *Genua* and *Lombardie*, which is very small and sharpe, hauing a taste like vnto Verjuyce. The Ilands which they call *Barlouente*, which bee *Hispaniola*, *Cuba*, *Port Ricco*, and others thereabouts, are beautified with many greene pastures, and abound in Cattell, as Neat, and Swine, which are become wilde. The wealth of these Ilands, bee their Sugar-workes and Hides. There is much *Cassia fistula* and Ginger. It is a thing incredible, to see the multitude of these merchandizes brought in one fleete, being in a manner impossible that all *Europe* should waste so much. They likewise bring wood of an excellent qualitie and colour, as Ebone, and others, which serue for buildings and Ioyners. There is much of that wood which they call *Lignum sanctum* or *Guage*, fit to cure the pox. All these Ilands and others thereabouts, which are many, haue a goodly and pleasant aspect, for that throughout the yeere, they are beautified with grasse and greene trees, so as they cannot discerne when it is Autumne or Summer, by reason of continuall moisture ioyned to the heat of the burning Zone. And although this Land bee of a great circuit, yet are there few dwellings, for that of it selfe it engenders great *Arcabutos*, as they call them, which be Groues or very thicke Coppises: and on the Playnes there are many marishes and bogs. They giue yet another notable reason, why they are so smally peopled, for that there haue remayned few naturall *Indians*, through the inconsideratnesse and disorder of the first Conquerors that peopled it: and therefore, for the most part, they vse *Negros*, but they cost deare, being very fit to till the Land. There growes neither bread nor wine in these Ilands, for that the too great fertilitie and the vice of the soile, suffers them not to seede, but casts all forth in grasse, very vnequally. There are no Oliue trees, at the least, they beare no Oliues, but many greene leaues pleasant to the view, which beare no fruit. The bread they vse is of *Caçaue*, whereof we shall hereafter speake. There is gold in the Riuers of these Ilands, which some draw forth, but in small quantitie. I was little lesse then a yeere in these Ilands, and as it hath beene told me of the mayne Land of the *Indies*, where I haue not beene, as in *Florida*, *Nicaragua*, *Guatimala*, and others, it is in a manner of this temper, as I haue described: yet haue I not set downe euery particular of Nature in these Prouinces of the firme Land, hauing no perfect knowledge thereof. The Country which doth most resemble *Spaine* and the Regions of *Europe*, in all the West *Indies*, is the Realme of *Chille*, which is without the generall rule of these other Prouinces, being seated without the burning Zone, and the Tropicke of *Capricorne*. This Land of it selfe is coole and fertile, and brings forth all kindes of fruits that bee in *Spaine*; it yeelds great abundance of bread and wine, and abounds in Pastures and Cattell. The aire is wholsome and cleere, temperate betwixt heat and cold, Winter and Summer are very distinct, and there they finde great store of very fine gold. Yet this Land is poore and smally peopled, by reason of their continuall warre with the *Auricanos*, and their Associates, being a rough people and friends to libertie.

Sugar workes and Hides.

Indians wasted.

There are great coniectures, that in the temperate Zone at the *Antartike* Pole, there are great and fertile Lands: but to this day they are not discouered, neither doe they know any other Land in this Zone, but that of *Chille*, and some part of that Land which runnes from *Ethiopia* to the Cape of *Good Hope*, as hath beene said in the first Booke; neither is it knowne if there bee any habitations in the other two Zones of the Poles, and whether the Land continues and stretcheth to that which is towards the *Antartike* or South Pole. Neither doe we know the Land that lyes beyond the Straight of *Magellan*, for that the greatest height yet discouered, is in fiftie sixe degrees, as hath beene formerly said; and toward the Artike or Northerne Pole, it is not known how farre the Land extends, which runnes beyond the Cape of *Mendoçin* and the *Califbornes*, nor the bounds and end of *Florida*, neither yet how farre it extends to the West. Of late they haue discouered a new Land, which they call *New Mexico*, where they say is much people that speake the *Mexican* tongue. The *Philippines* and the following Ilands, as some report that know it by experience, ranne aboue nine hundred leagues. But to intreat of *China*, *Cochinchina*, *Siam*, and other Regions which are of the East *Indies*, were contrarie to my purpose, which is onely to discourse of the West: nay, they are ignorant of the greatest part of *America*, which lyes betwixt *Peru* and *Brefil*, although the bounds be knowne of all sides, wherein there is diuersitie of opinions; some say it is a drowned Land, full of Lakes and waterie places; others affirme there are great and flourishing Kingdomes, imagining there be the *Paytiti*, the *Dorado*, and the *Cesars*, where they say are wonderfull things. I haue heard one of our companie say, a man worthy of credit, that he had seene great dwellings there, and the wayes as much beaten as those betwixt *Salamanca* and *Villadollit*, the which he did see, when as *Peter d'Orsua*, and after, those that succeeded him, made their entrie and discouerie by the great Riuer of *Amazons*, who beleeuing that the *Dorado* which they sought, was farther off, cared not to inhabit there, and after went both without the *Dorado*, which they could not finde, and this great Prouince which they left. To speake the truth, the habitations of *America* are to this day vnknowne, except the extremities, which are *Peru*, *Brefil*, and that part where the Land begins to straighten, which is the Riuer of *Siluer*, then *Tucuman*, which makes the round to *Chille* and *Charcas*. Of late we haue vnderstood by Letters from some of ours which goe to Saint *Croix* in the *Sierre*, that they goe discouering

Of the vnknowne Land, and the diuersitie of a whole day, betwixt them of the East and the West. *Chap.* 23.

couering of great Prouinces and dwellings, betwixt *Brasil* and *Peru*. Time will reueile them, for as at this day the care and courage of men is great, to compasse the World from one part to another; so we may beleeue, that as they haue discouered that which is now knowne, they may likewise lay open that which remaynes, to the end the Gospell may bee preached to the whole World, seeing the two Crownes of *Portugal* and *Castile* haue met by the East and West, ioyning their discoueries together, which in truth is a matter to be obserued, that the one is come to *China* and *Iapan* by the East, and the other to the *Philippines*, which are neighbours, and almost ioyning vnto *China*, by the West: for from the Ilands of *Luson*, which is the chiefe of the *Philippines*, in the which is the Citie of *Manille*, vnto *Macao*, which is in the Ile of *Canton*, are but foure score or a hundred leagues, and yet we finde it strange, that notwithstanding this small distance from the one to the other, yet according to their account, there is a dayes difference betwixt them; so as it is Sunday at *Macao*, when as it is but Saturday at *Manille*, and so of the rest. Those of *Macao* and of *China* haue one day aduanced before the *Philippines*. It happened to father *Alonso Sanches*, of whom mention is made before, that parting from the *Philippines*, hee arriued at *Macao* the second day of May, according to their computation, and going to say the Masse of Saint *Athanasius*, he found they did celebrate the feast of the *Inuention of the holy Crosse*, for that they did then reckon the third of May. The like happened vnto him in another voyage beyond it.

Some haue found this alteration and diuersitie strange, supposing that the fault proceedes from the one or the other, the which is not so: but it is a true and well obserued computation, for according to the difference of wayes where they haue beene, we must necessarily say, that when they meet, there must be difference of a day; the reason is, for that saying from West to East, they alwayes gaine of the day, finding the Sunne rising sooner: and contrariwise, those that saile from East to West, doe alwayes lose of the day, for that the Sunne riseth later vnto them; and as they approach neerer the East or the West, they haue the day longer or shorter. In *Peru*, which is Westward in respect of *Spaine*, they are aboue sixe houres behinde; so as when it is noone in *Spaine*, it is morning at *Peru*; and when it is morning here, it is mid-night there. I haue made certaine proofe thereof, by the computation of Eclipses of the Sunne and Moone. Now that the *Portugals* haue made their nauigations from West to East, and the *Castillans* from East to West, when they came to ioyne and meet at the *Philippines* and *Macao*, the one haue gayned twelue houres, and the other hath lost as much; so as at one instant, and in one time, they finde the difference of foure and twentie houres, which is a whole day.

Although we finde vents of fire in other places, as Mount *Aetna* and *Vesuuio*, which now they call Mount *Soma*, yet is that notable which is found at the *Indies*. Ordinarily these *Volcans* be Rocks or Pikes of most high Mountaines, which raise themselues aboue the tops of all other Mountaines; vpon their tops they haue a Playne, and in the midst thereof a pit or great mouth, which descends euen vnto the foote thereof; a thing very terrible to behold. Out of these mouthes there issues smoake, and sometimes fire: some cast little smoake, and haue in a manner no forte of *Volcans*, as that of *Arequipa*, which is of an vnmeasurable height, and almost all sand. It cannot be mounted vp in lesse then two dayes, yet they haue not found any shew of fire, but onely the reliques of some sacrifices which the *Indians* made while they were *Gentiles*, and sometimes it doth cause a little smoake. The *Volcan* of *Mexico* which is neere to the *Village of Angels*, is likewise of an admirable height, whereas they mount thirtie leagues in turning: from this *Volcan* issueth not continually, but sometimes, almost euery day, a great exhalation or whirlewinde of smoake, which ascends directly vp like to the shot of a Crosse-bow, and growes after like to a great plume of feathers, vntill it ceaseth quite, and is presently conuerted into an obscure and darke cloude. Most commonly it riseth in the morning after the Sunne rising, and at night when it setteth, although I haue seene it breake out at other times. Sometimes it doth cast forth great store of ashes after this smoake. They haue not yet seene any fire come from it, yet they feare it will issue forth and burne all the Land round about, which is the best of all the Kingdome: And they hold it for certaine, that there is some correspondencie betwixt this *Vulcan* and the *Sierre* of *Tlaxcala*, which is neere vnto it, that causeth the great thunders and lightnings they doe commonly heare and see in those parts.

Of the Volcans or Vents of fire. Chap. 4.

Some *Spaniards* haue mounted vp to this *Volcan*, and giuen notice of the myne of sulphur to make powlder thereof. *Cortez* reports the care he had to discouer what was in this *Volcan*. The *Volcans* of *Guatimala* are more renowmed, as well for their greatnesse and height: which those that saile in the South Sea discouer afarre off, as for the violence and terrour of the fire it casts. The three and twentieth day of December, in the yeere 1586. almost all the Citie of *Guatimala* fell with an Earthquake, and some people slaine. This *Volcan* had then sixe moneths together, day and night cast out from the top, and vomited as it were, a floud of fire, the substance falling vpon the sides of the *Volcan*, was turned into ashes like vnto burnt earth (a thing passing mans iudgement, to conceiue how it could cast so much matter from its centre during sixe moneths, being accustomed to cast smoake alone, and that sometimes with small flashes.) This was written vnto me being at *Mexico*, by a Secretarie of the Audience of *Guatimala*, a man worthy of credit,

Terrible earthquake at Guatimala.

credit, and at that time it had not ceased to cast out fire. This yeere past, being in *Quitto* in the Citie of *Kings*, the *Volcan* which is neere thereunto, cast such abundance of ashes, that in many leagues compasse thereabout it darkned the light of the day: and there fell such store in *Quitto*, as they were not able to goe in the streets. There haue beene other *Volcans* seene which cast neither smoake, flame, nor yet ashes, but in the bottome they are seene to burne with a quicke fire without dying: such a one was that which in our time a couetous and greedie Priest seeing, perswaded himselfe that they were heapes of gold he did see burning, imagining it could be no other matter or substance, which had burnt so many yeeres, and not consumed. And in this conceit he made certaine kettles with chaines, and an instrument, to gather and draw vp the gold out of this Pit or *Volcan:* but the fire scorned him, for no sooner did his Iron chaine and Caldron approach neere the fire, but suddenly they were broken in pieces. Yet some told me, that this man was still obstinate, seeking other inuentions for to draw out this gold as he imagined.

Couetous Priest.

Some haue held opinion, that these *Volcans* consume the inner substance they haue of Nature; and for this reason they beleeue, that naturally they shall end, when as they haue consumed the fuell (as a man may say) that is within them. According to which opinion wee see at this day, some Mountaines and Rocks, from whence they draw a burnt stone which is light, but very hard, and is excellent to build with, as that which is carried to *Mexico*. And in effect there are some shewes of that which hath beene spoken, that these Mountaines or Rocks had somtimes a naturall fire, which hath died after the matter was consumed; and so these stones haue remayned burnt and pierced with the fire as wee see. For my part, I will not contradict it, that in those places there hath not beene fire sometimes, or *Volcans*. But there is some difficultie to beleeue it should be so in all *Volcans*, considering the matter they cast out is almost infinite; and that being gathered together, it could not bee contayned in the same concauitie from whence it goes. Moreouer, there are some *Volcans*, that in hundreds, yea thousands of yeeres are alwayes of one fashion, casting out continually smoake, fire, and ashes. *Plinie* the historiographer of naturall things (as the other *Plinie* his nephew reports) searching out the secret how this should passe: and approaching too neere the exhalation of fire of one of these *Volcans*, died; and thinking by his diligence to find an end thereof, had an end of his life. For my part, vpon this consideration I thinke, that as there are places in the earth, whose vertue is to draw vaporous matter, and to conuert it into water, which bee the Fountaines that alwayes runne, and haue alwayes matter to make them runne, for that they draw vnto them the substance of water. In like sort there are places that haue the propertie to draw vnto them hot exhalations, and to conuert them into fire and smoake which by their force and violence cast out other thicke matter which dissolues into ashes, into pumice stone, or such like substance: and for a sufficient argument to proue it to be so in these *Volcans*, they sometimes cast smoake, and not alwayes, and sometimes fire, and not alwayes, which is according to that it can draw vnto it, and digest, as the Fountaines which in Winter abound, and in Summer decrease; yea some are quite dried vp, according to the force and vigour they haue, and the matter that is presented: euen so it is of these *Volcans*, which cast fire more or lesse at certaine seasons. Others say, that it is Hell fire, which issueth there, to serue as a warning, thereby to consider what is in the other life: but if Hell (as Diuines hold) bee in the centre of the Earth, the which containes in diameter aboue two thousand leagues, we cannot iudge that this fire is from the centre; for that Hell fire (as Saint *Basil* and others teach) is very different from this which wee see, for that it is without light, and burneth without comparison much more then ours.

Causes of this burning.

Basil. Psal. 28. & in exam.

Some haue held, that from these *Volcans* which are at the *Indies*, the Earthquakes proceede, being very common there: but for that they ordinarily chance in places farre from those *Volcans*, it cannot be the totall cause. It is true they haue a certaine simpathy one with another, for that the hot exhalations which engender in the inner concauities of the Earth, seeme to be the materiall substance of fire in the *Volcans*, whereby there kindleth another more grosse matter, and makes these shewes of flame and smoake that come forth. And these exhalations (finding no easie issue in the Earth) moue it, to issue forth with great violence, whereby wee heare that horrible noise vnder the Earth, and likewise the shaking of the Earth, being stirred with this burning exhalation; Euen as Gun-powlder in mynes, hauing fire put to it breaks Rocks and Walls; and as the Chesnut laid into the fire, leapes and breakes with a noise, when as it casts forth the aire (which is contayned within the huske) by the force of the fire: Euen so these Earthquakes doe most commonly happen in places neere the water or Sea. As wee see in *Europe*, and at the *Indies*, that Townes and Cities fartheſt from the Sea and waters are least afflicted therewith; and contrariwise, those that are seated vpon Ports of the Sea, vpon Riuers, the Sea coast, and places neere vnto them, feele most this calamitie. There hath happened in *Peru* (the which is wonderfull, and worthy to be noted) Earthquakes which haue runne from *Chille* vnto *Quitto*, and that is aboue a hundred leagues, I say the greatest that euer I heard speake of, for lesser be more common there. Vpon the coast of *Chille* (I remember not well in what yeere) there was so terrible an Earthquake, as it ouer-turned whole Mountaines, and thereby stopped the course of Riuers which it conuerted into Lakes, it beat downe Townes, and slue a great number of people, causing

Of Earthquakes. *Cap. 26.*

Great earthquakes.

causing the Sea to leaue her place some leagues, so as the ships remayned on drie ground, farre from the ordinarie Roade, with many other heauie and horrible things. And as I well remember, they say this trouble and motion, caused by the Earthquake, ranne three hundred leagues alongst the Coast. Soone after, which was in the yeere eightie two, happened that earthquake of *Arequipa*, which in a manner ouer-threw the whole Citie. Since in the yeere eightie sixe, the ninth of Iuly, fell another earthquake in the Citie of *Kings*, the which as the Vice-roy did write, had runne one hundred threescore and ten leagues alongst the Coast, and ouerthwart in the *Sierre* fiftie leagues. The mercy of the Lord was great in this Earthquake, to forewarne the people by a great noise which they heard a little before the Earthquake, who taught by former experiences, presently put themselues in safetie, leauing their Houses, Streets, and Gardens, to goe into the fields; so as although it ruined a great part of the Citie, and of the chiefest buildings, yet there died not aboue fifteene or twentie persons of all the Inhabitants. It caused the like trouble and motion at Sea, as it had done at *Chille*, which happened presently after the Earthquake, so as they might see the Sea furiously to flie out of her bounds, and to runne neere two leagues into the Land, rising aboue fourteene fathom: it couered all that Playne, so as the Ditches and pieces of wood that were there, swam in the water. There was yet another earthquake in the Realme and Citie of *Quitto*; and it seemes all these notable Earthquakes vpon that Coast, haue succeeded one another by order, as in truth it is subiect to these inconueniences. And therefore although vpon the coast of *Peru*, there be no torments from Heauen, as thunder and lightning, yet are they not without feare vpon the Land: and so euery one hath before his eyes, the Heralds of diuine Iustice, to moue him to feare God. For as the Scripture saith, *Fecit hæc vt timeatur*. Returning then to our purpose, I say the Sea coast is most subiect to these earthquakes, the reason is, in my iudgement, for that the water doth stop the conduits and passages of the earth, by which the hot exhalations should passe, which are engendered there. And also the humiditie thickning the superficies of the earth, doth cause the fumes and hot exhalations to goe close together and encounter violently in the bowels of the earth, which doe afterwards breake foorth.

Noyse before the earthquake.

Why the Sea coast is subiect to earthquakes.

Some haue obserued, that such Earthquakes haue vsually hapned, when as a raynie season falls after some drie yeeres. Whereupon they say, that the Earthquakes are most rare, where are most Wells, the which is approued by experience. Those of the Citie of *Mexico* hold opinion, that the Lake whereon it is seated, is the cause of the Earthquakes that happen there, although they be not very violent: and it is most certaine, that the Townes and Prouinces, farre within the Land, and farthest from the Sea, receiue sometimes great losses by these Earthquakes, as the Citie of *Chachapoyas* at the *Indies*, and in *Italie* that of *Ferrara*, although vpon this subiect It seemes this latter, being neere to a Riuer, and not farre from the *Adriatique* Sea, should rather be numbred among the Sea-townes. In the yeere of our Lord 1581. in *Cugiano*, a Citie of *Peru*, otherwise called *The Peace*, there happened a strange accident touching this subiect. A Village called *Angoango* (where many *Indians* dwelt that were Sorcerers and Idolaters) fell suddenly to ruine, so as a great part thereof was raysed vp and carried away, and many of the *Indians* smothered, and that which seemes incredible (yet testified by men of credit) the earth that was ruined and so beaten downe, did runne and slide vpon the Land for the space of a league and a halfe, as it had beene water or waxe molten, so as it stopt and filled vp a Lake, and remayned so spread ouer the whole Countrie.

Earthquake at *Ferrara* terrible.

At *Angoango*.

§. IIII.

Of Metals in the Indies *and especially of the Gold and Siluer, and Quick-siluer.*

METals are (as Plants) hidden and buried in the bowels of the Earth, which haue some conformitie in themselues, in the forme and manner of their production; for that we see and discouer euen in them, branches, and as it were a bodie, from whence they grow and proceede, which are the greater veines and the lesse, so as they haue a knitting in themselues: and it seemes properly that these Minerals grow like vnto Plants, not that they haue any inward vegetatiue life, being onely proper to Plants: but they are engendered in the bowels of the earth, by the vertue and force of the Sunne and other Planets, and in long continuance of time, they increase and multiply after the manner of Plants. And euen as metals bee plants hidden in the earth, so wee may say, that plants bee liuing Creatures fixed in one place, whose life is maintayned by the nourishment which Nature furnisheth from their first beginning. But *liuing Creatures* surpasse Plants, in that they haue a more perfect being; and therefore haue neede of a more perfect foode and nourishment; for the search whereof, Nature hath giuen them a mouing and feeling to discouer and discerne it. So as the rough and barren earth is as a substance and nutriment for metals; and that which is fertile and better seasoned a nourishment for

Metals grow as plants.

Animalia.

for Plants. The ſame plants ſerue as a nouriſhment for liuing creatures, and the plants and liuing creatures together as a nouriſhment for men, the inferiour nature alwayes ſeruing for the maintenance and ſuſtentation of the ſuperiour, and the leſſe perfect yeelding vnto the more perfect; whereby wee may ſee how much it wants, that gold and ſiluer and other things which men ſo much eſteeme by their couetouſneſſe, ſhould bee the happineſſe of man, whereunto hee ſhould tend, ſeeing they bee ſo many degrees in qualitie inferior to man, who hath beene created and made onely to be a ſubiect to ſerue the vniuerſall Creator of all things, as his proper end and perfect reſt; and to which man, all other things in this world, were not propounded or left, but to gaine this laſt end.

The diuerſitie of metals, which the Creator hath ſhut vp in the cloſets and concauities of the earth, is ſuch, and ſo great, that man drawes profit and commoditie from euery one of them. Some ſerue for curing of diſeaſes, others for armes and for defence againſt the enemies, ſome are for ornament and beautifying of our perſons and houſes, and others are fit to make veſſels and Iron-workes, with diuers faſhions of inſtruments, which the induſtrie of man hath found out and put in practice. But aboue all the vſes of metals, which be ſimple and naturall, the communication and commerce of men hath found out one, which is the vſe of money, the which (as the Philoſopher ſaith) is the meaſure of all things. And although naturally, and of it ſelfe, it bee but one onely thing, yet in value and eſtimation we may ſay, that *it is all things*. Money is vnto vs as it were, meate, clothing, houſe, horſe, and generally whatſoeuer man hath need of. By this meanes all obeyes to money, and as the Wiſeman ſaith, to finde an inuention that one thing ſhould be all. Men guided or thruſt forward by a naturall inſtinct, chooſe the thing moſt durable and moſt maniable, which is metall, and amongſt metals, gaue them the preheminence in this inuention of money, which of their nature were moſt durable and incorruptible, which is ſiluer and gold. A Wiſeman ſaid, that what a father doth to marry his daughter well, is to giue her a great portion in marriage; the like hath God done for this Land ſo rough and labourſome, giuing it great riches in mynes, that by this meanes it might be the more ſought after. At the weſt *Indies* then there are great ſtore of mynes of all ſorts of metals, as Copper, Iron, Lead, Tinne, Quick-ſiluer, Siluer, and Gold: and amongſt all the Regions and Parts of the *Indies*, the Realmes of *Peru* abound moſt in theſe metals, eſpecially with Gold, Siluer, Quick-ſiluer, or Mercurie, whereof they haue found great ſtore, and daily diſcouer new mynes. And without doubt, according to the qualitie of the earth, thoſe which are to diſcouer, are without compariſon, farre more in number then thoſe which are yet diſcouered: yea, it ſeemes that all the Land is ſowed with theſe metals, more then any other in the world that is yet known vnto vs, or that ancient Writers haue made mention of.

Ariſt. 5. Ethic. cap. 5.

Eccleſ. 10.

Of the qualitie and nature of the earth wher the metals are found, and that all theſe metals are not imployed at the *Indies*, and how the *Indians* vſed them. *L. 4. Chap. 3. Plin. lib. 5. de Geneſ. mund. Euſeb. lib. 8. de præpar. euang. cap. 9.*

The reaſon why there is ſo great abundance of metals at the *Indies* (eſpecially at the weſt of *Peru*, as I haue ſaid) is the will of the Creator, who hath imparted his gifts as it pleaſed him. But comming to a naturall and philoſophicall reaſon, it is very true, which *Philon* a wiſe man writes, ſaying, that gold, ſiluer, and metals, grow naturally in land that is moſt barren and vnfruitfull. And wee ſee, that in Lands of good temperature, the which are fertile with graſſe and fruits, there are ſeldome found any mynes; for that Nature is contented to giue them vigour to bring forth fruits more neceſſarie for the preſeruation and maintenance of the life of beaſts and men. And contrariwiſe to lands that are very rough, drie, and barren (as in the higheſt Mountaines and inacceſſible Rocks of a rough temper) they finde mynes of ſiluer, of quick-ſiluer, and of gold, and all thoſe riches (which are come into *Spaine* ſince the Weſt *Indies* were diſcouered) haue beene drawne out of ſuch places which are rough and full, bare and fruitleſſe: yet the taſte of this money, makes theſe places pleaſing and agreeable, yea, well inhabited with numbers of people. And although there be, as I haue ſaid, many mynes of all kindes of metals as at the *Indies*, yet they vſe none but thoſe of gold and ſiluer, and as much quick-ſiluer as is neceſſarie to refine their gold and ſiluer. They carry Iron thither from *Spaine* and *China*. As for Copper, the *Indians* haue drawne of it, and vſed it for their armes, the which were not vſually of Iron, but of Copper. Since the *Spaniards* poſſeſſed the *Indies*, they haue drawne very little, neither doe they take the paines to ſeeke out theſe mynes, although there bee many buſying themſelues in the ſearch of richer and more precious metals, wherein they ſpend their time and labour. They vſe no other metals, as Copper, and Iron, but onely that which is ſent them from *Spaine*, or that which remaines of the refining of gold and ſiluer. Wee finde not that the *Indians* in former times vſed gold, ſiluer, or any other metall for money, and for the price of things, but onely for ornament, as hath beene ſaid, whereof there was great quantitie in their Temples, Palaces, and Tombes, with a thouſand kindes of veſſels of gold and ſiluer, which they had. They vſed no gold nor ſiluer to trafficke or buy withall, but did change and trucke one thing for another, as *Homer* and *Plinie* report of the Ancients. They had ſome other things of greater eſteeme, which went currant amongſt them for price, and in ſtead of coine: and vnto this day this cuſtome continues amongſt the *Indians*, as in the Prouinces of *Mexico*, in ſtead of money they vſe *Cacao*, (which is a ſmall fruit) and therewith buy what they will. In *Peru* they vſe *Coca*, to the ſame end (the which is a leafe the *Indians* eſteeme much) as in *Paraguay*, they haue ſtamps of Iron for coine,

No money of gold, but of fruits, &c.

Plin. lib. 33. c. 3.

Digitized by Google

coine, and cotton wouen in Saint *Croix*, of the *Sierre*. Finally, the manner of the *Indians* trafficke, and their buying and ſelling, was to exchange, and giue things for things: and although there were great Marts and famous Faires, yet had they no neede of money, nor of Brokers, for that euery one had learned what he was to giue in exchange for euery kinde of merchandiſe. Since the *Spaniards* entred, the *Indians* haue vſed gold and ſiluer to buy withall: and in the beginning there was no coine, but ſiluer by weight was their price and money, as they report of the ancient *Romans*. Since, for a greater benefit, they haue forged coine in *Mexico* and *Peru*, yet vnto this day they haue not in the Weſt *Indies* coyned any money of Copper or other metall, but onely of ſiluer and gold: for the richneſſe of that Countrie hath not admitted nor receiued ſuch money as they call bullion, nor other kindes of alloy, which they vſe in *Italie*, and in other Prouinces of *Europe*; Although in ſome Ilands of the *Indies*, as Saint *Dominique*, and *Port Ricco*, they vſe coine of leather, which is ſquare, the which are currant onely in thoſe Ilands, hauing little ſiluer or gold. I ſay little, although there be much, for that no man digges it and refines it. But for that the riches of the *Indies*, and their manner to labour in the mynes, conſiſts of gold, ſiluer, and quick-ſiluer, I will ſpeake ſomething of theſe three metals, leauing the reſt for this time.

Plin. lib. 33. c. 4.

Coine of leather.

Gold amongſt other metals hath beene alwayes held the moſt excellent; and with reaſon, being the moſt durable and incorruptible of all others; for fire which conſumes and diminiſheth the reſt, amends it, and brings it to perfection. Gold which hath often paſſed through the fire, keepes his colour, and is moſt fine and pure; which properly is called (as *Plinie* ſaith) *Obriſo*, whereof the Scripture makes ſo often mention and vſe, which conſumeth all other metals (as the ſame *Plinie* ſaith) doth not any thing waſte gold, nor yet hurt it, neither is it eaten, nor groweth old. And although his ſubſtance and body bee firme and ſolid; yet doth it yeeld and bow wonderfully; the Beaters and Drawers of gold know well the force it hath to bee drawne out without breaking. All which things well conſidered, with other excellent properties, will giue men of iudgement to vnderſtand, wherefore the holy Scripture doth compare Charitie to gold. To conclude, there is little neede to relate the excellencies thereof to make it more deſirable. For the greateſt excellencie it hath, is to be knowne (as it is) amongſt men, for the ſupreme power and greatneſſe of the World. Comming therefore to our ſubiect; at the *Indies* there is great abundance of this metall, and it is well knowne by approued Hiſtories, that the *Ingues* of *Peru* did not content themſelues with great and ſmall veſſels of gold, as Pots, Cups, Goblets, and Flagons; yea with Kowles or great Veſſels, but they had Chaires alſo, and Litters of maſſie gold: and in their Temples they had ſet vp mayne Images of pure gold, whereof they finde ſome yet at *Mexico*, but not ſuch ſtore as when the firſt Conquerors came into the one and the other Kingdome, who found great treaſure, and without doubt there was much more hidden in the earth by the *Indians*. It would ſeeme ridiculous to report that they haue made their horſe ſhooes of ſiluer for want of Iron, and that they haue paid three hundred crownes for a bottle of wine, and other ſtrange things; and yet in truth this hath come to paſſe, yea and greater matters. They draw gold in thoſe parts after three ſorts: or at the leaſt; I haue ſeene all three vſed. For either they finde gold in graines, in powlder, or in ſtone.

Of gold which they digge and refine at the *Indies*. *Chap. 4.*

Plin. lib. 33. c. 3.

Apoc. 3. & 21. Cant. 3. Pſal. 67. 3. Reg. 6.

See before in *I. dos Santos*, and in *Herrera*.

The moſt famous gold is that of *Caranaua* in *Peru*, and of *Valdiuia* in *Chille*, for that it riſeth with his alloy and perfection, which is twentie three Carrats and a halfe, and ſometimes more. They make account likewiſe of the gold of *Veragua* to bee very fine. They bring much gold to *Mexico* from the *Philippines*, and *China*, but commonly it is weake and of baſe alloy. Gold is commonly found mixt with Siluer or with Copper; but that which is mixed with ſiluer is commonly of fewer Carrats then that which is mixed with copper. If there be a fift part of ſiluer, *Plinie* ſaith, it is then properly called *Electrum*, which hath the propertie to ſhine more at the light of the fire, then fine gold or fine ſiluer. That which is incorporate with copper, is commonly of a higher value. They refine powldred gold in baſons, waſhing it in many waters, vntill the Sand falls from it, and the gold as moſt heauie remayneth in the bottome. They refine it likewiſe with quick-ſiluer and ſtrong water, for that the allum whereof they make this water hath the vertue to ſeparate gold from droſſe, or from other metals. After it is purified and molten, they make Bricks or ſmall Barres to carry it vnto *Spaine*; for being in powlder, they cannot tranſport it from the *Indies*, for they can neither cuſtome it, marke it, nor take ſay, vntill it bee molten. In the fleet where I came, which was in the yeere 1585. the declaration of the firme Land was of twelue Caſſons or Cheſts of gold, euery Caſſon at the leaſt weighed foure *Arobes*, that is a hundred weight; and a thouſand fiftie and ſixe Mares from new *Spaine*, which was for the King onely, beſides that which came for Merchants and priuate men being regiſtred; and much that came vnregiſtred. This may ſuffice touching the gold of the *Indies*, and now wee will ſpeake of Siluer.

Plin. lib. 3. cap. 4.

Now we will ſhew how they diſcouer the mynes of Siluer, their veines, rootes, and beginnings whereof *Iob* ſpeakes. And firſt I will ſay, that the reaſon why they giue ſiluer the ſecond place among all other metals, is, for that it approcheth neerer to gold then any other, being more durable and leſſe indamaged by the fire, and more mallable then any other: yea it paſſeth gold in brightneſſe, beautie, and ſound, the which is cleere, and agreeable, for the colour is more conformable

Of the Siluer at the *Indies*. *Chap. 5.*

mable and resembling the light, and the sound more piercing, more liuely, and more delicate. The mynes of siluer are commonly found in Mountaines and high Rocks very desart, although they haue sometimes beene found in Playnes and Champaines. There are two different kindes, the one they call *stragling*, the other *fixed* and setled. The stragling, are pieces of metall found in certaine places, the which drawne away, there is no more found. But the fixed veines, are those which haue a continuance in depth and length, like to great branches and armes of Trees; and when they finde any one of them, they commonly finde many in the same place. The manner to purge and refine siluer which the *Indians* haue vsed, was by melting, in dissoluing this masse of metall by fire, which casts the earthly drosse apart, and by his force separates Siluer from Lead, Tin from Copper, and other metals mixt. To this end they did build small Furnaces in places where as the winde did commonly blow, and with Wood and Cole made their refining, the which Furnaces in *Peru* they call *Guayras*. Since the *Spaniards* entred, besides this manner of refining which they vse to this day, they likewise refine siluer with quick-siluer, and draw more by this meanes then in refining it by fire. For there is some kind of siluer metall found which can by no meanes be purged and refined by fire, but onely with quick-siluer. But this kinde of metall is commonly poore and weake, the which vsually they finde in greatest abundance. They call that poore which yeelds least siluer, and great quantitie of other metall, and that rich which yeelds most siluer. It is strange to see, not onely the difference betwixt the refining of metall by fire, and without it by quick-siluer, but also that some of these metals, which are refined by the fire, cannot well be molten with any artificiall winde, as with bellowes; but when it is kindled and blowne with the naturall aire, or naturall winde. The metall of the mynes of *Porco* is easily refined with bellowes, and that of the mynes of *Potozi* cannot bee molten with bellowes, but onely by the breath of their *Guayras*, which are small Furnaces vpon the sides of the Mountaines, built expressly where the winde lies, within the which they melt this metall; and though it be hard to yeeld a reason for this difference, yet is it most certaine and approued by long experience: so as the greedie desire of this metall so much valued amongst men, hath made them seeke out a thousand gentle inuentions and deuices, whereof we will hereafter make mention. The chiefe places of the *Indies* from whence they draw siluer, are new *Spaine* and *Peru*, but the mynes of *Peru* farre surpasse the rest; and amongst all others of the World, those of *Potozi*.

Note,

Of the Mountaine or Hill of *Potozi*, and the discouery thereof, *Chap. 6.*

The Mountaine or Hill of *Potozi* so famous, is situate in the Prouince of *Charcas*, in the Kingdome of *Peru*, distant from the Equinoctiall towards the South, or Pole Antartike, one and twentie degrees and two thirds: so as it falls vnder the Tropicke, bordering vpon the burning Zone, and yet this Region is extremely cold, yea, more then old *Castile* in the Kingdome of *Spaine*, and more then *Flanders* it selfe, although by reason it should be hot or temperate, in regard of the height and eleuation of the Pole where it is seated. The reason of this so cold a temperature, is the height of the Mountaine, whereas cold and intemperate winds continually blow, especially that which they call *Thomahaui*, which is boistrous and most cold. It raines most commonly in Iune, Iuly, and August. The ground and soile of this Mountaine is drie, cold, and very vnpleasant, yea altogether barren, which neither engenders nor brings forth any fruit, grasse, nor graine; it is naturally vnhabitable, for the intemperature of the Heauen, and the barrennesse of the Earth. But the force of siluer, which drawes vnto it the desire of all things, hath peopled this Mountaine more then any other place in all these Kingdomes, making it so fruitfull of all kindes of meates, as there wants nothing that can be desired, yea, in great abundance; and although there be nothing but what is brought by carriage, yet euery place abounds so with Fruit, Confectes, exquisite Wines, Silkes, and all other delicates, as it is not inferiour to any other part. This Mountaine is of colour darke red, and is in forme pleasing at the first sight, resembling perfectly the fashion of a Pauilion, or of a Sugar-loafe. It exceeds all other Hills and Mountaines about it in height. The way whereby they ascend, is very rough and vneuen, and yet they goe vp on horse-back. It is round at the top, and at the foot it hath a league in circuit. It containes from the top to the bottom 1680. common yards, the which reduced to the measure of *Spanish* leagues, makes a quarter of a league. At the foot of this Mountaine there is another small Hill that riseth out of it, in the which there hath beene somtimes mynes of metall dispersed, which were found as it were in purses, and not in fixed or continued veines; yet were they very rich, though few in number. This small Rock was called by the *Indians*, *Guayna Potozi*, which is yong *Potozi*; at the foot whereof begins the dwellings of the *Spaniards* and *Indians*, which are come to the riches and worke of *Potozi*, which dwelling may containe some two leagues in circuit, and the greatest traffick and cõmerce of all *Peru* is in this place. The mynes of this Mountaine were not digged nor discouered in the time of their *Ingues*, which were the Lords of *Peru*, before the *Spaniards* entred, although they had digged and opened the mynes of *Porco*, neer to *Potozi*, distant only six leagues.

An *Indian* called *Gualpa*, of the Nation of *Chumbibilca*, which is a Prouince of *Cusco*, going one day to hunt for Venison, passing towards the West whither the beast was fled, hee began to runne vp against the Rocke, which at that time was couered and planted with certaine Trees they call *Quinua*, and with thicke bushes, and as he striued to get vp a way which was somewhat rough and vneasie, hee was forced to lay hold vpon a branch, which issued from a veine of a siluer

siluer myne: (which since they haue called *Rich*) which hee pulled vp, perceiuing in the hole or roote thereof, metall, the which he knew to be very good, by the experience he had of the mynes of *Porco*: and after finding vpon the ground certaine pieces of metall, which lay broken and dispersed neere to this veine, being scarse well able to iudge thereof, for that the colour was spoyled and changed by the Sunne and raine; he carried it to *Porco* to trie by the *Guayra* (which is the triall of metall by fire) and hauing thereby found the great riches and his happy fortune, he secretly digged and drew metall out of this veine, not imparting it to any man, vntill that an *Indian* called *Guanca*, of the Valley of *Xaura*, which is vpon the borders of the Citie of *Kings*, who remayning at *Porco* neere vnto *Gualpa* of *Chumbibilca*, perceiued one day that hee made a refining, and that his Wedges and Bricks were greater then such as were vsually made in those places: and also increasing in his expence of apparell, hauing till then lined but basely. For this reason, and for that the metall his Neighbour refined was different from that of *Porco*, hee thought to discouer this secret; and wrought so, that although the other kept it as secret as hee could, yet through importunitie hee was forced to carry him vnto the Rocke of *Potozi*, hauing enioyed this rich treasure full two moneths. And then *Gualpa* the *Indian* willed *Guanca* for his part to take a veine, which he had discouered neere to the rich veine, which at this day is called the veine of *Diego Centeno*, that was not lesse rich, but more hard to digge and to draw forth; and so by agreement they diuided betweene them the richest Rocke in the world. It chanced after, the *Indian Guanca* finding some difficultie to digge and draw forth his metall, being most hard, and the other *Gualpa* refusing to impart any of his myne vnto him, they fell at debate; so as *Guanca* of *Xaura* grieued therewith, and with some other discontents, discouered this secret vnto his Master called *Villarel* a *Spaniard*, who then remayned at *Porco*. This *Villarel* desirous to vnderstand the truth, went to *Potozi*, and finding the riches his *Yanacona* or seruant had discouered vnto him, caused the *Indian Guanca* to be inrolled, vndertaking with him the said veine, which was called *Centeno*, they call it *Vndertaking*, that is as much as to note and marke the myne, and so much ground in circuit for him, which the Law graunts vnto those that discouer any myne, or vnto those that digge them: by meanes whereof, hauing discouered them to the Iustice, they remayned Lords of the myne, to digge and draw forth the siluer, as being their owne, paying onely their duties vnto the King, which is a fift part. So as the first discouerie and inregistring of the mynes of *Potozi*, was the one and twentieth of Aprill, in the yeere of our Lord 1545. in the Territorie of *Porco*, by the said *Villarel* a *Spaniard*, and *Guanca* an *Indian*. Presently after they discouered another veine, which they called the *Veine of Tinne*, the which is very rich, although it be rough and very painfull to worke in, the metall being as hard as flint. Since the thirtie day of August in the same yeere 1545. the veine called *Mendieta* was inrolled, and these are the foure principall veines of *Potozi*. They say of the rich veine, the first that was discouered, that the metall lay aboue the ground the height of a Lance, like vnto Rocks, raysing the superficies of the Earth, like vnto a crest of three hundred foot long, and thirteene foot broad, and that this remayned bare and vncouered by the deluge, this veine hauing resisted the violence and force of the water, as the hardest part. The metall was so rich as it was halfe siluer, and this veine continued in his bountie fiftie or threescore *Spades* (which is the height of a man) and then it fayled. Presently after that the discouerie of *Potozi* was knowne in *Peru*, many *Spaniards*, and the most part of the *Bourgeois* of the *Siluer Citie*, which is eighteene leagues from *Potozi*, came thither to take mynes: yea, there came many *Indians* from diuers Prouinces, specially the *Quayzadores* of *Porco*, so as within a short space it was the best peopled habitation of all the Kingdome.

When as the Licenciate *Polo* gouerned that Prouince, the which was many yeeres after the discouerie of this Mountaine, they did euery Saturday enter a hundred and fiftie and two hundred thousand pieces, whereof the Kings fift amounted to thirtie and fortie thousand pieces; and for euery yeere a million and a halfe, or little lesse. So as according to that computation they did draw euery day from this myne thirtie thousand pieces, whereof there came to the King for his fift, sixe thousand pieces a day.

Euery piece is worth thirteene Rials and a fourth part.

There is yet another thing to bee spoken of, to shew the riches of *Potozi*, that the account which hath beene made, was onely of siluer that was marked and customed. And it is well knowne in *Peru*, that they haue long vsed siluer in their Realmes, which they call *Currant*, which was neither marked nor customed. And they hold it for certaine which know these mynes, that in these dayes, the greatest part of siluer drawne at *Potozi*, was not customed, and this had course amongst the *Indians*, and much amongst the *Spaniards*, as I haue seene continued to my time; so as it may appeare, the third part of the riches of *Potozi*, yea the one halfe came not to light, neither was it customed. There is yet a more notable consideration, in that which *Plinie* saith, they had digged a fifteene hundred paces in the myne of *Rebello*, and that continually they found water, which is the greatest hinderance they haue to draw forth their metall. But in this of *Potozi*, although they haue digged two hundred stades or heights of a man in depth; yet did they neuer finde any water, which is the greatest happinesse of this Mountaine. But the mynes of *Porco*, whose metall is good and very rich, are at this day left for the discommoditie

Plinius lib. 33. c. 6.

moditie of water, which they haue found in their worke; for they are two insupportable labours in searching of the metall; first, to digge and breake the Rocks, and then to draw out the water all together. The first of them, that is, to cut through the Rocks, is paine enough; yea very hard and excessiue. Finally, at this day the King receiues for his fift yeerly, from the mynes of *Potozi*, a million of siluer, besides the wealth that growes by quick-siluer, and other Royall prerogatiues, which is a great treasure. Some men of iudgement hauing cast vp the accounts, say, that what hath beene brought into the custome House of *Potozi*, vnto the yeere of our Lord 1585. amounteth vnto a hundred thousand millions of pieces of Essay, whereof euery piece is worth thirteene Rials and a fourth part, not reckoning the siluer which hath beene carried away without custome, or that hath beene entred in other Royall custome houses, or the siluer that hath beene wrought in the Countrie, which is not entred, the which is innumerable, although the first Registers of Entries are not so exactly kept as at this day; for that in the beginning and first discoueries, they made their recoit by *Romans*, so great was their abundance.

But by the instructions and remembrances of *Don Francisco de Toledo* the Vice-roy, in the yeere of our Sauiour Christ 1574. they finde seuentie and sixe millions to that yeere: and from that yeere to eightie fiue inclusiue, it appeares by the Royall Registers, there were thirtie fiue millions more entred. They sent this accompt to the Vice-roy from *Potozi*, in the yeere I haue mentioned, being then in *Peru*; and since the wealth that hath come from *Peru* by ship, hath amounted to much more. In that fleet where I came in the yeere 1587. there were eleuen millions transported in the two fleetes of *Peru* and *Mexico*, whereof two thirds were in that of *Peru*, and almost the one halfe for the King.

Huge summes of siluer.

Estaim.

This Rocke of *Potozi*, containes as I haue said, foure principall veines, that is, the *Rich* veine, that of *Centeno*, that of *Tinne*, and that of *Mendieta*. All these veines are of the East part of the Mountaine, as looking to the Sunne rising, for on the West part there is not any. The foresaid veines runne from North to South, which is from Pole to Pole. In the largest place they haue sixe foot, and in the narrowest a span breadth. There are others of diuers fashions that runne out of the said veines; like as out of the great armes of Trees, there commonly sprout forth lesse. Euery veine hath diuers mynes which are parts and portions of the same, distinct and diuided betwixt diuers Masters, by whose names they are commonly called. The great myne containes fourscore yards, neither may it be more by the Law, and the least containes foure. All these mynes are at this day very deepe. In the *Rich* myne they reckon seuentie eight mynes, which are eightie yards deepe, or a hundred stades or height of a man, and in some places two hundred. In the veine of *Centeno* are foure and twentie mynes, whereof some are seuentie or eightie stades deepe, and so of the other veines of this Mountaine. For a remedie to this great profunditie, they haue inuented mynes, which they call *Soccabones*, which are caues or vents made at the foote of the Mountaine, the which goe crossing till they incounter with the veines: for we must vnderstand, that although the veines runne North to South, as hath beene said, yet is it in declining from the top to the foote of the Mountaine, which may be as they beleeue by coniecture, aboue twelue hundred stades. And by this account, although the mynes extend in such a profunditie, yet there remaines sixe times as much space vnto the bottome or roote, the which they say, are most rich and abundant, as the body and spring of all veines. Although vnto this day we haue seene the contrarie by experience, for the higher the veine is to the superficies of the earth, the more rich they finde it: and the deeper it goes, the poorer it is, and of the baser aloy. They then inuented the *Soccabons*, by which they enter to worke in the mynes very easily, with lesse charge, paine, and danger. They haue eight foot in breadth, and a stade in height, the which they shut with doores. By them they drawe forth their metall very easily, paying to the proprietarie of the *Soccabon*, the fift part of all the metall they draw forth. There are nine already made, and others are begun. They were nine and twentie yeeres in making of one *Soccabon*, as they call it, of the venome that flowes from the rich veine. It was begun in the yeere 1550. the eleuenth yeere of the discouerie, and was ended in the yeere 1585. the eleuenth of August. This *Soccabon* crossed the rich veine thirtie fiue stades from the foote or spring, and from thence where it met to the mouth of the myne, were a hundred thirtie fiue stades. So as they must descend all this depth to labour in the myne. This *Soccabon* containes from his mouth vnto the veine of *Crusero* as they call it, two hundred and fiftie yards, in which worke were spent nine and twentie yeeres, whereby we may see what great paines men take to draw siluer out of the bowels of the earth. They labour in these mynes in continuall darknesse and obscuritie, without knowledge of day or night. And forasmuch as those places are neuer visited with the Sunne, there is not only continuall darknesse, but also an extreme cold, with so grosse an aire contrarie to the disposition of man, so as, such as newly enter, are sicke as they at Sea. The which happened to me in one of these mynes, where I felt a paine at the heart, and beating of the stomacke. Those that labour therein, vse candles to light them, diuiding their worke in such sort, as they that worke in the day, rest by the night, and so they change. The metall is commonly hard, and therefore they breake it with hammers, splitting and hewing it by force, as if they were flints. After they carry vp this metall

Preciosa periculo, Speciosa suppicia.

Intolerable paines and darknesse in the Mynes, and if in the Mindes farre more intolerable remayning.

vpon

vpon their ſhoulders, by Ladders of three branches, made of Neats leather twiſted like pieces of wood, which are croſſed with ſtaues of wood; ſo as by euery one of theſe Ladders they mount and deſcend together. They are ten ſtades long a piece: and at the end of one beginnes another of the ſame length, euery Ladder beginning and ending at plat-formes of wood, where there are ſeates to reſt them, like vnto galleries, for that there are many of theſe Ladders to mount by one at the end of another. A man carries ordinarily the weight of two *Arrobes* of metall vpon his ſhoulders, tied together in a cloth in manner of a skip, and ſo mount they three and three. He that goes before carries a candle tied to his thumbe: for (as it is ſaid) they haue no light from Heauen, and ſo goe they vp the Ladder holding it with both their hands, to mount ſo great a height, which commonly is aboue a hundred and fiftie ſtades: a fearfull thing, and which breedes an amazement to thinke vpon it, ſo great is the deſire of Siluer, that for the gaine thereof, men endure any paines. And truly, it is not without reaſon, that *Plinie* treating of this ſubiect, exclaimes and ſayes thus, *Wee enter euen into the bowels of the Earth, and goe hunting after riches, euen to the place of the damned.* And after in the ſame Booke hee ſaith: *Thoſe that ſeeke for metals, performe workes more then Giants, making holes and caues in the depth of the Earth, piercing Mountaynes ſo deepe by the light of Candles, whereas the day and the night are alike, and in many moneths they ſee no day. So as often the walls of their mynes fall, ſmothering many of them that labour therein.* And afterwards hee addes, *They pierce the hard Rocke with hammers of Iron waighing one hundred and fiftie pounds, and draw out the metall vpon their ſhoulders, labouring day and night, one deliuering his charge to another, and all in darkneſſe, onely the laſt ſees the light: with Wedges and Hammers they breake the Flints, how hard and ſtrong ſoeuer, for the hunger of gold is yet more ſharpe and ſtrong.*

Euery *Arobe* is 25. pound.

Plin. in proem. lib. 33. cap. 6.

The veines as I haue ſaid, where they finde ſiluer, runne betwixt two Rocks, which they call *The Chaſe*, whereof the one is commonly as hard as flint, and the other ſoft and eaſie to breake. This metall is not alwayes equall, and of the ſame bountie, for you ſhall find in one and the ſame veine, one ſort of metall very rich, which they call *Cacilla*, or *Tacana*, from which they draw much ſiluer; and another is poore, from whence they draw little. The moſt rich metall of this Mountaine, is of the colour of Amber, and the next is that which inclines to blacke. There is other ſomewhat red, and other of the colour of aſhes: finally, of diuers and ſundrie colours, which ſeeme to ſuch as know them not, to bee ſtones of no value. But the myners doe preſently know his qualitie and perfection, by certaine ſignes and ſmall veines they finde in them. They carry all this metall they draw out of theſe mynes, vpon *Indian* ſheepe, which ſerue them as Aſſes to carry it to the Mills; the richeſt metall is refined by melting in thoſe ſmall Furnaces, which they call *Guayras*, for that is moſt leadie; by reaſon whereof, it is moſt ſubiect to melt, and for the better melting thereof, the *Indians* caſt in a matter, they call *Soroche*, which is a metall full of Lead. The metall being in theſe Furnaces, the filth and earthie droſſe, through the force of the fire, remaines in the bottome, and the Siluer and Lead melt; ſo as the Siluer ſwimmes vpon the Lead, vntill it bee purified; then after they refine the ſiluer many times, after this manner of melting. They haue vſually drawne out of one Quintall of metall, thirtie, fortie, and fiftie pieces of ſiluer, and yet I haue ſeene ſome moſt excellent that haue beene ſhewne me, where they haue drawne in the melting two hundred, yea two hundred and fiftie pieces of ſiluer of a Quintall of metall; a rare wealth, and almoſt incredible, if we had not ſeene the triall thereof by fire, but ſuch metals are very rare. The pooreſt metall is that which yeelds two, three, fiue, or ſixe pieces, or little more. This metall hath commonly little Lead, but is drie, and therefore they cannot refine it with fire. And for this reaſon in *Potozi*, there was great ſtore of theſe poore metals, whereof they made no great account, but were reiected like ſtraw, and as the ſkum of the good metall, vntill they found meanes to refine it by quick-ſiluer, whereby the ſkum they called *Oquiache* was of great profit, for the quick-ſiluer by a ſtrange and wonderfull propertie, purifies the ſiluer, and is apt for theſe metals which are drie and poore, wherein they conſume leſſe quick-ſiluer then in the richer: for the richer they are, the more need of quick-ſiluer they haue. At this day the moſt vſuall manner of refining in *Potozi*, is by quick-ſiluer, as alſo in the mynes of *Cacutecas*, and others of new *Spaine*. There were in old time vpon the ſides and tops of *Potozi*, aboue ſixe thouſand *Guayras*, which are ſmall Furnaces where they melt their metall, the which were placed like lights (a pleaſant ſight to behold by night) caſting a light afarre off like a flame of fire. But at this day there are not aboue two thouſand, for that (as I haue ſaid) they vſe little melting, but refine it by quick-ſiluer, the which is the greateſt profit. And for that the properties of quick-ſiluer are admirable; and that this manner of refining of ſiluer is remarkable, I will diſcourſe of Quick-ſiluer, of the Mynes and Worke, and what is requiſite for that ſubiect.

How they refine the metall of ſiluer. *Chap. 9.*

Quick-ſiluer, ſo called by the *Latines*, for that it runnes and ſlides ſuddenly from place to place; amongſt all other metals hath great and wonderfull vertues. The firſt is, although it bee a true metall, yet is it not hard, neither hath it any certaine forme nor ſubſiſtance like to other metals, but is liquid, not like vnto gold and ſiluer molten, but of his owne proper nature; and although it be a liquor, yet is it more heauie then any other metall: and therefore all others ſwim aboue and ſinke not to the bottome, being more light. I haue ſeene two pounds of Iron put into a

Digitized by Google

barrell of quick-ſiluer, the which did ſwimme about like vnto Wood or Corke vpon the Wa-
Plin. l. 33. c. 6. ter. *Plinie* giues an exception hereunto, ſaying, That gold alone doth ſinke and not ſwimme aboue it. I haue not ſeene the experience; but it may bee this growes, by reaſon that quick-ſiluer by nature doth inuiron gold, and couers it, which is one of the moſt important proper-
Sympathie with gold. ties it hath; for it ioynes with gold in a ſtrange manner, it ſeekes it where it lyes, and inui-rons it in ſuch ſort, as it doth diſtinguiſh and ſeparate it from any other body or metall where-with it is mixt: for this reaſon ſuch take gold as will preſerue themſelues from the dangers and diſcommodities of quick-ſiluer. They haue vſed a remedie to thoſe (in whoſe eares they had put quick-ſiluer, to cauſe them to die ſecretly) to put little plates of gold into their eares (for that Gold hath the vertue to draw out Mercurie) and after they drew out theſe plates all white with the quick-ſiluer, it did ſticke vnto them. Being one day at *Madril*, I went to ſee the exquiſite workes which *Iacomo de Treco* (a rare worke-man of *Millan*) made for Saint *Laurence* the *Royall*, it was my hap to be there one day, when as they gilded certaine pieces of a countertable of braſſe, which is done with quick-ſiluer; and for that the fume of Mercurie is mortall, he told me that the worke-men preſerued themſelues from this venome, by ſwallowing a double Duckat of gold rolled vp; the which being in the ſtomacke, drawes vnto it all the quick-ſiluer that enters in fume by the Eares, Eyes, Noſtrils, and Mouth, and by this meanes freed themſelues from the danger of quick-ſiluer, which the gold gathered in the ſtomacke, and after caſt out by the excrements: a thing truly worthy of admiration. After the quick-ſiluer hath purified and purged gold from all other metals and mixtures, hee is likewiſe ſeparated from the gold his friend by the heate of the fire, the which purifies it from all quick-
Plin. l. 33. c. 6. ſiluer. *Plinie* ſayes, that by a certaine arte and inuention they did ſeparate gold from quick-ſiluer. It ſeemes to me the Ancients had no knowledge to refine ſiluer by quick-ſiluer, which at this day is the greateſt vſe, and chiefe profit of quick-ſiluer; for that he ſayes plainly, that quick-ſiluer ioynes with no other metall but with gold; and when hee makes mention of refi-ning of ſiluer, hee ſpeakes onely but of the manner of melting; whereby wee may inferre that the Ancients had no knowledge of this ſecret. In truth, though there be a league and ſimpathy betwixt gold and quick-ſiluer, yet where as the Mercurie findes no gold, it ioynes with ſil-uer, though not in the like manner as with gold; but in the end, it doth cleanſe and purge it from Earth, Copper, and Lead, amongſt the which the ſiluer growes, without any neede of fire to melt it: yet muſt they vſe fire to ſeparate it from the ſiluer, as I will ſhew hereafter. Quick-ſiluer holds no account of other metals, but of Gold and Siluer; but contrariwiſe, it doth corrupt them, force and conſume them, and flyeth from them as much as may bee. The which is likewiſe admirable, and for this cauſe they put it in earthen veſſels, or in beaſts skins. For if it bee put in veſſels of Copper, of Iron, or other metall, it preſently pierceth and cor-rupts them. And therefore *Plinie* calleth it the poyſon of all things, for that it conſumes and ſpoiles all. Wee finde quick-ſiluer in the graues of dead men, which after it hath conſumed the bodies, comes forth pure and whole. There hath beene likewiſe found in the bones and mar-row of Men and Beaſts, who hauing receiued it in fume by the mouth and noſtrils, congeales within them and pierceth euen vnto the bones. Therefore it is a dangerous thing to frequent ſo perillous and mortall a creature. It hath another propertie, which is, to runne and make a hun-dred thouſand ſmall drops, whereof not one is loſt, bee they neuer ſo little, but they returne euery way to their liquor. It is almoſt incorruptible, hauing nothing in a manner that may conſume it. And therefore *Plinie* calls it the eternall ſweat. It hath yet another propertie, that although it doth ſeparate Gold from Copper, and all other metals, yet they that will gild Cop-per, Braſſe, or Siluer, vſe quick-ſiluer as the meanes of this vnion; for with the helpe thereof they gild metals. Amongſt all the wonders of this ſtrange liquor that ſeemes to mee moſt wor-thy obſeruation, that although it bee the weighteſt thing in the world, yet is it conuerted in-to the lighteſt of the world, which is ſmoake, and ſuddenly the ſame ſmoake which is ſo light a thing, turnes againe into ſo heauie a ſubſtance, as is the proper liquor of quick-ſiluer, where-into it is diſſolued; for this ſmoake encountring the metall on high, being a ſolid body, or comming into a cold Region, ſuddenly it thickens and is conuerted into quick-ſiluer, and if you ſet him once againe to the fire, he doth likewiſe returne into ſmoake, to be reſolued againe in-to quick-ſiluer.

Of the place where they finde quick-ſiluer, and how they diſcoue-red theſe rich mynes in *Guancavilca*. *Chap.* 11.

Quick-ſiluer is found in a kinde of ſtone, which doth likewiſe yeeld Vermillion, which the Ancients called *Minium*, and at this day they call the Images of cryſtall *Miniades*, which are painted with quick-ſiluer. The Ancients made great account of this *Minium* or Vermillion, holding it for a ſacred colour, as *Plinie* reports, ſaying, That the *Romans* were accuſtomed to paint the face of *Iupiter*, and the bodies of thoſe that triumphed in *Ethiopia*: yea, their Idols and their Gouernours likewiſe had their faces coloured with this *Minium*. And this Vermillion was ſo eſteemed at *Rome* (which they brought onely from *Spaine*, where they had many pits and mynes of quick-ſiluer, which continue there to this day) that the *Romans* ſuffered it not to be re-fined in *Spaine*, leſt they ſhould ſteale ſome of it, but they carried it to *Rome*, ſealed vp in a maſſe as they drew it out of the myne, and after refined it. They did yeerly bring from *Spaine*, eſpecially

from

Digitized by Google

from *Andaluſie*, about ten thouſand pound weight, which the *Romans* valued as an infinite treaſure. I haue reported all this out of that Author, to the end that thoſe which doe ſee what paſſeth at this day in *Peru*, may haue the content to know what chanced in former ages, among the mightieſt Lords of the world. I ſpeake for the *Ingnas* Kings of *Peru*, and for the naturall *Indians* thereof, which haue laboured and digged long in theſe Mines of Quick-ſiluer, not knowing what Quick-ſiluer was, ſeeking onely for *Cinabrium* or Vermillion, which they call *Limpi*, the which they eſteeme much, for that ſame effect that *Plinie* reports of the *Romans* and *Ethiopians*, that is, to paint the face and bodies of themſelues and their Idols: the like hath beene much practiſed by the *Indians*, eſpecially when they went to the warres, and vſe it at this day in their feaſts and dancing, which they call ſlubbering, ſuppoſing that their faces and viſages ſo ſlubbered, did much terrifie, and at this day they hold it for an ornament and beautifying; for this cauſe there were ſtrange workes of Mines in the Mountaines of *Guancauilca*, which are in *Peru*, neere to the Citie of *Guamangua*, out of the which they drew this Mettall: it is of ſuch a manner, that if at this day they enter by the caues or *Soccabones*, which the *Indians* made in thoſe dayes, they looſe themſelues, finding no paſſage out: but they regarded not Quick-ſiluer, which naturally is in the ſame ſubſtance or mettall of Vermillion, neither had they knowledge of any ſuch matter. Labirinths.

The *Indians* were not alone for ſo long a time without the knowledge of this treaſure, but likewiſe the *Spaniards*, who vntill the yeare 1566. and 1567. (at ſuch time as the licentiate *Caſtro* gouerned in *Peru*) diſcouered not the Mines of Quick-ſiluer, which happened in this manner. A man of iudgement called *Henrique Guarces*, a *Portugall* borne, hauing a piece of this coloured Mettall, as I haue ſaid, which the *Indians* call *Limpi*, with which they paint their faces, as he beheld it well, found it to be the ſame which they call Vermillion in *Caſtile*: and for that hee knew well that Vermillion was drawne out of the ſame mettall that Quick-ſiluer was, he coniectured theſe Mines to be of Quick-ſiluer, went to the place whence they drew this Mettall, to make triall thereof. The which he found true, and in this ſort the Mines of *Palcas* in the territorie of *Guamangua*, being diſcouered, great numbers of men went thither to draw out Quick-ſiluer, and ſo to carry it to *Mexico*, where they refine Siluer by the meanes of Quick-ſiluer, wherewith many are inriched. This Countrie of Mines which they call *Guancauilca*, was then peopled with *Spaniards* and *Indians* that came thither, and come ſtill to worke in theſe Mines of Quick-ſiluer, which are in great numbers, and very plentifull: but of all theſe Mines, that which they call *de Amador de Cabrera*, or of Saints, is goodly and notable. It is a Rocke of moſt hard Stone, interlaced all with Quick-ſiluer, and of that greatneſſe, that it extends aboue foureſcore *Vares* or yards in length, and fortie in breadth: in which Mine they haue many pits, and ditches, of threeſcore and tenne ſtades deepe, ſo as three hundred men may well worke together; ſuch is the capacitie thereof. This Mine was diſcouered by an *Indian* of *Amador* of *Cabrera*, called *Nauincopa* of the Village of *Acoria*, the which *Amador* of *Cabrera* cauſed to be regiſtred in his name. He was in ſuite againſt the Procurer fiſcall, but the vſufruite was adiudged to him by ſentence as the diſcouerer. Since he ſold his intereſt to another, for two hundred and fiftie thouſand Ducates; and afterwards thinking he had bin deceiued in the ſale, he commenced an action againſt the buyer, being worth, as they ſay, aboue fiue hundred thouſand Ducates; yea, ſome hold it to be worth a Million of Gold: a rare thing to ſee a Mine of that wealth. Mines of Quick-ſiluer found.

When as *Don Franciſco* of *Toledo* gouerned in *Peru*, there was one which had bin in *Mexico*, and obſerued how they refined Siluer with Mercury, called *Pero Fernandes de Valeſco*, who offred to refine Siluer at *Potozi*, with Mercury: and hauing made triall thereof in the yeare 1571. performed it with credit; then began they to refine Siluer at *Potozi* with Quick-ſiluer, which they tranſported from *Guancauelicqua*, which was a goodly helpe for the Mines; for by the meanes of Quick-ſiluer they drew an infinite quantitie of mettall from theſe Mines, whereof they made no accompt, the which they called *Scrapings*. For as it hath beene ſaid, the Quick-ſiluer purifies the Siluer, although it be drie, poore, and of baſe alloy, which cannot be done by melting in the fire. The Catholike King drawes from it Quick-ſiluer mines, without any charge or hazard, almoſt foure hundred thouſand pieces of a Mine, the which are foureteene rials a peece, or little leſſe, beſides the rights that riſe in *Potozi*, where it is imployed, the which is a great riches. They doe yearely, one with another, draw from theſe Mines of *Guancauilca*, eight thouſand quintals of Quick-ſiluer, yea and more.

Let vs now ſpeake how they draw out Quick-ſiluer, and how they refine Siluer therewith. They take the ſtone or mettall where they finde the Quick-ſiluer, the which they put into the fire in pots of earth well luted, being well beaten, ſo as this mettall or ſtone comming to melt by the heate of the fire, the Quick-ſiluer ſeparates it ſelfe, and goes forth in exhalation, and ſometimes euen with the ſmoake of the fire, vntill it incounters ſome body where it ſtaies and congeales, and if it paſſe vp higher, without meeting of any hard ſubſtance, it mounts vp vntill it be cold, and then congealed, it fals downe againe. When the melting is finiſhed, they vnſtop the pots and draw forth the mettall, ſometimes ſtaying vntill it be very cold, for if there remained The manner how to draw out Quick ſiluer, and how they refine Siluer. *Chap. 12.*

remained any fume or vapour, which should incounter them that should vnstop the pots, they were in danger of death, or to be benummed of their limbes, or at the least to loose their teeth. And for that they spend an infinitie quantitie of wood, in the melting of these mettals, a Miller called *Rodrigo de Tores* found out a profitable inuention, which was, to gather certaine straw which growes throughout all those Mountaines of *Peru*, the which they call *Ycho*, it is like vnto a hard reede wherewith they make their fire. It is a strange thing to see the force which this straw hath to melt and dissolue these mettals, the which fals out, as *Plinie* saies, that there is gold which melts more easily with the flame of straw, then with hot burning coales. They put the Quick-siluer thus molten into skinnes, for that it keepes best in leather, and in this sort they lay it into the Kings store-house, from whence they carrie it by Sea to *Ariqua*, and so to *Potozi* by Land vpon their sheepe. There is yeerely spent in *Potozi* for the refining of Mettals, about six or seuen thousand quintals of Quick-siluer, besides that they draw from the Plates (which is the earth or drosse of the first washings of these Mettals, which are made in caldrons.) The which plates they burne in their furnaces, to draw out the Quick-siluer which remaines in them: and there are aboue fiftie of these Furnaces in the Citie of *Potozi*, and in *Tarpaya*. The quantitie of mettals which they refine, (as some men of experience haue made the account) doth amount yearely to aboue three hundred thousand quintals, from the earth and drosse whereof being molt and refined, they may draw yearely aboue two thousand quintals of Quick-siluer. We must vnderstand there are diuers sorts of mettals, for some yeelde much Siluer, and waste little Quick-siluer: others consume much Quick-siluer, and yeelde little Siluer: and there are others which consume much Quick-siluer, and yeeldes much Siluer; and others that consume little Quick-siluer, and also yeelde little Siluer: and as men incounter in these mettals, so they grow rich or poore in their trafficke. Although commonly the rich mettall yeeldes much Siluer, and consumes much Quick-siluer; and likewise that which is poore, yeeldes little Siluer, and consumes as little Mercurie. They first beate and grinde the mettall very small, with hammers and other instruments, which beate this Stone like vnto tanne Mils, and being well beaten, they searce it in a copper searce, making the poulder as small and fine, as if it were horse haire: these searces being well fitted, doe sift thirtie quintals in a day and a night; then they put the poulder of the mettall into the vessels vpon furnaces, whereas they anoint it and mortifie it with brine, putting to euery fiftie quintals of poulder, fiue quintals of Salt. And this they doe for that the Salt seperates the earth and filth, to the end the Quick-siluer may the more easily draw the Siluer vnto it. After they put Quick-siluer into a peece of Holland and presse it out vpon the mettall, which goes forth like a dewe, alwaies turning and stirring the mettall, to the end it may be well incorporate.

Dangers by Quick-siluer.
Force of Straw *Pl n.l.33.c.4.*
Abundance of Mettals.
Manner of working.

Before the inuention of these furnaces of fire, they did often mingle their mettall with Quick-siluer, in great troughes, letting it settle some daies, and did then mixe it, and stir it againe, vntill they thought all the Quick-siluer were well incorporate with the Siluer, the which continued twentie daies and more, and at the least nine daies. Since they discouered (as the desire to get is diligent,) that to shorten the time fire did much helpe: to incorporate Siluer the sooner with Quick-siluer, they inuented these furnaces, whereon they set vessels to put in their mettall, with Salt and Quick-siluer, and vnderneath they put fire by little and little, in furnaces made for the nonce vnderneath; so as in fiue or six daies the Quick-siluer is incorporate with the Siluer. And when they finde that the Mercurie hath done his part, and assembled all the Siluer, leauing nothing behinde, but is well imbrued as a Spunge doth water, diuiding it from the Earth, Lead, and Copper, with the which it is engendered. Then after they seperate it likewise from the Quick-siluer, the which they doe in this sort; they put the Mettall in Caldrons, and vessels full of water, where with certaine wheeles they turne the mettall round about, as if they should make Mustard, and so the earth and drosse goes from the Mettall with the water that runnes away: The Siluer and Quick-siluer as most ponderous remaining in the bottome; the Mettall which remaines, is like vnto Sand: then they take it out and wash it againe in great platters of wood, or keelers full of water, still drawing the earth from it, vntill they leaue the Siluer and Quick-siluer well clensed. There slippes away also some small portion of Siluer and Quick-siluer with the earth and drosse, which they call *washings*, the which they after wash againe and draw out the remainder. When the Siluer and Quick-siluer are clensed and begin to shine, and that there remaines no earth, they put all the Mettall into a cloth, which they straine out very forcibly, so as all the Quick-siluer passeth out, being not incorporate with the Siluer, and the rest remaines as a loafe of Siluer, like to a marke of Almonds pressed to draw oyle. And being thus pressed, the remainder containes but the sixt part in Siluer, and fiue in Mercurie. So as if there remaines a marke of threescore pounds, ten are of Siluer, and fiftie of Mercurie. Of these markes they make pinnes (as they call them) like pine apples, or sugar loaues, hollow within, the which they commonly make of a hundred pound weight; then to separate the Siluer from the Quick-siluer, they put it into a violent fire, which they couer with an earthen vessell, like to the mold of a Sugar-loafe, or vnto a capuchon or hood, the which they couer with coales, and set fire vnto it; whereby the Quick-siluer exhals in smoake, the which striking against the capuchon of earth,

Digitized by Google

earth, it thickens and diſtils, like vnto the ſmoake of a pot couered; and by a pipe like vnto a limbecke, they receiue the Quick-ſiluer which diſtils, the Siluer remaining without changing the forme, but in weight it is diminiſhed fiue parts of that it was, and is ſpungious, the which is worthy the obſeruation. Of two of theſe loaues they make one barre of Siluer, in weight ſixtie fiue or ſixtie ſix markes: and in this ſort they carrie it to the touch, cuſtome, and marke. Siluer drawne with Mercurie, is ſo fine, that it neuer abates of two thouſand three hundred and foure-ſcore of alloy, and it is ſo excellent, that the worke-men are enforced to alay it, putting ſome mixture to it, as they doe likewiſe in their Mints, whereas their monie is ſtampt. Siluer indures all theſe martyrdomes (if we may ſo call it) to be refined, the which if we conſider well, it is a body framed where they grinde, ſift, kneade, lay the leuen, and bake the Siluer: beſides all this, they waſh it and waſh it againe; they bake it and bake it againe, induring the peſtels, ſiues, troughes, furnaces, caldrons, preſſes: and finally, by the water and fire. I ſpeake this, for that ſeeing this art in *Potozi*, I did conſider what the Scripture ſpeakes of the iuſt, *Colabit eos & purgabit quaſi argentum:* And that which they ſpeake in another part. *Sicut argentum purgatum terra, purgatum ſeptuplum.* So as to purifie Siluer, to refine and cleanſe it from the earth and ſtone where it engenders, they purge and purifie it ſeuen times: for in effect it paſſeth their hands ſeuen times, yea oftner, vntill it remaines pure and fine; ſo is it in the word of God, where the ſoules muſt be purified, that ſhall inioy the heauenly perfection.

Fine Siluer for worke muſt be alloyed.

Mat. 3. Eccleſ. 2. Pſal. 11.

To conclude this ſubiect of Siluer and of Mettals, there remaines yet two things to ſpeake of, the one is of their Engins and Mils, the other of their eſſay or triall: I haue ſaid before, how they grinde their Mettall: for the receiuing of the Quick-ſiluer, which is done with diuers inſtruments and Engins, ſome with Horſes like vnto hand-mils, others like Water-mils; of which two ſorts there are great numbers. But for that the water they doe vſe commonly, is but of raine, whereof they haue not ſufficient but three months in the yeare, December, Ianuary, and February: for this reaſon they haue made Lakes and ſtanding Pooles, which containe in circuite about a thouſand and ſix hundred rods, and in depth three ſtades; there are ſeuen with their ſluces: ſo as when they haue neede of any water, they raiſe vp a ſluce, from whence runnes a little ſtreame of water, the which they ſtop vpon holy-dayes. And when the Lakes and Pooles doe fill, and that the yeare abounds with raine, their grinding doth then continue ſix or ſeuen moneths; ſo as euen for Siluer ſake men deſire a good yeare of raine in *Potozi*, as they doe in other places for bread. There are ſome other Engins in *Tarapaya*, which is a valley three or foure leagues diſtant from *Potozi*, whereas there runnes a Riuer as in other parts. The difference of theſe Engins is, that ſome goe with ſix peſtels, ſome with twelue, and others with foureteene. They grinde and beate the Mettall in Morters, labouring day and night; and from thence they carry it to be ſifted, vpon the bankes of the brooke of *Potozi*. There are fortie eight Water-mils, of eight, ten, and twelue peſtels, and foure on the other ſide, which they call *Tanacognugno*; in the Citie of *Tarapaya*, there are two and twentie Engins all vpon the water; beſides there are thirtie goe with Horſes in *Potozi*, and many others in diuers parts, ſo great the deſire of man is to get Siluer, which is tried by deputies appointed by the King.

Of their Engius to grinde the Mettail, and of their triall of Siluer. *Chap. 13.*

To giue the alloy to euerie piece, they carrie the bars of Siluer vnto the Aſſay Maſter, who giue to euery one his number, for that they carrie many at once, hee cuts a ſmall peece of euerie one, the which he weighs iuſtly, and puts them into a *Cruſet*, which is a ſmall veſſell made of burnt bones beaten; after he placeth euery cruſible in his order in the furnace, giuing them a violent fire, then the Mettall melteth, and that which is lead, goes into ſmoake, and the copper and tinne diſſolues, the Siluer remaining moſt fine, of the colour of fire. It is a ſtrange thing, that being thus refined, although it be liquid and molten, yet it neuer ſpils, were the mouth of the cruſible turned downewards; but it remaineth fixed, without the loſſe of a droppe. The Aſſay Maſter knoweth by the colour and other ſignes, when it is refined, then doth he draw the cruſibles from the fire, and weighes euery peece curiouſly, obſeruing what euery one wants of his weight; for that which is of high alloy, waſtes but little, and that which is baſer, diminiſheth much; and according to the waſte, he ſees what alloy he beares, according to the which he markes euery bar punctually. Their ballance and weights are ſo delicate, and their graines ſo ſmall, as they cannot take them vp with the hand, but with a ſmall paire of pincers: and this triall they make by candle-light, that no ayre might mooue the ballance. For of this little the price of the whole barre dependeth. In trueth it is a very delicate thing, and requires a great dexteritie.

Cap. V.

Of Emeralds, Pearles, Indian Bread, Trees, Fruites, Flowers naturall, and carried thither from Spaine.

Pli lib. 37. ca. 3.

IT ſhall not be from the purpoſe, to ſpeake ſomething of Emeralds, both for that it is a precious thing, as Gold and Siluer, as alſo that they take their beginning from Mines and Mettals, as *Plinie* reports. The Emerald hath bin in old time in great eſteeme, as the ſame Author writes, giuing it the third place amongſt all Iewels and precious ſtones, that is, next to the Diamond and Pearle. At this day they doe not ſo much eſteeme the Emerald, nor the Pearle, for the great abundance brought of theſe two ſorts from the *Indies*; onely the Diamond holds the principalitie, the which cannot be taken from it. Next, the Rubies come in price and other Stones, which they hold more precious then the Emerald. Men are ſo deſirous of ſingularities and rare things, that what they ſee to be common, they doe not eſteeme. They report of a *Spaniard*, who being in *Italie* when the *Indies* were firſt diſcouered, ſhewed an

A pretty ſtorie

Emerald to a Lapidary, who asking him the value thereof, after he had well viewed it, being of an excellent luſtre and forme, he prized it at a hundred Duckets: he then ſhewed him another greater then it, which he valued at three hundred Duckats. The *Spaniard* drunke with this diſcourſe, carried him to his lodging, ſhewing him a Casket full. The *Italian* ſeeing ſo great a number of Emeralds, ſaid vnto him, Sir, theſe are well worth a crowne a peece. The Kings of *Mexico* did much eſteeme them; ſome did vſe to pierce their noſtrils, and hang therein an excellent Emerald: they hung them on the viſages of their Idols. The greateſt ſtore is found in the new Kingdome of *Grenado*, and *Peru*, neere vnto *Manta* and *Port Vieil*. There is towards that place

How Emeralds grow.

a ſoile which they call, *the Land of Emeralds*, for the knowledge that they haue of abundance to be there: and yet vnto this day they haue not conquered that Land. The Emeralds grow in ſtones like vnto Chriſtall; I haue ſeene them in the ſame ſtone, faſhioned like a veine, and they ſeeme by little and little to thicken and refine. I haue ſeene ſome that were halfe white, and halfe greene; others all white, and ſome greene and very perfit. I haue ſeene ſome of the bigneſſe of a Nut, and there haue bin ſome greater found: but I haue not knowne that in our time they haue found any of the forme and bigneſſe of the plat or Iewell they haue at *Genes*, the which they eſteeme (and with reaſon) to be a Iewell of great price, and no relique; yet without compariſon, the Emerald which *Theophraſtus* ſpeakes of, which the King of *Babylon* preſented to the King of *Ægypt*, ſurpaſſeth that of *Genes*; it was foure cubits long, and three broad, and they ſay, that in *Iupiters* Temple, there was a needle or pyramide, made of foure Emeralds ſtones of fortie cubits long, and in ſome places foure broad, and in others two: and that in his time there was in *Tirus* in *Hercules* Temple, a Pillar of an Emerald. It may be (as *Plinie* ſaieth) it was of ſome greene ſtone, ſomewhat like the Emerald, and they called it a falſe Emerald.

Admirable Emerald.

Church of *Corduba*.

As ſome will ſay, that in the Cathedrall Church of *Cordoua* there are certaine Pillars of Emeralds which remaine ſince it was a Meſquite for the Kings *Miramamolins Moores*, which reigned there. In the fleete, the yeare one thouſand fiue hundred eightie and ſeuen, in the which I came from the *Indies*, they brought two cheſts of Emeralds, euery one weighing at the leaſt foure *Arabes*, whereby we may ſee the abundance they haue.

Of Pearles. *Chap. 15.*

Now that we intreate of the great riches that comes from the *Indies*, it were no reaſon to forget the Pearle, which the Ancients called *Margueritès*, and at the firſt were in ſo great eſtimation, as none but royall perſons were ſuffered to weare them: but at this day there is ſuch abundance as the *Negres* themſelues doe weare chaines thereof; they grow in ſhels or Oyſters, in eating whereof I haue found Pearles in the middeſt of them. Theſe Oyſters within are of the colour of heauen, very liuely. In ſome places they make Spoones, the which they call *Mother of Pearle*. The Pearles doe differ much in forme, in bigneſſe, figure, colour and poliſhing; ſo likewiſe in their price they differ much. Some they call *Aue Mariaes*, being like the ſmall grains of beades: others are *Pater noſters*, being bigger. Seldome ſhall you finde two of one greatneſſe,

Plin. lib. 3. ca. 35.

forme, and colour. For this reaſon the *Romans* (as *Plinie* writeth) called them *Unions*. When as they doe finde two that are alike in all points, they raiſe the price much, eſpecially for eare-rings. I haue ſeene ſome paires valued at thouſands of Ducats, although they were not like to *Cleopatraes* two Pearles, whereof *Plinie* reports, either of them being worth a hundred thouſand Ducates, with the which this fooliſh Queene wonne a wager ſhe had made againſt *Marc Antony*, to ſpend in one Supper aboue an hundred thouſand Ducates, ſo at the laſt courſe ſhee diſſolued one of theſe Pearles in ſtrong Vinegar, and dranke it vp. They ſay the other Pearle was cut in two, and placed in the *Pantheon* at *Rome*, at th'eares of the Image of *Venus*.

Cleopatraes vanity.

They fiſh for Pearles in diuers parts of the *Indies*, the greateſt abundance is in the South Seas,

Pearle fiſhings.

neere vnto *Panama*, where the *Ilands of Pearles* be, as they call them. But at this day they finde greateſt ſtore, and the beſt, in the North Seas, the which is neere to the Riuer of *Hache*. I

did

did see them make their fishing, the which is done with great charge and labour of the poore slaues, which diue six, nine, yea twelue fadomes into the Sea, to seeke for Oysters, the which commonly are fastened to the rockes and grauell in the Sea: they pull them vp, and bring them aboue the water to their canoes, where they open them, drawing forth the treasure they haue within them. The water of the Sea in this part is very cold, but yet the labour and toile is greatest in holding of their breath, sometimes a quarter, yea halfe an houre together, being vnder the water at their fishing. And to the end these poore slaues may the better continue and hold their breaths, they feede them with drie meates, and that in small quantitie, so as couetousnesse makes them abstaine and fast thus against their wils. They imploy their Pearles to diuers works, and they pierce them to make chaines whereof there is great store in euery place. In the yeare of our Lord 1581. I did see the note of what came from the *Indies* for the King: there were eighteene Maces of Pearle, besides three caskets, and for particulars, there were twelue hundred threescore and foure Marks, and besides them, seuen caskets not pierced, which heretofore we would haue esteemed and held for a lye.

Manner thereof.

Long winded slaues.

They haue (as we haue here) a proper name, whereby they note and signifie bread, which at *Peru*, they call *Tanta*, and in other places by another name. But the qualitie and substance of the bread the *Indians* vse, differs much from ours; for we finde not they had any kinde of Wheat or Barley, nor any other kinde of graine which they vse in *Europe* to make Bread withall: instead whereof they vsed other kindes of graines and rootes, amongst the which *Mays* holds the first place, and with reason, in *Castile* they call it *Indian Wheat*, and in *Italie*, they call it *Turkey graine*. And euen as Wheate is the most common graine for the vse of man, in the regions of the old world, which are *Europe*, *Asia*, and *Affrica*: So in the new found world, the most common graine is *Mays*, the which is found almost in all the Kingdomes of the West *Indies*, as at *Peru*, new *Spaine*, in the new Kingdome of *Granado*, in *Gautimalla*, in *Chille*, and vpon the maine Land. I doe not finde that in old time, in the Ilands of *Barlouente*, as *Cuba*, Saint *Dominique*, *Iamaique*, and Saint *Iean*, that they vsed Mays: at this day they vse much *Yuca* and *Caçani*, whereof we will presently intreate. I doe not thinke that this *Mays* is any thing inferiour to our Wheate, in strength nor substance, but it is more hot and grosse, and engenders more bloud, whereupon they that haue not beene accustomed thereunto, if they eate too much, they swell and become scabbed. It growes vpon Canes or Reedes; euerie one beares one or two branches, to the which the graine is fastened, and although the graine be bigge, yet finde they great store thereof, so as in some clusters I haue told seuen hundred graines. They must plant it with the hand one by one, and not verie thicke; it desires a hot and a moist ground, and growes in great abundance in many places of the *Indies*. It is not strange in those Countries to gather three hundred *Fanegues*, or measures for one sowen. There is difference of *Mays* as there is of Wheate, one is great and very nourishing, another small and drie, which they call *Morocho*; the greene leaues and canes of *Mays*, is a good foode for their Mules and Horses, and it serues them for straw when it is dried; the graine is of more nourishment for Horses then Barley; and therefore in those Countries, they vse to water their Horses before they eate, for if they should drinke after, they would swell as when they eate Wheate. *Mays* is the *Indians* bread, the which they commonly eate boiled in the graine hot, and they call it *Mote*, as the *Chinois* and *Iaponois* eate their Rice soddden with the hot water: sometimes they eate it baked. There is some *Mays* round and bigge, as that of *Lucanas*, which the *Spaniards* eate rosted as a delicate meat, and hath a better taste then *Buarbenses*, or rosted peason. There is another kinde of eating it more pleasant, which is, to grinde the *Mays*, and to make small cakes of the flower, the which they put in the fire, and then bring them hot to the Table. In some places they call them *Arepas*. They make also round bowles of this paste, and so trimme them that they continue long, eating it as a daintie dish.

Of the *Indian* Bread, and of *Mays*, *Chap.* 16.

We call it also *Virginia* wheat.

How it groweth

I haue had it ripen reasonably in my Garden in *Essex*.

They haue inuented at the *Indies* (for friandise and pleasure) a certaine kinde of paste, they doe make of this flower mixt with Sugar, which they call Biscuits and mellinders. This *Mays* serues the *Indians*, not onely for bread, but also for wine: for they doe make their drinke thereof, wherewith they are sooner drunke then with wine of Grapes. They make this wine of *Mays* in diuers sorts and manners, calling it in *Peru*, *Acua*, and by the most common name of the *Indies*, *Chicha*. And the strongest is made like vnto Beere, steeping the graine vntill it breake. After they boile it in such sort, that it growes so strong, as a little ouerthrowes a man. In *Peru* they call this *Sora*, it is defended by the Law, for the great inconueniences that grow thereby, making men drunke. But this Law is ill obserued, for that they vse it still; yea they spend whole daies and nights in drinking carowses.

Malt & strong drinke made of it.

There is another manner of making this *Acha* or *Chicha*, which is to champe the *Mays*, and make a leuen thereof, and then boile it: yea the *Indians* hold opinion, that to make good leuen, it must be champed by old withered women, which makes a man sicke to heare, and yet they doe drinke it. The cleanliest manner, the most wholesome, and that which least harmeth, is to roast the *Mays*, which the most of all *Indians* doe vse, and some *Spaniards*, yea for physicke: For in effect they finde it a very wholesome drinke for the reines, so as you shall hardly finde any one at the *Indies* complaine of paine in the backe, for that they doe drinke of this *Chicha*.

Chica good against the Stone.

The

The *Spaniards* and *Indians* eate this *Mays* boyled and roasted for daintinesse, when it is tender in the grape like milke, they put it into the pot, and make sauces that are good to eate. The buds of *Mays* are very fat, and serue instead of Butter and oyle: so as this *Mays* at the *Indies* serues both for men and beasts, for bread, wine, and oyle.

Of *Yucas, Caçaui, Papas, Chunes and Kis. Chap. 17.*

In some parts of the *Indies* they vse a kinde of Bread they call *Caçaui*, which is made of a certaine roote they call *Yuca*. This *Yuca* is a great and grosse roote, which they cut in small morsels, they grate or scrape it, and then put it in a presse to straine, making a thinne and broad cake thereof, almost like vnto a *Moores* Target or Buckler; then doe they drie it: and this is the Bread they eate. It hath no taste, but is healthfull and of good nourishment. For this reason we said, being at Saint *Dominicke*, that it was the proper foode for great eaters, for that they might eate much, without any feare of surfetting. They must of necessitie water this *Caçaui* before they eate it; it is sharpe, and easely watered with water or broath, wherein it is very good, for that it swels much, and so they make *Capirotades*, but it is hardly steeped in Milke, Hony of Canes, or in Wine, for that these liquors cannot pierce it, as it doth Bread made of Wheate. Of this *Caçaui* there is one kinde more delicate then any other, which is that they make of the flower called *Xauxau*, which they doe much esteeme in those parts. For my part, I esteeme more a morsell of Bread, how hard and blacke soeuer. It is a strange thing that the iuyce or water that commeth from this roote when they straine it, which makes the *Caçaui*, is a deadly poison, and kils any that drinkes thereof: but the substance that remaineth, is a very wholesome Bread and nourishment, as we haue said.

Iuice of *Caçaui* poison.

There is another kinde of *Yuca*, which they call *Sweet*, and hath not this poison in the iuyce: this is eaten in the roote boiled or roasted, and is good meate. *Caçaui* will keepe long, and therefore they carrie it to Sea instead of Biscuit. The place where they vse most of this Bread, is at the Ilands of *Barlouente*, which are Saint *Dominicke*, *Cuba*, *Port Ricco*, *Iamaique*, and some others thereabouts; for that the soile of these Ilands will neither beare Wheate, nor *Mays*: for when as they sowe Wheate, it comes vp well, and is presently greene, but so vnequally, as they cannot gather it; for of the seede sowen, at one instant some is spindled, some is in the eare, and some doth but bud, one is great and another little, one is in the grasse and another in the graine: and although they haue carried labourers thither, to see if there were any tillage or Art to be vsed, yet could they finde no remedy for the qualitie of the earth. They carry Meale from new *Spaine* or the *Canaries*, which is so moist, that hardly can they make any profitable Bread, or of good taste. The Wafer-cakes wherewith they say Masse, did bend like to wet paper, by reason of the extreame humiditie and heate which are ioyntly in that Countrie. There is another extreame contrarie to this, which hinders the growing of *Mays* or Wheate in some parts of the *Indies*, as on the height of the *Sierre* of *Peru*; and the Prouinces which they call of *Colao*, which is the greatest part of this Realme, where the climate is so cold and dry, as it will not suffer any of these seedes to grow: instead thereof the *Indians* vse another kinde of roote, which they call *Papas*: these rootes are like to ground Nuts, they are small rootes, which cast out many leaues. They gather this *Papas*, and dry it well in the Sunne, then beating it, they make that which they call *Chuno*, which keepes many daies, and serues for bread. In this Realme there is great trafficke of *Chuno*, the which they carry to the Mines of *Potozi*: they likewise eate of these *Papas* boiled or roasted: there is one sweete of these kindes, which growes in hot places, whereof they doe make certaine sawces and minced meate, which they call *Locro*. To conclude, these rootes are the bread of that Land; so as when the yeare is good, they reioyce much, for that oftentimes they freeze in the earth, so great is the cold of that Region: they carrie *Mays* from the Valley or Sea-coast, and the *Spaniards* which are daintie, carrie likewise from the same places Wheate-meale, whereof they doe make good Bread, because that the Land is drie.

Wheat, why it groweth not in those parts.

Papas and *Chuno*.

Of diuers roots which grow at the *Indies*, *Chap. 18.*

Besides *Papas*, which is the principall, there is *Ocas*, *Yanoconas*, *Camotes*, *Vatas*, *Xiquimas*, *Yuca*, *Cochucha*, *Cani*, *Totora*, *Mani*, and an infinite nnmber of other kindes, as the *Patattes*, which they eate as a delicate and toothsome meate. They haue likewise carried fruites to the *Indies* from these parts, the which prosper better there, then the *Indian* Plants doe, brought into *Europe*. There are other rootes that serue them for dainties, as the *Cochucho*: it is a small sweete roote, which some prouide for more delight. There are other rootes fit to coole, as the *Piquinia*, which is the qualitie very cold and moist, and in Summer it refresheth and quencheth the thirst: but the *Papas* and *Ocas*, be the chiefe for nourishment and substance. The *Indians* esteeme Garlike aboue all the rootes of *Europe*, and hold it for a fruite of great force.

Of diuers sorts of green hearbs and Pulses, and of those they call Concombres, Pines, or Pine Apples, small fruits of *Chili*, and of Prunes, *Chap. 19*

Seeing we haue begunne with the lesser Plants, I might in few words, touch that which concernes Flowers and Pot-herbes, and that which the Latines call *Arbusta*, without any mention of Trees. There are some kindes of these shrubbes at the *Indies*, which are of verie good taste. The first *Spaniards* named many things at the *Indies* with such *Spanish* names, as they did most resemble, as *Pines*, *Concombres*, and *Prunes*, although they be very different fruites to those which are so called in *Spaine*. The Pines, or Pine-apples, are of the same fashion and forme outwardly to those of *Castile*, but within they wholly differ, for that they haue neither Apples,

nor scales, but are all one flesh, which may be eaten when the skin is off. It is a fruite that hath an excellent smell, and is very pleasant and delightfull in taste, it is full of iuyce, and of a sweete and sharpe taste, they eate it being cut in morsels, and steeped a while in water and salt. They grow one by one like a cane or stalke, which riseth amongst many leaues, like to the Lillie, but somewhat bigger. The Apple is on the top of euerie cane, it growes in hot and moist grounds, and the best are those of the Ilands of *Barlouente*. I haue seene in new *Spaine*, conserues of these Pines, which was very good. Those which they call *Concombres*, are no trees, but shrubbes, continuing but one yeare. They giue it this name, for that some of this fruite, and the most part, is in length, and roundnesse like to the *Concombres* of *Spaine*: but for the rest they differ much, for they are not greene, but violet, yellow, or white, neither are they thornie or rough, but polished and euen, hauing a verie different taste, and farre better then that of *Spaine*, for they haue a sharpe sweete taste, very pleasant when it is ripe, yet is it not so sharpe as the Pine. They are very coole, full of liquor and of easie digestion, and in time of heate fit to refresh. They take away the rinde which is white, and all that remaines is meate. They grow in a temperate soile, and require watering. And although for the resemblance they call them *Concombres*, yet are there many of them round, and others of a different fashion: so as they haue not the figure of *Concombres*. I doe not remember to haue seene this kinde of fruite in new *Spaine*, nor at the Ilands, but vpon the *Lanos* of *Peru*. That which they call the little fruite of *Chille*, is of the same sort, verie pleasant to eate, and comes neere the taste of Cherries, but in all other things it differs much; for that it is no tree, but an hearbe, which growes little and spreads vpon the earth, casting forth this little fruite, the which in colour and graines, resembles almost the Mulberie, when it is white and not ripe, yet is it more rough and bigger then the Mulberie. They say this little fruite is naturally found in the fields of *Chille*, where I haue seene of them. They set it vpon Plants and branches, and it growes like any other shrub. Those which they call *Prunes*, are verily the fruits of trees, and haue more resemblance then the rest to our Plumbs. But to returne to Pot-hearbs, I finde not that the *Indians* had any Gardens of diuers Hearbes and Plants, but did onely till the Land in some parts for pulses, which they vse, as those which they call *Frisolles* and *Palares*, which serue them as our Lentils, Beanes, or Tares: neither haue I knowne that these Pulses, or any other kindes that be in *Europe*, were there before the *Spaniards* entred, who carried Plants and Pulses from *Spaine* thither, where they now grow and increase wonderfully, and in some places exceede greatly the fertilitie of these parts. As if we speak of Mellons which grow in the Vallie of *Yuca*, in *Peru*, whose roote becomes a stalk that continues many yeares carrying Mellons yeerely, and they trimme it like vnto a tree; a thing which I doe not know to be in any part of *Spaine*. But that is more monstrous of the *Calibasses* or *Indian* Pompions, and the greatnesse they haue as they grow, especially those which are proper to the Countrie, which they call *Capallos*, the which they eate most commonly in Lent, boiled and trimmed with some other sawce. There are a thousand kindes of *Calibasses*, some are so deformed in their bignesse, that of the rinde cut in the middest and cleansed, they make as it were baskets to put in all their meate for their dinner. Of the lesser they make Vessels to eate and drinke in, and doe trimme them handsomely for manie vses.

Pines.

Pulses, Melons and Pompons carried out of *Europe* and thriuing better there.

These *Calibasses* seemeth *Guinny Gourds* carried from the *African* coast thither.

They haue not found at the West *Indies* anie kinde of Spices, proper or peculiar to them, as Pepper, Cloues, Cinamon, Nutmegs or Ginger, although one of our companie, who had trauelled much, and in diuers parts, told vs, that in the Desarts of the Iland of *Iamaique* he had found trees where Pepper grew. But they are not yet assured thereof, neither is there anie trade of these spices at the *Indies*. The Ginger was carried from the *Indies* to *Hispaniola*, and it hath multiplied so, as at this day they know not what to doe with the great abundance they haue. In the fleete the, yeare 1587. they brought 22053. quintals of Ginger to *Seuille*: but the naturall spice that God hath giuen to the West *Indies*, is that we in *Castill* call *Indian Pepper*, and at the *Indies*, *Axi*, as a generall word taken from the first Land of the Ilands, which they conquered. In the language of *Cusco*, it is called *Vchu*, and in that of *Mexico*, *Chili*. This plant in well knowne, and therefore I will speake a little, onely we must vnderstand, that in old time it was much esteemed amongst the *Indians*: that they carried into places where it grew not, as a Marchandise of consequence. It growes not vpon cold grounds, as on the *Sierre* of *Peru*, but in hot Vallies, where it is often watered. There is of this *Axi* of diuers colours, some is greene, some red, some yellow, and some of a burning colour, which they call *Caribe*, the which is extreamely sharpe and biting; there is another sort not so sharpe, but is so sweete, as they may eate it alone as any other fruite. There is some of it verie small and pleasing in the mouth, almost like to the smell of Muske, and is verie good. That which is sharpe and biting in this *Axi*, be the veines and the grain onely; the rest is not: for that they eate it greene & dry, whole and beaten, in the pot, and in sawces, being the chiefe sawce, & all the spice they haue at the *Indies*. When this *Axi* is taken moderately, it helps and comforts the stomack for digestion: but if they take too much, it hath bad effects, for of it selfe it is verie hot, fuming, & pierceth greatly, so as the vse thereof is preiudiciall to the health of yong folkes, chiefely to the soule, for that it prouokes to lust. They

Of *Axi* or *Indian* Pepper, *Chap.* 20.

Ginger.

vse Salt to temper this *Axi*, hauing great force to correct it, and so they moderate one with the other by the contrarietie that is in them. They vse also *Tomates*, which are cold and very wholesome. It is a kinde of graine great and full of iuyce, the which giues a good taste to sawce, and they are good to eate. They haue generally throughout the *Indies* of this *Indian* Pepper, at the Ilands, new *Spaine*, *Peru*, and all the rest that is discouered. And as Mays is the generall graine for Bread, so *Axi* is the most common spice for sawces.

Of the Plane tree. *Chap.* 21.

The thing wherein was most resemblance, in my opinion, betwixt the *Planes* at the *Indies*, and those which the Ancients did celebrate, is the greatnesse of the leaues, for that these haue them very great and coole. But in truth there is no more comparison nor resemblance of the one with the other, then there is (as the Prouerbe saith) betwixt an Egge and a Chesnut. For first, the ancient plane carries no fruite, at the least, they made no account thereof, but the chiefest reason why they esteemed it, was, for the shadow, for that there was no more Sunne vnder a Plane than vnder a roofe. And contrariwise, the reason why they should regard it at the *Indies*, yea make great accompt thereof, is by reason of this fruite, which is very good; for they haue little shade. Moreouer, the ancient Plane had the body so bigge, and the boughs so spread, that *Plinie* reporteth of one *Licinius* a *Romane* Captaine, who with eighteene of his companions dined at ease in th'hollow of one of these Planes: and of the Emperour *Caius Caligula*, who with eleuen of his ghests feasted vpon the top of another Plane, where he made them a sumptuous banquet. The *Indian* Planes haue neither so great nor hollow bodies, not so broad boughs.

Plin. lib. 2. cap. 1.

Pli. lib. 11. ca. 16.

The leaues of the *Indian* Plane, are of a wonderfull bignesse, and are, in a manner, sufficient to couer a man from the foote to the head. It is a Plant that makes a stocke within the earth, out of the which springs many and sundry sienes and sprigges, diuided, and not ioyned together. These sprigges grow bigge, euery one making a small tree apart, and in growing they cast forth these leaues, which are of a fine, greene, smooth, and great as I haue said. When it is growne to the height of a stade and a halfe, or two, it puts forth one onely bough of fruite, whereon sometimes there are great numbers of this fruite, and sometimes lesse. I haue told vpon some of these boughs three hundred, whereof euery one was a spanne long more or lesse, and two or three fingers bigge; yet is there much difference herein, betwixt some and others, they take away the rinde, and all the rest is a firme kernell and tender, good to eate, and nourishing. This fruite inclines more to cold then heate. They are accustomed to gather the boughes or clusters, as I haue said, being greene, and put them into vessels, where they ripen, being well couered, especially when there is a certaine hearbe mingled with it, which serues for this effect. If they suffer them to ripen on the tree, they haue a better taste, and a very good smell, like to *Camoisses* or sweete Apples. They last almost all the yeare, for that there are alwaies yong ones that grow out of this stocke; so as when one ends, another beginnes to yeelde his fruite, the one is halfe ripe, and the other begins to bud anew, so as one succeedes another, and the fruite continues the whole yeare. In gathering the cluster, they cut the sprigge or stalke, for that it beares but one, and neuer but once: but as I haue said, the stalke remaines, and casts forth new sienes or stalkes, vntill it growes old and dies. This Plane continues many yeares, and requires much moisture, and a very hot ground. They put ashes at the foote of it, for the better entertaining thereof, and they make small groues and very thicke: the leafe is as broad as a sheete of Paper, or little lesse, and foure times as long.

Of *Cacao* and *Coca*. *Chap.* 22.

Althongh the Plane be the most profitable, yet that *Cacao* is most esteemed at *Mexico*, and the *Coca* in *Peru*, in which two trees they haue great superstition. The *Cacao* is a fruite little lesse then Almonds, yet more fat, the which being roasted hath no ill taste. It is so much esteemed amongst the *Indians* (yea and among the *Spaniards*) that it is one of the richest and the greatest traffickes of new *Spaine*: for being a drie fruite, and that keepes long without corruption, they carrie whole Ships loaden from the Prouince of *Guatimalla*. The last yeare an *English* Pirat did burne in the Port of *Guatulco* in new *Spaine*, aboue a hundred thousand charges of *Cacao*. They vse it instead of money, for with fiue *Cacaos* they buy one thing, with thirtie another, and with a hundred another, without any contradiction; and they vse to giue it to the poore that beg for almes. The chiefe vse of this *Cacao*, is in a drinke which they call *Chocholate*, whereof they make great accompt in that Country, foolishly, and without reason; for it is loathsome to such as are not acquainted with it, hauing a skum or froth that is very vnpleasant to taste, if they be not very well conceited thereof. Yet it is a drinke very much esteemed among the *Indians*, wherewith they feast Noble men as they passe through their Countrie. The tree whereon this fruite growes, is of reasonable bignesse, and well fashioned, it is so tender, that to keepe it from the burning of the Sunne, they plant neere vnto it, a great tree, which serues onely to shadow it, and they call it *the mother of Cacao*. There are places where they are like to the Vines and Oliue trees of *Spaine*. The Prouince where there is greatest abundance for the trafficke of Marchandise, is *Guatimalla*. There growes none in *Peru*, but *Coca*, wherein they hold another great superstition, which seemes to be fabulous. It is a kinde of Marchandise, by the which all their Markets and Faires are made with great expedition. This *Coca* whereof they make such account, is a small greene leafe, which groweth vpon small trees about a fadome high, and in hot and moist grounds

Cacao money.

Coca.

euery

euery foure moneths it casts forth this leafe, which they call *Trefuitas* or *Tremey*; it requires great care in planting, being very tender, and much more to keepe it, when it is gathered. They lay it in ordes in long and narrow baskets, and so lade their sheepe of the Country, which goe in troopes, with one, two, or three thousand baskets of this marchandise.

They bring it commonly from the *Andes* and vallies, where there is an extreame heate; and where it raines continually the most part of the yeare: wherein the *Indians* endure much labour and paine to entertaine it, and often many die; for that they goe from the *Sierra* and cold places to till and gather them in the *Andes*. Their vse is to carry it in their mouthes, chawing it, and sucking out the iuice, but they swallow it not. They say it giues them great courage, and is very pleasing vnto them. They willingly imploy their money therein, and vse it as money.

Of Maguey, Tunal, Cochenille, Anir, and Cotton. Chap. 23.

Maguey is a tree of wonders, whereof the Notaries or Chapetons (as the *Indians* call them) are wont to write miracles, in that it yeeldeth Water, Wine, Oyle, Vinegar, Honie, Sirrope, Thred, Needles, and a thousand other things. It is a tree which the *Indians* esteeme much in new *Spaine*, and haue commonly in their dwellings some one of them for the maintenance of life; it growes in the fields, and hath great and large leaues, at the end whereof is a strong and sharpe point, which serues to fasten little pins, or to sew as a needle: and they draw out of this leafe as it were a kinde of thred which they vse. They cut the body which is bigge, when it is tender, wherein is a great hollownesse, by which the substance mounts from the roote, and is a liquor which they drinke like water, being sweete and fresh. This liquor being sodden, turnes like Wine, which growes to Vinegar, suffring it to soure, and boiling it more, it becomes as honie, and boiling it halfe, it serues as sirrope: which is healthfull enough, and of good taste; in my iudgement it is better then the sirrope of Raisons. Thus do they boile this liquor, and vse it in diuers sorts, whereof they draw a good quantitie, for that in some season they draw daily some pots of this liquor. There are also of these trees in *Peru*, but they are not so profitable as in new *Spaine*. The wood of this tree is hollow and soft, and serues to keepe fire, like to the match of a harquebuze, and preserues it long: I haue seene the *Indians* vse it to that end.

Maguey.

Manifold commodities of the Maguey.

The *Tunall* is another famous tree in new *Spaine*: if wee may call a tree a heape of leaues gathered together one vpon another, it is the strangest fashiond tree of all other: for first there growes one leafe out of the ground, then another vpon it, and so one vpon one, till it commeth to his perfection; but as the leaues grow vp, and on the sides, those vnderneath doe become great, and loose in a manner the forme of leaues, making a body and branches, which are sharpe, pricking, and deformed, so as in some places they doe call it a *Thistle*. There are Thistles or wilde *Tunalls*, the which doe carrie no fruite, or else it is very pricking without any profit. There are likewise planted *Tunalls* which yeelde fruite much esteemed amongst the *Indians*, the which they call *Tunas*, and they are much greater then Plumbes, and long. They open the shell which is fat, and within it is meate and small graines, like to those of figges, which be very sweete; they haue a good taste, especially the white, which haue a pleasing smell, but the red are not vsually so good. There is another sort of *Tunalls*, which they esteeme much more, although it yeeldes no fruit, yet it beares another commoditie and profit, which is of the graine, for that certaine small wormes breede in the leaues of this tree, when it is well husbanded, and are thereunto fastned, couered with a certaine small fine web, which doth compasse them in daintily; and this is that *Indian Cochenille*, so famous, and wherewith they die in graine. They let it drie, and being dried, carrie it into *Spaine*, which is a great and rich marchandise. The arobe of this *Cochenille* or graine is worth many ducats. In the fleete, the yeare 1587. they did bring fiue thousand six hundred seuentie seuen arobes, which amounted to two hundred fourescore three thousand seuen hundred and fiftie peeces, and commonly there comes euery yeare as great a wealth.

Tunall tree.

These *Tunalls* grow in temperate grounds inclining to cold. In *Peru* there growes none to this day. I haue seene some Plants in *Spaine*, but they deserue not estimation. I will speake something likewise of the *Anir*, although it comes not from a tree, but from an hearbe, for that it serueth for the dying of cloth, and is a marchandise which agrees with the graine; it groweth in great abundance in new *Spaine*, from whence there came in the fleete I mentioned 5263. arobes, or there abouts, which amounted to so many peeces. *Cotten* likewise growes vpon small shrubs, and great trees like to little apples, which doe open and yeelde forth this webbe, which being gathered, they spinne to make stuffes: and the yeare that I spake of, there came 64000. arobes.

I thinke hee meaneth Anil or Indico: of which see To. 1. l. 4. in Fitches Ioiirnall.

Cotten.

These Plants we haue spoken of, are the most profitable of the *Indies*, and the most necessarie for the life of man: yet there are many other that are good to eate, among the which the *Mameys* are esteemed, being in fashion like to great Peaches, and bigger, they haue one or two stones within them, and their meate is somewhat hard. There are some sweete, and others somewhat sowre, and haue the rinde hard. They make conserues of the meate of this fruite, which is like to Marmelade. The vse of this fruite is reasonable good, but the conserues they make thereof, are better. They grow in Ilands. I haue not seene any in *Peru*. It is a great tree, well fashioned, and a reasonable faire leafe. The *Guauanes* be other trees which commonly

Of Mameys, Guauanos, and Palto. Chap. 24.

carrie an ill fruite, full of sowre kernels, and are like to little Apples. It is a tree little esteemed vpon the firme Land and at the Ilands, for they say it smels like to the *Punaises*. The taste and sauour of this fruite is very grosse, and the substance vnholesome. In Saint *Domingue* and other Ilands, there are whole Mountaines full of these *Guayanos*, and they say, there was no such kindes of trees before the *Spaniards* came there, but that they brought them they know not from whence. This tree hath multiplied infinitely, for that there is no Beast that will eate the kernels or the graine, so as being thus scattered on the earth, being hot and moist, it multiplies in this sort. In *Peru*, the *Guayanos* differs from others, for that the fruite is not red, but white, neither hath it any ill smell, but is of a very good taste; and of what sort of *Guayanos* soeuer it be, the fruite is as good as the best of *Spaine*, especially of those which they call *Guayanos de Mayo*, and of other little white *Guayuilles*. It is a fruite reasonably holesome, and agrees with the stomack, being of a strong digestion, and cold. The *Paltas* commonly are hote and delicate. The *Palto* is a great tree, and carries a faire leafe, which hath a fruit like to great Peares: within it hath a great stone, and all the rest is soft meate, so as when they are full ripe, they are as it were Butter, and haue a delicate taste. In *Peru* the *Paltas* are great, and haue a verie hard skale, which may be taken off whole. This fruite is most vsuall in *Mexico*, hauing a thinne skinne, which may be pilled like an Apple: they hold it for a very holesome meate, and as I haue said, it declines a little from heate. These *Mamayes*, *Guayanos*, and *Paltos*, be the *Indians* Peaches, Apples, and Peares; and yet would I rather choose them of *Europe*.

Chicopotes.

The Marmalad is that which they call *Capotes*, or *Chicaçapotes*, which haue a sweete taste, and neere vnto the colour of Marmalade. Some *Crollos* (for so they talled the *Spaniards* borne at the *Indies*) say that this fruite passeth all the fruites of *Spaine* in excellencie: yet am I not of that opinion. Those *Chicoçapotes* or *Capotes*, wherein there is little difference, grow in the hotest parts of new *Spaine*, neither haue I knowledge of any such fruite in the firme Land of *Peru*. As for the *Blanckemanger*, it is that *Annona* or *Guanauana*, which growes in the *firme Land*, which is fashioned like vnto a Peare, a little sharpe and opened, within it is white, tender and soft like Butter, sweete and of a pleasing taste: It is no white meate, though they call it *Blanckemanger*.

Of many sorts of fruit Trees, of *Cocos*, Almonds, of the *Andes*, and Almonds of *Chachapoyas*. *Cha* 26

There are some grosse Fruites, as those which they call *Lucumes* (of which fruite they speake in a Prouerbe, that it is a counterfet price.) The *Guanos*, *Pacayes*, *Hubos*, and the Nuts which they call *Imprisoned*: which fruites seeme to many, to be the same kinde of Nuts we haue in *Spaine*. I doe not thinke it good to passe away vnder silence the *Cocos* or *Indian Palmes*, by reason of a verie notable propertie it hath. I call them Palmes, not properly, or that it beares Dates, but that they are trees like to other Palmes. They are high and strong, and the higher they grow, the broader they stretch out their branches. These *Cocos* yeeld a fruite which they likewise call *Cocos*, whereof they commonly make vessels to drinke in, and some they say haue a vertue against poison, and to cure the paine in the side. The nutte and meate being dried, is good to eate, and comes neere in take to greene Chesnuts. When the *Coco* is tender vpon the tree, the substance within it, is as it were Milke, which they drinke for daintinesse, and to refresh them in time of heate. I haue seene of these trees in Saint *Iean de Port Rico*, and other parts of the *Indies*, and they report a wonderfull thing, that euery moneth or Moone, this tree casts forth a new branch of this *Cocos*; so as it yeeldes fruite twelue times in the yeare, as it is written in the *Apocalips*: and in truth this seemes like vnto it, for that all the branches are of different ages, some beginning, others being ripe, and some halfe ripe. These *Cocos* are commonly of the forme and bignesse of a small Melon. There is of another kinde, which they call *Coquilles*, the which is a better fruite, whereof there be some in *Chille*. They are somewhat lesse then Nuts, but more round. There is another kinde of *Cocos*, which haue not the kernell so oylie, but within they haue a great number of small fruits like Almonds, like vnto the graines of a Pomgranat.

Cocos.

Almonds.

These Almonds are thrice as bigge as those of *Castille*, and resemble them in taste, though they be more sharpe, and likewise moist and oylie. It is a good meate, they vse it also in feasting, for lacke of Almonds to make Marchpanes, and such other things. They call them *Almonds of the Andes*, for that these *Cocos* grow abundantly vpon the *Andes* of *Peru*; they are so strong and hard, as to open them, they must beate them with a great stone, when they fall from the tree. If they chance to hit any one on the head, he hath no more neede of any Surgeon. It is an incredible thing, that within the hollow of these *Cocos*, which are no bigger than the rest, or little more, there are such a multitude of these Almonds. But as touching Almonds and other fruits, all trees must yeelde to the Almonds of *Chachapoyas*, which I cannot otherwise call. It is the most pleasing, delicate and wholesome fruite of all that I haue seene at the *Indies*.

Of many and diuers flowers, and of some trees which yeelde onely a flower, & how the *Indians* doe vse them. *Ch.* 27.

The Indians are great louers of flowers, and in new *Spaine* more then in any other part of the world, and therefore they are accustomed to make many kindes of Nosegaies, which there they call *Suchilles*, with such prettie varietie and art, as nothing can be more pleasing. They haue a custome amongst them, that the chiefest man offer their *Suchillos* or nosegayes in honour to Noblemen, and to their ghests; and they presented vs with such abundance as wee passed through that Countrey, as wee knew not what to doe with them; and at this day they vse

the

Digitized by Google

the principall flowers of *Castile*, to that end, for that they grow better there than here, as Gilliflowers, Roses, Iasmins, Violets, Orange flowers, and other sorts which they haue transported out of *Spaine*. The Rose tree groweth too fast in some places, so as they beare no Roses. It chanced one day that a Rose tree was burned, and the liens which sprowted out, presently bare abundance of Roses, and thereby they learned to prune them, and to cut off the superfluous branches, so as at this day they yeelde reasonable store of Roses. But besides these kindes of flowers, which haue beene transported from hence, there are many others, whose names I doe not know, whereof some are red, blew, yellow, violet and white, with a thousand different colours, which the *Indians* did vse to carry on their heads, as feathers for ornament. True it is, that may of these flowers are onely pleasing to the sight, hauing no good sauour, either they are grosse, or else they haue none at all; and yet there be some of an excellent sent. As those which grow vpon a tree tearmed by them *Floripondio* or *carry flower*, which beares no fruite, but onely these flowers, which are greater than the Lillie, and are like to little Bels, all white, which haue within them small threds, as we see in the Lillie: it leaues not all the yeare to beare these flowers, whose smell is wonderfull sweete and agreeable, especially in the coole of the morning. The Viceroy *Don Francisco de Toledo* sent of these trees vnto King *Phillip*, as a thing worthy to be planted in royall Gardens. In new *Spaine* the *Indians* esteeme much of a flower, which they call *Voloſuchil*, which signifieth *flower of the heart*, for that it beares the forme of a heart, and is not much lesse. The flower of *Granadille* is held for an admirable thing, and they say, it hath in it the markes of the Passion, and that therein they note the nailes, the piller, the whips, and crowne of thornes, and the wounds, wherein they are not altogether without reason, and yet to find out and obserue these things, it requires some pietie to cause beleefe: but it is very exquisite and faire to the eye, although it haue no smell, &c. Accidents produce most arts.

The balme which comes from the West *Indies*, is not of the same kinde of right Balme which they bring from *Alexandria* or *Caire*, and in old time was in *Iudea*, which *Iudea* (as *Plinie* writeth) did of all the world possesse this greatnesse, vntill the Emperour *Vespasian* brought it to *Rome* and into *Italie*. At the *Indies* I haue seene the Tree from whence they draw the Balme, which is as big as a Pomgranat tree, and something neere the fashion: and if my memorie failes me not, it hath nothing common with the Vine, although that *Strabo* writes, that the ancient tree of Balme, was of the bignesse of a Pomgranat tree. But in their accidents & operations, their liquors are alike, as likewise they be in their admirable smels, & in the cure and healing of wounds in colour and substance, seeing they report of other Balmes that there is some white, vermillion, greene and blacke, the which is likewise seene in that of the *Indies*. And as they drew forth the ancient in cutting and making incisions in the barke, to cause the liquor to distill out, so doe they with that at the *Indies*, although it distils in greater abundance. And as in the ancient there is one kinde which is pure, the which they call *Opobalſamum*, which be the verie teares that distill, so as there is another sort which is not so exquisite, the which they draw from the barke and leaues strained and boiled on the fire, the which they call *Xilobalſamum*. The like is also in the *Indian* Balmes; there is one pure that distils from the tree, and others that the *Indians* draw out by straining and boiling the leaues and wood. The Apostolike Sea hath giuen libertie to giue Creame of Balme at the *Indies*, and that they should vse it in Confirmation and other ceremonies which they vse. Of Balme. *Plin. lib. 12. c. 15. Chap. 28.* *Strab. lib. 16. Geograp.*

Next to Balme, Amber holds the second place: it is another liquor which is likewise sweet and medicinall, but more thicke, and turnes into a paste of a hot complexion, and a good perfume. This Amber comes from new *Spaine*, which hath that aduantage aboue other Prouinces in Gummes, Liquors, and juyce of Trees, whereby they haue such abundance of matter, for perfume and physicke, as is the *Animè*, whereof there comes great store, *Copal* or *Suchicopal*, which is another kinde, *Storax* and *Incense*, which haue excellent operations, and haue a very good smell fit for fumigations. Likewise the *Tacamahaca* and *Caranna*, which are also very medicinall. They bring likewise from this Prouince oile of *Aspicke*, which the Physicians and Painters vse much, the one for plaisters, the other to vernish their pictures. They bring also for the Physicians *Cassia fistula*, the which growes plentifully in Saint *Dominique*. It is a great Tree, which carries these Canes as his fruit. They brought in the fleet wherein I came from Saint *Dominique* fortie eight Quintals of *Cassia fistula*. *Salcepareille* is not lesse knowne, for a thousand remedies wherein it is vsed. There came in the same fleet fiftie Quintals from the same Iland. There is much of this *Salcepareille* at *Peru*, and most excellent in the Prouince of *Guayaquil*, which is vnder the Line. Many goe to be cured into this Prouince, and it is the opinion of some, that the pure water onely which they drinke, giues them health, for that it passeth by rootes as I haue said, from whence it drawes this vertue, so as there needes no great couering or garments to make a man sweat in that Countrie. The wood of *Guayac*, which they call *Lignum sanctum*, or *Indian* wood, growes abundantly in the same Ilands, and is as heauie as Iron, so as it presently sinkes in the water: hereof they brought in the same fleet three hundred and fiftie Quintals, and they might haue brought twentie, yea, a hundred thousand of this wood, if there were vse for it. There came in the same fleet, and from the same Iland, one hundred and thirtie Quintals of *Brefil* wood, the which is Of Amber, and other Oyles, Gummes, and Drugs, which they bring from the *Indies Chap. 29.* *Caſ. Fiſtula.* *Salceparilla.* *Lignum vitæ.*

Digitized by Google

fiery red, ſo well knowne, and much vſed in dying and other things. There are at the *Indies* infinite numbers of other aromaticall Woods, Gummes, Oiles, and Drugs, ſo as it is not poſſible to name them all, neither doth it now much import. I ſay onely, that in the time of the Kings *Ingas* of *Cuſco*, and the *Mexicane* Kings, there were many great perſonages expert in curing of diſeaſes with ſimples, and did goodly cures, hauing the knowledge of the many vertues and properties of Herbs, Rootes, Woods, and Plants, which grow there, and whereof the Ancients of *Europe* haue had no knowledge. There are a thouſand of theſe ſimples fit to purge, &c.

Auncient Phyſicians.

Woods are ſo many and great, that it hath beene needfull (paſſing through ſome parts of the *Indies*, eſpecially where they newly entred) to make their way, in cutting downe Trees, and pulling vp Buſhes, ſo that (as ſome religious men haue written that haue tried it) they could not ſometimes haue paſſed aboue a league in a day. One of our brothers (a man worthy of credit) reported vnto vs, that being ſtrayed in the Mountaines, not knowing which way hee ſhould paſſe, he fell among ſuch thicke Buſhes, that hee was forced to goe vpon them, without ſetting foot to the ground, by the ſpace of fifteen whole dayes: and to ſee the Sunne, or to marke ſome way in this thicke Foreſt full of wood, hee was forced to climbe to the top of the higheſt Trees to diſcouer. He that ſhall reade the diſcourſe of his trauell, how often he was loſt, and the wayes hee paſſed, with the ſtrange aduentures that happened vnto him, the which I haue written briefly, being ſo worthy the knowledge, and hauing my ſelfe trauelled a little ouer the Mountaines at the *Indies*, were it but the eighteene leagues betwixt *Nombre de Dios* and *Panama*, may well iudge what great Foreſts there are. So as hauing no winter in thoſe parts, to nip them with cold, and the humiditie of the Heauens and Earth being ſo great, as the Mountaines bring forth infinite Foreſts, and the Playnes which they call *Sauanas*, great plentie of graſſe: there is no want of Paſture for feeding, of Timber for building, nor of Wood for fuell. It is impoſſible to ſet downe the differences and formes of ſo many wilde Trees, for that the names of the greateſt part are vnknowne.

Strange trauil.

Cedars in old time ſo much eſteemed, are there very common, both for buildings and ſhips, and they are of diuers ſorts, ſome white, and ſome red, very odoriferant. There are great ſtore of Bay trees, very pleaſant to behold vpon the *Andes* of *Peru*, vpon the Mountaines, in the Ilands of *Nicaragua*, and in new *Spaine*. There are alſo infinite numbers of Palmes and Ceiuas, whereof the *Indians* make their Canoes, which are Boates made of one piece. They bring into *Spaine* from the *Hauana*, excellent timber. In the Iland of *Cuba*, there are infinite numbers of like trees, as *Ebene*, *Caouana*, *Grenadille*, *Cedars*, and other kindes which I doe not know. There are great Pine trees in new *Spaine*, though they be not ſo ſtrong as thoſe in *Spaine*: they beare no pignous or kernels, but emptie apples. The Oakes as they call them of *Guayaquil*, is an excellent wood and ſweet, when they cut it; yea there are Canes or moſt high Reeds, of whoſe boughs or ſmall reedes they doe make Bottles and Pitchers to carry water, and doe likewiſe vſe them in their buildings. There is likewiſe the wood of *Mauſle* or Firre, whereof they make maſts for their ſhips, and they hold them as ſtrong as Iron. *Molle* is a tree of many vertues, which caſteth forth ſmall boughes, whereof the *Indians* make wine. In *Mexico* they call it the tree of *Peru*, for that it came from thence: but it growes alſo in new *Spaine*, and better then thoſe in *Peru*. There are a thouſand other Trees, which were a ſuperfluous labour to intreat of, whereof ſome are of an exceeding greatneſſe, I will ſpeake onely of one which is in *Tlaco Chanoya*, three leagues from *Guayaca* in new *Spaine*: this tree being meaſured within, being hollow, was found to haue nine fadome, and without, neere to the roote, ſixteene, and ſomewhat higher, twelue. This tree was ſtrooke with lightning from the toppe to the bottome, through the heart, the which cauſed this hollowneſſe: they ſay that before the thunder fell vpon it, it was able to ſhaddow a thouſand men, and therefore they did aſſemble there for their dances and ſuperſtitions: yet to this day there doth remaine ſome boughes and verdure, but not much. They know not what kinde of tree it is, but they ſay it is a kinde of Cædar. Such as ſhall finde this ſtrange, let them reade what *Plinie* reporteth of the Plaine of *Lidia*, the hollow whereof contained foureſcore foot and one, and ſeemed rather a Cabbin or a Houſe, then the hollow of a tree, his boughes like a whole wood, the ſhaddow whereof couered a great part of the field. By that which is written of this Tree, we haue no great cauſe to wonder at the Weauer, who had his dwelling and Loome in the hollow of a Cheſnut tree: and of another Cheſnut tree, if it were not the very ſame, into the hollow whereof there entered eighteene men on Horſebacke, and paſſed out without diſturbing one another. The *Indians* did commonly vſe their Idolatries in theſe Trees, ſo ſtrange and deformed, euen as did the auncient *Gentiles*, as ſome Writers of our time doe report.

Great Tree.

Plin. lib. 12. c. 1.

Of Plants and fruites which haue bin carried out of *Spaine* to the *Indies*. *Chap. 31.*

The *Indians* haue receiued more profit, and haue bin better recompenced in Plants that haue bin brought from *Spaine*, then in any other Merchandiſe, for that thoſe few which are carried from the *Indies* into *Spaine*, grow little there, and multiply not, and contrariwiſe the great number that haue beene carried from *Spaine* to the *Indies*, proſper well and multiply greatly: I know not whether I ſhall attribute it to the bountie of the Plants that goe from hence, or to the goodneſſe of the ſoyle that is there. Finally, there is at the *Indies* any good thing that *Spaine* brings forth: in ſome places it is better, in ſome worſe, as Wheate, Barley, Hearbes, and all

kinds

Digitized by Google

kinds of Pulſes, alſo Lettuce, Coleworts, Radiſhes, Onions, Garlike, Parſley, Turneps, Parſeneps, *Becengenes*, or Apples of loue, Siccorie, Beetes, Spinage, Peaſe, Beanes, Fetches: and finally, whatſoeuer groweth here of any profit, ſo as all that haue voyaged thither, haue beene curious to carry Seedes of all ſorts, and all haue growne, although diuerſly, ſome more, ſome leſſe. As for thoſe trees that haue moſt abundantly fructified, be Orenge-trees, Limons, Citrons, and other of that ſort. In ſome parts there are at this day, as it were whole Woods and Forreſts of Orange trees: tha which ſeeming ſtrange vnto me, I asked who had planted the fields with ſo many Orange trees? they made me anſwer, that it did come by chance, for that Oranges being fallen to the ground, and rotten, their ſeedes did ſpring, and of thoſe which the water had carried away into diuers parts, theſe Woods grew ſo thicke: which ſeemed to mee a very good reaſon. I haue ſaid that this fruite hath generally increaſed moſt at the *Indies*, for that I haue not beene in any place but I finde Orange trees, for that all their ſoile is hot and moiſt, which this tree moſt deſires. There growes not any vpon the *Sierre* or Mountaine, but they carrie them from the vallies or Sea coaſt. The conſerue of Oranges which they doe make at the Ilands, is the beſt I haue ſeene any where: Peaches, Preſſes, and Apricockes haue greatly multiplied, eſpecially in new *Spaine*. At *Peru* there growes few of theſe kindes of fruites, except Peaches, and much leſſe in the Ilands. There growes Apples and Peares, yet but ſcarcely: there are but few Plumbs, but aboundance of Figges, chiefly in *Peru*. They finde Quinces in all the Countrie of the *Indies*, and in new *Spaine*, in ſuch aboundance, as they gaue vs little choice ones for halfe a riall. There is great ſtore of Pomegranats, but they are all ſweete, for the ſharpe are not there eſteemed. There are very good Melons in ſome parts of *Peru*. Cherries both wilde and tame haue not proſpered well at the *Indies*, the which I doe not impute to want of temperature, for that there is of all ſorts, but to careleſneſſe, or that they haue not well obſerued the temperature. To conclude, I doe not finde that in thoſe parts there wants any daintie fruite. As for groſſe fruites, they haue no *Beillottes*, nor Cheſnuts, neither doe I finde that any haue growne there to this day. Almonds grow there, but rarely. They carry from *Spaine*, for ſuch as are daintie mouthed, both Almonds, Nuts, and Filberds: but I haue not knowne they had any Medlers or Seruices, which imports little.

Natures huſbandrie.

There growes no Wine nor Grapes in the Ilands, nor firme Land, but in new *Spaine*, there are ſome Vines which beare Grapes, and yet make no Wine. The cauſe is, for that the Grape ripens not well, by reaſon of the raine that fals in the Moneths of Iuly and Auguſt, which hinders their ripening, ſo as they ſerue onely to eate. They carry Wine out of *Spaine*, and from the *Canaries*, to all parts of the *Indies*, except *Peru* and the Realme of *Chille*. There are ſome places where the Vines are not watered, neither from heauen nor earth, and yet they increaſe in great abundance, as in the Valley of *Yca*, and in the ditches that they call *Villacuzi*, in which places they finde ditches, or th'earth ſunke downe amongſt the dead Sands, which are thorow-out the yeare of a wonderfull cooleneſſe, and yet it raines not there at any time, neither is there any manner of meanes to water it artificially: the reaſon is, becauſe the ſoile is ſpongious, and ſucks vp the water of the riuers that fall from the Mountaine, which moiſten theſe Sands, or elſe it is the moiſtneſſe of the Sea, as others ſuppoſe, which paſſing ouer this Sand, is the cauſe why it is not barren nor vnprofitable, as the Philoſopher teaches. The Vines haue ſo increaſed there, as for this cauſe onely the tithes of the Churches are multiplied fiue or ſix times double within theſe twentie yeares. And it is ſtrange, that in the Citie of *Cuſco* you ſhall finde ripe Grapes all the yeare long: the reaſon is (as they ſay) for that thoſe Vallies bring forth fruits in diuers moneths of the yeare, either for that they cut their Vines in diuers ſeaſons, or that this varietie proceedes from the qualitie of the ſoile: but whatſoeuer it be, it is moſt certaine, there are ſome Vallies which carrie fruite all the yeare. If any one wonder at this, it may be he will wonder much more at that which I ſhall ſay, and perchance not beleeue it. There are Trees in *Peru*, whereof the one part yeeldes fruite one ſixe moneths of the yeare, and the other halfe part yeeldes fruite the other ſix moneths. In *Malla* which is thirteene leagues from the Citie of *Kings*, there is a Figge tree, whereof the one halfe which is towards the South, is greene, and yeeldeth his fruite one ſeaſon of the yeare, that is, when it is ſummer vpon the *Sierre*, and the other moitie towards the *Lanos* or Sea coaſt, is greene, and yeeldes his fruite in the other contrarie ſeaſon, when it is ſummer vpon the *Lanos*, which groweth from the diuers temperature, and the ayre which commeth from the one part, and the other. The reuenue of Wine there is not ſmall, but it goeth not out of the Countrie. But the Silke that is made in new *Spaine* is tranſported into other Countries, as to *Peru*. There were no Mulberrie trees in the *Indies*, but ſuch as were brought from *Spaine*, and they grow well, eſpecially in the Prouince which they call *Miſtecqua*, where there are Silke-wormes, and they put to worke the Silke they gather, whereof they make verie good Taffataes: yet to this day they haue made neither Damaske, Sattin, nor Veluet. The Sugar yet is a greater reuenue, for they not onely ſpend it at the *Indies*, but alſo they carrie much into *Spaine*, for the Canes, grow exceeding well in manie parts of the *Indies*. They haue built their engins in the Ilands, in *Mexico*, in *Peru*, and in other parts, which yeeldeth them a very great reuenue.

Of Grapes, Vines, Oliues, Mulberries, and Canes of Sugar. *Chap.* 32.

Grapes all the yeere.

Strange fructifying.

Digitized by Google

It was told me, that the engine for Sugar in *Nasca*, was worth yeerly aboue thirtie thousand pieces of reuenue. That of *Chicama* ioyning to *Truxillo*, was likewise of great reuenue, and those of new *Spaine* are of no lesse; and it is a strange thing to see what store they consume at the *Indies*. They brought from the Iland of Saint *Dominique*, in the fleet wherein I came, eight hundred ninetie eight chests of Sugar, which being (as I did see) shipped at *Port Ricco* (euery chest (in my opinion) weighed eight Arobes, euery Arobe weighing fiue and twentie pounds, which are two hundred weight of Sugar) is the chiefe reuenue of these Ilands, so much are men giuen to the desire of sweet things. There are likewise Oliues and Oliue trees at the *Indies*, I say in *Mexico* and in *Peru*, yet hath there not beene to this day any Mill for Oile, for that they eate all their Oliues, and dresse them well: they finde the charge is greater to make Oile then the profit, and therefore they carry all the Oile they doe spend from *Spaine*. And here we will end with plants, and will passe to such beasts as be at the *Indies*.

Oliues but no Oile.

§. VI.

Of Beasts and Fowles in the Indies.

Of beasts bearing woll, and of Kine. *Cap.* 33.

I Finde there are three kindes of beasts at the *Indies*, whereof some haue beene carried from *Spaine*; others are of the same kinde we haue in *Europe*, and yet not carried by the *Spaniards*; and others are proper to the *Indies*, whereof there are none in *Spaine*. Of the first kinde are Sheepe, Kine, Goats, Swine, Horses, Asses, Dogs, Cats, and other such beasts, for there are of all these kindes at the *Indies*. The smaller Cattell haue greatly multiplyed, and if they could make profit of their woolls by sending them into *Europe*, it were one of the greatest riches the *Indies* had, for there the flocks of sheepe haue great pastuers, where as their feeding failes not. In *Peru* there is such store of pastures and feedings, as no man hath any proper to himselfe, but euery man feedes his troups where he pleaseth. For this reason there is commonly great store of flesh, and very good cheape, and all other things that come from sheepe, as Milke, and Cheese. For a time they lost their woolls, vntill that some began to husband it, and to make cloth and couerings, which hath beene a great helpe for the poorer sort of the Countrie, for that the cloth of *Castile* is very deare there. There are many Clothiers in *Peru*, but more in new *Spaine*, yet the cloth that comes from *Spaine* is farre better, whether the wooll bee more fine, or the workmen more expert. In former times there were men that did possesse threescore and ten, yea a hundred thousand sheepe, and at this day they haue not many lesse. If this were in *Europe*, it were a very great substance, but in that Conntrie it is but a meane wealth. In many parts of the *Indies*, and I thinke in the greatest part, small Cattell doe not increase and profit well, by reason that the grasse is high, and the soile so vicious, that they cannot feede so well as great Cattell.

European beasts.

Store of sheep.

Store of Kine.

And therefore there is an infinite number of Kine, whereof there are two kindes. Some are tame and goe in troups, as in the land of *Charca*, and other Prouinces of *Peru*, as also in all new *Spaine*: from these tame Kine they draw such profit as they doe in *Spaine*, that is, the Flesh, Butter, Calues, and Oxen to till the ground. The other kinde is wilde, which liue in the Mountains and Forests, and therefore they tame them not, neither haue they any master to whom they are proper, both for the roughnesse and thicknesse of the Forest, as also for the great multitude there is, and he that first kills them is the master, as of any wilde beast. These wilde Kine haue so multiplyed in Saint *Dominique*, and thereabouts, that they troupe together in the fields and woods by thousands, hauing no master to whom they appertaine. They hunt these beasts onely for their hides, they goe to the field on horse-backe with their weapons to hough them, coursing the Kine: and when they haue strucken any and stayed them, they are their owne, they flay them and carry the hides home, leauing the flesh, which euery one neglects for the abundance there is, so as some haue testified in this Iland, that in some places the aire hath beene corrupted with the abundance of these stinking carkasses. The hides they bring into *Spaine*, is one of the best reuenues of the Ilands, and of new *Spaine*. In the fleet the yeere 1587. there came from Saint *Dominique* 35444. hides, and from new *Spaine* 64350. which they value at 96532. pieces, so as when they discharge one of these fleets, it is admirable to behold the Riuer of *Seuile*, and in the Arcenall (where they vnlade) so many hides, and so much merchandize. There are also great numbers of Goats, whose chiefe profit is their tallow, besides their Kid-milke and other commodities, for that both rich and poore vse this tallow for lights. For as there is a great quantitie, so doe they make very good account of it; yea, more then of oile, but all the tallow they vse is onely of the Males. They vse their skins for shooes, yet I hold them not so good, as those which are carried from *Castile*.

Wilde herds.

Killed only for the hides.

Almost 100000 hides transported at once. How rich might *Virginia* become, if I

Horses haue multiplyed there, and are very excellent in many places; yea in many parts there are Races found as good as the best in *Spaine*, as well for passing of a Carrier, and for pompe, as also for trauell: and therefore they vse Horses most commonly, although there bee no want of

Horses.

Moyles,

Digitized by Google

Moyles, whereof there are many, especially where they make their carriages by land. There is no great numbers of Asses, hauing no great vse for them, neither for trauell nor seruice. There are some few Camels; I haue seene some in *Peru*, that were brought from the *Canaries*, and haue multiplyed there a little. In Saint *Dominique*, Dogs haue so multiplyed in number and bigneſſe, as at this day it is the scourge and affliction of that Iland: for they eate the Sheepe, and goe in troupes through the fields. Such that kill them are rewarded like to them that kill Wolues in *Spaine*. At the first there were no Dogs at the *Indies* but some beasts like vnto little Dogs, the which the *Indians* call *Alco*, and therefore they call all Dogs that goe from *Spaine*, by the same name, by reason of the resemblance that is betwixt them. The *Indians* doe so loue these little Dogs, that they will spare their meat to feed them, so as when they trauell in the Country, they carry them with them vpon their shoulders, or in their bosoms, and when they are sicke, they keepe them with them, without any vse, but onely for companie.

Asses. Camels. Dogs multiplyed to noysomneſſe. *Indian* Dogs.

It is certaine that they haue carried from *Spaine* all these beasts whereof I haue spoken, of which kindes there were none at the *Indies*, when they were first discouered about a hundred yeeres since; for besides that it may be well approued by witnesses at this day liuing; It is also a sufficient argument to see that the *Indians* in their tongue, haue no *proper wordes to signifie these beasts, but they vse the same Spanish names*, although they be corrupted: for being ignorant of the thing, they tooke the word common to those places from whence they came. I haue found this a good rule, to discerne what things the *Indians* had before the *Spaniards* came there, and what they had not: for they gaue names to those they had and knew before, and haue giuen new names to these that are newly come vnto them, which commonly are the same *Spanish* names, although they pronounce them after their manner, as for a Horse, Wine, and Wheat. They found of some sorts of beasts that are in *Europe*, and were not carried thither by the *Spaniards*. There are Lions, Tigres, Beares, Boares, Foxes, and other fierce and wilde beasts, whereof we haue treated in the first Booke, so as it was not likely they should passe to the *Indies* by Sea, being impossible to swim the Ocean: and it were a folly to imagine that men had imbarked them with them. It followes therefore that this world ioynes with * the new in some part: by which these beasts might passe, and so by little and little multiplyed this world. The Lions which I haue seene, are not red, neither haue they such haire as they vsually paint them with. They are grey, and not so furious as they seeme in pictures. The *Indians* assemble in troupes to hunt the Lion, and make as it were a circle, which they doe call *Chaco*, wherewith they inuiron them, and after they kill them with stones, staues, and other weapons. These Lions vse to climbe trees, where being mounted, the *Indians* kill them with Lances and Crosse-bowes, but more easily with Harquebuzes. The Tigres are more fierce and cruell, and are more dangerous to meet, because they breake forth and assaile men in treason: They are spotted, as the Historiographers describe them. I haue heard some report that these Tigres were very fierce against the *Indians*, yet would they not aduenture at all vpon the *Spaniards*, or very little; and that they would choose an *Indian* in the middest of many *Spaniards*, and carry him away.

Of some beasts of *Europe*, which the *Spaniards* found at the *Indies*, and how they should passe thither. *Cap.* 34. Note.

* But where our Nauigations beyond 80. haue shewed open and wide Seas betwixt. Lions. Circles are vsed in hunting by *Persians*, *Tartars*, &c. Tigres.

The Beares which in *Cusco* they call *Otoiongos*, be of the same kinde that ours are, and keepe in the ground. There are few swarmes of Bees, for that their hony-combs are found in Trees, or vnder the ground, and not in Hiues as in *Castile*. The hony-combs which I haue seene in the Prouince of *Charcas*, which they call *Chiguanas*, are of a grey colour, hauing little iuyce, and are more like vnto sweet straw, then to hony-combs. They say the Bees are little, like vnto Flies; and that they swarme vnder the earth. The hony is sharpe and blacke, yet in some places there is better, and the combs better fashioned, as in the Prouince of *Tucuman* in *Chile*, and in *Carthagene*. I haue not seene nor heard speake of wilde Boares, but of Foxes and other wilde beasts that eate their Cattell and Fowle, there are more then their Shepherds would willingly haue. Besides these beasts that are furious and hurtfull, there are others that are profitable, and haue not beene transported by the *Spaniards*, as Stags and Deere, whereof there is great abundance in all the Forests. But the greatest part is a kinde of Deere without hornes, at the least, I haue neuer seene nor heard speake of other, and all are without hornes like vnto *Corcos*. It seemes not hard to beleeue; but is almost certaine, that all these beasts for their lightneſſe, and being naturally wilde, haue passed from one World to another, by some parts where they ioyne, seeing that in the great Ilands farre from the mayne land I haue not heard that there are any, though I haue made diligent inquirie.

Beares. Bees. Foxes and beasts of spoile. Deere without hornes.

We may more easily beleeue the same of birds, and that there are of the same kindes that we haue, as Partridges, Turtles, Pidgeons, Stock-doues, Quailes, and many sorts of Falcons, which they send from new *Spaine* and *Peru*, to the Noblemen of *Spaine*, for they make great account of them. There are also *Herons* and *Eagles* of diuers kindes; and there is no doubt but these birds and such like, haue sooner passed thither then Lions, Tigres, and Stags. There are likewise at the *Indies* great numbers of *Parrots*, especially vpon the *Andes* of *Peru*, and in the Ilands of *Port Rico*, and Saint *Dominique*, where they flie by flocks, as Pidgeons doe here. To conclude, birds with their wings may goe where they will; and truly, many kindes might well passe the Gulfe, seeing it is certaine, as *Plinie* affirmeth, that there are many that passe the Sea, and goe into strange

Of Fowles which are here and are at the *Indies*, and how they could passe thither. *Cap.* 35. *Plin. lib.* 10. *c.* 23.

Digitized by Google

strange Regions, although I haue not read that any Fowle hath passed by flight so great a Gulfe, as is the *Indian* Ocean, yet hold I it not altogether impossible, seeing the common opinion of Mariners, that you shall finde them two hundred leagues and more from the Land. And as *Aristotle* doth teach, that birds endure the water easily, hauing little respiration, as wee see in Sea fowle, which diue and remayne long vnder the water. Euen so wee may say, that the Fowle which be at this present vpon the mayne land, and in the Hands at the *Indies*, might passe the Sea, resting themselues in some small Ilands, or vpon some land which they discouered by a naturall instinct (as *Pluuie* reporteth of some) or peraduenture falling into the water, when they were wearie of flying, and after began their flight anew when they had a little rested. As for the Fowles which wee see in the Ilands, where there are no beasts, I beleeue certainly that they passed by one of the foresaid meanes. But for other birds which we finde vpon the mayne land, especially those whose flight is short, it is more credible that they came thither as the beasts did, which are of the same kindes that we haue in *Europe*. For at the *Indies* there are great birds, very heauie, as *Estridges*, whereof there are many in *Peru*; which doe vse sometimes to terrifie the *Indian* sheepe as they doe goe with their burthens.

Plin. l. 10. c. 25.

Estridges.

But leauing these birds that gouerne themselues without the care of man, but onely for hawking, let vs now speake of tame Fowle. I wondred at *Hennes*, seeing there were some at the *Indies* before the *Spaniards* came there, the which is well approued, for they haue a proper name of the Countrie, and they call a Hen *Gualpa*, and the Egge *Ponto*, and they vse the same prouerbe we doe, to call *a Coward, a Hen*. Those that were at the discouerie of the Ilands of *Salomon*, doe report that they haue seene Hennes there like vnto ours: wee may conceiue that the Hen being so tame a Fowle, and so profitable, men might carry them with them when they passed from one place to another, as we see at this day the *Indians* in their trauell carry their Hen with them, or chicken vpon the burthen they haue on their shoulders: and likewise they nurse them easily in their Cages of reedes or wood. Finally, there be at the *Indies* many kindes of beasts and birds, such as wee haue in *Europe*, as I haue specified, and other sorts which I leaue to others to discourse of.

Hennes.

How it should be possible, that at the *Indies* there should be any sorts of beasts, whereof the like are no where else. *Chap.* 36.

It were a matter more difficult, to shew, and proue, what beginning many and sundrie sorts of beasts had, which are found at the *Indies*, of whose kindes we haue none in this Continent. For if the Creator hath made them there, we may not then alleadge nor flie to *Noahs* Arke, neither was it then necessarie to saue all sorts of birds and beasts, if others were to bee created anew. Moreouer, we could not affirme, that the creation of the World was made and finished in sixe dayes, if there were yet other new kindes to make, and specially perfit beasts, and no lesse excellent then those that are knowne vnto vs: If we say then that all these kindes of Creatures were preserued in the Arke by *Noah*, it followes, that those beasts, of whose kindes wee finde not any but at the *Indies*, haue passed thither from this Continent, as wee haue said of other beasts that are knowne vnto vs. This supposed, I demand how it is possible that none of their kinde should remayne here? and how they are found there, being as it were Trauellers and Strangers? Truly it is a question that hath long held me in suspence. I say for example, if the sheepe of *Peru*, and those which they call *Pacos* and *Guanacos*, are not found in any other Regions of the world, who hath carried them thither? or how came they there, seeing there is no shew nor remaynder of them in all this world? If they haue not passed from some other Region, how were they formed and brought forth there? It may bee God hath made a new creation of beasts! That which I speak of these *Pacos* and *Guanacos* may be said of a thousand different kinds of birds and beasts of the Forest, which haue neuer beene known, neither in shape nor name, and whereof there is no mention made, neither among the *Latines*, nor *Greekes*, nor any other Nations of the world. Wee must then say, that though all beasts came out of the * Arke, yet by a naturall instinct, and the prouidence of Heauen, diuers kinds dispersed themselues into diuers Regions, where they found themselues so well, as they would not part; or if they departed, they did not preserue themselues, but in processe of time perished wholly, as we doe see it chance in many things. For if wee shall looke precisely into it, we shall finde that it is not proper and peculiar alone to the *Indies*, but generall to many other Nations and Prouinces of *Asia*, *Europe*, and *Affrike*, where they say there are certaine kindes of Creatures, that are not found in other

The same prouidence which brought all beasts and fowles from all their native diuersified residencies thorow all the world to the Arke (which no naturall instinct in such antipathies and at once, could doe) and kept them safe in the Arke, did also dispose them to their designed abodes after. For I hold it vnchristian with *Mercator* to say, *America* was not drowned with the Floud. And the same scruple might bee made for beasts, &c. in other parts; the temper of the Arke, or of the place where the Arke rested, not agreeing naturally to the Zebra, Elephant, Riuer-horse, Crocodile, and many other better creatures of *Africa*; nor to the other peculiar creatures of many other Regions. In things aboue nature (as it both the historie and mysterie of the Arke) we must flee necessarily to a supernaturall cause. For except wee would imagine the most part of the Sea to haue beene lands or Ilands from beyond the cold *Magellan* to the coldest *Purchas plus vltra*, that is from 57. South latitude, to aboue 81. of North latitude, all the Sea is known, and voyages many in this work deliuerd which excludes al possibilitie of such passages of beasts especially such as cannot endure cold, as our Author imagineth. For men in boats, that might happen accidentally, which voluntarily hath beene attempted by Ours, a little boat comming home from *Bermuda* to *England*: and the *Dutch* open boats from *Noua Zembla* to *Norway*: further and longer distances then is needfull from Iland to Iland for crossing from *Europe* to some parts of *America*; that I mention not the *Carthaginian* and *Owen Gwyneds* voyages, and other casuall tempests, &c. in which by fishing, fishermen might liue long at Sea with their wiues, and be carried by a higher coworking ouer-ruling prouidence to people this new World, which (it is likely) at diuers times and by diuers meanes receiued her inhabitants; God which made *all men of one bloud*, allotting to all *Adams* sonnes their portions and the seuerall *bounds of their habitation*. Act. 17. 20.

Digitized by Google

other Regions, at the least if they be any where else, they are knowne to be carried from thence. Seeing then these Creatures came out of the Arke, as for example, the Elephant which wee finde onely in the East *Indies*, and from thence haue beene imparted to other Regions, wee may say as much of these Creatures of *Peru*, and of others of the *Indies*, which are not found in any other part of the World.

We may likewise consider well vpon this subiect, whether these beasts differ in kinde, and essentially from all others, or if this difference be accidentall, which might grow by diuers accidents, as wee see in the linages of men, some are white, others blacke, some Giants, others Dwarfes: and in Apes, some haue no taile, others haue: and in Sheepe, some are bare, others haue fleeces; some great and strong with a long necke, as those of *Peru*; others weake and little, hauing a short necke, as those of *Castile*. But to speake directly, who so would by this Discourse, shewing onely these accidentall differences, preserue the propagation of beasts at the *Indies*, and reduce them to those of *Europe*, hee shall vndertake a charge hee will hardly discharge with his honour. For if wee shall iudge the kindes of beasts by their properties, those of the *Indies* are so diuers, as it is to call an Egge a Chesnut, to seeke to reduce them to the knowne kindes of *Europe*.

Of Fowles that are proper to the Indies, *and Venison.*

THere are many kindes of notable Fowles at the *Indies*, either of the same sort that ours be, or of different. They bring certaine birds from *China*, that haue no feete, and all their bodies are almost feathers. They sit not vpon the ground, but hang vpon boughs, by strings or feathers which they haue, and so rest themselues like Flies or ayrie things. In *Peru* there are birds which they call *Tomineios*, so small, that often-times I haue doubted seeing them flie, whether they were Bees or Butter-flies; but in truth they are birds. Contrariwise, those which they call *Condores*, be of an exceeding greatnesse, and of such a force, that not only they will open a sheep and eate it, but also a whole calfe. Those which they call *Auras*, and others *Poullazes* (which in my opinion are of the kinde of *Rauens*) are of a strange lightnesse, and haue a very quicke sight, being very fit to clense Cities, for that they leaue no Carrion nor dead thing. They passe the night on Trees or vpon Rocks, and in the morning they come to the Cities and Townes, sitting on the tops of the highest buildings, where they attend their prey. Their yong haue white feathers, as they report of Rauens, and so change into blacke.

See *Iobson Tom. 1. l. 9.* of such in *Guinee*.

Tomineios.

Condores.

Rauens.

The *Guacamayas* be birds bigger then Parrets, and resemble them something; they are esteemed for the varietie of their feathers, which be very faire and pleasing. In new *Spaine* there are abundance of birds with excellent feathers, so as there bee not any found in *Europe* that comes neere them, as wee may see by the Images of feathers they bring from thence, the which are (with great reason) much valued and esteemed, giuing cause of admiration, that with the feathers of birds, they should make so excellent a worke, and so perfectly equall, as they seeme properly to be the true colours of a Painter, and haue so liuely and pleasing a regard, as the Painter cannot exceede it with his pencill and colours. Some *Indians* which are good and expert workmen in this Art, will represent perfectly in feathers, whatsoeuer they see drawne with the pencill, so as the Painters of *Spaine*, haue in this point, no aduantage ouer them. *Don Philip* the Prince of *Spaine* his Schoole-master, did giue vnto him three figures or portraitures made of feathers, as it were to put in a *Breuiarie*. His Highnesse did shew them to King *Philip* his father, the which his Maiestie beholding attentiuely, said, that he had neuer seene in so small a worke, a thing of so great excellency and perfection. One day as they presented to Pope *Sixtus Quintus*, another square bigger then it, wherein was the figure of Saint *Francis*, and that they had told him it was made of feathers by the *Indians*, he desired to make triall thereof, touching the table with his fingers, to see if it were of feathers; for that it seemed strange, to see them so properly fitted, that the eye could not iudge nor discerne whether they were naturall colours of feathers, or artificiall done with the pencill. It is a goodly thing to see the lustre which a greene, an orange tawnie like gold, and other fine colours doe cast, and beholding them another way they seeme dead colours. They make the best and goodliest figures of feathers in the Prouince of *Mechouacan*, and in the village of *Pascaro*. The manner is with small delicate Pinsors they pull the feathers from the dead fowles, and with a fine paste they cunningly ioyne them together. They take the small and delicate feathers of those birds, which in *Peru* they call *Tomineyos*, or others like vnto them, which haue the most perfect colours in their feathers. The *Indians* (besides these Images) did vse feathers in many other most excellent workes, especially for the ornament of Kings and Noblemen, their Temples and Idols.

Feather pictures.

There are also other great birds, which haue excellent and fine feathers, whereof they make plumes of sundrie colours, especially when they goe to warre, inriching them with gold and siluer very artificially, which was a matter of great price. They haue the same birds still, but they are not so curious, neither doe they make so many gentill deuices as they were wont. There are other birds at the *Indies*, contrarie to these of so rich feathers, the which (besides that they are

ill-

ill-fauoured) serue to no other vse but for dung, and yet perchance they are of no lesse profit. I haue considered this, wondering at the prouidence of the Creator, who hath so appointed, that all Creatures should serue Man. In some Ilands or *Phares*, which are ioyning to the coast of *Peru*, we see the tops of the Mountaines all white, and to sight, you would take it for Snow, or for some white Land, but they are heapes of dung of Sea fowle which goe continually thither: and there is so great abundance, as it riseth many Elles, yea, many Lances in height, which seemes but a fable. They goe with boates to these Ilands, onely for the dung, for there is no other profit in them. And this dung is so commodious and profitable, as it makes the earth yeeld great abundance of fruit. They call this dung *Guano*, whereof the Valley hath taken the name, which they call *Limaguana*, in the valleys of *Peru*, where they vse this dung, and it is the most ferrile of all that Country. The Quinces, Pomegranets, and other fruits there, exceed all other in bountie and greatnesse; and they say, the reason is, for that the water wherewith they water it, passeth by a Land compassed with this dung.

The like is in the East *Indies.*

Of beasts for the Chases. *Chap.* 38.

Besides the Beasts of Chase, whereof wee haue spoken, There are beasts called *Sainos*, made like small Hogs, which haue this singular to themselues, to haue their Nauill vpon the ridge of their backs: these goe by troupes through the Woods, they are cruell and nothing fearfull, but contrariwise they assaile, and haue their tallents sharpe as Rasors, wherewith they make dangerous wounds and incisions, if such as hunt them put not themselues in safetie. Such as hunt them (for the more safer killing of them) climbe vp into Trees, whither the *Sainos* or Hogs come presently in troupes, biting the Tree when they cannot hurt the man, and then with their Lances they kill what they will. They are very good to eate, but they must of necessitie cut off the round piece where the Nauill growes vpon the backe; for otherwise, within a day they corrupt. There is another kinde of little beast like to sucking Pigges, and they call them *Guadatinaias*. I am in doubt whether there were any Swine at the *Indies*, before the *Spaniards* came thither, like to these in *Spaine*, for that in the discouerie of the Ilands of *Soloman*, it is said, they found * Hennes and Swine of *Spaine*. But howsoeuer it be, it is most certaine, that this Cattell hath greatly multiplyed at the *Indies*. They eate the flesh fresh, and hold it to bee as wholesome and as good, as if it were of Mutton; as in *Carthagene* in some parts, they are become wilde and cruell, the which they hunt like wilde Boares, as wee see in Saint *Dominique*, and other Ilands where the beasts liue in the Foresters. In some places they feede them with the graine of Mays, and they grow wonderfully fat, to haue the grease, which they vse for want of Oile; in some places they make Gamons, as in *Tolluca* of new *Spaine*, and in *Paria* at *Peru*. Returning then to such beasts as are peculiar there, euen as the *Sainos* are like vnto Swine, though somewhat lesse; euen so the *Dantes* resemble small Kine, but more vnto Mules, hauing no hornes. The Hides of these beasts are much esteemed for jerkins and other couerings, they are so hard as they resist any blow whatsoeuer. And as the *Dantes* be defended by the hardnesse of their Hides, so those which they call *Armadillos* are by the multitude of their scales, which open and shut as they please like to a Curasse. There bee little beasts which goe through the Woods, called *Armadillos*, by reason of the defence they haue hiding themselues within their scales, and opening when they list: I haue eaten of them, and doe not hold it for a meate of any great worth; but the flesh of the *Yguanas* is a better meate, but more horrible to the eye; for they are like to the very *Lizardes* of *Spaine*, although they bee of a doubtfull kinde, for that they goe to the Water, and comming to Land they climbe the Trees vpon the bankes; and as they cast themselues from the Trees into the water, the Boates watch vnderneath to receiue them. The *Chinchilles* is an other kinde of small beasts, like Squirrels, they haue a wonderfull smoothe and soft skin, which they weare as a healthfull thing to comfort the stomacke, and those parts that haue neede of a moderate heate; they make Coorrings and Rugs of the haire of these *Chinchilles*, which are found on the *Sierre* of *Peru*, where there is likewise a small beast very common, which they call *Cuyes*, and which the *Indians* hold for a very good meate, and they are accustomed often to offer these *Cuyes* in their sacrifices. They are like small Conies, and haue their borrowes in the ground, and in some places they haue vndermined all the Land: some are grey, some white, and some speckled. There are other small Animals which they call *Viscachas*, and are like to Hares, although they bee bigger, they hunt them and eate the flesh. Of common Hares there are great store in some parts. There are also Conies in the Realme of *Quitto*, but the good are come from *Spaine*. There is another strange beast, the which for his great heauinesse, and slownesse in mooning, they call *Perico-ligero*, or the *little light Dogge*, hee hath three nailes to euery hand, and mooues both hand and feete, as it were by compasse and very heauily: it is in face like to a Monkey, and hath a shrill crie; it climeth Trees, and eates Ants.

* These might come from the East parts thither by means of those Ilands which you see in *Schoutens* voyage.

Light-Dogge.

Of *Micos* or *Indian* Monkeys. *Chap.* 39.

Throughout all the Mountaines, either of these Ilands of the firme Land, or of the *Andes*, there are infinite numbers of *Micos* or Monkeys, which are a kinde of Apes, but very different, in that they haue a tayle, yea a very long one. And amongst them there are some kindes which are thrice, yea foure times bigger then the ordinarie; some are all blacke, some bay, some grey, and some spotted. Their agilitie and manner of doing is admirable, for that they seeme

ſeeme to haue reaſon and diſcourſe to goe vpon Trees, wherein they ſeeme to imitate Birds. Going from *Nombre de Dios* to *Panama*, I did ſee in *Capira*, one of theſe Monkeys leape from one Tree to an other, which was on the other ſide of a Riuer, making me much to wonder. They leape where they liſt, winding their tailes about a branch to ſhake it: and when they will leape further then they can at once, they vſe a pretie deuice, tying themſelues by the tailes one of another, and by this meanes make as it were a chaine of many: then doe they lanch themſelues forth, and the firſt holpen by the force of the reſt, takes hold where he liſt, and ſo hangs to a bough, and helpes all the reſt, till they be gotten vp. It were long to report the fooleries, tricks, trauerſes, and pleaſant ſports they make when they are taught, which ſeeme not to come from bruit beaſts, but from a manlike vnderſtanding. I ſaw one in *Carthagene* in the Gouernours houſe, ſo taught, as the things he did ſeemed incredible: they ſent him to the Tauerne for wine, putting the pot in one hand, and the money in the other; and they could not poſſibly get the money out of his hand, before he had his pot full of wine. If any children met him in the ſtreet, and threw any ſtones at him, hee would ſet his pot downe on the one ſide, and caſt ſtones againſt the children till hee had aſſured his way, then would hee returne to carry home his pot. And which is more, although he were a good Bibber of wine (as I haue oftentimes ſeene him drinke, when his Maſter hath giuen it him) yet would hee neuer touch it vntill leaue was giuen him. They told me moreouer, that if he ſaw any women painted, he would fall vpon them, pull off their attire, and would ſeeke to bite them.

Luſtie leape. Strange ſight. Monkey learned. Zealous.

Amongſt the moſt remarkable things at the *Indies* of *Peru*, be the *Vicugnes*, and ſheepe of the Countrie, as they call them, which are tractable beaſts and of great profit; the *Vicugnes* are wilde, and the Sheepe are tame. Some thinke that the *Vicugnes* are thoſe which *Ariſtotle*, *Plinie*, and other Authors call *Capreas*, which are wilde Goats, and in truth they haue ſome reſemblance, for the lightneſſe they haue in the Woods and Mountaines, but yet they are no Goates, for the *Vicugnes* haue no hornes, as thoſe haue, whereof *Ariſtotle* makes mention; neither are they the Goates of the Eaſt *Indies*, from whom they draw the *Bezar* ſtone; for if they be of that kinde, it were a diuerſe one, as in the race of Dogs, the Maſtife is diuerſe from the Grey-hound. The *Vicugnes* of *Peru* are not thoſe beaſts which carry the *Bezar* ſtone, in the Prouince of new *Spaine*, which there they call *Bezaars*, for that they are a kinde of Stags and Veniſon; yet doe I not know in any part of the World there bee any of theſe beaſts, but in *Peru*, and in *Chille*, which are Countries ioyning one to another. Theſe *Vicugnes* are greater then Goates, and leſſe then Calues. Their haire is of the colour of dried Roſes, ſomewhat cleerer; they haue no hornes like Stags and Goates. They feede vpon the higheſt tops of the Mountaines, which they call *Pugnas*. The Snow nor Froſt doth not offend them, but contrariwiſe they ſeeme to delight in it. They goe in troupes, and runne moſt lightly; when they meete with any Trauellers or Beaſts, they flie away, ſeeming very fearefull, and in flying they driue their yong ones before them. They doe not finde that they multiply much: and therefore the Kings *Ingnas* did defend the hunting of *Vicugnes*; if it were not for their feaſts, or by their commandement. Some complaine, that ſince the *Spaniards* entred there, they haue giuen too much libertie to hunt the *Vicugnes*, and by this meanes they are much diminiſhed. The manner the *Indians* vſe in their hunting, they aſſemble many men together, to the number of a thouſand or two thouſand, yea more, and inuironing a great circuit of wood, they hunt their game vntil they haue compaſſed it in on all parts, and by this meanes they commonly take three or foure hundred, and ſo chooſing what they liſt, they let goe the reſt, eſpecially the Females for breede. They are accuſtomed to sheere theſe beaſts, and of their fleece to make Couerings and Rugges of great value, for that this wooll is like to white ſilke, which laſts long: and as the colour is naturall and not dyed, ſo is it perpetuall. The ſtuffes that are made of this wooll, are very freſh and good in Summer, and they hold them profitable for the inflammation of the reines, and other parts, tempering the exceſſiue heate: This wooll hath the like vertue when it is made in Quilts, and therefore ſome vſe it to that end, for the triall they haue made thereof. They ſay moreouer, that this wooll or couerings made thereof, is phyſicall for other indiſpoſitions, as for the gowt: yet doe I not know that they haue made any certaine triall thereof. The fleſh of theſe *Vicugnes* is not good, although the *Indians* eate it, and drie it. For the effects of phyſicke, I will ſay what I haue ſeene vpon the *Sierre* of *Peru*, comming one night into a *Tambo* or Inne, being much afflicted with paine in mine eyes, thinking they would fall out (the which doth commonly happen in thoſe parts) for that they paſſe through places couered with ſnow, which is the cauſe of this accident. Being troubled with this paine, and out of patience, there came an *Indian* woman which ſaid to me, *Father, lay this to thine eyes, and thou ſhalt bee cured.* It was a piece of the fleſh of *Vicugnes* newly killed and all bloudie. I vſed this medicine, and preſently the paine ceaſed, and ſoone after went quite away. Beſides theſe *Chacos* which is the moſt common manner of hunting at the *Indies*, they haue vſed another more priuate to take them, which is, that comming neere, they doe caſt certaine lines with plummets of lead, which intangle their legges, ſo as they cannot runne, and by this meanes they take the *Vicugne*. The chiefe reaſon why this beaſt is eſteemed, is, by reaſon of

Of *Vicugnes*, and *Tarugnes* of *Peru*. Chap 40. *Ariſtot. lib. 3. de partib. animal. c. 2. lib. 10. c. 72.* *Indian hunting.* Experiment for the eyes.

Bezar stone. the *Bezars* stone they finde in them, whereof wee will intreate hereafter. There is another kinde of beasts, which they call *Tarugues*, which likewise are wilde, and more nimble then the *Vicugnes*. They are greater of body, and more hot. They haue soft eares and hanging: they goe not in troupes as the *Vicugnes*. I haue not seene them but alone, and most commonly in high places. They also draw *Bezars* stones from these *Tarugues*, which are greater, and haue more operation and vertue.

Tarugues.

Of *Pacos*, *Guanacos*, and *Indian* Muttons. *Chap.* 41.

There is nothing at *Peru* of greater riches and profit then the Cattell of the Country, which our men call *Indian Sheepe*, and the *Indians* in their generall language call them *Lama*. For all things well considered, it is a beast of the greatest profit and least charge of any that I know: from them they draw meate and clothing, as from the sheepe of *Spaine*. Moreouer, they haue the benefit to carry all things they haue need of, vsing them to beare their burthens: and they haue no need either of shooes or saddles, nor yet of oates, but he serueth his Master for nought, feeding on the grasse he findes in the fields; so as God hath furnished them of Sheepe and Mares, and all in one beast. And as it is a poore Nation, so would hee in this point free them from charge, for that there is much pasture vpon the *Sierre*: and this kinde of Cattell hath no need of any other charge. There are two kindes of these Sheepe or *Lamas*, the one they call *Pacos*, or sheepe bearing wooll, and the others are bare, and haue little wooll, so are they better for burthen; they are bigger then great Sheepe, and lesse then Calues, they haue a very long necke, like to a Camel, whereof they haue good need: for being high of stature, they haue need of a long necke, else should they be deformed. They are of diuers colours, some all white, others all blacke, some grey and some spotted, which they call *Moromoro*. The *Indians* had great superstitions in chooling the beasts for sacrifices, of what colour they should bee, according to the diuersitie of Seasons and Sacrifices. Their flesh is good, although it be hard, but that of their Lambs is the better, and the most delicate that can be eaten: yet they eate not many, for that the chiefe fruit and profit they yeeld, is their wooll, to make clothes, and their seruice to carry burdens. The *Indians* make stuffes of this wooll wherewith they clothe themselues: the one is grosse and common, which they call *Hanaca*, and the other fine and delicate, which they call *Cumbi*, they make Carpets and Couerings, and other exquisite workes, which last long, and haue a very faire lustre, like halfe silke: and that which is most rare, is their manner of weauing their workes, being both sides alike, so as you shall not finde any end in a whole piece. The *Ingua* King of *Peru* had many chiefe workmen, to make this worke of *Cumbi*: and the which, for the most part, were resident in the Prouince of *Capachica*, ioyning to the great Lake of *Titicaca*. They die this wooll into diuers fine colours, with sundrie kindes of herbs, whereof they make many sorts of workes both course and fine. All the *Indians*, both men and women, worke in the *Sierre*, and haue their Loomes in their houses, hauing no need to buy any stuffes for their necessarie vses. Of the flesh of these sheepe they make *Cuschargui*, or dryed flesh, the which will last very long, whereof they make great account. They are accustomed to driue troupes of these sheepe with burthens, and to goe in bands, three hundred, fiue hundred, yea a thousand in a companie, with Wine, Mays, Coca, Chuno, Quick-siluer, and all other kindes of merchandise, and of Siluer, which is the best of all. They carry barres of Siluer from *Potozi* to *Ariqua*, which is three score and ten leagues. I haue often wondered to see these troupes of sheepe laden with a thousand or two thousand barres of Siluer, and much more, which is aboue three hundred thousand ducats, without any other guard or resort then some *Indians*, which serue onely to guide these sheepe, and to lade and vnlade them, or at the most, some few *Spaniards*: and they sleepe all night in the middest of the fields, without other guard: and yet in so long a way and so weake a guard, they neuer finde want or losse of any thing in so great a treasure of Siluer, so safe is the way in *Peru*. The burthen which one of these sheepe doth commonly carry, is of foure or sixe Arrobes: when their voyage is long they goe not aboue two, three, or foure leagues at the most on a day. Those that guide those troupes, haue their ordinarie lodgings, where they are assured to haue water and pasture, and there they vnlade and set vp their Tents, making fire, and dressing their meates, which is not painfull, although it be a flegmatike and slow manner of trauell. When there is but one dayes iourney, one of these sheepe will beare eight Arrobes in weight, or more, and beares this burthen eight or ten leagues in a day, as the poore Souldiers were wont to doe, when they marched through *Peru*. This kinde of Cattell delights most in a cold aire, and for this cause they liue vpon the *Sierre*, and die in the *Lanos*, by reason of the heate. Sometimes these sheepe are all couered with Ice and frost, and yet they continue sound and well. The bare sheepe are pleasant to behold, for they will stay vpon the way, raysing vp their necks, and will looke vpon any one very wistly, and so they remaine a long time, without mouing or any shew of feare, which giueth occasion of laughter, seeing them thus to stand. And yet sometimes they doe grow amazed sodainly, and runne away with their burthens, euen to the highest Rocks, so as not being able to come vnto them, they are constrayned to kill them with an Harquebuze, lest they should lose their barres of Siluer, which they sometimes carry. The *Pacos* will grow reastie vnder their burthens, lying down, and will endure to be cut in a thousand pieces before they will rise when this humor takes them: wherof the prouerb growes in *Peru*, to say that

Two kindes.

Sixe Arobes is a hundred and fiftie pounds weight.

one

is reastie, to signifie, he is obstinate; for that when any of these beasts is moodie, it is with excesse: the remedie they haue is, to stay and sit downe by the *Paco*, making much on him, vntill the fit be past, and that he rise: and sometimes they are forced to stay two or three houres. They haue a disease like to scabs, which they call *Carache*, whereof they commonly die. The Ancients had a remedie, to burie them quicke that had the *Carache*, lest they should infect the rest, being a very contagious disease, and goes from one to another. An *Indian* that hath one or two of these sheepe, is not reputed poore, for one of them is worth sixe or seuen pieces of assay, and more, according to the time and places.

The *Bezaars* stone is found in all these beasts before mentioned, which are proper to *Peru*, whereof some Authors of our time haue written whole bookes, which they may reade that desire to haue a more particular knowledge. For the present subiect it shall be sufficient to say, that this stone which they call *Bezaar*, is found in the stomacke and belly of this beast, sometimes one alone, sometimes two, three, and foure. They are very different in forme, greatnesse and colour, for that some are small like Filberds, and lesse; others like Walnuts; some like Pidgeons egges, and others as bigge as a Hens egge: and I haue seene some as bigge as an Orange; in forme some are round, others in fashion like to Lentils, and many other formes. For their colour, some are blacke, some white, some grey, darke greene, and others, as if they had beene gilded. It is no certaine rule to iudge the best and most fine by the colour or forme. All these stones are made and fashioned of diuers films and skins one vpon another. In the Prouince of *Xaura* and other Prouinces of *Peru*, they finde these stones in diuers kindes of beasts, both wilde and tame, as in the *Guanacos*, *Pacos*, *Vicugnes*, and *Tarugues*, some adde an other kinde, which they say are wilde Goates, which the *Indians* call *Cypris*. These other kindes of beasts are very well known in *Peru*, whereof we haue alreadie discoursed. The *Guanacos* or Countrie sheepe, or *Pacos*, haue commonly the lesser stones, and blacke, neither are they so much approued for the vse of physicke. They draw the greatest *Bezaar* stones from the *Vicugnes*, and they are grey, or white, or of a darke greene, which are held for the better. They esteeme those of the *Tarugues* for the most excellent, whereof there are some reasonable bigge: they are commonly white, inclining to grey; and they haue the filmes commonly bigger and thicker then the rest.

Of the Bezaars stone. chap. 42.

They finde the *Bezaar* stone equally both in Male and Female. All beasts that ingender it, chaw the cuid, and commonly feede vpon the Snow and Rocks. The *Indians* report and teach by tradition from their Fathers and Ancients, that in the Prouince of *Xaura*, and in other Prouinces of *Peru*, there are many herbs and venemous beasts, which poison the water and the pastures where they eate and drinke, and where they breathe: amiddest which venemous herbs there is one very well knowne of the *Vicugne*, by a naturall instinct, and of other beasts that ingender the *Bezaar* stone, which eate this herbe, and by meanes thereof they preserue themselues from the poisoned waters and pastures; and they say, that of this herbe the stone is compounded in the stomacke, whence it drawes all the vertue against poison, and other wonderfull effects. This is the opinion and tradition of the *Indians*, discouered by men of great experience in the Kingdome of *Peru*, which agrees with reason, and with that which *Plinie* reports of the Mountaines Goats, which are nourished and fed vpon poison without suffering any harme. The *Indians* being demanded, why the Sheepe, Kine, Goats, and Calues, such as are in *Castile*, haue not the *Bezaar* stone, seeing that they feede on the same Rocks: their answere is, That they beleeue not, that those beasts of *Castile* eate of that herbe, or that they haue found the *Bezaar* stone in Stags and fallow Deere. This seemes to agree with our knowledge, for that in new *Spaine* they finde the *Bezaar* stone, although there be no *Vicugnes*, *Pacos*, *Tarugues*, nor *Guanacos*, but onely Stags, in some of which they finde these stones.

Plin. l. 10. c. 72.

One thing is worthy admiration, that they grow and are fashioned vpon very strange things, as vpon the tagge of a Point, vpon a Pin, or a piece of Wood, which they finde in the centre of this stone, and yet doe they not hold it false, for that the beast might swallow it, and the stone thicken vpon it, and growes one vpon another, and so it increaseth. I did see in *Peru*, two stones fashioned vpon *Pignons* of *Castile*, which made vs to wonder much, for that in all *Peru*, wee had not seene any Pines or *Pignons* of *Castile*, if they were not brought from *Spaine*, which seemes to mee very extraordinarie. This little may suffice touching the *Bezaars* stone. They bring other physicall stones from the *Indies*, as the stone of *Hyiada*, or of *Rate*, the blood stone, the stones of Milke, and of the Sea. Those which they call *Cornerinas*, for the Heart, whereof there is no neede to speake, hauing nothing common with the subiect of beasts, whereof wee haue intreated: which giues vs to vnderstand how the great Master and Author of all, hath imparted his benefits and wonderfull secrets, to all parts of the World; for the which he is to be glorified for euer.

READER, I haue here added this worke, for the better and more particular knowledge of the Naturall Historie *of the West* Indies. *This Author* Gonzalo Ferdinando de Ouiedo *did first write a Summarie to* Charles *the fifth (out of which the most part of this is taken)* An. 1525. *and after that writ*

writ his Generall Historie, *enlarging what he had written before this Summarie; and in the dividing it into three Parts: the first of which contayning principally the* Spanish *acts and Naturall obseruations in the Ilands, in twentie Bookes, wee haue in* Ramusios *third Tome of Voyages: the second (in which hee writ of the Continent of* New Spaine, *and the third of* Peru *and the Southerne* America, *with aboue foure hundred pictures of the Plants, Beasts, and other Creatures of those parts, were neuer published; to the great losse of naturall knowledge of those parts. As for the* Spanish *acts we haue them sufficiently written by others. But* Acosta *and* Oviedo *haue best deserued of the studious of Nature, that is, of the knowledge of God in his workes. In which respect I haue added many things omitted by Master* Eden, *and Master* Willes *in the former publication, both examining this, and translating the rest from* Ramusios *Italian edition.*

CHAP. III.

Extracts of GONZALO FERDINANDO DE OVIEDO his Summarie and Generall Historie of the *Indies*.

Of the mynes of gold, and the manner of working in them.

THis particular of the mynes of Gold, is a thing greatly to be noted, and I may much better speake hereof then any other man, forasmuch as there are now twelue yeeres past since I serued in the place of the Surueyor of the melting shops, pertayning to the gold mynes of the *firme Land*, and was the Gouernor of the mynes of the Catholike King *Don Ferdinando*, after whose departure from this life, I serued long in the same roome in the Name of your Maiestie. The myne or veine which ought to be followed, ought to be in a place which may stand to saue much of the charges of the Labourers, and for the administration of other necessarie things, that the charges may bee recompenced with gaynes. The greatest part of the wrought gold which the *Indians* haue, is base, and holdeth somewhat of Copper: of this they make Bracelets and Chaines, and in the same they close their Iewels which their Women are accustomed to weare, and esteemed more then all the riches of the World. The manner how gold is gathered, is this, either of such as is found in *Zauana*, that is to say, in the Plaines and Riuers of the Champaine country being without Trees, whether the Earth be with grasse or without, or of such as is sometimes found on the Land without the Riuers in places where Trees grow, so that to come by the same, it shall be requisite to cut downe many and great Trees. But after which soeuer of these two manners it be found, either in the Riuers or Breaches of waters, or else in the earth, I will shew how it is found in both these places, and how it is separate and purged. Therefore when the myne or veine is discouered, this chanceth by searching and prouing in such places as by certaine signes and tokens doe appeare to skilfull men apt for the generation of gold, and to hold gold: and when they haue found it, they follow the myne, and labour it, whether it be in the Riuer, or in the Playne, as I haue said. And if it be found on the Playne, first they make the place very cleane where they intend to digge, then they digge eight or ten foot in length, and as much in breadth: but they goe no deeper then a span or two, or more, as shall seeme best to the Master of the myne, digging equally, then they wash all the earth which they haue taken out of the said space, and if herein they finde any gold they follow it, and if not, they digge a span deeper, and wash the earth as they did before: and if then also they finde nothing, they continue in digging and washing the earth as before, vntill they come to the hard rocke or stone: and if in fine they finde no gold there, they follow no further to seeke gold in that place, but goe to another part. And it is to be vnderstood, that when they haue found the myne, they follow it in digging, in the same measure in leuell and depth, vntill they haue made an end of all the myne which that place contayneth, if it appeare to be rich. This myne ought to consist of certaine feet or paces in length or breadth, according to certaine orders determined, and within that compasse of earth, it is not lawfull for any other to digge for gold: And where as endeth the myne of him that first found the gold, immediatly it is lawfull for any other man that will, with a staffe to assigne himselfe a place by the side of the same, inclosing it with stakes or pales as his owne. These mynes of *Zauana* (that is, such as are found in the Playnes) ought euer to bee sought neere to some Riuer or Brooke, or Spring of water, or Dike, or standing Poole, to the end that the gold may be washed, for the which purpose they vse the labour of certaine *Indians*, as they doe other in digging of the myne. And when they haue digged out the myne, they fill certaine Trayes with that earth, which other *Indians* haue the charge immediatly to receiue at their hands, and to carry those Trayes of earth to the water, where it may be washed: Yet doe not they that bring it wash it, but deliuer it to other, putting it out of their owne Trayes into theirs, which they haue readie in their hands to receiue it. These Washers for the most part are the *Indian* women, because this worke is of lesse paine and trauell then any other. These women when they wash, are accustomed to sit by the water side, with their legges in the water euen vp to the knees, or lesse, as the place

Gold of *Indians* base.

place ſerueth their purpoſe: and thus holding the Trayes with earth in their hands by the handles thereof, and putting the ſame into the water, they moue them round about, after the manner of ſifting, with a certaine aptneſſe, in ſuch ſort that there entreth no more water into the Trayes then ſerueth their turne, and with the ſelfe ſame apt mouing of their Trayes in the water, they euer auoid the foule water with the earth out of the one ſide of the Veſſell, and receiue in cleane water on the other ſide thereof, ſo that by this means by little and little, the water waſheth the earth as the lighter ſubſtance of the Trayes, and the Gold as the heauier matter reſteth in the bottome of the ſame, being round and hollow in the middeſt like vnto a Barbars Baſen. And when all the earth is auoided, and the Gold gathered together in the bottome of the Tray, they put it a part, and returne to take more earth, which they waſh continually as before. Furthermore it is to be noted, that for euery two *Indians* that waſh, it is requiſite that two other ſerue them to bring earth from the Mine, and other two to breake the ſame ſmall, and fill their Trayes therewith. Alſo beſide theſe Labourers, it is neceſſarie that there be other people in the place where they worke and reſt in the night: theſe are ſuch as make their bread, and prouide for victuals, and other neceſſaries. So that to conclude, there are in all, fiue perſons ordinarily aſſigned to euery Tray of waſhers.

Other Labourers.

Fiue to a tray.

There is another manner of working the Mines, in Riuers or Brookes of running waters: and this is, that in auoyding the water of his courſe, after that the beds of the Riuers are dry and vtterly emptied, they find Gold among the breaches, clifts, and rifts of ſtones, and among all that is in the bottome of the Channell, and where naturally the Riuer runneth of greateſt force: So that it chanceth ſometime, that when the bed of the Riuer is good and rich, they find in it great quantitie of Gold. And therefore your Maieſtie ought to vnderſtand for a generall rule, as it appeareth in fact, that all Gold is ingendred in the tops and higheſt places of the Mountaines, and in continuance of time is by little and little brought downe to the Vales and Plaines by ſhowres of raine, and the fals of Springs, Riuers, and Brookes, hauing their originall in the Mountaines, and deſcending from the ſame, notwithſtanding it is oftentimes found in the Plaines farre from the Mountains. But when it chanceth to be found in great quantity, it is for the moſt part among the Mountaines, and in the Riuers, or their branches, more then in any other part of the Plaine: and in theſe two manners it is commonly found moſt abundantly. And for the better proofe that Gold is ingendred on high, and is brought downe into the low places, I haue one great token thereof, which cauſeth me to beleeue it for certaine: and this is, to conſider that coles neuer putrifie nor corrupt vnder the ground, if they be made of ſtrong wood. Whereby it chanceth, that digging the earth by the foulds or indented places of the Mountaines, or on the ſides, and breaking a Mine in the earth, where it had beene broken before, and hauing now digged one or two or three Poles in meaſure, the Miners found certaine coles of wood vnder the ſame leuell where they found Gold, and this I ſay in the earth which was taken for a Virgin, that is to ſay, ſuch as had not before beene opened for any Mine: the which coles could not naturally bee ingendred there, or enter in by any meanes, but when the ſuperficiall part of the earth was equall with the leuell where the coles were found, it is like that the coles were left there by ſome occaſion of fire, and that they faſtened there in time, and that afterward in long continuance of time, they were by little and little couered with the earth, which the often ſhowres of raine waſhed from the Mountaines, ſo that by the courſe of yeeres the earth ouergrew the coles vnto the ſaid leuell and meaſure, which had before time beene the ſuperficiall part of the earth, where the coles and Gold were found together: whereby it may appeare that the Gold was no more ingendred there then were the coles, but brought thither from the Mountaynes by the falls of waters as we haue ſaid, foraſmuch as the Mountaines are the Matrices and bowels of all rich Metals. Further and beſide this, I ſay that in how much more the Gold is gone farre from the naturall place of his generation to the place where it is found, it is ſo much the more purified and fined, and of a better caract, and the neerer that it is found to his proper Mine or veine where it is ingendred, it is ſo much the baſer, fouler, and more crude, and of a baſer alay and caract, and doth waſte ſo much the more in melting, and remayneth more brickle.

Gold in Riuers or poulder.

Gold engendred on hill tops.

His reaſon.

Some may thinke that coles, ſhels & other *ludibria naturæ*, naturally grow there.

Sometimes there are found graines of Gold of great quantitie, and of great weight aboue the earth, and ſometimes alſo vnder the earth: And the greateſt of all other that was found to this day in the *Indies*, was that which was loſt in the Sea about the Iland *Beata*, which weighed three thouſand and two hundred of *Caſtellans* of God, which are in value foure thouſand a hundred thirtie and eight Ducats of Gold, which weigh one *Arroua* and ſeuen pound, or thirtie and two pound, after twelue ounces to the pound, which make threeſcore and foure Markes of Gold. And I ſaw in the yeere 1515. in the hands of *Michel Paſſamonte* Treaſurer to your Maieſtie, two graines, of the which one weighed ſeuen pounds, which are fourteene Markes, and are in value about three ſcore and fiue Ducats of Gold euery Marke: the other was of ten Marks, which are fiue pounds of like value, and of very good Gold of two and twentie caracts, and better: There are alſo found many other great graines, although not equall vnto theſe in bigneſſe. And foraſmuch as I haue ſpoken of Gold, I haue thought good to declare ſomewhat how the *Indians* can very excellently gild ſuch Veſſels of Copper and baſe Gold as they make: for they can

Gold in graines.

One huge piece of gold.

A Marke is a pound of 8. ounces *ſumma*, 16. pound weight eight ounces, after 12. ounces to the pound.

Indian gilding.

giue them ſo faire and flouriſhing a colour, that all the maſſe which they gilt, appeareth as though it were Gold of two and twentie carects, and better. This colour they giue with a certaine hearbe, as though it were wrought by the art of any Gold-ſmith of *Spaine* or *Italie*, and would of them be eſteemed as a thing of great riches and a ſecret manner of gilding. For the deſire that our men haue to Gold, they nothing eſteeme the Copper, although there might great commoditie and profit be had thereby, and alſo by other Metals, which they nothing regard, except Siluer, which is found abundantly in that part of the firme Land which is called New *Spaine*.

Of the manner of fiſhing for Pearles.

THe *Indians* exerciſe this kind of fiſhing for the moſt part in the Coaſts of the North in *Cubagua* and *Cumana*, and many of them which dwell in the Houſes of certaine particular Lords in the Ilands of *San Dominico* and *Sancti Iohannis*, reſort to the Iland of *Cubagua*, for this purpoſe. Their cuſtome is to goe fiue, ſixe, or ſeuen, or more in one of their Canoas or Barkes, earely in the morning to ſome place in the Sea thereabout, where it appeareth vnto them that there ſhould be great plentie of thoſe ſhell fiſhes (which ſome call Muſcles, and ſome Oyſters) wherein Pearles are ingendred, and there they plunge themſelues vnder the water, euen vnto the bottome, ſauing one that remayneth in the Canoa or Boat, which hee keepeth ſtill in one place as neere as he can, looking for their returne out of the water: And when one of them hath beene a good while vnder the water, he riſeth vp, and commeth ſwimming to the Boat, entring into the ſame, and leauing there all the Oyſters which he hath taken and brought with him (for in theſe are the Pearles found) and when he hath there reſted himſelfe a while, and eaten part of the Oyſters, he returneth againe to the water, where hee remayneth as long as hee can endure, and then riſeth againe, and ſwimmeth to the Boat with his prey, where hee reſteth him as before, and thus continueth courſe by courſe, as doe all the other in like manner, being all moſt expert Swimmers and Diuers: and when the night draweth neere, they returne to the Iland to their houſes, and preſent all the Oyſters to the Maſter or Steward of the houſe of their Lord, who hath the charge of the ſaid *Indians*, and when he hath giuen them ſomewhat to eate, he layeth vp the Oyſters in ſafe cuſtodie, vntill he haue a great quantitie thereof, then he cauſeth the ſame Fiſhermen to open them, and they find in euery of them Pearles, other great or ſmall, two, or three, or foure, and ſometimes fiue or ſixe, and many ſmall graines, according to the liberalitie of nature. They ſaue the Pearles both ſmall and great which they haue found, and either eate the Oyſters if they will, or caſt them away, hauing ſo great a quantitie thereof, that they in manner abhorre them. Theſe Oyſters are of hard fleſh, and not ſo pleaſant in eating as are ours of *Spaine*. This Iland of *Cubagua*, where this manner of fiſhing is exerciſed, is in the North Coaſt, and is no bigger then the Iland of *Zeland*. Oftentimes the Sea increaſeth greatly, and much more then the Fiſhers for Pearles would, becauſe whereas the place is very deepe, a man cannot naturally reſt at the bottom, by reaſon of the abundance of airie ſubſtance which is in him, as I haue oftentimes proued. For although he may by violence and force deſcend to the bottome, yet are his feet lifted vp againe, ſo that hee can continue no time there: and therefore where the Sea is very deepe, theſe *Indian* Fiſhers vſe to tye two great ſtones about them with a coard, on each ſide one, by the weight whereof they deſcend to the bottome, and remayne there vntill them liſteth to riſe againe, at which time they vnloſe the ſtones, and riſe vp at their pleaſure.

Men continue an houre vnder water.

But this their aptneſſe and agilitie in ſwimming, is not the thing that cauſeth men moſt to maruell: but rather to conſider how many of them can ſtand in the bottome of the water for the ſpace of one whole houre, and ſome more or leſſe, according as one is more apt hereunto then an other. An other thing there is which ſeemeth to me very ſtrange: and this is, that whereas I haue oftentimes demanded of ſome of theſe Lords of the *Indians*, if the place where they are accuſtomed to fiſh for Pearles, being but little and narrow, will not in ſhort time be vtterly without Oyſters, if they conſume them ſo faſt: They all anſwered mee, that although they be conſumed in one part, yet if they goe a fiſhing in an other part, or an other Coaſt of the Iland, or at an other contrary wind, and continue fiſhing there alſo vntill the Oyſters bee likewiſe conſumed, and then returne againe to the firſt place, or any other place where they fiſhed before, and emptied the ſame in like manner, they find them againe as full of Oyſters as though they had neuer beene fiſhed. Whereby we may iudge, that theſe Oyſters either remoue from one place to an other, as doe other fiſhes, or elſe that they are ingendred and increaſe in certaine ordinarie places.

Naturall ſucceſſion.

Of this read more largely in the Decads.

This Iland of *Cumana* and *Cubagua*, where they fiſh for theſe Pearles, is in the twelfth degree of the part of the ſaid Coaſt which inclineth toward the North. Likewiſe Pearles are found and gathered in the South Sea, called *Mare del Sur*, and the Pearles of this Sea are very bigge, yet not ſo bigge as they of the Iland of Pearles, called *de las Perlas*, or *Margarita*, which the *Indians* call *Terarequi*, lying in the Gulfe of Saint *Michael*, where greater Pearles are found, and of greater price, then in any other Coaſt of the North Sea, in *Cumana*, or any other part. I ſpeake this as a true teſtimonie of ſight, hauing beene long in that South Sea, and making curious inquiſition to be certainly informed of all that pertayneth to the fiſhing of Pearles. From this Iland of *Terarequi*, there was brought a Pearle of the faſhion of a Peare, weighing thirtie and one Carats,

Huge Pearle.

Digitized by Google

Caracts, which *Petrus Arias* had among a thousand and so many pounds weight of other Pearles, which he had when Captaine *Gaspar Morales* (before *Petrus Arias*) passed to the said Iland in the yeare 1515. which Pearle was of great price. From the said Iland also, came a great and very round Pearle, which I brought out of the Sea, this was as bigge as a small pellet of a Stone-bow, and of the weight of twentie and sixe Caracts: I bought it in the Citie of *Panama*, in the Sea of *Sur*, and paid for it sixe hundred and fiftie times the weight thereof of good Gold, and had it three yeeres in my custodie, and after my returne into *Spaine*, sold it to the Earle of *Nansao* Marquesse of *Zenete*, great Chamberlaine to your Maiestie, who gaue it to the Marquesse his Wife, the Ladie *Mentia* of *Mendoza*. I thinke verily that this Pearle was the greatest, fairest, and roundest that hath beene seene in those parts. For your Maiestie ought to vnderstand, that in the Coast of the Sea of *Sur*, there are found a hundred great Pearles round after the fashion of a Peare, to one that is perfectly round and great.

By the computation of *Venice*, foure graines make a Caract.

Peare-pearles.

Of the familiaritie which certayne of the Indians *haue with the Deuill, and how they receiue answere of him of things to come, and other Superstitions.*

WHen the *Indians* beginne their battaile, or goe to any combate, or attempt any other great mater, they haue certaine elect men, whom they reuerently esteeme, and call them *Tequinas*, which in their tongue is as much to say as Masters: notwithstanding that they call euery man, that is cunning in any Science, by the same name, as Fishers, Fowlers, Hunters, or makers of Nets. These *Tequinas* therefore, they call the Masters of their Answeres, because they speake with *Tuyra*, that is, the *Deuill*, and bring them answere what he saith, either as touching such things as they haue to doe, or shall chance to them the day following, or many dayes to come. For the Deuill, being so ancient an Astronomer, knoweth the times of things, and seeth how they are naturally directed and inclined, and maketh them beleeue that they come so to passe by his ordinance, as though he were the Lord and mouer of all that is and shall be, and that he giueth the day light, and raine, causeth tempest, and ruleth the stations of times, giuing life, or taking away life, at his pleasure: By reason whereof, the *Indians* being deceiued of him, and seeing also such effects to come certainly to passe as he hath told them before, beleeue him in all other things, and honour him in many places with Sacrifices of the bloud and liues of men, and odoriferous Spices; And when God disposeth the contrary to that which the Deuill hath spoken in Oracle, whereby he is proued a Lyer, hee causeth the *Tequinas* to perswade the people that he hath changed his mind and sentence for some of their sins, or deuiseth some such lye as liketh him best, being a skilfull Master in such subtill and craftie deuices, to deceiue the simple and ignorant people, which hath small defence against so mightie and craftie an Aduersarie. And as they call the Deuill *Tuyra*, so doe they in many places call the Christians by the same name, thinking that they greatly honour them thereby, as indeed it is a name very fit and agreeable to many of them, hauing laid apart all honestie and vertue, liuing more like Dragons then men, among these simple people.

Deuils Impostures.

Before the Inhabitants of the Iland of *Hispaniola* had receiued the Christian Faith, there was among them a Sect of men, which liued solitarily in the Deserts and Woods, and led their life in Silence and Abstinence, more streightly then euer did the Philosophers of *Pythagoras* Sect, abstaining in like manner from the eating of all things that liue by bloud, contented onely with such Fruites, Herbes, and Rootes, as the Deserts and Woods ministred vnto them to eate: The Professors of this Sect were called *Piaces*. They gaue themselues to the knowledge of naturall things, and vsed certaine secret Magicall Operations and Superstitions, whereby they had familiaritie with Spirits, which they allured into their owne bodies, at such times as they would take vpon them to tell of things to come, which they did in manner as followeth. When any of the Kings had occasion to call any of them out of the Deserts for this purpose, their custome was to send them a portion of their fine Bread of *Cazabi* or *Maiz*, and with humble request and suite to desire them to tell them of such things as they would demand. After the request granted, and the place and day appointed, the *Piaces* commeth with two of his Disciples wayting on him, whereof the one bringeth with him a Vessell of a secret Water, and the other a little Siluer Bell. When hee commeth to the place, hee sitteth downe on a round seate made for him of purpose, where hauing his Disciples the one standing on the one hand, and the other on the other, euen in the presence of the King and certaine of his Nobles (for the common people are not admitted to these Mysteries) and turning his face toward the Desart, he beginneth his Inchantment, and calleth the Spirit with loude voyce by certaine names, which no man vnderstandeth but hee and his Disciples. After hee hath done thus a while, if the Spirit yet deferre his comming, hee drinketh of the said Water, and therewith waxeth hot and furious, and inuerteth and turneth his Inchantment, and letteth himselfe bloud with a thorne, maruellously turmoiling himselfe, as we read of the furious Sybils, not ceasing vntill

Pythagoreall Piaces.

Indian consultings or consultations.

vntill the ſpirit be come; who at his comming entreth into him, and ouerthroweth him, as it were a Greyhound ſhould ouerturne a Squerell, then for a ſpace, he ſeemeth to lye as though he were in great paine, or in a rapte, wonderfully tormenting himſelfe, during which agonie, the other Diſciple ſhaketh the Siluer Bell continually. Thus when the agonie is paſt, and he lyeth quietly (yet without any ſence or feeling) the King, or ſome other in his ſtead, demandeth of him what he deſired to know: and the ſpirit anſwered him by the mouth of the rapte *Piaces*, with a direct and perfect anſwere to all points: Inſomuch that on a time certaine *Spaniards* being preſent at theſe myſteries with one of the Kings, and in the *Spaniſh* tongue demanding the *Piaces* of their Ships which they looked for out *Spaine*, the ſpirit anſwered in the *Indian* tongue, and told them what day and houre the Ships departed from *Spaine*, how many they were, and what they brought, without failing in any point. If he be alſo demanded of the eclipſe of the Sunne or Moone (which they greatly feare and abhorre) he giueth a perfect anſwer, and the like of tempeſts, famine, plentie, warre or peace, and ſuch other things. When all the demands are finiſhed, his Diſciples call him aloud, ringing the Siluer Bell at his eare, and blowing a certaine powder into his noſtrils, whereby he is raiſed as it were from a dead ſleepe, being yet ſomewhat heauy headed and faint a good while after. Thus being againe rewarded of the King with more bread, he departeth againe to the deſarts with his Diſciples. But ſince the Chriſtian faith hath beene diſperſed throughout the Iland, theſe diuelliſh practiſes haue ceaſed, and they of the members of the Diuell, are made the members of Chriſt by Baptiſme, forſaking the Diuell and his workes, with the vaine curioſity of deſire of knowledge of things to come, whereof for the moſt part it is better to be ignorant, then with vexation to know that which cannot be auoided.

Eclipſes and Prognoſtications.

Furthermore, in manie places of the firme Land, when any of the Kings dye, all his houſhold ſeruants, aſwell women as men, which haue continually ſerued him, kill themſelues, beleeuing as they are taught by the Diuell *Tuyra*, that they that kill themſelues when the King dyeth, goe with him to heauen, and ſerue him in the ſame place and office as they did before on the earth while he liued: and that all that refuſe ſo to doe, when after they dye by their naturall death or otherwiſe, their ſoules to die with their bodies, and to be diſſolued into ayre, and become nothing, as doe the ſoules of Hogges, Birds, Fiſhes, or other bruite beaſts: and that onely the other may enioy the priuiledge of immortalitie for euer, to ſerue the King in heauen. And of this falſe opinion commeth it, that they which ſowe corne, or ſet rootes for the Kings bread, and gather the ſame, are accuſtomed to kill themſelues, that they may enioy this priuiledge in heauen, and for the ſame purpoſe, cauſe a portion of the graine of *Maiz*, and a bundle of *Iucca* (whereof their bread is made) to be buried with them in their graues, that the ſame may ſerue them in heauen, if perhaps there ſhould lacke ſeedes to ſowe, and therefore they take this with them, to begin withall, vntill *Tuyra* (who maketh them all theſe faire promiſes) prouide them of greater quantitie. This haue I my ſelfe ſeene in the top of the Mountaines of *Guaturo*, where hauing in priſon the King of that Prouince (who rebelled from the obedience of your Maieſtie) and demanding of him to whom pertained thoſe Sepultures or graues which I ſaw in his houſe: he anſwered, that they were of certaine *Indians* which ſlew themſelues at the death of his Father. And becauſe they are oftentimes accuſtomed to bury great quantities of wrought gold with them, I cauſed two graues to be opened, wherein was nothing found but a veſſell full of the graine of *Maiz*, and a bundle of *Iucca*, as I haue ſaid. And demanding the cauſe hereof, of the King and the other *Indians*: they anſwered, that they that were buried there, were the labourers of the ground, and men skilfull in ſowing of ſeedes, and making of bread, and ſeruants to the Kings father, and to the end that their ſoules ſhould not dye with their bodies, they ſlue themſelues at the death of the King their Maſter, to liue with him in heauen, and to the intent that they might ſerue him there in the ſame office, they reſerued that *Maiz* and *Iucca*, to ſowe it in heauen. Whereunto I anſwered them in this manner, Behold how your *Tuyra* deceiueth you, and how all that he teacheth you is falſe. You ſee how in ſo long a time ſince they are dead, they haue not yet taken away this *Maiz* and *Iucca*, which is now putrified and worth nothing, and not like to be ſowen in heauen. To this the King replied, ſaying, In that they haue not taken it away, nor ſowen it in heauen, the cauſe is, that they chanced to finde enough there, by reaſon whereof they had no neede of this. To this errour many things were ſaid, which ſeemed of little force to remoue him from his falſe opinion, and eſpecially any ſuch as at that age are occupied of the Diuell, whom they paint of the ſelfe ſame forme and colour, as he appeared vnto them in diuers ſhapes and formes. They make alſo Images of Gold, Copper, and Wood, to the ſame ſimilitudes, in terrible ſhapes, and ſo variable, as the Painters are accuſtomed to paint them at the feete of Saint *Michael* the Archangell, or in any other place, where they paint them of moſt terrible portrature. Likewiſe when the diuell greatly intendeth to feare them, he threateneth to ſend them great tempeſts, which they call *Furacanas*, or *Hauracanas*, and are ſo vehement, that they ouerthrow many houſes, and great trees. And I haue ſeene in Mountaines, full of many and great trees, that for the ſpace of three quarters of a league the Mountaine hath beene ſubuerted, and the tree ouerthrowne, and plucked out of the earth with the rootes.

Reaſon why men kill themſelues to ſerue their Maſters in the other world.

Images of the Diuell.

Tempeſts.

The gulfe of *Vraba*, is diſtant from the Equinoctiall line, from an hundred and twentie, to a hundred

hundred and thirty leagues, and three quarters of a league, after that accompt of seuenteen leagues and a halfe for euerie degree from Pole to Pole: & thus for a little more or lesse, goeth all the coast. By reason wherof, in the Citie of *Santta Maria, Antiqua*, in *Dariena*, and in all that course of the foresaid gulfe of *Vraba*, at all times of the yeere the daies and nights are in manner of equall length: and if there be any difference betweene them by reason of this small distance from the Equinoctiall, it is so little, that in foure and twentie houres, making a naturall day, it cannot be perceiued but by the iudgement of speculatiue men, and such as vnderstand the sphere. From hence the North Starre is seene verie low.

Of diuers particular things, as Wormes, Serpents, Beasts, Foules, Trees, &c.

I Will first speake of certaine little and troublesome Beasts, which may seeme to be engendred of nature to molest and vexe men, to shew them and giue them to vnderstand, how small and vile a thing may offend & disquiet them, to the end that they may remember the principall end for the which they were created, that is, to know their maker. In manie parts of the firme Land, by the which as wel the Christians as the Indians do trauaile, there are such marishes & waters in the way, that they are faine to go without breeches among the hearbs & weeds, by reason wherof, certain small beasts or wormes (which they call *Garapates*) much like vnto Ticks, cleaue fast to their legs. These worms are as little as the pouder of beaten Salt, & cleaue so fast, that they can by no meanes be taken away, except the place be nointed with oyle: & after that the legs be nointed a while with oyle, or the other parts where these little Tickes are fastened, they scrape the place with a Knife, & so take them away. But the *Indians* which haue no oyle, smoake them, and burne them with fire, and abide great paines in taking them away by this means. Of other little Beasts which trouble men, and are engendred in their heads or other parts of their bodies, I say that the Christian men which trauaile into these parts, haue them but seldome times, and that not past one or two, and this also very seldome: For passing by the line of the Diameter where the compasse maketh difference of sailing by the winde called *Greco* (that is, North-east) and *Magistral* (that is, South-west) which is in the course of the Ilands of *Azori*, they saile but a little way following our voiage by the West, but that all the Lice which the Christians carrie with them, or are engendred in their heads, or other places of their bodies, die and vtterly consume by little and little, and are not engendred in *India*, except in the heads of little children in those parts, as well among the children of the *Christians* which are borne there, as also among the naturall *Indians*, who haue them commonly in their heads, and sometimes in other parts of their bodies, and especially they of the Prouince of *Cuena*, which is a region containing more then a hundred leagues in length, and embraceth the one and the other coast of the North Sea, and of the East. When these *Indians* are infected with this filthinesse, they dresse and cleanse one another: And they that exercise this, are for the most part women, who eate all that they take, and haue herein such dexterity by reason of their exercise, that our men cannot lightly attaine thereunto. There is also another thing greatly to be considered: and this is, how the *Christian* men, being there cleane from this filthinesse of *India*, as well in their heads as the rest of their bodies, yet when they returne to come againe into *Europe*, and begin to arriue in that place of the Ocean Sea where we said before that these Lice died and forsooke them, sodainely in their repassing by the same clime (as though these Lice had tarried for them in that place) they can by no meanes auoide them for the space of certaine daies, although they change their shirts two or three times in a day. These Lice are at the first as little as Nits, and grow by little and little, vntill they be of the bignesse that they are in *Spaine*. This haue I oftentimes proued, hauing now foure times passed the Ocean Sea by this voiage. Beside these wormes and vermin wherof we haue spoken, there is another little mischieuous worm, which we may number among the kindes of Fleas, this Pestilence the *Indians* call *Nigua*, and is much lesse then a Flea: it pearceth the flesh of a man, and so lanceth or cutteth the same (while in the meane time it can neither be seene nor taken) that from some it hath cut off their hands, and from other their feete, vntill the remedy was found to annoint the place with Oyle and scrape it with a Rasor. In the firme Land in golden Castile or *Beragua*, there are many Vipers like vnto them of *Spaine*: they that are bitten of them, dye in short space, for few liue to the fourth day, except present remedy. Of these, some are of lesse kinde then other, and haue their taile somewhat round, and leape in the aire to assaile men; and for this cause, some call this kinde of Vipers *Tyro*: their biting is most venomous, and for the most part incurable. One of them chanced to bite an *Indian* Maide which serued me in my house, to whom I caused the Surgians to minister their ordinary cure, but they could doe her no good, nor yet get one drop of blood out of her, but onely a yellow water, so that she died the third day for lacke of remedie, as the like hath chanced to diuers others. This Maide was of the age of foureteene yeares, and spake the *Spanish* tongue as if she had beene borne in *Castile*: she said that the Viper which bit her, on the foot, was two spans long, or little lesse: and that to bite her, she leapt in the aire for the space of more then six paces, as I haue heard the like of other credible persons.

Small Wormes troublesome.

Lice forsake them.

Lice finde them againe.

Nigua.

Vipers.

I haue

Adders. I haue alſo ſeene in the firme Land a kinde of Adders, very ſmall, and of ſeuen or eight foot long; theſe are ſo red, that in the night they appeare like burning coles, and in the day ſeeme as red as blood, theſe are alſo venemous, but not ſo much as the Vipers. There are other much leſſe and ſhorter, and blacker: theſe come out of the Riuers, and wander ſometimes farre on the Land, and are likewiſe venemous. There are alſo other Adders of a ruſſet colour: theſe are ſomewhat bigger then the Viper, and are hurtfull and venemous. There are likewiſe another ſort of many colours, and very long: of theſe I ſaw one in the yeare of Chriſt 1515. in the Iland of *Hiſpaniola*, neere vnto the Sea coaſts, at the foote of the Mountaines called *Pedernales*. When this Adder was ſlain I meaſured her, & found her to be more then twenty foot long, and ſomewhat more then a mans fiſt in bigneſſe: and although ſhe had three or foure deadly wounds with a Sword, yet dyed ſhe not, nor ſtunke the ſame day, in ſo much that her blood continued warme all that time. There are alſo in the Mariſhes and deſarts of the firme Land many other kindes of Lyſarts, Dragons, and diuers other kindes of Serpents, whereof I intend not here to ſpeak much, becauſe I haue more particularly entreated of theſe things in my generall hiſtorie of the Weſt *Indies*. There are alſo Spiders of marueilous bigneſſe, and I haue ſeene ſome with bodie and legges bigger then a mans hand extended euery way, and I once ſaw one of ſuch bigneſſe, that onely her body was as bigge as a Sparrow, and full of that Laune whereof they make their webbes: this was of a darke ruſſet colour, with eyes greater then the eyes of a Sparrow, they are venemous, and of terrible ſhape to behold. There are alſo Scorpions, and diuers other ſuch venomous wormes. Furthermore in the firme Land, there are many Toades, being verie noious and hurtfull by reaſon of their great multitude, they are not venemous, they are ſeene in great abundance in *Dareena*, where they are ſo big that when they die in the time of drought, the bones of ſome of them (and eſpecially the ribs) are of ſuch greatneſſe, that they appeare to be the bones of Cats, or of ſome other beaſts of the ſame bigneſſe. But as the waters diminiſh, & the moiſture conſumeth in the time of drought (as I haue ſaid) they alſo conſume therewith, vntill the yeare next following when the raine and moiſture encreaſe, at which time they are ſeene againe. Neuertheleſſe, at this preſent there is no ſuch quantitie of them, as was wont to be, by reaſon that as the Land is better cultured by the Chriſtians, as well by the felling of Woods and Shrubs, as alſo by the Paſture of Kine, Horſes, and other beaſts, ſo is it apparant that this poiſon diminiſheth daily, whereby that region becommeth more holeſome and pleaſant. Theſe Toades ſing after three or foure ſort, for ſome of them ſing pleaſantly, otherlike ours of *Spaine*, ſome alſo whiſtle, and other ſome make another manner of noiſe: they are likewiſe of diuers colours, as ſome greene, ſome ruſſet or gray, and ſome almoſt blacke, but of all ſorts they are great and filthie, and noious by reaſon of their great multitude, yet are they not venemous, as I haue ſaid.

Dragons.

Spiders huge.

Toades.

Their renuing.

Singing.

Crabs or rather Tortoiſes. There are alſo a ſtrange kinde of Crabbes, which come forth of certaine holes of the earth, that they themſelues make: the head and bodie of theſe make one round thing, much like to the hood of a Faulcon, hauing foure feete comming out of the one ſide, and as manie out of the other: they haue alſo two mouthes, like vnto a paire of ſmall Pincers, the one bigger then the other, wherewith they bite, but doe no great hurt, becauſe they are not venemous: their skin and bodie is ſmooth, and thinne, as is the skinne of a man, ſauing that it is ſomewhat harder; their colour is ruſſet, or white, or blew, and walke ſidelong, they are verie good to be eaten, in ſo much that the Chriſtians trauailing by the firme Land, haue beene greatly nouriſhed by them, becauſe they are found in manner euerie where: in ſhape and forme they are much like vnto the Crabbe which we paint for the ſigne Cancer, and like vnto thoſe which are found in *Spaine* in *Andaluſia* in the Riuer *Guadalchiber*, where it entreth into the Sea, and in the Sea coaſts there about, ſauing that theſe are of the water, and the other of the land: they are ſometimes hurtfull, ſo that they that eate of them dye, but this chanceth onely when they haue eaten any venomous thing, or of the venemous apples wherewith the Caniball archers poiſon their arrowes, whereof I will ſpeake hereafter, and for this cauſe the Chriſtians take heede how they eate of theſe Crabbes, if they finde them neere vnto the ſaid apple trees. Furthermore in theſe *Indies*, as well in the firme land, as in the Ilands, there is found a kinde of Serpents, which they call *Yuanas*, which ſome call *Iuannas*, theſe are terrible and fearefull to ſight, and yet not hurtfull, they are verie delicate to be eaten, and it is not yet knowne whether they be beaſts of the land, or fiſhes, becauſe they liue in the water, and wander in the woods, and on the land: they haue foure feet, and are commonly bigger then Connies, and in ſome places bigger then Otters, with tailes like Lyſarts or Eutes: their skinne is ſpotted, and of the ſame kinde of ſmoothneſſe or bareneſſe, although of diuers colours: vpon the ridge of their backes, they haue manie long prickes, their teeth are very ſharpe, and eſpecially their fangs or dogge teeth, their throates are long and large, reaching from their beards to their breſts, of the like skinne to the reſidue of their bodies: they are dumbe, and haue no voice, or make any noiſe, or crie, although they be kept tied to the foote of a cheſt, or any other thing, for the ſpace of twentie or fiue and twentie daies, without any thing to eate or drinke, except they giue them now and then a little of the bread of *Cazabi*, or ſome ſuch other thing: they haue foure feete, and their fore-feete as long as a mans finger, with clawes like the clawes of a bird, but weaker, and ſuch as cannot graſple or take hold of any thing:

Serpents called *Iuanni*.

Digitized by Google

thing: they are much better to be eaten then to behold, for few that see them, will haue desire to eate of them, by reason of their horrible shape, except such as haue beene accustomed to the beasts of these regions, which are more horrible and fearefull, as this is not, but onely in apparence: their flesh is of much better taste then the flesh of Connies, and more holesome, for it hurteth none but onely such as haue had the French poxe, in so much, that if they haue beene touched of that infirmitie, although they haue beene whole of long time, neuertheless they feele hurt, and complaine of the eating of these *Iuannas*, as hath beene oftentimes proued by experience. Note.

There are found in the firme land certaine birds, so little, that the whole bodie of one of them is no bigger then the top of the biggest finger of a mans hand, and yet is the bare body without the feathers not halfe so bigge: This Bird, beside her littlenesse, is of such velocitie and swiftnesse in flying, that who so seeth her flying in the aire, cannot see her flap or beate her wings after any other sort then doe the Dorres, or humble Bees, or Beetels: so that there is no man that seeth her flye, that would thinke her to be any other then a Dorre: they make their nests according to the proportion of their bignesse, and I haue seene that one of these Birds with her nest put in a paire of gold weights altogether, hath waide no more then 2. *Tomini*, which are in poise 24 graines, with the feathers, without the which she should haue waied somewhat lesse. And doubtlesse, when I consider the finenesse of the clawes and feete of these Birds, I know not whereunto I may better liken them, then to the little birds which the lymners of bookes are accustomed to paint on the margent of Church Bookes, and other Bookes of Diuine Seruice. Their Feathers are of manie faire colours, as golden, yellow, and greene, beside other variable colours: their beake is verie long for the proportion of their bodies, and as fine and subtile as a sowing needle: they are verie hardy, so that when they see a man clime the tree where they haue their nests, they flye at his face, and strike him in the eyes, comming, going, and returning with such swiftnesse, that no man would lightly beleeue it, that hath not seene it: and certainly these birds are so little, that I durst not haue made mention hereof, if it were not that diuers others which haue seene them as well as I, can beare witnesse of my saying: they make their nests of flocks and cotten, whereof there is great plentie in these regions, and serueth well for their purpose. But as touching the Birds, Foules, and Beasts of these *Indies*, because they are innumerable, both little and great, I intend not to speake much here, because I haue spoken more largely hereof in my generall Historie of the *Indies*. There is another kinde of Beasts seene in the firme Land, which seemeth very strange and marueilous to the Christian men to behold, and much differing from all other Beasts which haue beene seene in other parts of the world: these Beasts are called *Bardati*, and are foure footed, hauing their taile and all the rest of their bodies couered onely with a skin like the coperture of a barbed horse, or the checkered skin of a Lisart or Crocodile, of colour betweene white and russet, inclining somewhat more to white. This Beast is of forme and shape much like to a barbed horse, with his barbes and flankets in all points, and from vnder that which is the barbe and coperture, the taile commeth forth, and the feete in their place, the necke also and the eares in their parts, and in fine all things in like sort as in a barbed courser: they are of the bigneſse of one of these common Dogges, they are not hurtfull, they are filthie, and haue their habitation in certaine hillockes of the earth, where digging with their feete, they make their dens verie deepe, and the holes thereof, in like manner as doe Connies: they are very excellent to be eaten, and are taken with nets, and some also killed with Crosbowes: they are likewise taken oftentimes when the Husbandmen burne the stubble in sowing time, or to renew the herbage for Kine and other Beasts. I haue oftentimes eaten of their flesh, which seemeth to me of better taste then Kiddes flesh, and holesome to be eaten. And if these Beasts had euer beene seene in these parts of the world, where the first barbed Horses had their originall, no man would iudge but that the forme and fashion of the coperture of Horses furnished for the warres, was first deuised by the sight of these Beasts. Small Birds. *Tomineios.* *Bardati* or *Armadillos*; a kinde of Mole.

There is also in the firme Land another beast, called *Orso Formigaro*, that is, the *Ante-beare*. This beast in haire and colour, is much like to the Beare of *Spaine*, and in manner of the same making, saue that he hath a much longer snout, and is of euill sight: they are oftentimes taken only with staues, without any other weapon, and are not hurtfull, they are also taken with Dogges, because they are not naturally armed, although they bite somewhat, they are found for the most part about and neere to the hillockes where are great abundance of Antes. For in these Regions is ingendred a certaine kind of Antes, very little and blacke, in the Fields and Plaines whereas grow no Trees, where by the instinct of Nature these Antes separate themselues to ingender farre from the Woods for feare of these Beares, the which because they are fearefull, vile, and vnarmed (as I haue said) they keepe euer in places full of Trees, vntill very famine and necessitie, or the great desire that they haue to feede on these Antes, cause them to come out of the Woods to hunt for them: these Antes make a hillocke of earth to the height of a man, or somewhat more or lesse, and as bigge as a great Chest, and sometimes as bigge as a But or a Hogshead, and as hard as a stone, so that they seeme as though they were stones, set vp to limit the ends and confines of certaine Lands. Within these hillockes, made of most hard earth, Beares. Antes.

are

are innumerable and infinite little Ants, the which may be gathered by buſhels when the hillock is broken: the which when it is ſometimes moyſted by raine, and then dried againe by the heat of the Sunne, it breaketh, and hath certaine ſmall rifts, as little and ſubtill as the edge of a Knife, and it ſeemeth that Nature hath giuen ſenſe to theſe Antes to find ſuch a matter of earth, where-

Iohſon mentions the like neere *Gambra*.

with they may make the ſaid hillocke of ſuch hardneſſe, that it may ſeeme a ſtrong pauement made of lime and ſtone: and whereas I haue prooued and cauſed ſome of them to be broken, I haue found them of ſuch hardneſſe, as if I had not ſeene, I could not haue beleeued, inſomuch that they could ſcarſly be broken with Pikes of Iron, ſo ſtrong Fortreſſes doe theſe little beaſts make for their ſafegard againſt their aduerſarie the Beare, who is chiefly nouriſhed by them, and giuen them as an enemie, according to the common Prouerbe which ſaith, *Non è alcuna perſona ſi libera, a chi manchi il ſuo Bargello*, that is, There is no man ſo free, that hath not his Perſecutor or priue Enemie. And here when I conſider the maruellous prouidence which Nature hath giuen to theſe little bodies, I call to remembrance the wittie Sentence of *Plinie*, where ſpeaking of ſuch little beaſts, he ſaith thus, *Why doe we maruell at the Towre-bearing ſhoulders of Elephants, and not rather where Nature hath placed ſo many ſenſes and ſuch induſtry in ſuch little bodies? Where is Hearing, Smelling, Seeing, and Feeling, yea, where are the Veines and Arteries (without which no beaſt can liue or moue) in theſe ſo little bodies, wherof ſome are ſo ſmall that their whole bodies can ſcarſly bee ſeene of our eyes: What ſhall we then ſay of the parts of the ſame? Yet euen among theſe there are many of ſuch ſagacitie and induſtry, as the like is not ſeene in beaſts of greater quantitie, no nor yet in man, &c.*

Great wonders in leaſt creatures.

But to returne to the Hiſtorie. This Enemy which nature hath giuen to theſe little Beaſts, vſeth this manner to aſſaile them: When he reſorteth to the Hillocke where the Antes lye hid as in their fortreſſe, he putteth his tongue to one of the rifts whereof we haue ſpoken, beeing as ſubtill as the edge of a Sword, and therewith continuall licking, maketh the place moiſt, the foame and froth of his mouth being of ſuch propertie, that by continuall licking the place, it inlargeth the rift in ſuch ſort by little and little, that at the length he eaſily putteth in his tongue, which he hath very long and thinne, and much diſproportionate to his bodie, and when he hath thus made free paſſage for his tongue in the hillocke, to put it eaſily in and out at his pleaſure, then he thruſteth it into the hole as farre as he can reach, and ſo letteth it reſt a good ſpace, vntill a great quantitie of the Antes (whoſe nature reioyceth in heat and moyſture) haue laden his tongue, and as many as he can containe in the hollowneſſe thereof, at which time hee ſuddenly draweth it into his mouth, and eateth them, and returneth againe to the ſame practice immediatly, vntill hee haue eaten as many as him liſteth, or as long as hee can reach any with his tongue. The fleſh of this Beaſt, is filthy and vnſauourie, but by reaſon of the extreame ſhifts and neceſſitie that the Chriſtian men were put to at their firſt comming into theſe parts, they were inforced to prooue all things, and ſo fell to the eating of theſe Beaſts: but when they had found more delicate meates, they fell into hatred with this. Theſe Antes haue the appearance of the place of their entrance into the hillocke, vnder the ground, and this at ſo little a hole, that it could hardly bee found, if certaine of them were not ſeene to paſſe in and out: but by this way the Beares could haue no ſuch power to hurt them as aboue at the ſaid rifts, as I haue ſaid.

A ſtrange beaſt which ſeemeth a kind of Camelion.

There is anoother ſtrange beaſt, which by a name of contrary effect, the *Spaniards* call *Cagnuolo leggiero*, that is, *The Light Dogge*, whereas it is one of the ſloweſt beaſts in the World, and ſo heauie and dull in mooving, that it can ſcarſly goe fiftie paſes in a whole day: theſe beaſts are in the firme Land, and are very ſtrange to behold for the diſproportion that they haue to all other beaſts: they are about two ſpans in length when they are growne to their full bigneſſe, but when they are very young, they are ſomewhat more groſſe then long: they haue foure ſubtill feet, and in euery of them foure clawes like vnto Birds, and ioyned together, yet are neither their clawes or their feet able to ſuſteine their bodies from the ground, by reaſon whereof, and by the heauineſſe of their bodies, they draw their bellies on the ground: their neckes are high and ſtreight, and all equall like the peſtle of a Morter, which is altogether equall euen vnto the top, without making any proportion or ſimilitude of a head, or any difference except in the noddle, and in the tops of their neckes: they haue very round faces much like vnto Owles, and haue a marke of their owne haire after the manner of a Circle, which maketh their faces ſeeme ſomewhat more long then large: they haue ſmall eyes and round, & noſtrils like vnto Monkeyes: they haue little mouthes, and mooue their neckes from one ſide to another, as though they were aſtoniſhed: their chiefe deſire and delight is to cleaue and ſticke faſt vnto Trees, or ſome other thing whereby they may climbe aloft, and therefore for the moſt part, theſe beaſts are found vpon Trees, whereunto cleauing faſt, they mount vp by little and little, ſtaying themſelues by their long clawes: the colour of their haire is betweene ruſſet and white, and of the proper colour of the haire of a Weſell: they haue no tayles, and their voice is much differing from other beaſts, for they ſing onely in the night, and that continually from time to time, ſinging euer ſixe notes one higher then another, ſo falling with the ſame, that the firſt note is the higheſt, and the other in a baſer tune, as if a man ſhould ſay, *La, ſol, fa, mi, re, vt*, ſo this beaſt ſaith, *Ha, ha, ha, ha, ha, ha.*

And

Digitized by Google

And doubtleſſe, it ſeemeth to me, that as I haue ſaid in the Chapter of the beaſt called *Bardati*, that thoſe beaſts might be the originall and document to imbarbe Horſes: euen ſo, the firſt inuention of Muſicke might ſeeme by the hearing of this beaſt, to haue the firſt principles of that Science, rather then by any other thing in the World. But now to returne to the Hiſtorie. I ſay that in a ſhort ſpace after this Beaſt hath ſung, and hath pauſed a while, ſhee returneth againe to the ſelfe-ſame Song, and doth this onely in the night, and not in the day: By reaſon whereof, and alſo becauſe of her euill ſight, I thinke her to be a night Beaſt, and the friend of darkneſſe. Sometimes the Chriſtian men find theſe Beaſts, and bring them home to their houſes, where alſo they creepe all about with their naturall ſlowneſſe, inſomuch that neither for threatning or pricking they will mooue any faſter then their naturall and accuſtomed pace. And if they finde any Trees, they creepe thither immediately, and mount to the top of the higheſt branch thereof, where they remayne continually for the ſpace of eight, or ten, or twentie dayes, without eating of any thing, as farre as any man can iudge. And whereas I my ſelfe haue kept them in my houſe, I could neuer perceiue other but that they liue onely of Aire: and of the ſame opinion, are in manner all men of thoſe Regions, becauſe they haue neuer ſeene them eate any thing, but euer turne their heads and mouthes toward that part where the wind bloweth moſt, whereby may be conſidered that they take moſt pleaſure in the Ayre. They bite not, nor yet can bite, hauing very little mouthes: they are not venemous or noyous any way, but altogether brutiſh, and vtterly vnprofitable, and without commoditie yet knowne to men, ſauing onely to mooue their minds to contemplate the infinite power of God, who delighteth in the varietie of creatures, whereby appeareth the power of his incomprehenſible wiſdome and maieſtie, ſo farre to exceed the capacitie of mans vnderſtanding.

In theſe Regions there are likewiſe found certaine Fowles or Birds, which the *Indians* call *Alcatraz*: theſe are much bigger then Geeſe, the greateſt part of their feathers are of ruſſet colour, and in ſome parts yellow, their bils or beakes are of two ſpannes in length, and very large neere to the head, and growing ſmall toward the point, they haue great and large throates, and are much like to a Fowle which I ſaw in *Flanders*, in *Bruſſels* in your Maieſties Palace, which the *Flemmings* call *Haina*: And I remember that when your Maieſtie dined one day in your great Hall, there was brought to your Maieſties preſence a Caldron of water with certaine fiſhes aliue, which the ſaid fowle did eat vp whole, and I think verily that that fowle was a fowle of the Sea, becauſe ſhe had feet like fowles of the water, as haue alſo theſe *Alcatrazi*, which are likewiſe fowles of the Sea, and of ſuch greatneſſe, that I haue ſeene a whole coate of a man put into the throats of one of them in *Panama*, in the yeere 1521. And foraſmuch as in that Coaſt of *Panama*, there paſſeth and flyeth a great multitude of theſe *Alcatrazi*, being a thing very notable, I will declare the manner hereof, as not onely I, but alſo diuers other now preſent in your Maieſties Court haue oftentimes ſeene. Your Maieſtie ſhall therefore vnderſtand, that in this place (as I haue ſaid before) the Sea of *Sur* riſeth and falleth two leagues and more from ſixe houres to ſixe houre: ſo that when it increaſeth, the water of the Sea arriueth ſo neere to the houſes of *Panama*, as doth our Sea (called *Mare Mediterraneum*) in *Barzalona*, or in *Naples*: and when the ſaid increaſing of the Sea commeth, there commeth alſo therewith ſuch a multitude of ſmall fiſhes called *Sardines*, that it is ſo maruellous a thing to behold, that no man would beleeue it that hath not ſeene it. Inſomuch that the *Cacique* (that is) the King of that Land, at ſuch time as I dwelt there, was bound daily, as he was commanded by your Maieſties Gouernour, to bring ordinarily three Canoas or Barkes full of the ſaid *Sardines*, and to vnlade the ſame in the Market place, which were afterward by the Ruler of the Citie diuided among the Chriſtian men, without any coſt or charge to any of them: Inſomuch that if the people had beene a much greater multitude then they were, and as many as are at this preſent in *Toledo*, or more, and had none other thing to liue by, they might haue beene ſufficiently ſuſteined by theſe *Sardines*, beſide the ouerplus which ſhould haue remayned. But to returne to the fowles, whereof wee haue ſpoken. As the Sea commeth, and the *Sardines* with the ſame, euen ſo likewiſe come the ſaid *Alcatrazzi* therewith, and flye continually ouer it in ſuch a multitude, that they appeare to couer the vpper part or floore of the water, and thus continue in mounting and falling from the ayre to the water, and from the water to the ayre, during all the time of their fiſhing: and aſſoone as they haue taken any of theſe *Sardines*, they flye aboue the waters, and eate them incontinently, and ſuddenly returne againe to the water for more, continuing thus courſe by courſe without ceaſing: in like manner when the Sea falleth, they follow their fiſhing as I haue ſaid. There goeth alſo in the company of theſe fowles another kind of fowles, called *Coda inforcata*, (that is) the *forked tayle*, whereof I haue made mention before, and aſſoone as the *Alcatraz* mounteth from the water with her prey of the *Sardines*, ſuddenly this *Coda inforcata* giueth her ſo many ſtrokes, and ſo perſecuteth her, that ſhee cauſeth her to let fall the *Sardines* which ſhee hath in her mouth: the which aſſoone as they are fallen, and before they yet touch the water, the *Coda inforcata* catcheth them euen in the fall, in ſuch ſort, that it is a great pleaſure to behold the combat betweene them all the day long. The number of theſe *Alcatrazzi* is ſuch, that the Chriſtian men are accuſtomed to ſend to certaine Ilands and Rockes which are neere about *Panama*,

Foules and Birds.

Alcatraz.

Panama.

Pilchards.

nama, with their Boates or Barkes to take these *Alcatrazzi*, while they are yet young, and cannot flie, and kill as many of them with staues as they will, vntill they haue therewith laden their Barkes or Canoas: these young ones are so fat and well fed, that they cannot bee eaten, and are taken for none other intent, but onely to make Grease for Candles to burne in the night, for the which purpose it serueth very well, and giueth a cleere light, and burneth easily. After this manner, and for this purpose, innumerable of them are killed: and yet it seemeth that the number of them that fish for *Sardines* doe daily increase. There are other fowles called *Passere sempie*, that is, simple Sparowes: these are somewhat lesse then Seamewes, and haue their feet like vnto great Malards, and stand in the water sometimes, and when the ships saile fiftie or a hundred leagues about the Ilands, these fowles beholding the ships comming toward them, breake their flight, and fall downe vpon the Saile yards, Masts, and Cables thereof, and are so simple and foolish, that they tarrie vntill they may easily bee taken with mens hands, and were therefore called of the Mariners simple Sparrowes: they are blacke, and vpon their blacke, haue their head and shoulders of feathers of a darke russet colour: they are not good to bee eaten, although the Mariners haue sometimes beene inforced to eate them. There is another kind of Birds in the firme Land, which the *Christians* call *Picuti*, because they haue very great beakes, in respect of the littlenesse of their bodies, for their beakes are very heauie, and weigh more then their whole bodies beside: these Birds are no bigger then Quailes, but haue a much greater bushment of feathers insomuch that their feathers are more then their bodies: their feathers are very faire, and of many variable colours; their beakes are a quarter of a yard in length or more, and bending downe toward the Earth, and three fingers broad neere vnto the head: their tongues are very quils, wherewith they make a great hissing: they make holes in Trees with their beakes, in the which they make their Nests. And surely these Birds are maruellous to behold, for the great difference which they haue from all other Birds that I haue seene, aswell for their tongues (which are quils as I haue said) as also for the strangenesse of their sight and disproportion of their great beakes, in respect of the rest of their bodies. There are no Birds found that prouide better for the safegard of their young in the time of their breeding, to be without danger of wilde Cats, that they enter not into their Nests to destroy their Egges or young, and this aswell by the strange manner of building their Nests, as also by their owne defence: and therefore when they perceiue that the Cats approach toward them, they enter into their Nests, and holding their beakes toward the entrance of the same, stand at their defence, and so vexe the Cats, that they cause them to leaue their enterprize.

Passere sempie.

Picuti, Birds with bils heauier then bodies.

There are also other Birds or Sparrowes, which the *Christians* by contrary effect call *Matti*, that is *Fooles*: Whereas neuertheless there is no Bird that sheweth more wit and craft in defending her young from perill. These Birds are little, and in manner blacke, and somewhat bigger then our Thrushes: they haue certaine white feathers in their neckes, and the like sagacitie or sharpnesse of sense as haue the Birds or Pyes called *Gazzuole*: they seldome times light vpon the earth: they make their Nests in Trees separated from other, because the Monkeyes are accustomed to leape from Tree to Tree, not descending to the ground for feare of other beasts, except when they are enforced by thirst to come downe to drinke, at such times as they are sure not to be molested, and for this cause doe not these Birds make their Nests but in Trees farre diuided from other, they make them of a Cubit in length, or more, after the manner of bagges or little sackes, large at the bottome, and growing narrower and narrower toward the mouth, whereby they are fastened, hauing the hole whereat they enter into the sacke, of such bignesse as may onely suffice to receiue them. And to the end that the Monkeyes may not deuoure their young, if they chance to mount vpon the Trees where they haue their Nests, they vse another craft, which is, to make their Nests in thicke branches of Trees, and to defend the same with sharpe and strong thornes, implicate and set in such order, that no man is able to make the like, so that the Monkeyes can by no meanes put their legges into the hole of the Nest to take out the young Birds, aswell for the sharpnesse of the thornes, as also for the depth of the Nests, in the bottome whereof, the young Birds rest without danger of their enemie: for some of their Nests being three or foure spans in length, the leg of the Monkey cannot reach to the bottome thereof. They vse also another policie, which is, to make many of their Nests in one Tree, the which they doe for one of these two causes: that is, that either of their owne naturall disposition they are accustomed to goe in great multitudes, and reioyce in the company of their owne generation, as doe the Birds which we call Stares, or else to the intent that if it should so chance that the Monkeyes should climbe the Trees where they make their Nests, they might bee a greater company to resist and molest the Monkeyes, at whose approach they make a fearefull and terrible cry, whereby the Monkeyes are put to flight. Furthermore, in the firme Land, and in the Ilands, there are certaine Birds called *Piche*, or *Gazzuole*, somewhat like vnto those which we call Wood-wals, or Wood-peckes, being lesse then ours of *Spaine*: these are altogether blacke, and goe hopping and leaping, their beakes are also blacke, and of the same fashion as are the Popingiayes beakes, they haue long tayles, and are somewhat bigger then Stares.

Foolish Sparowes, wisely prouident.

Gazzuole.

There

There are other Birds called *Pintadelli*, which are like vnto certaine greene Birds, which the *Itrlians* call *Fringuelli*, and are of seuen colours: these Birds for feare of the Monkeyes, are euer wont to make their Nests ouer the bankes of Riuers, or the Sea, where the branches of Trees so reach ouer the water, that with a little weight they may bow downe to the water: their Nests are made so neere the tops of the branches, that when the Monkeyes come thereon, the branches bend toward the water, and the Monkeyes turne backe againe for feare of falling: For although no beast in the World be more malicious then this, yet whereas the most part of beasts are naturally inclined to swimme, this Monkey hath no manner of aptnesse thereunto, and is therefore soone drowned or strangled in the water, and by a priuie sense of Nature feareth the danger which he cannot escape. These Birds make their Nests in such sort, that although they bee wet and filled with water, yet doe they so suddenly rise vp againe, that the young Birds are not thereby hurt or drowned. There are also many Nightingales, and other Birds which sing maruellously with great melodie and difference in singing: these Birds are of maruellous diuers colours the one from the other, some are altogether yellow, and some other of so excellent, delectable, and high a colour, as it were a Rubie, other are also of diuers and variable colours, some of few colours, and other some all of one colour, being all so faire and beautifull, that in brightnesse and shining they excell all that are in *Spaine*, or *Italie*, or other Prouinces of *Europe*. Many of these are taken with Nets, lime-twigs, and Springes of diuers sorts. Diuers other sorts of great fowles like vnto Eagles, and such other as liue of prey, are found in the firme Land, of such diuersitie, that it is in manner impossible to describe them all particularly: and forasmuch as I haue more largely intreated hereof in my generall Historie of the *Indies*, I thinke it not requisite heere to make any further mention of the same.

Pintadelli.

Great Fowles.

Of Trees, Fruits, and Plants.

THere is both in the firme Land and the Ilands a certaine Tree called *Coco*, being a kind of Date Trees, and hauing their leaues of the selfesame greatnesse, as haue the Date Trees which beare Dates, but differ much in their growing, for the leaues of this *Coco* grow out of the trunkes of the Tree, as doe the fingers out of the hand, wreathing themselues one within another, and so spreading abroad: these Trees are high, and are found in great plentie in the Coast of the Sea of *Sur*, in the Prouince of *Cacique Chiman*. These Date Trees bring forth a Fruit after this sort: being altogether vnite as it groweth on the Tree, it is of greater circumference then the head of a man, and from the superficiall part to the middest, which is the fruit, it is inuolued and couered with many Webs much like vnto those Hirds of Towe which they vse in *Andalusia*. Of this Towe or Web, the East *Indians* make a certaine kind of Cloth, of three or foure sorts, and Cordes for the Sayles of Ships: but in these *Indies* of your Maiestie, they passe not for these Coards, or this Cloth that may be made of the Fruit of *Coco*, by reason of the great plentie that they haue of the Bombage or Cotton of Gossampine Trees. The Fruit which is in the middest of the said Tow, is (as I haue said) as bigge as a mans fist, and sometimes twice as bigge, and more: It in forme like vnto a Walnut, or some other round thing, somewhat more long then large, and very hard, the rinde or barke hereof, is as thicke as the circle of Letters of a Riall of Plate, and within, there cleaueth fast to the rinde of the Nut a carnositie or substance of coornell, of the thicknesse of halfe a finger, or of the least finger of the hand, and is very white, like vnto a faire Almond, and of better taste and more pleasant. When this Fruit is chewed, there remayne certaine crummes, as doe the like of Almonds: Yet if it be swallowed downe, it is not vnpleasant. For although that after the iuyce or moysture be gone downe the throat before the said crummes be swallowed, the rest which is eaten, seeme somewhat sharpe or sowre, yet doth it not so greatly offend the taste, as to be cast away. While this *Cocus* is yet fresh and newly taken from the Tree, they vse not to eate of the said carnositie and Fruit, but first beating it very much, and then strayning it, they draw a Milke thereof, much better and sweeter then is the Milke of Beasts, and of much substance, the which the Christian men of those Regions put in the Tartes or Cakes which they make of the grain of *Maiz* whereof they make their Bread, or in other Bread as we put Bread in Pottage: so that by reason of the said Milke of *Cocus*, the Tartes are more excellent to be eaten without offence to the stomacke: they are so pleasant to the taste, and leaue it aswell satisfied as though it had beene delighted with many delicate Dishes. But to proceed further, your Maiestie shall vnderstand, that in the place of the stone or coornell, there is in the middest of the said carnositie a void place, which neuertheless is full of a most cleere and excellent water, in such quantitie as may fill a great Egge shell, or more, or lesse, according to the bignesse of the *Cocos*, the which water surely, is the most substantiall, excellent and precious to bee drunke, that may be found in the World: insomuch that in the moment when it passeth the palate of the mouth, and beginneth to goe downe the throate, it seemeth that from the sole of the foot, to the crowne of the head, there is no part of the bodie but that feeleth great comfort thereby: as it is doubtlesse one of the most excellent things that may bee tasted vpon the earth, and such as I am not able by writing or tongue to expresse. And to proceed yet further, I say that

Cocos.

I haue seene one of these Fruits opened, the which when it was whole, if it were shaken the water was hard shogge therein as it were in a Bottle, but in time it consumed & was partly congealed into a salt substance

Digitized by Google

when the meate of this fruit is taken from the Vessell thereof, the vessell remayneth as faire and neate as though it were polished, and is without of colour inclining toward black, and shineth or glistereth very faire, and is within of no lesse delicatenesse. Such as haue accustomed to drinke in these Vessels, and haue beene troubled with the Disease called the fretting of the guts, say that they haue by experience found it a maruellous remedie against that Disease, and that it breaketh the stone, and prouoketh vrine. This fruit was called *Coca*, for this cause, that when it is taken from the place where it cleaueth fast to the Tree, there are seene two holes, and aboue them two other naturall holes, which altogether doe represent the gesture and figure of the Cattes called *Mummons*, that is, Monkeyes, when they cry, which cry the *Indians* call *Coca*, but in very deed, this Tree is a kind of Date Tree, and hath the same effect to beale fretting of the guts, that *Plinie* describeth all kinde of Date trees to haue. There are furthermore in the firme Land, Trees of such bignesse that I dare not speake thereof, but in place where I haue so many witnesses which haue seene the same as well as I. I say therefore, that a league from *Dariena* or the Citie of *Sancta Maria Antiqua*, there passeth a Riuer very large and deepe, which is called *Cuti*, ouer the which the *Indians* laid a great Tree, so trauersing the same, that it was in the stead of a bridge, the which I my selfe with diuers other that are at this present in your Maiesties Court, haue oftentimes passed ouer. And forasmuch as the said Tree had lyen long there, and by the great weight thereof was so shrunke downeward, and partly couered with water, that none could passe ouer it, but were wet to the knee, I being then in the yeere 1522. the officiall or Iustice in that Citie at your Maiesties appointment, caused another great Tree to bee laid in that place, which in like manner trauersed the Riuer, and reached more then fiftie foote ouer the further side: This Tree was exceeding great, and rested aboue the water more then two Cubits, in the fall, it cast downe all such other Trees as were within the reach thereof, and discouered certaine bynes, which were so laden with blacke Grapes of pleasant taste, that they satisfied more then fiftie persons which ate their fill thereof. This Tree, in the thickest part thereof, was more then sixteene spannes thicke, and was neuertheless but little in respect of many other trees which are found in this Prouince. For the *Indians* of the Coast and Prouince of *Cartagenia*, make Barkes or Boates thereof (which they call *Canoas*) of such bignesse, beeing all one whole Tree, that some containe a hundred men, some a hundred and thirtie, and some more, hauing neuertheless such void space within the same, that there is left sufficient roome to passe to and fro throughout all the *Canoas*. Some of these are so large, beside the length, that they conteine more then tenne or twelue spannes in breadth, and saile with two sailes, as with the Master saile and the trincket, which they make of very good Cotton. The greatest Trees that I haue seene in these parts, or in any other Regions, was in the Prouince of *Guaturo*, the King whereof rebelling from the obedience of your Maiestie, was pursued by me, and taken Prisoner: at which time I with my company, passed ouer a very high Mountaine, full of great Trees, in the top whereof, we found one Tree, which had three roots, or rather diuisions of the roote aboue the Earth, in forme of a Triangle, or Treuet, so that betweene euery foot of this Triangle or three feet, there was a space of twentie foot betweene euery foot, and this of such height aboue the Earth, that a laden Cart of those wherewith they are accustomed to bring home Corne in time of Haruest in the Kingdome of *Toledo* in *Spaine*, might easily haue passed through euery of those partitions or windoores which were betweene the three feet of the said Tree. From the Earth vpward to the trunke of the Tree, the open places of the diuisions betweene these three feete, were of such height from the ground, that a Footman with a Iauelin was not able to reach the place where the said feet ioyned together in the trunke or bodie of the Tree, which grew of great height in one piece, and one whole bodie, or euer it spread in branches, which it did not before it exceeded in height the Towre of Saint *Romane* in the Citie of *Toledo*: from which height and vpward, it spread very great and strong branches. Among certaine *Spaniards* which climbed this Tree, I my selfe was one, and when I was ascended to the place where it begunne to spread the branches, it was a maruellous thing to behold a great Countrey of such Trees toward the Prouince of *Abrayme*. This Tree was easie to climbe, by reason of certaine *Besuchi*, (whereof I haue spoken before) which grew wreathed about the Tree, in such sort that they seemed to make a scaling Ladder. Euery of the foresaid three feet which bore the bodie of the Tree, was twentie spannes in thickenesse, and where they ioyned altogether about the Trunke or bodie of the Tree, the principall Trunke was more then fortie and fiue spannes in circuite. I named the Mountaine where these Trees grow, the Mountaine of *three footed Trees*. And this which I haue now declared, was seene of all the company that was there with mee when (as I haue said before) I took King *Guaturo* Prisoner in the yeere 1522. Many things more might here be spoken as touching this matter, as also how there are many other excellent Trees found of diuers sorts and difference, as sweet Cedar Trees, blacke Date Trees, and many other, of the which some are so heauie that they cannot float about the water, but sinke immediately to the bottome, and other againe as light as a Corke. As touching all which things I haue written more largely in my generall Historie of the *Indies*.

Good against the wind and stone Collick.

Great Trees.

Great Canoas

A maruellous Tree.

And for as much as at this present I haue entred to entreate of Trees, before I passe any fur-

ther

ther to other things, I will declare the manner how the *Indians* kindle fire, onely with Wood and without fire, the manner whereof is this. They take a peece of wood, of two ſpannes in length, as biggeas the leaſt finger of a mans hand, or as an arrow well pulliſhed, and of a ſtrong kinde of wood which they keepe onely for this purpoſe: and where they intend to kindle any fire, they take two other peeces of wood, of the drieſt and lighteſt that they can finde, and binde them faſt together one with another, as cloſe as two fingers ioyned: in the middeſt or between theſe, they put the point of the firſt little ſtaffe made of hard and ſtrong wood, which they hold in their hands by the top thereof, and turne or rubbe it round about continually in one place betweene the two peeces of wood which lye bound together vpon the earth, which by that vnceſſant rubbing and chafing, are in ſhort ſpace kindled, and take fire. I haue alſo thought good here to ſpeake ſomewhat of ſuch things as come to my remembrance of certaine Trees which are found in this Land, and ſometime alſo the like haue beene ſeene in *Spaine*. Theſe are certaine putrified trunkes, which haue lien ſo long rotting on the earth, that they are very white, and ſhine in the night like burning firebrands, and when the *Spaniards* finde any of this wood, and intend priuily in the night to make warre and inuade any Prouince, when caſe ſo requireth that it ſhall be neceſſarie to goe in the night, in ſuch places where they know not the way, the formoſt Chriſtian man which guideth the way, aſſociate with an *Indian* to direct him therein, taketh a little ſtarre of the ſaid wood, which he putteth in his cap, hanging behinde on his ſhoulders, by the light whereof he that followeth next to him, directeth his iourney, who alſo in like manner beareth another ſtarre behinde him, by the ſhining whereof the third followeth the ſame way, and in like manner doe all the reſt, ſo that by this meanes none are loſt or ſtragle out of the way. And for as much as this light is not ſeene very farre, it is the better policie for the *Chriſtians*, becauſe they are not thereby diſcloſed before they inuade their enemies. Furthermore, as touching the natures of Trees, one particular thing ſeemeth worthy to be noted, whereof *Plinie* maketh mention in his naturall Hiſtorie, where he ſaith that there are certaine Trees which continue euer greene, and neuer looſe their leaues, as the Bay-tree, the Cedar, the Orange-tree, and the Oliue-tree, with ſuch other, of the which in altogether he nameth not paſt fiue or ſix. To this purpoſe, I ſay, that in the Ilands of theſe *Indies*, and alſo in the firme land, it is a thing of much difficultie to finde two Trees that loſe or caſt their leaues at any time: for although I haue diligently ſearched to know the truth hereof, yet haue I not ſeene any that loſe their leaues, either of them which we haue brought out of *Spaine* into theſe regions, as Orange-trees, Limons, Cedars, Palmes, or Date-trees, and Pomegranate-trees, or of any other in theſe regions, except onely *Caſſia*, which loſeth his leaues, and hath a greater thing appropriate to it ſelfe onely: which is, that whereas all other Trees and Plants of *India* ſpread their rootes no deeper in the earth then the depth of a mans height, or ſomewhat more, not deſcending any further into the ground, by reaſon of the great heate which is found beneath that depth, yet doth *Caſſia* pearle further into the ground, vntill it finde water: which by the Philoſophers opinion ſhould be the cauſe of a thinne and watery radicall moiſture to ſuch things as draw their nouriſhment thereof, as fat and vnctuous grounds with temperate heate, yeelde a faſt and firme moiſture to ſuch things as grow in them, which is the cauſe that ſuch Trees loſe not their leaues, as the ſaid thinne and wateriſh moiſture is cauſe of the contrarie, as appeareth by the ſaid effect which is ſeene onely in *Caſſia*, and none other Tree or Plant in all theſe partes.

Kindling of fire without fire.

Putrified wood ſhining in the night.

Plinie.

Almoſt all *Indian* trees continue euer greene.

Caſſia.

Earth hot lower then a fadome.

A ſecret thing.

Radicall moiſture.

Of Reedes or Canes.

IN the firme land there are many ſorts of Reedes, ſo that in many places they make their houſes thereof, couering them with the tops of the ſame, and making their wals of them in like manner, as I haue ſaid before: and among theſe kindes of Reedes, there is one ſo great, that the Canes thereof are as bigge as a mans legge in the knee, and three ſpans in length from ioynt to ioynt, or more, in ſo much that euery of them is of capacitie to containe a little bucket of water. In this kinde, there are found ſome greater, and ſome leſſe, of the which ſome they vſe to make quiuers for arrowes. There is found another kinde, which ſurely is marueilous, being little bigger then a Iauelin, the Canes whereof are longer then two ſpannes: theſe Reedes grow one farre from another, as ſometimes twenty or thirty paces, and ſometimes alſo two or three leagues: they grow in manner in all Prouinces in the *Indies*, and grow neere to very high Trees, whereunto they leane, and creepe vp to the top of their branches, which they imbrace, and deſcend againe downe to the earth. Their Canes are full of moſt cleare water, without any manner of taſte or ſauour, either of the Canes, or of any other thing, and ſuch as if it were taken out of the freſheſt Spring in the world, nor yet is it knowne that euer it hurt any that drunke thereof. For it hath oftentimes ſo chanced, that as the *Chriſtian* men haue trauailed in theſe regions in deſolate waies, where for lacke of water they haue beene in great danger to dye with thirſt, they haue eſcaped that perill by reaſon that they found the ſaid Reedes, of the water of whoſe Canes they haue drunke a great quantity, without any hurt thereof enſuing. Therefore when they finde theſe in any place, they make water veſſels of the Canes thereof, and carry

Reed-ſprings or fountaines of water.

as many of them full of water as may ſuffice for one dayes iourney: and ſometime they carrie ſo many, that they take for euery man two or three quarts of water, which may ſerue them for many daies, becauſe it doth not corrupt, but remaineth ſtill freſh and good.

Platani, or Plantans.

There are alſo certaine Plants, which the Chriſtians call *Platani*. They are as high as trees, and become as bigge in the trunke as the knee of a man, or more. From the foote to the top, they beare certaine long and large leaues, being more then three ſpans in largeneſſe, and about ten or twelue in length: the which when they are broken of the winde, the ſtalke remaineth whole in the middeſt. In the middeſt of this Plant, in the higheſt part thereof, there groweth a cluſter with fortie or fiftie Plantans about it, euery of them being a ſpan and a halfe in length, and as bigge as a mans arme in the ſmall, or more, or leſſe, according to the goodneſſe of the ſoile where they grow: they haue a rinde not very thicke, and eaſie to be broken, being within altogether full of a ſubſtance like vnto the marie of the bone of an Oxe, as it appeareth when the rinde or barke is taken from the ſame. This cluſter ought to be taken from the Plant, when any one of the Plantans begin to appeare yellow, at which time they take it, and hang it in their houſes, where all the cluſter waxeth ripe, with all his Plantans. This cluſter is a very good fruite, and when it is opened, and the rinde taken off, there are found within it many good drie Figges, which being roſted, or ſtewed in an Ouen, in a cloſe pot, or ſome ſuch other thing, are of pleaſant taſte, much like to the conſerue of Hony: they putrifie not on the Sea ſo ſoone as ſome other fruites doe, but continue fifteene daies and more, if they be gathered ſomewhat greene: they ſeeme more delicate on the Sea then on the Land, not for that they any thing encreaſe in goodnes on the Sea, but becauſe that wheras on the Sea other things are lacking, whereof is plentie on the Land, thoſe meates ſeeme of beſt taſte, which ſatisfie preſent neceſſitie. This trunke or ſprig which bringeth forth the ſaid cluſter, is a whole yeare in growing and bringing forth fruite, in which time it hath put forth round about in ten or twelue ſprigges, as bigge as the firſt or principal, and multiplieth no leſſe then the principall in bringing forth of cluſters, with fruits likewiſe at their time, and alſo in bringing forth other and many ſprigges, as is ſaid before. From the which ſprigges or trunkes, as ſoone as the cluſter of the fruite is taken away, the Plant beginneth to drie and wither, which then they take out of the ground, becauſe it doth none other then occupie it in vaine, and without profit. They are ſo many, and doe ſo marueilouſly encreaſe and multiplie, that it is a thing in manner incredible. They are exceeding moiſt, in ſo much that when they are plucked vp from the place where they grow, there iſſueth forth a great quantity of water, as well out of the Plant, as out of the place where it grew, in ſuch ſort, that all the moiſture of the earth farre about, might ſeeme to be gathered together about the trunke or blocke of the ſaid Plant, with the fruites whereof, the Antes are ſo farre in loue, that they are ſeene in great multitudes in the branches of the Plants: ſo that for the multitude thereof, it ſometime ſo chanceth, that men are enforced to take away the Plants from their poſſeſſion: theſe fruites are found at all times of the yeere. There is alſo another kinde of wilde Plants that groweth in the fieldes, which I haue not ſeene but in the Iland of *Hiſpaniola*, although they be found in other Ilands of the *Indies*: theſe they call *Tunas*. They grow of a Thiſtle full of thornes, and bring forth a fruite much like vnto great Figges, which haue a crowne like Medlers, and are within of a high colour, with graines and the rinde like vnto a Figge: they are of good taſte, and grow abundantly in the fields in many places: They worke a ſtrange effect in ſuch as eate them, for if a man eate two, or three, or more, they cauſe his vrine to be of the very colour of bloud, which thing chanced once to my ſelfe. For on a time as I made water, and ſaw the colour of my Vrine, I entred into a great ſuſpition of my life, being ſo aſtoniſhed for feare, that I thought the ſame had chanſed to me vpon ſome other cauſe, in ſo much that ſurely my imagination might haue done me hurt, but that they which were with me did comfort me immediately, declaring the cauſe thereof, as they knew by experience, being auncient inhabitours in thoſe regions. There groweth alſo another Plant, which the people of the Countrie call *Bihaos*: this putteth forth certaine ſtraight branches, and very broade leaues, which the *Indians* vſe for diuers purpoſes: for in ſome places they couer their houſes with the leaues thereof, couched and laid after the manner of thatch, whereunto it ſerueth very well: Sometimes alſo when it raineth, they caſt theſe ouer their heads, to defend them from the water. They make alſo certaine cheſts, which they call *Hauas*, weaued after a ſtrange ſort, and intermixt with the leaues of this *Bihaos*. Theſe Cheſts are wrought in ſuch ſort, that although it raine vpon them, or they chance to fall into the water, yet are not ſuch things wet as are within them: they are made of the branches of the ſaid *Bihaos*, with the leaues weaued together therewith. In theſe they keepe ſalt, and other ſubtile things. They vſe them alſo for another purpoſe, which is this: that finding them in the fields at ſuch time as they haue ſcarſeneſſe of victuals, they digge vp the rootes of theſe Plants while they are yet yong, or eate the Plant it ſelfe, in that part where it is moſt tender, which is from a foote vnder the ground, where it is as tender and white as a Reede or Bulruſh. And for as much as we are now come to the end of this narration, it commeth to my remembrance to make mention of

Tunas.

Bihaos.

Hauas.

of another thing, which is not farre from my purpose: and this is, how the *Indians* doe staine or dye cloath of bombage cotton, or any other thing which they intend to dye, of diuers colours, as Blacke, Tawny, Greene, Blew, Yellow, and Red, which they doe with the Barkes, or Rindes, and Leaues of certaine Trees, which they know by experience to be good for this practise: and by this art they make colours in such perfection and excellency, that no better can be deuised. But this seemeth a strange thing, that they doe all this in one selfe same Vessell: so that when they haue caused the said Rindes and Leaues to boile together, they make in the same Vessell without any change (as I haue said) as many colours as them listeth. Which thing I suppose to come to passe, by the disposition of the colour which they haue first giuen to the thing that they intend to dye or colour, whether it be Thred, Web, or Cloth, or any thing that they intend to colour.

Dying of Cotton.

A strange thing.

Of venemous Apples, wherewith they poyson their Arrowes.

THe Apples wherewith the *Indian Canibals* inuenome their arrowes, grow on certaine Trees couered with many Branches and Leaues, being very greene, and growing thicke. They are laden with abundance of these euill fruites, and haue their Leaues like the Leaues of a Peare-tree, but that they are lesse and rounder: the fruite is much like the muscadell Peares of the Iland of *Sicilie* or *Naples* in forme and bignesse, and are in some parts stained with red spots, and of very sweet sauour: these trees for the most part, grow euer by the Sea Coasts, and neere vnto the water, and are so faire and of pleasant sauour, that there is no man that seeth them, but will desire to eate thereof, insomuch that if it may bee spoken of any fruit yet growing on the earth, I would say that this was the vnhappy fruit whereof our first parents * *Adam* and *Eue* tasted, whereby they both lost their felicitie, and procured death to them and their posteritie. Of these fruits, and of the great Ants whose byting causeth swelling (whereof I haue spoken elsewhere) and of the *Eutes*, or *Lysarts*, and *Vipers*, and such other venomous things, the *Canibals* which are the chiefe Archers among the *Indians*, are accustomed to poyson their Arrowes, wherewith they kill all that they wound: These venomes they mingle together, and make thereof a blacke Masse or composition, which appeareth like vnto very blacke Pitch. Of this poyson I caused a great quantitie to bee burnt, in *Sancta Maria Antiqua*, in a place two leagues and more within the Land, with a great multitude of their inuenomed Arrowes and other munition, with also the house wherein they were reserued: This was in the yeere 1514. at such time as the Armie arriued there with Captaine *Pedrarias de Villa*, at the commaundement of the Catholike King *Don Ferdinando*. But to returne to the Historie. These Apples (as I haue sayde,) grow neere vnto the Sea: the Christians which serue your Maiestie in these patties, suppose that there is no remedie so profitable for such as are wounded with these Arrowes, as is the water of the Sea, if the wound bee much washed therewith, by which meanes some haue escaped, although but few: yet to say the truth, albeit the water of the Sea, haue a certaine caustike qualitie against poyson, it is not sufficient remedie in this case, nor yet to this day haue the Christians perceiued that of fiftie that haue beene wounded, three haue recouered. But that your Maiestie may the better consider the force of the venome of these trees, you shall further vnderstand, that if a man doe but repose himselfe to sleepe a little while vnder the shadow of the same, he hath his head and eyes so swolne when he riseth, that the eye lids are ioyned with the cheekes, and if it chance one drop or more of the deaw of the said tree to fall into the eye, it vtterly destroyeth the sight. The pestilent nature of this tree is such, that it cannot be declared in few words. Of these, there groweth great plentie in the gulfe of *Vraba*, toward the North coast, on the West and East side. The wood of these trees when it burneth, maketh so great a stinke, that no man is able to abide it, by reason it causeth so great a paine in the head.

* It was not a venemous iuice of the fruit, but spirituall disobedience in eating contrarie to Gods commandement, which poysoned *Adams* soule with sinne, the wages whereof is death.

Canibals inuenome their Arrowes.

Petrus Martir.

The water of the Sea.

The gulfe of *Vraba*.

Among other trees which are in these *Indies*, as well in the Ilands, as in the firme land, there is another kind which they call *Xagua*, whereof there is great plentie: they are very high, and streight, and faire to behold. Of these they vse to make Pikes, and Iauelins of diuers lengths and bignesse: they are of a faire colour, betweene russet and white: this tree bringeth forth a great fruit as big as *Papaner* or *Poppie*, and much like thereunto, it is very good to be eaten when it is ripe. Out of this they get a very cleare water, wherewith they wash their legs, and sometimes all their bodies, when they feele their flesh weary, faint, or loose: the which water, beside that it hath a binding qualitie, it hath also this propertie, that whatsoeuer it toucheth, it staineth it blacke by little and little, vntill it be as blacke as Iet, which colour cannot bee taken away in lesse space then tenne or twelue dayes: And if the nayle bee but touched therewith, it is so stained, that it can by no meanes be taken away, vntill it either fall of, or grow out, and be clipped away by little and little, as I my selfe haue oftentimes seene by experience.

Xagua.

Blacke staines.

There

Digitized by Google

Hohi. Some thinke these to be mirobalanes.

There is another kinde of Trees which they call *Hohi*: these are very great and faire, and cause wholesome aire where they grow, and a pleasant shadow, and are found in great abundance: their fruit is very good, and of good taste and sauour, and much like vnto certaine Damsons or Prunes being little and yellow, but their stone is very great, by reason whereof they haue but little meate: their Barke or Rinde boyled in water, maketh a wholesome Bathe for the legges, because it bindeth and stayeth the loosenesse of the flesh, so sensibly that it is a maruell to consider. It is surely a wholesome and excellent Bathe against such faintnesse, and is the best Tree that may be found in those parts to sleepe vnder: For it causeth no heauinesse of the head, as doe diuers other Trees, which thing I speake, because the Christians are much accustomed in those Regions to lie in the fields. It is therefore a common practice among them, that whersoeuer they finde these Trees, there they spreade their Mattresses and Beds wherein they sleepe.

Date trees.

The Inhabitans of the Sea of *Sur*.

There are also a kinde of high Date trees, and full of thornes: the wood of these is most excellent, being very blacke and shining, and so heauie that no part thereof can swim aboue the water, but sinketh immediatly to the bottom. Of this wood they make their Arrowes and Darts, also Iauelins, Speares, and Pikes: and I say Pikes, because that in the coasts of the Sea of *Sur*, beyond *Esquegua* and *Uracha*, the *Indians* vse great and long Pikes, made of the wood of these Date trees. Of the same likewise they make Clubs, and Swords, and diuers other weapons: Also vessels and houshold stuffe of diuers sorts, very faire and commodious. Furthermore, of this wood the Christians vse to make diuers musicall instruments, as Claricymbals, Lutes, Gitterns, and such other, the which beside their faire shining colour like vnto jeat, are also of a good sound, and very durable, by reason of the hardnesse of the wood.

An herbe that beareth cordes.

Cabuia and *Henequen.*

A strange thing.

After that I haue said thus much of Trees and Plants, I haue thought good also to speake somewhat of Herbs. You shall therefore vnderstand, that in these *Indies* there is an herbe much like vnto a yellow Lilly, about whose leaues there grow and creepe certaine Cordes or Laces, as the like is partly seene in the herbe which we call *Laced sauory*, but these of the *Indies* are much bigger, and longer, and so strong that they tie their hanging beds thereby, which they cell *Hamacas*, whereof we haue spoken elsewhere: these Cordes they call *Cabuia*, and *Henequen*, which are all one thing, sauing that *Henequen* is lesse and of a finer substance, as it were Line, and the other is grosser, like the wike or twist of Hempe, and is imperfect in comparison to the other: they are of colour betweene white and yellow, like vnto abarne, and some also white. With *Henequen*, which is the most subtile and fine threed, the *Indians* saw in sunder Fetters, Chaines, or barres of Iron, in this manner: They moysten the threed of *Henequen* vpon the Iron which they intend to saw or cut, drawing the one hand after the other as doe they that saw, putting euer now and then a portion of fine Sand vpon the threed, or on the place or part of the Iron, where they continue rubbing the said threed, so that if the threed be worne, they take another, and continue in their worke as before, vntill they haue cut in sunder the Iron, although it bee neuer so bigge, and cut it as if it were a tender thing, and easie to be sawen.

Leaues.

Thistle trees.

A leafe of great vertue.

And forasmuch as the leaues of Trees may be counted among Herbs, I will here speake somewhat of the qualitie of the leaues of certaine Trees which are found in the Iland of *Hispaniola*. These trees are so full of thornes, that there is no tree or plant that seemeth more wilde and deformed: so that I cannot well determine whether they bee Trees or Plants: they haue certaine branches full of large and deformed leaues, which branches were first leaues like vnto the other. As the branches made of these leaues grow forth in length, there commeth other leaues of them: so that in fine it is a difficult thing to describe the forme of these trees, except the same should be done by a Painter, whereby the Eye might conceiue that wherein the Tongue faileth in this behalfe. The leaues of this tree are of such vertue, that being well beaten and spred vpon a cloth, after the manner of a plaister, and so laid to a legge or arme that is broken in many pieces, it healeth it in fifteene dayes, and maketh it as whole as though it had neuer beene broken: During the time of this operation, it cleaueth so fast to the flesh, that it cannot without much difficultie be taken away, but assoone as it hath healed the sore, and wrought his operation, it looseth it selfe from the place where it was laid, as I my selfe, and diuers other which haue proued it, know by experience.

Of Fishes, and of the manner of fishing.

IN the Sea coasts of the firme Land, there are diuers and sundrie kindes of fishes, much differing in shape and forme. And although it be impossible to speake of all, yet will I make mention of some. And first to begin at *Sardines*, you shall vnderstand that there is found a kinde of these fishes very large and with red tailes, being a very delicate fish. The best kindes of other fishes are these, *Moxarre*, *Diahace*, *Brettes*, *Dahaos*, *Thornbacks*, and *Salmons*: All these, and diuers other which I doe not now remember, are taken in great quantitie in Riuers. There are likewise taken very good *Creuishes*. There are also found in the Sea, certaine other fishes, as *Soles*, *Mackerels*, *Turbuts*, *Palamite*, *Lizze*, *Polpi*, *Chieppe*, *Xaibas*, *Locusts*, *Oisters*, exceeding great *Tortoises*, and *Tiburoni* of maruellous bigneste: also *Manates*, and *Murene*, and many other fishes, which

Tiburoni. *Manates.*

Digitized by Google

which haue no names in our language, and theſe of ſuch diuerſitie and quantitie, as cannot bee expreſſed without large writing and long time. But to let paſſe to intreate particularly of the multitude of fiſhes, I intend to ſpeake chiefly, and ſomewhat largely, of three ſorts of moſt notable fiſhes: whereof the firſt is, the great *Tortoiſes*, the ſecond is called *Tiburon*, and the third *Manate*. And to begin at the firſt, I ſay that in the Iland of *Cuba*, are found great *Tortoiſes* (which are certaine ſhell fiſhes) of ſuch bigneſſe that ten or fifteene men are ſcarſly able to lift one of them out of the water, as I haue beene informed of credible perſons dwelling in the ſame Iland. But of that which I my ſelfe haue ſeene, I can teſtifie, that in the firme Land, in the village of *Acla*, there are of this ſort ſome taken and killed of ſuch bigneſſe, that ſixe men with much difficultie could ſcarſly draw them out of the water, and commonly the leaſt ſort of them are as much as two men may carry at a burden: that which I ſaw lifted vp by ſixe men, had her ſhell a yard and a quarter in length, and in breadth more then fiue yards. The manner of taking them, is this: It ſometimes chanceth that in their great nets (which they call ſhoote nets) there are found certaine *Tortoiſes* of the common ſort, in great quantities, and when they come out of the Sea, and bring forth their egges, and goe together by companies from the Sea, to feede on the Land, the *Chriſtians* or *Indians* follow their ſteps which they finde in the Sand, and ſoone ouertake them, becauſe they are very heauie and ſlow in going, although they make all the haſte they can to returne to the Sea, aſſoone as they eſpy any body. When they that purſue them haue ouertaken them, they put a ſtake or ſtaffe vnder their legs, and ouerturne them on their backs as they are yet running, ſo that they can goe no further, nor yet riſe againe or turne, and thus they ſuffer them to lye ſtill while they follow after the reſt, which they ouerturne in like manner: and by this meanes take very many, at ſuch times as they come forth of the Sea, as I haue ſaid: This fiſh is very excellent and wholeſome to be eaten, and of good taſte. *Great Tortoiſes.*

The ſecond of the three fiſhes whereof I haue ſpoken, is the *Tiburon*: this is a very great fiſh, and very quick and ſwift in the water, and a cruell Deuourer: theſe are oftentimes taken, aſwell when the ſhips are vnder ſaile in the Ocean, as alſo when they lye at anker, or at any other time, and eſpecially the leaſt kinde of theſe fiſhes. When the ſhips are vnder ſaile, the biggeſt ſort are taken after this manner. When the *Tiburon* ſeeth the ſhip ſayling, hee followeth it ſwimming behind, the which things the Mariners ſeeing, caſt forth all the filth of the ſhip into the Sea for the fiſh to eate, who neuertheleſſe followeth them with equall paſe, although they make neuer ſuch haſte with full winde and ſailes, and walloweth on euery ſide and about the ſhip, and thus followeth it ſometime for the ſpace of a hundred and fiftie leagues, and more, and when the Mariners are diſpoſed to take them, they caſt downe by the ſterne of the ſhip a hooke of Iron, as bigge as the biggeſt finger of a mans hand, of three ſpans in length, and crooked like a fiſh-hooke, with beards according to the bigneſſe thereof, and faſtned to an Iron chaine of fiue or ſixe linkes neere vnto the end, and from thence tyed with a great rope, faſtning alſo on the hooke for a bait, a piece of ſome fiſh, or hogs fleſh, or ſome other fleſh, or the bowels and intrals of another *Tiburon* which they haue taken before, which may eaſily be done, for I haue ſeene nine taken in one day, and if they would haue taken more, they might alſo. Thus when the *Tiburon* hath pleaſantly followed the ſhip a long voyage, at the length he ſwalloweth the bait with the hooke, and aſwell by his ſtriuing to flee or eſcape, as alſo by the ſwift paſſage of the ſhip, the hooke ouerthwarteth and catcheth hold of his chaps: the which fiſh when it is taken, it is of ſuch huge bigneſſe, that twelue or fifteene men are ſcarſly able to draw it out of the water, and lift it into the ſhip, where one of the Mariners giueth it many knocks on the head with a club or beetle, vntill he haue ſlaine it: they are ſometimes found of ten or twelue foote long, and of fiue, ſixe, or ſeuen ſpans in breadth, where they are broadeſt: they haue very great and wide mouthes, to the proportion of the reſt of their bodies, and haue two rowes of teeth, the one ſomewhat ſeparate from the other, of cruell ſhape, and ſtanding very thicke. When they haue ſlaine this fiſh, they cut the body thereof in ſmall pieces, and put it to drie, hanging it three or foure dayes at the Cordes of the ſaile clothes to drie in the winde, and then eate it: It is doubtleſſe a good fiſh, and of great commoditie to ſerue the ſhips for victualls for many dayes: the leaſt of theſe fiſhes are moſt wholeſome and tender, it hath a skin much like to the skin of a *Sole* whereunto the ſaid *Tiburon* is like in ſhape: Which I ſay, becauſe *Plinie* hath made mention of none of theſe three fiſhes, among the number of them whereof he writeth in his Naturall hiſtorie. Theſe *Tiburons* come forth of the Sea, and enter into the Riuers, where they are no leſſe perillous then great *Lizards* or *Crocodiles*, whereof I haue ſpoken largely before: For they deuoure Men, Kine, and Horſes, euen as doe the *Crocodiles*: they are very dangerous in certaine waſhing places or Pooles by the Riuers ſides, and where they haue deuoured at other times. Diuers other fiſhes both great and ſmall, of ſundrie ſorts and kindes, are accuſtomed to follow the ſhips going vnder ſaile, of the which I will ſpeake ſomewhat when I haue written of *Manate*, which is the third of the three whereof I haue promiſed to entreat. *Manate* therefore, is a fiſh of the Sea, of the biggeſt ſort, and much greater then the *Tiburon* in length and breadth, and is very brutiſh and vile, ſo that it appeareth in forme like vnto one of thoſe great veſſels made of Goats skins, wherein they vſe to carry new wine in *Medina de Campo*, or in *Arenalo*: the head of this beaſt is like the head of an *Tiburons of Sharkes.* *Plinie.* *Crocodiles.* *Manates.*

Oxe,

Oxe, with also like eyes, and hath in the place of armes, two great stumps wherwith he swimmeth: It is a very gentle and tame beast, and commeth oftentimes out of the water to the next shoare, where if he finde any herbes or grasse, he feedeth thereof. Our men are accustomed to kill many of these, and diuers other good fishes, with their Crosse-bowes, pursuing them in Barkes or Canoas, because they swim in manner aboue the water: the which thing when they see, they draw them with a hooke tyed at a small corde, but somewhat strong: As the fish fleeth away, the Archer letteth goe, and prolongeth the corde by little and little, vntill he haue let it goe many fathoms: at the end of the corde, there is tyed a corke, or a piece of light wood, and when the fish is gone a little way, and hath coloured the water with his bloud, and feeleth himselfe to faint and draw toward the end of his life, he resorteth to the shoare, and the Archer followeth, gathering vp his corde, whereof while there yet remaine sixe or eight fathoms, or somewhat more or lesse, he draweth it toward the Land, and draweth the fish therewith by little and little, as the waues of the Sea helpe him to doe it the more easily: then, with the helpe of the rest of his companie, he lifteth this great beast out of the Water to the Land, being of such bignesse, that to conuey it from thence to the Citie, it shall be requisite to haue a Cart with a good yoke of Oxen, and sometimes more, according as these fishes are of bignesse, some being much greater then other some in the same kinde, as is seene of other beasts: Sometimes they lift these fishes into the Canoa or Barke, without drawing them to the Land as before, for as soone as they are slaine, they flote aboue the water: And I beleeue verily that this fish is one of the best in the world to the taste, and the likest vnto flesh, especially so like vnto beefe, that who so hath not seene it whole, can iudge it to be none other when hee seeth it in pieces then very Beefe or Veale, and is certainly so like vnto flesh, that all the men in the world may herein be deceiued: the taste likewise, is like vnto the taste of very good Veale, and lasteth long, if it be powdred: so that in fine, the Beefe of these parts, is by no meanes like vnto this. This *Manate* hath a certaine stone, or rather bone in his head within the braine, which is of qualitie greatly appropriate against the disease of the stone, if it be burnt and ground into small powder, and taken fasting in the morning when the paine is felt, in such quantitie as may lye vpon a peny, with a draught of good white wine: For being thus taken three or foure mornings, it acquieteth the griefe, as diuers haue told me which haue proued it true, and I my selfe by testimonie of sight, doe witnesse that I haue seen this stone sought of diuers for this effect.

The fish *Manate.*

A remedie against the stone.

There are also diuers other fishes as bigge as this *Manate*, among the which there is one called *Vihuella*. This fish beareth in the top of his head a sword, being on euery side full of many sharp teeth: this sword is naturally very hard and strong, of foure or fiue spans in length, and of proportion according to the same bignesse: and for this cause is this fish called *Spada*, that is, the *Sword fish*. Of this kinde some are found as little as *Sardines*, and other so great, that two yokes of Oxen are scarsly able to draw them on a Cart. But whereas before I haue promised to speake of other fishes, which are taken in these Seas while the ships are vnder saile, I will not forget to speake of the *Tunny*, which is a great and good fish, and is oftentimes taken and kild with Trout speares, and hookes, cast in the water, when they play and swim about the ships. In like manner also are taken many *Turbuts*, which are very good fishes as are lightly in all the Sea. And here is to be noted, that in the great Ocean Sea, there is a strange thing to be considered, which all that haue beene in the *Indies* affirme to bee true: And this is, that like as on the Land there are some Prouinces fertile and fruitfull, and some barren, euen so doth the like chance in the Sea: So that at some windes the ships saile fiftie, or a hundred, or two hundred leagues and more, without taking or seeing of one fish: and againe, in the selfe same Ocean in some places, all the water is seen tremble by the mouing of the fishes, where they are taken abundantly. It commeth further to my remembrance to speake somewhat of the flying of fishes, which is doubtlesse a strange thing to behold, and is after this manner. When the ships saile by the great Ocean, following their viage, there riseth sometimes on the one side or on the other, many companies of certaine little fishes, of the which the biggest is no greater then a *Sardine*, and so diminish lesse and lesse from that quantitie, that some of them are very little: these are called *Volatori*, that is, *flying fishes:* they rise by great companies and flocks, in such multitudes that it is an astonishment to behold them: Sometimes they rise but little from the water, and (as it chanceth) continue one flight for the space of an hundred paces, and sometimes more, or lesse, before they fall againe into the Sea, sometimes also they fall into the ships. And I remember, that on an euening when all the companie in the ship were on their knees, singing *Salue Regina*, in the highest part of the Castle of the poope, and sailed with a full winde, there passed by vs a flocke of these flying fishes, and came so neere vs, that many of them fell into the ship, among the which, two or three fell hard by mee, which I tooke aliue in my hand, so that I might well perceiue that they were as bigge as *Sardines*, and of the same quantitie, hauing two wings or quils growing out of their finnes, like vnto those wherewith all fishes swim in Riuers: these wings are as long as the fishes themselues. As long as their wings are moist, they beare them vp in the aire, but assoone as they are drie, they can continue their flight no further then as I haue said before, but fall immediatly into the Sea, and so rise againe, and flie as before from place to place. In the yeere 1515. when I came first to enforme your

Digitized by Google

your Maieſtie of the ſtate of the things in *India*, and was the yeere following in *Flanders* in the time of your moſt fortunate ſucceſſe in theſe your Kingdomes of *Arragon* and *Caſtile*, whereas at that voyage I ſayled aboue the Iland *Bermuda*, otherwiſe called *Garza*, being the furtheſt of all the Ilands that are found at this day in the world, and arriuing there at the depth of eight yards of water, and diſtant from the Land as farre as the ſhot of a piece of Ordinance, I determined to ſend ſome of the ſhip to Land, aſwell to make ſearch of ſuch things as were there, as alſo to leaue in the Iland certaine Hogs for increaſe. But the time not ſeruing my purpoſe by reaſon of contrarie winde, I could bring my ſhip no neerer the Iland, being twelue leagues in length, and ſixe in breadth, and about thirtie in circuit, lying in the three and thirtieth degree of the North ſide. The Iland of *Bermuda.*

While I remayned here, I ſaw a ſtrife and combat betweene theſe flying fiſhes, and the fiſhes named *Gilt heads*, and the fowles called *Sea-mewes*, and *Cormorants*, which ſurely ſeemed vnto me a thing of as great pleaſure and ſolace as could be deuiſed, while the *Gilt heads* ſwam on the brim of the water, and ſometimes lifted their ſhoulders aboue the ſame, to raiſe the flying fiſhes out of the water to driue them to flight, and follow them ſwimming to the place where they fall, to take and eate them ſuddenly. Againe on the other ſide, the *Sea-mewes* and *Cormorants*, take many of theſe flying fiſhes, ſo that by this meanes they are neither ſafe in the Aire, nor in the Water. In the ſelfe ſame perill and danger doe men liue in this mortall life, wherein is no certaine ſecuritie, neither in high eſtate, nor in lowe. Which thing ſurely ought to put vs in remembrance of that bleſſed and ſafe reſting place which God hath prepared for ſuch as loue him, who ſhall acquiet and finiſh the trauailes of this troubleſome world, wherein are ſo many dangers, and bring them to that eternall life where they ſhall finde eternall ſecuritie and reſt. Not too hie for the Pie, Nor too low for the Crow.

Of the increaſe and decreaſe (that is) riſing and falling of our Ocean Sea, and South Sea, called the Sea of Sur.

I Will now ſpeake of certaine things which are ſeene in the Prouince, or at the leaſt in the Citie of *Golden Caſtile*, otherwiſe called *Beragua*, and in the coaſts of the North Sea, and of the South Sea, called the Sea of *Sur*, not omitting to note one ſingular and maruellous thing which I haue conſidered of the Ocean Sea, whereof hitherto no Coſmographer, Pilot, or Mariner, or any other, haue ſatisfied me. I ſay therefore, as it is well knowne to your Maieſtie, and all ſuch as haue knowledge of the Ocean Sea, that this great Ocean caſteth from it ſelfe the Sea *Mediterraneum* by the mouth of the Straight of *Gibralterra*; in the which the water, from the end and furtheſt part of that Sea, euen vnto the mouth of the ſaid Straight, either in the Eaſt toward the coaſt commonly called *Leuante*, or in any other part of the ſaid Sea *Mediterraneum*, the Sea doth not ſo fall nor increaſe, as reaſon would iudge for ſo great a Sea, but increaſeth very little, and a ſmall ſpace: Neuertheleſſe, without the mouth of the Straight in the mayne Ocean, it increaſeth and falleth very much, and a great ſpace of ground, from ſixe houres to ſixe houres, as in all the coaſts of *Spaine*, *Britaine*, *Flanders*, *Germanie*, and *England*. The ſelfe ſame Ocean Sea in the firme Land newly found, in the coaſts of the ſame lying toward the North, doth neither riſe nor fall, nor likewiſe in the Ilands of *Hiſpaniola* and *Cuba*, and all the other Ilands of the ſame lying toward the North, for the ſpace of three thouſand leagues, but onely in like manner as doth the Sea *Mediterraneum* in *Italie*, which is in manner nothing, in reſpect to that increaſe and decreaſe which the ſaid Ocean hath in the coaſts of *Spaine* and *Flanders*. But this is yet a greater thing, that alſo the ſelfe ſame Ocean in the coaſts of the ſaid firme Land lying toward the South, in the Citie of *Panama*, and alſo in the coaſt of that Land which lyeth toward the Eaſt and Weſt from that Citie, as in the Iland of *Pearles* or *Margarita*, which the *Indians* call *Tarrarequi*, and alſo in *Taboga* and *Oteque*, and in all other Ilands of the South Sea of *Sur*, the water riſeth and falleth ſo much, that when it falleth, it goeth in manner out of ſight, which thing I my ſelfe haue ſeene oftentimes. And here your Maieſtie may note another thing, that from the North Sea to the South Sea, being of ſuch difference the one from the other in riſing and falling, yet is the Land that diuideth them not paſt eighteene or twentie leagues in breadth from Coaſt to Coaſt: So that both the ſaid Seas, being all one Ocean, this ſtrange effect is a thing worthy greatly to bee conſidered of all ſuch as haue inclination and deſire to know the ſecret workes of Nature, wherein the infinite power and wiſedome of God is ſeene to be ſuch, as may allure all good Natures to reuerence and loue ſo diuine a Majeſtie. *Beragua.* The Weſt Ocean. The Sea *Mediterraneum.* *Hiſpaniola.* *Cuba.* Ocean without ebbing and flowing. The ebbe at *Panama* falleth two leagues or ſixe miles. The South Sea.

Of the ſtraight or narrow paſſage of the Land lying betweene the North and South Sea, by the which Spices may much ſooner and eaſilier be brought from the Ilands of Molucca *into* Spaine *by the Weſt Ocean, then by that way whereby the* Portugals *ſaile into the Eaſt* India.

THe firme Land in ſome parts thereof is ſo ſtraight and narrow, that the *Indians* ſay, that from the Mountaines of the Prouince of *Eſquegua* or *Vraca* (which are betweene the one Sea and the other) if a man aſcend to the top of the Mountaines, and looke toward the North, he *Eſquegua* and *Vraca.*

he may ſee the Water of the North Sea of the Prouince of *Beragua:* and againe looking the contrarie way, may on the other ſide (towards the South) ſee the Sea of *Sur*, and the Prouinces which confine with it, as doe the Territories of the two Lords or Kings of the ſaid Prouinces of *Vraca* and *Eſquegua*. Some meaſure this way in this part, to bee from Sea to Sea eighteene leagues, which I ſuppoſe to bee rather twentie, not for that it is any more by meaſure, but becauſe it is rough and difficult, as I haue ſaid, and as I haue found it by experience, hauing now twiſe paſſed that way by foote, counting from the Port and Village of *Nombre de Dios*, vnto the Dominion of the *Cacique* of *Iuanaga*, otherwiſe called *Capira*, eight leagues, and from thence to the Riuer of *Chagre*, other eight leagues. So that at this Riuer, being ſixteene leagues from the ſaid Port, endeth the roughneſſe of the way: then from hence to the maruellous Bridge are two leagues, and beyond that, other two, vnto the Port of *Panama*: So that all together, in my iudgement, make twentie leagues. It is a maruellous facilitie to bring Spices by this way which I will now declare. From *Panama* to the Riuer of *Chagre*, are foure leagues of good and faire way, by the which Carts may paſſe at pleaſure, by reaſon that the Mountaines are but few and little, and that the greateſt part of theſe foure leagues is a plaine ground void of Trees: and when the Carts are come to the ſaid Riuer, the Spices may be carried in Barkes and Pinaſes. For this Riuer entreth into the North Sea fiue or ſixe leagues lower then the Port of *Nomen Dei*, and emptieth it ſelfe in the Sea neere vnto an Iland called *Baſtimento*, where is a very good and ſafe Port. Your Maieſtie may now therefore conſider, how great a thing, and what commoditie it may be to conuey Spices this way, foraſmuch as the Riuer of *Chagre*, hauing his originall onely two leagues from the South Sea, continueth his courſe, and emptieth it ſelfe into the other North Sea. This Riuer runneth faſt, and is very great, and ſo commodious for this purpoſe as may bee thought or deſired: the *maruellous Bridge* made by the worke of Nature, being two leagues beyond the ſaid Riuer, and other two leagues on this ſide the Port of *Panama*, ſo lying in the mid way betweene them both, as framed naturally in ſuch ſort, that none which paſſe by this voyage doth ſee any ſuch Bridge, or thinke that there is any ſuch building in that place, vntill they be in the top thereof, in the way toward *Panama:* But aſſoone as they are on the Bridge, looking toward the right hand, they ſee a little Riuer vnder them, which hath his Channell diſtant from the feete of them that walke ouer it, the ſpace of two ſpeares length or more. The water of this Riuer is very ſhallow, not paſſing the depth of a mans legge to the knee, and is in breadth betweene thirtie and fortie paces, and falleth into the Riuer of *Chagre*. Toward the right hand, ſtanding on this Bridge, there is nothing ſeene but great Trees. The largeneſſe of the Bridge contayneth fifteene paces, and the length thereof about threeſcore or fourſcore paces: The Arch is ſo made of moſt hard ſtone, that no man can behold it without admiration, being made by the High and Omnipotent Creator of all things.

The Riuer of *Chagre*.

The Iland *Baſtimento*.

The maruellous Bridge.

Naturall ſtone Bridge.

How things that are of one kinde, differ in forme and qualitie, according to the nature of the place where they are engendred or grow, and of the beaſts called Tigres.

IN the firme Land are found many terrible beaſts, which ſome thinke to be Tigres. Which thing neuertheleſſe I dare not affirme, conſidering what Authors doe write of the lightneſſe and agilitie of the Tigre, whereas this beaſt, being otherwiſe in ſhape very like vnto a Tigre, is notwithſtanding very ſlow. Yet true it is, that according to the maruailes of the World, and differences which naturall things haue in diuers Regions vnder Heauen, and diuers conſtellations of the ſame, vnder the which they are created, wee ſee that ſome ſuch Plants and Herbes as are hurtfull in one Countrie, are harmleſſe and wholeſome in other Regions. And Birds which in one Prouince are of good taſte, are in other ſo vnſauourie that they may not bee eaten. Men likewiſe which in ſome Countries are blacke, are in other places white: and yet are both theſe and they, men. Euen ſo may it be, that Tigres are light in ſome Region, as they write, and may neuertheleſſe be ſlow and heauie in theſe *Indies* of your Maieſtie, whereof wee ſpeake. The Sheepe of *Arabia* draw their tailes long and bigge on the ground, and the Bulls of *Egypt* haue their haire growing toward their heads: yet are thoſe Sheepe, and theſe Bulls. Men in ſome Countries are hardie and of good courage, and in other naturally fearfull and bruitiſh. All theſe things, and many more, which may be ſaid to this purpoſe, are eaſie to bee prooued, and worthy to bee beleeued, of ſuch as haue read of the like in Authors, or trauelled the World, whereby their owne ſight may teach them the experience of theſe things whereof I ſpeake. It is alſo manifeſt that *Iucca*, whereof they make their bread in the Iland of *Hiſpaniola*, is deadly poiſon if it be eaten greene with the juyce: and yet hath it no ſuch propertie in the firme Land, where I haue eaten it many times, and found it to be a good fruit. The Bats of *Spaine*, although they bite, yet are they not venemous: but in the firme Land, many die that are bitten of them. And in this forme may ſo many things be ſaid, that time ſhall not ſuffice to write, whereas my intent is onely to proue that this beaſt may be a Tigre, or of the kinde of Tigres, although it

be

bee not of such lightnesse and swiftnesse, as are they whereof *Plinie* and other authors speake, describing it to bee one of the swiftest beasts of the Land, and that the Riuer of *Tygris* for the swift course thereof was called by that name. The first *Spaniards*, which saw this Tyger in the firme land, did so name it. Of the kind of these, was that which *Don Diego Columbo*, the Admiral sent your Maiesty out of New *Spaine* to *Toledo*. Their heads are like to the heads of Lions, or Lionesses, but greater: the rest of all their bodies, and their legs, are full of black spots one neere vnto another, & diuided with a circumference, or fringe of red colour, shewing (as it were) a faire work and correspondent picture, about their croopes or hinder parts, they haue these spots biggest and lesse & lesse toward their bellies, legs, & heads. I haue seen some of three spans in height, and more then fiue in length. They are beasts of great force, with strong legs, and well armed with nayles and fanges, which we call Dog-teeth: they are so fierce, that in my iudgement, no reall Lyon of the biggest sort is so strong or fierce. Of these, there are many found in the firme Land, which deuoure many of the *Indians*, and doe much hurt otherwise: but since the comming of the *Christians*, many haue beene killed with Crosse-bowes after this manner. Assoone as the Archer hath knowledge of the haunt of any of these Tygers, hee goeth searching their trace, with his Crosse-bow, and with a little Hound or Begle, & not with a grey-hound; because this Beast would soon kill any Dogge that would venter on him: When the Hound hath found the Tigre, he runneth about him baying continually, and approacheth so neere him, snapping and grinning, with so quicke flying and returning, that he hereby so molesteth this fierce Beast, that hee driueth him to take the next Tree, at the foot whereof he remayneth still baying, and the Tigre grinning and shewing his teeth, while in the meane time the Archer commeth neere, and twelue or fourteene paces off, striketh him with the querell of his Crosse-brow in the brest, and flyeth incontinent, leauing the Tigre in his trauell for life and death, byting the Tree and eating earth for fiercenesse: then within the space of two or three houres, or the day following, the Archer returneth thither, and with his Dogge findeth the place where hee lyeth dead. The *Indians* (and especially they of the firme Land in the Prouince which the Catholike King *Don Ferdinando* commanded to bee called Golden *Castile*) call this Beast *Ochi*. This thing is strange that chanced of late: that whereas the Tigre whereof we haue made mention before, would haue killed his keeper that then kept him in a Cage, was in few daies after made so tame, that he led her tyed only with a small coard, and plaid with her so familiarly, that I maruelled greatly to see it, yet not without certaine beliefe that this friendshipwill not last long, without danger of life to the Keeper, forasmuch as surely these Beasts are not meet to be among men, for their fiercenesse and cruell nature that cannot be tamed.

Plinie.

The hunting of Tigres.

A Tigre made tame.

Of the manners and customes of the Indians *of the Firme Land, and of their women.*

THe manners and customes of these *Indians*, are diuers in diuers Prouinces. Some of them take as many Wiues as them list, and other liue with one Wife, whom they forsake not without consent of both parties, which chanceth especially when they haue no children. The Nobilitie aswel men as women, repute it infamous to ioyne with any of base Parentage or Strangers, except Christians, whom they count Noblemen, by reason of their valiantnesse, although they put a difference betweene the common sort and the other to whom they shew obedience, counting it for a great matter and an honorable thing, if they bee beloued of any of them; insomuch that if they know any Christian man carnally, they keepe their faith to him, so that hee be not long absent farre from them, for their intent is not to be Widdowes, or to liue chaste like religious women. Many of them haue this custome, that when they perceiue that they are with childe, they take an Hearbe wherewith they destroy that is conceiued: for they say that only well aged women should beare children, and that they will not forbeare their pleasures, and deforme their bodies with bearing of children, whereby their Teates become loose and hanging, which thing they greatly dispraise. When they are deliuered of their children, they goe to the Riuer and wash them, which done, their bloud and purgation ceasseth immediately: And when after this they haue a few dayes abstained from the company of men, they become so streight, as they say which haue had carnal familiaritie with them, that such as vse them, cannot without much difficultie satisfie their appetite: They also which neuer had children, are euer as Virgins. In some parts they weare certaine little Aprons round about them before and behind, as low as to their knees and hammes, wherewith they couer their priuy parts, and are naked all their bodie beside. The principall men beare their Priuities in a hollow Pipe of Gold, but the common sort haue them inclosed in the shells of certaine great Welkes, and are beside vtterly naked: For they thinke it no more shame to haue their Cods seene, then any other part of their bodies: and in many Prouinces both the men and women goe vtterly naked, without any such couerture at all. In the Prouince of *Cueua* they call a man *Chuy*, and a woman *Ira*, which name is not greatly disagreeable to many both of their women and of ours.

The *Indian* women.

The men of *India*.

These *Indians* giue great honor and reuerence to their *Caciques* (that is) their Kings and Rulers.

Digitized by Google

The King is borne on mens backes.

lers. The principall *Cacique*, hath twelue of his moſt ſtrong *Indians* appointed to beare him, when he remoueth to any place, or goeth abroad for his pleaſure. Two of them carrie him ſitting vpon a long peece of wood, which is naturally as light as they can finde, the other ten follow next vnto him as footemen: they keepe continually a trotting paſe with him on their ſhoulders. When the two that carrie him are wearie, other two come in their places, without any diſturbance or ſtay. And thus if the way be plaine, they carry him in this manner for the ſpace of fifteene or twenty leagues in one day. The *Indians* that are aſſigned to this office, are for the moſt part ſlaues, or *Naborias*, that is, ſuch as are bound to continuall ſeruice.

Letting of bloud.

I haue alſo noted that when the *Indians* perceiue themſelues to be troubled with too much bloud, they let themſelues bloud in the calfe of their legges, and brawnes of their armes: this doe they with a very ſharpe ſtone, and ſometimes with the ſmall tooth of a Viper, or with a ſharpe reede or thorne.

They haue no beards.

All the *Indians* are commonly without Beards, in ſo much that it is in a manner a maruell to ſee any of them either men or women to haue any downe or haire on their faces, or other parts of their bodies: Albeit I ſaw the *Cacique* of the Prouince of *Caparapa*, who had haire on his face and other parts of his body, as had alſo his wife in ſuch places as women are accuſtomed to haue.

They paint their bodies.

This *Cacique* had a great part of his body painted with a blacke colour, which neuer fadeth, and is much like vnto that wherewith the *Moores* paint themſelues in *Barbarie* in token of Nobilitie. But the *Moores* are painted ſpecially on their viſage and throate, and certaine other parts. Likewiſe the principall *Indians* vſe theſe paintings on their armes and breaſts, but not on their viſages, becauſe among them the ſlaues are ſo marked.

The Canibals Trumpets.

When the *Indians* of certaine Prouinces goe to the battaile (eſpecially the *Canibal* Archers) they carrie certaine ſhels of great welkes of the Sea, which they blow, and make therewith great ſound, much like the noiſe of Hornes: they carrie alſo certaine Timbrels, which they vſe in the ſtead of Drummes:

Armor of gold.

alſo very faire Plumes of Feathers, and certaine armour of gold, eſpecially great and round peeces on their breaſts, and ſplints on their armes. Likewiſe other peeces, which they put on their heads and other parts of their bodies:

Their gallantneſſe in the warres. Their Iewels.

For they eſteeme nothing ſo much as to appeare gallant in the warres, and to goe in moſt comely order that they can deuiſe, gliſtering with precious Stones, Iewels, Gold, and Feathers. Of the leaſt of theſe welkes or perewincles, they make certaine little Beades, of diuers ſorts and colours: they make alſo little Bracelets, which they mingle with gaudes of Gold, theſe they roule about their armes from the elbow to the wreſt of the hand. The like alſo doe they on their legges from the knees to the ſoles of their feete, in token of Nobilitie, eſpecially their Noble Women in diuers Prouinces are accuſtomed to weare ſuch Iewels, and haue their neckes in manner laden therewith: theſe Beades and Iewels, and ſuch other trinkets, they call *Caquiras*. Beſide theſe alſo, they weare certaine Rings of Gold at their eares and noſtrels, which they bore full of holes on both ſides, ſo that the Rings hang vpon their lippes. Some of theſe *Indians* are poulde and rounded; albeit commonly both the Men and Women take it for a decent thing to weare long haire, which the women weare to the middeſt of their ſhoulders, and cut it equally, eſpecially aboue their browes: this doe they with certaine hard Stones, which they keepe for the ſame purpoſe.

How the women beare vp their teates with bars of Gold.

The principall Women, when their teates fall, or become looſe, beare them vp with barres of Gold, of the length of a ſpanne and a halfe, well wrought, and of ſuch bigneſſe that ſome of them weigh more then two hundred Caſtelans or Ducades of Gold: theſe barres haue holes at both the ends, whereat they tye two ſmall cords made of Cotton at euery end of the barres: one of theſe cords goeth ouer the ſhoulder, and the other vnder the arme holes, where they tye both together, ſo that by this meanes the barre beareth vp their teates. Some of theſe chiefe Women goe to the battaile with their Husbands, or when they themſelues are regents in any Prouinces, in the which they haue all things at commandement, and execute the office of generall Captaines, and cauſe themſelues to be carried on mens backs, in like manner as doe the *Caciques*, of whom I haue ſpoken before.

The ſtature & colour of the *Indians*.

Theſe *Indians* of the firme Land are much of the ſame ſtature and colour as are they of the Ilands: they are for the moſt part of the colour of an Oliue: if there be any other difference, it is more in bigneſſe then otherwiſe, and eſpecially they that are called *Coronati*, are ſtronger and bigger then any other that I haue ſeene in theſe parts, except thoſe of the Iland of Giants, which are on the South ſide of the Iland of *Hiſpaniola*, neere vnto the coaſts of the firme Land, and likewiſe certain other which they call *Iucates*, which are on the North ſide. All which chiefly, although they be no Giants, yet are they doubtleſſe the biggeſt of the *Indians* that are known to this day, and commonly bigger then the *Flemings*; and eſpecially many of them, as well women as men, are of very high ſtature, and are all archers both men and women.

The *Indians* called *Coronati*.

The Iland of Giants.

Iucates.

Theſe *Coronati* inhabit thirtie leagues in length by theſe coaſts, from the point of *Canoa* to the great riuer which they call *Guadalchiber*, neere vnto *Santta Maria de gratia*. As I trauerſed by thoſe coaſts, I filled a butt of freſh water of that riuer, ſix leagues in the Sea from the mouth thereof where it falleth into the Sea. They are called *Coronati* (that is *Crowned*) becauſe their haire is cut round by their eares, and poulde lower a great compaſſe about the Crowne, much like the Friers of Saint *Auguſtines* Order. And becauſe I haue ſpoken of their manner of wearing their

theſt haire, here commeth to my remembrance a thing which I haue oftentimes noted in theſe *Indians*: and this is, that they haue the bones of the ſculs of their heads foure times thicker, and much ſtronger then ours, ſo that in comming to handſtroakes with them, it ſhall be requiſite not to ſtrike them on the heads with ſwords, for ſo haue many ſwords beene broken on their heads, with little hurt done. The ſculs of *Indians* heads.

Of the thiefe Ilands, Hiſpaniola *and* Cuba.

THe *Indians* which at this preſent inhabit the Iland of *Hiſpaniola*, are but few in number; and the *Chriſtians* not ſo many as they ought to be, for as much as many of them that were in this Iland, are gone to other Ilands, and to the firme Land. For being for the moſt part yong men vnmarried, and deſirous daily to ſee new things, wherein mans nature delighteth, they were not willing to continue long in one place, eſpecially ſeeing daily other new Lands diſcouered, where they thought they might ſooner fill their Purſes, by being preſent at the firſt ſpoile: Wherein neuertheleſſe their hope deceiued many of them, and eſpecially ſuch as had houſes and habitations in this Iland: For I certainely beleeue, confirming my ſelfe herein with the iudgement of many other, that if any one Prince had no more ſeignories then onely this Iland, it ſhould in ſhort time be ſuch, as not to giue place either to *Sicilie* or *England*, whereas euen at this preſent there is nothing wherefore it would malice their proſperity, not being inferiour to them in any felicity, that in manner the heauens can grant to any Land: being furthermore ſuch as may inrich many Prouinces and Kingdomes, by reaſon of many rich Gold Mines that are in it, of the beſt Gold that is found to this day in the world, and in greateſt quantitie. In this Iland, nature of her ſelfe bringeth forth ſuch abundance of Cotton, that if it were wrought and maintained, there ſhould be more and better then in any part of the world. There is ſo great plentie of excellent *Caſſia*, that a great quantitie is brought from thence into *Spaine*, from whencee it is carried to diuers parts of the world, &c. Men are deſirous of new things. The commodities of *Hiſpaniola*, *England*, and *Sicilie*. Gold Mines. Cotton. *Caſſia.*

In this Iland furthermore are many Sheepe, and a great number of Hogges, of the which (as alſo of the Kine) many are become wilde, and likewiſe many Dogges and Cats, of thoſe which were brought out of *Spaine*: Theſe (and eſpecially the Dogs) doe much hurt among the Cattell, by reaſon of the negligence of the Heard-men. There are alſo many Horſes, Mares, and Mules, and ſuch other Beaſts as ſerue the vſe of men in *Spaine*, and are much greater then they of the firſt broode brought thither out of *Spaine*. Sheepe and Hogs. Dogs and Cats become wilde. The ſcituation of *Hiſpaniola*.

Saint *Domingo* was built by line and rule: the Houſes of Stone very faire. There is alſo a Cathedrall Church builded of late, where as well the Biſhop according to his dignity, as alſo the Canons are well endowed. This Church is well builded of Stone and Lime, and of good workmanſhip. There are furthermore three Monaſteries, bearing the name of S. *Dominicke*, S. *Francis*, and S. *Marie* of *Mercedes*, the which are al wel builded, although not ſo curiouſly as they of *Spain*. There is alſo a very good Hoſpital for the aid & ſuccor of poore people, which was found by *Michael Paſſamont*, treaſurer to your Maieſtie. The people of this Iland are commonly of ſomewhat leſſe ſtature then are the *Spaniards*, & of a ſhining or cleare brown color: they haue Wines of their own, and abſtaine from their Daughters, Siſters & Mothers: they haue large foreheads, long black haire, and no beards or haire in any other parts of their bodies, as well Men as Women, except very few, as perhaps ſcarſly one among a thouſand. They goe as naked as they were borne, except that on the parts which may not with honeſtie be ſeene, they weare a certaine leaſe as broad as a mans hand, which neuertheleſſe is not kept cloſe with ſuch diligence, but that ſometimes a man may ſee that they thinke ſufficiently hid. In this Iland are certaine Glowormes, that ſhine in the night as doe ours, but are much bigger, and giue a greater light: In ſo much that when the men of the Iland goe any iournies in the night, they beare ſome of theſe wormes made faſt about their feete and head, in ſuch ſort that he that ſhould ſee them a farre, and ignorant of the thing, would be greatly aſtoniſhed thereat. By the light of theſe alſo, the women worke in their houſes in the night. Theſe wormes they call *Cucuas*. Their light laſteth for the ſpace of three dayes, and diminiſheth as they begin to drie vp. There is alſo a kinde of Crowes, whoſe breath ſtinketh in the morning, and is ſweete in the afternoone: the excrement which they auoide, is a liuing worme. A Cathedrall Church and Monaſteries in *Hiſpaniola*. An Hoſpitall. The people. *Cucuas* a kinde of Gloworme. Crowes ſtinking and ſweete.

In *Cuba*, is a certaine kinde of Partridges, being very little, with their feathers much of the colour of Turtle Doues, but are of much better taſte to be eaten: they are taken in great number, and being brought wilde into the houſes, they become as tame within the ſpace of three or foure dayes as though they had beene hatched there: they become exceeding fat in ſhort ſpace, and are doubtleſſe the moſt delicate and pleaſant meate that euer I haue eaten. But to let paſſe many other things that might be here ſaid, and to ſpeake of two marueilous things which are in this Iland of *Cuba*: whereof the one is, that a Valley containing two or three leagues in length betweene two Mountaines, is full of a kinde of very hard Stones, of ſuch perfect roundneſſe, and like vnto Pellets of Gunnes, that no art can make better or more exactly poliſhed. Of theſe, ſome are as ſmall as Pellets for Handgunnes, and partridges. Bullets for Guns wrought by nature.

other ſo encreaſing bigger and bigger from that quantitie, that they may ſerue for all ſorts of Artillerie, although they be of bigneſſe to receiue one or two or more Quintales of powder, euery Quintale containing one hundred weight, or of what other quantitie ſoeuer they be. Theſe Pellets are found throughout all the Valley within the earth, as in a Mine, which they digge, and take out ſuch as they neede of all ſorts. The other marueilous thing of this Iland is this: That farre from the Sea, there iſſueth out of a Mountaine a certaine liquor, much like the Clay of Babylon, called *Bitumen*, or like vnto Pitch, in great quantitie, and ſuch as is very commodious for the calking of Shippes: this falleth continually from the Rocke, and runneth into Sea, in ſuch abundance that it is ſeene floting aboue the water on euery ſide of the Sea thereabout, as it is driuen from place to place by the winde, or courſe of the water.

A Fountaine of the Pitch of *Bitumen*.

Quintus Curtius writeth in his Hiſtorie, that great *Alexander* came to the Citie of *Memi*, where is a great Caue or Denne, in the which is a Spring or Fountaine that continually auoideth a great quantitie of *Bitumen*, in ſuch ſort, that it is an eaſie thing to beleeue that the ſtones of the wals of *Babylon* might be laid therewith, according as the ſaid Author writeth. I haue ſeene this Mine of *Bitumen*, not onely in the Iland of *Cuba*, but alſo ſuch another in new *Spaine*, in the Prouince of *Panuco*.

Quintus Curtius

Bitumen of *Babylon*.

Thus farre I haue giuen you from Maſter Eden *his Edition, wherein becauſe many things neceſſary to the naturall Hiſtory of the* Indies *are in the Authors Summarie, and in his* 20. *Books of a larger Hiſtorie, I haue added hither ſuch things as I thought fitteſt.*

The *Vtias* are like great Rats, and the *Cories* like Conies, of which the people in *Hiſpaniola* eate, as alſo of the *Tuanas*. *Chemi* and *Mohui* are little creatures alſo in that Iland: which and their little mute Dogges were all the foure footed Beaſts they had, ſaue that of Rats there is ſome queſtion. The *Indians* of *Iamaica* and *Cuba* vſe to catch fiſh with the fiſh *Reuerſo*, as Huntſmen or Falconers vſe Hounds or Haukes in their game. The *Indians* take it ſometimes in their Nets, of which I haue eaten: and when they will bring vp one of them they feede it in the Sea and carrie it tied to their Canoa by a ſtrong line, which when they ſee a fiſh fit for pray, they looſen and vſe words to excite courage and valour in this fiſh; which preſently flies like an arrow at that fiſh and faſtens thereon, and the *Indian* lets the line runne out at length (being oiled, of many fadomes, and hauing a peece of wood at the end to buoy it,) till the fiſh be wearied: this little fiſh (little aboue a ſpanne long, vnſightly to looke on) ſtill holding faſt, till the *Indian* gathering in his cord, prepares to ſhoare to take the greater fiſh, with much commendation and words of encouragement to this chaſe-fiſh, perſwading him to let goe his hold, which otherwiſe ſhould ſooner by violence breake in peeces this Huntſman, then force him to vnfaſten. Thus will he faſten on the belly of a Tortoiſe ſo great that two *Indians* and ſometimes ſixe haue enough to doe to carrie the ſame to their houſes. This fiſh *Reuerſo* hath ſcailes Starre faſhioned, or like the roofe of a mans mouth, and on them certain prickles very ſharpe and ſtrong, whereby he faſtens himſelfe to what fiſh him pleaſeth: and theſe prickly ſcales he hath on the moſt part of his body.

The *Reuerſo* a ſtrange fiſh to hunt with.

Perhaps this *Reuerſo* is the little fiſh which cleaueth to the Sharke and is by him carried in all his Chaſes, feeding on the ſcraps.

They haue likewiſe a cunning wild-gooſe-chaſe, in a great Lake caſting in certaine great emptie Pompons in the ſeaſon when Geeſe reſort thither, wherewith they being accuſtomed grow out of feare and will ſit on them to bee carried. Being thus acquainted, the *Indian* puts one of theſe emptie Pompons on his head, and with much dexteritie of ſwimming enters amongſt the Geeſe, and when one hath made him his Porter, no part of his body being ſeene, he ſwimmes from the reſt, and then with his hand pulls her in, and hangs her thus ſtrangled at his girdle, and begins a freſh game.

When their *Caciques* are dead they lay them on a piece of wood or ſtone, and make a fire about the ſame which may not burne them, but by degrees draw forth all the moyſture in ſweat, leauing onely the skin and bones, and then in a place ſeparate repoſe the ſame with the Anceſtors which before had beene ſo dealt with; this being their beſt Booke of Heraldrie to recount the Names and ſeuerall Deſcents in that Pedegree. If any die in battell, or ſo that they cannot recouer his body, they compoſe Songs which the Children learne touching him, and the manner of his death, to ſupply that memoriall. Theſe Songs they call *Areytos*. As for Letters they were ſo ignorant, that ſeeing the intercourſe of *Spaniards* by Letters, they thought that Letters could ſpeake, and were very cautelous in their carriage of them, leſt the Letters might accuſe them of ill demeanor by the way. When they will diſport themſelues, the Men and Women meet and take each other by the hand, and one goeth before which is called *Tequina* or their Maſter, with certaine paces meaſured to his ſinging in a low voice what commeth in his minde, and after him all the multitude anſwereth in a higher voice with like meaſures proportioned to the tune, and ſo continue they three or foure houres, with *Chicha* or Mayz-wine among; ſometimes alſo changing the *Tequina* and taking another with a new tune and ſong. Their Houſes are commonly round like a Tent, and ſometimes with a double water paſſage (which they call *Bubio*) of good Timber, thatched with Straw or long Graſſe, the Walls of Reed pitched into the ground. In the Prouince of *Abrayne* in *Golden Caſtile* and thereabouts, there are many Villages of *Indians* which dwell on the tops of Trees in Houſes or Roomes there made, to which they aſcend

Memorials of the dead.

Ignorance of Letters.

Areytos, ſongs and dances.

Houſes of three ſorts.

by certaine haires of *Besuco*, which growes about * Trees, and is vsed to binde their Walls and Timbers in their houses before mentioned. Beneath, the ground is fenny and couered with water not so high as a man: and where it is deeper, they vse Canoas, and therewith passe to drie Land to sow their Mays and *Iucca*, *Battatas* and *Aies*. In those houses they are secured from wild Beasts, Enemies and Fire. They are not Archers, and vse Clubs. In the Gulfe of *Vraba* where *Rio Grande* enters the Sea, are many Palme trees in the middest of the Riuer growing neere together, on the tops whereof are houses made as the former and much bigger, in which many Inhabitants dwell together, and haue their beds tyed to the lower parts of the said Palme trees: These beds they call *Hamacas*, being couerlets of Cotten of good threed and well wouen, of two or three braces long, but narrower, with cordes at the ends. The cordes are of Cotton, or of *Henequen* or *Cabuya*, this the courser threed, that the finer and able to cut Iron; made of the leafe of a certaine herbe. These *Indians* fight also with Clubs, and did much harme to Captaine *Vasco Nunes di Balboa* his men, which returned with losse not able to ouer-come them. I haue also obserued that these *Indians* haue the bones of their skulls foure times as thicke as those of the *Christians*, so that to strike them with a Sword must be warily done, the Swords being thereby often broken.

* *Besuco* seemes to be as bind-weed or luie, but stronger and more pliant.

Besides the *Tigre* and other beasts before mentioned, in the firme Land are the *Beori*, (the Christians call them *Dants*, not that they are such, but for some resemblance, as is also said of the *Tigre*) of the bignesse of a meane Mule, without hornes, ash-coloured: they know not to dresse and tanne their hides. They take them with Dogs, but if they take water, they are fierce and cruell. The *Gatto Ceruiero* is as bigge as the *Tigre* and very fierce, more dreadfull to the *Christians*, the swiftest beast yet found in those parts. The *Lions* are a little lesse then those of *Barbarie* and not so full of courage, but fearfull and fugitiue, and hurt none but such as assault them. The *Leopards* are like those of *Barbarie*, and are swift and fierce, but neither these nor the *Lions* haue yet done *Christians* any harme, nor dor they eate the *Indians* as the *Tigres* doe. The *Foxes* are like those of *Spaine*, but in colour blacker then blacke veluet, and somewhat lesse then of *Spaine*. The *Red Deere* are as those of *Spaine*, but not so swift. Their *Fallow Deere* are like those of *Spaine*, but both Red and Fallow exceed the *Spanish* in taste. Their *Conies* or *Hares* are somewhat like ours, but liker *Hares* then *Conies*, yet lesse then the *Conies* of *Spaine*. The *Marterns* are like to those of *Spaine* in bignesse, biting and otherwise: some of them are kept tame and are as full of sport and lesse filthy then the *Monkeys*. The *Monkeys* are of innumerable sorts and shapes: some of them so suttle as they imitate the actions of men, as breaking of Pine-apples and Almonds with stones: some will throw stones at passengers, or breake boughs to fall on them as they passe by to breake their heads, and retort the arrowes shot at them, and doe other things incredible. Some are as little or lesser then a mans hand, and some as great as a meane Mastiffe. The *Indian Dogs* are little and barke not, some hayrie and some bare, but wagge the taile and leape on those which feede them, and are not so tame as ours. The *Churchin* is as bigge as a small *Conie*, tawnie, sharpe-snowted, dog-toothed, long-tayled and eared like a *Rat*. They doe great harme to their Hennes, killing sometimes twentie or more at once to sucke their bloud: And if they then haue young, shee carrieth them with her in a bagge of skin vnder her belly, running alongst the same like a Satchell, which shee opens and shuts at pleasure to let them in and out: and if any come with light when the Damme and young are at their Hen-bloud dainties, shee receiues them into this bagge, and runneth away with them: and if shee finde the way stopped, shee climbeth vp aboue the Hen-roost, and is sometimes taken aliue or dead in this manner, as I haue seene. Her Teats are within her bagge. It is a stinking creature.

The beasts of those parts. *Dants.* *Gatto Ceruiero.* *Leopards.* *Foxes.* Red and fallow Deere. *Marterns.* *Monkeys.* *Dogs.* *Churchin.*

Of Fowles, they haue *Eagles*, *Hawkes*, *Buzzards*, *Rauens*, &c. as in *Spaine*. Other differing sorts they haue so many that they need rather a Painter then Relator to describe them. Of *Parrots* I carried ten or twelue sorts at once to King *Ferdinand*. They flie by couples, a Male and Female together: and doe much harme to their Corne grounds. There are *Night-sparrowes* which flie by night onely, and strike at the *Bats*, holding a pleasant pursute after them. They are bigger and swifter then *Swallowes*, hauing a row of white feathers ouerthwart the wing. The *Bats* draw much bloud by their bitings; and if they bite one man amongst an hundred persons, the same *Bat* will in the nights following still single the same person. They stanch the bloud with hot ashes, or water as hot as may be endured, and so I haue beene cured. There are *Peacocks*, some yellow, some blacke, with tailes like those of *Spaine*: they are better meat: some are wilde, and some tame, which are brought home young. Other *Peacocks* they haue, of which the Hens are ill shaped, the Males haue not so great a taile as ours: their necke also is bare of feathers, but couered with a skin which they change after their phantasie into diuers colours. They haue a horne as it were on their front, and haires on the breast *(the last seeme Turkeys.)*

Fowles. *Parrots.* *Night-sparrowes.* *Bats.* *Peacocks* and *Turkeys.*

The *Sea-Crowes* are so many which on the coast of *Panama* follow the *Pilchards* or *Sardines* (as is before said of the *Alcatrazzi*) that lighting or houering on the Sea, they seeme to couer the same with a blacke carpet of cloth or veluet, going and comming with the Sea. There are *Wilde Hens* as great as *Peacocks*, blacke, the head part of the necke gray skins, and not feathered: they eate Carrion and are of vnsauourie taste to be eaten; smell like muske whiles they are

Sea-crowes. *Wilde Hennes.*

aliue, but that ſent dyeth with them: neither are they good for any thing, except their quills to feather arrowes. They are deſirous to liue about places inhabited to feede on Carrion. The *Partriches* are gray, as ſauourie as thoſe of *Spaine*, and as great as the *Spaniſh* Hens: they haue their brawnes or fleſh double, one ouer the other. Their egges are as bigge as Hens egges, but rounder, and coloured like a fine Turkeſſe ſtone. The *Indians* making a ſound like theirs, draw them to theirs nets. There are alſo a leſſe kinde. The *Pheaſants* are not in feathers like thoſe of *Spaine*, nor ſo goodly, but very ſauourie meate like the great *Partriches*, but are not ſo great; they are gray, haue long legs and tailes, make a loud whiſtling noiſe, and are eaſily ſhot.

Partriches.

Pheaſants.

Flies are not there ſo many as in theſe parts of *Europe*. Their *Waſpes* are greater and ſting more dangerouſly. Their *Bees* are almoſt as ſmall as flies, and ſting not. They haue great Hiues and Combes which hold foure times as much Honie as ours: their Honie is white. *Ants* are great, many, and doe much damage to the Trees, Sugars, and other prouiſions. There are of many ſorts, ſome little and black (of which and the Ant-beare is ſpoken before) ſome called *Conixen* halfe Ant, halfe Worme, very hurtfull; they carry earth on their heads, and therewith on trees, walls, or where they pleaſe build their neſts, three or foure ſpans large, and are as hurtfull to houſes as Moths to clothes. There are others greater of diuers ſorts, ſome as bigge as Bees with vs, ſo poyſonfull that herewith the *Indians* infect their arrowes ſo remedileſſe, that not foure of an hundred which are wounded eſcape: and if this Ant bite a Man he preſently falls into a grieuous feauer, and the place ſwelleth much. There are others red, yellow, and ſome winged. Of *Hornets* or *Horſe-flies (Tafani)* are many ſorts, tedious to expreſſe. There are alſo *Scorpions* in the firme Land. *An.* 1519. and two yeeres after the Ants deſtroyed in *Hiſpaniola* their *Cannafiſtola*, Oranges, and fruit Trees, neither in their houſes could they keepe victualls for their multitudes, deſtroying all like the *African* Graſſe-hoppers, in ſo much that Saint *Domingo* was nigh diſpeopled by them.

Flies, and Waſps, Bees, Ants, &c.

Hiſt. G. l. 15. c. 1. vid. inf. Hiſtoria Gen. l. 2. c. 14.

They laugh in *India* to heare the diſeaſe called *French* by the *Italians*, and *Neapolitan* by the *French*, which may indeed be called *Indian*, where the beſt remedie *Lignum Sanctum*, and *Guaiacan* grow; God ſo in iudgement remembring mercy, that where our ſinnes produce a puniſhment, he alſo ſends a remedie. I had acquaintance with diuers which went in the firſt and ſecond voyages of *Columbus*: of which was *Peter Margarite* Commendator in the ſecond voyage, of moſt reſpect with the King and Queene, who complayned of thoſe paines. Soone after, in the yeere 1496. began the diſeaſe to arreſt ſome Courtiers; but in thoſe beginnings, it was onely amongſt baſer perſons of ſmall authoritie: and it was thought that they got it with hauing to doe with common women. But afterwards it extended to principall Perſons, and the Phyſicians could not tell what to thinke of it, ſo that many dyed. When after this *Gonzalo Fernandes di Cordoua* was ſent with a great Armie by the Catholike Kings, in behalfe of *Ferdinand* the ſecond King of *Naples*, againſt *Charles* the *French* King, ſome diſeaſed perſons went with that Armie, and by dealing with the women, and by conuerſing, ſpread the diſeaſe to the *Italians* and *French*-men, which thence got the names aforeſaid, but indeed came from *Hiſpaniola*: where it is ordinarie, and the remedie alſo. *Our Author* l. 17. c. 4. *and* Ramuſio *in his Preface to his third Tome ſay, That the Souldiers of* Pamfilo de Nauaz *hauing the ſmall pocks infected the* Indians, *which neuer before had heard of that diſeaſe: in ſo much that of* 1600000. *ſoules in that Iland there are ſo few left, as by and by you ſhall heare.* The *Niguas* alſo, creatures leſſe then Fleas, which eate in the fleſh very dangerouſly, are rife in that Iland. The people of that Iland when firſt they were diuided amongſt the *Spaniſh* Planters, were deemed a Million or more (ſome ſay 1600000. of which and of their poſteritie in the yeere 1535. were not aboue fiue hundred left, little and great, the reſt which then were there being Slaues brought thither from other parts. The couetouſneſſe of the Myne-workers, neglect of Diet, change of Gouernours growing worſe and worſe, cauſed them to poyſon, kill, and hang themſelues, beſides thoſe which were conſumed by infectious or peſtilentiall pocks * and other diſeaſes: Their owne vices, alſo Sodomitrie, Idolatrie, &c. prouoked diuine Iuſtice againſt them. No prouiſion could hinder their conſumption. The King ſent Religious men of diuers Orders, but this I know that the *Dominicans* and *Franciſcans* contradicted each other, and what one approued the other diſallowed, although after the other had left that opinion, the Contradictors would embrace it, ſtill agreeing in diſagreeing: which cauſed much danger not onely to new Conuerts, but alſo to old Chriſtians: whiles one Order would not abſolue them except they franchiſed the *Indians*, and the other abſolued them neuertheleſſe. Much diſputation hath beene about the *Indians* ſeruice amongſt the Thomiſts, Canoniſts, and famous Lawyers and Diuines, but their differences haue done little good to the *Indians* or the plantation; and in a ſhort time both this Iland and the three adioyning, Saint *Iohn*, *Iamaica*, and *Cuba*, remayned deſolate, being by the Friars meanes (which I thinke, meant well) diſperſed thorow the Iland, to leſſen their labours, which the Gentlemen impoſed on them. I am of opinion that if a Chriſtian Prince had this Iland of *Hiſpaniola* onely, hee might make it as good as either *England* or *Sicily*: ſuch is the ſtore of Gold, the proſperous ſucceſſe of things carried from *Spaine*, the Beeues (which I knew firſt carried thither from *Spaine*) being alreadie ſo multiplyed that they kill them for the Hides, leauing the fleſh in the fields of fiue hundred at once: and

Digitized by Google

and *Roderigo di Bastidas* Bishop of *Venesuela* hath therein 16000. Beeues, and the Treasurer *Passamonte* as many; others 8000. or more, likewise in other Beasts, Seeds, Oranges, Limons, Figs, Pomegranets, &c.

Of their Zemes, Idols, Sepulchres, and other things concerning their Religion, the Reader may see enough in the ninth Booke and fourteenth Chapter of my Pilgrimage; and of the Spanish first voyages thither in the beginning of this worke, which Oviedo *handleth in his former Bookes.* *Oviedos* fift Booke is of their religion, &c.

Their *Huracans* (so they call tempests of winde and raine together) are very excessiue. *An.* 1508. on the third of August, all the thatched houses in Saint *Domingo* were throwne to the ground, and some also of stone; all the houses also in the Towne *Bonauentura*, which might thence be named *Malauentura*: in the Hauen were sunke twentie Ships and Caruels, a North-wind first and after a South-wind playing their furious prizes, one carrying out the Vessels in despight of all prouisions to Sea, and the other as terribly forcing them againe to the Hauen (if the losse of ships and men may permit that name) yea on Land many men were carried in the streets and fields diuers bow-shots before they could stay themselues. Hell seemed to haue beene opened, and the Deuils to haue carried things to and fro. Yet in Iuly following was a worse, which now are allayed and not so violent since the Blessed Sacrament hath beene placed in Churches. I haue seene the space of a Crosse-bow shot or two, all the ground couered with Trees plucked vp by the Windes from the Rootes, and ours haue sometime by dangers of the way beene forced to climbe from tree to tree ouer such a passage, with rents and perills enough. *Lib.6. c.3.* Superstitious conceit of the Sacrament. It was ordayned against the *Huracans* of the conscience, not of the weather.

The Cocks in *Spaine* crow at mid-night and towards day: but here in the shutting in of the euening, or two houres within night, and two houres before day, and not at all at mid-night: some crow in the first watch and not else all night. Their Cats also vse their lusts all the yeere and without walling noise, which in *Spaine*, *France*, *Sicily*, and other places in *Europe* and *Afrike* which I haue seene goe on Catter-walling onely about Februarie. In the Ile of *Nauaza* Westward from *Hispaniola* in the way thence to *Iamaica*, the Rocks are seene vnder the water: and amongst them a fathome and fiue foote vnder the salt water there ariseth a spring of good fresh water vpon the Sea, spowting vp bigger then a mans arme, higher then the salt water that it may easily be taken in. I haue not seene it, but *Stephen Rocca* a person of credit testifieth this of his owne sight and taste. But I haue seene in the Iland *Dominica* at the Riuer *Acquiata*, twentie paces wide, and not deeper then the arme pits, there is a hot spring, that if one take vp the Sands they seeme like embers in his fist, and so is the water a span deepe aboue the Sands, which on the top is fresh and like other water. *Lib.10. c.10.* Cocks & Cats differing from the *Spanish*: wherein our *English* doe much agree with the *Indians*. Strange water-spous.

Oviedos 8. 9. 10. *and* 11. *Bookes are of Plants and Trees in those parts. The* 12. *of Creatures before mentioned: the* 13. *of Fishes, in which he telleth that An.* 1529. going from the Gulfe of *Orotigua* to *Panama* two hundred leagues Eastward, neere the mouth of the Gulfe, wee saw a Fish or great Water-monster, which at times lifted it selfe right vp aboue the Water so farre that the head and both the armes might bee seene, which seemed higher then our Caruell and all her Masts. Thus did shee rise and fall diuers times beating the water strongly, not casting any water out of the mouth. A younger or lesse of the same kinde did likewise, swimme a little distant from the greater. Some iudged it to bee a Whale with her young one, which others denyed, saying, a Whale had no armes. To my iudgement each arme might be fiue and twentie foote long, and as bigge as a Butt or Pipe: the head fourteene or fifteene foote high and much more in breadth; and the rest of the body larger. That of her which appeared aboue water, was aboue fiue times the height of a meane man, which make fiue and twentie paces. * *Lorenzo Martino* Canon of the Church of *Golden Castile*, *Sancio di Tudela*, &c. were with me: and we were all afraid when shee came neere our small Caruell. Shee seemed to disport her selfe at a tempest approching, which suddenly arose much to our purpose, from the West, and brought vs in few dayes to *Panama*. *Lib.13. c.2.* Sea Monster stupendious. * 25. *passa*, which sometimes signifieth fathoms.

In *Hispaniola* and the neighbouring Ilands is a strange bird of prey, as bigge as a great * *Gaula* and much like it: shee preyeth on the Land on birds, &c. and on fish in the Water, shee is footed like water-fowles and goeth like a Goose, but hath talons like Hawkes, and fastens therewith on the fishes which shee eates (so taken) either in the Water or on the Rocks, or as shee flyeth in the Aire holding it betweene her feete. The Christians call them *Astori di aqua*. *Lib.14. c.7.* * An *Italian* fowle. Water hawkes.

What scath the Ants did in *Hispaniola*, is before mentioned, in the yeere 1519. and the next following, and the Citie of Saint *Domingo*, was almost dishabited by this great Armie of little creatures, as in *Spaine* a Citie was dispeopled by Conies, and which lately happened to the Ile *Porto Santo*; in *Thessalia* (which almost fell out to the *English* Colonie in *Bermuda*) to another Citie by Rats, to the *Atariotes* by Frogges, to the *Mountines* by Fleas, to *Amucle* in *Italie* by Serpents, and to another part thereof by Sparrowes; to diuers places of *Africa* often by Locusts: so can the Great God arme the least creatures to the destruction of proud vainglorious men. And this miserie so perplexed the *Spaniards*, that they sought as strange a remedie as was the disease, which *L.15. c.1.* Greatest harme by least creatures.

Vncertainty of Superstition.

which was to chuse some Saint for their Patron against the Antes. *Alexander Giraldine*, the Bishop hauing sung a solemne and Pontificall Masse, after the Consecration and Eleuation of the Sacrament, and deuout Prayers made by him and the people, opened a Booke in which was a Catalogue of the Saints, by lot to chuse some he or she Saint, whom God should please to appoint their Aduocate against that Calamitie. And the Lot fell vpon Saint *Saturnine* whose Feast is on the nine and twentieth of Nouember: after which the Ant-damage became more tolerable and by little and little diminished, by Gods mercie and intercession of that Saint: I note it the rather, becausse the Bishop and that Saint were both *Romanes*, and as that Martyr had made mute the Idols in *Toledo*, (as is written in the Historie of his Martyrdome) so now was Idolatry (and I pray what was this?) destroyed in *Hispaniola?* Hee might haue said exchanged! a pitifull case that when *God hath sent his owne Sonne made of a woman, made vnder the Law, &c.* Who hath *dyed for our* (yea, that Martyrs) *sinnes, risen for our Iustification, ascended on high to giue gifts to men*; and is *there, and therefore, set downe at Gods right hand to make intercession for vs sinners, to take possession for vs mortals*, to accomplish, as our *Amen, all the promises of this life, and that which is to come*, whether against Ants or Deuils; and in him it hath *pleased the Father that all fulnesse should dwell*; yea (beyond and *it pleased*) in him *dwelleth the fulnesse of the Godhead bodily, and we are compleate in him, and he is all in all, yesterday, to day, the same for euer*; which *hath loued vs, and giuen himselfe for vs*, which *is loue*, which hath inuited vs, *Come to me all ye that labour*, which hath incited vs by all attractiues: that after all this, men, Christian men should goe cast Lots for an Intercessor, and neglecting Christ, dreame of *Romane* carnall phancies, or runne mad with *Romish* superstitious phrensies; wherein if the bodie be deliuered, as happened to the *lusting Israelites*, with their *Quaile-store*, the burthen is made double to the soule, when God heareth in his anger. Such Cisternes doe they digge which forsake the *Fountaine of liuing waters, euen broken Cisternes which can hold no waters*: the best of Saints like the wise Virgins, hauing no *more Oile then will suffice their owne Lampes*, and that also receiued out *of anothers fulnesse, of whose fulnesse wee all haue receiued grace for grace*; said a principall Saint.

Gal.4. Rom.4. Eph.4. Rom.8. Iob.14. 1.Tim.4. Col.1. Col.2. Col.3. Heb.13. Eph.5. 1.Iob.4. Mat.11. Num.11. Ier.2.13. Mat.25. Iob.1.

There are Caterpillers, which shine in the night fiftie or a hundred paces off, only from that part of the bodie whence the legges issue: others only haue their head shining. I haue seene some a spanne long very fearefull, but for any thing I haue heard, harmelesse. Flies are lesse, but more hurtfull then in *Spaine*: but these in kindes and colours are so diuersified that it is impossible to write them: and so may be said of other small creatures in those parts.

L.16.c.15.

In his sixteenth Booke he declareth the Conquest of the Ile *Boriehen*, or Saint *Iohn* and the quarrels betwixt the *Spaniards*, the learning of some breeding such dissentions, that not without cause (saith our Author) in Golden *Castile* and in other parts, the King forbad Law-learned men and Proctors should passe thither, as men infectious by sowing strife where they ought not. In this Ile, the people and other things are as before is said of *Hispaniola*; there are more Birds in Saint *Iohn*, rich Mineralls of Gold, certaine Battes which the people eate; and *Lignum Sanctum* groweth there, more excellent then the *Guaiacum* for the *French* Disease and others.

Lawyers dangerous in the *Spanish Indies.*

L.17.c.4.

In his seuenteenth Booke he writeth of *Cuba*. The people and other things are much like to *Hispaniola*. In their Mariages, all the guests of the Bridegroomes tanke (as *Caciques*, if hee bee a *Cacique* or Principall, or Plebeians as he is) lye with the Spouse before he himselfe may doe it: after which she with her fist bent comes crying with a loud voyce, *Manicato*, *Manicato*, that is *forced* and *full of force*, as glorying in her shame. They are in vices like those of *Hispaniola*, and will be no better *Christians* then other *Indians*, whatsoeuer *Peter Martyr* writeth from *Encises* Relations. For I haue seene more *Indians* then they both, and by experience of those Nations know, that none or very few of them are *Christians* of their owne will and accord: and when any are baptized being of age, he doth it more for some by-purpose then for zeale of the faith: for there remaines to him nothing but the name, which also soone after he forgets. Perhaps there are some faithfull, but I beleeue they are very rare.

Filthy Mariages.

Ouiedos testimony of *Indian* Christianity. He thinkes it a Fable that is told of Crosses found in *Iucatan.*

The Creatures and Plants of *Spaine* prosper well there, as doe the naturall which are the same which are in *Hispaniola*. The people were exhausted when they first went into New *Spaine*, and with the second Armie of *Grigialua*, and with the third of *Cortese*, and with the fourth of *Pamphilo di Narbaez*, all by order of Lieutenant *Velasco*: whereby *Cuba* was in manner dispeopled, and by the former causes mentioned of *Hispaniola*, and by the contagion of the small Pockes which was vniuersall in all these Ilands: So that the Great God hath in manner wholly extinguished them for their *(not without others)* sinnes. They haue much Gold and Brasse: vse to fish much with the *Rouerso* before mentioned, as also that Wild-goose chase. There are innumerable Cranes, such as are in *Spaine*; the Boyes take infinite Egges and young ones. There are Turtles greater then in *Spaine*. Euery yeare there passe from the end of *Cuba* infinite numbers of diuers sorts of Birds, which come from the North of the firme Land, and crosse ouer the *Alacrain* Ilands and *Cuba*, and flye ouer the Gulfe Southwards. I haue seene them passe ouer *Darien* and *Nombre de dios* and *Panama* in diuers yeeres, in the *Firme Land*; so many that they couer

Strange passages of Fowles.

uer the Skie: and this passage or march continueth a moneth or more about the moneth of March. I thinke they flie round about the World; for they neuer are seene to returne toward the West or North: and we see them not euery yeere one after another; from morning to night the aire is couered, and some flie so high that they cannot bee seene, others lower yet higher then the Mountaines tops. They come from the North-west and North to the Southwards, and then turne South-west, occupying in length more then the eye can discerne, and a great space in breadth. The lowest are Eaglets and Eagles, and all seeme Birds of prey of many kinds and plumes: The higher cannot bee discerned in their plumes, but in manner of flying and quantitie appeare of diuers sorts. L.17.c.15.

There haue beene Serpents killed in *Cuba*, as bigge as a mans thigh, and fiue and twentie, or thirtie foot long and more. They are tame, and the *Indians* eate them, and find sometimes in their bellies sixe or seuen creatures bigger then Conies, which they swallow whole.

I am loth to lead you with this Author along with *Grigalua*, in his long Expedition from hence to *Iucatan* and other parts. Neere to *Porto de termini*, he found two Trees seeming set by hand, standing alone, and fifteene paces off diuers Idols of Chalke. They saw two Images made of the wood *Copei*, in manner of *Sodomiticall* villenie ioyned together; and another of Chalke with his circumcised member betwixt his hands. L.17.c.18. Abominable deuotions.

Iamaica was in people, vices, creatures and other things like the former: they were the Inuentors of the *reuerso*-fishing and Goose-catching with Gourds or Pompions aforesaid, which sometimes they practised also with leaues and greene boughes on their heads, and vsed that Garland, as is before said of the Pompions. Of *Cubagua* the Pearle Iland and of the Pearle-fishing is spoken before. In *Cubagua* is a bituminous Fountayne, hauing otherwise no water to drinke, nor Hearbes, nor Trees but a few of *Guaiacan*, nor any liuing creatures, though at first comming of the Christians there were a few Conies. At the East point is the Fountayne running into the Sea with an Oily substance floating on it, profitable for Medicine there called *Deuils Dung*. They that liue there, fetch their water seuen leagues off from *Cumana*, on the firme Land, and wood from *Margarita*. The Kings fifth of the Pearle-fishing hath yeelded 15000. Duckets yeerly: a thing not knowne that so many Pearles haue beene taken from so small a space, the Iland of *Cubagua* not compassing aboue three leagues. In the Gulfe of *Orotigna*, and the Ilands therein in the Prouince of *Nicaragua* on the South Sea, are many shel-fishes of a long forme, some a Cubit long, some lesse, crealed, growing broader and broader to the end when they are opened: they haue a fishie substance within them, and shine within as the Pearle-oysters doe, halfe their length, thence by degrees loosing that shining toward the broader end. The Pearles within them are not so fine as the other. The *Indians* vse the shels to digge their loose ground, fastning the shell to a handle of wood, binding it fast and making a kind of Spade thereof. L.18.c.2. L.19.c.2. Pitch Fountaine. c.9. Two shel-fishes which yeeld Pearles.

In the yeare 1517. An *Englishman* * vnder colour of Discouery came with a great ship towards *Brasil* on the Firme Land, and thence trauersed to *Hispaniola*, and came neere the Hauen of Saint *Domingo*, and sent his Boat full of people on shoare, and desired Trade. But the Captaine of the Fort shot from the Castle at the Boate, because shee came directly to the Port; and thereupon they returned to their ship. The *English* seeing this entertainment, tooke their course towards the Iland of Saint *Iohn*, and entred the Port of Saint *German*, and there demanded victuals and prouisions for their ship, complaining of the wrong done them at Saint *Domingo*, comming thither for Trade, to buy with their Mony, and to barter Commodities. There they got some victuals for which they paid in wrought pieces of Pewter and other things: and so returned towards *Europe*, where it is likely they came not; for there was neuer any more heard of them. *English* voyage to the West *Indies*, A.1517. L.10.c.13. * He cals him a Pirate, but sheweth no reason of that name. Pewter.

The next yeare a *French* Pirat guided by a *Spanish* Pilot, came to trade in the Iland of Pearles and a *Portugall* Carauell which he had taken on the Coast of *Brasil*, and would haue landed his Boats full of men, but was resisted, and a Battel betwixt both parts followed, in which thirteene *Frenchmen* were slaine, and two of ours. Three or foure *Nauarrois* and *Biskainers* fled from them and said the *French* were Theeues and came to take the Iland: whereupon they went with all their strength, and tooke her Boat, and the ship fled out of sight, &c. L.20.

Ouiedos twentieth Booke is of shipwrackes and disaduentures which haue happened to the *Spaniards* in those parts. One which happened 1514. is admirable, the ship sinking and fiue and twentie persons escaping in the Boat, hast forbidding prouision of Card, Compasse or victuall, to saue their liues. Thus liued they twelue dayes at Sea; neither had they any thing to eate or drinke: only a young man had saued two pounds of Bisket, which beeing diuided amongst them, he which had most had not aboue an ounce and halfe. Vrine, or the Sea was their drinke. In this case they made Vowes to our Ladie of *Antica* in *Siuill*: and on the twelfth day hauing made a Saile of their shirts, they came to *Siluer-port* in *Hispaniola*. Their Pilot *Anto Calio* told me the Storie. The same yeare in the Fleet of *Pedrarias de Auilla* a *Portugal* youth, being scoffed at, and flouted by the *Spaniards*, leaped into the Sea in a fresh gale, and not without the wonder of all men was taken vp by another ship aliue, whom after I saw vaunting of this folly, and saying that no *Castilian* durst haue done it; which I easily beleeue, as hauing more wit then this Foole.

* *Ouiedo* writ other Bookes of the firme Land, which are not extant.

Foole. Yet will I imitate a little this fooliſh *Portugall*, and leape out of *Ouiedos Spaniſh* ſhip (for who will not feare ſuch dreadfull ſhipwrackes as this Booke, the laſt which hath come * to our hands, is full of?) and ſwim aſhoare, or ſeeke other paſſage with *Acoſta*, in a new or rather an old Voyage for Diſcouerie of the *Mexican* Antiquities.

CHAP. IIII.

Mexican *Antiquities gathered out of the Writings of* IOSEPHVS ACOSTA *a learned Ieſuite.*

L.7. Eccleſ.1.

EVery Hiſtorie well written is profitable to the Reader: For as the Wiſeman ſaith, That which hath beene, is, and that which ſhall bee, is that which hath beene: *Humane things haue much reſemblance in themſelues, and ſome grow wiſe by that which happeneth to others. There is no Nation, how barbarous ſoeuer, that haue not ſomething in them, good, and worthy of commendation; nor Common-weale ſo well ordered, that hath not ſomething blame-worthy, and to bee controlled. If therefore there were no other fruit in the Hiſtorie and Narration of the Deeds and Geſts of the* Indians, *but this common vtilitie, to be a Relation or Hiſtorie of things, the which in the effect of truth haue happened, it deſerueth to bee receiued as a profitable thing, neither ought it to bee reiected, for that it concernes the* Indians. *As wee ſee that thoſe Authors that treate of naturall things, write not onely of generous Beaſts, notable and rare Plants, and of Precious Stones, but alſo of wilde Beaſts, common Hearbes, and baſe and vulgar Stones, for that there is alwayes in them ſome properties worthy obſeruation. If therefore there were nothing elſe in this Diſcourſe, but that it is a Hiſtorie, and no fables nor fictions, it were no vnworthy Subiect to be written, or read. There is yet another more particular reaſon, which is, that we ought herein to eſteeme that which is worthy of memorie, both for that it is a Nation little eſteemed, and alſo a Subiect different from that of our* Europe, *as theſe Nations bee, wherein wee ſhould take moſt pleaſure and content, to vnderſtand the ground of their beginning, their manner of life, with their happie and vnhappie Aduentures. And this ſubiect is not onely pleaſant and agreeable, but alſo profitable, eſpecially to ſuch as haue the charge to rule and gouerne them; for the knowledge of their Acts inuites vs to giue credit, and doth partly teach how they ought to be intreated: yea, it takes away much of that common and fooliſh contempt wherein they of* Europe *hold them, ſuppoſing that thoſe Nations haue no feeling of reaſon. For in truth wee cannot cleere this errour better, than by the true report of the Acts and deeds of this people. I will therefore as briefly as I can, intreat of the beginning, proceedings and notable deeds of the* Mexicanes, *whereby wee may know the time and the diſpoſition that the high God would chooſe, to ſend vnto theſe Nations the Light of the Goſpell of Ieſus Chriſt his only Sonne our Lord, whom I beſeech to ſecond our ſmall labour, that it may bee to the glorie of his Diuine greatneſſe, and ſome profit to theſe people, to whom he hath imparted the Law of his holy Goſpell.*

§. I

Of the ancient Inhabitants of New Spaine, *and of the ſixe Linages of the* Nauatlacas. *Of the* Mexican Exodus, *and Aduentures by the way: the foundation of* Mexico, *their firſt King and Tribute.*

L.7.c.2.

Chichimecas. Their ſauage courſe of life.

THe aneient and firſt Inhabitants of thoſe Prouinces, which wee call New *Spaine*, were men very barbarous and ſauage, which liued onely by hunting, for this reaſon they were called *Chichimecas*. They did neither ſow nor till the ground, neither liued they together; for all their exercile was to hunt, wherein they were very expert. They liued in the rougheſt parts of the Monntaynes beaſt-like, without any policie, and they went all naked. They hunted wilde Beaſts, Hares, Conies, Weezels, Mowles, wild Cats, and Birds, yea vncleane beaſts, as Snakes, Lizards, Locuſts and Wormes, whereon they fed, with ſome hearbs and roots. They ſlept in the Mountaynes, in caues and in buſhes, and the wiues likewiſe went a hunting with their husbands, leauing their young children in a little panier of Reeds, tyed to the boughes of a Tree, which deſired not to ſucke vntill they were returned from hunting. They had no Superiours, nor did acknowledge or worſhip any gods, neither had any manner of Ceremonies or Religion.

There is yet to this day in New *Spaine* of this kind of people, which liue by their Bowes and Arrowes, the which are very hurtfull, for that they gather together in troopes to doe miſchiefe,

Digitized by Google

chiefe, and to rob: neither can the *Spaniards* by force or cunning reduce them to any policie or obedience: for hauing no Townes nor places of residence, to fight with them, were properly to hunt after sauage beasts, which scatter and hide themselues in the most rough and couered places of the Mountaynes. Such is their manner of liuing euen to this day, in many Prouinces of the *Indies*. Those in New *Spaine*, which they call *Ottomies*, were of this sort, beeing commonly poore *Indians*, inhabiting a rough and barren Land, and yet they are in good numbers, and liue together with some order, and such as doe know them, find them no lesse apt and capeable of matters of Christian Religion, then others which are held to be more rich and better gouerned. Comming therefore to our subiect, the *Chichimecas* and *Ottomies* which were the first Inhabitants of New *Spaine*, for that they did neither till nor sowe the Land, left the best and most fertile of the Countrey vnpeopled, which, Nations that came from farre did possesse, whom they called *Nauatalcas*, for that it was a more ciuill and politicke Nation; this word signifies a *people that speakes well*, in respect of other barbarous Nations without reason. These second peoplers *Nauatalcas*, came from other farre Countreyes, which lye toward the North, where now they haue discouered a Kingdome they call *New Mexico*. *Ottomies.* *New Mexico.*

There are two Prouinces in this Countrey, the one called *Aztlan*, which is to say a *place of Herons*: the other *Tuculhuacan*, which signifies a *Land of such, whose Grandfathers were diuine*. The Inhabitants of these Prouinces haue their houses, their Lands tilled, Gods, Customes, and Ceremonies, with like order and gouernment to the *Nauatalcas*, and are diuided into *seuen Tribes* or Nations: and for that they haue a custome in this Prouince, that euery one of these Linages hath his place and priuate Territorie, the *Nauatalcas* paint their beginning and first Territorie in figure of a Caue, and say that they came forth of *seuen Caues* to come and people the Land of *Mexico*, whereof they make mention in their Historie, where they paint seuen Caues and men comming forth of them. By the supputation of their Bookes, it is aboue *eight hundred yeeres* since these *Nauatalcas* came forth of their Countrey, reducing which to our accompt, was about the yeere of our Lord 720. When they left their Countrey to come to *Mexico*, they stayed fourescore yeeres vpon the way; and the cause of this their long stay in their Voyage, was, that their Gods (which without doubt were Deuils, and spake visibly vnto them) had perswaded them to seeke new Lands that had certaine signes. And therefore they came discouering the whole Land, to search for these tokens which their Idols had giuen them; and in places where they found any good dwellings, they peopled it, and laboured the Land, and as they discouered better Countreyes, they left those which they had first peopled; leauing still some, especially the aged, sicke folkes, and the wearie; yea, they did plant and build there, whereof wee see the remainders at this day. In the way where they passed, they spent fourescore yeeres in this manner of leisurely trauell, the which they might haue done in a moneth. By this meanes they entred the Land of *Mexico*, in the yeere 902. after our computation. *Aztlan.* *Tuculhuacan.* Their beginnings 900. yeeres agoe, *A.D.720.*

These seuen Linages I haue spoken of, came not forth altogether; the first were the *Suchimilcos*, which signifie a *Nation of the seeds of flowres*. Those peopled the bankes of the great Lake of *Mexico* towards the South, and did build a Citie of their name, and many Villages. Long time after came they of the second Linage called *Chalcas*, which signifies *people of mouthes*, who also built a Citie of their name, diuiding their limits and Territories with the *Suchimilcos*. The third were the *Tepanecans*, which signifies people of the bridge: they did inhabite vpon the banke of the Lake towards the West, and they increased so, as they called the chiefe and Metropolitane of their Prouince, *Azcapuzalco*, which is to say, an *Ants Nest*, and they continued long time mightie. After them came those that peopled *Tescuco*, which be those of *Culhua*, which is to say, *a crooked people*: for that in their Countrey there was a Mountaine much bending. And in this sort this Lake was enuironed with these foure Nations, these inhabiting on the East, and the *Tepanecas* on the North. These of *Tescuco*, were held for great Courtiers, for their tongue and pronunciation is very sweet and pleasant. Then arriued the *Tlalhuicans*, which signifies men of the *Sierre* or Mountaine. Those were the most rude and grosse of all the rest, who finding all the Plaines about the Lake possessed euen vnto the *Sierre*, they passed to the other side of the Mountaine, where they found a very fertile, spacious and warme Countrey, where they built many great Villages, calling the Metropolitane of their Prouince *Quahunachua*, which is as much to say, as *a place that sounds the voice of an Eagle*, which our common people call by corruption, *Quernauaca*, and at this day they call this Prouince, the *Marquisate*. Those of the sixt Generation, which are the *Tlascaltecans*, which is to say, *Men of bread*, passed the Mountaine towards the East, crossing all the *Sierre*, or Mountaine of *Menade*, where that famous *Vulcan* is betwixt *Mexico* and the *Citie of Angels*, where they did find a good Countrey, making many buildings. They built many Townes and Cities, whereof the Metropolitane was called by their name *Tlascala*. This is the Nation which fauoured the *Spaniards* at their entrie, by whose helpe they did winne this Countrey, and therefore to this day they pay no Tribute, but enioy a generall exemption. When all these Nations peopled these Countreyes, the *Chinchimecans* being the ancient Inhabitants, made no resistance, but fled, and as people amazed, they hid themselues in the most obscure of the Rockes. But those that inhabited on the other side of the How the six Linages of *Nauatalcas* peopled the Land of *Mexico*. *Chap. 3.* *Suchimilcos.* *Chalchas.* *Tepanecans.* *Azcapuzalco.* *Tescuco.* *Culhua.* *Tlalhuicans.* *Quahunachuas* *Tlascaltecans.*

Mountaine where the *Tlaſcaltecans* had planted themſelues, did not ſuffer them in quiet, as the reſt of the *Chichimecans* had done, but they put themſelues in defence to preſerue their Country,
Giants. and being Giants as the Hiſtories report, they ſought to expell the laſt Commers, but they were vanquiſht by the policy of the *Tlaſcaltecans*, who counterfeiting a peace with them, inuited them to a great banquet, and when they were buſieſt in their drunkenneſſe, there were ſome laid in ambuſh, who ſecretly ſtole away their weapons, which were great Clubs, Targets, Swords of wood, and other ſuch armes. Then did they ſuddenly ſet vpon them, and the *Chichimecans* ſeeking to defend themſelues, they did want their armes, ſo as they fled to the Mountaines and Foreſts adioyning, where they pulled downe Trees, as if they had beene ſtalkes of Lettuces. But in the end, the *Tlaſcaltecans* being armed, and marching in order, they defeated all the Giants, not
Note of Giants. leauing one aliue. We muſt not hold this of the Giants to be ſtrange, or a fable; for at this day we finde dead mens bones of an incredible bigneſſe.

When I was in *Mexico*, in the yeere 1586. they found one of thoſe Giants buried in one of our Farmes, which we call *Ieſus du Mont*, of whom they brought a tooth to bee ſeene, which (without augmenting) was as bigge as the fiſt of a man, and according to this, all the reſt was proportionable, which I ſaw and admired at his deformed greatneſſe. The *Tlaſcaltecans* by this victorie remayned peaceable, and ſo did the reſt of the Linages. Theſe ſixe Linages did alwayes entertaine amitie together, marrying their children one with another, and diuiding their limits quietly: then they ſtudied with an emulation to encreaſe and beautifie their Commonweale. The barbarous *Chichimecans*, ſeeing what paſſed, began to vſe ſome gouernment, and to apparell
Beginnings of amitie. themſelues, being aſhamed of what had paſſed: for till then they had no ſhame. And hauing abandoned feare by their communication with theſe other people, they began to learne many things of them, building ſmall Cottages, hauing ſome policy and gouernment. They did alſo chooſe Lords, whom they did acknowledge for their Superiors, by meanes whereof they did in a manner quite abandon this bruitiſh life, yet did they alwayes continue in the Mountaines diuided from the reſt.

Of the *Mexicans* departure, or their iourney and peopling the Prouince of *Mechoacan*. *ch.* 4. Three hundred and two yeeres after the former two Linages had left their Country, to inhabite New *Spaine*, the Country being now well peopled, and reduced to ſome forme of gouernment, Thoſe of the ſeuenth Caue or Line arriued, which is the *Mexicane* Nation, the which like vnto the reſt, left the Prouince of *Aztlan*, and *Teuculhuacan*, a politike, courtlike, and warlike Nation. They did worſhip the Idoll *Vitzliputzli*, the Deuill that was in this Idoll ſpake, and gouerned this Nation eaſily. This Idoll commanded them to leaue their Country, promiſing to make them Princes and Lords ouer all the Prouinces which the other ſixe Nations did poſſeſſe, that he would giue them a Land abounding with gold, ſiluer, precious ſtones, feathers, and rich mantels: whereupon they went forth, carrying their Idoll with them in a Coffer of Reedes, ſupported by foure of their principall Prieſts, with whom he did talke and reueale vnto them in ſecret, the ſucceſſe of their way and voyage, aduiſing them of what ſhould happen. He likewiſe gaue them Lawes, and taught them the cuſtomes, ceremonies, and ſacrifices they ſhould obſerue. They did not aduance nor mooue without commandement from this Idoll. He gaue them notice when to march, and when to ſtay in any place, wherein they wholly obeyed him. The firſt thing they did whereſoeuer they came, was to build a Houſe or Tabernacle for their falſe god, which they ſet alwayes in the middeſt of their Campe, and there placed the Arke vpon an Altar, in the ſame manner as they haue vſed in the holy Chriſtian Church. This done, they ſowed their land for bread and pulſes, which they vſed: and they were ſo addicted to the obedience of their god, that if he commanded them to gather, they gathered, but if he commanded them to raiſe their Campe, all was left there for the nouriſhment of the aged, ſicke, and wearie, which they left purpoſely from place to place, that they might people it, pretending by this meanes, that all the Land ſhould remaine inhabited by their Nation.

Deuills emulation of that worke of God in bringing *Iſrael* out of *Egypt*, and paſſing thorow the deſert to *Canaan*. Tabernacle. Arke.

We may well iudge what this *Vitzliputzli* was, for that there was neuer ſeene nor heard ſpeake of cuſtomes more ſuperſtitious, nor ſacrifices more cruell and inhumane, then thoſe which hee taught them. To conclude, they were inuented by the enemie of mankinde. The Chiefe and
Mexi their *Moſes*. Captaine whom they followed, was called *Mexi*, whence came the name of *Mexico*, and of the *Mexican* Nation. This people marching thus at leiſure, as the other ſixe Nations had done, peopling and tilling the Land in diuers parts, whereof there is yet ſome ſhewes and ruines: and after they had endured many trauels and dangers, in the end they came to the Prouince of
Mechoacan. *Mechoacan*, which is as much to ſay, as *a land of fiſh*, for there is great abundance in goodly great Lakes, where contenting themſelues with the ſituation and temperature of the ground, they reſolued to ſtay there. Yet hauing conſulted with their Idoll vpon this point, and finding him vnwilling, they demanded licenſe to leaue ſome of their men to people ſo good a Land, the which he granted, teaching them the meanes how to doe it, which was, that when the Men and Wo-
Paſcuaro. men ſhould be entred into a goodly Lake called *Paſcuaro*, to bathe themſelues, thoſe which remayned on Land, ſhould ſteale away all their clothes, and then ſecretly raiſe their Campe, and depart without any bruit, the which was effected, and the reſt which dreamt not of this deceit (for the pleaſure they tooke in bathing) comming forth and finding themſelues ſpoyled of their garments,

Digitized by Google

garments, and thus mocked and left by their Companions, they remayned discontented and vexed therewith: so as to make shew of the hatred they had conceiued against them, they say that they changed their manner of life and their language. At the least it is most certaine, that the *Mechoacans* haue beene alwayes enemies to the *Mexicans*, and therefore they came to congratulate the Marqueſſe *De Valle*, after his victorie obtayned when he had conquered *Mexico*.

From *Mechoacan* to *Mexico*, are aboue fiftie leagues, and vpon the way is *Malinalco*, where it happened, that complayning to their Idoll of a woman that was a notable witch, which came in their company carrying the name of their ſiſter to their god, for that with her wicked artes ſhee did them much harme, pretending by certaine meanes to bee worſhipped of them as their goddeſſe: the Idoll ſpake in a dreame to one of thoſe old men that carried the Arke, commanding him to comfort the people, making them new and great promiſes, and that they ſhould leaue this his ſiſter with her family, being cruell and bad, rayſing their Campe at mid-night in great ſilence, leauing no ſhew what way they paſſed. So they did, and the Witch remayning alone with her family in this ſort, peopled a Towne which they call *Malinalco*, the Inhabitants whereof, are held for great Sorcerers, being iſſued from ſuch a mother. The *Mexicans* for that they were greatly diminiſhed by theſe diuiſions, and by the number of ſicke and wearied perſons, which they had left behinde, meant to repayre themſelues, and to ſtay in a place called *Tula*, which ſignifies *a place of Reedes*. There their Idoll commanded them to ſtop a great Riuer, that it might couer a great Playne, and by the meanes he taught them, they did inuiron a little Hill called *Coatepec*, making a great Lake, the which they did plant round about with Willowes, Elmes, Sapines, and other Trees. There began to breede much fiſh, and many birds came thither: ſo as it became a very pleaſant place. The ſituation of this place, ſeeming pleaſant vnto them, and being wearied with trauell, many talked of peopling there, and to paſſe no farther: wherewith the Deuill was much diſpleaſed, threatning the Prieſts with death, commanding them to returne the Riuer to her courſe, ſaying, that hee would that night chaſtiſe thoſe which had beene diſobedient as they had deſerued. And as to doe ill is proper to the Deuill, and that the diuine Iuſtice doth often ſuffer ſuch to be deliuered into the hands of ſuch a Tormentor, that chooſe him for their god; It chanced that about mid-night they heard a great noyſe in one part of the Campe, and in the morning going thither, they found thoſe dead that had talked of ſtaying there. The manner of their death, was, that their ſtomacks were opened, and their hearts pulled out. And by that meanes, this good god taught theſe poore miſerable Creatures, the kindes of ſacrifices that pleaſed him, *which was, in opening the ſtomacke, to pull out the heart*, as they haue ſince practiſed in their horrible ſacrifices. Seeing this puniſhment, and that the Playne was dryed, the Lake being emptied, they asked counſell of their god what to doe, who commanded them to paſſe on, the which they did by little and little, vntill they came to *Chapultepec*, a league from *Mexico*, famous for the pleaſantneſſe thereof. They did fortifie themſelues in theſe Mountaines, fearing the Nations which inhabited that Country, the which were oppoſite vnto them, eſpecially for that one named *Copil*, ſonne to this Sorcereſſe, left in *Malinalco*, had blamed and ſpoken ill of the *Mexicans*: for this *Copil* by the commandement of his mother, awhile after followed the *Mexicans* courſe, labouring to incenſe the *Tapanecas*, and other neighbours againſt them, euen vnto the *Chalcas*: ſo as they came with a ſtrong Armie to deſtroy the *Mexicans*. *Copil* in the meane ſpace ſtood vpon a little Hill in the middeſt of a Lake, called *Acopilco*, attending the deſtruction of his Enemies, and they by the aduice of their Idoll, went againſt him, tooke him ſuddenly, and ſlue him, carrying his heart to their god, who commanded them to caſt it into the Lake, fayning that thereof did grow a plant called *Tunal*, where ſince *Mexico* was built. They came to fight with the *Chalcas*, and other Nations, hauing choſen for their Captaine, a valiant man, called *Vitzilonilti*, who in an encounter, was taken and ſlaine by the Enemies. But for all this, they were not diſcouraged, but fought valiantly; and in deſpight of their Enemies they brake the ſquadrons, and carrying their Aged, their Women, and young Children in the midſt of their battaile, they paſſed on to *Atlacuyanaya*, a Towne of the *Culhuans*, whom they found ſolemniſing of a Feaſt, in which place they fortified. The *Chalcas*, nor the other Nations did not follow them, but grieued to be defeated by ſo ſmall a number of men; they being in ſo great multitudes retyred to their Townes.

Of that which happened in *Malinalco*, *Tula*, and in *Chapultepec*. *Chap.* 5.

The *Mexicans*, by the aduice of their Idoll, ſent their Meſſengers to the Lord of *Culhuacan*, to demand a place to dwell in, who after hee had imparted it to his people, granted them the place of *Tizaapan*, which ſignifies *white waters*, to the end they ſhould all periſh there, being full of Vipers, Snakes, and other venemous beaſts which bred in a Hill neere adioyning. But being perſwaded and taught by their Deuill, they accepted willingly what was offered, and by their deuilliſh arte, tamed theſe beaſts, ſo as they did them no harme; yea, they vſed them as meate, eating them with delight and appetite. The which the Lord of *Culhuacan* ſeeing, and that they had tilled and ſowed the Land, he reſolued to receiue them into the Citie, and to contract amitie with them. But the god whom the *Mexicans* did worſhip (as he is accuſtomed to do no good, but ill) ſaid vnto his Prieſts, that this was not the place where hee would haue them ſtay, and that they muſt go forth making warres. Therefore they muſt ſeeke forth a Woman, and name her

Queene of Diſcord made by the King of Pride.

the *Goddeſſe of Diſcord.* Whereupon they reſolued to ſend to the King of *Culhuacan*, to demand his daughter to be Queene of the *Mexicans*, and mother to their god, who receiued this ambaſſage willingly, ſending his daughter preſently gorgeouſly attired and well accompanied. The ſame night thee arriued, by order of the murtherer whom they worſhipped, they killed her cruelly; and hauing flayed her artificially as they could doe; they did clothe a young man with her skin, and thereupon her apparell, placing him neere their Idoll, dedicating him for a *Goddeſſe and the mother of their god*, and euer after did worſhip it, making an Idoll which they called *Teccy*, which is to ſay, *our grand mother*. Not content with this crueltie, they did maliciouſly inuite the King of *Culhuacan*, the father of the young Maid, to come and worſhip his daughter, who was now conſecrated a goddeſſe, who comming with great Preſents, and well accompanied with his people, he was led into a very darke Chappell where their Idoll was, that he might offer ſacrifice to his daughter that was in that place. But it chanced that the Incenſe that was vpon the harth, according to their cuſtome, kindled in ſuch ſort, as he might diſcerne his daughters haire, and hauing by this meanes diſcouered the crueltie and deceit, he went forth crying aloud, and with all his men he fell vpon the *Mexicans*, forcing them to retyre to the Lake, ſo as they were almoſt drowned. The *Mexicans* defended themſelues, caſting certaine little darts, which they vſed in the warres, wherewith they much galled their enemies. But in the end they got Land, and leauing that place, they coaſted along the Lake, very weary and wet; the Women and little Children crying and making great exclamations againſt them and their god that had brought them into this diſtreſſe. They were inforced to paſſe a Riuer that could not bee waded thorow, and therefore they aduiſed to make ſmall Boates of their Targets and of Reedes, wherein they paſſed. Then afterwards, hauing left *Culhuacan*, they arriued at *Iztacalco*, and finally to the place where the Hermitage of Saint *Anthony* now is, at the entrie of *Mexico*, and to that quarter which they now call Saint *Paul*. During which time their Idoll did comfort them in their trauels, and incouraged them, promiſing great matters.

Teccy.

Of the foundation of *Mexico. Chap. 7.*

The time being now come, that the Father of lyes ſhould accompliſh his promiſe made to his people, who could no longer ſuffer ſo many turnings, trauels, and dangers, it happened that ſome old Prieſts or Sorcerers, being entred into a place full of water-lillies, they met with a very faire and cleere current of water, which ſeemed to be ſiluer, and looking about, they found the Trees, Meadowes, Fiſh, and all that they beheld to be very white: wondering hereat, they remembred a propheſie of their god, whereby he had giuen them that for a token of their place of reſt, and to make them Lords of other Nations. Then weeping for ioy, they returned to the people with theſe good newes. The night following, *Vitzliputzli* appeared in a dreame to an ancient Prieſt, ſaying, that they ſhould ſeeke out a *Tunal* in the Lake, which grew out of a ſtone (which as hee told them, was the ſame place where by his commandement they had caſt the heart of *Copil*, ſonne to the Sorcereſſe their enemie) and vpon this *Tunal* they ſhould ſee a goodly Eagle, which fed on certaine ſmall birds. When they ſhould ſee this, they ſhould beleeue it was the place where their Citie ſhould be built, the which ſhould ſurmount all others, and be famous throughout the World. Morning being come, the old man aſſembled the whole people, from the greateſt to the leaſt, making a long ſpeech vnto them, how much they were bound vnto their god; and of the reuelation, which (although vnworthy) he had receiued that night, concluding that all muſt ſeeke out that happy place which was promiſed them; which bred ſuch deuotion and ioy in them all, that preſently they vndertooke the enterpriſe, and diuiding themſelues into Bands, they began to ſearch, following the ſignes of the reuelation of the deſired place. Amiddeſt the thickeſt of theſe water-lillies in the Lake, they met with the ſame courſe of water they had ſeene the day before, but much differing, being not white, but red, like bloud, the which diuided it ſelfe into two ſtreames, whereof the one was of a very obſcure azure, the which bred admiration in them, noting ſome great myſterie, as they ſaid. After much ſearch here and there, the *Tunal* appeared growing on a ſtone, whereon was a Royall Eagle, with the wings diſplayed towards the Sunne, receiuing his heat. About this Eagle were many rich feathers, white, red, yellow, blue, and greene, of the ſame ſort as they make their Images, which Eagle held in his tallants a goodly bird. Thoſe which ſaw it and knew it to bee the place foretold by the Oracle, fell on their knees, doing great worſhip to the Eagle, which bowed the head looking on euery ſide. Then was there great cryes, demonſtrations, and thankes vnto the Creator, and to their great god *Vitzliputzli*, who was their father, and had alwayes told them truth. For this reaſon they called the Citie which they founded there, *Tenoxtitan*, which ſignifies *Tunal on a ſtone*, and to this day they carry in their Armes, an Eagle vpon a *Tunal*, with a bird in his tallant, and ſtanding with the other vpon the *Tunal*. The day following, by common conſent they made an Hermitage adioyning to the *Tunal* of the Eagle, that the Arke of their god might reſt there, till they might haue meanes to build him a ſumptuous Temple: and ſo they made this Hermitage of Flagges and Turfes couered with ſtraw. Then hauing conſulted with their god, they reſolued to buy of their Neighbours, Stone, Timber, Lime, in exchange of Fiſh, Frogs, and young Kids, and for Ducks, Water-hens, Courlieus, and diuers other kindes of Sea fowles. All which things they did fiſh and hunt for in this Lake, whereof there is great abundance. They went with

with these things to the Markets of the Townes and Cities of the *Tapanecans*, and of them of *Tescuco* their neighbours, and with policy they gathered together by little and little, what was necessarie for the building of their Citie: so as they built a better Chappell for their Idoll of lime and stone, and laboured to fill vp a great part of the Lake with rubbish. This done, the Idoll spake one night to one of his Priests, in these termes; *Say vnto the* Mexicans, *that the Noblemen diuide themselues euery one with their Kinsfolks and Friends, and that they diuide themselues into foure principall quarters, about the house which you haue built for my rest, and let euery quarter build in his quarter at his pleasure.* The which was put in execution: and those be the foure principall quarters of *Mexico*, which are called at this day Saint *Iean*, Saint *Mary the round*, Saint *Paul*, and Saint *Sebastian*. After this, the *Mexicans* being thus diuided into these foure quarters, their god commanded them to diuide amongst them the gods he should name to them, and that they should giue notice to euery quarter, principall of the other foure particall quarters, where their gods should bee worshipped. So as vnder euery one of these foure principall quarters, there vvere many lesse comprehended, according to the number of the Idols which their god commanded them to worship, which they called *Calpulteco*, which is as much to say, as *God of the quarters*. In this manner the Citie of *Mexico Tenoxtitlan* was founded, and grew great.

Stone Chappell.

Oracle.

God of the quarters.

This diuision being made as aforesaid, some old Men and Ancients held opinion, that in the diuision, they had not respected them as they deserued: for this cause, they and their Kinsfolke did mutinie, and went to seeke another residence: and as they went through the Lake, they found a small piece of Ground or Terrasse, which they call *Tloteloli*, where they inhabited, calling it *Tlatellulco*, which signifies *Place of a Terrasse*. This was the third diuision of the *Mexicans*, since they left their Country. That of *Mechonacan* being the first, and that of *Malinalco* the second. Those which separated themselues and went to *Tlatellulco*, were famous men, but of bad disposition: and therefore they practised against the *Mexicans* their neighbours, all the ill neighbourhood they could. They had alwayes quarrels against them, and to this day continues their hatred and old leagues. They of *Tenoxtitlan*, seeing them of *Tlatellulco* thus opposite vnto them, and that they multiplyed, feared that in time they might surmount them: hereupon they assembled in counsell, where they thought it good to choose a King, whom they should obey, and strike terrour into their Enemies, that by this meanes they should bee more vnited and stronger among themselues, and their Enemies not presume too much against them. Being thus resolued to choose a King, they tooke another aduice very profitable and assured, to choose none among themselues, for the auoyding of dissentions, and to gayne (by their new King) some other neighbour Nations, by whom they were inuironed, being destitute of all succours. All well considered, both to pacifie the King of *Culhuacan*, whom they had greatly offended, hauing slaine and flayed the daughter of his predecessor, and done him so great a scorne, as also to haue a King of the *Mexican* bloud, of which generation there were many in *Culhuacan*, which continued there since the time they liued in peace amongst them; they resolued to choose for their King, a young man called *Acamapixtli*, sonne to a great *Mexican* Prince, and of a Lady, daughter to the King of *Culhuacan*. Presently they sent Ambassadors with a great Present to demand this man, who deliuered their Ambassage in these termes; *Great Lord, wee your Vassals and Seruants, placed and shut vp in the Weedes and Reedes of the Lake, alone, and abandoned of all the Nations of the World, led onely and guided by our god to the place where wee are, which falls in the iurisdiction of your limits of* Ascapusalco, *and of* Tescuco: *Although you haue suffered vs to liue and remayne there, yet will wee not, neither is it reason to liue without a Head and Lord to command, correct, and gouerne vs, instructing vs in the course of our life, and defending vs from our Enemies: Therefore wee come to you, knowing that in your Court and House, there are Children of our generation, linckt and allied with yours, issued from our entrailes, and yours, of our blond and yours, among the which wee haue knowledge of a Grand-child of yours and ours, called* Acamapixtli. *Wee beseech you therefore, to giue him vs for Lord, wee will esteeme him as hee deserues, seeing hee is of the Linage of the Lords of* Mexico, *and the Kings of* Culhuacan.

Of the sedition of those of *Tlatelulco*, and of the first Kings the *Mexicans* did choose: *chap. 8.*

Acamapixtli first King of the *Mexicans*.

The King hauing consulted vpon this point, and finding it nothing inconuenient to bee allied to the *Mexicans*, who were valiant men, made them answere, That they should take his grand-child in good time, adding thereunto, that if he had beene a woman, hee would not haue giuen her, noting the foule fact before spoken of, ending his discourse with these wordes, *Let my grand-child goe to serue your god, and be his Lieutenant, to rule and gouerne his Creatures, by whom we liue, who is the Lord of Night, Day, and Windes: Let him goe and be Lord of the Water and Land, and possesse the* Mexican *Nation, take him in good time, and vse him as my sonne and grand-child.* The *Mexicans* gaue him thankes, all ioyntly desiring him to marry him with his owne hand, so as hee gaue him to wife, one of the noblest Ladies amongst them. They conducted the new King and Queene with all honor possible, and made him a solemne reception, going all in generall forth to see the King, whom they led into Palaces which were then but meane, and hauing seated them in Royall Thrones, presently one of the Ancients and an Orator

much eſteemed amongſt them, did riſe vp, ſpeaking in this manner, *My ſonne, our Lord and King, thou art welcome to this poore Houſe and Citie, amongſt theſe weeds and mud, where thy poore fathers, Grand-fathers, and Kinſfolks, endure what it pleaſeth the Lord of things created. Remember Lord thou commeſt hither to be the defence and ſupport of the* Mexican *Nation, and to be the reſemblance of our god* Vitzliputzli, *whereupon the charge and gouernment is giuen thee. Thou knoweſt wee are not in our Country, ſeeing the Land we poſſeſſe at this day is anothers, neither know we what ſhall become of vs to morrow, or another day: Conſider therefore that thou commeſt not to reſt or recreate thy ſelfe, but rather to indure a new charge vnder ſo heauy a burden: wherein thou muſt continually labour, being ſlaue to this multitude, which is fallen to thy lot, and to all this neighbour people, whom thou muſt ſtriue to gratifie, and giue them contentment, ſeeing thou knoweſt we liue vpon their Lands, and within their limits.* And ending, he repeated theſe wordes; *Thou art welcome, Thou and the Queene our Miſtris, to this your Realme.* This was the ſpeech of the old man, which with other Orations (which the *Mexican* Hiſtories doe celebrate) the Children did vſe to learne by heart, and ſo they were kept by *Tradition*, ſome of them deſerue well to bee reported in their proper termes. The King anſwering, thanked them, and offered them his care and diligence in their defence and aide in all he could. After they gaue him the Oath, and after their manner ſet the Royall Crowne vpon his head, the which is like to the Crowne of the Dukes of *Venice:* the name of *Acamapixtli* their firſt King, ſignifies a *handfull of Reedes*, and therefore they carry in their Armouries a hand holding many arrowes of Reedes.

How Orations were kept in memorie.

Crowne and coronation.

Of the ſtrange tribute the *Mexicans* payed to them of *Azcapuzalco. Chap. 9.*

The *Mexicans* hapned ſo well in the election of their new King, that in ſhort time they grew to haue ſome forme of a Commonweale, and to bee famous among ſtrangers; whereupon their neighbours mooued with feare, practiſed to ſubdue them, eſpecially the *Tapanecans*, who had *Azcapuzalco* for their Metropolitane Citie, to whom the *Mexicans* payed tribute, as ſtrangers dwelling in their Land. For the King of *Azcapuzalco* fearing their power which increaſed, ſought to oppreſſe the *Mexicans*, and hauing conſulted with his ſubiects, he ſent to tell King *Acamapixtli*, that the ordinarie tribute they payed was too little, and that from thenceforth they ſhould bring Firre trees, Sapines, and Willowes for the building of the Citie; and moreouer, they ſhould make him a Garden in the water, planted with diuers kindes of Herbes and Pulſes, which they ſhould bring vnto him yeerly by water, dreſſed in this manner, without fayling; which if they did not, he declared them his enemies, and would roote them out. The *Mexicans* were much troubled at this commandement, holding it impoſſible: and that this demand was to no other end, but to ſeeke occaſion to ruine them. But their god *Vitzliputzli* comforted them, appearing that night to an old man, cõmanding him to ſay to the King his ſonne in his name, that he ſhould make no difficultie to accept of this tribute, he would helpe them and make the meanes eaſie, which after happened: for the time of tribute being come, the *Mexicans* carried the Trees that were required, and moreouer, a Garden made and floating in the water, and in it much *Mays* (which is their Corne) alreadie grayned and in the eare: there was alſo *Indian* Pepper, Beetes, *Tomates*, which is a great ſappy and ſauourie graine, *French* Peaſe, Figs, Gourds, and many other things, all ripe, and in their ſeaſon. Such as haue not ſeene the Gardens in the Lake of *Mexico*, in the middeſt of the water, will not beleeue it, but will ſay it is an inchantment of the Deuill whom they worſhip: But in truth it is a matter to bee done, and there hath beene often ſeene of theſe Gardens floating in the water; for they caſt earth vpon Reeds and Graſſe, in ſuch ſort as it neuer waſtes in the water; they ſow and plant this ground, ſo as the graine growes and ripens very well, and then they remoue it from place to place. But it is true, that to make this great Garden eaſily, and to haue the fruits grow well, is a thing that makes men iudge there was the worke of *Vitzliputzli*, whom otherwiſe they call *Patillas*, ſpecially hauing neuer made nor ſeene the like. The King of *Azcapuzalco* wondred much when he ſaw that accompliſhed which he held impoſſible, ſaying vnto his ſubiects, that this people had a great god that made all eaſie vnto them, and he ſaid vnto the *Mexicans*, that ſeeing their god gaue them all things perfect, he would the yeere following, at the time of tribute, they ſhould bring in their Garden a *wilde Ducke, and a Heron, ſitting on their egges*, in ſuch ſort, that they ſhould hatch their young ones as they ſhould arriue, without fayling of a minute, vpon paine of his indignation. The *Mexicans* were much troubled and heauie with this proud and ſtrict command: but their god, as he was accuſtomed, comforted them in the night, by one of his Prieſts, ſaying, that he would take all that charge vpon him, willing them not to feare, but beleeue that the day would come, when as the *Azcapuzalcos* ſhould pay with their liues this deſire of new Tributes. The time being come, as the *Mexicans* carried all that was demanded of their Gardens, among the Reedes and Weedes of the Garden, they found a Ducke and a Heron hatching their egges, and at the ſame inſtant when they arriued at *Azcapuzalco* their young ones were diſcloſed. Whereat the King of *Azcapuzalco* wondring beyond meaſure, hee ſaid againe to his people, that theſe were more then humane things, and that the *Mexicans* began as if they would make themſelues Lords ouer all thoſe Prouinces. Yet did hee not diminiſh the order of this tribute, and the *Mexicans* finding not themſelues mightie enough, endured this ſubiection and ſlauerie the ſpace of fiftie yeeres. In this time the King *Acamapixtli* died, hauing beautified the Citie of *Mexico* with many goodly buildings, ſtreets, Conduits of water,

Garden in the water.

water, and great abundance of munition. He raigned in peace and rest fortie yeeres, hauing beene alwayes zealous for the good and increase of the Commonweale.

As he drew neere his end, he did one memorable thing, that hauing lawfull children to whom he might leaue the succession of the Realme, yet would he not doe it, but contrariwise hee spake freely to the Common-weale, that as they had made a free Election of him, so they should choose him that should seeme fittest for their good Gouernment, aduising them therein to haue a care to the good of the Common-weale, and seeming grieued that he left them not freed from Tribute and subiection, he dyed, hauing recommended his wife and children vnto them, he left all his people sorrowfull for his death.

§. II.

Of the second King VITZILOVITLI; *and of his Successours and their Acts vntill the Reigne of* MOTEZVMA *their last King.*

THe Obsequies of the dead King performed, the Ancients, the chiefe of the Realme, and some part of the people assembled together, to choose a King, where the Ancients propounded the necessitie wherein they were, *and that it was needfull to choose for chiefe of their Citie, a man that had pitie of age, of Widdowes, and Orphans, and to be a Father of the Common-weale: for in very deed they should be the feathers of his wings, the eye-browes of his eyes, and the beard of his face, that it was necessary hee were valiant, being needfull shortly to vse their forces, as their God had propheſied.* Their resolution in the end was to choose a sonne of the Predecessor, vsing the like good office in accepting his sonne for Successor, as hee had done to the Common-weale, relying thereon.

This young man was called *Vitzilouitli*, which signifieth a rich feather. They set the Royall Crowne vpon his head, and anointed him, as they haue beene accustomed to do to all their Kings, with an Ointment they call *Diume*, being the same vnction wherewith they did anoint their Idoll. Presently an Orator made an eloquent speech, exhorting him to arme *himselfe with courage, and free them from the trauels, slauerie and miserie they suffered, being oppressed by the Azcapuzalcos:* which done, all did him homage. This King was not married, and his Counsell held opinion, that it was good to marry him with the Daughter of the King of *Azcapuzalco*, to haue him a friend by this alliance, and to obtaine some diminution of their heauie burthen of Tributes imposed vpon them, and yet they feared lest he should disdaine to giue them his Daughter; by reason they were his Vassals: yet the King of *Azcapuzalco* yeelded thereunto, hauing humbly required him, who with courteous words gaue them his Daughter, called *Ayanchiguall*, whom they led with great pompe and ioy to *Mexico*, and performed the Ceremonie and Solemnitie of Marriage, which was to tie a corner of the mans Cloake to a part of the womans Veile, in signe of the band of Marriage. This Queene brought forth a sonne, of whose name they demanded aduice of the King of *Azcapuzalco*, and casting Lots as they had accustomed (being greatly giuen to Southsayings, especially vpon the names of their children) hee would haue his Grand-childe called *Chimalpopoca*, which signifies *A Target casting smoke*. The Queene his Daughter seeing the contentment the King of *Azcapuzalco* had of his Grand-childe, tooke occasion to intreate him to relieue the *Mexicans*, of the heauie burthen of their Tributes, seeing hee had now a Grand-childe *Mexican*, the which the King willingly yeelded vnto, by the aduice of his Counsell, granting (for the Tribute which they paid) to bring yeerely a couple of Duckes and some fish, in signe of subiection, and that they dwelt in his Land. The *Mexicans* by this meanes remained much eased and content, but it lasted little. For the Queene their Protectrix died soone after: and the yeere following likewise *Vitzilouitli* the King of *Mexico* died, leauing his sonne *Chimalpopoca* tenne yeeres old; he reigned thirteene yeeres, and died thirtie yeeres old, or little more. He was held for a good King, and carefull in the seruice of his Gods, whose Images hee held Kings to be; and that the honour done to their God, was done to the King who was his Image. For this cause the Kings haue been so affectionate to the seruice of their Gods. This King was carefull to winne the loue of his neighbours, and to trafficke with them, whereby hee augmented his Citie, exercising his men in Warrelike actions in the Lake, disposing them to that which he pretended, as you shall see presently.

Vitzilouitli elected King.

Marriage ceremonie.

Lots and Southsayings.

Kings death.

The *Mexicans* for successor to their deceased King did choose his sonne *Chimalpopoca*, by common consent, although he were a child of ten yeeres old, being of opinion that it was alwayes necessary to keepe the fauour of the King of *Azcapuzalco*, making his Grand-childe King. They then set him in his Throne, giuing him the Ensignes of warre, with a *Bow and Arrowes* in one hand, and a *Sword with Rasors* (which they commonly vse) in the right, signifying thereby

Of *Chimalpopoca* the third King, and his cruell death, & the occasion of warre which the *Mexicans* made. *Chap. 11.*

(as they doe say) that they pretended by Armes to set themselues at libertie. The *Mexicans* had great want of water, that of the Lake being very thicke and muddie, and therefore ill to drinke, so as they caused their infant King to desire of his Grand-father the King of *Azcapuzalco*, the water of the Mountaine of *Chapultepec*, which is from *Mexico* a league, as is said before, which they easily obtained, and by their industrie made an Aquaduct of faggots, weeds and flagges, by the which they brought water to their Citie. But because the City was built within the Lake, and the Aquaduct did crosse it, it did breake forth in many places, so as they could not enioy the water, as they desired, and had great scarcitie: whereupon, whether they did expressly seeke it, to quarrel with the *Tapanecans*, or that they were moued vpon small occasion, in the end they sent a resolute Ambassage to the King *Azcapuzalco*, saying, they could not vse the water which he had graciously granted them, and therefore they required him to prouide them wood, lime, and stone, and to send his Workmen, that by their meanes they might make a Pipe of stone and lime that should not breake. This message nothing pleased the King, and much lesse his subiects, seeming to be too presumptuous a message, and purposely insolent, for Vassals to their Lord. The chiefe of the Counsell disswayning thereat, said *It was too bold, that not content with permission to*

Quarrell with the *Tapanecans*.

liue in anothers Land, and to haue water giuen them, but they would haue them goe to serue them: what a matter was that? And whereon presumed this fugitiue Nation, shut vp in the mud? They would let them know, how fit they were to worke, and to abate their pride, in taking from them their Land and their liues.

In these tearmes and choller they left the King, whom they did somewhat suspect, by reason of his Grand-childe, and consulted againe anew, what they were to doe, where they resolued to make a generall Proclamation, that no *Tapanecan* should haue any commerce or traffique with any *Mexican*, that they should not goe to their Citie, nor receiue any into theirs, vpon paine of death. Whereby we may vnderstand that the King did not absolutely command ouer his people, and that hee gouerned more like a Consull, or a Duke, then a King; although since with their power, the command of Kings increased, growing absolute Tyrants, as you shall see in the last Kings.

The King of *Azcapuzalco* seeing the resolution of his subiects, which was to kill the *Mexicans*, intreated them first to steale away the young King his Grand-childe, and afterwards doe what they pleased to the *Mexicans*. All in a manner yeelded hereunto, to giue the King contentment, and for pittie they had of the childe; but two of the chiefest were much opposite, inferring, that it was bad counsell, for that *Chimalpopoca*, although hee were of their bloud, yet was it but by the Mothers side, and that the Fathers was to be preferred, and therefore they concluded that the first they must kill was *Chimalpopoca* King of *Mexico*, protesting so to doe. The King of *Azcapuzalco* was so troubled with this contradiction, and the resolution they had taken, that soone after for very griefe he fell sicke, and dyed. By whose death the *Tapanecans* finishing their consultation, committed a notable Treason: for one night the young King of *Mexico* sleeping without guard, or feare of any thing, they of *Azcapuzalco* entred his Palace, and slue him suddenly, returning vnseene. The morning being come, when the Nobles went to salute the King, as they were accustomed, they found him slaine with great and cruell wounds; then they cryed out and filled all their Citie with teares: and transported with choller, they presently fell to Armes, with an intent to reuenge their Kings death. As they ranne vp and downe full of furie and disorder, one of their chiefest Knights stept forth, labouring to appease them, with a graue admonition: *Whither goe yee* (said he) *O yee* Mexicans? *quiet your selues, consider that things done without consideration are not well guided, nor come to good end: suppresse your griefe, considering that although your King be dead, the Noble bloud of the* Mexicans *is not extinct in him. Wee haue children of our Kings deceased, by whose conduct, succeeding to the Realme, you shall the better execute what you pretend, hauing a Leader to guide your enterprise: goe not blindly, surcease, and choose a King first, to guide and encourage you against your enemies: In the meane time dissemble discreetly, performing the Funerals of your deceased King, whose bodie you see heere present, for hereafter you shall find better meanes to take reuenge.* By this meanes the *Mexicans* passed no farther, but stayed to make the Obsequies of their King, whereunto they inuited the Lords of *Tescuco*, and *Culhuacan*, reporting vnto them this foule and cruell fact, which the *Tapanecans* had committed, moouing them to haue pittie on them, and incensing them against their enemies, concluding that their resolution was to die, or to bee reuenged of so great an indignitie, intreating them not to fauour so vniust a fact of their enemies; and that for their part, they desired not their aide of armes or men, but onely to be lookers on of what should passe, and that for their maintenance, they would not stop nor hinder the commerce, as the *Tapanecans* had done. At these speeches they of *Tescuco* and *Culhuacan* made them great shewes of good will, and that they were well satisfied, offering them their Cities, and all the Commerce they desired, that they desired, that they might prouide victuall and Munition at their pleasure, both by land and water. After this, the *Mexicans* intreated them to stay with them, and assist at the election of their King; the which they likewise granted, to giue them contentment.

King murthered.

The

The Electors being assembled, an old man that was held for a great Orator, rose vp, who (as the Historics report) spake in this manner, *The light of your eyes, O* Mexicans, *is darkened, but not of your hearts: for although you haue lost him that was the light and guide of the* Mexican *Common-weale, yet that of the heart remaines: to consider, that although they haue slaine one man, yet there are others that may supply with aduantage, the want we haue of him: the* Mexican *Nobilitie is not extinguished thereby, nor the blood Royall decayed. Turne your eyes and looke about you, you shall see the Nobilitie of* Mexico *set in order, not one or two, but many and excellent Princes, Sons to* Acamapixtli, *our true and lawfull King and Lord. Here you may choose at your pleasure, saying, I will this man, and not that. If you haue lost a Father, heere you may find both Father and Mother: make account O* Mexicans, *that the Sunne is eclipsed and darkened for a time, and will returne suddenly. If* Mexico *hath beene darkened by the death of your King, the Sunne will soone shew, in choosing another King. Looke to whom, and vpon whom you shall cast your eyes, and towards whom your heart is inclined, and this is he whom your God* Vitzliputzli *hath chosen.* And continuing awhile this discourse, he ended to the satisfaction of all men. In the end, by the consent of this Counsell, *Izcoalt* was chosen King, which signifies a *Snake of Rasors*, who was Sonne to the first King *Acamapixtli*, by a slaue of his: and although he were not legitimate, yet they made choice of him, for that hee exceeded the rest in behauiour, valour, and magnanimitie of courage. All seemed very well satisfied, and aboue all, these of *Tescuco*, for their King was married to a sister of *Izcoalts*. After the King had beene crowned and set in his Royall Seat, another Orator stept vp, discoursing how the King was bound to his Common-weale, and of the courage he ought to shew in trauell, speaking thus, *Behold this day we depend on thee, it may be thou wilt let fall the burthen that lies vpon thy Souldiers, and suffer the old men and woman, the Orphlin and the widdow to perish. Take pittie of the Infants that goe creeping in the Ayre, who must perish if our enemies surmount vs: vnfold then, and stretch forth thy Cloake, my Lord, to beare these Infants vpon thy shoulders, which bee the poore and the common people, who liue assured vnder the shadow of thy wings, and of thy bountie.* Vttering many other words vpon this subiect, the which, (as I haue said) they learne by heart, for the exercise of their children, and after did teach them as a Lesson to those that began to learne the faculties of Orators.

Of the fourth King called *Izcoalt*, and of the warre against the *Tapanecans*. Chap. 12.

In the meane time, the *Tapanecans* were resolute to destroy the *Mexicans*, and to this end they had made great preparations. And therefore the new King tooke counsell for the proclaming of Warre, and to fight with those that had so much wronged them. But the common people, seeing their Aduersaries to exceed them farre in numbers and munition for the warre, they came amazed to their King, pressing him not to vndertake so dangerous a warre, which would destroy their poore Citie and Nation: whereupon being demanded what aduice were fittest to take, they made answere, that the King of *Azcapuzalco* was very pittifull, that they should demand peace, and offer to serue him, drawing them forth those Marshes, and that hee should giue them houses and lands among his subiects, that by this meanes they might depend all vpon one Lord. And for the obtaining hereof, they should carrie their God in his Litter for an Intercessor. The cries of the people were of such force (hauing some Nobles that approoued their opinion) as presently they called for the Priests, preparing the Litter and their God, to performe the Voyage. As this was preparing, and euery one yeelded to this treatie of peace, and to subject themselues to the *Tapanecans*, a gallant young man, and of good sort, stept out among the people, who with a resolute countenance spake thus vnto them, *What meanes this O yee* Mexicans, *are yee mad? How hath so great cowardise crept in among vs? Shall wee goe and yeeld our selues thus to the Azcapuzalcans?* Then turning to the King he said, *How now my Lord, will you endure this? Speake to the people, that they may suffer vs to find out some meanes for our honour and defence, and not yeeld our selues so simply and shamefully into the hands of our enemies.* This young man was called *Tlacaellec*, Nephew to the King, he was the most valiant Captaine and greatest Counsellor that euer the *Mexicans* had, as you shall see hereafter. *Izcoalt* encouraged by that his Nephew had so wisely spoken, retained the people, saying they should first suffer him to try another better meanes. Then turning towards his Nobilitie, he said vnto them, *You are all heere my Kinsmen, and the best of* Mexico, *he that hath the courage to carrie a message to the* Tapanecans, *let him rise vp.* They looked one vpon another, but no man stirred nor offered himselfe to the word. Then this young man *Tlacaellec* rising, offered himselfe to goe, saying, that seeing hee must die, it did import little whether it were to day or to morrow: for what reason should hee so carefully preserue himselfe? he was therefore readie, let him command what he pleased. And although all held this for a rash attempt, yet the King resolued to send him, that he might thereon vnderstand the will and disposition of the King of *Azcapuzalco* and of his people; holding it better to hasten his Nephewes death, then to hazard the honour of his Common-weale. *Tlacaellec* being readie, tooke his way, and being come to the Guards, who had commandement to kill any *Mexicans* that came towards them, by cunning or otherwise: hee perswaded them to suffer him to passe to the King, who wondred to see him, and hearing his Ambassage, which was to demand peace of him vnder honest conditions, answered, that he would impart it to his subiects, willing him to returne the next day for his answere. Then *Tlacaellec* demanded a Pasport,

Tlacaellecs valour.

passport, yet could he not obtaine any, but that he should vse his best skill: with this he returned to *Mexico*, giuing his words to the guards to returne. And although the King nf *Azcapuzalco* desired peace, being of a milde disposition, yet his Subiects did so incense him, as his answer was open warre. The which being heard by the Messenger, he did all his King commanded him, declaring by this ceremony, to giue armes, and annointing the King with the vnction of the dead, that in his Kings behalfe he did defie him. Hauing ended all, the King of *Azcapuzalco* suffering himselfe to be anointed and crowned with Feathers, giuing goodly armes in recompence to the Messenger, wishing him not to returne by the Pallace gate, whereas many attended to cut him in peeces, but to goe out secretly by a little false Posterne that was open in one of the Courts of the Pallace. This yong man did so, and turning by secret waies, got away in safetie in sight of the Guards, and there defied them, saying, Tapanecans *and* Azcapuzalcans, *you doe your office ill, vnderstand you shall all dye, and not one* Tapanecan *shall remaine aliue.* In the meane time the Guards fell vpon him, where he behaued himselfe so valiantly, that he slew some of them: and seeing many more of them come running, he retired himselfe gallantly to the Citie, where he brought newes, that warre was proclaimed with the *Tapanecans*, and that he had defied their King.

Ceremonies of defiance.

The defie being knowne to the Commons of *Mexico*, they came to the King, according to their accustomed cowardise, demanding leaue to depart the Citie, holding their ruine certaine. The King did comfort and incourage them, promising to giue them libertie if they vanquished their enemies, willing them not to feare. The people replied. *And if we be vanquished, what shall wee doe? If wee be ouercome,* (answered the King) *we will be bound presently to yeelde our selues into your hands to suffer death, eate our flesh in your dishes and be reuenged of vs. It shall be so then* (say they) *if you loose the victorie, and if you obtaine the victorie, we doe presently offer our selues to be your Tributaries, to labour in your houses, to sowe your ground, to carrie your armes and baggage when you goe to the warres for euer, wee and our descendants after vs.* These accords made betwixt the People and the Nobilitie (which they did after fully performe, either willingly or by constraint, as they had promised) the King named for his Captaine Generall *Tlacaellec*: the whole Campe was put in order, and into squadrons, giuing the places of Captaines to the most valiant of his kinsfolkes and friends: then did he make them a goodly speech, whereby he did greatly incourage them, being now well prepared, charging all men to obey the commandement of the Generall whom he had appointed: he diuided his men into two parts, commanding the most valiant and hardie, to giue the first charge with him, and that all the rest should remaine with the King *Izcoalt*, vntill they should see the first assaile their enemies. Marching then in order, they were discouered by them of *Azcapuzalco*, who presently came furiously forth the Citie, carrying great riches of Gold, Siluer, and Armes of great value, as those which had the Empire of all that Countrie. *Izcoalt* gaue the signall to battaile, with a little Drumme he carried on his shoulders, and presently they raised a generall showt, crying, *Mexico, Mexico*, they charged the *Tapanecans*, and although they were farre more in number, yet did they defeate them, and force them to retire into their Citie, then aduanced they which remained behinde, crying *Tlacaellec, Victorie, Victorie*, all sodainly entred the Citie, where (by the Kings commandement) they pardoned not any man, no not old men, women, nor children, for they slew them all, and spoiled the Citie being very rich. And not content herewith, they followed them that fled, and were retired into the craggie rockes of the *Sierres* or neere Mountaines, striking and making a great slaughter of them. The *Tapanecans* being retired to a Mountaine cast downe their Armes, demanding their liues, and offering to serue the *Mexicans*, to giue them Lands and Gardens, Stone, Lime and Timber, and to hold them alwayes for their Lords. Vpon this condition *Tlacaellec* retired his men and ceased the battaile, granting them their liues vpon the former conditions, which they did solemnely sweare. Then they returned to *Azcapuzalco*, and so with their rich and victorious spoiles to the Citie of *Mexico*. The day following the King assembled the Nobilitie and the People, to whom hee laid open the accord the Commons had made, demanding of them, if they were content to persist therein: the Commons made answer, that they had promised, and they had well deserued it, and therefore they were content to serue them perpetually. Whereupon they tooke an oath, which since they haue kept without contradiction.

Of the battaile the *Mexicans* gaue to the *Tapanecans*, and of the victorie they obtained. *Chap.* 13.

The Battaile.

Mexicans conquer.

This done, *Izcoalt* returned to *Azcapuzalco* (by the aduise of his Counsell) he diuided all the Lands and Goods of the conquered among the conquerours, the chiefest part fell to the King, then to *Tlacaelles*, and after to the rest of the Nobles, as they best deserued in the Battaile. They also gaue Land to some Plebeans, hauing behaued themselues valiantly; to others they distributed the Pillage, making small account of them as of cowards. They appointed Lands in common for the quarters of *Mexico*, to euery one his part, for the Seruice and Sacrifices of their Gods. This was the order which afterwards they alwayes kept, in the diuision of the Lands and spoiles of those they had vanquished and subdued. By this meanes they of *Azcapuzalco* remained so poore, as they had no Lands left them to labour, and (which was worse) they tooke their King from them, and all power to choose any other then him of *Mexico*.

Diuision of spoyles.

Although

Digitized by Google

Although the chiefe Citie of the *Tapanecanes*, was that of *Azcapuzalco*, yet had they others with their priuate Lords, as *Tucuba* and *Cuyoacan*. These seeing the storme passed, would gladly that they of *Azcapuzalco* had renewed the warre against the *Mexicans*, and seeing them danted, as a Nation wholly broken and defeated, they of *Cuyoacan* resolued to make warre by themselues; to the which they laboured to draw the other neighbour Nations, who would not stirre nor quarrell with the *Mexicans*. In the meane time the hatred and malice increasing, they of *Cuyoacan* began to ill intreate the women that went to their Markets, mocking at them, and doing the like to the men ouer whom they had power: for which cause the King of *Mexico* defended, that none of his should goe to *Cuyoacan*, and that they should receiue none of them into *Mexico*, the which made them of *Cuyoacan* resolue wholly to warre: but first they would prouoke them by some shamefull scorne, which was, that hauing inuited them to one of their solemne Feasts, after they had made them a goodly Banquet, and feasted them with a great daunce after their manner, they sent them for their fruite, womens apparell, forcing them to put it on, and so to returne home like women to their Citie, reproaching them, that they were cowards and effeminate, and that they durst not take armes being sufficiently prouoked. Those of *Mexico* say, that for reuenge they did vnto them a foule scorne, laying at the gates of their Citie of *Cuyoacan* certaine things which smoaked, by meanes whereof many women were deliuered before their time, and many fell sicke. In the end, all came to open war, and there was a battaile fought, wherein they imploied all their forces, in the which *Tlacaellec*, by his courage and policie in warre, obtained the victorie. For hauing left King *Izcoalt* in fight with them of *Cuyoacan*, he put himselfe in ambush with some of the most valiant Souldiers, and so turning about, charged them behinde, and forced them to retire into their Citie. But seeing their intent was to flie into a Temple which was very strong, he with three other valiant Souldiors, pursued them eagarly, and got before them, seising on the Temple and firing it, so as he forced them to flie to the fields, where he made a great slaughter of the vanquished, pursuing them two leagues into the Countrie, vnto a little hill, where the vanquished casting away their weapons, and their armes a crosse, yeelded to the *Mexicans*, and with many teares craued pardon of their ouerweening folly, in vsing them like women, offering to be their slaues: so as in the end the *Mexicanes* did pardon them. Of this victory the *Mexicans* did carry away very rich spoiles of Garments, Armes, Gold, Siluer, Iewels, and rich feathers, with a great number of Captiues. In this Battaile there were three of the principals of *Culhuacan* that came to aide the *Mexicans*, to win honour, the which were remarkeable aboue all. And since being knowne to *Tlacaellec*, and hauing made proofe of their fidelity, he gaue them *Mexican* deuises, and had them alwayes by his side, where they fought in all places very valiantly. It was apparant that the whole victory was due to the Generall, and to these three; for among so many captiues taken, two third parts were wonne by these foure, which was easily knowne by a policie they vsed: for taking a Captiue, they presently cut off a little of his haire, and gaue it to others, so as it appeared that those which had their haire cut, amonnted to that number, whereby they wonne great reputation and fame of valiant men. They were honoured as Conquerours, giuing them good portions of the spoiles and Lands, as the *Mexicans* haue alwaies vsed to doe, which gaue occasion to those that did fight, to become famous, and to win reputation by Armes.

Of the warre and victory the *Mexicans* had against the Citie of *Cuyoacan*. *Chap.* 14.

Temple.

The Nation of the *Tapanecans* being subdued, the *Mexicans* had occasion to doe the like to the *Suchimilcos*, who (as it hath beene said) were the first of the seuen Caues or linages that peopled this Land. The *Mexicans* sought not the occasion, although they might presume as Conquerours to extend their limits, but the *Suchimilcos* did moue them, to their owne ruine, as it happens to men of small iudgement that haue no foresight, who not preuenting the mischiefe they imagined, fall into it: The *Suchimilcos* held opinion, that the *Mexicans*, by reason of their victories past, should attempt to subdue them, and consulted hereon among themselues. Some among them thought it good to acknowledge them for superiours, and to applaud their good fortune, but the contrary was allowed, and they went out to giue them battaile: which *Izcoalt* the King of *Mexico* vnderstanding, he sent his Generall *Tlacaellec* against them, with his armie: the battaile was fought in the same field that diuides their limits, which two Armies were equall in men and armes, but very diuers in their order and manner of fighting; for that the *Suchimilcos* charged all together on a heape confusedly, and *Tlacaellec* diuided his men into squadrons with a goodly order, so as he presently brake his enemies, forcing them to retire into their Citie, into the which they entred, following them to the Temple whither they fled, which they fired, and forcing them to flye to the Mountaines: in the end they brought them to this point, that they yeelded with their arme acrosse. The Generall *Tlacaellec* returning in great triumph, the Priests went forth to receiue him, with their musicke of Flutes, and giuing incense. The chiefe Captaines vsed other Ceremonies and shewes of ioy, as they had beene accustomed to doe, and the King with all the troupe went to the Temple to giue thankes to their false god.

Of the warre and victory which the *Mexicans* had against the *Suchimilcos*. *Ch.* 15.

Temple filled.

The day following, the King *Izcoalt* went vnto the Citie of *Suchimilco*, causing himselfe to be

be ſworne King of the *Suchimilcos*: and for their comfort he promiſed to doe them good. In token whereof he commanded them to make a great Cawſey ſtretching from *Mexico* to *Suchimilco*, which is foure leagnes, to the end there might be more commerce and trafficke among them. Which the *Suchimilcos* performed, and in ſhort time the *Mexican* gouernment ſeemed ſo good vnto them, as they held themſelues happy to haue changed their King and Commonweale. Some neighbours pricked forward by enuie, or feare, to their ruines, were not yet made wiſe by others miſeries.

Cauſey made.

Cuitlauaca, *Cuitlauaca* was a Citie within the Lake: which though the name and dwelling be changed, continueth yet. They were actiue to ſwim in the Lake, and therefore they thought they might much indomage and annoy the *Mexicans* by water, which the King vnderſtanding, he reſolued to ſend his Armie preſently to fight againſt them. But *Tlacaellec* little eſteeming this warre, holding it diſhonorable to lead an Armie againſt them, made offer to conquer them with the children onely: which he performed in this manner: he went vnto the Temple and drew out of the Couent ſuch children as he thought fitteſt for the action, from tenne to eighteene yeares of age, who knew how to guide their Boates, or Canoes, teaching them certaine pollicies. The order they held in this warre, was, that he went to *Cuitlauaca* with his children, where by his pollicie he preſſed the enemy in ſuch ſort, that he made them to flye; and as he followed them, the Lord of *Cuitlauaca* met him and yeelded vnto him, himſelfe, his Citie, and his people, and by this meanes he ſtayed the purſuite. The children returned with much ſpoyle, and many Captiues for their Sacrifices, being ſolemnely receiued with a great Proceſſion, Muſicke and Perfumes, and they went to worſhip their gods, in taking of the earth which they did eate, and drawing bloud from the forepart of their legs with the Prieſts Lancets, with other ſuperſtitions which they were accuſtomed to vſe in the like ſolemnities. The children were much honored and encouraged, and the King imbraced and kiſſed them, and his kinſmen and allies accompanied them. The bruite of this victory ranne throughout all the Countrie, how that *Tlacaellec* had ſubdued the Citie of *Cuitlauaca* with children: the news and conſideration whereof opened the eyes of thoſe of *Teſcuco*, a chiefe and very cunning Nation for their manner of life: So as the King of *Teſcuco* was firſt of opinion, that they ſhould ſubiect themſelues to the King of *Mexico*, and inuite him thereunto with his Citie. Therefore by the aduiſe of his Counſell, they ſent Ambaſſadours good Orators with honorable preſents, to offer themſelues vnto the *Mexicans*, as their Subiects, deſiring peace and amity, which was graciouſly accepted; but by the aduiſe of *Tlacaellec* he vſed a Ceremony for the effecting thereof, which was, that thoſe of *Teſcuco* ſhould come forth armed againſt the *Mexicans*, where they ſhould fight, and preſently yeelde, which was an act and ceremony of warre, without any effuſion of bloud on either ſide. Thus the King of *Mexico* became ſoueraigne Lord of *Teſcuco*, but he tooke not their King from them, but made him of his Priuie Counſell; ſo as they haue alwaies maintained themſelues in this manner vntill the time of *Motaçuma* the ſecond, during whoſe raigne the *Spaniards* entred. Hauing ſubdued the Land and Citie of *Teſcuco*, *Mexico* remained Lady and Miſtris of all the Lands and Cities about the Lake, where it is built. *Izcoalt* hauing enioyed this proſperitie, and raigned twelue yeares, dyed, leauing the Realme which had beene giuen him, much augmented by the valour and counſell of his Nephew *Tlacaellec*.

Children in the Couent.

Captiues ſacrificed.

Izcoalts death.

Foraſmuch as the election of the new King, belonged to foure chiefe Electors, and to the King of *Teſcuco*, and the King of *Tacuba*, by eſpeciall priuiledge: *Tlacaellec* aſſembled theſe ſix perſonages, as he that had the ſoueraigne authority, and hauing propounded the matter vnto them, they made choiſe of *Moteçuma*, the firſt of that name, Nephew to the ſame *Tlacaellec*. His election was very pleaſing vnto them all, by reaſon whereof, they made moſt ſolemne feaſts, and more ſtately then the former. Preſently after his election they conducted him to the Temple with a great traine, where before the *diuine harth* (as they call it) *where there is continuall fire*, they ſet him in his royall throane, putting vpon him his royall ornaments. Being there, the King drew bloud from his eares and legs with a Griffons talons, which was the Sacrifice wherein the diuell delighted to be honoured. The Prieſts, Ancients, and Captaines, made their Orations, all congratuling his election. They were accuſtomed in their elections to make great Feaſts and Dances, where they waſted many lights. In this Kings time the cuſtome was brought in, that the King ſhould goe in perſon to make warre in ſome Prouince, and bring Captiues to ſolemnize the feaſt of his Coronation, and for the ſolemne Sacrifices of that day. For this cauſe King *Moteçuma* went into the Prouince of *Chalco*, who had declared themſelues his enemies: from whence (hauing fought valiantly) he brought a great number of Captiues, whereof he did make a notable Sacrifice the day of his Coronation, although at that time he did not ſubdue all the Prouince of *Chalco*, being a verie warlike Nation. Manie came to this Coronation from diuers Prouinces, as well neere as farre off, to ſee the feaſt, at the which all commers were verie bountifully entertained and clad, eſpecially the poore, to whom they gaue new garments. For this cauſe they brought that day into the Citie, the Kings tributes, with a goodly order, which conſiſted in Stuffes to make Garments of all ſorts, in *Cacao*, Gold, Siluer, rich Feathers, great burthens of Cotton, Cucumbers, ſundrie ſorts of Pulſes, many kindes of Sea fiſh, and of the freſh water,

Of the fifth King of *Mexico*, called *Moteçuma*, the firſt of that name. *Chap. 16.*

ware, great ſtore of Fruits, and Veniſon without number, not reckoning an infinite number of Preſents, which other Kings and Lords ſent to the new King. All this Tribute marched in order according to the Prouinces, and before them the Stewards and receiuers, with diuers markes and Enſignes, in very goodly order: ſo as it was one of the goodlieſt things of the feaſt, to ſee the entrie of the Tribute. The King being crowned, he imploied himſelfe in the conqueſt of many Prouinces, and for that he was both valiant and vertuous, he ſtill increaſed more and more, vſing in all his affaires the counſell and induſtrie of his Generall *Tlacaellec*, whom he did alwaies loue and eſteeme very much, as he had good reaſon. The warre wherein he was moſt troubled and of greateſt difficultie, was that of the Prouince of *Chalco*, wherein there happened great matters, whereof one was very remarkeable; which was, that they of *Chalco*, had taken a brother of *Moteçumaes* in the warres, whom they reſolued to chooſe for their King, asking him verie curteouſly, if he would accept of this charge. He anſwered (after much importunitie, ſtill perſiſting therein) that if they ment plainely to chooſe him for their King, they ſhould plant in the Market-place, a Tree or very high ſtake, on the top whereof, they ſhould make a little ſcaffold, and meanes to mount vnto it. The *Chalcas* ſuppoſing it had beene ſome ceremonie to make himſelfe more apparant, preſently effected it: then aſſembling all his *Mexicans* about the ſtake, he went to the top with a garland of flowers in his hand, ſpeaking to his men in this manner, *O valiant* Mexicans, *theſe men will chooſe me for their King, but the gods will not permit, that to be a King I ſhould commit any treaſon againſt my Countrie, but contrariwiſe, I will that you learne by me, that it behoueth vs rather, to indure death, then to aide our enemies.* Saying theſe words, he caſt himſelfe downe, and was broken in a thouſand peeces, at which ſpectacle, the *Chalcas* had ſo great horror and deſpite, that preſently they fell vpon the *Mexicans* and ſlew them all with their Lances, as men whom they held too proud and inexorable, ſaying, they had diuelliſh hearts. It chanced the night following, they heard two Owles making a mournfull cry, which they did interpret as an vnfortunate ſigne, and a preſage of their neere deſtruction, as it ſucceeded: for King *Moteçuma* went againſt them in perſon with all his power, where he vanquiſhed them, and ruined all their kingdome: and paſſing beyond the Mountaine *Menade*, he conquered ſtill euen vnto the North Sea. Then returning towards the South Sea, he ſubdued many Prouinces; ſo as he became a mighty King: all by the helpe and counſell of *Tlacaellec*, who in a manner conquered all the *Mexican* Nation. Yet he held an opinion (the which was confirmed) that it was not behoouefull to conquer the Prouince of *Tlaſcalla*, that the *Mexicans* might haue a frontier enemy, to keepe the youth of *Mexico* in exerciſe and allarme: and that they might haue numbers of Captiues to Sacrifice to their Idols, wherein they did waſte (as hath beene ſaid) infinite numbers of men, which ſhould be taken by force in the wars. The honor muſt be giuen to *Moteçuma*, or to ſpeak truly, to *Tlacaellec* his Generall, for the good order and pollicy ſetled in the Realme of *Mexico*, as alſo for the Counſels and goodly enterpriſes, which they did execute: and likewiſe for the number of Iudges and Magiſtrates, being as well ordered there, as in any Common-weale; yea, were it in the moſt flouriſhing of *Europe*. This King did alſo greatly increaſe the Kings houſe, giuing it great authoritie, and appointing many and ſundry Officers, which ſerued him with great pompe and ceremony. He was no leſſe remarkable touching the deuotion and ſeruice of his Idols, increaſing the number of his Miniſters, and inſtituting new ceremonies, whereunto he carried a great reſpect.

Horrible courage.

Tlaſcalla to *Mexico*, as *Carthage* to *Rome*.

He built that great Temple dedicated to their god *Vitziliputzli*, whereof is ſpoken in the other Booke. He did Sacrifice at the dedication of this Temple, a great number of men, taken in ſundry victories: finally, inioying his Empire in great proſperitie, he fell ſicke, and died, hauing raigned twentie eight yeares, vnlike to his ſucceſſor *Ticocic*, who did not reſemble him, neither in valour, nor in good fortune.

Great Temple built. Deuilliſh deuotions.

The foure Deputies aſſembled in counſell, with the Lords of *Teſcuco* and *Tacuba*, where *Tlacaellec* was Preſident in the election, where by all their voices *Tlacaellec* was choſen, as deſeruing this charge better then any other. Yet he refuſed it, perſwading them by pertinent reaſons, that they ſhould chooſe another, ſaying, that it was better, and more expedient to haue another King, and he to be his inſtrument and aſſiſtant, as he had beene till then, and not to lay the whole burthen vpon him, for that he held himſelfe no leſſe bound for the Common-weale, then if he were King; ſeeming to him, though he were not King, yet in a manner, that he commanded Kings, ſuffering him to carry certaine markes, as a *Tiara* or ornament for the head, which belonged onely to themſelues: as in a Comedie he deſerues moſt commendation, that repreſents the perſonage that imports moſt. In recompence of his modeſty, and for the reſpect which the *Mexican* Electors bare him, they demanded of *Tlacaellec* (that ſeeing he would not raigne) whom hee thought moſt fit: Whereupon he gaue his voyce to a Sonne of the deceaſed King, who was then very young, called *Ticocic*: but they replied, that his ſhoulders were very weake to beare ſo heauie a burthen. *Tlacaellec* anſwered, that his was there to helpe him to beare the burthen, as he had done to the deceaſed: by meanes whereof, they tooke their reſolution, and *Ticocic* was choſen, to whom were done all the accuſtomed ceremonies.

How *Tlacaellec* refuſed to be King, and of the election and deedes of *Ticocic*. *Chap.* 17

Fit ſimilitude.

They

Noſthrils pierced.

They pierced his noſthrils, and for an ornament put an Emerald therein: and for this reaſon, in the *Mexican* Bookes, this King is noted by his noſthrils pierced. Hee differed much from his Father and Predeceſſor, being noted for a coward, and not valiant. He went to make warre for his Coronation, in a Prouince that had rebelled, where hee loſt more of his owne men then hee tooke captiues; yet he returned ſaying, that he brought the number of captiues required for the

King poyſoned

Sacrifice of his Coronation, and ſo hee was crowned with great ſolemnitie. But the *Mexicans* diſcontented to haue a King ſo little diſpoſed to warre, practiſed to haſten his death by poiſon. For this cauſe he continued not aboue foure yeeres in the Kingdome. But this loſſe was well repaired by a Brother of the deceaſed, who was alſo ſonne to great *Moteçuma*, called *Axaya-ca*, who was likewiſe choſen by the aduice of *Tlacaellec*, wherein hee happened better then before.

Of the death of *Tlacaellec*, & the deeds of *Axayaca* the ſeuenth King of the *Mexicans*. *Chap.* 18.

Now was *Tlacaellec* very old, who by reaſon of his age, was carried in a chaire vpon mens ſhoulders, to aſſiſt in counſell when buſineſſe required. In the end he fell ſicke, when as the King (who was not yet crowned) did viſit him often, ſhedding many teares, ſeeming to looſe in him his Father, and the Father of his Countrey. *Tlacaellec* did moſt affectionately recommend his children vnto him, eſpecially the eldeſt, who had ſhewed himſelfe valiant in the former warres. The King promiſed to haue regard vnto him, and the more to comfort the old man, in his preſence hee gaue him the charge and enſignes of Captaine Generall, with all the preheminences of his Father; wherewith the old man remained ſo well ſatisfied, as with this content he ended his dayes.

The *Mexicans* made his Funerall as the Founder of that Empire, more ſumptuous and ſtately, then they had done to any of their former Kings. And preſently after *Axayaca* (to appeaſe the ſorrow which all the people of *Mexico* ſhewed for the death of their Captaine) reſolued to make the voyage neceſſary for his Coronation. He therefore led his Armie with great expedition into the Prouince of *Tequantepec*, two hundred leagues from *Mexico*, where he gaue battell to a mighty Army, and an infinite number of men aſſembled together, as well out of that Prouince, as from their Neighbours, to oppoſe themſelues againſt the *Mexicans*. The firſt of his Campe that aduanced himſelfe, to the combate was the King himſelfe, defying his enemies, from whom he made ſhew to flye when they charged him, vntill hee had drawne them into an Ambuſcadoe, where many Souldiers lay hidden vnder ſtraw, who ſuddenly iſſued forth, and they

Tiquantepec razed.

which fled, turned head: ſo as they of *Tiquantepec* remayned in the midſt of them, whom they charged furiouſly, making a great ſlaughter of them: and following their victorie, they razed their Citie and Temple, puniſhing all their Neighbours rigorouſly. Then went they on farther,

Guatulco.

and without any ſtay, conquered to *Guatulco*, the which is a Port at this day well knowne in the South Sea. *Axayaca* returned to *Mexico* with great and rich ſpoiles, where he was honourably crowned, with ſumptuous and ſtately preparation of Sacrifices, Tributes, and other things, whither many came to ſee his Coronation. The Kings of *Mexico* receiued the Crowne from the hands of the King of *Teſcuco*, who had the preheminence. Hee made many other Enterpriſes, where he obtained great victories, being alwayes the firſt to leade the Armie, and to charge the enemie; by the which he purchaſed the name of a moſt valiant Captaine: and not content to ſubdue ſtrangers, he alſo ſuppreſſed his Subjects which had rebelled, which neuer any of his Predeceſſors euer could doe, or durſt attempt. Wee haue alreadie ſhewed how ſome ſeditions of *Mexico* had diuided themſelues from that Common-weale, and built a Citie neere vnto them, which they called *Tlatelulco*, whereas now Saint *Iaques* is.

Theſe being reuolted, held a faction apart, and encreaſed and multiplyed much, refuſing to acknowledge the Kings of *Mexico*, nor to yeeld them obedience. The King *Axayaca* ſent to aduiſe them, not to liue diuided, but being of one bloud, and one people, to joyne together, and acknowledge the King of *Mexico*: wherupon the Lord of *Tlatelulco* made an anſwer ful of pride and diſdaine, defying the King of *Mexico*, to ſingle combate with himſelfe: and preſently muſtred his men, commanding ſome of them to hide themſelues in the weeds of the Lake; and the better to deceiue the *Mexicans*, he commanded them to take the ſhapes of Rauens, Geeſe, and other Beaſts, as Frogges, and ſuch like, ſuppoſing by this meanes to ſurprize the *Mexicans* as they ſhould paſſe by the wayes and cawſies of the Lake. Hauing knowledge of this deſie, and of his Aduerſaries policie, he diuided his Armie, giuing a part to his Generall, the ſonnne of *Tlacaellec*, commanding him to charge this Ambuſcadoe, in the Lake; and hee with the reſt of his people, by an vnfrequented way, went and incamped before *Tlatelulco*. Preſently he called him who had defied him, to performe his promiſe, and as the two Lords of *Mexico*, and *Tlatelulco* aduanced, they commanded their Subjects not to mooue, vntill they had ſeene who ſhould bee

Royall combate.

Conquerour, which was done, aud preſently the two Lords encountred valiantly, where hauing fought long, in the end the Lord of *Tlatelulco* was forced to turne his backe, being vnable to indure the furious charge of the King of *Mexico*. Thoſe of *Tlatelulco* ſeeing their Captaine flye, fainted, and fled likewiſe, but the *Mexicans* following them at the heeles, charged them furiouſly; yet the Lord of *Tlatelulco* eſcaped not the hands of *Axayaca*; for thinking to ſaue himſelfe, hee fled to the top of the Temple, but *Axayaca* followed him ſo neere, as hee ſeized on him with great

Digitized by Google

great force, and threw him from the top to the bottome, and after set fire on the Temple, and the Citie.

Whilest this passed at *Tlatelulco*, the *Mexican* Generall was very hote in the reuenge of those that pretended to defeat him by policie, and after hee had forced them to yeeld, and to cry for mercy, the Generall said he would not pardon them, vntill they had first performed the Offices of those figures they represented, and therefore hee would haue them cry like Frogges and Rauens, euery one according to the figure which he had vndertaken, else they had no composition: which thing he did to mocke them with their owne policie. Feare and Necessitie bee perfect Teachers, so as they did sing and cry with all the differences of voices that were commanded them, to saue their liues, although they were much grieued at the sport their enemies made at them. They say that vnto this day, the *Mexicans* vse to jeast at the *Tlatelulcans*, which they beare impatiently, when they put them in minde of this singing and crying of beasts. King *Azayaca* tooke pleasure at this scorne and disgrace, and presently after they returned to *Mexico* with great joy. This King was esteemed for one of the best that had commanded in *Mexico*. Hee reigned eleuen yeeres. *Tlatelulco* fired.

Among the foure Electors that had power to choose whom they pleased to be King, there was one endued with many perfections, named *Autzol*. This man was chosen by the rest, and this election was very pleasing to all the people: for besides that he was valiant, all held him courteous and affable to euery man, which is one of the chiefe qualities required in them that command, to purchase loue and respect. To celebrate the Feast of his Coronation, hee resolued to make a Voyage, and to punish the pride of those of *Quaxulatlan*, a very rich and plentifull Prouince, and at this day the chiefe of New *Spaine*. They had robbed his Officers and Stewards, that carried the Tribute to *Mexico*, and therewithall were rebelled. There was great difficultie to reduce this Nation to obedience, lying in such sort, as an arme of the Sea stopt the *Mexicans* passage: to passe the which *Autzol* (with a strange deuice and industry) caused an Iland to be made in the water, of faggots, earth, and other matter; by meanes whereof, both hee and his men might passe to the enemie, where giuing them battell, he conquered them, and punished them at his pleasure. Then returned he vnto *Mexico* in triumph, and with great riches, to bee crowned King, according to their custome. *Autzol* extended the limits of his Kingdome farre, by many Conquests, euen vnto *Guatimalia*, which is three hundred leagues from *Mexico*. Hee was no lesse liberall then valiant: for when as the Tributes arriued which (as I haue said) came in great abundance, hee went forth of his Palace, gathering together all the people into one place, then commanded he to bring all the Tributes, which he diuided to those that had need. To the poore he gaue Stuffes to make them apparell, and meate, and whatsoeuer they had need of in great abundance, and things of value, as Gold, Siluer, Iewels, and Feathers, were diuided amongst the the Captaines, Souldiers, and Seruants of his House according to euery mans merit. This *Autzol* was likewise a great Politician, hee pulled downe the houses ill built, and built others very sumptuous. Of the deeds of *Autzol* the eight King of *Mexico*. *Chap.* 19 The Picture story cals him *Tigocicatzi*. *Quaxulatlan*.

It seemed vnto him that the Citie of *Mexico* had too little water, and that the Lake was very muddie, and therefore hee resolued to let in a great course of water, which they of *Cuyoacan* vied. For this cause hee called the chiefe man of the Citie vnto him, beeing a famous Sorcerer, hauing propounded his meaning vnto him: the Sorcerer wished him to bee well aduised what he did, being a matter of great difficultie, and that he vnderstood, if hee drew the Riuer out of her ordinary course, making it passe to *Mexico*, hee would drowne the Citie. The King supposed these excuses were but to frustrate the effect of his Designe, being therefore in choler, he dismissed him home, and a few dayes after he sent a Prouost to *Cuyoacan*, to take this Sorcerer: who hauing vnderstanding for what intent the Kings Officers came, he caused them to enter his house, and then he presented himselfe vnto them in the forme of a terrible *Eagle*, wherewith the Prouost and his companions being terrified, they returned without taking him. *Autzol* incensed herewith sent others, to whom he presented himselfe in forme of a furious *Tigre*, so as they durst not touch him. The third came, and they found him in the forme of a horrible *Serpent*, whereat they were much afraid. The King mooued the more with these doings, sent to tell them of *Cuyoacan*, that if they brought not the Sorcerer bound vnto him, hee would raze their Citie. For feare whereof, or whether it were of his owne free will, or being forced by the people, he suffered himselfe to be led to the King, who presently caused him to bee strangled, and then then did he put his resolution in practice, forcing a channell whereby the water might passe to *Mexico*, whereby he brought a great current of water into the Lake, which they brought with great Ceremonies and Superstitions, hauing Priests casting Incense along the bankes, others sacrificed Quailes, and with the bloud of them sprinkled the channell bankes, others sounding of Cornets, accompanied the water with their Musicke. One of the chiefe went attired in a habit like to their *Goddesse of the water*, and all saluted her, saying, that she was welcome. All which things are painted in the Annalls of *Mexico*: which Booke is now at *Rome* in the holy Library, or Vatican, where a Father of our Company, that was come from *Mexico*, did see it, and other Histories, the which he did expound to the Keeper of his Holinesse Library, taking Famous Sorcerer, or *Indian Prester*. *Mexican Annalls* in the Vatican.

Digitized by Google

taking great delight to vnderstand this Booke, which before hee could neuer comprehend. Finally, the water was brought to *Mexico*, but it came in such abundance, that it had welneere drowned the Citie, as was foretold: and in effect it did ruine a great part thereof, but it was presently preuented by the industry of *Autzol*, who caused an issue to bee made to draw forth the water: by meanes whereof hee repayred the buildings that were fallen, with an exquisite worke, being before but poore Cottages. Thus he left the Citie inuironed with water, like another *Venice*, and very well built: he reigned eleuen yeeres, and ended with the last and greatest Successor of all the *Mexicans*.

§. III.

Of the Election of great MOTEZVMA, *the last King of* Mexico: *his pompe and manner of gouernment, prodigious fore-warnings, of his ruine, and the* Spanish *Conquest.*

WHen the *Spaniards* entred New *Spaine*, being in the yeere of our Lord 1518. *Motecuma* second of that name, was the last King of the *Mexicans*, I say the last, although they of *Mexico*, after his death, chose another King, yea, in the life of the same *Motecuma*, whom they declared an enemy to his Countrey, as wee shall see hereafter. But he that succeeded him, and he that fell into the hands of the Marquesse *de Valle*, had but the names and titles of Kings, for that the Kingdome was in a manner all yeelded to the *Spaniards*: so as with reason we account *Motecuma* for the last King, and so hee came to the period of the *Mexicans* power and greatnesse, which is admirable beeing happened among *Barbarians*. For this cause, and for that this was the season, that God had chosen to reueale vnto them the knowledge of his Gospell, and the Kingdome of Iesus Christ, I will relate more at large the *Acts* of *Motecuma*, then of the rest.

Before he came to be King, hee was by disposition, very graue and stayed, and spake little, so as when he gaue his opinion in the priuy Counsell, whereas he assisted, his speeches and discourses made euery one to admire him, so as euen then he was feared and respected. He retyred himselfe vsually into a Chappell, appointed for him in the Temple of *Vitzliputzli*, where they said their Idoll spake vnto him; and for this cause hee was held very religious and deuout. For these perfections then, being most noble and of great courage, his election was short and easie, as a man vpon whom all mens eyes were fixed, as worthy of such a charge. Hauing intelligence of this election, he hid himselfe in this Chappell of the Temple, whether it were by judgement (apprehending so heauy and hard a burthen) as to gouerne such a people, or rather, as I beleeue, through hypocrisie, to shew that hee desired not Empery: In the end they found him, leading him to the place of Councell, whither they accompanied him with all possible joy: he matched with such a grauity, as they all said the name of *Motecuma* agreed very well with his nature, which is as much to say, as *angrey Lord*. The Electors did him great reuerence, giuing him notice, that hee was chosen King: from thence hee was led before the hearth of their Gods, to giue Incense, where he offered Sacrifices in drawing bloud from his eares, and the calues of his legs, according to their custome. They attyred him with the Royall ornaments, and pierced the gristle of his nosthrils, hanging thereat a rich Emerald, a barbarous and troublous custome: but the desire of rule, made all paine light and easie. Being seated in his Throne, hee gaue audience to the Orations and Speeches that were made vnto him, which according vnto their custome were eloquent and artificiall.

King of *Tescucos* Oration.

The first was pronounced by the King of *Tescuco*, which being preferued, for that it was lately deliuered, and very worthy to bee heard, I will set it downe word by word, and thus hee said: *The concordance and vnitie of voyces vpon thy election, is a sufficient testimonie (most noble young man) of the happinesse the Realme shall receiue, as well deserning to be commanded by thee, as also for the generall applause which all doe shew by meanes thereof. Wherein they haue great reason, for the Empire of* Mexico *doth already so farre extend it selfe, that to gouerne a World, as it is, and to beare so heauie a burthen, it requires no lesse dexteritie and courage, then that which is resident in thy firme and valiant heart, nor of lesse wisdome and iudgement then thine. I see and know plainly, that the mightie God loueth this Citie, seeing hee hath giuen vnderstanding to choose what was fit. For who will not beleeue that a Prince, who before his Reigne had pierced the nine Vaults of Heauen, should not likewise now obtaine those things that are earthly to relieue his people, aiding himselfe with his best iudgement, being thereunto bound by the dutie and charge of a King? Who will likewise beleeue that the great courage which thou hast alwayes valiantly shewed in matters of importance, should now faile thee in matters of greatest need? Who will not perswade himselfe but the* Mexican *Empire is come to the height of their Soueraignitie, seeing the Lord of things created hath imparted so great graces vnto thee, that with thy looke onely thou breedest admiration in them that behold thee? Reioyce then, O hap-*

Mexican greatnesse.

Their opinions of God and 9. Heauens.

Elegant *Prosopopœia.*

happie Land, to whom the Creator hath giuen a Prince, as a firme Pillar to support thee, which shall bee thy Father and thy defence, by whom thou shalt be succoured at need, who will bee more then a brother to his subiects, for his pietie and clemencie. Thou hast a King, who in regard of his estate is not inclined to delights, or will lye stretched out vpon his bed, occupied in pleasures and vices, but contrariwise in the middest of his sweet and pleasant sleep he will suddenly wake, for the care he must haue ouer thee, and will not feele the taste of the most sauourie meate, hauing his spirits transported with the imagination of thy good. Tell me then (O happie Realme) if I haue not reason to say that thou ought'est reioyce, hauing found such a King; And thou noble young man, and our most mighty Lord, be confident, and of a good courage, that seeing the Lord of things created hath giuen thee this charge, hee will also giue thee force and courage to manage it: and thou mayest well hope, that hee which in times past hath vsed so great bountie towards thee, will not now deny thee his greater gifts, seeing he hath giuen thee so great a charge, which I wish thee to enioy many yeeres. King *Moteçuma* very attentiue to this Dispurle: which being ended, they say hee was so troubled, that endeauouring thrice to answere him, hee could not speake, being ouercome with teares, which ioy and content doe vsually cause, in signe of great humility. In the end being come to himselfe, he spake briefly, *I were too blind, good King of Tescuco, if I did not know, that what thou hast spoken vnto me, proceeded of meere fauour, in pleasing you to shew me, seeing among so many noble and valiant men within this Realme, you haue made choice of the least sufficient: and in truth, I find my selfe so incapeable of a charge of so great importance, that I know not what to doe, but to beseech the Creator of all created things, that hee will fauour mee, and I intreate you all to pray vnto him for me.* These words vttered, hee beganne a gaine to weepe.

Elegant Prosopœia. Kings Office.

Moteçumas answere.

He that in his election made such shew of humility and mildnesse, seeing himselfe King, began presently to discouer his aspiring thoughts. The first was, hee commanded that no plebeian should serue in his house, nor beare any Royal Office, as his Predecessors had vsed til then; blaming them that would be serued by men of base condition, commanding that all the noble and most famous men of his Realme should liue within his Palace, and exercise the Offices of his Court, and House. Whereunto an old man of great authoritie (who had sometimes bin his Schoolemaster) opposed himselfe, aduising him, to be careful what he did, and not to thrust himselfe into the danger of a great inconuenience, in separating himselfe from the vulgar and common people, so as they should not dare to looke him in the face, seeing themselues so reiected by him. He answered, that it was his resolution, and that he would not allow the Plebeians thus to goe mingled among the Nobles, as they had done, saying, that the seruice they did, was according to their condition, so as the Kings got no reputation, and thus welcommended firme in his resolution. Hee presently commanded his Counsell to dismisse all the Plebeians from their charges and offices, as well those of his Houshold as of his Court, and to prouide Knights: the which was done. After hee went in person to an enterprize necessary for his Coronation. At that time a Prouince lying farre off towards the North Ocean, was reuolted from the Crown, whither he led the flower of his people, well appointed. There he warred with such valour and dexteritie, that in the end hee subdued all the Prouince, and punished the Rebels seuerely, returning with a great number of Captiues for the Sacrifices, and many other spoyles. All the Cities made him solemne receptions at his returne, and the Lords thereof gaue him water to wash, performing the offices of seruants, a thing not vsed by any of his Predecessors. Such was the feare and respect they bare him. In *Mexico*, they made the Feasts of his Coronation with great preparations of Dances, Comedies, Banquets, Lights, and other inuentions for many dayes. And there came so great a wealth of Tributes from all his Countreyes, that strangers vnknowne came to *Mexico*, and their very enemies resorted in great numbers disguised to see these Feasts, as those of *Tlascalla*, and *Mechoacan*: the which *Moteçuma* hauing discouered, he commanded they should be lodged and gently intreated, and honoured as his owne person. He also made them goodly Galleries like vnto his owne, where they might see and behold the Feasts. So they entred by night to those Feasts, as the King himselfe, making their Sports and Maskes. And for that I haue made mention of these Prouinces, it shall not be from the purpose to vnderstand, that the Inhabitants of *Mechoacan*, *Tlascalla*, and *Tapeaca*, would neuer yeeld to the *Mexicans*, but did alwayes fight valiantly against them; yea, sometimes the *Mechoacans* did vanquish the *Mexicans*, as also those of *Tapeaca* did. In which place, the Marquesse *Don Ferrand Cortes*, after that hee and the *Spaniards* were expelled *Mexico*, pretended to build their first Citie, the which hee called (as I well remember) *Segurede la Frontiere*: But this peopling continued little: for hauing afterwards reconquered *Mexico*, all the *Spaniards* went to inhabite there. To conclude, those of *Tapeacu*, *Tlascalla*, and *Mechoacan*, haue beene alwayes enemies to the *Mexicans*; although *Moteçuma* said vnto *Cortes*, that hee did purposely forbeare to subdue them; to haue occasion to exercise his men of warre, and to take numbers of captiues.

How *Moteçuma* ordered the seruice of his house, and of the warre he made for his Coronation. *Chap.* 21. Pride before the fall.

Segurede la Frontiere.

Of the behauiour and greatnesse of *Moteçuma*. *Chap.* 22. His proud state.

This King laboured to bee respected, yea, to be worshipped as a God. No Plebeian might looke him in the face; if he did, he was punished with death: he did neuer let his foot on the ground, but was alwayes carried on the shoulders of Noblemen; and if he lighted, they laid rich Tapistrie whereon hee did goe. When hee made any Voyage, hee and the Noblemen went as it were

* Or betwixt railes.

in a Parke * compaſſed in for the nonce, and the reſt of the people were without the Parke, enuironing it in on euery ſide; hee neuer put on a garment twice, nor did eate or drinke in one veſſell or diſh aboue once; all muſt be new, giuing to his attendants that which had once ſerued him: ſo as commonly they were rich and ſumptuous. Hee was very careſull to haue his Lawes obſerued. And when he returned victor from any warre, hee fained ſometimes to goe and take his pleaſure, then would hee diſguiſe himſelfe, to ſee if his people (ſuppoſing hee were abſent) would omit any thing of the feaſt or reception: If there were any exceſſe or defect, hee then did puniſh it rigorouſly. And alſo to diſcerne how his Miniſters did execute their Offices, hee often diſguiſed himſelfe, offering gifts and preſents to the Iudges, prouoking them to doe in-juſtice. If they offended, they were preſently puniſhed with death, without remiſſion or reſpect, were they Noblemen, or his Kinſmen; yea, his owne Brethren. Hee was little conuerſant with his people, and ſeldome ſeene, retyring himſelfe moſt commonly to care for the gouernment of his Realme. Beſides that, he was a great Iuſticier and very Noble, he was very valiant and happy, by meanes whereof, hee obtayned great victories, and came to this greatneſſe, as is written in the *Spaniſh* Hiſtories, whereon it ſeemes needleſſe to write more. I will onely haue a care hereafter to write what the Books and Hiſtories of the *Indies* make mention of; the which the *Spaniſh* Writers haue not obſerued, hauing not ſufficiently vnderſtood the ſecrets of this Countrey, the which are things very worthy to be knowne, as we ſhall ſee hereafter.

His liberalitie.

His ſeueritie.

His policie to tiſt men.

It chanced that *Moteçuma* hauing reigned many yeeres in great proſperitie, and ſo puft vp in his conceit, as he cauſed himſelfe to be ſerued and feared, yea to be worſhipped as a God, that the Almighty Lord began to chaſtice him, and alſo to admoniſh him, ſuffering euen the very Deuils whom he worſhipped, to tell him theſe heauy tydings of the ruine of his Kingdome, and to torment him by Viſions, which had neuer beene ſeene; wherewith hee remayned ſo melancholy and troubled, as he was void of judgement.

Quetzacoalt.

The Idoll of thoſe of *Cholola*, which they called *Quetzacoalt*, declared, that a ſtrange people came to poſſeſſe his Kingdomes. The King of *Teſcuco* (who was a great Magitian, and had conference with the Deuill) came one day at an extraordinary houre to viſit *Moteçuma*, aſſuring him that his Gods had told him, that there were great loſſes preparing for him, and for his whole Realme: many Witches and Sorcerers went and declared as much, amongſt which there was one, did very particulary foretell him what ſhould happen: and as hee was with him hee told him that the pulſes of his feete and hands failed him. *Moteçuma* troubled with theſe newes, commanded all thoſe Sorcerers to be apprehended: but they vaniſhed preſently in the Priſon, wherewith he grew into ſuch a rage, that he might not kill them, as hee put their wiues and children to death, deſtroying their Houſes and Families. Seeing himſelfe importuned and troubled with theſe aduertiſements, hee ſought to appeaſe the anger of his Gods: and for that cauſe hee laboured to bring a huge ſtone, thereon to make great Sacrifices: For the effecting whereof hee ſent a great number of people with Engins and Inſtruments to bring it: which they could by no meanes mooue, although (being obſtinate) they had broken many Inſtruments. But as they ſtroue ſtill to raiſe it, they heard a voyce joyning to the ſtone, which ſaid they laboured in vaine, and that they ſhould not raiſe it, for that the Lord of things created would no more ſuffer thoſe things to be done there. *Moteçuma* vnderſtanding this, commanded the Sacrifice to be performed in that place, and they ſay the voyce ſpake againe: *Haue I not told you, that it is not the pleaſure of the Lord of things created, that it ſhould bee done? and that you may well know that it is ſo, I will ſuffer my ſelfe to bee tranſported a little, then after you ſhall not mooue me.* Which happened ſo indeed, for preſently they carried it a ſmall diſtance with great facilitie, then afterwards they could not mooue it, till that after many Prayers, it ſuffered it ſelfe to bee tranſported to the entry of the Citie of *Mexico*, where ſuddenly it fell into the Lake, where ſeeking for it, they could not find it, but it was afterwards found in the ſame place from whence they had remooued it, wherewith they remayned amazed and confounded.

His crueltie a true effect of the Deuils foretellings. God forewarneth men to bring them to repentance: the Deuill to fill them with feates, perfidious and cruell iealouſies, ſuperſtious ſhifts, and to maintaine his credit, by his diuining, ſeeking to prooue his diuinity (al which is heere euident) in things which Gods iuſtice lets him know he will doe to puniſh ſuch impious pietie. Prodgies or Deuilliſh Miracles.

At the ſame time there appeared in the Element a great flame of fire, very bright, in the forme of a Pyramide, which beganne to appeare at midnight, and went ſtill mounting vntill the Sunne riſing in the morning, where it ſtayed at the South, and then vaniſhed away. It ſhewed it ſelfe in this ſort the ſpace of a whole yeere, and euer as it appeared the people caſt forth great cryes as they were accuſtomed, beleeuing it was a preſage of great misfortune. It happened alſo that fire tooke the Temple, when as no body was within it, nor neere vnto it, neyther did there fall any lightning or thunder: whereupon the Guards crying out, a number of people ranne with water, but nothing could helpe, ſo as it was all conſumed; and they ſay the fire ſeemed to come forth of pieces of timber, which kindled more by the water that was caſt vpon it.

A Comet by day.

There was a Comet ſeene in the day time, running from the Weſt to the Eaſt, caſting an infinite number of ſparkles, and they ſay the forme was like to a long tayle, hauing three heads.

The great Lake betwixt *Mexico* and *Teſcuco*, without any winde, earthquake, or any other apparant ſigne, began ſudainly to ſwell, and the waues grew in ſuch ſort, as all the buildings neere vnto it fell downe to the ground. They ſay at that time they heard many voices, as of a woman

woman in paine, which said sometimes, *O my children, the time of your destruction is come:* and otherwhiles it said, *O my children, whither shall I carry you that you perish not vtterly?* There appeared likewise many Monsters with two heads, which being carried before the King, sudainly vanished. There were two that exceeded all other Monsters, being very strange; the one was, the Fishers of the Lake tooke a Bird as bigge as a Crane, and of the same colour, but of a strange and vnseene forme. They carried it to *Motecuma*, who at that time was in the pallace of teares and mourning, which was all hanged with blacke; for as he had many Pallaces for his recreation, so had he also others for times of affliction, wherewith he was then heauily charged and tormented, by reason of the threatnings his gods had giuen him by these sorrowfull aduertisements. The Fishers came about noone setting this Bird before him, which had on the top of his head a thing bright and transparent, in forme of a Looking-glasse, wherein he did behold a warlike Nation comming from the East, armed, fighting, and killing. He called his Diuines and Astronomers (whereof there was a great number) who hauing seene these things, and not able to yeelde any reason of what was demanded of them, the Bird vanished away, so as it was neuer more seene: whereupon *Motecuma* remained very heauy and sorrowfull. The other which happened, was a Laborer, who had the report of a very honest man; he came vnto him, telling him, that being the day before at his worke, a great Eagle flew towards him, and tooke him vp in his talents, without hurting him, carrying him into a certaine Caue, where it left him; The Eagle pronouncing these words, *Most mighty Lord, I haue brought him whom thou hast commanded me:* This *Indian* Laborer looked about on euery side, to whom he spake, but he saw no man. Then he heard a voyce which said vnto him; Doost thou not know this man, whom thou seest lying vpon the ground? and looking thereon, he perceiued a man to lye very heauy asleepe, with royall ensignes, flowers in his hand, and a staffe of perfumes burning, as they are accustomed to vse in that Country: whom the Labourer beholding, knew it was the great King *Motecuma*, and answered presently: *Great Lord, this resembles our King* Motezuma. The voice said againe, *Thou sayest true, behold what he is, and how hee lies asleepe, careless of the great miseries and afflictions prepared for him. It is now time that he pay the great number of offences he hath done to God, and that he receiue the punishment of his tyrannies, and great pride, and yet thou seest how careless he lyes, blinde in his owne miseries, and without any feeling. But to the end thou maiest the better see him, take the staffe of perfumes he holds burning in his hand, and put it to his face, thou shalt then finde him without feeling.* The poore laborer durst not approach neere him, nor doe as he was commanded, for the great feare they all had of this King. But the voice said, *Haue no feare, for I am without comparison greater than this King, I can destroy him, and defend him, doe therefore what I command thee.* Whereupon the Laborer tooke the staffe of perfumes out of the Kings hand, and put it burning to his nose, but he moued not, nor shewed any feeling. This done, the voice said vnto him, that seeing he had found the King so sleepie, he should goe awake him, and tell him what he had seene. Then the Eagle by the same commandement, tooke the man in his talents, and set him in the same place where he found him, and for accomplishment of that which he had spoken, he came to aduertise him. They say, that *Motecuma* looking on his face, found that he was burnt, the which he had not felt till then, wherewith he continued exceeding heauie and troubled.

Monsters.

Prodigious Foule.

In the foureteenth yeare of the raigne of *Motecuma*, which was in the yeare of our Lord 1517. there appeared in the North Seas, Shippes, and men landing, whereat the Subiects of *Motecuma* wondred much, and desirous to learne, and to be better satisfied what they were, they went aboord in their Canoes, carrying many refreshings of meates and stuffes to make apparrell, vpon colour to sell them. The *Spaniards* receiued them into their Shippes, and in exchange of their victuals and stuffes, which were acceptable vnto them, they gaue them chaines of false Stones, red, blew, greene, and yellow, which the *Indians* imagined to be precious stones. The *Spaniards* informing themselues, who was their King, and of his great power, dismissed them, willing them to carry those Stones vnto their Lord, saying, that for that time they could not goe to him, but they would presently returne and visite him. Those of the coast went presently to *Mexico* with this message, carrying the representation of what they had seene, painted on a cloath, both of the Shippes, Men, and Stones which they had giuen them. King *Motecuma* remained very pensiue with this message, commanding them not to reueale it to any one. The day following, he assembled his Counsell, and hauing shewed them the painted cloathes and the Chaines, he consulted what was to be done: where it was resolued to set good watches vpon all the Sea coasts, to giue present aduertisement to the King of what they should discouer. The yeare following, which was in the beginning of the yeare 1518. they discouered a Fleete at Sea, in the which was the Marquise of *Valle Don Fernando Cortes*, with his companions, newes which much troubled *Motecuma*, and conferring with his Counsell, they all said, that without doubt, their great and auncient Lord *Quezalcoalt* was come, who had said, that he would returne from the East, whither he was gone. The *Indians* held opinion, that a great Prince had in times past left them, and promised to returne. Of the beginning and ground of which opinion shall be spoken in another place. They therefore sent fiue principall Ambassadors

Of the newes *Motecuma* receiued of the *Spaniards* arrival in his Country, and of the Ambassage he sent them. *Chap. 24.*

with rich presents, to congratulate his comming, saying, they knew well that their great Lord *Quezizalcoalt* was come, and that his seruant *Motecuma* sent to visite him, for so he accounted himselfe. The *Spaniards* vnderstood this message by the meanes of *Marina*, an *Indian* woman whom they brought with them which vnderstood the *Mexican* tongue. *Fernando de Cortes* finding this a good occasion for his entry, commanded to decke his Chamber richly, and being set in great state and pompe, he caused the Ambassadors to enter, who omitted no shewes of humilitie, but to worship him as their god.

Cortes admits diuine worship agreeing more with his couetous designes then Christian religion, which thriued there according to these beginnings.

They deliuered their charge, saying, that his seruant *Motecuma* sent to visit him, and that he held the Country in his name as his Lieutenant, that he knew well it was the *Topilcin* which had beene promised them many yeares since, who should returne againe vnto them. And therefore they brought him such Garments as he was wont to weare, when he did conuerse amongst them, beseeching him to accept willingly of them, offering him many presents of great value. *Cortes* receiuing the presents, answered, that he was the same they spake of, wherewith they were greatly satisfied, seeing themselues to be curteously receiued and intreated by him. To conclude, the day after this Ambassage, all the Captaines and Commanders of the Fleete, came vnto the Admirall, where vnderstanding the matter, and that this Realme of *Motecuma* was mighty and rich, it seemed fit to gaine the reputation of braue and valiant men among this people, and that by this meanes (although they were few) they should be feared and receiued into *Mexico*. To this end they discharged all their Artillery from their Shippes, which being a thing the *Indians* had neuer heard, they were amazed, as if heauen had fallen vpon them. Then the *Spaniards* beganne to defie them to fight with them: but the *Indians* not daring to hazard themselues, they did beate them and intreate them ill, shewing their Swords, Lances, Pertuisans, and other armes, wherewith they did terrifie them much. The poore *Indians* were by reason hereof so fearefull and amazed, as they changed their opinion, saying, that their Lord *Topilcin* came not in this troupe, but they were some gods (their enemies) came to destroy them. When as the Ambassadors returned to *Mexico*, *Motecuma* was in the house of audience; but before he would heare them, this miserable man commanded a great number of men to be sacrificed in his presence, and with their bloud to sprinkle the Ambassadors (supposing by this ceremony) which they were accustomed to doe in solemne Ambassages) to receiue a good answer. But vnderstanding the report and information of the manner of their Ships, Men, and Armes, he stood perplexed and confounded: then taking counsell thereon, he found no better meanes, then to labor to stop the entry of these strangers, by Coniurations and Magicke Arts. They had accustomed often to vse this meanes, hauing great conference with the Deuill, by whose helpe they sometimes obtained strange effects. They therefore assembled together all the Sorcerers, Magitians, and Inchanters, who being perswaded by *Motecuma*, they tooke it in charge to force this people to returne vnto their Country. For this consideration, they went to a certaine place which they thought fit for the inuocation of their Deuils, and practising their Arts (a thing worthy of consideration) They wrought all they could; but seeing nothing could preuaile against the *Christians*, they went to the King, telling him that they were more then men, for that nothing might hurt them, notwithstanding, all their Coniurations and Inchantments. Then *Motecuma* aduised him of another policie, that faining to be very well contented with their comming, he commanded all his Countries to serue these celestiall gods that were come into his Land. The whole people was in great heauinesse and amazement, and often newes came that the *Spaniards* inquired for the King, of his manner of life, of his house and meanes. He was exceedingly vexed herewith: some of the people and other Negromanciers aduised him to hide himselfe, offering to place him whereas no creature should euer finde him. This seemed base vnto him, and therefore he resolued to attend them, although it were dying. In the end he left his Houses and royall Pallaces to lodge in others, leauing them for these gods as he said.

Egregiam vero laudem.

Needes must they goe whom Deuill driues.

Protean shifts.

I pretend not to intreate of the acts and deedes of the *Spaniards*, who conquered New *Spaine*, nor the strange aduentures which happened vnto them, nor of the courage and inuincible valour of their Captaine *Don Fernando Cortes*: for that there are many Histories and Relations thereof, as those which *Fernando Cortes* himselfe did write to the Emperour *Charles* the fift, although they be in a plaine stile, and farre from arrogancy, the which doe giue a sufficient testimony of what did passe, wherein he was worthy of eternall memory, but onely to accomplish my intention: I am to relate what the *Indians* report of this action, the which hath not to this day beene written in our vulgar tongue. *Motecuma* therefore, hauing notice of this Captains victories, that he aduanced for his conquest, that he was confederate and ioyned with them of *Tlascalla*, his capitall enemies, and that he had seuerely punished them of *Cholola* his friends, he studied how to deceiue him, or else to try him in sending a principall man vnto him, attyred with the like ornaments and royall ensignes, the which should take vpon him to be *Motecuma*, which fiction being discouered to the Marquise by them of *Tlascalla* (who did accompany him) he sent him backe, after a milde and gentle reprehension, in seeking so to deceiue him: whereupon *Motecuma* was so confounded, that for the feare thereof he returned to his first imaginations and

Of the *Spaniards* entrie into *Mexico*. *Chap.* 25.

Digitized by Google

and practises, to force the *Christians* to retire, by the inuocation of Coniurers and Witches. And therfore he assembled a greater number then before, threatning them, that if they returned without effecting what he had giuen them in charge, not any one should escape, whereunto they all promised to obey. And for this cause, all the Deuils officers went to the way of *Chalco*, by the which the *Spaniards* should passe, when mounting to the top of a hill, *Tezcalipuca*, one of their principall gods, appeared vnto them, as comming from the *Spaniards* campe, in the habit of *Chalcas*, who had his paps bound about eight fold with a cord of reedes, he came like a man beside himselfe, out of his wits, and drunke with rage and furie. Being come to this troupe of Witches and Coniurers, he stayed, and spake to them in great choller, *Why come you hither? what doth Motecuma pretend to doe by your meanes? He had aduised himselfe too late: for it is now determined, that his Kingdome and honour shall be taken from him, with all that he possesseth, for punishment of the great tyrannies he hath committed against his Subiects, hauing gouerned not like a Lord, but like a traitour and tyrant.* The Inchanters and Coniurers hearing these words, knew it was their Idoll, and stumbling themselues before him, they presently built him an Altar of Stone in the same place, couering it with flowers which they gathered thereabouts, but he contrariwise, making no account of these things, began againe to chide them, saying: *What come you hither to doe, O ye traitours? Returne presently and behold* Mexico, *that you may vnderstand what shall become thereof.* And they say, that returning towards *Mexico* to behold it, they did see it flaming on fire. Then the Deuill vanished away, and they not daring to passe any farther, gaue notice thereof to *Motezuma*, whereat he remained long without speaking, looking heauily on the ground; then he said, *What shall we doe if god and our friends leaue vs, and contrariwise, they helpe and fauour our enemies? I am now resolute, and we ought all to resolue in this point, that happen what may, wee must not flye nor hide our selues, or shew any signe of cowardise. I onely pitie the aged and infants, who haue neither feete nor hands to defend themselues.* Hauing spoken this, he held his peace, being transported into an extasie. In the end, the Marquesse approaching to *Mexico*, *Motezuma* resolued to make of necessity a vertue, going three or foure leagues out of the Citie to receiue him with a great maiesty, carried vpon the shoulders of foure Noblemen, vnder a rich Canapy of Gold and Feathers. When they met, *Motezuma* descended, and they saluted one another very curteously. *Don Fernando Cortes* said vnto him, that he should not care for any thing, and that he came not to take away his Realme, nor to diminish his authority. *Motezuma* lodged *Cortes*, and his companions in his royall Pallace, the which was very stately, and he himselfe lodged in other priuate houses. This night the Souldiers for ioy discharged their Artillery, wherewith the *Indians* were much troubled, being vnaccustomed to heare such Musicke. The day following, *Cortes* caused *Motezuma* and all the Nobles of his Court to assemble in a great Hall, where being set in a high Chaire, he said vnto them, that he was seruant to a great Prince, who had sent them into these Countries to doe good workes, and that hauing found them of *Tlascalla* to be his friends (who complained of wrongs and greeuances done vnto them daily by them of *Mexico*) he would vnderstand which of them was in the blame, and reconcile them, that hereafter they might no more afflict and warre one against another: and in the meane time, he and his brethren (which were the *Spaniards*) would remaine still there without hurting them: but contrariwise, they would helpe them all they could. He laboured to make them all vnderstand this discourse, vsing his Interpreters and truchmen. The which being vnderstood by the King and the other *Mexican* Lords, they were wonderfully well satisfied, and shewed great signes of loue to *Cortes* and his company. So it is, that by some occasions, many complaints, griefes, and iealousies grew on either side. The which *Cortes* finding, & that the *Indians* mindes began to be distracted from them, he thought it necessary to assure himselfe, in laying hand vpon King *Motecuma*, who was seized on, and his legges fettered. Truely this act was strange vnto all men, and like vnto that other of his, to haue burnt his Shippes, and shut himselfe in the midst of his enemies, there to vanquish or to dye. The mischiefe was, that by reason of the vnexpected arriuall of *Pamphilo Naruaes* at the true crosse, drawing the Country into mutiny, *Cortes* was forced to absent himselfe from *Mexico*, and to leaue poore *Motecuma* in the hands of his companions, who wanted discretion nor had not moderation like vnto him: so as they grew to that dissention, as there was no meanes to pacifie it.

Tezcalipuca a Deuill-god.

Good fishing in troubled waters.

Cortes his two strange attempts.

When as *Cortes* was absent from *Mexico*, he that remayned his Lieutenant, resolued to punish the *Mexicans* seuerely, causing a great number of the Nobilitie to be slaine at a maske, which they made in the Palace, the which did so farre exceed, as all the people mutined, and in a furious rage, tooke Armes to be reuenged and to kill the *Spaniards*. They therefore besieged them in the Palace, pressing them so neere, that all the hurt the *Spaniards* could doe them with their Artillerie and Crosse-bowes, might not terrifie them, not force them to retyre from their enterprise, where they continued many dayes, stopping their victuals, not suffering any one to enter or issue forth. They did fight with stones, and cast Darts after their manner, with a kind of Lances like vnto Arrowes, in the which there are foure or sixe very sharpe Rasors, the which are such (as the Histories report) that in these warres, an *Indian* with one blow of these Rasors, almost cut off the necke of a Horse, and as they did one day fight with this resolution and furie, the

Indian armies.

Digitized by Google

the *Spaniards* to make them cease, shewed forth *Moteçuma*, with an other of the chiefe Lords of *Mexico*, vpon the top of a plat-forme of the house, couered with the Targets of two Souldiers that were with them. The *Mexicans* seeing their Lord *Moteçuma*, stayed with great silence. Then *Moteçuma* caused the Lord to aduise them to pacifie themselues, and not to warre against the *Spaniards*, seeing that (he being a prisoner) it could little profit him. The which being vnderstood by a yong man, called *Quicuxtemoc*, whom they now resolued to make their King, hee spake with a loud voyce to *Moteçuma*, willing him to retyre like a Villaine, that seeing he had beene such a Coward, as to suffer himselfe to bee taken, they were no more bound to obey him, but rather should punish him as he deserued, calling him *Woman* for the more reproach, and then he began to draw his Bowe and to shoot at him, and the people began to cast stones at him, and to continue their combate. Many say that *Moteçuma* was then hurt with a stone, whereof hee dyed. The *Indians* of *Mexico* affirme the contrarie, and that hee dyed as I will shew hereafter. *Alnaro*, and the rest of the *Spaniards* seeing themselues thus pressed, gaue intelligence to Captaine *Cortes*, of the great danger they were in: who hauing with an admirable dexteritie and valour, giuen order to *Narnaes* affaires, and assembled the greatest part of his men, hee returned with all speed to succour them of *Mexico*, where obseruing the time the *Indians* rest (for it was their custome in warre, to rest euery fourth day) Hee one day aduanced with great policy and courage, so as both he and his men entred the Palace, where as the *Spaniards* had fortified themselues: they then shewed great signes of ioy, in discharging their Artillerie. But as the *Mexicans* fury increased (being out of hope to defend themselues) *Cortes* resolued to passe away secretly in the night without bruit. Hauing therefore made Bridges to passe two great and dangerous passages, about mid-night they issued forth as secretly as they could, the greatest part of his people hauing passed the first bridge, they were discouered by an *Indian* woman before they could passe the second, who cryed out their enemies fled, at the which voyce all the people ranne together with a horrible furie: so as in passing the second bridge, they were so charged and pursued, as there remayned aboue three hundred men slaine and hurt in one place; where at this day there is a small Hermitage, which they vnproperly call *of Martyrs*. Many *Spaniards* (to preserue the gold and jewels which they had gotten) perished, and others staying to carry it away, were taken by the *Mexicans*, and cruelly sacrificed to their Idols. The *Mexicans* found King *Moteçuma* dead, and wounded as they say with Poniards, and they hold opinion that that night the *Spaniards* slue him with other Noblemen. The Marquesse in his Relation sent to the Emperor, writes the contrary, and that the *Mexicans* killed him that night with a sonne of *Moteçuma*, which he led with him amongst other Noblemen, saying, that all the treasure of gold, stones, and siluer, fell into the Lake and was neuer more seene. But how soeuer, *Moteçuma* dyed miserably, and payed his deserts to the iust iudgement of our Lord of Heauen for his pride and tyrannie: his body falling into the *Indians* power, they would make him no Obsequies of a King, no not of an ordinarie person, but cast it away in great disdaine and rage. A seruant of his hauing pitie of this Kings miserie (who before had beene feared and worshipped as a God) made a fire thereof, and put the ashes in a contemptible place. Returning to the *Spaniards* that escaped, they were greatly tyred and turmoyled, the *Indians* following them two or three dayes very resolutely, giuing them no time of rest, being so distressed for victuals, as a few graines of Mays were diuided amongst them for their meate. The Relations both of the *Spaniards* and *Indians* agree, that God deliuered them here miraculously, the Virgin *Mary* defending them on a little Hill, whereat this day three leagues from *Mexico*, there is a Church built in remembrance thereof, called *our Lady of succour*. They retyred to their ancient friends of *Tlascalla*, whence (by their aide, and the valour and policy of *Cortes*) they returned afterwards to make war against *Mexico*, by Water and Land, with an inuention of Brigantines, which they put into the Lake, where after many combats, and aboue threescore dangerous battailes, they conquered *Mexico*, on Saint *Hippolitus* day, the 13. of August, 1521. The last King of the *Mexicans* (hauing obstinately maintayned the warres) was in the end taken in a great Canoe, whereinto hee fled, who being brought with some other of the chiefest Noblemen before *Fernando Cortes*, this petie King with a strange resolution and courage, drawing his dagger, came neere to *Cortes*, and said vnto him, *Vntill this day I haue done my best indeuour for the defence of my people: now am I no further bound, but to giue thee this dagger to kill me therewith*. *Cortes* answered, that he would not kill him, neither was it his intention to hurt them: but their obstinate folly was guiltie of all the miserie and afflictions they had suffered, neither were they ignorant how often he had required peace and amitie at their hands. Hee then commanded them to be intreated curteously. Many strange and admirable things chanced in this Conquest of *Mexico*: for I neither hold it for an vntruth, nor an addition, which many write, that God fauoured the *Spaniards* by many miracles.

It is most certaine by the Relations of many, and by the Histories which are written, that in diuers battailes which the *Spaniards* had, as well in New *Spaine*, as in *Peru*, the *Indians* their enemies did see a Horseman in the ayre, mounted on a white horse, with a Sword in his hand, fighting for the *Spaniards*, whence comes the great reuerence they beare at the *Indies* to the glorious Apostle Saint *Iames*. Otherwhiles they did see in some battailes, the Image of our Lady, from whom

Fourth dayes rest in warre.

300. *Spaniards* lost.

And can you blame him to write the best of himselfe?

Succession of superstition. Royall courage. You here hear a Iesuit. Gold is a miracle-working God in couetous hearts. *Quid non mortalia pectora cogit Auri sacra fames?* this *sacrima fames* wrought miracles in all the *Spanish Indies*, and still doth at Saints shrines, and in *European* pilgrimages, and Purgatorie visions, &c. *Great is* (cryed the shrine-makers) *Diana of the Ephesians.*

Digitized by Google

whom the Christians haue receiued in those parts incomparable fauours and benefits, &c. And therefore we ought not to condemne all these things of the first Conquerors of the *Indies*, as some religious and learned men haue done, doubtlesse with a good zeale, but too much affected: For although for the most part they were couetous men, cruell, and very ignorant in the course that was to be obserued with the *Infidels*, who had neuer offended the *Christians*; yet can we not deny, but on the in part there was much malice against God and our Men, which forced them to vse rigour and chastisement.

Euery one may vnderstand by the Relation and Discourse I haue written in these Bookes, as well at *Peru*, as in *New Spaine*, when as the *Christians* first set footing, that these Kingdomes and Monarchies were come to the height and period of their power. The *Ingas* of *Peru*, possessing from the Realme of *Chille* beyond *Quito*, which are a thousand leagues, being most abundant in gold, siluer, sumptious seruices, and other things: as also in *Mexico*, *Motezuma* commanded from the North Ocean Sea, vnto the South, being feared and worshipped not as a man, but rather as a god. Then was it, that the most high Lord had determined that that stone of *Daniel*, which dissolued the Realmes and Kingdomes of the World, should also dissolue those of this new World. And as the Law of Christ came when as the *Romane* Monarchie was at her greatnesse: so did it happen at the West *Indies*, wherein wee see the iust prouidence of our Lord: For being then in the World, I meane in *Europe*, but one head and temporall Lord, as the holy Doctors doe note, whereby the Gospell might more easily bee imparted to so many People and Nations: Euen so hath it happened at the *Indies*, where hauing giuen the knowledge of Christ to the Monarchs of so many Kingdomes, it was a meanes that afterwards the knowledge of the Gospell was imparted to all the people: yea, there is herein a speciall thing to be obserued, that as the Lords of *Cusco* and *Mexico* conquered new Lands, so they brought in their owne language: for although there were (as at this day) great diuersitie of tongues, yet the Courtly speech of *Cusco*, did and doth at this day runne aboue a thousand leagues, and that of *Mexico* did not extend farre lesse, which hath not beene of small importance, but hath much profited in making the preaching easie, at such a time, when as the Preachers had not the gift of many tongues, as in old times. He that would know what a helpe it hath beene for the conuersion of this people in these two great Empires, and the great difficultie they haue found to reduce those *Indians* to Christ, which acknowledge no Soueraigne Lord, let him goe to *Florida*, *Brésil*, the *Andes*, and many other places, where they haue not preuayled so much by their preaching in fiftie yeeres, as they haue done in *Peru* and new *Spaine* in lesse then fiue. If they will impute the cause to the riches of the Country: I will not altogether denie it. Yet were it impossible to haue so great wealth, and to be able to preserue it, if there had not beene a Monarchie. This is also a worke of God in this age, when as the Preachers of the Gospell are so cold and without zeale, and Merchants with the heat of couetousnesse and desire of command, search and discouer new people whither we passe with our commodities; for as Saint *Augustine* saith, the propheſie of *Esay* is fulfilled, in that the Church of Christ is extended, not onely to the right hand, but also to the left: which is (as hee declareth) by humane and earthly meanes, which they seeke more commonly then Iesus Christ. It was also a great prouidence of our Lord, that when as the first *Spaniards* arriued there, they found aide from the *Indians* themselues, by reason of their partialities and great diuisions.

This is well knowne in *Peru*, that the diuision betwixt the two brothers *Atabualpa* and *Guasca*, the great King *Guanacapa* their father being newly dead, gaue entrie to the Marquesse *Don Francis Pizarro*, and to the *Spaniards*, for that either of them desired his alliance being busied in warre one against the other. The like experience hath beene in new *Spaine*, that the aide of those of the Prouince of *Tlascalla*, by reason of their continuall hatred against the *Mexicans*, gaue the victorie and seigniorie of *Mexico*, to the Marquesse *Fernando Cortes* and his men, and without them it had beene impossible to haue wonne it, yea, to haue maintayned themselues within the Country.

They are much deceiued that so little esteeme the *Indians*, and iudge that (by the aduantage the *Spaniards* haue ouer them in their Persons, Horses, and Armes, both offensiue and defensiue) they might easily conquer any Land or Nation of the *Indies*.

Chille stands yet, or to say better, *Arauco* and *Tucapel*, which are two Cities, where our *Spaniards* could not yet win one foot of ground, although they haue made warre there aboue fiue and twentie yeeres, without sparing of any cost. For this barbarous Nation, hauing once lost the apprehension of horse and shot, and knowing that the *Spaniards* fall as well as other men, with the blow of a stone or of a dart, they hazard themselues desperately, entring the Pikes vpon any enterprise. How many yeeres haue they leuied men in new *Spaine*, to send against the *Chichimecques*, which are a small number of naked *Indians*, armed only with bowes and arrowes? yet to this day they could not be vanquished, but contrariwise, from day to day they grow more desperate and resolute. But what shall we say of the *Chunos*, of the *Chiraguanas*, of the *Pifcocones*, and all the other people of the *Andes*? Hath not all the flower of *Peru* beene there, bringing with them so great prouision of Armes and Men as we haue seene? What did they? With what victories

Si ego (might *America* say) *digna sim hac contumelia maximè; At ille* (Hispane) *indignus qui faceres tamen.*

What difference twixt Words and Swords, twixt Apostles and greedie Souldiers? The Prince of peace sent men not to kill, but to be killed, & came to bee a slaine Lamb, that the World might be saued; not to slay a World that himselfe might be a couetous worldly sauer and conqueror. *Nimrod* or *Alexander* had been fitter Preachers in this kinde then *Peter* and *Paul*: their examples (not of these) did *Cortes* and *Pizarro* follow: and the Christianitie of those parts more smells of the Sword then the Word, as the Iesuit in bookes *de procuranda Ind. sal.* hath shewed, as is shewed *sup. To. 1. l. 2. c. 1.* in bayting the Popes Bull. *August. lib. 2. de com. euang. c. 36.* This was the greatest helpe of the *Spanish* conquest. *Indian* quarrels made that easie which their gold made desirable.

Diuers Nations which the *Spaniards* could neuer conquer to this day.

victories returned they (surely) they returned very happy in saving of their liues, hauing left their baggage and almost all their horses. Let no man thinke (speaking of the *Indians*) that they are men of nothing, but if they thinke so, let them goe and make triall. Wee will beleeue attribute the glorie to whom it appertaynes, that is, principally to God, and to his admirable disposition: for if *Motezuma* in *Mexico*, and the *Ingas* in *Peru*, had beene resolued to resist the *Spaniards*, and to stop their entrie, *Cortes* and *Pizarre* had prouayled little in their landing, although they were excellent Captaines. It hath also beene a great helpe to induce the *Indians* to receiue the Law of Christ, the subiection they were in to their Kings and Lords: and also the seruitude and slauerie they were held in by the Deuils tyrannies and insupportable yoke. This was an excellent disposition of the diuine Wisedome, the which drawes profit from ill to a good end, and receiues this good from an others ill, which hath not sowed. It is most certaine that no people of the West *Indies* haue beene more apt to receiue the Gospell, then those which were most subiect to their Lords, and which haue beene charged with the heauiest burthens, as well of Tributes and Seruices, as of Customes and bloudie Practises. All that which the *Mexican* Kings and those of *Peru* did possesse, is at this day most planted with Christian Religion, and where there is least difficultie in the Gouernment and Ecclesiasticall Discipline. The *Indians* were so wearied with the heauy and insupportable yoke of Satans lawes, his sacrifices and ceremonies, whereof wee haue formerly spoken, that they consulted among themselues, to seeke out a new Law, and an other God to serue. And therefore the Law of Christ seemed vnto them, and doth at this day seeme iust, sweet, cleane, good, and full of happinesse.

Deuill insupportable.

And that which is difficult in our Law, to beleeue so high and soueraigne Mysteries, hath beene easie among them, for that the Deuill had made them comprehend things of greater difficultie, and the selfe-same things which hee had stolen from our Euangelicall Law, as their manner of Communion and Confession, their adoration of Three in One, and such other like, the which against the will of the Enemie, haue holpen for the easie receiuing of the Truth by those who before had embraced Lyes. God is wise and admirable in all his workes, vanquishing the Aduersarie euen with his owne weapon, hee takes him in his owne snare, and kills him with his owne sword. Finally, our God (who had created this People, and who seemed to haue thus long forgot them) when the houre was come, hee would haue the same Deuils, enemies to mankinde, whom they falsly held for gods; should giue a testimonie against their will, of the true Law, the power of Christ, and the triumph of the Crosse, as it plainly appeares by the presages, prophesies, signes, and prodigies, here before mentioned, with many others happened in diuers parts, and that the same ministers of Satan, Sorcerers, Magicians, and other *Indians* haue confessed it. And wee cannot denie it (being most euident and knowne to all the World) that the Deuill dareth not hisse, and that the Practises, Oracles, Answers, and visible Apparitions, which were so ordinarie throughout all this Infidelitie, haue ceased, whereas the Crosse of Christ hath beene planted, where there are Churches, and where the Name of Christ hath beene confessed. And if there be at this day any cursed minister of his, that doth participate thereof, it is in Caues, and on the tops of Mountaines, and in secret places, farre from the name and communion of Christians. The Soueraigne Lord be blessed for his great mercies, and for the glorie of his holy Name: And in truth, if they did gouerne this people temporally and spiritually, in such sort as the Law of Iesus Christ hath set it downe, with a milde yoke and light burthen, and that they would impose no more vpon them then they can well beare, as the Letters Patents of the good Emperour of happy memorie doe command, and that they would imploy halfe the care they haue to make profit of these poore mens sweats and labours, for the health of their soules, it were the most peaceable and happy Christian part of all the World, &c.

CHAP. V.

Of the ancient superstitions of the Mexicans *and* Indians *of* America, *gathered out of the fifth Booke of* IOSEPHVS ACOSTA.

FIrst, although the darkenesse of Infidelitie holdeth these Nations in blindnesse, yet in many things the light of Truth and Reason workes somewhat in them. And they commonly acknowledge a supreme Lord and Author of all things, which they of *Peru* called *Vnachocha*, and gaue him names of great excellence, as *Pachacamac*, or *Pachayachachic*, which is, *the Creator of Heauen and Earth*: and *Vsapu*, which is, *admirable*, and other like names. Him they did worship, as the chiefest of all, whom they did honor in beholding the Heauen. The like wee see amongst them of *Mexico*, and *China*, and all other Infidels. Which accordeth well with that which is said of Saint *Paul*, in the *Acts* of the Apostles, where he did see the Inscription of an Altar; *Ignoto Deo:*

They acknowledge one supreme Deitie.

to *the vnknowne God*. Whereupon the Apostle tooke occasion to preach vnto them, saying, *Hee whom you worship without knowing, him doe I preach vnto you*. In like sort, those which at this day doe preach the Gospell to the *Indians*, finde no great difficultie to perswade them that there is a High God and Lord ouer all, and that this is the Christians God, and the true God. And yet it hath caused great admiration in mee, that although they had this knowledge, yet had they no proper Name for God; if wee shall seeke into the *Indian* tongue for a word to answere to this Name of God, as in Latin, *Deus*; in Greeke, *Theos*; in Hebrew, *El*; in Arabike, *Alla*; but we shall not finde any in the *Cuscan* or *Mexican* tongues. So as such as preach or write to the *Indians*, vse our *Spanish* name *Dios*, fitting it to the accent or pronunciation of the *Indian* tongues, the which differ much, whereby appeares the small knowledge they had of God, seeing they cannot so much as name him, if it bee not by our very name: yet in truth they had some little knowledge, and therefore in *Peru* they made him a rich Temple, which they called *Pachacamac*, which was the principall Sanctuarie of the Realme. And as it hath beene said, this word of *Pachacamac*, is as much to say, as *the Creator*, yet in this Temple they vsed their Idolatries, worshipping the Deuill and Figures. They likewise made Sacrifices and Offerings to *Viracocha*, which held the chiefe place amongst the worships which the Kings *Ingas* made. Hereof they called the *Spaniards Viracochas*, for that they hold opinion they are the *sonnes of Heauen*, and diuine; euen as others did attribute a Deitie to *Paul* and *Barnabas*, calling the one *Iupiter*, and the other *Mercurie*, so would they offer sacrifices vnto them, as vnto gods: and as the *Barbarians* of *Melite* (which is *Malta*) seeing that the Viper did not hurt the Apostle, they called him God.

Acts 17.

No proper name for God.

Acts 28.

NExt to *Viracocha*, or their supreme God, that which most commonly they haue and doe adore amongst the Infidels, is *the Sunne*; and after, those things which are most remarkeable in the celestiall or elementarie nature, as the *Moone*, *Starres*, *Sea*, and *Land*. The *Guacas*, or *Oratories*, which the *Ingas* Lords of *Peru* had in greatest reuerence, next to *Viracocha* and the *Sunne*, was *the Thunder*, which they called by three diuers names, *Chuquilla*, *Catuilla*, and *Intiillapa*, supposing it to be a man in heauen, with a Sling and a Mace, and that it is in his power to cause Raine, Haile, Thunder, and all the rest that appertaines to the Region of the Aire, where the Cloudes engender. It was a *Guaca* (for so they called their Oratories) generall to all the *Indians* of *Peru*, offering vnto him many sacrifices: and in *Cusco*, which is the Court and Metropolitan Citie, they did sacrifice children vnto him, as to the *Sunne*. They did worship these three, *Viracocha*, the *Sunne*, and *Thunder*, after another manner then all the rest, as *Polo* writes, who had made triall thereof, they did put as it were a Gantlet or Gloue vpon their hands, when they did lift them vp to worship them. They did worship the *Earth*; which they called *Pachamama*, as the Ancients did the goddesse *Tellus*: and the *Sea* likewise, which they call *Mamacocha*, as the Ancients worshipped *Thetis*, or *Neptune*. Moreouer, they did worship the *Raine-bowe*, which were the Armes and Blazons of the *Inga*, with two Snakes stretched out on either side. Amongst the *Starres* they all did commonly worship that which they called *Colca*, and wee here *Cabrille*. They did attribute diuers offices to diuers Starres, and those which had neede of their fauour did worship them, as the Shepherd did sacrifice to a Starre, which they called *Vrcuchillay*, which they hold to be a Sheepe of diuers colours, hauing the care to preserue their Cattell; and they imagine it is that which the Astronomers call *Lyra*. These Shepherds worship two other Starres, which walke neere vnto them, they call them *Catuchillay*, and *Vrcuchillay*; and they fayne them to be an *Ewe* and a *Lambe*. Others worshipped a Starre which they called *Machacuay*, to which they attribute the charge and power ouer Serpents, and Snakes, to keepe them from hurting of them. They ascribe power to another Starre, which they called *Chuquinchinchay* (which is as much as Tigre) ouer Tigres, Beares, and Lions, and they haue generally beleeued, that of all the beasts of the earth, there is one alone in heauen like vnto them, the which hath care of their procreation and increase. And so they did obserue and worship diuers Starres, as those which they called *Chacana*, *Topatarca*, *Mamanan*, *Mirco*, *Mioquiquisay*, and many other. So as it seemed they approched somwhat neere the propositions of *Platoes Idees*. The *Mexicans* almost in the same manner after the supreme God, worshipped the *Sunne*: And therefore they called *Hernando Cortez* (as he hath written in a Letter sent vnto the Emperor *Charles* the fifth) *Sonne of the Sunne*, for his care and courage to compasse the Earth. But they made their greatest adoration to an Idoll, called *Vitziliputzli*, the which in all this Region they called the most puissant, and Lord of all things: for this cause the *Mexicans* built him a Temple, the greatest, the faire st, the highest, and the most sumptuous of all other. The situation and beautie thereof, may well be conjectured by the ruines which yet remaine in the midst of the Citie of *Mexico*. But here the *Mexicans* Idolatrie hath beene more pernicious and hurtfull then that of the *Ingas*, as wee shall see playner hereafter, for that the greatest part of their adoration and Idolatrie, was imployed to Idols, and not to naturall things, although they did attribute naturall effects to these Idols, as *Raine, multiplication of Cattell, Warre, and Generation*, euen as the *Greekes* and *Latines* haue forged Idols of *Phœbus*, *Mercurie*, *Iupiter*, *Minerua*, and of *Mars*. To conclude, who so shall neerly looke into it, shall finde this manner which the Deuill hath vsed to deceiue the *Indians*,

Of the first kinde of Idolatrie, vpon naturall and vniuersall things. *Chap.* 4.

Sunne their second God: and then other heauenly Bodies in their order.

Temples to the *Thunder* their third God.

Iupiters fulmen.

Humane sacrifices.

Earth, Sea, Raine-bow, Starres worshipped.

Idolatrising rite the same to all their Idols with words different.

to be the same wherewith he hath deceiued the *Greekes* and *Romans*, and other ancient *Gentiles*, giuing them to vnderstand that these notable creatures, *the Sunne, Moone, Starres, and Elements*, had power and authority to doe good or harme to men. Their manner to pray to *Viracocha*, to the Sunne, the Starres, and the rest of their Idols, was to open their hands, and to make a certaine sound with their mouthes (like people that kissed) and to aske that which euery one desired in offering his Sacrifices; yet was there great difference betwixt the words they vsed in speaking to the great *Ticuiracocha*, to whom they did attribute the chiefe power and commandement ouer all things, and those they vsed to others, the which euery one did worshippe priuately in his house, as Gods or *particular Lords*, saying, that they were their Intercessors to this great *Ticciuiracocha*. This manner of worship, opening the hands, and as it were *kissing*, hath something like to that which *Iob* had in horrour, as fit for Idolaters, saying, *If I haue kissed my hands with my mouth, beholding the Sunne when it shines, or the Moone when it is light, the which is a great iniquitie, and to deny the most great God.*

Lares: as Popish mediators of Intercession.

* Adoration hid the name of *ad* and *os*: kissing the hand with bowing of the body, &c. See *Min. Fel. Iob* 31.

Of the Idolatry the *Indians* vsed to particular things. *Chap.* 5.

THe Deuill hath not beene contented to make these blinde *Indians* to worshippe the *Sunne, Moone, Starres, Earth, and Sea*, and many other generall things in nature, but he hash passed on further, giuing them for God, and making them subiect to base and abiect things, and for the most part, filthy and infamous: for they worshipped *Riuers, Fountaines, the mouthes of Riuers, entries of Mountaines, Rockes or great Stones, Hils and the tops of Mountaines*, which they call *Apachitas*, and they hold them for matters of great deuotion. To conclude, they did worship *all things in nature*, which seemed to them remarkable and different from the rest, as acknowledging some particular deitie.

These shewed me in *Caxamalca* of *Nasca* a little hill or great mount of Sand, which was the chiefe Idoll or *Guaca* of the Ancients. I demaunded of them what diuinity they found in it? They answered, that they did worship it for the wonder, being a very high mount of Sand, in the midst of very thicke Mountaines of Stone. We had neede in the Citie of *Kings*, of great store of great wood; for the melting of a Bell, and therefore they cut downe a great deformed Tree, which for the greatnesse and antiquity thereof had beene a long time the Oratorie and *Guaca* of the *Indians*. And they beleeued there was a certaine Diuinity in any thing that was extraordinary and strange in his kinde, attributing the like vnto small Stones and Mettals; yea vnto rootes and fruites of the earth, as the rootes they call *Papas*. There is a strange kinde which they call *Lallahuas*, which they kissed and worshipped. They did likewise worship Beares, Lyons, Tygres and Snakes, to thend they should not hurt them: and such as their gods be, such are the things they offer vnto them in their worship. They haue vsed as they goe by the way, to cast, in the crosse wayes, on the hils, and toppes of Mountaines, which they call *Apachittas*, *olde shooes, Feathers, and Coca chewed*, being an hearbe they vse much. And when they haue nothing left, they cast a *Stone* as an offring, that they might passe freely, and haue greater force, the which they say increaseth by this meanes, as it is reported in a prouinciall Counsell of *Peru*. And therefore they finde in the hie-waies great heapes of Stones offred, and such other things. They vsed another offring no lesse pleasant and ridiculous, pulling the haire from the eyebrowes to offer it to the Sunne, Hils, *Apachittas*, to the Windes, or to any other thing they feare. Such is the miseries that many *Indians* haue liued in, and doe to this day, whom the Deuill doth abuse like very Babes, with any foolish illusion whatsoeuer.

Concil. Limens. 2 p. 2. cap. 99.

They report of one of the Kings *Ingnis*, a man of a subtile spirit, who (seeing that all his predecessours had worshipped the Sunne) said, that he did not take the Sunne to be God, neither could it be, for that God was a great Lord, who with great quiet and leasure performed his workes, and that the Sunne doth neuer cease his course, saying, that the thing which laboured so much could not seeme to be God.

Of another kinde of Idolatry vpon the dead. *Chap.* 6. *Wisd.* 14.

They came to the height of Idolatry by the same meanes the Scripture maketh mention of: first they had a care to keepe the bodies of their Kings and Noblemen whole, from any ill scent or corruption aboue two hundred yeeres. In this sort were their Kings *Ingnas* in *Cusco*, euery one in his Chappell and Oratory, so as the Marquesse of *Canette* beeing Viceroy, to root out Idolatry, caused three or foure of their Gods to be drawne out and carried to the Citie of *Kings*, which bred a great admiration, to see these bodies (dead so many yeeres before) remayne so faire and also whole. Euery one of these Kings *Ingnas* left all his Treasure and Reuenues, to entertayne the place of worship where his body was laid, and there were many Ministers with all his Family dedicated to his seruice: for no King Successor did vsurpe the Treasures and Plate of his Peedeceſſor, but he did gather all new for himselfe, and his Palace. They were not content with this Idolatry to dead bodies, but also they made their figures and representations: and euery King in his life time caused a figure to be made wherein he was represented, which they called *Guaoqui*, which signifieth *Brother*, for that they should doe to this Image, during his life and death, as much honour and reuerence as to himselfe. They carried this Image to the warres, and *in procession for raine or faire weather*, making sundry Feasts and Sacrifices vnto them. There haue beene

beene many of these Idols in *Cusco*, and in that Territory, but now they say that this Superstition of worshipping of stones hath altogether ceased, or for the most part, after they had beene discouered by the diligence of the Licentiate *Polo*, and the first was that of the *Inguas Rocha*, chiefe of the faction or race of *Hanans Cusco*. And we find that among other Nations they had in great estimation and reuerence the bodies of their Predecessors, and did likewise worship their Images.

Of Superstitions they vsed to the dead. *Chap.* 7.

THe *Indians* of *Peru* beleeued commonly that the Soules liued after this life, and that the good were in glorie, and the bad in paine; so as there is little difficultie to perswade them to these Articles. But they are not yet come to the knowledge of that point, that the bodies should rise with the Soules. And therefore they did vse a wonderfull care, as it is said, to preserue the bodies which they honoured after death: to this end their Successors gaue them Garments, and made Sacrifices vnto them, especially the Kings *Ingues*, being accompanied at their Funerals, with a great number of seruants and women for his seruice in the other life: and therefore on the day of his decease, they did put to death the woman he had loued best, his Seruants and Officers, that they might serue him in the other life.

Immortality of soules beleeued but not resurrection of the bodies: as *at.* 17.

1000. slaine to attend one dead man.

When as the *Guanticapa* dyed (who was father to *Atagualpa*, at what time the *Spaniards* entred) they put to death aboue a thousand persons of all ages and conditions, for his seruice to accompany him in the other life, after many songs and drunkennesse they slew them; and these that were appointed to death, held themselues happy. They did sacrifice many things vnto them, especially *young children*, and with the bloud they made a stroake on the dead mans face, from one eare to the other. This superstition and inhumanity, to kill both men and women, to accompany and serue the dead in the other life, hath beene followed by others, and is at this day vsed amongst some other barbarous Nations. And as *Polo* writes, it hath beene in a manner generall throughout all the *Indies*. The reuerent *Beda* reports, that before the *Englishmen* were conuerted to the Gospell, they had the same custome, to kill men to accompany and serue the dead. It is written of a *Portugall*, who being captiue among the *Barbarians*, had beene hurt with a dart, so as he lost one eye, and as they would haue sacrificed him to accompany a Nobleman that was dead, he said vnto them, that those that were in the other life, would make small account of the dead, if they gaue him a blinde man for a companion; and that it were better to giue him an attendant that had both his eyes. This reason being found good by the *Barbarians*, they let him goe. Besides this superstition of sacrificing men to the dead, being vsed but to great Personages, there is another farre more generall and common in all the *Indies*, which is, to set meate and drinke vpon the graue of the dead, imagining they did feede thereon: the which hath likewise beene an errour amongst the Auncients, as Saint *Austine* writes, and therefore they gaue them meate and drinke. At this day many *Indian* Infidels, do secretly draw their dead out of the Churchyard, and bury them on hils, or vpon passages of Mountaines, or else in their owne houses. They haue also vsed to put Gold and Siluer in their mouth, hands, and bosome, and to apparell them with new Garments durable, and well lined vnder the herse. They beleeue that the soules of the dead wandred vp and downe and indure cold, thirst, hunger and trauel, and for this cause they make their anniuersaries, carrying them cloathes, meate and drinke.

Superstitions of the old *English*.

Portugall wile.

Purgatory fancies as in Popish legends.

HAuing reported what many Nations of *Peru* haue done with their dead, it shall not be from the purpose, to make particular mention of the *Mexicans* in this point, whose mortuaries were much solemnised, and full of notable follies. It was the office of the Priests and religious of *Mexico* (who liued there with a strange obseruance, as shall be said hereafter) to interre the dead, and doe their obsequies. The places where they buried them, was in their Gardens, and in the Courts of their owne houses: others carried them to the places of sacrifices which were done in the Mountaines: others burnt them, and after buried the ashes in their Temples; and they buried them all, with whatsoeuer they had, of Apparell, Stones and Iewels. They did put the ashes of such as were burnt into pots, and with them, the Iewels, Stones, and Earerings of the dead, how rich and precious soeuer. They did sing the Funerall offices, like to anniuersaries, and did often lift vp the dead bodies, doing many ceremonies. At these mortuaries they did eate and drinke; and if it were a person of quality, they gaue apparell to all such as came to the interment. When any one dyed, they laid him open in a chamber, vntill that all his kinsfolks and friends were come, who brought presents vnto the dead, and saluted him as if he were liuing. And if he were a King or Lord of some towne, they offered him slaues to be put to death with him, to the end they might serue him in the other world. They likewise put to death his Priest, or Chaplaine (for euery Nobleman had a Priest which administred these ceremonies within his house) and then they killed him, that he might execute his office with the dead. They likewise killed his Cook, his Butler, his Dwarfes, and deformed men, by whom he was most serued: neither did they spare the very brothers, of the dead, who had most serued them: for it was a greatnesse amongst the Noblemen, to be serued by their brethren and the rest. Finally, they

put to death all of his traine, for the entertaining of his house in the other world: and lest pouerty should oppresse them, they buried with them much wealth, as Gold, Siluer, Stones, Curtins of exquisite worke, Bracelets of Gold, and other rich peeces. And if they burned the dead, they vsed the like with all his Seruants, and ornaments they gaue him for the other world. Then tooke they all the ashes they buried with very great solemnity. The obsequies continued tenne dayes with songs of plaints and lamentations, and the Priests carried away the dead with so many ceremonies, and in so great number, as they could scarce accompt them. To the Captaines and Noblemen they gaue trophees and markes of honour, according to their enterprises and valor imployed in the wars and gouernments; for this effect they had armes and particular blazons. They carried these markes or blazons to the place where he desired to be buried or burnt, marching before the body, and accompanying it, as it were in procession, where the Priests and officers of the Temple went with diuers furnitures and ornaments, some casting incense, others singing, and some sounding of mournfull Flutes and Drums, which did much increase the sorrow of his kinsfolkes and subiects. The Priest who did the office was decked with the markes of the Idoll which the Nobleman had represented; for *all Noblemen did represent Idols, and carried the name of some one*; and for this occasion they were esteemed and honoured. The order of *Knighthood* did commonly carry these foresaid markes. He that should be burnt, being brought to the place appointed, they inuironed him with wood of Pine trees, and all his baggage, then set they fire vnto it, increasing it still with goomie wood, vntill that all were conuerted into ashes, then came there forth a Priest attired like a Deuil, hauing mouthes vpon euery ioynt of him, and many eyes of glasse, holding a great staffe, with the which he did mingle all the ashes very boldly, and with so terrible a gesture, as he terrified all the assistants. Sometimes this Minister had other different habits, according to the quality of the dead.

The fourth & last kinde of Idolatry the *Indians* vsed, especially the *Mexicans* to Images and Idols. *Chap. 9.* Images the fourth kinde of *Indian* Idolatry.

There hath beene great curiosity at the *Indies* in making of Idols and Pictures of diuers formes and matters, which they worshipped for Gods, and in *Peru* they called them *Guacas*, being commonly of foule and deformed beasts, at the least, such as I haue seene, were so. I beleeue verily that the Deuill, in whose honour they made these Idols, was pleased to cause himselfe to be worshipped in these deformities, and in truth it was found so, that the Deuill spake and answered many of these *Guacas* or Idols, and his Priests and Ministers came to these Oracles of the father of lies, and such as he is, such were his Counsels and Prophesies. In the Prouinces of New *Spaine, Mexico, Tescuco, Tlascalla, Cholula*, and in the neighbour Countries to this Realme, this kinde of Idolatry hath beene more practised than in any other Realme of the world. And it is a prodigious thing to heare the superstitions rehearsed that they haue vsed in that point, of the which it shall not be vnpleasant to speake something. The chiefest Idoll of *Mexico* was, as I haue said *Vitziliputzli*. It was an image of wood like to a man, set vpon a stoole of the color of azure, in a brankard or litter, at euery corner was a piece of wood in forme of a Serpents head. The stoole signified that he was set in heauen: this Idoll had all the forehead Azure, and had a band of Azure vnder the nose from one eare to another: vpon his head he had a rich plume of Feathers, like to the beake of a small Bird, the which was couered on the top with Gold burnished very browne: he had in his left hand a white Target, with the figures of fiue pine Apples, made of white Feathers, set in a crosse: and from aboue issued forth a creast of gold, and at his sides he had foure darts, which (the *Mexicans* say) had beene sent from heauen to doe those acts and prowesses which shall be spoken of: In his right hand he had an Azured staffe, cut in fashion of a wauing snake. All these ornaments with the rest he had, carried this sence as the *Mexicans* doe shew *the name of* Vitziliputzli *signifies the left hand of a shining Feather.*

I will speake hereafter of the proud Temple, the Sacrifices, Feasts and Ceremonies of this great Idoll, being very notable things. But at this present we will onely shew, that this Idoll thus richly apparelled and deckt, was set vpon an high Altar, in a small peece or boxe, well couered with linnen cloathes, Iewels, Feathers, and ornaments of Gold, with many rundles of Feathers, the faireſt and most exquisite that could be found: he had alwaies a curtaine before him for the greater veneration. Ioyning to the chamber or chappell of this Idoll, there was a peece of lesse worke, and not so well beautified, where there was another Idoll they called *Tlaloc*. These two Idols were alwaies together, for that they held them as companions, and of equall power. There was another Idoll in *Mexico* much esteemed, which was the *god of repentance*, and of *Iubilies and pardons* for their sinnes. They called this Idoll *Tezcallipuca*, he was made of a blacke shining stone like to *Iayet*, being attired with some Gentile deuises after their manner; it had earerings of gold and siluer, and through the nether lip a small canon of Christall, in length halfe a foote: in the which they sometimes put a greene feather, and sometimes an azured, which made it resemble sometimes an Emerald, and sometimes a Turquois: it had the haire broided and bound vp with a haire-lace of gold burnished, at the end whereof did hang an eare of gold, with two firebrands of smoake painted therein, which did signifie the praiers of the afflicted and sinners that he heard, when they recommended themselues vnto him. Betwixt the two eares hanged a number of small herons. He had a Iewell hanging at his necke, so great that it couered all his stomacke: vpon his armes bracelets of Gold; at his nauill a rich greene stone: and in his left hand a

The Deuils Pænitentiary.

Fanne

Digitized by Google

Fanne of precious Feathers, of Greene, Azure, and Yellow, which came forth of a Looking-glasse of Gold, shining and well burnished, and that signified, that within this Looking-glasse he saw whatsoeuer was done in the world. They called this Glasse or Chaston of gold *Irlacheaya* which signifies his Glasse for to looke in. In his right hand he held foure darts, which signified the chastisement he gaue to the wicked for their sinnes. And therefore they feared this Idoll most, least he should discouer their faults and offences. At his feast they had pardon of their sinnes, which was made euery foure yeares, as shall be declared hereafter. They held this Idoll *Tescatlipuca* for the *god of drought, of famine, barrennesse and pestilence*: And therefore they painted him in another forme, being set in great maiesty vpon a stoole compassed in with a red Curtin, painted and wrought with the heads and bones of dead men. In the left hand it had a Target with fiue Pines, like vnto pine Apples of Cotton: and in the right a little dart with a threatning countenance, and the arme stretcht out, as if he would cast it; and from the Target came foure darts. It had the countenance of an angry man, and in choller, the body all painted blacke, and the head full of Quailes feathers. They vsed great superstition to this Idoll, for the feare they had of it. In *Cholula* which is a Commonwealth of *Mexico*, they worshipt a famous Idoll which was the *god of Marchandise*, being to this day greatly giuen to trafficke. They called it *Quetzaalcoalt*.

Their *Nemesis*.

Varro makes this difference betwixt Religion and Superstition. *Qui Deum non verentur vt patrem timebunt vt hostem.*

This Idoll was in a great place in a Temple very high: it had about it, Gold, Siluer, Iewels, very rich Feathers, and habits of diuers colours. It had the forme of a man, but the visage of a little Bird, with a red bill; and aboue a combe full of warts, hauing rankes of teeth, and the tongue hanging out. It carried vpon the head, a pointed myter of painted paper, a sithe in the hand, and many toyes of gold on the legges; with a thousand other foolish inuentions, whereof all had their significations, and they worshipt it, for that he enriched whom he pleased, as *Memnon* and *Plutus*. In truth this name which the *Choluanos* gaue to their god, was very fit, although they vnderstood it not: they called it *Quetzaalcoalt*, signifying *colour of a rich Feather*, for such is the deuill of couetousnesse. These barbarous people contented not themselues to haue gods onely, but they had goddesses also, as the Fables of Poets haue brought in, and the blinde gentility of the *Greekes* and *Romans* worshipt them. The chiefe goddesse they worshipt was called *Tozi*, which is to say, our Grandmother, who as the Histories of *Mexico* report, was daughter to the King of *Culhuacan*, who was the first they flayed by the commandement of *Vitzliputzli*, whom they sacrificed in this sort, being his sister; and then they began to flay men in their sacrifices, and to clothe the liuing with the skins of the sacrificed, hauing learned that their gods were pleased therwith: as also to pul the hearts out of them they sacrificed, which they learned of their god, who pulled out the hearts of such as he punished in *Tulla*, as shall be said in his place. One of these goddesses they worshipt had a son, who was a great hunter, whom they of *Tlascalla* afterwards tooke for a god, and those were enemies to the *Mexicans*, by whose aide the *Spaniards* won *Mexico*. The Prouince of *Tlascalla* is very fit for hunting, and the people are much giuen therunto. They therfore made a great feast vnto this Idoll, whom they painted of such a forme, as it is not now needfull to loose any time in the description thereof. The feast they made was pleasant, and in this sort: They sounded a Trumpet at the breake of day, at the sound whereof they all assembled with their Bowes, Arrows, Nets, and other instruments for hunting: then they went in procession with their Idoll, being followed by a great number of people to a high Monntaine, vpon the top whereof they had made a bower of leaues, and in the middest thereof an Altar richly deckt, where-vpon they placed the Idoll. They marched with a great bruit of Trumpets, Cornets, Flutes & Drums, and being come vnto the place, they inuironed this Mountain on all sides, putting fire to it on all parts: by meanes whereof many beasts flew forth, as Stags, Conies, Hares, Foxes, and Woolues, which went to the top flying from the fire. These hunters followed after with great cries and noise of diuers instruments, hunting them to the top before the Idoll, whither fled such a number of beasts, in so great a presse, that they leaped one vpon another, vpon the people, and vpon the Altar, wherein they tooke great delight. Then tooke they a great number of these beasts, and sacrificed them before the Idoll, as Stagges and other great beasts, pulling out their hearts, as they vse in the sacrifice of men, and with the like ceremony: which done, they tooke all their prey vpon their shoulders, and retired with their Idoll in the same manner as they came, and entered the City laden with all these things, very ioyfull, with great store of musick, Trumpets, and Drums, vntill they came to the Temple, where they placed their Idoll with great reuerence and solemnity. They presently went to prepare their venison, wherewith they made a banquet to all the people; and after dinner they made their playes, representations, and dances before the Idoll. They had a great number of other Idols, of gods and goddesses; but the chiefe were of the *Mexican* Nation, and the neighbour people as is said.

Indian Mercury.

Goddesses.

See former Chap.

They sat down to eate and drinke and rose vp to play.

AS we haue said that the Kings *Ingues* of *Peru* caused Images to be made to their likenesse, which they called their *Guacos* or brothers, causing them for to be honored like themselues: euen so the *Mexicans* haue done of their gods, which was in this sort. They tooke a captiue, such as they thought good, & afore they did sacrifice vnto him their Idols, they gaue him the name of

Of a strange manner of Idolatry practised amongst the *Mexicans*. Ch. 18

the Idoll, to whom he ſhould be ſacrificed, and apparelled him with the ſame ornaments like their Idoll, ſaying, that he did repreſent the ſame Idoll. And during the time that this repreſentation laſted, which was for a yeare in ſome Feaſts, in others ſix moneths, and in others leſſe: they reuerenced and worſhipped him in the ſame manner, as the proper Idoll; and in the meane time he did eate, drinke, and was merry. When he went through the ſtreetes, the people came forth to worſhip him, and euery one brought him an almes, with children and ſicke folkes, that he might cure them, and bleſſe them, ſuffering him to doe all things at his pleaſure, onely he was accompanied with ten or twelue men leſt he ſhould flye. And he (to the end he might be reuerenced as he paſſed) ſometimes ſounded vpon a ſmall Flute, that the people might prepare to worſhip him. The feaſt being come, and he growne fat, they killed him, opened him, and eate him, making a ſolemne ſacrifice of him. It followes that we treate of their Religion, or rather Superſtition, which they vſe in their Sacrifices, Temples, Ceremonies, and the reſt.

How the Deuil hath laboured to make himſelfe equall vnto God, and to imitate him in his Sacrifices, Religion and Sacraments. *Chap.* 11.

That which God by his wiſedome hath decreed for his honour and ſeruice, and for the good and health of man, the Deuill ſtriues to imitate and to peruert, to be honored, and to cauſe man to be damned: for as we ſee the great God hath Sacrifices, Prieſts, Sacraments, Religious Prophets, and Miniſters, dedicated to his diuine Seruice and holy ceremonies: ſo the Deuill hath his Sacrifices, Prieſts, his kindes of Sacraments, his Miniſters appointed, his ſecluded and fained holineſſe, with a thouſand ſorts of falſe Prophets.

Of the Temples that were found at the *Indies. Chap.* 12.

BEginning then with their Temples, euen as the great God would haue a houſe dedicated, where his holy name might be honoured, and that it ſhould be particularly vowed to his ſeruice; euen ſo the Deuill, by his wicked practiſes, perſwaded Infidels to build him proud Temples, and particular Oratories and Sanctuaries. In euery Prouince of *Peru*, there was one principall *Guaca*, or houſe of adoration; and beſides it, there was one Generall throughout all the Kingdome of the *Ingas*; among the which there hath beene two famous and notable, the one which they called *Pachamama*, is foure leagues from *Lima*, where at this day they ſee the ruines of a moſt auncient and great building, out of the which *Francis Pizarro* and his people drew infinite treaſure, of veſſels and pots of Gold and Siluer, which they brought when they tooke the *Ingua Atagualpa*. There are certaine memories and diſcourſes which ſay, that in this Temple the Deuill did ſpeake viſibly, and gaue anſwers by his Oracle, and that ſometimes they did ſee a ſpotted Snake: and it was a thing very common and approued at the *Indies*, that the Deuill ſpake and anſwered in theſe falſe Sanctuaries deceiuing this miſerable people. But where the Goſpell is entred, and the Croſſe of Chriſt planted, the father of lyes becomes mute, as *Plutarch* writes of his time, *Cur ceſſauerit Pithiae fundere oracula*; and *Iuſtine Martyr* treates amply of the ſilence which Chriſt impoſed to Deuils, which ſpake by Idols, as it had beene before much propheſied of in the holy Scripture. The manner which the Infidell Miniſters and Inchanters had to conſult with their gods, was as the Deuill had taught them. It was commonly in the night, they entred backward to their Idoll, and ſo went bending their bodies and head, after an vgly manner, and ſo they conſulted with him. The anſwere he made, was commonly like vnto a fearefull hiſſing, or to a gnaſhing which did terrifie them; and all that he did aduertiſe or command them, was but the way to their perdition and ruine. There are few of theſe Oracles found now, through the mercy of God, and great power of Ieſus Chriſt. There hath beene in *Peru* another Temple and Oratory, moſt eſteemed, which was in the Citie of *Cuſco*, where at this day is the Monaſtery of Saint *Dominicke*. We may ſee it hath beene a goodly and a ſtately worke, by the pauement and ſtones of the building, which remaine to this day. This Temple was like to the *Pantheon* of the *Romans*, for that it was the houſe and dwelling of *all the gods*; for the Kings *Ingas* did there behold the gods of all the Nations and Prouinces they had conquered, euery Idoll hauing his priuate place, whither they of that Prouince came to worſhip it with an exceſſiue charge of things which they brought for his ſeruice. And thereby they ſuppoſed to keepe ſafely in obedience, thoſe Prouinces which they had conquered, holding their gods, as it were in hoſtage. In this ſame houſe was the *Pinchao*, which was an *Idoll of the Sunne*, of moſt fine Gold, wrought with great riches of Stones; the which was placed to the Eaſt, with ſo great Art, as the Sunne at his riſing did caſt his beames thereon: and as it was of moſt fine mettall, his beames did reflect with ſuch a brightneſſe, that it ſeemed another Sunne. The *Ingas* did worſhip this for their god, and the *Pachayachu*, which ſignifies the *Creator of Heauen*. They ſay, that at the ſpoile of this ſo rich a Temple, a Souldier had for his part this goodly plate of gold of the Sunne. And as play was then in requeſt, he loſt it all in one night at play, whence came the prouerbe they haue in *Peru* for great gameſters, ſaying, that *they play the Sunne before it riſeth.*

Flu. lib. de tract. Iuſt. in apol. pro chriſt.

Of the proud Temples at *Mexico. Cha.* 13.

THe Superſtitions of the *Mexicans*, haue without compariſon beene greater then the reſt, as well in their ceremonies, as in the greatneſſe of their Temples, the which in old time the *Spaniards* called by this word *Cu*, which word might by taken from the Ilanders of Saint *Dominique*, or of *Cuba*, as many other words that are in vſe, the which are neither from *Spaine*,

Digitized by Google

nor from any other language now vsuall among the *Indians*, as is *Mays*, *Chico*, *Vaquiano*, *Chapeton*, and other like. There was in *Mexico*, this *Cu*, the famous Temple of *Vitzliputzli*, it had a very great circuit, and within a faire Court. It was built of great stones, in fashion of Snakes tyed one to another, and the circuit was called *Coatepantli*, which is, a circuit of Snakes: vpon the top of euery Chamber and Oratorie where the Idols were, was a fine Pillar wrought with small stones, blacke as jeat, set in goodly order, the ground rayſed vp with white and red, which below gaue a great light. Vpon the top of the Pillar were battlements very artificially made, wrought like Snailes, supported by two *Indians* of stone, sitting, holding Candle-sticks in their hands, the which were like Croisants garnished and enriched at the ends, with yellow and greene feathers and long fringes of the same. Within the circuit of this Court, there were many Chambers of religious men, and others that were appointed for the seruice of the Priests and *Popes*, for so they call the soueraigne Priests which serue the Idoll. This Court is so great and spacious, as eight or ten thousand persons did dance easily in round, holding hands, the which was an vsuall custome in that Realme, although it seeme to many incredible. *Mexican Popes.*

There were foure Gates or Entries, at the East, West, North, and South; at euery one of these Gates began a faire Cawsey of two or three leagues long. There was in the midst of the Lake where the Citie of *Mexico* is built, foure large Cawseys in crosse, which did much beautifie it; vpon euery Portall or Entrie, was a God or Idoll, hauing the visage turned to the Cawsey, right against the Temple gate of *Vitzliputzli*. These were thirtie steps of thirtie fathome long, and they diuided from the circuit of the Court by a street that went betwixt them; vpon the top of these steps there was a walke of thirtie foot broad, all playstered with chalke, in the midst of which walke was a Pallisado artificially made of very high Trees, planted in order a fathome one from another. These Trees were very bigge, and all pierced with small holes from the foote to the top, and there were rods did run from one Tree to another, to the which were chayned or tyed many dead mens heads. Vpon euery rod were twentie Sculls, and these rankes of Sculls continue from the foot to the top of the Tree. This Pallisado was full of dead mens Sculls from one end to the other, the which was a wonderfull mournfull sight and full of horror. These were the heads of such as had beene sacrificed; for after they were dead, and had eaten the flesh, the head was deliuered to the Ministers of the Temple, which tyed them in this sort vntill they fell off by morsels; and then had they a care to set others in their places. Vpon the top of the Temple were two Stones or Chappels, and in them were the two Idols, which I haue spoken of, *Vitzliputzli*, and his companion *Tlaloc*. These Chappels were caued and graued very artificially, and so high, that to ascend vp to it, there was a staire of stone of fiftie score steps. Before these Chambers or Chappels, there was a Court of forty foot square, in the midst whereof, was a high stone of fiue hand breadth, pointed in fashion of a Pyramide; it was placed there for the sacrificing of men; for being laid on their backs, it made their bodies to bend, and so they did open them and pull out their hearts, as I shall shew hereafter. There were in the Citie of *Mexico*, eight or nine other Temples, the which were ioyned one to another within one great circuit, and had their priuate Stayres, their Courts, their Chambers, and their Dortoires. The entries of some were to the East, some to the West, others to the South, and some to the North. All these Temples were curiously wrought, and compassed in with diuers sorts of Battlements and Pictures, with many figures of stones; being accompanyed and fortified with great and large Spurres or Plat-formes. They were dedicated to diuers gods: but next to the Temple of *Vitzliputzli*, was that of *Tezcatlipuca*, which was the god of Penance and of Punishments, very high and well built.

There were fourscore steps to ascend on the top was a Flat or Table of fourscore foot broad, and ioyning vnto it was a Hall hanged with Tapistrie and Curtins of diuers colours and workes. The Doore thereof being low and large, was alwayes couered with a vaile, and none but the Priests might enter in. All this Temple was beautified with diuers Images and Pictures most curiously; for that these two Temples were as the *Cathedrall Churches*; and the rest in respect of them as *Parishes* and *Hermitages*: they were so spacious, and had so many Chambers, that there were in them places for the Ministerie, Colleges, Schooles, and Houses for Priests, whereof wee will intreat hereafter.

The Deuil counterfaiting the vse of the Church of God, hath placed in the order of his Priests, some greater or superiors, and some lesse, the one as *Acolites*, the other as *Leuites*, and that which hath made me most to wonder, was, that the Deuill would vsurpe to himselfe the seruice of God; yea, and vse the same name: for the *Mexicans* in their ancient tongue called their high Priests *Papas*, as they should say *Soueraigne Bishops*, as it appeares now by their Histories. The Priests of *Vitzliputzli* succeeded by Linages of certaine quarters of the Citie, deputed for that purpose, and those of other Idols came by election, or being offered to the Temple in their infancie. The daily exercise of the Priests was to cast Incense on the Idols, which was done foure times in the space of a naturall day. The first at breake of day, the second at noone, the third at Sunne setting, and the fourth at mid-night. At mid-night all the chiefe officers of the Temple did rise, and in stead of Bells, they sounded a long time vpon Trumpets, Cornets, and Flutes very

Of the Priests and their offices *Ch.* 14. The Deuill had his Popes or Vicars at *Mexico* for the new World, as at *Rome* for the old, and now for both. Mid-night Matins.

very heauily, which being ended, he that did the office that weeke, stept forth, attyred in a white Robe after the *Dalmatike* manner, with a Censor in his hand full of coales, which hee tooke from the harth burning continually before the Altar; in the other hand he had a Purse full of Incense, which he cast into the Censor, and as he entred the place where the Idoll was, he incensed it with great reuerence, then tooke he a cloth, with the which he wiped the Altar and the Curtins. This done, they went all into a Chappell, and there did a certaine kinde of rigorous and austere penance, beating themselues, and drawing of bloud, as I shall shew in the Treatise of Penance, which the Deuill hath taught to his Creatures; and hereof they neuer fayled at these Mattins at mid-night. None other but the Priests might entermeddle with their sacrifices, and euery one did imploy himselfe according to his dignitie and degree. They did likewise *preach* to the people at some feasts, as I will shew when wee treat thereof. They had Reuenues, and great Offerings were made vnto them. I will speake hereafter of their Vnction in consecrating their Priests. In *Peru* the Priests were entertayned of the Reuenues and Inheritance of their god, which they called *Chacaras*, which were many, and also very rich.

Of the Monasterie of Virgins which the Deuill hath inuented for his seruice. *Chap.* 15.

There were in *Peru* many Monasteries of Virgins (for there are no other admitted) at the least one in euery Prouince. In these Monasteries there were two sorts of women, one ancient, which they called *Mamacomas*, for the instruction of the young; and the other was of young Maidens, placed there for a certaine time, and after they were drawne forth, either for their gods or for the *Ingua*. They called this House or Monasterie *Aclaguagi*, which is to say, the *House of the Chosen*. Euery Monasterie had his Vicar or Gouernour called *Appopanaca*, who had libertie and power to choose whom he pleased, of what qualitie soeuer, being vnder eight yeeres of age, if they seemed to be of a good stature and constitution.

Vestall Virgins, or Nunns of *Peru*.

These Virgins thus shut vp into these Monasteries, were instructed by the *Momacomas*, in diuers things needfull for the life of man, and in the customes and ceremonies of their gods; and afterwards they tooke them from thence, being aboue fourteene, sending them to the Court with sure guards, whereof some were appointed to serue the *Guacas* and Sanctuaries, keeping their Virginities for euer: some others were for the ordinarie sacrifices that were made of Maidens, and other extraordinarie sacrifices, they made for the health, death, or warres of the *Ingua*; and the rest serued for Wiues and Concubines to the *Ingua*, and vnto other his Kinsfolks and Captains, vnto whom hee gaue them, which was a great and honorable recompence: This distribution was vsed euery yeere. These Monasteries possessed Rents and Reuenues for the maintenance of these Virgins, which were in great numbers. It was not lawfull for any father to refuse his daughters when the *Appopanaca* required them for the seruice of these Monasteries. Yea, many fathers did willingly offer their daughters, supposing it was a great merit to be sacrificed for the *Ingua*. If any of these *Momacomas* or *Aclas* were found to haue trespassed against their honor, it was an inuitable chastisement to burie them aliue, or to put them to death by some other kind of cruell torment.

The Deuill hath euen in *Mexico* had some kinde of religious women, although their possession was but for one yeere; and it was in this sort: Within this great circuit whereof wee haue spoken, which was in the principall Temple, there were two Houses like *Cloysters*, the one opposite to the other, one of Men, the other of Women: In that of women, they were Virgins onely, of twelue or thirteene yeeres of age, which they called the *Maides of Penance*. They were as many as the men, and liued chastely and regularly, as Virgins dedicated to the seruice of their god. Their charge was, to sweep and make cleane the Temple, and euery morning to prepare meat for the Idoll and his Ministers, of the *Almes* the religious gathered. The foode they prepared for the Idoll were small loaues in the forme of hands and feet, as of March-pane: and with this bread they prepared certaine sawces which they cast daily before the Idoll, and his Priests did eate it, as those of *Baal*, that *Daniel* speaketh of. These Virgins had their haire cut, and then they let them grow for a certaine time: they rose at mid-night to the Idolls Mattins, which they daily celebrated, performing the same exercises the Religious did. They and their Abbesses who imployed them to make cloth of diuers fashions for the ornament of their Idolls and Temples. Their ordinarie habit was all white, without any worke or colour. They did their penance at mid-night, sacrificing and wounding themselues, and piercing the top of their eares, they laid the bloud which issued forth vpon their cheekes: and after (to wash off the bloud) they bathed themselues in a Poole which was within their Monasterie. They liued very honestly and discreetly; and if any were found to haue offended, although but lightly, presently they were put to death without remission, saying, she had polluted the House of their god. They held it for an augure and aduertisement, that some one of the Religious, Man or Woman, had committed a fault, when they saw a Rat or a Mowse passe, or a Bat in the Chappell of their Idoll, or that they had gnawed any of the vailes, for that they say, a Rat or a Bat would not aduenture to commit such an indignitie, if some offence had not gone before, and then they began to make search of the fact, and hauing discouered the Offendor or Offendors, of what qualitie soeuer, they presently put them to death.

Dan. 14.

None were receiued into this Monasterie, but the daughters of one of the fiue quarters, named for

for that purpose: and this profession continued, as I haue said, the space of one whole yeere: during the which time, their fathers, and they themselues had made a vow to serue the Idoll in this manner, and from thence they went to be married.

I doe not know that in *Peru* there is any proper houses for men, but for the Priests and Sorcerers, whereof there is an infinite number. But it seemeth, that in *Mexico* the Deuill hath set a due obseruation: for within the circuit of the great Temple there were two Monasteries, as before hath beene said, one of Virgins, whereof I haue spoken, the other of young men secluded of eighteen or twentie yeeres of age, which they called religious. They weare shaued crownes, as the Friars in these parts, their haire a little longer, which fell to the middest of their eare, except the hinder part of the head, which they let grow the breadth of foure fingers down to their shoulders, and which they tyed vp in tresses. These young men that serued in the Temple of *Vitzliputzli* liued poore and chastly, and did the Office of Leuites, ministring to the Priests and chiefe of the Temple, their Incense, Lights, & garments; they swept and made cleane the holy places, bringing Wood for a continuall fire to the harth of their god, which was like a lampe that still burnt before the Altar of their Idoll. Besides these young men, there were other little boyes, as novices, that serued for manuall vses, as to deck the Temple with boughs, roses, & reeds, giue the Priests water to wash with, giue them their rasors to sacrifice, and goe with such as begged almes to carry it. All these had their superiors, who had the gouernment ouer them, they liued so honestly, as when they came in publike, where there were any women, they carried their heads very low, with their eyes to the ground, not daring to behold them: they had linnen garments, and it was lawfull for them to goe into the Citie foure or sixe together, to aske Almes in all quarters: and when they gaue them none, it was lawfull to goe into the Corne fields, and gather the eares of Corne, or clusters of Mays, which they most needed, the Master not daring to speake, nor hinder them. They had this libertie, because they liued poorely, and had no other reuenues, but Almes. There might not be aboue fiftie liue in penance, rising at midnight to sound the Cornets and Trumpets to awake the people. Euery one watched the Idoll in his turne, lest the fire before the Altar should die: they gaue the Censor, with the which the Priest at midnight incensed the Idoll, and also in the morning, at noone, & at night. They were very subiect and obedient to their superiors, and passed not any one point that was commaunded them. And at midnight after the Priest had ended his censing, they retired themselues into a secret place, apart, sacrificing, and drawing blood from the calues of their legs with sharpe bodkins: with this bloud they rubbed their temples, and vndes their eares: and this sacrifice finished, they presently washt themselues in a little poole appointed to that end. These young men did not annoint their heads and bodies with any *Petum*, as the Priests did: their garments were of course white linnen cloth they doe make there. These exercises and strict vse of penance continued a whole yeere, during which time they liued with great austeritie and solitarinesse.

Of the Monasteries of religious men, that the Deuill hath inuented for superstition. *Ch. p. 16.*

Indian shauen Friars, & their show of sanctitie, with pouertie, chastity, &c.

It hath beene said that the Priests and religious of *Mexico*, rose at midnight, and hauing cast Incense before the Idoll, they retired themselues into a large place, where there were many Lighs; and sitting downe, euery one tooke a point of *Mangues*, which is like vnto an awle or sharpe bodkin, with the which, or with some other kindes of Launcets or Rasors, they pierced the calfes of their legs neere to the bone, drawing forth much blood, with the which they anointed their temples, and dipt these bodkins or lancets in the rest of the bloud, then set they them vpon the batelements of the Court, sticke in gloabes or bowles of straw, that all might see and know the penance they did for the people: they doe wash off the bloud in a lake appointed for that purpose, which they call *Exapangue*, which is to say, water of bloud.

Of Penance, & the strictnesse the *Indians* haue vsed at the Deuils perswasion. *Ch. 17.*

There were in the Temple a great number of bodkins or lancets, for that they might not vse one twice. Moreouer, these Priests and Religious men, vsed great Fastings, of fiue or ten dayes together, before any of their great Feasts, and they were vnto them as our foure Ember weekes: they were so strict in continence, that some of them (not to fall into any sensualitie) slit their members in the midst, and did a thousand things to make themselues vnable, lest they should offend their gods. They drunke no Wine, and slept little, for that the greatest part of their exercises were by night; committing great cruelties and martyring themselues for the Deuill, and all to bee reputed great fasters and penitents. They did vse to discipline themselues with cords full of knots, and not they onely, but the people also vsed this punishment and whipping, in the procession and feast they made to the Idoll *Tezcalipuca*, the which (as I haue said before) is the god of penance; for then they all carried in their hands new cordes of the threed of *Mangues*, a fadome long, with a knot at the end, and wherewith they whipped themselues, giuing great lashes ouer their shoulders. The Priests did fast fiue dayes before this Feast, eating but once a day, and they liued apart from their wiues, not going out of the Temple during those fiue dayes, they did whip themselues rigorously in the manner aforesaid.

Their seuere Fasts.

Monsters of Wil-worship.

In *Peru* to solemnize the feast of the *Ina*, which was great, all the people fasted two dayes; during the which, they did not accompanie with their Wiues, neither did they eate any meate with Salt or Garleeke, nor drinke *Chica*. They did much vse this kinde of fasting for some sins, and did penance, whipping themselues with sharpe stinging Nettles, and often they strooke them-

themselues ouer the shoulders with certayne stones. This blind Nation, by the perswasion of the Deuill, did transport themselues into craggie Mountaynes, where sometimes they sacrificed themselues, casting themselues downe from some high Rocke.

Of the Sacrifices the *Indians* made to the Deuill, & whereof. *Chap.* 18.

Wee may draw all the Sacrifices the Infidels vse into three kindes, one of insensible things; another of beasts, and the third of men. They did vse in *Peru* to sacrifice *Coca*, which is an hearbe they esteeme much, of *Mays*, which is their Wheate, of coloured feathers, and of *Chaquira*, which otherwise they call *Mollo*, of shels or Oysters, and sometime Gold and Siluer, being in figures of little beasts. Also of the fine stuffe of *Cumbi*, of carued and sweet wood, and most commonly Tallow burnt. They made these Offerings or Sacrifices for a prosperous winde, and faire weather, or for their health, and to be deliuered from some dangers and mishaps. Of the second kind, their ordinary Sacrifice was of *Cuyes*, which are small beasts like Rabbets, the which the *Indians* eate commonly. And in matters of importance, or when they were rich men, they did offer *Pacos*, or *Indian* sheepe, bare, or with Wooll, obseruing curiously the numbers, colours, and times. The manner of killing their Sacrifices, great or small, which the *Indians* did vse according to their ancient Ceremonies, is the same the *Moores* vse at this day, the which they call *Alquible*, hanging the beast by the right fore-legge, turning his eyes towards the Sunne, speaking certayne words, according to the qualitie of the Sacrifice they slue: for if it were of colour, their words were directed to *Chuquilla*, and to the Thunder, that they might want no water: if it were white and smoothe, they did offer it to the Sunne with certaine words: if it had a fleece, they did likewise offer it him with some others, that he might shine vpon them, and fauour their generation: If it were a *Guanaco*, which is gray, they directed their sacrifice to *Viracocha*. In *Cusco* they did euery yeere kill and sacrifice with this Ceremony, a shorne sheepe to the Sunne, and did burne it, clad in a red Waste-coate, and when they did burne it, they cast certayne small baskets of *Coca* into the fire, which they call *Vilcanuca*; for which Sacrifice, they haue both men and beasts appointed which serue to no other vse. They did likewise sacrifice small Birds, although it were not so vsuall in *Peru* as in *Mexico*, where the sacrificing of Quailes was very ordinary. Those of *Peru* did sacrifice the Birds of *Puna*, (for so they call the Desart when they should goe to the Warres, for to weaken the forces of their aduersaries *Guacas*.) They called these Sacrifices *Cuyuyucca*, or *Cuyuyuca*, or *Hualluca*, or *Sophauicca*, and they did it in this manner: they tooke many kinds of small Birds of the Desart, and gathered a great deale of a thorny wood, which they call *Taulis*, the which beeing kindled, they gathered together these small Birds. This assembly they called *Quico*, then did they cast them into the fire, about the which the Officers of the Sacrifice went with certayne round stones carued, whereon were painted many Snakes, Lions, Toades, and Tygres, vttering this word *Vsachum*, which signifies, *Let the victorie be giuen vnto vs*, with other words, whereby they layd the forces of their enemies *Guacas* were confounded. And they drew forth certayne blacke sheepe, which had beene kept close some dayes without meate, the which they called *Vrac*, and in killing them they spake these words; As the hearts of these beasts bee weakened, so let our enemies be weakned. And if they found in these sheepe that a certayne piece of flesh behind the hear were not consumed by fasting and close keeping, they then held it for an ill Augure. They brought certayne blacke Dogges, which they call *Appuros*, and slue them, casting them into a Playne, with certayne Ceremonies, causing some kinde of men to eate this flesh, the which Sacrifices they did, lest the *Ingua* should bee hurt by poyson: and for this cause they fasted from morning vntill the starres were vp, and then they did glut and defile themselues like to the *Moores*. This Sacrifice was most fit for them to withstand their enemies Gods: and although at this day a great part of these customes haue ceased, the warres being ended, yet remayne there some Reliques, by reason of the priuate or generall quarrels of the *Indians*, or the *Caciques*, or in their Cities. They did likewise offer and sacrifice shels of the Sea, which they call *Mollo*, and they offered them to the Fountaynes and Springs, saying, that these shels were daughters of the Sea, the mother of all waters. They gaue vnto these shels sundry names, according to the colour, and also they vse them to diuers ends. They vsed them in a manner in all kinde of Sacrifices, and yet to this day they put *beaten shels* in their *Chica*, for a superstition. Finally, they thought it conuenient to offer Sacrifices of euery thing they did sow or raise vp. There were *Indians* appointed to doe these Sacrifices to the Fountayne, Springs, and Riuers which passed through the Townes, or by the their *Chacras*, which are their Farmes, which they did after Seed time, that they might not cease running, but alwayes water their grounds. The Sorcerers did conjure, to know what time the Sacrifices should be made, which beeing ended, they did gather of the contribution of the people, what should be sacrificed, and deliuered them to such as had the charge of these Sacrifices. They made them in the beginning of Winter, at such time as the Fountaynes, Springs, and Riuers, did increase by the moysture of the weather, which they did attribute to their Sacrifices. They did not sacrifice to the Fountaynes and Springs of the Desarts. To this day continues the respect they had to Fountaynes, Springs, Pooles, Brookes, or Riuers, which passe by their Cities or *Chacras*, euen vnto the Fountaynes and Riuers of the Desarts. They haue a speciall regard and reuerence to the meeting of two Riuers, and there they

Shel-offerings.

they wash themselues for their health, annoynting themselues first with the flower of *Mays*, or some other things, adding thereunto diuers Ceremonies, the which they doe likewise in their Bathes.

THe most pitifull disaster of this poore people, is their slauery vnto the Deuill, sacrificing men vnto him, which are the Images of God. In many Nations they had vsed to kill (to accompany the dead, as hath beene declared) such persons as had beene agreeable vnto him, and whom they imagined might best serue him in the other World. Besides this, they vsed in *Peru*, to sacrifice young children of foure or sixe yeeres olde vnto ten: and the greatest part of these Sacrifices were for the affaires that did import the *Ingua*, as in sickneſſe for his health: and when he went to the warres for victory, or when they gaue the wreathe to their new *Ingua*, which is the mark of a King, as here *the Scepter and the Crowne be*. In this Solemnitie they sacrificed the number of two hundred children, from foure to ten yeeres of age, which was a cruell and inhumane spectacle. The manner of the Sacrifice was to drowne them and bury them with certayne representations and ceremonies: sometimes they cut off their heads annoynting themselues with the bloud from one eare to another.

Of the Sacrifices they made of men. *Cha.* 19.

Two hundred children sacrificed.

They did likewise sacrifice Virgins, some of them that were brought to the *Ingua* from the Monasteries, as hath beene said. In this case there was a very great and generall abuse: If any *Indian* qualified, or of the common sort, were sicke, and that the Diuine told him confidently that he should dye, they did then sacrifice his *owne sonne* to the Sunne, or to *Viracocha*, desiring them to be satisfied with him, and that they would not deprive the father of life. This crueltie is like to that the holy Scripture speaks of, which the King of *Moab* vsed in sacrificing his first-born Sonne vpon the wall, in the sight of all *Israel*; to whom this act seemed so mournfull, as they would not presse him any further, but returned to their houses.

Parricide.

ALthough they of *Peru* haue surpassed the *Mexicans* in the slaughter and Sacrifice of their Children (for I haue not read nor vnderstood that the *Mexicans* vsed any such Sacrifices) yet they of *Mexico* haue exceeded them, yea all the Nations of the World, in the great number of men which they had sacrificed, and in the horrible manner thereof. And to the end wee may see the great misery wherein the Deuill holds this blind Nation, I will relate particularly the custome and inhumane manner which they haue obserued: First the men they did sacrifice were taken in the warres, neyther did they vse these solemne Sacrifices but of Captiues: so as it seemes therein they haue followed the custome of the Ancients. For as some Authors say, they called the Sacrifice *Victima*, for this reason, because it was of a conquered thing: they also called it *Hostia quasi ab hoste*, for that it was an Offering made of their enemies, although they haue applyed this word to all kinds of Sacrifices. In truth the *Mexicans* did not sacrifice any to their Idols, but Captiues, and the ordinary warres they made, was onely to haue Captiues for their Sacrifices: and therefore when they did fight, they laboured to take their enemies aliue, and not to kill them, to enjoy their Sacrifices. And this was the reason which *Moteguma* gaue to the *Marquise du Val*, when he asked of him, why being so mightie, and hauing conquered so many Kingdomes, he had not subdued the Prouince of *Tlascalla*, which was so neere? *Moteçuma* answered him, that for two reasons he had not conquered that Prouince, although it had bin easie, if he would haue vndertaken it: the one was for the exercise of the youth of *Mexico*, lest they should fall into idlenesse and delight: the other and the chiefe cause why hee had reserued this Prouince, was, to haue Captiues for the Sacrifices of their Gods. The manner they vsed in these Sacrifices, was, they assembled within the Palisadoe of dead mens Sculles (as hath beene said) such as should be sacrificed, vsing a certayne Ceremony at the foot of the Palisadoe, placing a great guard about them. Presently there stept forth a Priest, attyred with a short Surplice full of tassels beneath, who came from the top of the Temple with an Idoll made of Paste of Wheate and Mays mingled with Honey, which had the eyes made of the graines of greene glasse, and the teeth of the graines of Mayz; he descended the steps of the Temple with all the speed he could, and mounted on a great stone planted vpon a high Terrasse in the midst of the Court. This stone was called *Quauxicalli*, which is to say, *the stone of Eagle*, whereon he mounted by a little Ladder, which was in the fore-part of the Terrasse, and descended by another staire on the other side, still imbracing his Idoll. Then did he mount to the place where those were that should be sacrificed, shewing this Idoll to euery one in particular, saying vnto them; *this is your God*. And hauing ended his shew, he descended by the other side of the staires, and all such as should dye, went in procession vnto the place where they should bee sacrificed, where they found the Ministers ready for that Office. The ordinary manner of sacrificing was, to open the stomake of him that was sacrificed, and hauing pulled out his heart halfe aliue, they tumbled the man downe the staires of the Temple, which were all imbrewed and defiled with bloud: And to make it the more plaine, sixe Sacrificers being appointed to this dignitie, came into the place of Sacrifice, foure to hold the hands and feet of him that should be sacrificed, the fift to hold his head, and the sixt to open his stomake, and to pull out the heart of the sacrificed. They called them *Cha-*

Bloudie Rites.

chals

chalmua, which in our Tongue is as much, *as the Miniſters of holy things*. It was a high dignitie, and much eſteemed amongſt them, wherein they did inherit and ſucceed as in a Fee-ſimple. The Miniſter who had the Office to kill, which was the ſixt amongſt them, was eſteemed and honoured as the *Souereigne Prieſt and Biſhop*, whoſe name was different, according to the difference of times and Solemnities. Their habits were likewiſe diuers when they came forth to the Sacrifice, according to the diuerſitie of times. The name of their chiefe dignitie was *Papa* and *Topilzin*, their Habite and Robe was a red Curtayne after the *Dalmatike* faſhion, with taſſels below, a Crowne of rich Feathers, greene, white, and yellow vpon his head, and at his eares like pendants of Gold, wherein were ſet greene ſtones, and vnder the lip vpon the middeſt of the beard he had a Peece like vnto a ſmall Canon of an azured ſtone. Theſe Sacrificers came with their faces and hands coloured with a ſhining blacke. The other fiue had their haire much curled, and tyed vp with Laces of Leather, bound about the middeſt of the head: vpon their forehead they carried ſmall Roundelets of Paper painted with diuers colours, and they were attyred in a *Dalmatike* Robe of white, wrought with blacke. With this attyre they repreſented the very figure of the Deuill, ſo as it did ſtrike feare and terrour into all the people, to ſee them come forth with ſo horrible a repreſentation. The Souereigne Prieſt carried a great Knife in his hand, of a large and ſharpe flint: another Prieſt carried a coller of wood wrought in forme of a Snake: All ſix put themſelues in order, ioyning to this Pyramidall ſtone, wherof I haue ſpoken, being directly againſt the doore of the Chappell of their Idoll. This ſtone was ſo pointed, as the man which was to be ſacrificed, being laid thereon, vpon his backe, did bend in ſuch ſort, as letting the Knife but fall vpon his ſtomack it opened very eaſily in the middeſt. When the Sacrificers were thus in order, they drew forth ſuch as had beene taken in warre, which were to bee ſacrificed at that Feaſt, and being accompanied with a guard of men all naked, they cauſed them to mount vp theſe large ſtaires in ranke, to the place where the Miniſters were prepared: and as euery one of them came in their order, the ſix Sacrificers tooke the Priſoner, one by one foote, another by the other, and one by one hand, another by the other, caſting on his backe vpon this pointed ſtone, where the fift of theſe Miniſters put the coller of wood about his necke, and the High Prieſt opened his ſtomack with the Knife, with a ſtrange dexteritie and nimbleneſſe, pulling out his heart with his hands, the which hee ſhewed ſmoking vnto the Sunne, to whom hee did offer this heate and fume of the heart, and preſently he turned towards the Idoll and did caſt the heart at his face, then did they caſt away the body of the ſacrificed, tumbling it downe the ſtaires of the Temple, the ſtone being ſet ſo neere the ſtaires, as there were not two foote ſpace betwixt the ſtone and the firſt ſtep, ſo as with one ſpurne with their foote, they caſt the bodie from the top to the bottome. In this ſort one after one they did ſacrifice all thoſe that were appointed. Being thus ſlaine, and their bodies caſt downe, their Maſters, or ſuch as had taken them, went to take them vp, and carried them away: then hauing diuided them amongſt them, they did eate them, celebrating their Feaſt and Solemnitie. There were euer fortie or fiftie at the leaſt thus ſacrificed, for that they had men very expert in taking them. The neighbour Nations did the like, imitating the *Mexicans* in the Cuſtomes and Ceremonies of the Seruice of their Gods.

Their *Papa*.

The other fiue Prieſts.

Deuilliſh dexteritie.

Fume of the heart offered to the Sunne.

Of other kinds of Sacrifices of men which the *Mexicans* vſed. *Chap.* 22.

THere was another kind of Sacrifice which they made in diuers feaſts, which they call *Tlacaxipe Velitzli*, which is as much as *the flaying of men*. They call it ſo, for that in ſome Feaſts they tooke one or more ſlaues, as they pleaſed, and after they had flayed him, they with that skinne apparelled a man appointed to that end. This man went dancing and leaping thorow all the houſes and Market places of the Citie, euery one being forced to offer ſomething vnto him: and if any one fayled, he would ſtrike him ouer the face with a corner of the skin, defiling him with the congealed bloud. This inuention continued vntill the skinne did ſtinke; during which time, ſuch as went, gathered together much almes, which they employed in neceſſary things for the Seruice of their Gods. In many of theſe Feaſts they made a Challenge, betwixt him that did ſacrifice, and him that ſhould bee ſacrificed thus: they tyed the ſlaue by one foote to a Wheele of ſtone, giuing him a Sword and Target in his hands to defend himſelfe: then preſently ſtept forth hee that ſacrificed him, armed with another Sword and Target: if hee that ſhould bee ſacrificed defends himſelfe valiantly againſt the other, and reſiſted him, hee then remayned freed from the Sacrifice, winning the name of a famous Captayne, and ſo was reputed: but if hee were vanquiſhed, they then ſacrificed him on the ſtone whereunto hee was tyed. It was another kinde of Sacrifice, when as they appointed any ſlaue to bee the repreſentation of the Idoll, ſaying that it was his Picture: They euery yeere gaue one ſlaue to the Prieſts, that they might neuer want the liuely Image of their Idoll. At his firſt entry into the Office, after he had beene well waſhed, they attyred him with all the ornaments of the Idoll, giuing him the ſame name. Hee was that whole yeere reuerenced and honoured as the Idoll it ſelfe, and had alwayes with him twelue men for his Guard, leſt hee ſhould flye, with which Guard they ſuffered him to goe freely and where he would: and if by chance he fled, the chiefe of the Guard was put in his place to repreſent the Idoll, and after to bee ſacrificed. This *Indian*

had

had the most honourable lodging in all the Temple, where hee did eate and drinke, and whither all the chiefe Ministers came to serue and honour him, carrying him meate after the manner of great Personages. When hee went through the streets of the Citie, hee was well accompanied with Noblemen, hee carried a little Flute in his hand, which sometimes hee sounded, to giue them knowledge when he passed: then presently the women came forth with their little children in their armes, which they presented vnto him, saluting him as God. All the rest of the people did the like: at night they put him in a strong Prison or Cage, lest he should flye; and when the Feast came, they sacrificed him, as hath beene said.

Incredible numbers sacrificed.

By these and many other meanes hath the Deuill abused and entertayned these poore wretches, and such was the multitude of those that had beene sacrificed by this infernall crueltie, as it seemes a matter incredible, for they affirme there were some dayes fiue thousand or more, and that there were aboue twentie thousand sacrificed in diuers places. The Deuill to entertaine this murther of men, vsed a pleasant and strange inuention, which was, when it pleased the Priests of Satan they went to their Kings, telling them how their Gods dyed for hunger, and that they should remember them. Presently they prepared themselues, and aduertised one another, that their Gods required meate, and therefore they should command their people to bee readie to goe to the Warres; and thus the people assembled, and the companies appointed went to field, where they mustred their forces; and all their quarrell and fight was to take one another for sacrifice, striuing on either side to take what Captiues they could, so as in these battels they laboured more to take, then to kill, for that all their intention was to take men aliue, to giue them to their Idols to eate, for after that manner brought they their Sacrifice vnto their Gods. And wee must vnderstand, that neuer King was crowned vntill he had subdued some Prouince, from the which he brought a great number of Captiues for the Sacrifices of their Gods, so as it was an infinite thing to see what bloud was spilt in the honour of the Deuill.

Deuill hungry for mans flesh.

MAny of these Barbarians were now wearied and tyred with such an excessiue crueltie, in shedding so much bloud, and with so tedious a Tribute, to bee alwayes troubled to get Captiues, for the feeding of their Gods, seeming vnto them a matter insupportable; yet left they not to follow and execute their rigorous Lawes, for the great awe the Ministers of these Idols kept them in, and the cunning wherewith they abused this poore people. But inwardly they desired to be freed from so heauie a yoke. And it was a great prouidence of God; that the first which gaue them knowledge of the Law of Christ, found them in this disposition: for without doubt it seemed to them a good Law, and a good God, to bee serued in this sort. Heereupon a graue religious man in *New Spaine* told me, that when he was in that Countrey he had demanded of an ancient *Indian*, a man of qualitie, for what reason the *Indians* had so soone receiued the Law of Iesus Christ, and left their owne, without making any other proofe, tryall, or dispute thereon, for it seemed they had changed their Religion, without any sufficient reason to moue them. The *Indian* answered him, *Beleeue not Father, that we haue embraced the Law of Christ so rashly as they say: for I will tell you, that we were alreadie wearie and discontented with such things as the Idols commanded vs, and were determined to leaue it, and to take another Law. But when as wee found that the Religion that you preached had no cruelties in it, and that it was fit for vs, and both iust and good, we vnderstood and beleeued that it was the true Law, and so we receiued it willingly.* Which answere of this *Indian* agrees well with that we reade in the first Discourse, that *Fernand Cortes* sent to the Emperour *Charles* the fift, wherein hee reports, that after he had conquered the Citie of *Mexico*, being in *Cuyoacan*, there came Ambassadours to him from the Prouince and Common-wealth of *Mechoacan* requiring him to send them his Law, and that hee would teach them to vnderstand it, because they intended to leaue their owne, which seemed not good vnto them, which *Cortez* granted, and at this day they are the best *Indians*, and the truest Christians that are in New *Spaine*. The *Spaniards* that saw these cruell Sacrifices, resolued with all their power to abolish so detestable and cursed a butchering of men, and the rather, for that in one night before their eyes they saw threescore or threescore and tenne *Spaniards* sacrificed, which had beene taken in a battaile giuen at the Conquest of *Mexico*: and another time they found written with a Coale in a Chamber in *Tezcusco* these wordes; *Heere such a miserable man was Prisoner with his Companions whom they of* Tezcusco *did sacrifice.*

How the *Indians* grew weary, and could not endure the crueltie of Satan, *Chap. 22.*

Spaniards sacrificed.

There happened a very strange thing vpon this subiect, and yet true, beeing reported by men worthy of credit, which was, that the *Spaniards* beholding these Sacrifices, hauing opened and drawne out the heart of the lustie young man, and cast him from the top of the stayres (as their custome was) when hee came at the bottome, hee said to the *Spaniards* in his Language, *Knights, they haue slaine mee*, the which did greatly moue our men to horrour and pitie. It is no incredible thing, that hauing his heart pulled out, hee might speake, seeing that *Galen* reports that it hath often chanced in the Sacrifice of beasts, after the heart hath beene drawne out, and cast vpon the Altar, the beasts haue breathed, yea, they did bray and cry out aloude, and sometimes did runne.

A man speakes after his heart is out.

Galen. lib. 2. de Hip. & Platon. placit. cap. 4.

In

How the Deuill hath laboured to imitate and counterfait the Sacraments of the holy Church. *Chap.* 25. *Indian* Communion.

In the first moneth, which in *Peru* they called *Raymi*, and answereth to our *December*, they made a most solemne feast, called *Capacraymi*, wherein they made many sacrifices and ceremonies, which continued many dayes: during the which, no stranger was suffered to bee at the Court which was in *Cusco*. These dayes being past, they then gaue libertie to strangers to enter, that they might be partakers of the feasts and sacrifices, ministring to them in this manner. The *Mamacona* of the Sunne, which were a kinde of Nunnes of the Sunne, made little loaues of the flower of Mays, dyed and mingled with the bloud of white Sheepe, which they did sacrifice that day; then presently they commanded that all strangers should enter, who set themselues in order, and the Priests which were of a certaine Linage, descending from *Limaiyupanqui*, gaue to euery one a morsell of these small loaues, saying vnto them, that *they gaue these pieces, to the end they should be vnited and confederate with the* Ingua, *and that they aduised them not to speake nor thinke any ill against the* Ingua, *but alwayes to beare him good affection, for that this piece should bee a witnesse of their intentions and will, and if they did not as they ought, hee would discouer them and bee against them.* They carried these small loaues, in great Platters of gold and siluer appointed for that vse, and all did receiue and eate these pieces, thanking the Sunne infinitely for so great a fauour which hee had done them, speaking wordes and making signes of great contentment and deuotion: protesting that during their liues, they would neither doe nor thinke any thing against the Sunne nor the *Ingua*: and with this condition they receiued *this foode of the Sunne*, the which should remaine in their bodies for a witnesse of their fidelitie which they obserued to the Sunne and to the *Ingua* their King. This manner of deuillish communicating they likewise vsed in the tenth moneth, called *Coyaraymi*, which was *September*; in the solemne feast which they called *Cytua*, doing the like ceremonies. And besides *this Communion* (if it be lawfull to vse this word in so deuillish a matter) which they imparted to all strangers that came, they did likewise send of these loaues to all their *Guacas*, Sanctuaries, or Idols of the whole Realme, and at one instant they found people of all sides, which came expressly to receiue them, to whom they said (in deliuering them) that *the Sunne had sent them that, in signe that hee would haue them all to worship and honor him*, and *likewise did send them in honor of the Caciques*. Some perhaps will hold this for a fable and a fiction: yet is it most true, that since the *Ingua Yupanqui* (the which is hee that hath made most Lawes, Customes, and Ceremonies, as *Numa* did in *Rome*) this manner of Communion hath continued, vntill that the Gospell of our Lord Iesus Christ thrust out all these superstitions, giuing them the right foode of life, which vnites their soules to God: who so would satisfie himselfe more amply, let him reade the Relation which the Licenciate *Polo* did write.

In what manner the Deuill hath laboured in *Mexico* to counterfait the feast of the holy Sacrament vsed in the Popish Church. *Chap.* 24.

IT is a thing more worthy admiration, to heare speake of the Feast and solemnitie of the Communion which the Deuill himselfe, the Prince of Pride, ordained in *Mexico*, the which (although it be somewhat long) yet shall it not be from the purpose to relate as it is written by men of credite. The *Mexicanes* in the moneth of May, made their principall Feast to their god *Vitziliputzli*, and two dayes before this Feast, the Virgins whereof I haue spoken (the which were shut vp and secluded in the same Temple, and were as it were *Religious women*) did mingle a quantitie of the seede of Beetes with roasted Mays, and then they did mould it with honey, making an Idoll of that paste, in bignesse like to that of wood, putting in stead of eyes, graines of greene glasse, of blue, or white; and for teeth, graines of Mays, set forth with all the ornament and furniture that I haue said. This being finished, all the Noblemen came and brought it an exquisite and rich garment, like vnto that of the Idoll, wherewith they did attyre it. Being thus clad and deckt, they did set it in an azured Chaire, and in a Litter to carry it on their shoulders. The morning of this feast being come, an houre before day, all the Maidens came forth attyred in white, with new ornaments, the which that day were called the sisters of their god *Vitziliputzli*, they came crowned with Garlands of Mays roasted and parched, being like vnto Azahar or the flower of Orange, and about their necks they had great chaines of the same, which went bauldrickwise vnder their left arme. Their cheekes were dyed with Vermillion, their armes from the elbow to the wrist, were couered with red Parrots feathers. And thus attyred, they tooke the Idoll on their shoulders, carrying it into the Court, where all the young men were, attyred in garments of an artificiall red, crowned after the same manner, like vnto the women. When as the Maidens came forth with the Idoll, the young men drew neere with much reuerence, taking the Litter wherein the Idoll was, vpon their shoulders, carrying it to the foote of the staires of the Temple, where all the people did humble themselues, laying earth vpon their heads, which was an ordinarie ceremonie which they did obserue at the chiefe feast of their gods. This ceremonie being ended, all the people went in Procession with all the diligence and speede they could, going to a Mountayne which was a league from the Citie of *Mexico*, called *Chapulteper*, and there they made sacrifices. Presently they went from thence with like diligence, to goe to a place neere vnto it, which they called *Atlacuyanaya*, where they made their second station: and from thence they went to another Burgh or Village a league beyond *Cuyoacan*, from whence they parted, returning to the Citie of *Mexico*, not making any other station. They went in this sort aboue foure leagues in three or foure houres, calling this Procession *Ypayna Vitziliputzli*.

Digitized by Google

Iputzli. Being come to the foot of the staires, they set downe the Brancard or Litter with the Idoll, tying great Cordes to the armes of the Brancard, then with great obseruance and reuerence, they did draw vp the Litter with the Idoll in it to the top of the Temple, some drawing aboue, and others helping below, in the meane time there was a great noyse of Flutes, Trumpets, Cornets, and Drummes. They did mount it in this manner, for that the stayres of the Temple were very steepe and narrow, so as they could not carry vp the Litter vpon their shoulders, while they mounted vp the Idoll, all the people stood in the Court with much reuerence and feare. Being mounted to the top, and that they had placed it in a little Lodge of Roses, which they held readie, presently came the young men, which strewed many flowers of sundrie kindes, wherewith they filled the Temple both within and without. This done, all the Virgins came out of their Couent, bringing pieces of paste compounded of Beetes, and roasted Mays, which was of the same paste whereof their Idoll was made and compounded, and they were of the fashion of great bones. They deliuered them to the young men, who carried them vp and laid them vp, and laid them at the Idols feete, wherewith they filled the whole place, that it could receiue no more. They called these morsels of paste, the flesh and bones of *Vitziliputzli.* Hauing laid abroad these bones, presently came all the Ancients of the Temple, Priests, Leuites, and all the rest of the Ministers, according to their Dignities and Antiquities, for herein there was a strict order amongst them, one after another, with their vailes of diuers colours and workes, euery one according to his Dignitie and Office, hauing Garlands vpon their heads, and Chaines of flowers about their necks: after them came their gods and goddesses whom they worshipt, of diuers figures, attyred in the same liuerie; then putting themselues in order about those morsels and pieces of paste, they vsed certaine ceremonies with singing and dancing. By meanes whereof they were blessed and consecrated for the flesh and bones of this Idoll.

This ceremonie and blessing (whereby they were taken for the flesh and bones of the Idoll) being ended, they honored those pieces in the same sort as their god. Then came forth the Sacrificers, who began the sacrifice of men, in the manner as hath beene spoken, and that day they did sacrifice a greater number then at any other time, for that it was the most solemne feast they obserued. The sacrifices being ended, all the young Men and Maides came out of the Temple attyred as before, and being placed in order and ranke one directly against another, they danced by Drummes the which sounded in praise of the Feast, and of the Idoll which they did celebrate. To which song all the most ancient and greatest noble-men did answere, dancing about them, making a great circle as their vse is, the young Men and Maides remayning alwayes in the middest. All the Citie came to this goodly spectacle, and there was a commandement very strictly obserued throughout all the Land, that the day of the feast of the Idoll *Vitziliputzli*, they should eate no other meate, but this paste with hony, whereof the Idoll was made. And this should be eaten at the point of day, and they should drinke no water nor any other thing till after noone: they held it for an ill signe, yea for sacrilege, to doe the contrarie: but after the ceremonies ended, it was lawfull for them to eate any thing. During the time of this ceremonie, they hid the water from their little children, admonishing all such as had the vse of reason, not to drinke any water; which if they did, the anger of God would come vpon them, and they should die, which they did obserue very carefully and strictly. The ceremonies, dancing, and sacrifice ended, they went to vnclothe themselues, and the Priests and Superiors of the Temple tooke the Idoll of paste, which they spoyled of all the ornaments it had, and made many pieces, as well of the Idoll it selfe as of the Tronchons which were consecrated, and then they gaue them to the Communion, beginning with the greater, and continuing vnto the rest, both Men, Women, and little Children; who receiued it with such teares, feare, and reuerence, as it was an admirable thing, saying, *that they did eate the flesh and bones of God*, wherewith they were grieued. Such as had any sicke folkes demanded thereof for them, and carried it with great reuerence and veneration.

All such as did communicate, were bound to giue the tenth of this seede, whereof the Idoll was made. The solemnitie of the Idoll being ended, an old man of great authoritie stept vp into a high place, and with a loud voice preached their Law and Ceremonies.

The Deuill liking that vnchristian, Antichristian prodigious opinion of transubstantiation, and the consequents, elcuation, adoration, reseruation, *Corpus christi* mad solemnities and idolatrous processions, with rites beyond any former paganisme, in disgrace of the true Sacrament, falsly calling this their Idoll an *vnbloudy sacrifice*, which hath cost so many thousands their bloud in fire and otherwise (the Papists at once disputing of Christs naturall body and despising and renting his mysticall body) hath found nothing fitter to transport into the *Indies*, nothing more contrarie to sense, reason, religion, humanitie, or wherein more to triumph ouer mankinde in all these, then this brutish opinion and bloudie solemnitie, here described.

Communicating.

Idol-sermon.

Of Confessors and Confession which the *Indians* vsed. *Chap. 25.*

Reserued cases as in Papall penance.

THe father of lyes would likewise counterfait the *(Romish) Sacrament of Confession*, and in his Idolatries seeke to be honored with ceremonies very like to the manner of Christians. In *Peru* they held opinion, that all diseases and aduersities came for the sinnes which they had committed: for remedie whereof they vsed sacrifices: moreouer, they confessed themselues verbally, almost in all Prouinces, and had Confessors appointed by their Superiors to that end, there were some sinnes reserued for the Superiors. They receiued penance, yea sometimes very sharply, especially when the Offendor was a poore man, and had nothing to giue his Confessor. This office of Confessor was likewise exercised by Women. The manner of these Confessors Sorcerers whom they call *Ychuiri* or *Ychuri*, hath beene most generall in the Prouinces of *Collasuio*. They hold opinion, that it is a haynous sinne to conceale any thing in confession. The *Ychuiri* or Con-

feſſors diſcouered by lots, or by the view of ſome beaſt Hides, if any thing were concealed, and puniſhed them with many blowes with a ſtone vpon the ſhoulders, vntill they had reuealed all, then after they gaue him penance, and did ſacrifice. They doe likewiſe vſe this confeſſion, when their children, wiues, husbands, or their *Caciques* be ſicke, or in any great exploit. And when their *Ingua* was ſicke, all the Prouinces confeſſed themſelues, chiefly thoſe of the Prouince of *Collao*. The Confeſſors were bound to hold their Confeſſions ſecret, but in certaine caſes limited. The ſinnes that they chiefly confeſſed, was firſt to kill one another out of warre, then to ſteale, to take another mans wife, to giue poyſon or ſorcerie to doe any harme: and they held it to be a grieuous ſinne, to be forgetfull in the reuerence of their *Guacas*, or Oratories, not to obſerue the Feaſts, or to ſpeake ill of the *Ingua*, and to diſobey him. They accuſed not themſelues of any ſecret acts and ſinnes. But according to the report of ſome Prieſts, after the Chriſtians came into that Country, they accuſed themſelues of their thoughts. The *Ingua* confeſſed himſelfe to no man, but onely to *the Sunne*, that hee might tell them to *Virachoca*, and that hee might forgiue them. After the *Ingua* had beene confeſſed, he made a certaine bath to cleanſe himſelfe in a running Riuer, ſaying theſe wordes: *I haue told my ſinnes to the Sunne, receiue them, O thou Riuer, and carry them to the Sea, where they may neuer appeare more.* Others that confeſſed, vſed likewiſe theſe baths, with certaine ceremonies very like to thoſe the *Moores* vſe at this day, which they call *Guadoy*, and the *Indians* call them *Opacuna*. When it chanced that any mans children dyed, hee was held for a great ſinner, ſaying, that it was for his ſinnes that the ſonne dyed before the father. And therefore thoſe to whom this had chanced, after they were confeſſed, were bathed in this bath called *Opacuna*, as is ſaid before. Then ſome deformed *Indian*, crooke-backt, and counterfait by nature, came to whip them with certaine Nettles. If the Sorcerers or Inchanters by their lots and diuinations, affirmed that any ſicke body ſhould die, the ſicke man makes no difficultie to kill his owne ſonne, though he had no other, hoping by that meanes to eſcape death, ſaying, *that in his place he offered his ſonne in ſacrifice.* And this crueltie hath beene practiſed in ſome places, euen ſince the Chriſtians came into that Country. In truth it is ſtrange, *that* this cuſtome of confeſſing their ſecret ſinnes, hath continued ſo long amongſt them, and to doe ſo ſtrict penances, as, *to faſt, to giue apparell, gold and ſiluer, to remaine in the Mountaynes, and to receiue many ſtripes vpon the ſhoulders.* Our men ſay, that in the Prouince of *Chiquito*, euen at this day they meet with this plague of Confeſſors or *Ychuris*, where as many ſicke perſons repaire vnto them: but now, by the grace of God, this people begins to ſee cleerly the effect and great benefit of our Confeſſion, whereunto they come with great deuotion.

Sinnes of omiſsion.

Wicked effect of deuilliſh diuinations.

Penances.

I will report the manner of a ſtrange confeſſion the Deuill hath inuented at *Iapon*, as appeares by a Letter that came from thence, which ſaith thus: There are in *Ocaca* very great and high and ſteepe Rocks, which haue pricks or points on them, aboue two hundred fathom high. Amongſt theſe Rocks there is one of theſe pikes or points ſo terribly high, that when the *Xamabuſis* (which be *Pilgrimes*) doe but looke vp vnto it, they tremble, and their haire ſtares, ſo fearfull and horrible is the place. Vpon the top of this point there is a great rod of Iron of three fathom long, placed there by a ſtrange deuice, at the end of this rod is a ballance tyed, whereof the ſcales are ſo bigge, as a man may ſit in one of them: and the *Goquis* (which be Deuils in humane ſhape) command theſe Pilgrimes to enter therein one after another, not leauing one of them: then with an engine or inſtrument which mooueth, by meanes of a wheele, they make this rod of Iron whereon the ballance is hanged, to hang in the aire, one of theſe *Xamabuſis* being ſet in one of the ſcales of the ballance. And as that wherein the man is ſet hath no counterpoiſe on the other ſide, it preſently hangeth downe, and the other riſeth vntill it meets with and toucheth the rod: then the *Goquis* telleth them from the Rocke, that they muſt confeſſe themſelues of all the ſinnes they haue committed, to their remembrance, and that with a loud voyce, to the end that all the reſt may heare him. Then preſently hee beginneth to confeſſe, whileſt ſome of the ſtanders by doe laugh at the ſinnes they doe heare; and others ſigh, and at euery ſinne they confeſſe, the other ſcale of the ballance falls a little, vntill that hauing told all his ſinnes, it remaines equall with the other, wherein the ſorrowfull penitent ſits: then the *Goquis* turnes the wheele, and drawes the rod and ballance vnto him, and the Pilgrime comes forth; then enters another, vntill all haue paſſed. A *Iaponois* reported this after he was chriſtned, ſaying, that hee had beene in this pilgrimage, and entred the ballance ſeuen times, where he had confeſſed himſelfe publikely. Hee ſaid moreouer, that if any one did conceale any ſinne, the emptie ſcale yeelded not: and if hee grew obſtinate after inſtance made to confeſſe himſelfe, refuſing to open all his ſinnes, the *Goquis* caſt him downe from the top, where in an inſtant he is broken into a thouſand pieces. Yet this Chriſtian, who was called *Iohn*, told vs, that commonly the feare and terror of this place is ſo great to all ſuch as enter therein, and the danger they ſee with their eyes, to fall out of the ballance, and to be broken in pieces, that ſeldom there is any one but diſcouers all his ſinnes. This place is called by another name *Sangenotosoro*, that is to ſay, *the place of Confeſſion.*

Iapon confeſsion.

Of the abominable Vnction which the *Mexican* Prieſts and other Nations vſed, and of their witchcraftes. *Chap.* 26.

The Prieſts of the Idols in *Mexico* were anointed in this ſort; they anointed the body from the foote to the head, and all the haire likewiſe, which hung like treſſes, or a Horſe mane, for that they applyed this Vnction wet and moiſt. Their haire grew ſo, as in time it hung

hung downe to their hammes, ſo heauily, that it was troubleſome for them to beare it, for they did neuer cut it, vntill they dyed, or that they were diſpenſed with for their great age, or being employed in gouernments or ſome honorable charge in the Commonwealth. They carried their haire in treſſes, of ſixe fingers breadth, which they dyed blacke with the fume of Sapine, of Firre trees, or Roſin; for in all Antiquitie it hath beene an offering they made vnto their Idols, and for this cauſe it was much eſteemed and reuerenced They were alwayes dyed with this tincture from the foot to the head, ſo as they were like vnto ſhining *Negroes*, and that was their ordinary Vnction: yet when as they went to ſacrifice and giue Incenſe in the Mountaines, or on the tops thereof, or in any darke and obſcure Caues, where their Idols were, they vſed an other kinde of vnction very different, doing certaine ceremonies to take away feare, and to giue them courage. This vnction was made with diuers little venemous beaſts, as Spiders, Scorpions, Palmers, Salamanders and Vipers, the which the Boyes in the Colledges tooke and gathered together, wherein they were ſo expert, as they were alwayes furniſhed when the Prieſts called for them. The chiefe care of theſe Boyes was, to hunt after theſe beaſts; if they went any other way, and by chance met with any of theſe beaſts, they ſtayed to take them, with as great paine, as if their liues depended thereon. By the reaſon whereof the *Indians* commonly feared not theſe venemous beaſts, making no more account then if they were not ſo, hauing beene all bred in this exerciſe. To make an ointment of theſe beaſts, they tooke them all together, and burnt them vpon the harth of the Temple, which was before the Altar, vntill they were conſumed to aſhes: then did they put them in Morters with much Tobacco or *Petum* (being an herbe that Nation vſeth much, to benum the fleſh, that they may not feele their trauell) with the which they mingle the aſhes, making them loſe their force; they did likewiſe mingle with theſe aſhes, Scorpions, Spiders, and Palmers aliue, mingling all together, then did they put to it a certaine ſeede being grownd, which they call *Ololuchqui*, whereof the *Indians* make a drinke to ſee viſions, for that the vertue of this herbe is to depriue man of ſenſe. They did likewiſe grinde with theſe aſhes blacke and hayrie wormes, whoſe haire onely is venemous, all which they mingled together with blacke, or the fume of Roſin, putting it in ſmall pots, which they ſet before their god, ſaying it was his meat. And therefore they called it *a diuine meat*. By meanes of this ointment they became Witches, and did ſee and ſpeake with the Deuill. The Prieſts being ſlubbered with this ointment, loſt all feare, putting on a Spirit of crueltie. By reaſon whereof they did very boldly kill men in their ſacrifices, going all alone in the night to the Mountaines, and into obſcure Caues, contemning all wilde beaſts, and holding it for certaine and approued, that both Lions, Tigres, Serpents, and other furious beaſts which breed in the Mountaines, and Foreſts, fled from them, by the vertue of this *Petum* of their god.

Haire-ſuperſtition.

Viſion ointment.

Like lips, like Lettuce.

And in truth, though this *Petum* had no power to make them flie, yet was the Deuils picture ſufficient whereinto they were transformed. This *Petum* did alſo ſerue to cure the ſicke, and for children: and therefore all called it *the diuine Phyſicke*: and ſo they came from all parts to the Superiors and Prieſts, as to their Sauiours, that they might apply this diuine phyſicke, wherewith they anointed thoſe parts that were grieued. They ſaid that they felt hereby a notable eaſe, which might be, for that Tobacco and *Ololuchqui* haue this propertie of themſelues, to benum the fleſh, being applyed in manner of an emplayſter, which muſt bee by a ſtronger reaſon being mingled with poyſons, and for that it did appeaſe and benum the paine, they held it for an effect of health, and a diuine vertue. And therefore ran they to theſe Prieſts as to holy men, who kept the blinde and ignorant in this error, perſwading them what they pleaſed, and making them runne after their inuentions and deuilliſh ceremonies, their authoritie being ſuch, as their wordes were ſufficient to induce beliefe as an article of their Faith. And thus made they a thouſand ſuperſtitions among the vulgar people, in their manner of offering Incenſe, in cutting their haire, tying ſmall flowers about their necks, and ſtrings with ſmall bones of Snakes, commanding them to bathe at a certaine time; and that they ſhould watch all night at the harth, leſt the fire ſhould die, that they ſhould eate no other bread but that which had beene offered to their gods, that they ſhould vpon any occaſion repayre vnto their Witches, who with certaine graines told fortunes, and diuined, looking into Keelers and Pailes full of water. The Sorcerers and Miniſters of the Deuill vſed much to beſmeare themſelues. There were an infinite number of theſe Witches, Diuiners, Enchanters, and other falſe prophets. There remaynes yet at this day of this infection, although they bee ſecret, not daring publikely to exerciſe their ſacrileges, deuilliſh ceremonies and ſuperſtitions, but their abuſes and wickedneſſe are diſcouered more at large and particularly in the confeſſions made by the Prelates of *Peru*.

Benumming force of Tobacco.

Diuinations.

There is a kinde of Sorcerers amongſt the *Indians* allowed by the Kings *Ingas*, which are as it were Sooth-ſayers, they take vpon them what forme and figure they pleaſe, flying far through the aire in a ſhort time, beholding all that was done. They talke with the Deuill, who anſwereth them in certaine ſtones or other things which they reuerence much. They ſerue as Conjurers, to tell what hath paſſed in the fartheſt parts, before any newes can come. As it hath chanced ſince the *Spaniards* arriued there, that in the diſtance of two or three hundred leagues, they haue knowne the Mutinies, Battailes, Rebellions, and Deaths, both of Tyrants, and of

Strange Sorcerers.

thoſe of the Kings partie, and of priuate men, the which haue beene knowne the ſame day they chanced, or the day after, a thing impoſſible by the courſe of nature. To worke this diuination, they ſhut themſelues into a houſe, and became drunke vntill they loſt their ſenſes, a day after they anſwered to that which was demanded. Some affirme they vſe certaine Vnctions. The *Indians* ſay, that the old women doe commonly vſe this office of witchcraft, and ſpecially thoſe of one Prouince, which they call *Coaillo*, and of another Towne called *Manchey*, and of the Prouince of *Guarochiri*. They likewiſe ſhew what is become of things ſtollen and loſt. There are of theſe kindes of Sorcerers in all parts, to whom commonly doe come the *Anaconas*, and *Cyua*, which ſerue the *Spaniards*, and when they haue loſt any thing of their Maſters, or when they deſire to know the ſucceſſe of things paſt or to come, as when they goe to the *Spaniards* Cities for their priuate affaires, or for the publike, they demand if their voyage ſhall bee proſperous, if they ſhall be ſick, if they ſhall die, or returne ſafe, if they ſhall obtaine that which they pretend: and the Witches or Conjurers anſwer, Yea, or No, hauing firſt ſpoken with the Deuill, in an obſcure place: ſo as theſe *Anaconas* do well heare the ſound of the voyce, but they ſee not to whom theſe Conjurers ſpeake, neither doe they vnderſtand what they ſay. They make a thouſand ceremonies and ſacrifices to this effect, with the which they mocke the Deuill and grow exceeding drunke, for the doing whereof, they particularly vſe an herb called *Villca*, the juyce whereof they mingle with their *Chica*, or take it in ſome other ſort.

Of other Ceremonies and Cuſtomes of the *Indians*, which are like vnto ours. *Chap.* 27.

Mexican Baptiſme.

THe *Indians* had an infinite number of other ceremonies and cuſtomes, which reſembled to the ancient Law of *Moſes*, and ſome to thoſe which the *Moores* vſe, and ſome approched neere to the Law of the Goſpell, as their Bathes or *Opacuna*, as they call them: they did waſh themſelues in water, to cleanſe them from their ſinnes. The *Mexicans* had alſo amongſt them a kinde *of Baptiſme*, the which they did with ceremonie, cutting the eares and members of young children new borne, counterfaiting in ſome ſort the Circumciſion of the *Iewes*. This ceremonie was done principally to the ſonnes of Kings and Noblemen: preſently vpon their birth the Prieſts did waſh them, and did put a little Sword in the right hand, and in the left a Target. And to the Children of the vulgar ſort, they put the markes of their offices, and to their Daughters inſtruments to ſpin, knit, and labour. This ceremonie continued foure dayes, being made before

Marriage ceremonies.

ſome Idoll. They contracted marriage after their manner, whereof the Licenciate *Polo* hath written a whole Treatiſe, and I will ſpeake ſomewhat thereof hereafter. In other things their cuſtomes and ceremonies haue ſome ſhew of reaſon. The *Mexicans* were married by the hands of their Prieſts in this ſort. The Bridegroome and the Bride ſtood together before the Prieſt, who tooke them by the hands, asking them if they would marry; then hauing vnderſtood their wills, he tooke a corner of the vaile wherewith the woman had her head couered, and a corner of the mans gowne the which he tyed together on a knot, and ſo led them thus tyed to the Bridegroomes houſe, where there was a harth kindled, and then he cauſed the wife to goe ſeuen times about the harth, and ſo the married couple ſate downe together, and thus was the marriage contracted. The *Mexicans* were very jealous of the integritie of their wiues: ſo as if they found they were not as they ought to bee (the which they knew either by ſignes or diſhoneſt wordes) they preſently gaue notice thereof to their fathers and kinſfolks of their wiues, to their great ſhame and diſhonor, for that they had not kept good guard ouer them. When they went to the houſe they made an Inuentorie of all the man and wife brought together, of prouiſions for the houſe, of land, of jewels and ornaments, which Inuentories euery father kept, for if it chanced they made any diuorce (as it was common amongſt them when they agree not) they diuided their goods according to the portion that euery one brought, euery one hauing libertie in ſuch a caſe, to marry whom they pleaſed: and they gaue the Daughters to the Wife, and the Sonnes to the Husband. It was defended vpon paine of death, not to marry againe together, the which they obſerued very ſtrictly. And although it ſeeme that many of their ceremonies agree with ours, yet differ they much for the great abomination they mingle therewithall. It is common and generall to haue vſually one of theſe three things, either Crueltie, Filthineſſe, or Slouth: for all their ceremonies were cruell and hurtfull, as to kill men and to ſpill bloud; or filthy and beaſtly, as to eate and drinke to the name of their Idols, and alſo to piſſe in the honour of them, carrying them vpon their ſhoulders, to anoint and beſmeare themſelues filthily, and to doe a thouſand ſorts of villanies, which were at the leaſt, vaine, ridiculous, and idle, and more like the actions of children, then of men. Whereas the temporall power was greateſt, there ſuperſtition hath moſt increaſed, as we ſee in the Realmes of *Mexico* and *Cuſco*, where it is incredible to ſee the number of

300. *Mexican* Idols.

Idols they had: for within the Citie of *Mexico* there were aboue three hundred. *Mango Inga Yupangui*, amongſt the Kings of *Cuſco*, was he that moſt augmented the ſeruice of their Idols, inuenting a thouſand kindes of ſacrifices, feaſts, and ceremonies. The like did King *Iſcoalt* in *Mexico*, who was the fourth King. There was alſo a great number of ſuperſtitions and ſacrifices in other Nations of the *Indians*, as in the Prouince of *Guatimala*, at the Ilands in *the new Kingdome*, in the Prouince of *Chille*, and others that were like Commonwealths and Comminalties. But it was nothing in reſpect of *Mexico* and *Cuſco*, where Satan was as *in Rome*, or in his *Ieruſalem*.

Manges mangled deuotions.

The

The *Ingua* Lords of *Peru*, had two kindes of Feasts. Some were *ordinarie*, which fell out in certayne moneths of the yeere: and others *extraordinarie*, which were for certayne causes of importance, as when they did crowne a new King, when they beganne some warre of importance, when they had any great need of water or droughe; or other like things. For the ordinary Feasts, wee must vnderstand, that euery moneth of the yeere they made Feasts, and diuers Sacrifices, and although all of them had this alike, that they offered a hundred sheepe: yet in colour, and in forme they are very diuers. In the first moneth which they call *Rayme*, which is the moneth of December, they made their first Feast, which was the principall of all others, and for that cause they called it *Capacrayme*, which is to say, *A rich and principall Feast*. In this Feast they offered a great number of sheepe and Lambes in Sacrifice, and they burnt them with sweet wood, then they caused Gold and Siluer to bee brought vpon certayne sheepe, setting vpon them three Images of *the Sunne*, and three of the *Thunder*, *the Father*, *the Sonne*, *and the Brother*. In these Feasts they dedicated the *Inguas* children, putting *Guaras*, or Ensignes vpon them, and they pierced their eares: then some old man did whip them with slings, and annoynted their faces with bloud, all in signe that they should be true Knights to the *Ingua*. No stranger might remayne in *Cusco* during this moneth, and this Feast, but at the end thereof they entred, and they gaue vnto them pieces of the paste of Mays with the bloud of the Sacrifice, which they did eate in signe of confederation with the *Ingua*, as hath beene said before. It is strange that the Deuill after his manner hath brought a *Trinitie* into Idolatry, for the three Images of the Sunne called *Apomti*, *Churunti*, and *Intiquaoqui* which signifieth *Father and Lord Sunne*, *the Sonne Sunne*, and the *Brother Sunne*. In the like manner they named the three Images of *Chuquilla*, which is the God that rules in the Region of the Ayre, where it Thunders, Raines and Snowes. I remember, that beeing in *Cuquisaca*, an honourable Priest shewed me an information, which I had long in my hands, where it was prooued that there was a certayne *Guaca* or Oratory, whereas the *Indians* did worship an Idoll called *Tangatanga*, which they said was *one in three, and three in one*. Comming then to the Feast of the second moneth, which they called *Camey*, besides the Sacrifices which they made, they did cast the ashes into the Riuer, following fiue or sixe leagues after, praying it to carry them into the Sea, for that the *Virochoca* should there receiue this present. In the third, fourth and fift moneth, they offered a hundred blacke sheepe, speckled, and grey, with many other things, which I omit for being too tedious. The sixt moneth is called *Hatuncuzqui Aymorey*, which answereth to May, in the which they sacrificed a hundred sheepe more, of all colours: in this Moone and moneth, which is when they bring May from the fields into the house, they made a Feast, which is yet very vsuall among the *Indians*, and they doe call it *Aymorey*.

Feasts celebrated by them of *Cusco*, and how the Deuill would imitate the mystery of the holy Trinitie. *Chap.* 28.

Rayme-feast.

Indian Trinity.

Camey-feast.

Aymorey-feast.

This Feast is made comming from the *Chacra* or Farme vnto the house, saying certayne Songs, and praying that the Mays may long continue, the which they call *Mamacora*. They take a certayne portion of the most fruitfull of the Mays that growes in their Farmes, the which they put in a certayne Granier which they doe call *Pirua*, with certayne Ceremonies, watching three nights: they put this Mays in the richest garments they haue, and being thus wrapped and dressed, they worship this *Pirua*, and hold it in great veneration, saying it is the Mother of the Mays of their Inheritances, and that by this meanes the Mays augments and is preserued. In this moneth they make a particular Sacrifice, and the Witches demand of this *Pirua*, if it hath strength sufficient to continue vntill the next yeere: and if it answeres No, then they carry this Mays to the Farme to burne, whence they brought it, according to euery mans power; then make they another *Pirua*, with the same Ceremonies, saying, that they renew it, to the end the Seed of Mays may not perish, and if it answers that it hath force sufficient to last longer, they leaue it vntill the next yeere. This foolish vanitie continueth to this day, and it is very common amongst the *Indians* to haue these *Piruas*, and to make the Feast of *Aymorey*. The seuenth moneth answereth to Iune, and is called *Aucaycuzqui Intiraymi*, in it they made the Feast that is called *Intiraymi*, in the which they sacrificed a hundred sheepe called *Guanacos*, and said it was the Feast of the Sunne. In this moneth they made many Images of *Quinua* wood carued, all attired with rich garments, and they made their dancings which they doe call *Cayo*. At this Feast they cast flowers in the high wayes, and thither the *Indians* came painted, and their Noblemen had small places of Gold vpon their beards, and all did sing; we must vnderstand that this Feast falleth almost at the same time, when as the Christians obserue *the Solemnitie of the holy Sacrament*, which doth resemble it in some sort, as in dancing, singing and representations. And for this cause there hath beene, and is yet among the *Indians* (which celebrated a Feast somewhat like to ours of the holy Sacrament) many Superstitions in celebrating this ancient Feast of *Intiraymi*. The eight moneth is called *Chahua Huarqui*, in the which they did burne a hundred sheep more, all grey, of the colour of *Viscacha*, according to the former order, which moneth doth answere to our Iuly. The ninth moneth was called *Tapaquis*, in which they burnt an hundred sheepe more, of a Chesnut colour; and they doe likewise kill and burne a thousand *Cuyes*, to the end that neither the Frost, the Ayre, the water, nor the Sunne should hurt their Farmes: and this moneth doth answere vnto August. The tenth moneth was called *Coyarami*, in the which they

Intiraymi-feast.

Corpus Christi day resembled

Situa-feast.

they burnt a hundred white sheepe that had fleeces. In this moneth which answereth to September, they made the Feast called *Situa*, in this manner. They assembled together the first day of the Moone before the rising thereof: and in seeing it they cryed aloude, carrying Torches in their hands, and saying, Let all harme goe away, striking one another with their Torches. They that did this, were called *Panconcos*: which being done, they went to the common Bath, to the Riuers and Fountaines, and euery one to his owne Bath, setting themselues to drinke foure dayes together. In this moneth the *Mamacomas* of the Sunne made a great number of small Loaues with the bloud of the Sacrifices, and gaue a piece to euery stranger; yea, they sent to euery *Guaca* throughout the Realme, and to many *Curacas*, in signe of confederation and loyaltie to the Sun and the *Ingua*, as hath beene said.

The Bathes, drunkennesse and some Relickes of this Feast *Situa*, remayne euen vnto this day, in some places, with the Ceremonies a little different, but yet very secretly, for that these chiefe and principall Feasts haue ceased. The eleuenth moneth *Homaraymi Punchaquis*, wherein they sacrificed a hundred sheepe more. And if they wanted water, to procure raine, they set a blacke sheepe tyed in the middest of a Plaine, powring much *Chica* about it, and giuing it nothing to eate vntill it rayned, which is practised at this day in many places, in the time of our October. The twelfth and last moneth was called *Aymara*, wherein they did likewise sacrifice a hundred sheepe, and made the Feast called *Raymicantara Raquis*. In this moneth which answered to our Nouember, they prepared what was necessary for the Children that should bee made Nouices, the moneth following, the Children with the old men made a certayne shew, with rounds and turnings: and this Feast was called *Ituraymi*, which commonly they make when it raines too much, or too little, or when there is a plague.

Among the extraordinary Feasts which were very many, the most famous was that which they called *Itu*. This Feast *Itu* hath no prefixed time nor season, but in time of necessitie. To prepare themselues thereunto, all the people fasted two dayes, during the which they did neither company with their wiues, nor eate any meate with Salt or Garlicke, nor drinke any *Chica*. All did assemble together in one place, where no stranger was admitted, nor any beast: they had Garments and Ornaments, which serued onely for this Feast. They marched very quietly in Procession, their heads couered with their Veiles, sounding of Drummes, without speaking one to another. This continued a day and a night; then the day following they danced and made good cheere for two dayes and two nights together, saying, that their Prayer was accepted. And although that this Feast is not vsed at this day, with all this ancient Ceremony, yet commonly they make another which is very like, which they call *Ayma*, with Garments that serue onely to that end, and they make this kinde of Procession with their Drummes, hauing fasted before, then after they make good cheere, which they vsually doe in their vrgent necessities. And although the *Indians* forbeare to sacrifice beasts, or other things publikely, which cannot be hidden from the *Spaniards*, yet doe they still vse many Ceremonies that haue their beginnings from these Feasts and ancient Superstitions: for at this day they doe couertly make this Feast of *Itu*, at the dances of the Feast of the Sacrament, in making the dances of *Lyamallama*, and of *Guacon*, and of others, according to their ancient Ceremonies.

Of the feast of Iubilee which the Mexicans celebrated. Chap. 29.

THe *Mexicans* haue beene no lesse curious in their Feasts and Solemnities, which were of small charge, but of great effusion of mans bloud. We haue before spoken of the principall Feast of *Vitzliputzli*, after the which the Feast of *Tezcalipuca* was most solemnized. This Feast fell in May, and in their Kalender they called it *Toxcolt*: it fell euery foure yeere with the feast of Penance, where there was giuen full indulgence and remission of sinnes. In this day they did sacrifice a Captiue which resembled the Idoll *Tezcalipuca*, it was the nineteenth day of May: vpon the Euen of this Feast, the Noblemen came to the Temple, bringing a new Garment like vnto that of the Idoll, the which the Priest put vpon him, hauing first taken off his other Garments, which they kept with as much, or more reuerence then wee doe our Ornaments. There were in the Coffers of the Idoll many Ornaments, Iewels, Earerings, and other Riches, as Bracelets, and precious Feathers which serued to no other vse, but to be there, and was worshipped as their God it selfe. Besides the Garment wherewith they worshipped the Idoll that day, they put vpon him certayne enfignes of Feathers, with fannes, shadowes and other things, being thus attired and furnished, they drew the Curtayn or Veile from before the doore, to the end he might be seene of all men: then came forth one of the chiefe of the Temple, attyred like to the Idoll, carrying flowres in his hand, and a Flute of earth, hauing a very sharpe sound, and turning towards the East, he sounded it, and then looking to the West, North and South he did the like. And after he had thus sounded towards the foure parts of the World (shewing that both they that were present and absent did heare him) he put his finger into the Aire, and then gathered vp earth, which hee put in his mouth, and did eate it in signe of adoration. The like did all they that were present, and weeping, they fell flat to the ground, inuocating the *darkenesse of the night, and the winds*, intreating them not to leaue them, nor to forget them, or else to take away

their

Digitized by Google

their liues, and free them from the labours they endured therein. Theeues, Adulterers, and Murtherers, and all other offenders had great feare and heauineſſe, whileſt this Flute ſounded; ſo as ſome could not diſſemble nor hide their offences. By this meanes they all demanded no other thing of their God, but to haue their offences concealed, powring forth many teares, with great repentance and ſorrow, offering great ſtore of Incenſe to appeale their Gods. The couragious and valiant men, and all the old Souldiers, that followed the art of Warre, hearing this Flute, demanded with great deuotion of *God the Creator*, of the *Lord for whom we liue*, *of the Sun*, and of other theſe Gods, that they would giue them victory againſt their enemies, & ſtrength to take many Captiues, therewith to honour their Sacrifices. This Ceremony was done ten dayes before the Feaſt: During which ten dayes the Prieſt did ſound this Flute, to the end that all might doe this worſhip in eating of earth, and demand of their Idoll what they pleaſed; they euery day made their Prayers, with their eyes lift vp to Heauen, and with ſighs and groanings, as men that were grieued for their ſinnes and offences. Although this contrition was onely for feare of the corporall puniſhment that was giuen them, and not for any feare of the eternall, for they certainly beleeued there was no ſuch ſeuere puniſhment in the other life. And therefore they offered themſelues voluntarily to death, holding opinion that it is to all men an aſſured reſt.

No feare but of temporall puniſhment.

The firſt day of the Feaſt of this Idoll *Tezcalipuca* beeing come, all they of the Citie aſſembled together in a Court, to celebrate likewiſe the Feaſt of the Kalender, whereof we haue already ſpoken, which was called *Toxcoatlh*, which ſignifies *A dry thing*: which Feaſt was not made to any other end, but to demand raine, in the ſame manner that wee ſolemnize the *Rogations*: and this Feaſt was alwayes in May, which is the time that they haue moſt need of raine in thoſe Countreyes. They beganne to celebrate it the ninth of May, ending the nineteenth. The laſt day of the Feaſt the Prieſts drew forth a Litter well furniſhed with Curtaynes and Pendants of diuers faſhions. This Litter had ſo many armes to hold by as there were Miniſters to carrie it. All which came forth beſmeered with blacke and long haire, halfe in treſſes with white ſtrings, and attyred in the ſiuery of the Idoll. Vpon this Litter they ſet the perſonage of the Idoll, appointed for this Feaſt, which they called the reſemblance of their God *Tezcalipuca*, and taking it vpon their ſhoulders, they brought it openly to the foot of the ſtaires: then came forth the young men and Maydens of the Temple, carrying a great coard wreathed of chaines of roaſted Mays, with the which they enuironed the Litter, and putting a chaine of the ſame about the Idols necke, and a Garland vpon his head. They called the coard *Toxcalt*, ſignifying the drought and barrenneſſe of the time. The young men came wrapped in red Curtaines, with Garlands and chaines of roaſted Mays. The Maydes were clothed in new Garments, wearing chaines about theirs neckes of roaſted Mays; and vpon their heads Mytres made of rods couered with this Mays, they had their feet couered with feathers, and their armes and cheekes painted. They brought much of this roaſted Mays, and the chiefe men put it vpon their heads, and about their neckes, taking flowres in their hands. The Idoll being placed in his Litter, they ſtrewed round about a great quantitie of the boughes of Manguey, the leaues whereof are large and pricking.

This Litter being ſet vpon the religious mens ſhoulders, they carried it in Proceſſion within the circuit of the Court, two Prieſts marching before with Cenſors, giuing often Incenſe to the Idoll; and euery time they gaue Incenſe, they lifted vp their armes as high as they could to the Idoll, and to the Sunne, ſaying, that they lifted vp their Prayers to Heauen, euen as the ſmoke aſcended on high. Then all the people in the Court turned round to the place whither the Idoll went, euery one carrying in his hand new coards of the threed of the *Manguey*., a fadome long, with a knot at the end, and with them they whipped themſelues vpon the ſhoulders; euen as they doe here vpon holy Thurſday. All the wals of the Court and Battlements were full of boughes and flowres, ſo freſh and pleaſant, as it did giue a great contentment. This Proceſſion being ended, they brought the Idoll to his vſuall place of abode. Then came a great multitude of people with flowres, dreſſed in diuers ſorts, wherewith they filled the Temple and all the Court, ſo as it ſeemed the ornament of an Oratory. All this was put in order by the Prieſts, the young men adminiſtring theſe things vnto them from without. The Chappell or Chamber where the Idoll remayned was all this day open without any Veile.

This done, euery one came and offered Curtines, and pendants of *Sandaly*, precious Stones, Iewels, Incence, ſweet wood, Grapes, or eares of Mays, Quailes: and finally, all they were accuſtomed to offer in ſuch ſolemnities. When as they offered Quailes (which was the poore mans offering) they vſed this ceremonie, they deliuered them to the Prieſts, who taking them, pulled off their heads, and caſt them at the foote of the Altar, where they loſt their bloud, and ſo they did of all other things which were offered. Euery one did offer meate and fruite according to their power, the which was laid at the foote of the Altar, and the Miniſters gathered them vp, and carried them to their Chambers. This ſolemne offering done, the people went to dinner, euery one to his village or houſe, leauing the feaſt ſuſpended vntill after dinner. In the meane time, the yong Men and Maidens of the Temple, with their ornaments, were buſied to ſerue the Idoll, with all that was appointed for him to eate: which meate was prepared by

other

other women, who had made a vow that day to serue the Idoll. And therefore such as had made this vow, came by the point of day, offering themselues to the Deputies of the Temple, that they might command them what they would haue done, the which they did carefully performe. They did prepare such variety of meates, as it was admirable. This meate being ready, and the houre of dinner come, all these Virgins went out of the Temple in procession, euery one carrying a little basket of bread in her hand, and in the other, a dish of these meates: before them marched an old man, like to a steward, with a pleasant habit, he was cloathed in a white Surples downe to the calues of his legges, vpon a doublet without sleeues of red leather, like to a iacket, he carried wings instead of sleeues, from the which hung broad ribbands, at the which did hang a small *Calibasse* or pumpion, which was couered with flowers, by little holes that were made in it, and within it were many superstitious things. This old man thus attyred, marched very humbly and heauily before the preparation, with his head declining: and comming neere the foote of the staires, he made a great obeisance and reuerence. Then going on the one side, the Virgins drew neere with the meate, presenting it in order one after another, with great reuerence. This seruice presented, the old man returned as before, leading the Virgins into their conuent. This done, the yong men and ministers of the Temple, came forth and gathered vp this meate, the which they carried to the Chambers of the chiefe Priests of the Temple, who had fasted fiue dayes, eating onely once a day, and they had also abstained from their wiues, not once going out of the Temple in these fiue dayes. During the which they did whip themselues rigorously with cords; they did eate of this diuine meate (for so they called it) what they could, was it lawfull for any other to eate thereof. All the people hauing dined, they assembled againe in the court to see the end of the feast, whither they brought a captiue, which by the space of a whole yeare, had represented the Idoll, being attired, decked, and honoured, as the Idoll it selfe, and doing all reuerence vnto him, they deliuered him into the hands of the sacrificers, who at that instant presented themselues, taking him by the feete and hands. The Pope did open his stomacke, and pull out his heart, then did he lift vp his hand as high as he could, shewing it to the Sunne, and to the Idoll, as hath beene said. Hauing thus sacrificed him that represented the Idoll, they went into a holy place appointed for this purpose, whither came the yong Men and Virgins of the Temple, with their ornaments, the which being put in order, they danced and sung with Drummes and other instruments, on the which the chiefe Priests did play and sound. Then came all the Noblemen with ensignes and ornaments like to the yong men, who danced round about them. They did not vsually kill any other men that day, but him that was sacrificed, yet euery fourth yeare they had others with him, which was in the yeare of Iubile and full pardons. After Sunne set, euery one being satisfied with sounding, eating, and drinking, the Virgins went all to their conuent, they tooke great dishes of earth full of bread mixt with hony, couered with small panniers, wrought and fashioned with dead mens heads and bones, and they carried the collation to the Idoll, mounting vp to the Court, which was before the doore of the Oratorie: and hauing set them downe, they retired in the same order as they came, the steward going still before. Presently came forth all the yong men in order, with canes or reedes in their hands, who began to runne as fast as they could to the top of the staires of the Temple, who should come first to the dishes of the collation. The Elders or chiefe Priests obserued him that came first, second, third, and fourth, without regarding the rest. This collation was likewise all carried away by the yong men, as great Relicks. This done, the foure that arriued first were placed in the midst of the Ancients of the Temple, bringing them to their chambers with much honour, praising them, and giuing them ornaments; and from thence forth they were respected and reuerenced as men of marke. The taking of this collation being ended, and the feast celebrated with much ioy and noise, they dismissed all the yong men and maides which had serued the Idoll; by meanes whereof they went one after another, as they came forth. All the small children of the Colledges and Schooles, were at the gate of the court, with bottomes of rushes and hearbs in their hands, which they cast at them, mocking and laughing, as of them that came from the seruice of the Idoll: they had liberty then to dispose of themselues at their pleasure, and thus the Feast ended.

Of the Feast of Marchants, which those of *Cholutecas* did celebrate. *Ch.* 30

ALthough I haue spoken sufficiently of the seruice the *Mexicans* did vnto their gods; yet will I speake something of the feast they called *Quetzaceoalt*, which was the god of riches, the which was solemnised in this manner. Fortie dayes before the Marchants bought a slaue well proportioned, without any fault or blemish, either of sickneſſe or of hurt, which they did attire with the ornaments of the Idoll, that he might represent it forty dayes. Before his cloathing they did clense him, washing him twice in a lake, which they called the lake of the gods; and being purified, they attired him like the Idoll. During these forty dayes, he was much respected for his sake whom he represented. By night they did imprison him (as hath beene said) least he should flye, and in the morning they tooke him out of prison, setting him vpon an eminent place, where they serued him, giuing him exquisite meates to eate. After he had eaten, they put a chaine of flowers about his necke, and many nosegaies in his hand. He had

Digitized by Google

had a well appointed guard, with much people to accompany him. When he went through the Citie, he went dancing and ſinging through all the ſtreetes, that he might be knowne for the reſemblance of their god, and when he beganne to ſing, the women and little children came forth of their houſes to ſalute him, and to offer vnto him as to their god. Two old men of the Ancients of the Temple, came vnto him nine dayes before the feaſt, and humbling themſelues before him, they ſaid with a low and ſubmiſſe voyce, *Sir, you muſt vnderſtand that nine dayes hence the exerciſe of dancing and ſinging doth end, and thou muſt then dye*; and then he muſt anſwer, *In a good houre.* They call this ceremony, *Neyola Maxiltlextli*, which is to ſay, *the aduertiſement*: and when they did thus aduertiſe him, they tooke very carefull heede whither he were ſaid, or if he danced as ioyfully as he was accuſtomed, the which if he did not as cheerefully as they deſired, they made a fooliſh ſuperſtition in this manner. They preſently tooke the ſacrificing raſors, the which they waſhed and clenſed from the bloud of men, which remained of the former ſacrifices. Of this waſhing they made a drinke mingled with another liquor made of *Cacao*, giuing it him to drinke; they ſaid that this would make him forget what had beene ſaid vnto him, and would make him in a manner inſenſible, returning to his former dancing and mirth. They ſaid moreouer, that he would offer himſelfe cheerefully to death, being inchanted with this drinke. The cauſe why they ſought to take from him this heanineſſe, was, for that they held it for an ill augure, and a fore-telling of ſome great harme. The day of the Feaſt being come, after they had done him much honour, ſung, and giuen him incenſe, the ſacrificers tooke him about midnight and did ſacrifice him, as hath beene ſaid, offering his heart vnto the Moone, the which they did afterwards caſt againſt the Idoll, letting the body fall to the bottome of the ſtaires of the Temple, where ſuch as had offered him tooke him vp, which were the Marchants, whoſe feaſt it was. Then hauing carried him into the chiefeſt mans houſe amongſt them, the body was dreſt with diuers ſawces, to celebrate (at the breake of day) the banquet and dinner of the feaſt, hauing firſt bid the Idoll good morrow, with a ſmall dance, which they made whilſt the day did breake, and that they prepared the ſacrifice. Then did all the Marchants aſſemble at this banket, eſpecially thoſe which made it a trafficke to buy and ſell ſlaues, who were bound euery yeere to offer one, for the reſemblance of their god. This Idoll was one of the moſt honored in all the Land: and therefore the Temple where he was, was of a great authoritie. There were threeſcore ſtaires to aſcend vp vnto it, and on the top was a Court of an indifferent largeneſſe, very finely dreſt and plaſtered, in the midſt whereof, was a great round thing like vnto an Ouen, hauing the entrie low and narrow: ſo as they muſt ſtoope very low that ſhould enter into it. This Temple had Chambers and Chappels as the reſt, where there were conuents of Prieſts, yong Men, Maides, and Children, as hath beene ſaid: and there was one Prieſt alone reſident continually, the which they changed weekely: For although there were in euery one of theſe Temples, three or foure Curates or Ancients, yet did euery one ſerue his weeke without parting. His charge that weeke (after he had inſtructed the children) was to ſtrike vp a Drum euery day at the Sunne-ſetting, to the ſame end that we are accuſtomed to ring to Euenſong. This Drum was ſuch as they might heare the houſe ſound thereof throughout all the parts of the Citie, then euery man ſhut vp his merchandiſe, and retired vnto his houſe, and there was ſo great a ſilence, as there ſeemed to be no liuing creature in the Towne. In the morning when as the day began to breake, they began to ſound the Drum, which was a ſigne of the day beginning, ſo as trauellers and ſtrangers attended this ſignall to begin their iournies, for till that time it was not lawfull to goe out of the Citie.

Stately Temple.

Drums vſed in ſtead of Bels.

There was in this Temple a Court of reaſonable greatneſſe, in the which they made great dances, and paſtimes, with games or comedies the day of the Idols feaſt; for which purpoſe there was in the middeſt of this court a Theatre of thirty foote ſquare very finely decked and trimmed, the which they decked with flowers that day, with all the art and inuention that might be, being inuironed round with Arches of diues flowers and feathers, and in ſome places there were tied many ſmall Birds, Conies, and other tame beaſts. After dinner all the people aſſembled in this place, and the Players preſented themſelues, and plaied Comedies, ſome counterfeit the deafe, and the rheumatike, others the lame, ſome the blinde, and without hands, which came to ſeeke for cure of the Idoll, the deafe anſwered confuſedly, the rheumaticke did cough, the lame halted, telling their miſeries and griefes, wherewith they made the people to laugh; others come forth in the forme of little beaſts, ſome were attired like Snailes, others like Toades, and ſome like Lizards: then meeting together, they told their offices, and euery one retyring to his place, they ſounded on ſmall flutes, which was pleaſant to heare. They likewiſe counterfeited Butterflies and ſmall Birds of diuers colours, and the children of the Temple repreſented theſe formes, then they went into a little Forreſt planted there for the nonce, where the Prieſts of the Temple drew them forth with inſtruments of muſicke. In the meane time they vſed many pleaſant ſpeeches, ſome in propounding, others in defending, wherewith the aſſiſtants were pleaſantly intertained. This done, they made a Maske or Mummerie with all theſe perſonages, and ſo the Feaſt ended: the which were vſually done in their principall Feaſts.

Comedies.

CHAP. VI.

Ciuill Customes and Arts of the INDIANS *taken out of* ACOSTAS *6. Booke.*

Of the supputation of times and the Kalende th *Mexicans* vsed. *Cha.* 2.

Mexican yeare & 18. moneths.

I Will first shew in what sort the *Mexicans* counted and diuided their yeere, their moneths, their Kalender, their computations, their worlds and ages. They diuided the yeare into eighteene moneths, to which they gaue twentie dayes, wherein the three hundred and threescore dayes are accomplished, not comprehending in any of these Moneths the fiue daies that remaine, and make the yeare perfect. But they did reckon them apart, and called them *the dayes of nothing:* during the which, the people did not any thing, neither went they to their Temples, but occupied themselues onely in visiting one another, and so spent the time: the sacrificers of the Temple did likewise cease their sacrifices. These fiue dayes being past, they began the computation of the yeare, whereof the first moneth and beginning was in *March*, when the leaues began to grow greene, although they tooke three dayes of the moneth of February; for the first day of their yeare was, as it were, the six and twentieth day of February, as appeareth by their Kalender, within the which ours is likewise comprehended and contained with a very ingenious Art, which was made by the ancient *Indians* that knew the first *Spaniards*. I haue seene this Kalender, and haue it yet in my custodie, which well deserueth the sight, to vnderstand the discourse and industrie the *Mexican Indians* had. Euerie one of these eighteene moneths had his proper name, and his proper picture, the which was commonly taken of the principall Feast that was made in that moneth, or from the diuersitie of times, which the yeare caused in that moneth. They had in this Kalender certaine daies marked and distinguished for their feasts. And they accounted their weekes by thirteene dayes, marking the daies with a *Zero* or cipher, which they multiplied vnto thirteene, and then began to count, one, two, &c. They did likewise marke the yeares of these wheeles, with foure signes or figures, attributing to euerie yeare a peculiar signe, whereof one was of a House, another of a Conie, the third of a Reede, and the fourth of a Flint. They painted them in this sort, noting by those figures the yeare that did runne, saying *of so many Houses, of so many Flints, of such a Wheele, happened such a thing*. For we must vnderstand that their wheele, which was an age, contained foure weekes of yeares, euerie weeke containing thirteene yeares, which in all made fiftie two yeares. In the midst of this wheele they painted a Sun, from the which went foure beames or lines in crosse to the circumference of the wheele, and they made their course, euen as the circumference was diuided into foure equall parts, euerie one with his line, hauing a distinct colour from the rest, and the foure colours were, Greene, Blew, Red, and Yellow: euery portion of these foure had thirteene separations which had all their signes or particular figures, of a House, a Conie, a Reede, or a Flint, noting by euery signe a yeare, and vpon the head of this signe they painted what had happened that yeare.

New yeares day. Their Kalender.

Weeke of 13. daies, or years. See this in the *Mexican* Chronicle in their owne figures.

And therefore I did see in the Kalender mentioned the yeare when the *Spaniards* entered *Mexico*, marked by the picture of a man clad in red, after our manner, for such was the habit of the first *Spaniard*, whom *Fernando Cortes* sent, at the end of the two and fiftie yeares, which finished the wheele. They vsed a pleasant ceremonie, which was, the last night they did breake all their vessels and stuffe, and put out their fire, and all the lights, saying, that the world should end at the finishing of one of these wheeles, and it might be at that time: for (said they) seeing the world must then end, what neede is there to prouide meate to eate, and therefore they had no further neede of Vessels nor fire. Vpon this conceit they passed the night in great feare, saying, it might happen there would be no more day, and they watched verie carefully for the day; when they saw the day begin to breake, they presently beat many Drums, and sounded Cornets, Flutes, and other instruments of ioy and gladnesse, saying, that God did yet prolong the time with another age, which were fiftie two yeares. And then began another wheele. The first day and beginning of this age they tooke new fire, and bought new Vessels to dresse their meate, and all went to the high Priest for this new fire, hauing first made a solemne Sacrifice, and giuen thanks for the comming of the day, and prolongation of another age. This was their manner of accounting their yeares, moneths, weekes, and ages.

New Age.

How the Kings *Ingas* accounted the yeares and moneths.

ALthough this supputation of times practised amongst the *Mexicans*, be ingenious enough and certaine, for men that had no learning; yet in my opinion they wanted discourse and consideration, hauing not grounded their computation according vnto the course of the Moone, nor distributed their months accordingly, wherein those of *Peru* haue farre surpassed them: for they diuided their yeare into as manie daies, perfectly accomplished as we doe here, and into twelue moneths or Moones, in the which they imploied and consumed the eleuen daies that remaind of the Moone, as *Pola* writes. To make the computation of their yeare sure and certaine, they vsed this industrie; vpon the Mountaines which are about the Citie of *Cuseo* (where the

Better computation of times in *Peru*.

Kings

Kings *Ingas* held their Court, being the greatest sanctuarie of those Realms, and as we would say another *Rome*) there were twelue Pillars set in order, and in such distance the one from the other, as euerie moneth one of these Pillars did note the rising and setting of the Sunne. They called them *Succanga*, by meanes whereof they taught and shewed, the Feasts, and the seasons fit to sowe and reape, and to doe other things. They did certaine sacrifices to these Pillars of the Sunne. Euery moneth had his proper name, and peculiar Feasts. They began the yeare by Ianuarie as we doe. But since, a King *Ingas* called *Pachacuto*, which signifies *a reformer of the Temple*, began their yeare by December, by reason (as I coniecture) that then the Sunne returneth from the last point of Capricorne, which is the tropike neerest vnto them. I know not whether the one or the other haue obserued any Bisexte, although some hold the contrarie. The weekes which the *Mexicans* did reckon, were not properly weekes, being not of seuen daies: the *Ingas* likewise made no mention thereof which is no wonder, seeing the count of the weeke is not grounded vpon the course of the Sunne, as that of the yeare, nor of the Moone, as that of the moneth; but among the *Hebrewes* it is grounded vpon the creation of the world, as *Moyses* reporteth; and amongst the *Greekes* and *Latins* vpon the number of the seuen Planets, of whose names the daies of the weeke haue taken their denomination; yet was it much for those *Indians*, being men without bookes and learning, to haue a yeare, seasons, and feasts, so well appointed as I haue said.

12. Pillars of the Sunne.

LEtters were inuented to signifie properly the words we doe pronounce, euen as words (according to the Philosopher) are the signes and demonstrations of mans thoughts and conceptions. And both the one and the other (I say the letters and words) were ordained to make things knowne. The voice of such as are present, and letters for the absent, and such as are to come. Signes and markes which are not properly to signifie words, but things, cannot be called, neither in truth are they letters, although they be written, for we cannot say that the picture of the Sunne is a writing of the Sunne, but onely a picture; and the like may be said of other signes and characters, which haue no resemblance to the thing, but serue onely for memorie: for he that inuented them, did not ordaine them to signifie words, but onely to noate the thing: neither doe they call those characters, letters, or writings, as indeede they are not, but rather ciphers, or remembrances, as those be which the Spherists or Astronomers doe vse, to signifie diuers signes or planets of *Mars*, *Venus*, *Iupiter*, *&c.*

That no Nation of the *Indies* hath beene found to haue had the vse of Letters. *Chap.* 4

Such characters are ciphers, and no letters: for what name soeuer *Mart* may haue in *Italian*, *France*, or *Spanish*, this character doth alwaies signifie it, the which is not found in letters: for although they signifie the thing, yet is it by meanes of words. So as they which know not the thing, vnderstand them not: as for example, the *Greekes* nor the *Hebrews*, cannot conceiue what this word *Sal* doth signifie, although they see it written; for that they vnderstand not the Latine word: so as writing and letters are onely practised by them, which signifie words therewith. For if they signifie things mediately, they are no more letters nor writings, but ciphers and pictures: whereby we may obserue two notable things. The one, that the memorie of Histories and Antiquities may be preserued by one of these three meanes, either by letters and writings, as hath beene vsed amongst the *Latines*, *Greekes*, *Hebrewes*, and manie other Nations; or by painting, as hath beene vsed almost throughout all the world, for it is said in the second *Nicene* Counsell, *Painting is a Booke for fooles which cannot reade*: or by ciphers and characters, as the cipher signifies the number of a hundred, a thousand and others, without noting the word of a hundred, or a thousand. The other thing we may obserue thereby, is that which is propounded in this Chapter, which is, that no Nation of the *Indies* discouered in our time, hath had the vse of letters, and writings, but of the other two sorts, Images, and figures. The which I obserue, not onely of the *Indies* of *Peru*, and New *Spaine*, but also of *Iappon*, and *China*.

Three wayes of remembrance to posterity; letters, as we haue: pictures, as the *Mexicans*; characters, as in *China*.

Such fooles did that wise counsell make the *Christian* Church, in decreeing Images not onely to be bookes for such as can not reade, but obiects of worship to learned and vnlearned.

It is difficult to vnderstand how the *Chinois* can write proper names in their tongue, especially of strangers, being things they haue neuer seene, and not able to inuent figures proper vnto them. I haue made triall thereof being in *Mexico* with the *Chinois*, willing them to write this proposition in their language, *Ioseph Acosta is come from Peru*, and such like: whereupon the *Chinese* was long pensiue, but in the end hee did write it, the which other *Chinois* did after reade, although they did vary a little in the pronuntiation of the proper name. For they vse this deuise to write a proper name: they seeke out some thing in their tongue, that hath resemblance to that name, and set downe the figure of this thing. And as it is difficult among so many proper names, to finde things to resemble them in the prolation, so is it very difficult and troublesome to write such names. Vpon this purpose, Father *Alonso Sanchez* told vs, that when hee was in *China*, being led into diuers Tribunall Seates, from *Mandarin* to *Mandarin*, they were long in putting his name in writing in their *Capha*, yet in the end they did write it after their manner, and so ridiculously, that they scarce came neere to the name: and this is the fashion of Letters and Writings which the *Chinois* vsed. That of the *Iapponois* approached very neere, although they affirme that the Noblemen of *Iappon* that came into *Europe*, did write all things

verie

very easily in their Language, were they of our proper names: yea, I haue had some of their Writing shewed me, whereby it seemes they should haue some kinde of Letters, although the greatest part of their Writings, bee by the Characters and figures, as hath beene said of the *Chinois.*

An *Indian* of *Peru* or *Mexico*, that hath learned to read & write, knowes more then the wisest *Mandarin* that is amongst them: for that the *Indian* with foure and twentie Letters which hee hath learned, will write all the words in the World: and a *Mandarin* with his hundred thousand Letters, will be troubled to write some proper name, as of *Martin*, or *Alonso*, and with greater reason he shall bee lesse able to write the names of things hee knowes not. So as the writing in *China*, is no other thing but a manner of painting or ciphering.

Of the fashion of Letters and writings which the *Mexicans* vsed. *chap.7.*

WE find among the Nations of New *Spaine* a great knowledge and memorie of antiquitie; and therefore searching by what meanes the *Indians* had preserued their Histories, and so many particularities, I learned, that although they were not so subtill and curious as the *Chinois*, and those of *Iappon*, yet had they some kind of Letters and Bookes amongst them, whereby they preserued (after their manner) the deeds of their Predecessors. In the Prouince of *Yucatan*, where the Bishopricke is, which they call *de Honduras*, there were Bookes of the leaues of Trees, folded and squared, after their manner, in the which the wise *Indians* contained the distribution of their times, the knowledge of the Planets, of beasts and other naturall things, with their Antiquities, a thing full of great curiositie and diligence. It seemed to some Pendant that all this was an Inchantment and Magicke Arte, who did obstinately maintayne, that they ought to be burnt, so as they were committed to the fire. Which since not onely the *Indians* found to be ill done, but also the curious *Spaniards*, who desired to know the secrets of the Countrey. The like hath happened in other things: for our men thinking that all was but Superstition, haue lost many memorials of ancient and holy things, which might haue profited much. This proceedeth of a fooliſh and ignorant zeale, who not knowing, nor seeking to know what concerned the *Indians*, say preiudicately, that they are all but Witch-crafts, and that all the *Indians* are but Drunkards, incapable to know or learne any thing. For such as would be curiously informed of them, haue found many things worthy of consideration. One of our company of Iesuits, a man very wittie and well experienced, did assemble in the Prouince of *Mexico*, the Ancients of *Tescuco*, of *Talla*, and of *Mexico*, conferring at large with them, who shewed vnto him their Bookes, Histories and Kalenders, things very worthy the sight, because they had their figures and Hierogliphicks, whereby they represented things in this manner: Such as had forme or figure, were represented by their proper Images, and such as had not any, were represented by Characters that signified them, and by this meanes they figured and writ what they would. And to obserue the time when any thing did happen, they had those painted Wheeles, for euery one of them contayned an Age, which was two and fiftie yeeres, as hath beene said; and of the side of those Wheeles, they did paint with figures and Characters right against the yeere, the memorable things that happensd therein. As they noted the yeere when as the *Spaniards* entred their Countrey, they painted a man with a Hat and a red Ierkin, vpon the signe of a Reed, which did rule then, and so of other accidents. But for that their Writings and Characters were not sufficient as our Letters and Writings be, they could not so plainly expresse the words, but onely the substance of their conceptions. And forasmuch as they were accustomed to rehearse Discourses and Dialogues by heart, compounded by their Oratours and ancient Rhethoricians, and many *Caphas* made by their Poets (which were impossible to learne by their Hierogliphickes and Characters) the *Mexicans* were very curious to haue their Children learne these Dialogues and compositions by heart. For the which cause they had Schooles, and as it were, Colledges or Seminaries, where the Ancients taught Children these Orations, and many other things, which they preserued amongst them by tradition from one to another, as perfectly, as if they had beene written; especially the most famous Nations had a care to haue their children (which had any inclination to be Rhetoritians, and to practise the Office of Orators) to learne these Orations by heart: So as when the *Spaniards* came into their Countrey, and had taught them to reade and write our Letters, many of the *Indians* then wrote these Orations, as some graue men doe witnesse that had read them. Which I say, for that some which shall happily reade these long and eloquent Discourses in the *Mexican* History, will easily beleeue they haue beene inuented by the *Spaniards*, and not really taken and reported from the *Indians*. But hauing knowne the certaine truth, they will giue credit (as reason is) to their Histories. They did also write these Discourses after their manner, by Characters and Images: and I haue seene for my better satisfaction, the *Pater noster*, *Aue Maria*, and *Symboll*, or generall Confession of our Faith, written in this manner by the *Indians*.

Bookes of leaues of trees heere *folium & liber*, or *codex*, from the rinde in which the Ancients writ.

Blind zeale.

Confession by picture.

And in truth whosoeuer shall see them, will wonder thereat. For, to signifie these words, *I a Sinner doe confesse my selfe*, they painted an *Indian* vpon his knees, at a religious mans feet, as one that confesseth himselfe: and for this, *To God most mightie*, they painted three faces with their Crownes, like to the Trinitie, and *To the glorious Virgin Maria*, they painted the face of

Digitized by Google

our Lady, and halfe the bodie of a little childe: and for Saint *Peter* and Saint *Paul*, heads with crownes, and a Key with a Sword: and whereas Images failed, they did set Characters, as *Wherein I haue sinned, &c.* whereby we may conceiue the quickneſſe of ſpirit of theſe *Indians*, ſeeing this manner of writing of our Prayers and matters of Faith hath not beene taught them by the *Spaniards*, neither could they haue done it, if they had not had an excellent conception of that was taught them. And I haue ſeene in *Peru*, a confeſſion of ſinnes brought by an *Indian*, written in the ſame ſort with Pictures and Characters, painting euery one of the tenne Commandements, after a certayne manner, where there were certayne markes like Ciphers, which were the ſinnes hee had committed againſt the Commandements. I nothing doubt but if any of the moſt ſufficient *Spaniards* were imployed to make memorials of the like things by by their Images and markes, they would not attayne vnto it in a whole yeere, no not in tenne.

Of Regiſters and the manner of reckoning which the *Indians* of *Peru* vſed. *Chap.* 8.

BEfore the *Spaniards* came to the *Indies*, they of *Peru* had no kind of writing, either Letters, Characters, Ciphers, or Figures, like to thoſe of *China* and *Mexico*: yet preſerued they the memory of their Antiquities, and maynteine an order in all their affaires, of Peace, Warre, and Policie, for that they were carefull obſeruers of Traditions from one to another, and the young ones learned, and carefully kept, as a holy thing, what their Superiors had told them, and taught it with the like care to their Poſteritie. Beſides this diligence, they ſupplied the want of Letters and Writings, partly by painting, as thoſe of *Mexico*, (although they of *Peru* were very groſſe and blockiſh) and partly, and moſt commonly by *Quippos*. Theſe *Quippos* are Memorials or Regiſters, made of Bowes, in the which there are diuers knots and colours, which doe ſignifie diuers things, and it is ſtrange to ſee what they haue expreſſed and repreſented by this meanes: for their *Quippos* ſerue them inſteed of *Bookes of Hiſtories, of Lawes, Ceremonies, and accounts of their affaires.* There were Officers appointed to keepe theſe *Quippos*, the which at this day they call *Quipocamayos*, the which were bound to giue an account of euery thing, as *Notaries and Regiſters* doe heere. Therefore they fully beleeued them in all things, for according to the varietie of buſineſſe, as Warres, Policies, Tributes, Ceremonies and Lands, there were ſundry *Quippos* or branches, in euery one of the which there were ſo many knots little and great, and ſtrings tyed vnto them, ſome Red, ſome Greene, ſome Blue, ſome White, and finally, ſuch diuerſitie, that euen as wee deriue an infinite number of words from the foure and twentie Letters, applying them in diuers ſorts, ſo doe they draw innumerable words from their knots, and diuerſitie of colours. Which thing they doe in ſuch a manner, that if at this day in *Peru*, any Commiſſary come at the end of two or three yeeres, to take information vpon the life of any Officer, the *Indians* come with their ſmall reckonings verified, ſaying, that in ſuch a Village they giuen him ſo many Egges which he hath not payed for, in ſuch a houſe a Henne, in another, two burthens of graſſe for his Horſe, and that he hath payed but ſo much mony, and remaineth debtor ſo much. The proofe being preſently made with theſe numbers of knots and handfuls of coards, it remaynes for a certaine teſtimonie and regiſter. I did ſee a handfull of theſe ſtrings, wherein an *Indian* woman carried written a generall confeſſion of all her life, and thereby confeſſed her ſelfe, as well as I could haue done it in written Paper. I asked her what thoſe ſtrings meant that differed from the reſt: ſhe anſwered me, they were certaine circumſtances which the ſinne required to be fully confeſſed. Beſide theſe *Quippos* of threed, they haue another, as it were a kind of writing with ſmall ſtones, by meanes whereof, they learne punctually the words they deſire to know by heart. It is a pleaſant thing to ſee the old and the impotent (with a Wheele made of ſmall ſtones) learne the *Paternoſter*, with another the *Aue Maria*, with another the Creed; and to remember what ſtone ſignifies, *Which was conceiued by the Holy Ghoſt*, and which, *Suffered vnder Pontius Pilate.*

Quippos.

Writing with ſmall ſtones.

It is a pleaſant thing to ſee them correct themſelues when they doe erre; for all their correction conſiſteth onely in beholding of their ſmall ſtones. One of theſe Wheeles were ſufficient to make me forget all that I doe know by heart. There are a great number of theſe Wheeles in the Church-yards for this purpoſe. But it ſeemes a kind of Witch-craft, to ſee another kinde of *Quippos*, which they make of graines of Mays, for to caſt vp a hard account, wherein a good Arithmetician would bee troubled with his Penne to make a diuiſion: to ſee how much euery one muſt contribute: they doe draw ſo many graines from one ſide, and adde ſo many to another, with a thouſand other inuentions. Theſe *Indians* will take their graines, and place fiue of one ſide, three of another, and eight of another, and will change one graine of one ſide, and three of another: So as they finiſh a certaine account, without erring in any point: and they ſooner ſubmit themſelues to reaſon by theſe *Quippos*, what euery one ought to pay, then wee can doe with the Penne. Heereby wee may judge if they haue any vnderſtanding, or bee brutiſh: for my part, I thinke they paſſe vs in thoſe things, whereunto they doe apply themſelues.

Accounts by graines of Mays.

Of the order the *Indians* hold in their Writings. *Ch.* 9.

IT shall be good to adde hereunto what we haue obserued, touching the *Indians* Writings: for their manner was not to write with a continued line, but from the top to the bottome, or in circle-wise. The *Latines* and *Greekes* doe write from the left hand vnto the right, which is the vulgar and common manner wee doe vse. The *Hebrewes* contrariwise beganne at the right to the left, and therefore their Bookes began where ours did end. The *Chinois* write neither like the *Greekes* nor like the *Hebrewes*, but from the top to the bottome, for as they bee no Letters but whole words, and that euery figure and Character signifieth a thing, they haue no neede to assemble the parts one with another, and therefore they may well write from the toppe to the bottome. Those of *Mexico*, for the same cause did not write in line, from one side to another, but contrary to the *Chinois*, beginning below, they mounted vpward. They vsed this manner of writing, in the account of their dayes, and other things which they obserued: Yet when they did write in their Wheeles or Signes, they began from the middest where the Sunne was figured, and so mounted by their yeeres vnto the round and circumference of the Wheele.

Diuers manners of writing.

By words, Pictures, and these Memorialls, the Kings were often aduertised of that which passed. For this cause there were men of great agilitie, which serued as Curriers, to goe and come, whom they did nourish in this exercise of Running from their youth, labouring to haue them well breathed, that they might runne to the top of a high Hill without wearinesse. And therefore in *Mexico* they gaue the Prize to three or foure that first mounted vp the stayres of the Temple, as hath beene said in the former Booke. And in *Cusco*, when they made their Solemne Feast of *Capacraymi*, the Nouices did runne who could fastest vp the Rocke of *Tnacaui*. And the exercise of running is generall; much vsed among the *Indians*. When as there chanced any matter of importance, they sent vnto the Lords of *Mexico*, the thing painted, whereof they would aduertise them, as they did when the first *Spanish* ships appeared to their sight, and when they tooke *Topancban*. In *Peru* they were very curious of Footmen, and the *Ingua* had them in all parts of the Realme, as ordinary Posts called *Chasquis*, whereof shall bee spoken in his place.

Diuers formes of gouernment.

Many Nations of the *Indies* haue not indured any Kings, or absolute and souereigne Lords, but liue in Comminalties, creating and appointing Captaynes and Princes, for certayne occasions onely, to whom they obey during the time of their charge; then after they returne to their former estates. The greatest part of this New World (where there are no setled Kingdomes, nor established Common-weales, neither Princes nor succeeding Kings) they gouerne themselues in this manner, although there bee some Lords and principall men raised aboue the common sort. In this sort the whole Countrey of *Chille* is gouerned, where the *Auracanes*, those of *Teucapell* and others, haue so many yeeres resisted the *Spaniards*. And in like sort all the new Kingdome of *Granado*, that of *Guatimalla*, the Ilands, all *Florida*, *Brefil*, *Luson*, and other Countreyes of great circuit: but that in some places they are yet more barbarous, scarcely acknowledging any head, but all command and gouerne in common, hauing no other thing, but will, violence, industry and disorder, so as hee that most may most commands.

Whether the *Mexican* or *Peru* Kingdome was greater.

They haue onely found two Kingdomes or setled Empires, that of the *Mexicans* in New *Spaine*, and of the *Inguas* in *Peru*. It is not easie to be said, which of the two was the mightiest Kingdome, for that *Motezuma*, exceeded them of *Peru*, in Buildings, and in the greatnesse of his Court: but the *Inguas*, did likewise exceed the *Mexicans*, in treasure, riches, and greatnesse of Prouinces. In regard of Antiquitie, the Monarchie of the *Inguas*, hath the aduantage, although it be not much, and in my opinion, they haue beene equall in feats of Armes and Victories. It is most certaine, that these two Kingdomes haue much exceeded all the *Indian* Prouinces, discouered in this New World, as well in good order and gouernment, as in power and wealth, and much more in Superstition and Seruice of their Idols, hauing many things like one to another But in one thing they differed much, for among the *Mexicans*, the succession of the Kingdome, was by election, as the Empire of the *Romanes*, and that of *Peru*, was hereditary, and they succeeded in bloud, as the Kingdomes of *France* and *Spaine*.

Of the gouernment of the Kings and *Inguas* of *Peru*. *Chap.* 12.

THe *Ingua* which ruled in *Peru*, being dead, his lawfull Sonne succeeded him, and so they held him that was borne of his chiefe Wife, whom they called *Coya*. The which they haue alwayes obserued since the time of an *Ingua*, called *Tupangui*, who married his sister: for these Kings held it an honour to marrie their Sisters. And although they had other Wiues and Concubines, yet the succession of the Kingdome appertayned to the Sonne of *Coya*. It is true, that when the King had a legitimate Brother, he succeeded before the Sonne, and after him his Nephew, and Sonne to the first. The *Curacas*, and Noblemen, held the same order of succession in their goods and Offices. And after their manner they made excessiue Ceremonies, and obsequies for the dead. Being dead, they presently held him for a God, making Sacrifices vnto him, Images and such like. By this meanes, there was infinite Treasure in *Peru*: for euery one of the *Inguas*, had laboured to haue his Oratorie and Treasure surpasse that of his Predecessors. The marke or ensigne, whereby they tooke possession of the Realme, was a *red roll of Woell*, more then fine silke, the which hung in the middest of his forehead: and none but the *Ingua* alone might

Incestuous Marriages.

Diadem.

weare

weare it, for that it was as a Crowne and Royall Diademe: yet they might lawfully weare a Roll hanging on the one ſide, neere vnto the eare, as ſome Noblemen did, but onely the *Ingua* might carrie it in the middeſt of his forehead. At ſuch time as they tooke this Roll or Wreathe, they made ſolemne Feaſts, and many Sacrifices, with a great quantitie of veſſell of Gold, and Siluer, a great number of ſmall formes or Images of ſheepe, made of Gold and Siluer, great abundance of the ſtuffes of *Cumby*, well wrought, both fine and courſer, many ſhels of the Sea of all ſorts, many feathers, and a thouſand ſheepe, which muſt bee of diuers colours. Then the chiefe Prieſt tooke a young Childe in his hands, of the age of ſixe or eight yeeres, pronouncing theſe words with the other Miniſters ſpeaking to the Image of *Vtracocha*, *Lord we offer this vnto thee, that thou mayeſt mayntayne vs in quiet, and helpe vs in our warres, mayntaine our Lord the* Ingua *in his greatneſſe and eſtate, that hee may alwayes increaſe, giuing him much knowledge to gouerne vs.*

There were preſent at this Ceremonie and Oath, men of all parts of the Realme, and of all *Guacas* and Sanctuaries. And without doubt, the affection and reuerence which this people bare to their Kings *Ingas*, was very great, for it is neuer found that any one of his ſubiects committed Treaſon againſt him, for that they proceeded in their gouernments, not only with an abſolute power, but alſo with good order and Iuſtice, ſuffering no man to bee oppreſſed: The *Ingua* placed Gouernours in diuers Prouinces, amongſt the which, ſome were Superiours, and did acknowledge none but himſelfe, others were of leſſe command, and others more particular, with ſo goodly an order, and ſuch grauitie, as no man durſt be drunke, nor take an eare of Mays from his Neighbour. Theſe *Ingas* held it for a Maxime, that it was neceſſary to keepe the *Indians* alwayes in action: and therefore we ſee it to this day, long cawſies and workes of great labour, the which they ſay were made to exerciſe the *Indians*, leſt they ſhould remayne idle. When hee conquered any new Prouince, hee was accuſtomed preſently to ſend the greateſt part, and the chiefe of that Countrey into other Prouinces, or elſe to his Court, and they call them at this day in *Peru*, *Mitimas*, and in their places he ſent others of the Nation of *Cuſco*, eſpecially the *Orejones*, which were as Knights of an ancient houſe. They puniſhed faults rigorouſly. And therefore ſuch as haue any vnderſtanding hereof, hold opinion, that there can be no better gouernment for the *Indians*, nor more aſſured, then that of the *Ingas*.

Exact Iuſtice.

No idleneſſe permitted.

Tranſmigration.

TO relate more particularly what I haue ſpoken before, you muſt vnderſtand, that the diſtribution which the *Ingas* made of their vaſſals, was ſo exact and diſtinct, as hee might gouerne them all with great facilitie, although his Realme were a thouſand leagues long: for hauing conquered a Prouince, he preſently reduced the *Indians* into Townes and Comminalties, the which he diuided into bands, he appointed one to haue the charge ouer euery ten *Indians*, ouer euery hundred another, ouer euery thouſand another, and ouer ten thouſand another, whom they called *Hunos*, the which was one of the greateſt charges. Yet aboue all in euery Prouince, there was a Gouernour of the houſe of the *Ingas*, whom all the reſt obeyed, giuing vnto him euery yeere particular account of what had paſſed, that is, of ſuch as were borne, of thoſe that were dead and of their troupes and graine. The Gouernours went euery yeere out of *Cuſco*, where they remayned, and returned to the great Feaſt of *Raymi*, at the which, they brought the tribute of the whole Realme to the Court; neither might they enter but with this condition. All the Kingdome was diuided into foure parts, which they called *Tahuantinſuyo*, that is, *Chinchaſuyo*, *Collaſuyo*, *Andeſuyo*, and *Condeſuyo*, according to the foure wayes which went from *Cuſco*, where the Court was reſident, and where the generall aſſemblies of the Realme were made. Theſe waies and Prouinces being anſwerable vnto them, were towards the foure quarters of the world; *Collaſuyo* to the South, *Chinchaſuyo* to the North, *Condeſuyo* to the Weſt, and *Andeſuyo* to the Eaſt. In euery Towne and Village, there were two ſorts of people, which were of *Hanaunſaya*, and *Vrinſaya*, which is as much to ſay, as *thoſe aboue*, and *thoſe below*. When they commanded any worke to be done, or to furniſh any thing to the *Ingua*, the Officers knew preſently how much euery Prouince, Towne, and Family, ought to furniſh: ſo as the diuiſion was not made by equall portions, but by Cottization, according to the qualities and wealth of the Countrey. So as for example, if they were to gather a hundred thouſand *Fanegues* of Mays, they knew preſently how much euery Prouince was to contribute, were it a tenth, a ſeuenth, or a fift part. The like was of Townes and Villages, *Aillos*, or Linages. The *Quipocamayos*, which were the Officers and Intendants, kept the account of all with their ſtrings and knottes, without fayling, ſetting downe what euery one had payed, euen to a Henne, or a burthen of wood, and in a moment they did ſee by diuers Regiſters what euery one ought to pay.

Of the diſtribution the *Ingas* made of their Vaſſals. *Chap.* 13.

Gouernours.

Tribute yeerely paid at *Cuſco*.

Fourefold prouinciall partition.

THe Edifices and Buildings which the *Ingas* made in Temples, Fortreſſes, wayes, Countrey houſes, and ſuch like, were many in number, and of an exceſſius labour, as doth appeare at this day by their ruines and remaynders, both in *Cuſco*, *Tyaguanaco*, *Tambo*, and other places, where there are ſtones of an vnmeaſurable greatneſſe: as men cannot conceiue how they were

Of the Edifices and manner of building of the *Ingas*. *Chap.* 14.

cut, brought and ſet in their places. There came great numbers of people from all Prouinces, to worke in theſe Buildings and Fortreſſes, which the *Ingua* cauſed to bee made in *Cuſco*, or other parts of the Realme. As theſe Workes were ſtrange, and to amaze the beholders, wherein they vſed no Morter nor Ciment, neither any Iron, or Steele, to cut, and ſet the ſtones in worke. They had no Engines or other Inſtruments to carrie them, and yet were they ſo artificially wrought, that in many places they could not ſee the ioynts: and many of theſe ſtones are ſo bigge, that it were an incredible thing, if one ſhould not ſee them. At *Tiaguanaco*, I did meaſure a ſtone of thirtie eight foot long, of eighteene broad, and ſixe thicke. And in the wall of the Fortreſſe of *Cuſco*, which is of *Moallon*, there are ſtones of a greater bigneſſe. And that which is moſt ſtrange, theſe ſtones being not cut nor ſquared to ioyne, but contrariwiſe, very vnequall one with another in forme and greatneſſe, yet did they ioyne them together without Ciment, after an incredible manner. All this was done by the force of men, who endured their labour with an inuincible patience. For to ioyne one ſtone with another, they were forced to handle and trie many of them often, being vneuen. The *Ingua* appointed euery yeere what numbers of people ſhould labour in theſe ſtones and buildings, and the *Indians* made a diuiſion amongſt them, as of other things, ſo as no man was oppreſſed. Although theſe Buildings were great, yet were they commonly ill appointed and vnfit, almoſt like to the Moſquites or Buildings of the Barbarians.

Neat art in ioyning huge ſtones.

Arches.

They could make no Arches in their Edifices, nor Morter or Ciment to build them withall: when they ſaw Arches of wood built vpon the Riuer of *Xaura*, the Bridge being finiſhed, and the wood broken downe, they all began to runne away, ſuppoſing that the Bridge which was of ſtone ſhould preſently fall; but when they found it to ſtand firme, and that the *Spaniards* went on it, the *Cacique* ſaid to his companions; *It is reaſon we ſhould ſerue theſe men, who in truth ſeeme to be the children of the Sunne.* The Bridges they made were of Reedes pleited, which they tyed the bankes with great ſtakes, for that they could not make any Bridges of ſtone or wood. The Bridge which is at this day vpon the current of the great Lake *Chiquitto* in *Collao* is admirable; for the courſe of that water is ſo deepe, as they cannot ſettle any foundation, and ſo broad, that it is impoſſible to make an Arch to paſſe it: ſo as it was altogether impoſſible to make a Bridge either of wood or ſtone. But the wit and induſtry of the *Indians* inuented a meanes to make a firme and aſſured Bridge being only of ſtraw, which ſeemeth fabulous, yet is it very true: For as we haue ſaid before, they did binde together certaine bundles of Reeds, and Weeds, which doe grow in the Lake that they call *Totora*, and being a light matter that ſinkes not in the water, they caſt it vpon a great quantitie of Reeds, then hauing tyed thoſe bundles of Weedes to either ſide of the Riuer, both men and beaſts goe ouer it with eaſe: paſſing ouer this Bridge I haue wondred, that of ſo common and eaſie a thing, they had made a Bridge, better, and more aſſured then the Bridge of Boates from *Seuille* to *Triane*. I haue meaſured the length of this Bridge, and as I remember, it was aboue three hundred foote; and they ſay that the depth of this Current is very great: and it ſeemes aboue, that the water hath no motion, yet they ſay, that at the bottome it hath a violent and very furious courſe. And this ſhall ſuffice for Buildings.

Bridges.

Straw Bridge.

Of the *Inguas* reuenues, and the order of Tributes they impoſed vpon the *Indians*. *Chap.* 15.

THe *Inguas* riches was incomparable, for although no King did inherit the riches and treaſure of his Predeceſſor, yet had he at command, all the riches of his Realmes, aſwell Siuer and Gold, as the ſtuffe of *Cumbi*, and cattell, wherein they abounded, and their greateſt riches of all, was their innumerable number of vaſſals, which were all imployed as it pleaſed the King. They brought out of euery Prouince what he had choſen for tribute. The *Chicas* ſent him ſweet and rich woods; the *Lucanas* ſent Brancars to carry his Litter; The *Chumbiluicas*, Dancers; and ſo the other Prouinces ſent him what they had of abundance, beſides their generall Tribute, whereunto euery one contributed. The *Indians* that were noted to that end, laboured in the Mynes of Gold and Siluer, which did abound in *Peru*, whom the *Ingua* entertained with all they needed for their expences: and whatſoeuer they drew of Gold and Siluer, was for him. By this meanes there were ſo great treaſures in this Kingdome, as it is the opinion of many, that what fell in the hands of the *Spaniards*, (although it were very much, as wee know) was not the tenth part of that which they hid and buried in the ground, the which they could neuer diſcouer, notwithſtanding all the ſearch couetouſneſſe had taught them. But the greateſt wealth of theſe barbarous people, was, that their vaſſals were all ſlaues, whoſe labour they vſed at their pleaſure: and that which is admirable, they employed them in ſuch ſort, as it was no ſeruitude vnto them, but rather a pleaſing life. But to vnderſtand the order of Tributes which the *Indians* payed vnto their Lord, you muſt know, that when the *Ingua* conquered any Cities, he diuided all the Land into three parts, the firſt was, for Religion and Ceremonies, ſo as the *Pachayachaqui*, which is the *Creator*, and the *Sunne*, the *Chuquilla*, which is the *Thunder*, the *Pachamama*, and the dead, and other *Guacas* and Sanctuaries, had euery one their proper Lands, the fruits whereof were ſpoyled and conſumed in Sacrifices, and in the nouriſhing of Miniſters and Prieſts; for there were *Indians* appointed for euery *Guaca*, and Sanctuarie, and the

All ſlaues and none.

Lands ſacred.

Digitized by Google

the greatest part of this reuenue was spent in *Cusco*, where was *the vniuersall and generall sanctuarie*, and the rest in that Citie, where it was gathered: for that after the imitation of *Cusco*, there were in euery Citie, *Guacas*, and Oratories of the same, order, and with the same functions, which were serued after the same manner and ceremonies to that of *Cusco*, which is an admirable thing, and they haue found it by proofe in aboue a hundred Townes, some of them distant aboue two hundred leagues from *Cusco*. Order in their Religion.

That which they sowed or reapt vpon their Land, was put into houses, as Granaries or storehouses, built for that effect, and this was a great part of the Tribute which the *Indians* paied. I cannot say how much this part amounted vnto, for that it was greater in some parts then in other, and in some places it was in a manner all: and this part was the first they put to profit. The second part of these Lands and inheritances was for the *Ingua*, wherewith he and his household were entertained, with his kinsfolks, Noblemen, Garrisons and Souldiers. And therefore it was the greatest portion of these tributes, as it appeareth by the quantity of Gold, Siluer, and other Tributes, which were in houses appointed for that purpose, being longer and larger then those where they keepe the reuenues of the *Guacas*. They brought this Tribute verie carefully to *Cusco*, or vnto such places where it was needefull for the Souldiers, and when there was store, they kept it ten or twelue yeares, vntill a time of necessitie. The *Indians* tilled and put to profit the *Inguas* Lands, next to those of the *Guacas*; during which time they liued and were nourished at the charges of the *Ingua*, of the Sunne, or of the *Guacas*, according to the Land they laboured. But the old men, women, and sicke folkes were reserued and exempt from this Tribute, and although whatsoeuer they gathered vpon those Lands were for the *Ingua*, the Sunne, or the *Guacas*, yet the propertie appertained vnto the *Indians* and their successours. The third part of these Lands were giuen by the *Ingua* for the Comminaltie, and they haue not yet discouered, whither this portion were greater, or lesse, then that of the *Ingua* or *Guacas*. It is most certaine they had a care and regard, it might be sufficient for the nourishment of the people. No particular man possessed any thing proper to himselfe of this third portion, neither did the *Indians* euer possesse any, if it were not by speciall grace from the *Ingua*: and yet might it not be engaged nor diuided amongst his heires. They euerie yeare diuided these Lands of the comminaltie, in giuing to euery one, that which was needefull for the nourishment of their persons and families. And as the familie increased or diminished, so did they encrease or decrease his portion, for there were measures appointed for euerie person. The *Indians* paied no tribute of that which was apportioned vnto them: For all their tribute was to till and keepe in good order the Lands of the *Ingua*, and the *Guacas*, and to lay the fruits thereof in their store-houses. When the yeare was barren, they gaue of these frnits thus reserued to the needie, for that there is alwaies superabundance. The *Ingua* did likewise make destribution of the cattell as of the Lands, which was to number and diuide them; then to appoint the pastures and limits, for the cattell belonging to the *Guacas*, and to the *Ingua*, and to euerie Town: and therefore one portion of their reuenues was for religion, another for the *Ingua*, and the third for the *Indians* themselues. The like order was obserued among the hunters, being forbidden to take or kill any females. The troupes of the *Inguas* and *Guacas*, were in great numbers and verie fruitfull; for this cause they called them *Kapaellama*, but those of the common and publike, were few in number and of small value, and therefore they called them *Bacchallama*. The *Ingua* tooke great care for the preseruation of Cattell, for that it hath beene, and is yet, all the wealth of the Countrie, and as it is said, they did neither sacrifice any females, nor kill them, neither did they take them when they hunted. If the mangie or the scuruie which they call *Carache* take anie beast, they were presently commanded to burie it quicke, lest it should infect others. They did sheare their cattell in their season, and distributed to euerie one to spinne and weaue Stuffes for the seruice of his Family. They had *searchers* to examine if they did employ themselues in these workes, and to punish the negligent. They made Stuffes of the wooll of the *Inguas* cattell, for him and for his family, one sort very fine, which they called *Cumbi*, and another grosser, which they likewise called *Abasca*. There was no certaine number of these Stuffes and garment, appointed, but what was deliuered to euery one. The wooll that remained was put into the storehouses, whereof the *Spaniards* found them full, and with all other things necessary for the life of man. There are few men of iudgement but doe admire at so excellent & well setled a gouernment, seeing the *Indians* (being neither religious, nor Christians) maintained after their manner, this perfection, nor to hold any thing proper, and to prouide for all their necessities, entertaining with such abūdance matters of Religion, & that which concerned their King & Lord.

THe *Indians* of *Peru* had one perfection, which was, to teach their children all arts and occupations necessary for the life of man; for that there were no particular Trades-men, as amongst vs, Taylers, Shoomakers, Weauers, and the rest, but euery one learned what was needefull for their persons and houses, and prouided for themselues. All could weaue and make their garments, and therefore the *Ingua* furnishing them with wooll, gaue them cloathes. Euery man could till the ground, and put it to profit, without hyring of any labourers. All built their own houses

Of Arts and offices which the *Indians* did exercise. *Ch.* 16.

All men of all trades.

houses, and the women, which vnderstood most were not brought vp in delights, but serued their Husbands carefully. Other Arts and Trades which were not ordinary and common for the life of man, had their proper Companies and workemen, as *Goldsmiths*, *Painters*, *Potters*, *Watermen*, and *players of Instruments*. There were also *Weauers* and workemen for exquisite workes, which the Noblemen vsed: but the common people, as hath beene said, had in their houses all things necessary, hauing no neede to buy. This continues to this day, so as they haue no neede one of another for things necessary: touching his person and family, as shooes and garments, and for their house, to sowe and reape, and to make Iron workes, and necessarie instruments. It is worthy obseruation, although the *Indians* be simple in their manner and habits, yet doe we see great diuersitie amongst the Prouinces, especially in the attire of their head, for in some places they carried a long peece of cloath, which went often about, in some places a large peece of cloath, which went but once about, in some parts as it were little morters or hats, in some others as it were high and round Bonets, and some like the bottome of sacks, with a thousand other differences. They had a straight and inuiolable law, that no man might change the fashion of the garments of his Prouince, although he went to liue in another. This the *Ingua* held to be of great importance for the order and good gouernment of his Realme, and they doe obserue it to this day, though not with so great a care as they were accustomed.

Diuersitie of head-tire.

Vniformity of habit.

THere were many Posts and couriers which the *Ingua* maintained throughout his Realme, whom they called *Chasquis*, and they carried commandements to the Gouernours, and returned their aduises and aduertisements to the Court. These *Chasquis* were placed at euery course, which was a league and a halfe one from another in two small houses, where were foure *Indians* of euery Country, and they were changed monthly. Hauing receiued the packet or message, they ranne with all their force vntill they had deliuered it to the other *Chasquis*, such as were ao runne, being ready and watchfull. They ran fiftie leagnes in a day and night, although the greatest part of that Countrie be very rough. They serued also to carry such things as the *Ingua* desired to haue with speede. Therefore they had alwaies Sea-fish in *Cusco*, of two daies old or little more, although it were aboue a hundred leagues off. Since the *Spaniards* entred, they haue vsed of these *Chasquis*, in time of seditions, whereof there was great neede. *Don Martin* the Viceroy appointed ordinary Posts at euery foure leagues, to carry and recarry dispatches, which were very necessary in this Realme, though they run not so swiftly as the ancients did, neither are there so many, yet they are well paied, and serue as the ordinaries of *Spaine*, to whom they giue Letters which they carry foure or fiue leagues.

Of the Posts and *Chasquis* the *Indians* did vse. *Chap.* 17.

EVen as such as had done any good seruice in warre, or in the gouernment of the Commonweale were honoured and recompensed with publike charges, with Lands giuen them in proper, with armes and titles of honour, and in marrying wiues of the *Inguas* linage: Euen so they gaue seuere punishments to such as were disobedient and offenders. They punished murther, theft, and adultery, with death, and such as committed incest with ascendants or descendants in direct line, were likewise punished with death. But they held it no adultery to haue many wiues or concubines, neither were the women subiect to the punishment of death, being found with any other, but onely she that was the true and lawfull wife, with whom they contracted marriage; for they had but one whom they did wedde and receiue with a particular solemnitie and ceremonie, which was in this manner: The Bridegroome went to the Brides house, and led her from thence with him, hauing first put an *Ottoya* vpon her foote. They call the shooe which they vse in those parts *Ottoya*, being open like the *Franciscan* Friars. If the Bride were a maide, her *Ottoya* was of Wooll, but if she were not, it was of Reedes. All his other wiues and concubines did honour and serue this as the lawfull wife, who alone after the decease of her husband carried a mourning weede of blacke, for the space of a yeare; neither did she marry vntill that time were past; and commonly she was yonger then her husband. The *Ingua* himselfe with his owne hand gaue this woman to his Gouernours and Captaines; and the Gouernours or *Caciques*, assembled all the yong men and maides, in one place of the Citie, where they gaue to euerie one his wife with the aforesaid ceremonie, in putting on the *Ottoya*, and in this manner they contracted their marriages. If this woman were found with any other then her husband, she was punished with death, and the adulterer likewise: and although the husband pardoned them, yet were they punished, although dispensed withall from death. They inflicted the like punishment on him that did commit incest with his Mother, Grandmother, Daughter, or Grandchilde: for it was not prohibited for them to marrie together, or to haue of their other kinsfolke for concubines; onely the first degree was defended, neither did they allow the brother to haue the company of his sister, wherein they of *Peru* were very much deceiued, beleeuing that their *Inguas* and Noblemen might lawfully contract marriage with their sisters, yea by father and mother: for in truth it hath beene alwaies held vnlawfull among the *Indians*, and defended to contract in the first degree; which continued vntill the time of *Topa Ingua Yupangui* father to *Guaynacapa*, and grandfather to *Atabualpa*, at such time as the *Spaniards* entred

Of the Iustice, Lawes, and punishments which the *Inguas* haue established, and of their mariages *Chap.* 18.

Adultery.

Marriage solemnitie.

Incest forbidden.

entred *Peru*; for that *Topa Ingua Yupangui*, was the first that brake this custome, marrying with *Mamaoello*, his sister by the fathers side, decreeing that the *Inguas* might marrie with their sisters by the fathurs side, and no other.

This he did, and by that marriage he had *Guaynacapa*, and a daughter called *Coya Cussillimay*: finding himselfe at the point of death, he commanded his children by father and mother to marrie together, and gaue permission to the Noblemen of his Countrie, to marrie with their sisters by the fathers side. And for that this marriage was vnlawfull, and against the law of nature, God would bring to an end this Kingdome of the *Inguas*, during the raigne of *Guascar Ingua*, and *Atabualpa Ingua*, which was the fruite that sprang from this marriage. Who so will more exactly vnderstand the mannor of marriages among the *Indians* in *Peru*, let him reade the Treatise *Polo* hath written at the request of *Don Ieronimo Loaisa* Archbishop of *Kings*: which *Polo* made a very curious search, as he hath done of diuers other things at the *Indies*.

Of the Originall of the *Inguas* Lords of *Peru*, with their Conquests and Victories. *Chap.* 19.

BY the commandement of *Don Phillip* the Catholike King, they haue made the most diligent and exact search that could be, of the beginning, customes, and priuiledges of the *Inguas*, the which was not so perfectly done as was desired: for that the *Indians* had no written Records: yet the haue recouered that which I shall write, by meanes of their *Quippos* and Registers. First there was not in *Peru* in old time, any King or Lord to whom all obeyed, but they were Comminalties, as at this day there is in the Realme of *Chille*, and in a manner, in all the Prouinces which the *Spaniards* haue conquered in those Westerne *Indies*, except the Realme of *Mexico*. You must therefore vnderstand, that they haue found three manner of Gouernements at the *Indies*. The first and best, was a Monarchie, as that of the *Inguas*, and of *Motecuma*, although for the most part they were tyrannous. The second was of Comminalties, where they were gouerned by the aduise and authority of many, which are as it were Counsellors. These in time of warre, made choise of a Captaine, to whom a whole Nation or Prouince did obey, and in time of peace, euery Towne or Comminalty did rule and gouerne themselues, hauing some chiefe men whom the vulgar did respect, and sometime (though not often) some of them assemble together about matters of importance, to consult what they should thinke necessary. The third kinde of Gouernment, is altogether barbarous, composed of *Indians* without Law, without King, and without any certaine place of abode, but goe in troopes like sauage beasts. As farre as I can conceiue, the first Inhabitants of the *Indies*, were of this kinde, as at this day a great part of the *Brasilians*, *Chiraguanas*, *Chunchos*, *Tscycingas*, *Pilcocones*, and the greatest part of the *Floridians*, and all the *Chichimaquas* in new *Spaine*. Of this kinde the other sort of gouernment by Comminalties was framed, by the industry and wisdome of some amongst them, in which there is some more order, holding a more staied place, as at this day those of *Auracano*, and of *Teucapell* in *Chille*, and in the new Kingdome of *Grenado*, the *Moscas*, and the *Ottomittes* in new *Spaine*: and in all these there is lesse fiercenesse and inciuilitie, & much more quiet then in the rest. Of this kinde, by the valor & knowledg of some excellent men, grew the other gouernment more mighty and potent, which did institute a Kingdome and Monarchy.

Continuance of their Monarchy.

It appeares by their Registers, that their Gouernment hath continued aboue three hundred yeares, but not fully foure, although their Seigniorie for a long time, was not aboue fiue or six leagues compasse about the Citie of *Cusco*: their originall and beginning was in the valley of *Cusco*: where by little and little they conquered the Lands which we call *Peru*, passing beyond *Quitto*, vnto the riuer of *Pasto* towards the North, stretching euen vnto *Chille*, towards the South, which is almost a thousand leagues in length. It extended in breadth vnto the South Sea towards the West, and vnto the great champains which are on the other side of the *Andes*, where at this day is to be seene the Castell which is called the *Pucara* of the *Ingua*, the which is a fortresse built for the defence of the frontire towards the East. The *Inguas* aduanced no farther on that side, for the abundance of water, Marshes, Lakes, and Riuers, which runne in those parts.

Strife twixt *Inguas* and *Canaries*.

These *Inguas* passed all other Nations of *America*, in pollicie and gouernment, and much more in valour and armes, although the *Canaries* which were their mortall enemies, and fauoured the *Spaniards*, would neuer confesse it, nor yeelde them this aduantage: so as euen at this day, if they fall into any discourse or comparisons, and that they be a little chased and incensed, they kill one another by thousands vpon this quarrell, which are the most valiant, as it hath happened in *Cusco*. The practise and meanes which the *Inguas* had to make themselues Lords of all this Countrie, was in faining that since the generall deluge (whereof all the *Indians* haue knowledge) the world had beene preserued, restored, and peopled by these *Inguas*, and that seuen of them came forth of the Caue of *Pacaricambo*, by reason whereof, all other men ought them tribute and vassalage, as their progenitors. Besides they said and affirmed, that they alone held the true religion, and knew how God should be serued and honoured: and for this cause they should instruct all men. It is a strange thing, the ground they giue to their customes and ceremonies. There were in *Cusco* aboue *foure hundred Oratories*, as in a holy land, and all places were filled with their misteries. As they continued in the conquests of Prouinces, so they brought in the like ceremonies and customes. In all this Realme the chiefe Idols

400. Oratories in *Cusco*.

they

they did worship, were *Viracocha*, *Pachayachachic*, which signifies *the Creator* of the World, and after him, *the Sunne*. And therefore they said, that the Sunne receiued his vertue and being from the Creator, as the other Idols doe, and that they were intercessors to him.

Of the first *Ingua*, and his Successors. *Chap.* 20.

THe first man which the *Indians* report to be the beginning and first of the *Inguas*, was *Mangocapa*, whom they imagine, after the deluge, to haue issued forth of the Caue of *Tambo*, which is from *Cusco* about fiue or sixe leagues. They say that hee gaue beginning to two principall Races or Families of the *Inguas*, the one was called *Hanancusco*, and the other *Vrincusco*: of the first came the Lords which subdued and gouerned this Prouince, and the first whom they make the Head and Stemme of this Familie, was called *Ingaroca*, who founded a Familie or *Aillo*, as they call them, named *Viçaquiquirao*. This although he were no great Lord, was serued notwithstanding in vessell of gold and siluer. And dying, he appointed that all his treasure should be imployed for the seruice of his Body, and for the feeding of his Familie. His Successor did the like: and this grew to a generall custome, as I haue said, that no *Ingua* might inherit the goods and house of his Predecessor, but did build a new Palace. In the time of this *Inguaroca*, the *Indians* had Images of gold; and to him succeeded *Yaguarguaque*, a very old man: they say, hee was called by this name, which signifies *teares of blood*, for that being once vanquished and taken by his Enemies, for griefe and sorrow hee wept bloud. Hee was buried in a Village called *Paullo*, which is vpon the way to *Omasuyo*: he founded a Familie called *Aocuillipanaca*. To him succeeded his sonne *Viracocha Ingua*, who was very rich, and made much vessell of gold and siluer: he founded the Linage or Familie of *Cocopanaca*. *Gonçales Piçarro* sought out his body, for the report of the great treasure buried with him, who after hee had cruelly tormented many *Indians*, in the end he found it in *Xaquixaquana*, where as they said *Piçarro* was afterwards vanquished, taken, and executed by the President *Guasca*. *Gonçales Piçarro* caused the body of *Viracocha Ingua* to be burnt; the *Indians* did afterwards take the ashes, the which they preserued in a small vessell, making great sacrifices thereunto, vntill *Polo* did reforme it, and other Idolatries which they committed vpon the bodies of their other *Inguas*, the which hee suppressed with an admirable diligence and dexteritie, drawing these bodies out of their hands, being whole, and much imbalmed, whereby hee extinguished a great number of Idolatries which they committed. The *Indians* tooke it ill, that the *Ingua* did intitle himselfe *Viracocha*, which is the name of their God: and he to excuse himselfe, gaue them to vnderstand, that the same *Viracocha* appeared to him in his dreame, commanding him to take this name. To him succeeded *Pachacuti Ingua Yupangui*, who raigned seuentie yeeres, and conquered many Countries. The beginning of his conquests, was by meanes of his eldest brother, who hauing held the gouernment in his fathers time, and made warre by his consent, was ouer-throwne in a battaile against the *Changuas*, a Nation which inhabites the Valley of *Andaguaylas*, thirtie or fortie leagues from *Cusco*, vpon the way to *Lima*. This elder brother thus defeated, retyred himselfe with few men. The which *Ingua Yupangui*, his younger brother seeing, deuised and gaue forth, that being one day alone and melancholy, *Viracocha* the Creator spake to him, complayning, that *though hee were vniuersall Lord and Creator of all things, and that he had made the Heauen, the Sunne, the World, and Men, and that all was vnder his command, yet did they not yeeld him the obedience they ought, but contrariwise did equally honour and worship the Sunne, Thunder, Earth, and other things, which had no vertue but what he imparted vnto them:* giuing him to vnderstand, that in heauen where hee was, they called him *Viracocha Pachayachachic*, which signifieth *vniuersall Creator*; and to the end the *Indians* might beleeue it to be true, he doubted not although hee were alone, to raise men vnder this title, which should giue him victorie against the *Changuas*, although they were then victorious, and in great numbers; and make himselfe Lord of those Realmes, for that hee would send him men to his aide inuisibly, whereby he preuayled in such sort, that vnder this colour and conceit, he began to assemble a great number of people, whereof he made a mightie Armie, with the which he obtayned the victorie, making himselfe Lord of the whole Realme, taking the gouernment from his father and brother. Then afterwards he conquered and ouer-threw the *Changuas*, and from that time commanded that *Viracocha* should be held for vniuersall Lord, and that the Images of the Sunne and Thunder, should doe him reuerence and honor: And from that time they began to set the Image of *Viracocha* aboue that of the Sunne and Thunder, and the rest of the *Guacas*. And although this *Ingua Yupangui* had giuen Farmes, Lands, and Cattell to the Sunne, Thunder, and other *Guacas*, yet did he not dedicate any thing to *Viracocha*, saying, that he had no neede, being vniuersall Lord and Creator of all things. Hee informed his Souldiers after this absolute victorie of the *Changuas*, that it was not they alone that had conquered them, but certaine bearded men, whom *Viracocha* had sent him, and that no man might see them but himselfe, which were since conuerted into stones; it was therefore necessarie to seeke them out, whom he would know well. By this meanes he gathered together a multitude of stones in the Mountaines, whereof he made choice, placing them for *Guacas*, or Idols, they worshipped and sacrificed vnto; they called them *Pururaucas*, and carried them to the warre with great deuotion, beleeuing for certaine, that they had gotten the victorie by their helpe. The imagination

and

and fiction of this *Ingua* was of such force, that by the meanes thereof hee obtayned goodly victories: He founded the Familie called *Tuacapanaca*, and made a great Image of gold, which hee called *Indyllapa*, which he placed in a Brancard of gold, very rich, and of great price, of the which gold the *Indians* tooke great store to carry to *Xaxamalca*, for the libertie and ransome of *Atabalpa*, when the Marquesse *Francis Piçarre* held him prisoner. The Licenciate *Polo* found in his house in *Cusco*, his seruants and *Mamacomas*, which did seruice to his memorie, and found that the body had beene transported from *Patallacta* to *Totocache*, where the *Spaniards* haue since founded the Parish of Saint *Blaise*. This body was so whole and preserued with a certaine Rosin, that it seemed aliue, he had his eyes made of a fine cloth of gold, so artificially set, as they seemed very naturall eyes, he had a blow with a stone on the head, which he had receiued in the warres, hee was all grey and hayrie, hauing lost no more haire then if he had dyed but the same day, although it were seuentie and eight yeeres since his decease. The foresaid *Polo* sent this body with some others of the *Inguas*, to the Citie of *Lima*, by the Vice-royes command which was the Marquesse of *Canette*, and the which was very necessarie to roote out the Idolatrie of *Cusco*. Many *Spaniards* haue seene this body with others in the Hospitall of Saint *Andrew*, which the Marquesse built, but they were much decayed. *Don Philip Caritopa*, who was grand-child or great grand-child to this *Ingua*, affirmed that the treasure hee left to his Familie was great, which should bee in the power of the *Tanacenas*, *Amaro*, *Toto*, and others. To this *Ingua* succeeded *Topaingua Yupanqui*, to whom his sonne of the same name succeeded, who founded the Familie called *Cupac Aillo*.

TO this latter *Ingua* succeeded *Guaynacapa*, which is to say, *A young man, rich and valiant*, and so was he in truth, more then any of his Predecessors, or Successors. He was very wise, planting good orders throughout his whole Realme, he was a bold and resolute man, valiant, and very happy in warre. He therefore obtayned great victories, and extended his Dominions much farther then all his Predecessors had done before him; he dyed in the Realme of *Quitto*, the which he had conquered, foure hundred leagues distant from his Court. The *Indians* opened him after his decease, leauing his heart and entrailes in *Quitto*, the body was carried to *Cusco*, the which was placed in the renowmed Temple of the *Sunne*. Wee see yet to this day many Cawseys, Buildings, Fortresses, and notable workes of this King: hee founded the Familie of *Teme Bamba*. This *Guaynacapa* was worshipped of his subiects for a god, being yet aliue, as the old men affirme, which was not done to any of his Predecessors. When hee dyed, they slue a thousand persons of his household, to serue him in the other life, all which dyed willingly for his seruice, insomuch that many of them offered themselues to death, besides such as were appointed: his riches and treasure was admirable. And forasmuch as the *Spaniards* entred soone after his death, the *Indians* laboured much to conceale all, although a great part thereof was carried to *Xaxamalca*, for the ransome of *Atabalpa* his sonne. Some worthy of credit, affirme that he had aboue three hundred sonnes and grand-children in *Cusco*. His mother called *Mamaoella* was much esteemed amongst them. *Polo* sent her body with that of *Guaynacapa* very well imbalmed to *Lima*, rooting out infinite Idolatries. To *Guaynacapa* succeeded in *Cusco* a sonne of his called *Titocussiguelpa*, who since was called *Guaspar Ingua*, his body was burned by the Captaines of *Atabualpa*, who was likewise sonne to *Guaynacapa*, and rebelled in *Quitto* against his brother, marching against him with a mightie Armie. It happened that *Quisquis* and *Chilicuchi*, Captaines to *Atabualpa*, tooke *Guaspar Ingua* in the Citie of *Cusco*, being receiued for Lord and King (for that he was the lawfull successor) which caused great sorrow throughout all his Kingdome, especially in his Court. And as alwayes in their necessities they had recourse to sacrifices, finding themselues vnable to set their Lord at libertie, aswell for the great power the Captaines had that tooke him, as also, for the great Armie that came with *Atabualpa*, they resolued (some say by the commandement of this *Ingua*) to make a great and solemne sacrifice to *Viracocha Pachayachachic*, which signifieth *vniuersall Creator*, desiring him, that since they could not deliuer their Lord, he would send men from Heauen to deliuer him from prison. And as they were in this great hope, vpon their sacrifice, newes came to them, that a certaine people come by Sea, was landed, and had taken *Atabualpa* prisoner. Hereupon they called the *Spaniards Viracochas*, beleeuing they were men sent from God, aswell for the small number they were to take *Atabualpa* in *Xaxamalca*, as also, for that it chanced after their sacrifice done to *Viracocha*, and thereby they began to call the *Spaniards Viracochas*, as they doe at this day. And in truth, if we had giuen them good example, and such as we ought, the *Indians* had well applyed it, in saying they were men sent from God. It is a thing very well worthy of consideration, how the greatnesse and prouidence of God, disposed of the entrie of our men at *Peru*, which had beene impossible, were not the dissention of the two Brethren and their Partisans, and the great opinion they had of *Christians*, as of men sent from Heauen, bound (by the taking of the *Indians* Country) to labour to win soules vnto Almightie God.

Of the greatest and most famous *Ingua* called *Guaynacapa*. ch. 22.

Guaynacapa worshipped for a god.

His 300. sonnes &c.

Spaniards esteemed men sent from God.

Peru could not haue beene conquered but by diuision of themselues.

Of the last Successors *Ingas*. *Chap.* 23.

THe rest of this subiect is handled at large by the *Spanish* Writers in the Histories of the *Indies*, and for that it is not my purpose, I will speake onely of the succession of the *Ingas*. *Atabualpa* being dead in *Xaxamalca*, and *Guascar* in *Cusco*, and *Francis Picarre* with his people hauing seised on the Realme, *Mangocapa* sonne to *Guaynacapa* besieged them in *Cusco* very straightly: but in the end he abandoned the whole Country, and retyred himselfe to *Vilca Bamba*, where he kept himselfe in the Mountaines, by reason of the rough and difficult accesse, and there the Successors *Ingas* remayned, vntill *Amaro*, who was taken and executed in the market place of *Cusco*, to the *Indians* incredible griefe and sorrow, seeing iustice done vpon him publiquely whom they held for their Lord. After which time, they imprisoned others of the Linage of these *Ingas*. I haue knowne *Don Charles*, grand-child to *Guaynacapa*, and sonne to *Polo*, who was baptized, and alwayes fauoured the *Spaniards* against *Mangocapa* his brother, when the Marquesse of *Canette* gouerned in this Country *Sarritopaingua*, went from *Vilcabamba*, and came vpon assurance to the Citie of *Kings*, where there was giuen to him the Valley of *Yucay*, and other things, to whom succeeded a daughter of his. Behold the succession which is knowne at this day of that great and rich Familie of the *Ingas*, whose raigne continued aboue three hundred yeeres, wherein they reckon eleuen Successors, vntill it was wholly extinguished. In the other Linage of *Vrincusco*, which (as we haue said before) had his beginning likewise from the first *Mangocapa*, they reckon eight Successors in this sort: To *Mangocapa* succeeded *Cinchoraca*, to him *Capac Yupangui*, to him *Lluqui Yupangui*, to him *Maytaca paest Tarcoguamam*; vnto whom succeeded his sonne, whom they name not, to this sonne succeeded *Don Iean Tambo*, *Maytapanaça*. This sufficeth for the originall and succession of the *Ingas*, that gouerned the Land of *Peru*, with that that I haue spoken of their Lawes, Gouernment, and manner of Life.

Pedegree of *Vrincusco*.

Of the manner of the *Mexicans* Commonweale. *Chap.* 24.

ALthough you may see by the Historie written of the Kingdome, succession, and beginning of the *Mexicans*, their manner of Commonweale and Gouernment, yet will I speake briefly what I shall thinke fit in generall to bee most obserued: whereof I will discourse more amply in the Historie. The first point whereby wee may iudge the *Mexican* gouernment to bee very politike, is the order they had and kept inuiolable in the election of their King: for since their first, called *Acamapach*, vnto their last, which was *Motecuma*, the second of that name, there came none to the Crowne by right of succession, but by a lawfull Nomination and Election. This election in the beginning was by the voice of the Commons, although the chiefe men managed it. Since in the time of *Iscoalt* the fourth King, by the aduise and order of a wise and valiant man, called *Tlacael*, there were foure certaine Electors appointed, which (with two Lords or Kings subiect to the *Mexican*, the one of *Tescuco*, and the other of *Tucuba*) had power to make this election. They did commonly choose young men for their Kings, because they went alwayes to the warres, and this was in a manner the chiefe cause why they desired them so. They had a speciall regard that they should bee fit for the warres, and take delight and glorie therein. After the election they made two kindes of feasts, the one in taking possession of the Royall Estate, for the which they went to the Temple, making great ceremonies and sacrifices vpon the *Harth*, called *Diuine*, where there was a continuall fire before the Altar of the Idoll, and after some Rhetoricians practised therein, made many Orations and Speeches. The other feast, and the most solemne, was at his Coronation, for the which hee must first ouercome in battell, and bring a certaine number of Captiues, which they must sacrifice to their gods; hee entred in triumph with great pompe, making him a solemne reception, aswell they of the Temple, who went all in procession, sounding on sundrie sorts of instruments, giuing Incense, and singing like secular men, as also the Courtiers, who came forth with their deuises to receiue the victorious King. The Crowne or royall Ensigne was before like a Myter, and behinde it was cut, so as it was not round, for the forepart was higher, and did rise like a point. The King of *Tescuco* had the priuilege to crown the King of *Mexico*. In the beginning when the *Mexicans* were but poore and weake, the Kings were very moderate in their expenses and in their Court, but as they increased in power, they increased likewise in pompe and state, vntill they came to the greatnesse of *Motecuma*, who if he had had no other thing but his house of Beasts and Birds, it had beene a proud thing, the like whereof hath not beene seene: for there was in this house all sorts of fish, birds of *Xacamamas*, and beasts, as in an other *Noahs* Arke; for Sea fish, there were Pooles of salt-water; and for Riuer fish, Lakes of fresh-water; birds that doe prey were fed, and likewise wilde beasts in great abundance: there were very many *Indians* imployed for the keeping of these beasts: and when he found an impossibilitie to nourish any sort of fish, fowle, or wilde beast, he caused the Image or likenesse to be made, richly cut in precious stones, siluer, or gold, in marble, or in stone: and for all sorts of entertainments, he had his seuerall Houses and Palaces, some of pleasure, others of sorrow and mourning, and others to treat of the affaires of the Realme. There was in this Palace many Chambers, according to the qualitie of the Noble men that serued him, with a strange order and distinction.

THe *Mexicans* haue beene very curious, to diuide the degrees and dignities amongst the noble men and Lords, that they might distinguish them to whom they were to giue the greatest honor. The dignitie of these foure Electors was the greatest, and most honorable, next to the King, and they were chosen presently after the Kings election. They were commonly brothers, or very neere Kinsmen to the King, and were called *Tlacochcalcatl*, which signifies *Prince of darts*, the which they cast, being a kinde of armes they vse much. The next dignitie to this, were those they doe call *Tlacateccatl*, which is to say, *Cremmcisers or Cutters of men*. The third dignitie were of those which they called *Ezuahuacatl*, which signifies, *A shedder of bloud*. All the which Titles and Dignities were exercised by men of warre. There was another, a fourth intituled, *Tlilancalqui*, which is as much to say, as, *Lord of the blacke house*, or *of darkenesse*, by reason of certaine Inke wherewith the Priests anointed themselues, and did serue in their Idolatries. All these foure Dignities were of the great Counsell, without whose aduise the King might not doe any thing of importance: and the King being dead, they were to choose another in his place out of one of those foure Dignities. Besides these, there were other Counsels and Audiences, and some say there were as many as in *Spaine*, and that there were diuers Seates and Iurisdictions, with their Counsellors and Iudges of the Court, and others that were vnder them, as *Corrigidors*, chiefe Iudges, Captaines of Iustice, Lieutenants, and others, which were yet inferior to these, with a very goodly order. All which depended on the foure first Princes that assisted the King. These foure onely had authoritie and power to condemne to death, and the rest sent them instructions of the Sentences they had giuen. By meanes whereof they gaue the King to vnderstand what had passed in his Realme.

There was a good order and settled policie for the Reuenues of the Crowne, for there were Officers diuided throughout all the Prouinces, as Receiuers and Treasurers, which receiued the Tributes and Royall Reuenues. And they carried the Tribute to the Court, at the least euery moneth; which Tribute was of all things that doe grow or ingender on the Land, or in the water, aswell of Iewels and Apparell, as of Meat. They were very carefull for the well ordering of that which concerned their Religion, Superstition, and Idolatries: and for this occasion there were a great number of Ministers, to whom charge was giuen to teach the people the custome and ceremonies of their Law. Hereupon one day a christian Priest made his complaint that the *Indians* were no good Christians, and did not profit in the Law of God; an old *Indian* answered him very well to the purpose, in these termes: *Let the Priest* (said he) *imploy as much care and diligence to make the* Indians *Christians, as the Ministers of Idols did to teach them their ceremonies; for with halfe that care they will make vs the best Christians in the world, for that the Law of Iesus Christ is much better; but the* Indians *learne it not, for want of them to instruct them.* Wherein he spake the very truth, to our great shame and confusion.

Priests and Teachers of the Law.

THe *Mexicans* gaue the first place of honour to the profession of Armes, and therefore the Noble-men are their chiefe Souldiers, and others that were not noble, by their valour and reputation gotten in warres, came to Dignities and Honors, so as they were held for Noble-men. They gaue goodly recompences to such as had done valiantly, who inioyed priuiledges that none else might haue, the which did much incourage them. Their Armes were of Rasors of sharpe cutting flints, which they set on either side of a staffe, which was so furious a weapon, as they affirmed that with one blow, they would cut off the necke of a Horse. They had strange and heauy Clubs, Lances, fashioned like Pikes, and other manner of Darts to cast, wherein they were very expert; but the greatest part of their combate was performed with stones. For defensiue armes they had little Rondaches or Targats, and some kinde of Morions or Head-pieces inuironed with feathers. They were clad in the skinnes of Tigres, Lions, and other sauage beasts. They came presently to hands with the Enemie, and were greatly practised to runne and wrestle, for their chiefe manner of combate, was not so much to kill, as to take Captiues, the which they vsed in their sacrifices, as hath beene said. *Motezuma* set Knight-hood in his highest splendor, ordayning certaine militarie orders, as Commanders, with certaine markes and ensignes. The most honorable amongst the Knights, were those that carried the crowne of their haire tied with a little red Ribband, hauing a rich plume of feathers, from the which, did hang branches of feathers vpon their shoulders, and rolls of the same. They carried so many of these rolls, as they had done worthy deeds in warre. The King himselfe was of this order, as may be seene in *Chapultepec*, where *Motezuma* and his sonnes were attyred with those kindes of feathers, cut in the Rocke, the which is worthy the sight. There was another order of Knight-hood, which they called the *Lions* and the *Tigres*, the which were commonly the most valiant and most noted in warre, they went alwayes with their Markes and Armories. There were other Knights, as the *Grey Knights*, the which were not so much respected as the rest: they had their haire cut round about the eare. They went to the warre with markes like to the other Knights, yet they were not armed, but to the girdle, and the most honorable were armed all ouer. All Knights might carry gold and siluer, and weare rich Cotton, vse painted and gilt vessell, and carry shooes after their manner: but the common people might vse none but earthen vessell, neither might they carry

carry shooes, nor attire themselues but in *Nequen*, the which is a grosse stuffe. Euery order of these Knights had his lodging in the Pallace noted with their markes: the first was called the *Princes lodging*, the second of *Eagles*, the third of *Lyons and Tigers*, and the fourth of the *grey Knights*. The other common officers, were lodged vnderneath in meaner lodgings: and if any one lodged out of his place, he suffred death.

Of the great order and diligence the *Mexicans* vsed to instruct their youth. *Chap.* 27.

THere is nothing that giues me more cause to admire, nor that I finde more worthy of commendations and memory, then the order and care the *Mexicans* had to nourish their youth: for they knew well, that all the good hope of a Common-weale, consisted in the nurture and institution of youth, whereof *Plato* treates amply in his bookes *De Legibus*: and for this reason they laboured and tooke paines to sequester their children from delights and liberties (which are the two plagues of this age) imploying them in honest and profitable exercises. For this cause there was in their Temples, a priuate house for children, as Schooles, or Colledges, which was seperate from that of the yong men and maides of the Temple, whereof we haue discourst at large. There were in these Schooles a great number of children, whom their fathers did willingly bring thither, and which had teachers and masters to instruct them in all commendable exercises, to be of good behauiour, to respect their superiours, to serue and obey them, giuing them to this end, certaine precepts and instructions. And to the end they might be pleasing to Noblemen, they taught them to sing and dance, and did practise them in the exercise of warre; some to shoote an Arrow, to cast a dart or a staffe burnt at the end, and to handle well a Target and a Sword. They suffered them not to sleepe much, to the end they might accustome themselues to labour in their youth, and not be men giuen to delights. Besides the ordinary number of these children, there were in the same Colledges, other children of Lords and Noblemen, the which were instructed more priuately. They brought them their meate and ordinary from their houses, and were recommended to ancients and old men to haue care ouer them, who continually did aduise them to be vertuous and to liue chastely; to be sober in their diet, to *fast*, and to march gravely, and with measure. They were accustomed to exercise them to trauell, and in laborious exercises: and when they see them instructed in all these things, they did carefully looke into their inclination: if they found any one addicted vnto warre, being of sufficient yeares, they sought all occasions to make triall of them, sending them to the warre, vnder colour to carrie victuals and munition to the Souldiers, to the end they might there see what passed, and the labour they suffered. And that they might abandon all feare, they were laden with heauie burthens, that shewing their courage therein, they might more easily be admitted into the company of Souldiers. By this meanes it happened, that many went laden to the Armie, and returned Captaines with markes of honour. Some of them were so desirous to be noted, as they were either taken, or slaine: and they held it lesse honourable to remaine a prisoner. And therefore they sought rather to be cut in peeces, then to fall captiues into their enemies hands. See how Noblemens children that were inclined to the warres were imployed. The others that had their inclination to matters of the Temple; and to speake after our manner, to be *Ecclesiasticall men*, hauing attained to sufficient yeares, they were drawne out of the colledge, and placed in the Temple, in the lodging appointed for religious men, and then they gaue them the *order of Ecclesiasticall men*. There had they *Prelates and Masters*, to teach them that which concerned their profession, where they should remaine being destined thereunto. These *Mexicans* tooke great care to bring vp their children: if at this day they would follow this order, in building of houses & colledges for the instruction of youth, without doubt Christianitie should flourish much amongst the *Indians*. Some godly persons haue begunne, and the King with his Counsell haue fauoured it: but for that it is a matter of no profit, they aduance little, and proceede coldly.

Their employments and trials.

The baine of Plantations is expectation of present and externall gain.

Plaies and dances. Military games.

We haue not discouered any Nation at the *Indians*, that liue in communalties, which haue not their recreations, in plaies, dances, and exercises of pleasure. At *Peru* I haue seene plaies in manner of combats, where the men of both sides were sometimes so chafed, that often their *Pulla* (which was the name of this exercise) fell out dangerous. I haue also seene diuers sorts of dances, wherein they did counterfait and represent certaine trades and offices, as shepheards, labourers, fishers, and hunters, and commonly they made all those dances, with a very graue sound and pase: there were other dances and maskes, which they called *Guacones*, whose actions were pure representations of the deuill. There were also men that dance on the shoulders one of another, as they doe in *Portugall*, the which they call *Paellas*. The greatest pars of these dances, were superstitions, and kindes of Idolatries: for that they honoured their Idols and *Guacas* in that manner. For this reason the Prelates haue laboured to take from them these dances, all they could: but yet they suffer them, for that part of them are but sports of recreation: for alwayes they dance after their manner. In these dances, they vse sundry sorts of instruments, whereof, some are like Flutes, or little *Canons*, others like Drums, and others like Cornets: but commonly they sing all with the voyce, and first one or two sing the song, then all the rest answer them. Some of these songs were very wittily composed, containing Histories, and others were full of

Idoll games *Exo.* 32. a thing vsuall to Heathens, as their Comedies, &c. manifest. Musicke.

super-

Digitized by Google

superstitions, and some were meere follies. Our men that haue conuersed among them, haue laboured to reduce matters of our holy faith to their tunes, the which hath profited well: for that they employ whole dayes to rehearse and sing them, for the great pleasure and content they take in their tunes. They haue likewise put our compositions of Musicke into their Language, as Octaues, Songs, and Rondels, the which they haue very aptly turned, and in truth it is a goodly and very necessary meanes to instruct the people. In *Peru*, they commonly call Dances *Taqui*, in other Prouinces, *Areitos*, and in *Mexico*, *Mitotes*. There hath not beene in any other place any such curiositie of Playes and Dances, as in New *Spaine*, where at this day we see *Indians* so excellent Dancers, as it is admirable. Some dance vpon a Cord, some vpon a long and streight stake, in a thousand sundry sorts; others with the soles of their feet and their hammes, do handle, cast vp and receiue againe a very heauy blocke, which seemes incredible but in seeing it. They doe make many other shewes of their great agilitie, in leaping, vaulting, and tumbling, sometimes bearing a great and heauy burthen, sometimes enduring blowes able to breake a barre of Iron: But the most vsuall exercise of recreation among the *Mexicans* is the solemne *Mitotte*, and that is a kind of dance they held so braue and so honourable, that the King himselfe danced, but not ordinarily, as the King *Don Pedro* of *Arragon* with the Barber of *Valencia*. This Dance or *Mitotte*, was commonly made in the Courts of the Temple, and in those of the Kings houses, which were more spacious. They did place in the midst of the Court two Instruments, one like to a Drumme, and the other like a Barrell made of one piece, and hollow within, which they set vpon the torme of a man, a beast, or vpon a Pillar.

Curious Dancers.

Great agility.

These two Instruments were so well accorded together, that they made a good harmony: and with these Instruments they made many kinds of Ayres and Songs. They did all sing and dance to the sound and measure of these Instruments, with so goodly an order and accord, both of their feet and voyces, as it was a pleasant thing to behold. In these Dances they made two Circles or Wheeles, the one was in the middest neere to the Instruments, wherein the Ancients and Noblemen did sing and dance with a soft and slow motion; and the other was of the rest of the people round about them, but a good distance from the first, wherein they danced two and two more lightly, making diuers kinds of paces, with certayne leaps to the measure. All which together made a very great Circle. They attyred themselues for these Dances with their most precious apparell and Iewels, euery one according to his abilitie, holding it for a very honourable thing: for this cause they learned these Dances from their infancie. And although the greatest part of them were done in honour of their Idols, yet was it not so instituted, as hath beene said, but only as a recreation and pastime for the people. Therefore it is not conuenient to take them quite from the *Indians*, but they must take good heed they mingle not their superstitions amongst them. I haue seene this *Mitotte*, in the Court of the Church of *Topetzotlan*, a Village seuen leagues from *Mexico*: and in my opinion, it was a good thing to busie the *Indians* vpon Festiuall dayes, seeing they haue need of some recreation: and because it is publike, and without the preiudice of any other, there is lesse inconuenience, then in others which may be done priuately by themselues, if they tooke away these.

To the Reader.

READER, I here present vnto thee the choisest of my Iewels. My trauelling fancie hath inuited many Readers to many my labours in strange births already. Quæ regio in terris nostri non plena laboris? Iaponian *and* China *rarities, so remote from our world, are neere to our worke, and their characters communicated here to the Reader; not their arts alone. Thou hast here also* Indostan, Arabike, Persian, Turkish, *add other Letters, and not onely the transcript from their languages. As for translations and collections, thou hast them here also out of the* Hebrew, *Auncient and Moderne* Greeke, Abassine, Tartarian, Russian, Polonian, Ægyptian, *and innumerable other Nations* Christian, Iewish, Mahumetan, Ethnike, Ciuill, Barbarian *and* Sauage, *innumerable wayes diuersified. Yet all these in letters, or characters. In hieroglyphicall mysticall pictures the ancient* Ægyptians *and* Ethiopians, *haue by way of Emblemes obscurely and darkly deliuered their obscure mysteries, vncertaine, waxenly, pleant conceits to the world; some of which our Pilgrimage hath mentioned. But a Historie, yea a Politicke, Ethike, Ecclesiastike, Oeconomike History, with iust distinctions of times, places, acts and arts, we haue neither seene of theirs, nor of any other Nation, but of this, which our light and slight apprehensions terme not barbarous alone, but wilde and sauage. Such an one we here present, a present thought fit for him whom the senders esteemed the greatest of Princes, and yet now presented to thy hands before it could arriue in his presence. For the* Spanish *Gouernour hauing with some difficultie (as the* Spanish *Preface imports) obtained the Booke of the* Indians, *with* Mexican *interpretations of the Pictures (but ten dayes before the departure of the Ships) committed the same to one skilfull in the* Mexican *language to be interpreted; who in a very plaine stile and verbatim performed the same, vsing also some* Morisco *words, as* Alfaqui *and* Mezquitas *(for Priest and Temples) import. This Historie thus written, sent to* Charles *the fifth Emperour, was together with the Shippe that carried it taken by* Frenchmen *of war, from whom* Andrew Theuet *the* French *Kings Geographer, obtained the same: after whose death,*

Maſter Hakluyt *(then Chaplaine to the* Engliſh *Embaſſadour in* France*) bought the ſame for* 20. French *crownes, and procured Maſter* Michael Locke *in Sir* Walter Raleighs *name to tranſlate it. It ſeemes that none were willing to be at the coſt of cutting the Pictures, and ſo it remained among ſt his papers till his death, whereby (according to his laſt will in that kinde) I became poſſeſſour thereof, and haue obtained with much earneſtneſſe the cutting thereof for the Preſſe. The rather was I eagerly vehement herein, as being a thing deſired by that moſt induſtrious Antiquary, indicious Scholler, Religious Gentleman, our Eccleſiaſtike Secular, the Churches champion, Sir* Henry Spelman, *Knight; whom for honors ſake I name, that his name may honour our ruder lines; a name ſo fitting to the Man, as one which can, in regard of his wiſe* ſpell *and ſcience in diuine & humane learning, and is ready, with maine courage and alacritie to ſhew himſelfe the Churches Man, and to exhibit himſelfe in deede whatſoeuer any* man *can* ſpell, *out of* Spel-man. *The commending from ſuch a friend (let the Muſes impetrate pardon for ſo bold a name) was a commanding vnto me, which here I againe commend to Him and thee.*

Sir. Hen. Spelman.

It is diuided into three parts; the firſt being the Annales and Mexican *Chronicle: the ſecond, their Exchequer or the Accounts of their ſeuerall Tributes paid them from the Nations and peoples tributary, whereby may be ſeene the Naturall riches of thoſe parts peculiarly ſorted: the third the* Mexican *Oeconomie and Policie in warre and peace, religious and ſecular, their priuate and publike rites from the grant of the wombe, to the wombe of the graue. Obſcure places I haue explained (beſides what before in* Acoſta *thou haſt read) comparing the tranſlation with the originall, adding many of mine owne: and perhaps there is not any one Hiſtory of this kinde in the world comparable to this, ſo fully expreſſing ſo much without Letters; hardly gotten, and eaſily loſt, that thou muſt here finde it.*

CHAP. VII.

The Hiſtory of the Mexican *Nation, deſcribed in pictures by the* Mexican *Author explained in the* Mexican *language; which expoſition tranſlated into* Spaniſh, *and thence into* Engliſh, *together with the ſaid Picture-hiſtorie, are here preſented.*

§. I.

The Mexican *Chronicle.*

HEre beginneth the Hiſtorie and foundation of the Citie of *Mexico*, founded and inhabited by the *Mexicans*, who at that time were called *Metici*; whoſe originall beginning of being Lords, and their acts and liues are declared briefely in this Hiſtorie, according as it is ſignified and ſet out ſucceſſiuely by the pictures and paintings following.

In the yeare 1324. after the comming of our Lord and Sauiour Ieſus Chriſt, the *Mexican* people firſt arriued at the place of the Citie of *Mexico*, and becauſe they liked not the greatneſſe and the ſituation of that place, after that they had trauailed in their Iournies, and wandered many yeares from Country to Countrey, & in ſome of them had made their abode, for ſome yeares, being come from far Countries in following their Iournies, and not being contented with the other places where they had made their abode, they came and ſetled themſelues in the place of *Mexico*. The which place at that time was all drowned with water, and was couered with great bogs and bankes of mooriſh ſhegs and bulruſhes, which they call *Tuli*, and it had *Carizales*, and great plats of dry ground couered with ſhrubbes, buſhes, and briars like woods. And through all the ſpace of that place there went a ſpring & ſtreame of fair cleeer water which was free from all ſegges and buſhes, which water ſtreame went through it croſſewiſe, in manner of Saint *Andrewes* croſſe, as it is ſhewed in the picture: and about the middle of that place of that water-ſtreame, the *Metici* found a great rocke of ſtone, and growing thereon a great Tree or buſh called *Tunal*, wherein a great Eagle *Caudal* had her haunt and abode for her foode, ſo as all about that place was ſcattered full of bones and feathers of diuers Birds and Foules of diuers colours. And they hauing gone throughout all that place and Countrie thereabout, and finding it very fruitfull and full of wilde beaſts, wilde Foules, Birds, and Fiſhes, and things of the water, wherewith to ſuſtaine themſelues and to profit themſelues in their buſineſſe in dealing with the Townes thereabouts, and finding the water-courſes of that place ſo commodious, and that their Neighbours could not trouble nor hurt them, and for other things and cauſes to their good liking they determined to paſſe no further on their iourneyes in trauelling, but to ſettle them-

Digitized by Google

themſelues and dwell ſtill. And according to their determination, they did ſettle themſelues there effectually. And made themſelues a ſtrong Citie of defence with bankes and walles about the waters, and on the plats of ground among the Segges and Buſhes of *Tulis* and *Carrizales*. And for a beginning of that their ſeate and habitation, it was determined by them, to giue name and title to that place, calling it *Tenultitlan*. By reaſon and cauſe of the *Tunal* growing out of the Rocke (for *Tenuchtitlan* interpreted in our *Caſtilian Spaniſh* Tongue is *Tunal growing vpon a Rocke.*)

The armie of the *Mexican* people had with them for chiefe Gouernours ten perſons named, *Ocelopan, Quapan, Acacitli, Ahuexolt, Tenuch, Tecinquh, Xomimitl, Xocoyol, Xuihcaqui, Atotetl*, as it is ſhewed in the Pictures. And hauing ſo ſetled themſelues, they did chuſe *Tenuch* for their chiefe Gouernour and Lord to gouerne them, as a perſon eſpecially choſen thereto and fit for it, hauing in him all parts and abilitie to exerciſe Lordſhip. And they appointed the other chiefe Gouernours, that they ſhould be Agents and Captaynes, Gouernours vnder him.

And after ſome yeeres were paſſed of their dwelling in that place, and the people multiplyed, the Citie likewiſe was named *Mexico*, ſo named and deriued of the *Mexicans*, calling it the place of ſetling of the *Mexican* people.

And when the people were ſomewhat multiplyed like bold and warlike people, they tooke beginning of couragious mindes in preuayling ouer their Neighbours, and ſo ſhewed themſelues in force of armes, whereby they ſubdued and made tributarie to them two Townes next adioyning to *Mexico*, named *Colhuacan*, and *Tenaincan*; as likewiſe is ſet forth in the pictures: the which doings paſſed in the time of the gouernment of the chiefe Lord *Tenuch*, which was the ſpace of fiftie one yeares, at the end whereof he died.

Tenuchtitlan. Mexican Lords *Tenuch* choſen chiefe Lord. *Mexico. Colhuacan* and *Tenaincan* ſubdued.

Concerning the Pictures of blew in the margents of this Hiſtorie, it is to be vnderſtood that euery ſeuerall ſpace or partition doth ſignifie one yeare, and they bee the numbring of yeares: it is to be vnderſtood that euery ſeuerall ſpace or partition ſignifie the one ſeuerall yeare, and ſo they accounted & numbred euery yeare ſeuerally, proceeding by the number of rundles or pricks therein contained, beginning at one, and proceeding to thirteene rundles. And from thence they began againe at the beginning in their accompt from one point or rundle, and ſo accordingly they did proceede in numbering againe, till they came to thirteene. And although that in the partitions or ſpaces ſeuerally there be diuers ſeuerall figures, yet the principall accompt of numbering is that accompt of the pictures or rundles therein contained. And although the names of the yeares that they giue to euery partition from the number of the firſt point till the thirteenth be to ſome purpoſe, yet for to aduertiſe the Reader thereof; here is made by it ſelfe a declaration of the names, with their interpretations.

In the order and rule of the partitions which are numbred for yeares, that partition where there is a branch with a foote like a flower, it doth ſignifie a bitter and vnfortunate yeare which the *Mexicans* had, and did feare, ſaying that their predeceſſours time out of minde did giue them warning that ſuch yeares which befell euery two and fiftieth yeare were dangerous, and vnfortunate, and bitter yeares, becauſe that in ſuch yeares there were floods generally, and likewiſe darkeneſſe of the eclips of the Sunne, and vniuerſall earthquakes. And likewiſe in ſuch yeares they made great ſacrifice and ceremonies to their gods, and gaue themſelues to repentance, and did abſtaine from all vices againſt the very day and houre of ſuch a yeare. In the which day generally they put out all their lights and fires till that day were paſt; and being paſſed they kindled new lights being had out of a Mountaine by a Prieſt.

This is a weeke of yeares after the Mexican *computation (all coloured blew, the* Mexican *names written ouer in red) the firſt of which they call* Setuchtli, *that is, one Conie: the ſecond* Omeacalt, *or two Canes: the third* Yeyteepatl, *three Flints: the fourth* Macuilituchtli, *which ſignifieth foure houſes: the fifth* Criquacenacatl, *that is fiue Conies: the ſixth, ſixe Canes: the ſeuenth, ſeuen Flints: the eight, eight Houſes: the ninth, nine Conies: the tenth, ten Canes: the eleuenth, eleuen Flints: the twelfth, twelue Houſes: the thirteenth, thirteene Conies.*

This Picture presents the number of 51. yeares: that is, the time of Tenuchs reigne: in this wheele or square (which, as all the like representing yeares, are in the originall picture coloured blew) The pictures of men signifie the ten Lords or Governours before mentioned; their names are inscribed in the originall pictures, which here we have by the letters annexed directly to a following glosse. A. *Acasitli.* B *Quapan.* C *Ocelopan.* D *Aguexotl.* E *Tecinenb.* F *Tenuch.* G *Xominith.* H *Xocoyol.* I *Xiuhcaqui.*

caqui. K Azatli. L Tenochtitlan, representing the armes which they vse din the conquest of that place, which they sid instituted. is M the Tunal (painted greater) growing out of a Rock. N the Eagle. O their seting or habitation. P the people of Colhuacan Q Tenayucca: both which Nations R Tenuch conquered by force of armes, as appeareth S their subiection or bringing vnder. T is the blue square and Saint Andrewes crosse. The former relation doth more fully lay open these things.

In this figure is represented the reigne of their second Lord or King Acamapich. A is the time of his reigne 21. yeeres. B Acamapichtli the successor. C His target and arrowes instruments of warre, by force whereof he subdued these foure townes or peoples figured D Quauhnahuac. G Mizquic. H Caitlahuac. I Xochimilco. E is the same Acamapichtli as a conquerer. F by foure faces and ensignes shewing the men of these foure Townes (to each of which is added like ensigne) subdued. This picture therefore doth in figures signifie, that which we in letters thus;

IN the yeere 1327. in the said Gouernment and Lordship succeeded *Acamapichtli*. And during his Lordship he subdued and conquered by force of armes the foure Townes contayned and named in the pictures here before, which are these: *Quauhnahuac*, *Misquic*, *Caitlahuac*, and *Xochimilco*, the which were tributaries to him, acknowledging their subiection. In the yeeres that the said *Acamapich* ruled in the said Lordship: his inclination and vo-

Was to haue many wiues, the which were daughters of all the principall men of *Mexico*, by whom he had many sons which were the beginning and increase of many *Caciques*, and Captaines, and warlike people, by meanes of whom the Citie of *Mexico* was enlarged and augmented in great might, as is signified hereafter in the discourse, by the pi-

ctures, with their declarations. The two pictures with their titles & names of *Acamapich* be one same thing to diuers effects, for the first sheweth his beginning and succession of the said Lordship, and the second sheweth the yeere after his succession in the said Lordship, when hee began to conquer and subdue the said foure Townes. And in the said Lordship he had his course one and twentie yeeres, at the end whereof the said *Acamapich* dyed and departed this present life, the which said departure was in the yeere 1398.

A 21. yeeres. B *Towne and People of Tolsitlan.* C *Quauztitlan.* D *Chalco.* H *Tulancinco.* I *Xaltocan.* K *Otumpa.* L *Acolma.* M *Tezcuco.* E *The Cutter hath set letters to diuers figures whereof*

whereof I can giue no interpretation: and such is this, except perhaps it signifieth that in his seuenth yeere he began his conquests. For I doe here interpret diuers in which the Spanish is silent, if the coniecture seeme easier. F is King Huiçilihuitl. G the instruments of warre.

IN the yeere 1396. in the said Lordship succeeded *Huiçilihuitl* sonne of *Acamapich*, and during the time of his reigne in his Lordship, he conquered by force of armes eight Townes, which are contayned in the pictures here before, with the names of the same Townes intituled, the which were made tributarie to the *Mexican* Lordship acknowledging seruitude. The said *Huiçilihuitl* was valiant in warres, and inclined to haue many wiues by whom he had many sons, wherewith the power of the *Mexicans* was augmented. The time of the Lordship and life of the said *Huiçilihuitl* therein was 21. yeeres, at the end whereof he dyed and departed this present life, according as by the pictures of blue are numbred.

A tenne yeeres. B Chimalpupuca. C Target and Darts, to intimate his forcible conquest of D Tequixquiac and E Chalco. F sheweth his death. G the Townes of Chalco in rebellion. H the foure Canoas and I the fiue men aboue said of Mexico, which the Rebels slue. You see this King and euery other both King and Towne distinguished by speciall Armes or Scutchions, with other particulars, which here and in all the rest I leaue to each Readers owne industrie and search.

IN the yeere 1470. after the death of *Huicilihuitl* succeeded *Chimalpupuca* in the said Lordship of *Mexico*, sonne of the said *Huicilihuitl*, and during his time hee subdued by force of armes the Townes of *Tequixquiac*, and *Chalco*, which *Chalco* is a great Towne and acknowledging ser-

uitude

uitude: they paid tribute to the Lordſhip of *Mexico*, according as the pictures doe ſhew. And hauing the ſaid Townes thus in ſubiection, at the end of certaine yeeres the ſaid Towne of *Chalco*, being mightie, rebelled againſt the *Mexicans*, and in the rebellion there grew danger to the *Mexicans*, inſomuch that they ſlue fiue of them, and brake them foure Canoas, according as here is ſignified by the pictures. The time of the life and Lordſhip of the ſaid *Chimalpupuca* was ten yeeres, at the end whereof hee dyed, according as is numbred by the blue pictures in the margent. And likewiſe the ſaid *Chimalpupuca*, in the time of his life had many wiues and ſons; for it was accounted a matter of reputation.

The explanation of the firſt Table A 13. yeeres. Yzcoatci. F *by force of Armes (ſignified by this Target and Darts) ſubdued the Townes and Territories of* B *Azcapucalco.* C *Coyoacan.* D *Teocalhuyacan.* G *Guaguacan.* H *Tlacopan.* I *Aſtacuihuayan.* K *Mixcoac.* L *Quauximalpan.* M *Quauhtitlan.* N *Tupan.* O *Acolhuacan.*

IN the yeere 1427. in the ſaid Dominion of *Mexico*, after the death of *Chimalpopuca*, ſucceeded *Yzcoatçi*, Sonne of *Acamapich*, which had beene Lord of *Mexico*, and during his time hee conquered by force of Armes foure & twentie Townes which are here pictured, which Townes he made ſubiect to the Lordſhip of *Mexico*, at one inuaſion which he made; for he was as valiant and warlike in Armes as the ſaid *Acamapich*, and was a man of good iudgement, and wiſe in many matters, and by his good induſtries he ſubdued the ſaid Townes which gaue him tribute, and did acknowledge ſeruitude. The ſaid *Yzcoatçi* had many Concubines, by whom he had ſeuen Sonnes and Daughters and he reigned in the ſaid Lordſhip thirteene yeeres at the end whereof the ſaid *Yzcoatçi* dyed and departed this preſent life.

In the other Table (in the originall being another Page) follow A *Mizquic* B *Cuitlahuac.* C *Xochimilcopa.* D *Chalco.* E *Quauhtlatoa the Lord of Tlatilulco; the Towne also added.* F *Huitzilopan.* G *Quauhnahuac.* H *Cuecalan.* I *Caqualpan.* K *Iztepec.* L. *Xiuhtepec.* M *Tealan.* N *Tepequacuilco.*

IN the yeere 1440. after the death of *Yzcoatçi* succeeded *Gueguemoteçuma* in the Lordship of *Mexico*, the Sonne of *Cuiçilihuitl* which had beene Lord of *Mexico*: and during his time, he conquered by force of Armes three and thirtie Townes (according as they are pictured in that compasse where the Picture of *Gueguemoteçuma* standeth.) And hauing subdued them to the said Lordship of *Mexico*, they payed him tribute, acknowledging their subiection.

This *Gueguemoteçuma* was a very seuere and graue Lord, and giuen to vertue, and was a man of a good nature and vnderstanding, and an enemie to all euill vices: and beeing of a good inclination, set downe Orders and Lawes in his Common-wealth, and to all his Seruants how they ought to liue, and also ordayned grieuous penalties for the breach of them: which penalties were executed without any remission vpon those that brake the Lawes. He was not cruell, but rather gentle, and desirous of the welfare of his Subiects, not vicious in women; hee had two Sonnes, hee was very temperate in drinking, for in all his life time hee was neuer seene to bee drunke as the naturall *Indians* which are extremely inclined to drunkennesse, but rather he commanded him to be corrected and punished that committed such a fact. And by his seueritie and Iustice and good example of life, hee was feared and reuerenced of all his Subiects, all his life time, which was the space of nine and twentie yeeres. At the end whereof he dyed, and passed out of this present life.

IN the yeere 1479. after the death of *Gueguemotezuma*, succeeded in the Lordship of *Mexico* *Axayacaci* sonne of *Teçoçomoctliquieto*, which was the sonne of *Yzcoalt* Lord of *Mexico*. And during the time that the said *Axayacaci* was Lord, he conquered and won by force of armes seuen and thirtie Townes, as hereafter are pictured and named. Amongst which Townes hee subdued vnder his Lordship by force of armes the Towne of *Tlatilulco*, a thing of great importance. *Moquihuix* was Lord of *Tlatilulco* at that time, who being a mightie person of great strength and of a proud nature, began to giue occasion of dissention and warres to the Lords of *Mexico*, hauing heretofore held them for friends: by occasion whereof hee had great incounters and battailes, wherein the said *Moquihuix* Lord of *Tlatilulco* dyed in throwing himselfe downe from a *Cu* (or a high *Mezcita*, or Temple) for he seeing himselfe so hard beset in the battaile, being almost ouercome, entred into a *Mizcita* to saue himselfe, because hee would not be taken prisoner. And an *Alfaqui* (or Priest) which was in the *Mezquito*, or Temple, reprouing him for it and imputing cowardise vnto him, he threw himselfe downe as aforesaid. At which time the *Mexicans* had the victorie. And thenceforth the Towne of *Tlatilulco* was subiect to the Lord of *Mexico*, paying tribute and acknowledging subiection. *Axayacaci* was very valiant and warlike in armes, and was viciously giuen to women, hauing had many wiues and sonnes: he was also proud and warlike, whereby all his subiects feared him extremely: hee did maintaine and hold for good all the Lawes and Ordinances that his predecessor *Gueguemotezuma* had made, according as hath beene mentioned in his Historie; and hee continued the space of twelue yeeres in the said Lordship of *Mexico*, at the end whereof he dyed and departed out of this present life.

See the storie before in *Acosta*.

Tlatilulco subdued before as *Acosta* saith the *Mexicans* were subiect to them.

A twelue yeeres. B *Axayacaci*. C *by armed force subdued these Townes following (not as before expressed in picture) Tlatilulco, Atlapulco, Xalatlanbio, Tlacotepec, Motepec, Cupulnac, Ocoyacac, Quanhpanoayan, Xochiacan, Teotenanco, Caliymayan, Cinacantepec, Tulucan, Xiquipilco, Tenancinco, Tepeyacac, Tlaxmaloyan, Oztoma, Xacotitlan, Ocuilan, Ozteticpac, Matlatlan, Cuezcomatlyacac, Tecalco, Cuetlaxtlan, Puxcauhtlan, Alcuilizapan, Tlaolan, Mixtlan, Cuecaloztoc, Tetzapotitlan, Miquizetlan, Tamuoc, Tampatel, Tuchpan, Tenexticpac, Quauhtlan.*

IN the yeere 1482. after the end and death of *Axayacaci*, succeeded in the Lordship of *Mexico*, *Tiçoçicatzi*, sonne of the said *Axayacaci*, and during the time of his raigne he conquered and got by force of armes fourteene Townes. The said *Tiçoçicatzi* was very valiant and warlike in armes, and before that he succeeded in the Lordship of *Mexico*, he had done dangerous feates of valiantnesse in his owne person in the warres, whereby hee obtayned the title of *Tlacatecatl*, which

Tiçocicatzi.

Title *Tlacatecatl* that is, *Great Captaine.*

Digitized by Google

which they esteemed for a Title of great honour and estate: and it was a degree whereby that the Lordship of *Mexico* being vacant, he which had the same degree and title succeeded in the place of the same Dominion of *Mexico*, which title in like manner his Predecessors, Brothers, and Father, and Grand-father had, whereby they came to bee Lords of *Mexico*. Also the said *Tiecicatzi* by the estate and authoritie of the said Lordship of *Mexico*, had many Wiues and Sonnes which hee had by them, and he was a graue and seuere man in commanding and was feared and reuerenced of his Subjects, hee was likewise enclined to good and vertuous things, and was good for his Commonwealth. He commanded the Lawes and Statutes to bee kept and approoued for good, that his Predecessors had amplified and kept since the time of *Gueguemotezuma*. And he was zealous in punishing and chastning the euill vices and offences that his Subjects committed. And so the *Mexican* Commonwealth was well ordered and gouerned the time of his life, which was the space of fiue yeeres, at the end whereof he died and departed this present life.

A *Fiue yeeres.* B *Ticocicatzi* C *by armes subdued these Townes, Tonabymoquezayan, Toxico, Ecatepec, Zilan, Tecaxic, Tuluca, Tancuitlan, Tlapan, Atezcahuacan, Mazatlan, Xochiyetla, Tamapachco, Ecatlyquapochco, Miquetlan.*

IN the yeere 1485. after the death of *Tizizocatzi*, succeeded *Ahuizotzin*, brother to his Predecessor *Tizozicatzi*, in the Signorie of *Mexico*. And during the time of his Lordship, he conquered by force of armes fiue and fortie Townes, according as hereafter are pictured and named. The said *Ahuizotzin* was like to his Predecessor and Brother *Tizizocatzi* in valiantnesse and feates of warre, whereby he got the title of *Tlacatecatl*, which signifieth a *great Captaine*, and from the same title he came to be Lord of *Mexico*. The said *Ahuizotzin* was by nature of a good inclination, and giuen to all vertue, and likewise in the course of his life hee had his Commonwealth ruled and gouerned well, and he fulfilled and kept the Lawes and Statutes that his Predecessors had maintayned since the time of *Gueguemotezuma*. And as the state of the Lordship of *Mexico* was brought to great Majestie, and had the greatest part of this *New Spaine* subiect, acknowledging their seruice, and by the great and rich tributes which they gaue the said *Mexican* Lordship, came to much renowme and mightinesse. And he like a mightie and great minded Prince, gaue great things and preferments to his seruants, and he was temperate of condition and mercifull, whereby his seruants loued him exceedingly, and yeelded him great reuerence. And likewise hee had many wiues, and children by them, because it was a thing adioyned to the Lordship, and a point of great estate. He was of a merrie condition, whereby his seruants did feast him continually in his life time with great and diuers kindes of feasts, and musick, and songs, and instruments, as well in the night as in the day: for in his place the Musicians and Singers neuer ceased with many Instruments of musicke. The course of his life in that Signorie was sixteene yeeres, at the end whereof he dyed and passed out of this present life.

A sixteene yeres. B Auizotzin. C conquered by armes the townes following, Tzicconc, Tlappan, Molanco, Amaxtlan, Zapotlan, Xaltepec, Chiapan, Tototepec, Xochtlan, Xolochtlylan, Coxaquanbtenanco, Cocohuipilecan, Coyuacac, Acatepec, Huexolotlan, Acapulco, Xinbhuacan, Apancalecan, Tecpatepec, Tepechiapco, Xicochimalco, Xiubtecacatlan, Tequantepec, Coyolapan, Tzatchlalocan, Tecuitlatlan, Huehuetlan, Quauhxayacatitlan, Tzhpatlan, Comitlan, Nauzintlan, Huipilan, Cahualan, Tztatlan, Huixtlan, Xolotlan, Quauhnacaztlan, Macatlan, Ayanbtechiuitlatla, Quauhtlan, Cuecalcuitlapilla, Mapachtepec, Quauhpilolan, Tlacotepec, Mizquitlan.

Motezuma. IN the yeere 1502. after the end and death of *Auiçoçin*, succeeded in the Lordship of *Mexico*, *Motezuma*. *Mexico* was now growne into great Majestie, Renowme, and Authoritie: and he by his grauitie and seueritie enlarged exceedingly the State and Dominion of *Mexico*, yea a great deale more then his Predecessors. *Motexzeuma* was the sonne of *Axayaçapi*, which had beene Lord of *Mexico*, and before hee came to the said Lordship hee had the deserts of a worthy Captaine and a valiant man in warres, whereby hee had the title of *Tlacatecal*, and so hee succeeded in the Lordship of *Mexico*, as is before rehearsed, and being in the said Lordship he did greatly increase the *Mexican* Empire, bearing the rule ouer all the Townes in this *New Spaine*, insomuch that they gaue and payed him great tributes of much riches and value: He was feared very much of all his seruants, and likewise of his Captaines and Principals, insomuch that not one when they had any businesse with him, for the great reuerence they had him in, durst for feare looke him in the face, but that they held downe their eyes and their head low and enclined to the ground, and many other extraordinarie respects and ceremonies they did vnto him for the Maiestie he represented vnto them, not mentioned here for auoyding of tediousnesse. After *Motezuma* had succeeded in the said Lordship, hee conquered foure and fortie Townes hereafter named; and hee subdued them vnder his Lordship and Empire, and in their acknowledging of seruitude all the continuance of his life, they payed him many and great tributes, as hereafter by their pictures and declarations is made manifest.

His weale and greatnesse.

Maiestie.

Conquests.

Wisdome and learning.

Motecçuma was by nature wise, and an Astrologer, and a Philosopher, subtile and skilled generally in all artes, aswell of warres as all other matters temporall. And for his grauitie and estate he had of his Lordship the beginning of an Empire, according as his seruants did reuerence him with great honor and power, that in comparison of him, not one of his predecessors came to halfe so much estate and Majestie.

Lawes.

The Statutes and Lawes of his Predecessors, since the time of *Gueguemotecçuma* vntill his time, he commanded to bee kept and wholly fulfilled with great zeale. And because hee was a man so wise, by his good nature he ordayned and made other Statutes and Lawes which he thought defectiue for the execution of the former, not abrogating any, all which were for the welfare and good gouernment of his Commonwealth and Subjects. Hee was inclined to kepe many houses and women, which were daughters of the Lords his Subjects and Confederates; and by them he had many children; and to haue so many wiues was for to set forth his Majestie the more, for they hold it for a point of great estate. Among which the daughters of the Lords of great au-

Many women, some wiues, some Concubines.

thoritie

thoritie he held for lawfull wiues, according to their rights and ceremonies, and them hee kept within his Palaces and dwelling houses; and the children that came of them were had in reputation as more lawfull children then the others which hee had by the other women. It were a large historie to tell the order he had in keeping of them, and conuersation with them. And because this present historie is but briefe, it is left vnrehearsed.

See before in *Acosta*, and after in *Gomara* more large relations of *Mutezuma*, in a wilde kind of state and maiestie, equalling in many things, in some exceeding most Princes of the elder world.

The quantitie, value, and number of the tributes and kindes of things that his subiects did pay for tribute vnto him, shall be seene and vnderstood hereafter, as by the pictures and declarations is signified. And he made a straight order that the tributes which they payed him, should be fulfilled according as they were leuied by him; for the fulfilling whereof he had in all his subiect-townes his *Calpixques* and Factors, which were as Gouernors, that ruled, commanded, and gouerned them; and hee was so much feared that none durst disobey nor transgresse his will and commandement, but that they were kept and wholly fulfilled, because he punished and corrected the rebels without remission.

First notice of the *Spaniards*.

And in the sixteenth yeere of the reigne of *Motezuma*, the *Mexicans* had knowledge of certaine *Spaniards*, which were discouerers of this *New Spaine*, that at the end of twelue moneths there should come a fleet of *Spaniards* to ouercome and conquer this Country; and the *Mexicans* kept account thereof, and they found it to bee true, for at the end of the said twelue moneths was the arriuall of the said fleet at a Hauen of this *New Spaine*, in the which fleet came *Don Ferdinando Cortes*, Marques *del Valle*, which was the seuenteenth yeere of the reign of *Motezuma*; and in the eighteenth yeere he made an end of the continuance of his Lordship and Raigne: in the which yeere he dyed and departed this present life. At the time when *Motezuma* came to his gouernment, he was fiue and thirtie yeeres old little more or lesse, so that at his decease he was three and fiftie yeeres of age. And straightway in the yeere after his death, this Citie of *Mexico*, and other Townes adioyning, were ouercome and pacified by the said Marques *del Valle*, and his Confederates. And so this *New Spaine* was conquered and pacified.

Mutezumas death.

A *The number of 19. yeeres (18. yeeres of his raigne, and that other which followed in his Successor, wherin Mexico was conquered, as you may see in the next chapter)* B *the fourth yeere of his raigne in which hee began his conquest.* C *Motezuma.* D *the instruments of warre by which hee conquered Achiotlan, Zozolan, Nochiztlan, Tecutepec, Zulan, Tlaniztlan, Huilotepec, Yepatepec, Yxsatlalocan, Chichibualtatacala, Tecaxic, Tlachinoltepac, Xoconochco, Zinacantlan, Huiztlan, Piaztlan, Molanco, Zaquantepec, Pipyoltepec, Hueyapan, Tecpatlan, Amatlan, Caltepec, Pantepec, Teoazinco, Tecozahtla, Teochiapan, Zacatepec, Tlachquiyahco, Malinaltepec, Quimichtepec, Tzquintepec, Zenzontepec, Quetzaltepec, Cuezcomayxtlahuacan, Huexolotlan, Xalapan, Xaltianbnizco, Yoloxonecuila, Atepec, Mictlan, Yztitlan, Tliltepec, Comaltepec.*

These townes were gouerned by the *Casiques* & Principals of *Mexico*, appointed by the Lords of *Mexico*, for the good defence and gouernment of the naturall people, and for the securitie of the Townes, that they should not rebell, as also for the charge they had to gather and command to be gathered the Rents and Tributes, that they were bound to giue and pay to the Dominion of *Mexico*.

Citlaltepec, Quanhtochco, Mixcoatl, Tlacatecth a Gouernour, *Zompanco, Xaltocan, Tlacatecth* a Go-

Gouernour, *Acalhuacan, Tlacochtecatl* a Gouernour, *Huexac, Yztayocan, Coatitlan, Huixachtitlan, Tlacatecatl* a Gouernour, *Tlacochtecatl* a Gouernour, *Zozolan, Poetepec, Coatlayancham, Acolnahuac, Puputlan, Yztacolco, Chalcoatenco, Tlacochtecatly* a Gouernour, *Tlacatecatl* a Gouernour, *Oztoma, Atzacan, Atlan, Omequuh, Tezcacoacatl* a Gouernour, *Tlilancalqui* a Gouernour, *Xoconochco, Tecapotitlan.*

§. II.

The second part of this Booke contayning the particular Tributes which euery Towne subdued paid vnto the Lords of Mexico.

HEre follow pictured and intituled the kinds of things, that they of *Tlatilulco* (which at this day is called by the *Spaniards*, Saint *Iames*) did pay in tribute to the Lords of *Mexico*, and the said tribute summed here, is that which followeth.

They were charged for tribute, alwayes to repaire the Church called *Huiznahuac*. *Item*, fortie great Baskets (of the bigneſſe of halfe a Bushell) of *Cacao* ground, with the Meale of Maiz (which they called *Chiampinoli*) and euery Basket had sixteene hundred Almonds of *Cacao*. *Item*, other fortie Baskets of *Chiampinoli*. *Item*, eight hundred burthens of great Mantels. *Item*, eightie pieces of Armour, of slight Feathers, and as many Targets of the same Feathers, of the deuices & colours as they are pictured. All the which tribute, except the said armes and targets they gaue euery 24. dayes, and the said armes and targets they gaue for tribute but once in the whole yeere. The said tribute had his beginning since the time of *Quauhtlatoa* and *Moquihuix*, which were Lords of *Tlatilulco*. The Lords of *Mexico*, which first enioyned to those of *Tlatilulco*, to pay tribute, and to acknowledge their subiection, were *Yzcoatçi* and *Axiacaçi*.

A the Temple of Huiznahuac. B 20. *baskets of Cacao meale (the Eare and Meale figured)* C 20. *more of the same.* C 20. D 20. E 20. *baskets of Chiampinoli.* F 40. *peeces of Armes of this deuice.* G 40. *of this deuice (like the former, but that is white with blacke streakes, this yellow)* H I *are each* 400. *burthens (the eare signed* 400.*) of Mantles.* K *These foure like vnto flowres doe signifie foure dayes, euery flowre* 20. *dayes, as they of Tlatilulco did tribute the things pictured and intituled by taxation of the Lords of Mexico.* L 40. *Targets of this deuice (to expresse the difference of colours*

Digitized by Google

colours in each particular were too tedious.) N Tlatilco. The names of Quauhtlatoa and Moquihuix Lords of Tlatilulco are added, because in their times it began; as also of Tenuxtitlan; Itzcuac and Apayauan to intimate that these two Lords of Mexico or Tenuxtitlan subdued them. The Pictures of them (as of many Townes before) were omitted: being but such descriptions of men and Townes as you haue seene alreadie.

THe Townes pictured in the two Pieces following, and summed heere be twentie three Townes as appeareth by their Titles, and they had a chiefe Gouernour appointed by the Lords of *Mexico*, called *Petlacalcatl*, although neuertheleſſe, euery Towne had his *Calpixque*, which is at it were a Steward or Bayliffe, whoſe charge was to gather the Rents & tributes that the ſaid Townes did tribute to the Dominion of *Mexico*, and all the ſaid Stewards came to the ſaid *Petlacalcatl* as their Gouernor, and the things and kinds that the ſaid townes did tribute, are theſe which follow, 2400. burthens of great Mantels of twiſted Yarne. Eight hundred burthens of little Mantles, rich attyre, of the colours as they are pictured. Foure hundred burthens of *Maxtlac*, which ſerued for little clothes. Foure hundred burthens of *Huipiles* and *Naguas*, all the which they gaue for tribute euery ſixe moneths.

Item, They gaue fiue pieces of Armour, of rich Feathers, and as many Targets of the colours and deuices as they are pictured.

Item, They did tribute ſeuentie pieces of Armour of Feathers of ſmall account, and as many Targets of the colours and deuices as they are pictured.

Item, They tributed one *Troxe* of *Friſoles*, and another *Troxe* of *Chian*, and another *Troxe* of Mayz, and another of *Bnastle*, which is the ſeed of *Bletes*. All the which things of the ſaid Armour and Targets, and *Troxes* of *Friſoles*, and the other ſeeds the ſaid Townes did pay for tribute once euery yeere.

Pethacalcatl a Governour (the pictures of men and townes are heere and in the following omitted, being no other then as you haue already seene). The townes are Xacalpan, Tepico, Tepetlaculco, Tacolapan, Teporlpan, Tequenecan, Huicilo Pochco, Colhuacinco, Cuetlan, Tequapulan, Olac, Atapan, Cuitlahuac, Tezcacoa, Mezquic, Atchopanco, Itzapolitlan, Xoc, Topac, Tamalca, Thecoxinoch, Nextitlan.

The

THese Townes pictured and named, enduring and summed heere, are six and twentie townes, wherein from the time of their conquests by the Lords of *Mexico*, they had set *Calpixques*, as it were Bayliffes in euery of them, and in the principall Towne a Gouernour that rule aboue all the rest, because he should maynteine them in peace and iustice, and make them performe their tributes, and that they should not rebell. The tributes that all the said townes hereafter conteyned, did pay together, are these which follow.

Two thousand burthens of great Mantels twisted. *Item*, 1200. burthens of *Cuachtli*, which be rich Mantels, wherewith the Lords and *Casiques* were clothed of the colours as they are pictured. *Item*, 400. burthens of *Maxtlatl*, which be little clothes. *Item*, 400. burthens of *Huipiles* and *Nagua*, all the which they paid for tribute ewice a yeere. *Item*, they gaue more tribute three pieces of Armour garnished with rich feathers, and as many Targets of the colours and deuices as they are pictured, the which they gaue in the space of one yeere. *Item*, one hundred pieces of Armour garnished with feathers of small value, and as many Targets of the deuices and colours as they are hereafter pictured, the which they tributed onee a yeere. *Item*, foure great *Troxes* of wood, full, the one of *Frisoles*, and another of *Chian*, and another of Maiz, and another of *Guauti*, which is the seed of *Blethos*. Euery *Troxe* might contayne foure or fiue thousand *Hanegas*, the which they tributed once a yeere.

Acolmecalt. Calpixque. Acolhuacan, Huiciltepe, Tolquiaco, Tlachyahualco, Tepechpa, Aztaquemeca, Teocalco, Tenanitla, Zenpoalan, Tepetlaoztoc, Achnatepec, Tiçatep, Coatlan, Txquenecan, Matixco, Tenextzalapan, Tyzaucan, Tepetlapan, Calchmalco, Tecoyncan, Tlaquilpan, Quauhquemican, Epaçoncan, Ameyalco, Quauhyocan, Ecatepec.

A 400. *burthens of Mantels of this colour (red) and worke (edged Blue, Greene, Red, and Yellow)* B 400. *bundles of Mantels of this worke (Blacke and White)* C *Twentie pieces of Armes of rich feathers of this worke.*

A *Following two Troxes of Frisoles and Chian,* B *two Troxes, the one of Maiz, the other of Huauti (their corne.) The rest are omitted in Picture, being resembled to the former, and for the Historie you haue it before.*

THe townes pictured and named, and numbred here are sixteene townes, the which townes did pay for tribute to the Lords of *Mexico*, the things pictured and intituled. And because they should be well ruled and gouerned, the Lords of *Mexico* had set *Calpixques* in euery town, and aboue all them for Gouernour, a principall man of *Mexico*; the *Calpixques* also were men of *Mexico*: which was done by the said Lords for the securitie of the townes, that they should not rebell, and also because they should minister Iustice, and liue in policie. And the said Tributes that the said townes gaue as appeareth by the said Pictures, and summed heere, are those which follow.

First, they did tribute twelue hundred burthens of great Mantels of twisted Yarne.

Item, Eight hundred burthens of small white Mantels, of the apparell which they did weare.

Item, Twelue hundred burthens of small white Mantels, richly wrought, which is apparell that the Lords and *Casiques* did weare.

Item, Foure hundred burthens of *Maxtlatle*, which are small clothes that they weare.

Item,

Item, Foure hundred burthens of *Huipiles* and *Nagua*, which is apparell for women, all the which they tribute twice a yeere, so that they gaue tribute euery sixe moneths.

Item, They did tribute eight pieces of Armour, and as many Targets garnished with rich feathers of diuers colours as they are pictured, the which they paid for tribute onnce a yeere.

Item, Foure great *Troxes* of wood, full of *Maiz* and *Frisoles*, and *Chian*, and *Huauli*, which is the seed of *Blethos*, euery *Troxe* might contayne 5000. *Hanegas* or Bushels, the which they did tribute once a yeere.

Item, Eight Reames of Paper, of the Countrey, which they tributed twice a yeere; so that in all it was euery yeere sixteene thousand sheets of Paper.

Item, In euery tribute 2000. *Xicaras*, or drinking Cups, which they gaue euery 2 yeere.

The Townes were *Quauhnahuac*, *Tepoztlan*, *Chimalco*, *Huiccolapan*, *Acatlipan*, *Xochitepec*, *Miacatlan*, *Molotla*, *Cuezlan*, *Xiuhtepec*, *Xoxutla*, *Amaqueztitlan*, *Yztlan*, *Quauquecon*, *Tzicpetlan*, *Atlichololoyan*.

A Eight thousand sheetes of Paper, of the Countrey. B Foure hundred *Xicaras*, or Cup-dishes of this worke. C Foure hundred of this worke. D Foure hundred of this worke. E Foure hundred of this worke. F Foure hundred of his worke. The colours are Yellow and Red. The rest need no presenting in Picture, being but as formerly is seene.

THe townes following, and numbred here are six and twentie, which did pay tribute of the things pictured and entituled to the Lords of *Mexico* and likewise there was resident a Gouernour, and *Mexican Calpixque*, as in the other townes afore mentioned, which were ordained by the Lords of *Mexico*. And the tributes that they payed, appearing by the Pictures are these which follow. First, they did tribute 400. burthens of *Maxtlatle*, which are little clothes. *Item*, 400. burthens of *Nagua* & *Huipiles*, apparell for women. *Item*, 2400. burthens of great Mantles, of twisted yarne. *Item*, 800. burthens of rich Mantles, that the Lords and Principals of *Mexico* were clothed with, of the colours as they are pictured. *Item*, 2000. *Xicaras* varnished, of the colours as they be pictured. *Item*, 8000. Reames of Paper of the Countrey, all the which they gaue in euery tribute which was euery six moneths. *Item*, They tributed 40. pieces of Armour, and as many Targets garnished with flight feathers died of diuers colours, as appeareth by the Pictures. *Item*, Six pieces of Armour, and as many Targets garnished with rich feathers of the deuices and colours as they be pictured. *Item*, Foure great *Troxes* of wood like those aforesaid, ful of *Maiz* and *Frisoles*, and *Chian*, and *Guauli*, all the which they tributed once a yeere.

The townes names are *Huaxtepec*, *Xoxhimilcaçinco*, *Quauhtlan*, *Achichinccpan*, *Anenicquilco*, *Olintepec*, *Quauhnitlyxco*, *Zompanco*, *Huitzilapan*, *Tlaltitcapan*, *Coacalco*, *Tzamatitla Tepoztlan*, *Tanhtepec*, *Tacapichtla*, *Thyacapan*, *Xalentzo*, *Tecpazino*, *Nepopoalco*, *Atlatlanca*, *Tetolapan*, *Amilxinco*, *Atlhuelic*.

A B C D E are each of them foure hundred *Xicaras* or Cup-dishes.

F Eight thousand sheets of Paper, the Pictures of the rest are omitted.

The

THe Townes pictured and named here are seuen, which paid tribute to the Lords of *Mexico*, as in the other parts aforesaid haue beene mentioned, and the things they tributed are these that follow.

First, Foure hundred burdens of Mantels of rich workes; and foure hundred burdens of plaine Mantels, of the color as they be pictured. *Item*, Foure thousand *Petates*, which are Mats, and other foure hundred backes with their seates made of Segs and other Herbs, the which they did tribute euery six moneths. *Item*, Two peeces of Armour, and as many Targets garnished with rich Feathers of the deuices and colours as they be pictured. *Item*, Fortie peeces of Armour, and as many Targets, garnished with sleight Feathers. *Item*, Foure great *Troxes* of wood of the bignesse of those aforesaid, full of *Maiz*, *Frisoles*, *Chian* and *Guantly*, which they gaue for tribute once a yeare.

The Townes are *Quauhtitlan, Tehuiloyocan, Ahuexoyocan, Xalapan, Tepoxaco, Cuezcomo huacan, Xiloçinco.*

A Foure hundred burthens of Mantles of this worke (coloured with Red, Tellow, &c.) B Foure hundred burthens of Mantles of this worke (Blacke and White.) C Foure hundred burthens of this worke (all White.) D Foure thousand Mats & foure thousand Backes: the number is intimated by the figures following, somewhat like eares of Corne, eachof which significth foure hundred.

THe Townes pictured and named are tenne, which did paie tribute to the Lords of *Mexico*, as afore said, and the things that they did tribute doe follow.

First, eight hundred burdens of rich Mantles, and wrought as appeareth by the titles and pictures. *Item*, Foure hundred burdens of white Mantles, with their border of blacke and white. *Item*, Eight hundred burdens of white Mantles. *Item*, Foure hundred burdens of *Nagnas* and *Huipiles*. *Item*, Foure hundred great Pots of thicke Honie of *Magues*; all the which they tributed euery sixe moneths. *Item*, They did tribute two peeces of Armour, garnished with rich Feathers, and as many Targets of rich Feathers, of the deuices as they be pictured and intituled. *Item*, Fortie peeces of Armour, garnished with slight Feathers, and as many Targets, of the deuices as they are pictured. *Item*, Foure great *Troxes* of wood, of the bignesse of those that are signified in the parts before, the one of *Maiz*, and the other of *Frisoles*, another of *Chian*, and another of *Guantli* seede of *Bledos*. All the which they tributed once a yeare. The Townes are *Axocopan, Atenco, Tetepanco, Xochichuca, Temohuayan, Tezcatepec, Myzquiauhuala, Tzanyquitpan, Tlaahuilpan, Tecpatepec.*

A *Foure hundred Pots of thicke Honie of Magues: this is for the newell figure pictured, the rest not, being as the former in their forme.*

THe number of the Townes ensuing, are seuen, and they did tribute to the Lords of *Mexico*, after the order declared in the parts aforesaid; and the things which they did tribute are those which follow.

First, Foure hundred burdens of Mantels of rich workes, which was apparell that the Lords and *Caciques* did put on. *Item*, Foure hundred burdens of white Mantels, with their borders of white

white and black. *Item*, Eight hundred burdens of great Mantels of twiſted Yarne. *Item*, Foure hundred burdens of Chalk; all the which they did tribute euery ſix moneths. *Item*, they did tribute two peeces of Armour garniſhed with rich Feathers, and two Targets, as appeareth by the deuices and pictures. *Item*, Fortie peeces of Armor, and as many Targets garniſhed with ſlight Feathers, as appeareth by the pictures, deuices and titles. *Item*, Foure great *Troxes* of wood, of the bigneſſe of thoſe before, the one full of *Maiz*, another of *Friſoles*, another of *Clian*, and another of *Guiauti*; all of the which they did tribute once a yeare. The Townes are *Atotonilco*, *Guapalcalco*, *Quecalmacan*, *Acococlco*, *Tehuchuec*, *Otlazpan*, *Xalac*.

A 400. *burthens of Chalke or Lime: the marke on the top ſignifieth* 400. *the figure is the forme of their burthen. Other figures neede not be preſented.*

THe number of the Townes following, are nine, according as they be pictured and named. And they paid tribute as followeth.

Firſt, foure hundred burdens of Mantels of rich workes, which the Lords and *Caſiques* did put on. *Item*, Foure hundred burdens of white Mantels, with their edge of white and blacke. *Item*, eight hundred burdens of white Mantels of *Enequen*. *Item*, Foure hundred Pots of thicke Honie of *Maguez*. All the which they tributed euery ſix moneths. *Item*, Two peeces of Armour, and as many Targets, garniſhed with rich Feathers, of the colours and deuiſes as they be pictured & intituled. *Item*, threeſcore peeces of Armor, and as many Targets, garniſhed with ſlight Feathers, of the colours and deuiſes as they be entituled and pictured. *Item*, Foure great *Troxes* of wood, of the bigneſſe aforeſaid full, the one of *Mays*, and another of *Friſoles*, another of *Chian*, and another of *Guauly*. All the which they tributed once a yeare. The Townes are *Hueypuchtla*, *Xalac*, *Tequixquiac*, *Tetlapanaloyan*, *Xicalhuacan*, *Xamoyocan*, *Acayocan*, *Tezcatepetenco*, *Atocpan*.

A 400. *Pots of Honie of Maguez, paid euery ſix moneths.*

THe number of the Townes following be ſix: and they paid tribute as followeth.

Firſt, Eight hundred burdens of rich Mantels apparel that the Lords of *Mexico* did cloath themſelues with, as appeareth in the ſaid ſide by the pictures and titles. *Item*, One thouſand ſix hundred burdens of white Mantels of *Enequen*; all the which they did tribute to the Lords of *Mexico* euery ſix moneths. *Item*, Foure peeces of Armour, and as many Targets, garniſhed with rich Feathers of the colours and deuiſes as they are pictured and intituled. *Item*, Foure great *Troxes* of wood, of the bigneſſe of the other, full of *Maiz*, *Friſoles*, *Chian*, and *Guauly*. Item*, A liue Eagle, and some times two or three, as they could catch them. *B*. All the which they tributed once a yeare.

Pepper

CTzicoac, *Molanco*, *Cozcatecutlan*, *Yehoatlan* and *Xocogoran*, paid these tributes to the Lords of *Mexico*. First, 400. burdens of white Mantels with their edge of red, blew, greene and yellow. *Item*, 400. burdens of *Maxtlatle*, which are lesser cloathes *B*. *Item*, 800. burdens of great white Mantels of three bracas euery Mantell. *Item*, 400. burdens of *Naguas* and *Huipiles*, which is womans apparell, *A*. All the which they tributed euery six moneths. *Item*, they tributed two pieces of Armour with their Shields decked with rich Feathers of the fashion that they are pictured. *Item*, 800. packs of Cotten, *D*. *E*. All the which they tributed once a yeare. *Item*, 400 burdens of *Axi* dried *C*.

§. III.

The third part of this Booke containeth the priuate behauiour in Mariages, education of Children, and Trades; with the Martiall, Eccleſiaſtike, and Ciuill policie of the MEXICAN *people.*

A Relation of the manner and cuſtome that the naturall *Mexicans* had when either a Boy or Girle was borne vnto them. The vſe and ceremonies in giuing names to their children, and afterwards to dedicate and offer them either to the Church, or elſe to the warres, according as by the pictures is ſignified, and briefly declared.

The Woman being delidered, they laid the childe in a Cradle, according as is pictured, & foure dayes after the birth of the childe the Midwife tooke it in her armes naked, & brought it forth to the yard of the childe wiues houſe; and in the yard were prepared Bulruſhes or Sedges, which they call *Tule*, and they ſet vpon them a little pan of water, wherein the ſaid Midwife waſhed the ſaid childe: after it is waſhed, three Boyes, which are ſet by the ſaid Bulruſhes, eating toſted *Maiz*, mingled with ſodden *Friſoles*, which they called *Txicue* foode, the which foode made

A kinde of Baptiſme with the naming of their children.

A *The woman that is delinered,* B *Theſe foure Reſes ſignifie foure dayes wherein the Midwife brought forth the childe that was lately borne to waſh.* C *The cradle with the childe.* D *The Midwife.* E *The ſignes, inſtruments, and the bond (Shield and Darts)* F G H *the three Boyes which name the childe.* I *The Bulruſhes with the pan of water.* K *The Broome.* L *The Spindell and the Diſtaffe.* M *The Basket.* N *The high Prieſt.* O *The childe in his cradle which his Parents offer in the Temple.* P *The Maſter or Teacher of boyes and yong men.* Q *The childes Father.* R *The childes Mother.*

ready

ready, was set in a little pan before the said Boyes, that they might eate it. And after the said bathing or washing, the said Midwife aduertited the said Boyes, that they should with a loud voice giue a new name vnto the childe that she had so washed, and the name that they gaue it was that which the Midwife would impose.

When the childe was brought forth to wash, if it be a man childe they bring him forth with his signe in his hand, and the signe is the Instrument wherewith his Father did exercise himselfe, as well in the Military art, as other arts, as of a Goldsmith, a Grauer, or any other office whatsoeuer: And after they had done all the aforesaid, the Midwife brings the childe to his Mother. And if it be a woman-childe, the signe wherewith they bring her to wash, is a Distaffe, a Spindel, a Basket, and a handfull of Broome; which are the things wherewith she should exercise her selfe, being of age thereto.

And the bond of the Manchilde with a Shield and Darts for a signe which he brings with him when they bring him for to wash; they offer it to that part and place where are likely to happen warres with his enemies, where they burie it vnder ground. And so likewise of the Woman-childe, her bond they buried vnder the *Metate*, which is a stone to grinde Cakes vpon.

And after the aforesaid, at the end of twenty dayes, the childes Parents went with the childe to the Temple or *Mixquiza*, which they called *Calmecac*, and in the presence of the Priests they presented the childe with his offering of Mantels, and *Mastelles* and some meate: And after the childe being brought vp by his Parents, and being of age, they committed the childe to the high Priest of the said Temple, because there he might be taught that hereafter he might be a Priest. Presentation in the Temple

And if the childes Parents were determined that he (being of age) should serue in warlike affaires, then straight way they offered him to the Master thereof, making him a promise of him (the Master of Boyes and yong men they called *Teachcauch* or *Telpuchtlato*) which offering was made with his present of meate and other things for the celebrating thereof. And the childe being of age, they committed him to the said Master.

X

The declaration of the pictures contained in the deuiſon following, wherein is declared at what age, and in what manner the naturall Parents did giue counsell to their children, how they ought to liue, as successiuely is pictured in foure partitions; and so the foure partitions of this side are declared in order which are these that follow. X

1 The first partition, wherein is declared how that the Parents corrected their children, in giuing them good counsell when they were three years of age; and the portion of meate that they gaue them euery meale was halfe a cake of bread.

2 The second partition wherein is pictured in what things the Parents did instruct their children when they were of the age of foure yeares, and how they began to exercise them to serue in small things. And the portion of meate which they gaue them at a meale, was a whole Cake.

A *The Boy his Father.* B *Three yeares of age.* C *A Boy.* D *Halfe a Cake.* E *The Boyes Mother.* F *Halfe a Cake.* G *Girle of three yeares of age.* H *The Father of the Boy.* I *A Boy of foure yeares of age.* K *A Cake.* L *The Mother of the Girle.* M *A Cake.* N *A Girle of foure yeare of age.* * *A Spindell with a locke of cotten woll lying on a Mat.*

3 The third partition, wherein is ſhewed that the Parents did exerciſe their children in bodily labour at fiue yeares of age, in loding their Sonnes with Wood and other things in ſmall burdens, of ſmall weight, and to carry packes of ſmall weight to the *Tyanguez*, or Market place. And they exerciſed their Daughters of that age, in ſhewing them how they ſhould handle the Spindell and Diſtaffe for to ſpin. And their allowance of meate was a whole Cake of Bread.

4 The fourth partition, wherein is pictured how the Parents inſtructed their children of ſix yeares old, and exerciſed and occupied them in bodily ſeruice, that they might profit their Parents in ſome thing, as in the *Tyanguez*, which are Market-places that they might gather from the ground, the cornes of *Maiz* and *Friſoles* that were ſpilt there by him, and other ſmall things that the buyers and others had left and ſpilt there. And this was the Boies worke. But the Girles were put to ſpinne and to doe other profitable ſeruices, becauſe in time to come, by meanes of the ſaid ſeruices and occupations, they ſhould not ſpend their time idelly, and ſhould auoide euill vices that are wont to grow through idleneſſe. And the allowance of meate that they gaue to their children was a Cake and a halfe of Bread.

O *The Father of the Boyes.* P *Two Boyes of fiue yeares of age.* Q *A Cake.* R *A Cake.* S *The Mother of the Girle holding the Spindle and Rocke.* T *A Cake.* V *A Girle of fiue yeares old.* W *The Father of the two Boyes.* *Two Boyes of ſix yeares old.* X *A Cake and a halfe.* Y *The mother of the Girle.* Z *A Cake and a halfe.* *A Girle of ſix yeares old ſpinning Cotton well.*

A Declaration of the figure following, wherein is ſhewed, at what age and in what things the naturall people of *Mexico* did inſtruct their children, and in what manner they corrected them, that they ſhould auoide all idleneſſe, and alwayes ſhould be exerciſed in ſome profitable things, aſſucceſſiuely is pictured in foure partitions.

1 The firſt partition, wherein is pictured how the Parents vſe their children of ſeuen yeares old that is the men children they applyed them in giuing them their fiſhing Nets. And the Mothers did exerciſe their Daughters in ſpinning and in giuing them good counſell that they ſhould alwayes apply and occupie their time in doing ſome thing for to auoide idleneſſe. And the allowance of meate that they gaue to their children at euery meale was a Cake and a halfe of Bread.

A *The Father of the Boyes.* B *Theſe ſeuen ſpots ſhew ſignifie ſeuen yeares.* C D *A Cake and a halfe.* D *A Boy of ſeuen yeares old, whoſe Father ſheweth him how he ſhould fiſh with the net he hath in his hand.* E *The mother of the children.* G *A Girle of ſeuen yeares old, whoſe mother is teaching her to ſpinne.*

Digitized by Google

2 The second partition: Wherein is pictured, how the Parents did chasten their children of the age of eight yeeres, in laying before them with terrors and feares the thornes of *Maguez*, that in being negligent and disobedient to their Parents they should bee chastned with the said thornes, and so for very feare they wept, as by the pictures of this partition is signified. And their allowance for a meale, which they gaue them by measure, was a Cake and a halfe.

3 The third partition: Wherein is pictured, how the parents punished their children of nine yeeres of age, because they were disobedient and rebellious to their fathers, they did chastise them with the said thornes of *Maguez*, binding them naked hand and foot, they thrust the said thornes into their body and shoulders. And they prioked onely the wrists and hands of the Girles with the said thornes, as in the said partition is pictured. And their allowance euery meale was a Cake and a halfe of bread.

4 The fourth partition: Wherein is pictured, how the parents chastised their children of ten yeeres of age, that is, being rebellious they did chastise them in beating them with a cudgell, and threatning them otherwise as in the fourth partition is pictured. And the allowance which they had giuen them at a meale, was a Cake and a halfe.

H *The father of the children contayned in this row.* I *These eight spots signifie eight yeeres.* K N *a cake and a halfe.* L *a Boy of eight yeeres old, whose father is threatning him that he be not vnhappy, because he will chastise him in thrusting thornes of Maguez into his body.* M *The mother of the children contayned in this row.* L O *Thornes of Maguez.* P *a Girle of eight yeeres old, whom her mother threatneth her with thornes of Maguez, that shee bee not vnhappy.* Q *The father of the children contayned in this side.* R W *a Cake and a halfe.* S *These nine spots signifie nine yeeres.* T *a Boy of nine yeeres old, because he is incorrectible, his father thrusteth thornes of Maguez into his body.* V *The mother of the children contayned in this row.* X *a Girle of nine yeeres old, that for her negligence and idlenesse, her mother did chastise her in pricking her hands with thornes of Maguez.* Y *These ten spots signifie ten yeeres.* X *The father of the children contayned in this row.* Z B *a cake and a halfe.* A *The mother of the children contayned in this row.* & *a Boy of ten yeeres old, whom his father is chastising with a cudgell staffe.* C *a Girle of ten yeeres, whom her mother is chastising in beating her with a cudgell staffe.*

1 A Declaration of the first partition of the picture following. The Boy or Girle of eleuen yeeres old, which would not bee reformed with wordes nor stripes, their parents did chastise, giuing them into the Nose the smoke of *Axi*, which was a grieuous and cruell torment, to the intent they should be reformed and not be vicious persons and vagabonds, but should employ and spend their time in profitable things. And to the children of that age they gaue bread, which are cakes, by measure, only a cake & a halfe at a meale, because they should not be gluttons.

2 In the ſecond partition; The Boy or Girle of the age of twelue yeeres, which would not receiue quietly counſell nor correction at their Fathers hands; the Father tooke that Boy and tyed him hand and foot naked, and ſtretched him on the ground in a dirtie wet place, where he lay ſo a whole day, becauſe he ſhould be chaſtiſed and feared thereby. And the Girle of that age, her Mother made her ſerue, ſo that in the night before it were day ſhee ſhould ſweepe all the houſe and the ſtreet, and that alwayes ſhee might be occupied in bodily ſeruice. And ſo likewiſe their Parents gaue them meat by meaſure a Cake and a halfe euery meale.

3 In the third partition, the Boy or Girle of thirteene yeeres old, their Fathers employed in bringing wood from the Mountaine, and with a Canoa-boat to bring boughs and other herbs for the ſeruice of the houſe. And the Girles ſhould grinde and make Cakes and other meates for their Parents. And they gaue their children meat by meaſure, two Cakes euery meale.

4 In the fourth partition; The Boy or Girle of fourteene yeeres old, their Parents did imploy in fiſhing in Lakes and Riuers with his Canoa. And the Girle was ſet to weaue yarne of whatſoeuer ſort for apparell. And they gaue them to eate two Cakes by meaſure.

A *Theſe eleuen ſpots of blue ſignifie eleuen yeeres.* B *The father of the children.* C *a Boy of eleuen yeeres old, whoſe father is chaſtiſing him, ſmoking him at the Noſe with* Axi *dried.* D *a Cake and a halfe.* E *a fume or ſmoke of* Axi *or Pepper, which the Cutter hath not ſo well expreſſed.* F *The mother of the children.* G *a Girle of eleuen yeeres old, whoſe mother is chaſtiſing her ſmoking her at the Noſe with Axi.* H *a Cake and a halfe.* I *a perfume of Axi.* K *The father of the children.* L *twelue yeeres.* M *a Cake and a halfe.* N *a Boy of twelue yeeres old, tyed hand and foot and laid a whole day on the wet and moiſt ground.* O *The mother of the children.* P *This picture ſignifieth the night.* Q *a Cake and a halfe.* R *a Girle of twelue yeeres old that is ſweeping in the night time.* S *The father of the children.* T *Thirteene yeeres.* V *a Boy of thirteene yeeres old laden with Sedges.* W *a Boy of thirteene yeeres which carrieth Sedges in his Canoa.* X *a Canoa with burdens of* Z *Canes or Tule.* Y *Two cakes.* Aa *The mother of the children.* Bb *a Girle of thirteene yeeres, which is grinding and making of Cakes, and dreſſing meat.* Cc *Two Cakes.* Dd *a Porenger.* Ee *Comaly* Ff *Two Cakes.* Gg *a pot of boyled meat.* Hh *Fourteene yeeres.* Ii *The father of the children.* Kk Ll *a Boy of fourteene yeeres which goeth a fiſhing with his Canoa.* Mm *Two Cakes.* Nn *The mother.* Oo *a Girle of fourteene yeeres weauing.* Pp *Two Cakes.* Qq *The cloth that ſhee weaueth.*

1 That

1 THat which is pictured in the first partition, doth signifie that the Father hauing two sonnes young men, of yeeres able to serue, brought them to the two houses that are pictured, either to the Masters house that did teach and instruct yong men, or else to the Temple, according as the youths were inclined, and so committed them either to the high Priests, or else to the Master of Boyes to the end they might be taught; the youths being fifteene yeeres of age.

2 In the second partition is pictured, the manner and law they had and kept in their Marriages that they made lawfully. The celebration thereof was, that an *Amanteca* (which is a Broker) carried the Bride on her backe at the beginning of the night, and there went with them foure women with Torches of Pine-tree rosined burning, wherewith they lighted her. And being come to the Bridegroomes house, the Parents of the Bridegroome came out to the Court of the house to receiue her, and they carried her into a Hall or some place where the Bridegroome tarried for her. And the betrothed folkes were set on a Mat with their seates neere a pan of fire, and they tyed the one to the other with a corner of their appatell, and made a perfume of *Copale* to their gods, and two old men and two old women were present as witnesses. Then the married folke dined, and afterwards the old folkes. And when dinner was done, the old men and women separated the married folke by themselues, giuing them good counsell how they should behaue themselues and liue, and how they should maintayne the charge and calling they had taken vpon them, that they might liue with quietnesse.

A *The father of the two youths.* B *a youth of fifteene yeeres old committed to an high Alfaqui or Priest.* C *Tlamacazqui, which is an high Priest.* D *a Temple or Mezquita, which they called Calmecac.* E *a youth of fifteene yeeres, whose father putteth him to a Master to be taught.* F *Tachcauh, a Master.* G *a house where youths are taught and brought vp in.* H *Fifteene yeeres.* I *An old man.* K *The hearth. Copale.* L *The woman.* M *The man.* N *An old woman.* * *The perfume.* O *The Mat.* P *The meat.* Q *The meat.* R *An old man.* S *A Cauter or pot of pulque.* T *The Cup.* V *An old woman.* W *The Bride.* X *These goe lighting the Bride, whom they goe to leaue at the Bridegroomes house in the beginning of the night.* Y *Amanteca which carrieth the Bride on her backe.* Z *These goe lighting of the Bride at the beginning of the night.* 1 *a torch of Pinetree.* 2 *a torch.* 3 *torches of Pinetree.* 4 *torches of Pinetree.*

3 When

1 WHen they entred to bee Prieſts, the elder Prieſts occupied them ſtraightway in bodily ſeruices for their Temples, that afterwards they might bee skilfull when they were chiefe Prieſts, that after the ſame order as they had ſerued, they might bring vp the other Nouices that ſhould be after them. Theſe Prieſts are all painted in aſh-colour: Other men in an oliue or tawny.

2 In the ſecond partition is declared wherein the young men were occupied and did ſerue, that thenceforth when they were of yeeres, they might bee skilfull to take charge and command other youths like themſelues, that they ſhould not goe idle nor become vagabonds, but that they ſhould alwayes apply themſelues to things of vertue.

3 In the third partition is declared likewiſe the correction and chaſtiſing, that the chiefe Prieſts did to the Nouice-Prieſts, which were forgetfull and negligent in their ſeruices, and for other faults as they committed, chaſtiſing them according, as is ſhewed by the pictures.

4 In the fourth partition, is declared how the Captaines and warlike men exerciſed the young men which were of age thereto in warlike affaires, according as their fathers did recommend them.

A *Tlamacazcá*, *A nouice Prieſt that is charged to ſweep.* B *A nouice Prieſt that cōmeth from the wood ladē with boughes for to dreſſe the Temple.* C *A nouice Prieſt laden with thornes of Maguez, for to draw bloud with all to offer ſacrifice to the deuill.* D *A nouice Prieſt which is laden with greene cane: for the Temple for to make Skates and Toe.* E *A youth which is laden with a great log to keepe fire in the Temple.* F *Youthes which are laden with logs of wood for to keepe fire in the Temple.* G *A youth laden with boughes for to dreſſe the Temple.* H *This chiefe Prieſt is puniſhing the nouice Prieſt becauſe he was negligent in his office.* I *The nouice Prieſt.* K *The chiefe Prieſt.* L *The nouice Prieſt.* M *Another elder Prieſt. They are puniſhing this nouice Prieſt, pricking him with thornes of Magues throughout his body, becauſe he was arebell and diſobedient and negligent in that he was commanded to doe.* N *This houſe ſignifieth that if the nouice Prieſt went to his houſe to ſleepe three dayes they puniſhed, as is aboue pictured and declared.* O *Tequigna, which is a valiant Warriour.* P *The youth.* Q *The father of the youth that offereth his ſonne to the valiant Warriour, to exerciſe him in warlike affaires, and to carrie him to the warres.* R *The youth who is publike ſeruant to the valiant man that goeth to the warre with him, carrying his baggage on his backe with his owne Armour.* S *Tequima, a valiant man that goeth armed to the warres.*

1. Here

1 HEreis declared how the chiefe Priests did exercise and occupie them selues in the night time, whereof some occupied themselues in going to the Mountaynes, to offer sacrifice to their Gods, others in Musicke, and others were obseruers of time by the Starres of the Element, and others in other things of their Temples.

2 In the second partition is declared the punishment they did vse to the young men, according as the Pictures doe represent. The which was executed according to the Lawes and Statutes of the Lords of *Mexico*.

4 The punishment that the Beadles *Telpuchtlatos* did vse to the vicious young men, which went about like Vagabonds according to their Lawes, and the rest pictured and declared in the same partition.

A chiefe Priest which goeth in the night with his fire burning, to a Mountaine to doe penance. And hee carrieth in his hand a purse of Copaly, which is Perfume to offer Sacrifice to the Deuill. And at his backe Rosen in a vessell for the same Sacrifice, and he carrieth his boughes to beset the place of Sacrifice. And hath after him a novice Priest, which carrieth other things for the Sacrifice. B A novice Priest. C A chiefe Priest, which is playing on the Tepunaztly, which is an instrument of Musicke, and he exerciseth himselfe therein in the night. D This Picture with eyes doth signifie the night. E This Picture with eyes doth signifie the night. F A chiefe Priest which is looking on the flames of the Towers by night, to see what towre it is in the night, which is his charge and office. G A young man that goeth to warre, laden with fusse and instruments of armour. H Telpuchtlato. I The youth. K The woman. L Telpuchtlato. The two Telpuchtlatos, do signifie Beadles to vse youths, that when any youth did fall in loue with any woman, they chastised the young man, throwing burning fire brands at him, and parted their loue. M A chiefe Priest whose office is to sweepe the Temples, or command them to be swept. N A chiefe Priest. O The novice Priest. P The woman. Q A chiefe Priest. The declaration of the pictures of these two chiefe Priests is, that if the novice Priest was negligent or had accesse to any woman, or fell in loue, the chiefe Priests did chastise him, thrusting thornes of Pine-tree made like pricks in all his body. R Telpuchtlato, a Beadle. S The young man. T Trachcauli, the Beadle. By these Pictures is declared that if a young man went about like a Vagabond, the two Beadles did carrell him in pooling and singing his head with fire. V A young man that is occupied in carrying stones with his Canoa to repaire the Temples. X The Temple.

This

This Picture expresseth the Priests employments. A *A noble Priest occupied in carrying of stones in his Canoa, for the reparation of the Temple.* B *The Temple called Ayauhcalli.* C *A noble Priest that goeth to the warre with a chiefe Priest carrying his package.* D *A chiefe Priest that goeth to warre, for to incorage and boldnen the warriours, and to doe other Ceremonies in the warres.*

Their Armes, which signes of Armes were made of more authoritie from degree to degree, according as the worthinesse of the man of warre was knowne, and the number of the Captiues that they tooke. As is shewed sufficiently in the Pictures with their signes and Armes, and fashions of attire, and the degrees whereby they came to be valiant men in warre. The first degree.

E Tecuhtli, *Lord, or Master of the Lords of Mexico.* F *Another chiefe Lord of Mexico, Tecuhtli, or his equall.* G *A Temple called Tlachco.* H *The stone wall of stones and lime and morter of wood.* I *A young man, who if he had taken any Prisoner in the warres, they gaue him for a valiant Knight of those Orders of the quadrant with his following, in token of his valiantnesse.* K *The same said Youth in these Pictures signifieth that he is occupied in repayring the streets and bridges that ioyne to the Temple.* L *A Captiue.* M *This valiant man all in vaine, hauing taken two enemies, they reuested him with the fashion of a warriour he hath on, and more (N) the signe and marke of Quauhtinchan with great consideration of his valiantnesse.* O *A Captiue.* P *This valiant Champion with a new scull of the enemie he hath taken, and his (Q) Mantle of rich worke for warriours that haue taken enemies in the warres.* R *A Captiue.* S *This valiant man with the deuice he hath on, and the signe and marke (T) of enemies, which is, that he had taken foure enemies in the warre.* V *A Captiue.* W *This valiant man with the deuice of water he hath on, and his name Ecoma for his valiant acts, and other like workes of fiue or six enemies taken, and more is the that is aboue mentioned, who had the beginning of his valiant acts in the warres, and so from degree to degree he hath come to this degree.* X *A Captiue.* Y *This valiant man called Quauhtinchan for the deuice of Mixcoatl Quauhtinchan, shewing that he had taken fiue in the warres of Cuba, whereof there are pictures aboue the ensigne of his valiantnesse.* Z *A Captiue.* And *this valiant man called Tlacatecatl, with the fashion of the apparell he hath on, and his tassell and deuise of rich feathers, do shew that he had done all the valiant acts afore pictured and declared, and is knowne to haue more title of valiantnesse of person then are pictured.*

1 THe chiefe Prieſts did exerciſe warlike affaires, & according as they proued in valiant acts, and as the number of the Captiues were that they tooke, ſo the Lords of *Mexico* gaue them titles of honour, and Blaſons of Armes with deuices of their valiantneſſe, as is ſhewed by the Pictures, and by the Armor they haue on. In the third partition are the titles of honour, which they obtayned by the exerciſe of war, whereby they came to a higher degree, the Lord of *Mexico* making them Captains and Generals of the Souldiers. And thoſe of the one ſide ſerued for Meſſingers and Executioners of that which the Lords of *Mexico* determined and commanded, aſwel in things touching the Common-wealth of *Mexico*, as alſo in other townes of their dominions.

O Tequiltecatl. *Theſe foure on this rowe are valiant men in warre, and Captaines of the Armies of the* Mexicans *and perſons which executed the charge of Generals ouer the* Mexicans *Armies.*

Digitized by Google

THe *Caſique* (that is, a Lord of a Towne) becauſe hee rebelled againſt the Lordſhip of *Mexico* by the Executioners afore contayned, had a rope caſt about his necke wherewith for his rebellion, he was condemned by the Lords of *Mexico* to die, and his wife and children to be taken and brought priſoners to the Court of *Mexico*. And for the accompliſhing of the condemnation the officers are executing the penalties wherein he was condemned, as is ſignified by the pictures.

2 He together with his ſeruants and towne are condemned to be deſtroyed. And ſo the Executioners, by the commandement of the Lords of *Mexico*, are giuing him to vnderſtand of the ſaid condemnation, in token whereof they marke him with the ſignes that they ſet on his head, and the Target that they preſent him with, becauſe he ſhould not be ignorant of his deſtruction. And the pictures of men with mortall wounds, doe ſignifie that they were Merchants and Occupiers of *Mexico*, which came with things to the Countrie and Towne of the ſaid *Caſique*; and the ſeruants of the *Caſique* aſſaulted them on the high-way, killing them and taking away the merchandiſe they carried, which was the occaſion of the deſtruction of the Towne.

3 In the third partition: The foure Officers or Ambaſſadors of the Lords of *Mexico*, doe ſignifie that they haue warned the ſaid *Caſique* contayned in the ſecond partition before this, as is aboueſaid, at the returning of the Executioners towards *Mexico*, there came out to the high-way certaine ſeruants of the ſaid *Caſique* to miſſe-vſe them, ſhooting arrowes at them in token of war.

A *Huiznahuatlan, officer and executioner as a Sergeant.* B *Executioner.* C *Caſique.* D *Executioner.* E *The wife of the Caſique impriſoned, with a yoke of Iron about her necke.* F *The ſonne of the Caſique taken priſoner with a yoke of Iron.* G *The ſeruant of the Caſique.* H *The merchant.* I *a bundell of merchandiſe.* K *The merchant.* L *The ſeruant of the Caſique.* M *Executioner.* N *Executioner.* O *Caſique.* P *An Executioner or Ambaſſador of the Lord of Mexico.* Q *An Executioner or Ambaſſador of the Lord of Mexico.* R *a ſeruant of the Caſique.* S *An Executioner or Ambaſſador of the Lord of Mexico.* T *An Executioner or Ambaſſador of the Lord of Mexico.* V *a ſeruant of the Caſique.* W *a ſeruant of the Caſique which ſhooteth at the Ambaſſadors of the Lords of Mexico, for more occaſion of warre.*

1 THe *Tequichua* signifieth Spies, sent to the Towne of the *Casique* by the Lord of *Mexico*, that in the night time they might goe and walke it secretly vnknowne to their enemies, to aduertise and giue warning vnto the Souldiers, where they should enter with the battaile. And so the *Tequichua* goe round about the Towne, Houses, Market place, and Church, at the time that they of the Towne are asleepe and at rest, for to finde a place where they may giue the onset with the lesse trouble and resistance.

2 A declaration of the pictures in the second partition. The *Mexican* that is pictured and at his shoulders a Target and Darts, doth signifie the *Mexicans* being mooued to destroy a certaine Towne by warres, because they had rebelled against the Lordship of *Mexico*. And the other three that are pictured and set ouer against the *Mexicans* are seruants of the *Casique*, which doe signifie that the whole Towne of the *Casique* being afraid of the warres and destruction that the *Mexicans* would bring vpon them, they come to *Mexico* to entreat a peace, submitting themselues for seruants of *Mexico*, and protesting to acknowledge the Lordship, by meanes whereof they receiue them in friendship and for their seruants, laying aside that which was determined by their counsell.

The foure valiant men pictured and intituled, with their Speares in their hands, and made readie for the warres, and the deuices of Armour that they haue on, doe signifie that they are Captaines of the *Mexicans* armies.

A *Tequihua.* B *Tequihua.* C *Tiangues, a Marquet place.* D *Tequihua.* E E *houses.* F *Tequihua.* G *a Temple.* H *Tequihua.* I *Tequihua.* K *Tequihua.* L *Tequihua.* This partition(al blue) is the towne of the *Casique* aforecontayned. 1 HE that is set and at his backe a woman spinning, signifieth that it is his wife new married, and because he had taken the state of matrimonie vpon him, hauing been a Messenger with the rest that are pictured before him, which are fiue, named *Tetpuchtly*, which are Messengers likewise. The married man giueth them a reason why hee leaueth the charge of a Messenger by reason of his marriage, and that hee will rest and leaue off his seruice past. And to please them more, and that they should grant his request, hee maketh them a banquet in giuing them well to eate and drinke, and moreouer the present that hee giueth them is a handfull of perfumes, a copper Hatchet and two Mantels, as by the pictures of these things are intituled. And by this solemnitie the married man is free from the said Office.

2 In the second partition: Hee that is set downe and intituled, doth signifie the Lord of *Mexico*, that when any Messenger *Telpuchtly* pictured in the partition before this had giuen a good account of his office, and hauing taken vpon them the state of marriage, the Lords of *Mexico* from that they were but Messengers, did promote them to a better title and degree, in so much that he made them *Tequihua*, which is signified by the pictures and titles of *Tequihua*, with their Speares and Fannes, giuing them authoritie to bee his Ambassadors and Officers in the warres, which they held for an office of great honour.

3 The *Alcaldes* doe signifie Iustices, appointed by the Lords of *Mexico*, that they should heare matters aswell Ciuill as Criminall. And the pictures of men and women which are before them, are Pleaders and Suitors which doe aske iustice. And the foure pictures that are intituled *Teotli*, that are behinde the *Alcaldes*, are principall young men that ioyne with the *Alcaldes* in their audience, to learne and instruct themselues in matters of iudgement, and afterwards to succeede in the Offices of the *Alcaldes*. From these *Alcaldes* there was an appellation before the counsell Chamber of *Motecçuma*, as hereafter is pictured.

AAAAA *The Telpuchtly or yong men which are officers or messengers.* B *Two mantels.* C *a handful of perfumes.* D *Tamales or bread.* E *a copper hatchet.* F *a boyled hen.* G *Xicara with Cacao to drinke.* H *Telpuchtly maried* I *The wife of the maried Telpuchtly* K *The Lord of Mexico.* L *Tequihua.* N *Tequihua.* OOO *Teotly.* P *Teotly Mixcoatlaylotlac a Iustice like an Alcalde.* Q *Exguagacatl Alcalde.* R *Acatlyacapanecatl Alcalde.* S *Tequixquinahuacatl Alcalde.* T *These sixe pictures three of men and three of women, are pleaders and suitors which aske Iustice of the Alcaldes.*

THe fashion of the Counsell Chambers of the Lord or King of *Mexico*, and of his Royall Houses and Courts, and the steps where they entred in, and the Throne and Seate of *Motezuma*, and in the spaces of euery thing is declared and intituled what they signifie, and so in this declaration it is not repeated. But that in one Counsell Chamber, when that by way of offence they were agrieued, and hauing a iust cause not being sentenced and determined by the *Alcaldes*, then by degree of appellation they appealed from the *Alcaldes* before the Counsell. And if it were a matter of importance they appealed from the Counsell Chamber before *Motezuma* the King himselfe, where the matter was concluded.

In the Chamber, that is intituled, The Counsell Chamber of warre, were prouided Captaines and Armies for the warres, as was appointed by *Motezuma*.

A The Throne and Maiestie of Motezuma where he sate on Court-dayes and on iudgement. B Motezuma. C. a house where the Lords of Tenayuca, Chienanbtla, and Colhuacan, were lodged that were friends and confederates of Motezuma. D a house where the chiefe Lords of Tezcucoytacuba were lodged that were Motezuma his friends. E F G The Court of the royall houses of Motezuma. H K These lines that goe vpward are the steps to the Courts of the royall houses of Motezuma. I The counsell chamber of warre. K The counsell chamber of Motezuma. L These foure are as Auditers of the counsell of Motezuma, wise men. M Pleaders and Suitors that in the degree and appellation from the Alcaldes, doe present themselues and appeare before the Auditors of the counsell of Motezuma.

THe father and the sonne that sit against each other face to face, signifie that the father giueth his sonne good counsell, that he be not vicious, laying before him for example, that those which come to vertue come afterwards in credit with the Lords and *Casiques*; in that they giue

them honest offices, and doe vse them to be their Messengers; and they doe admit Musicians and Singers vnto their feasts and weddings for the credit they beare.

2 The pictured in the house, where they meane to talke and prouide for publike affaires, and the Steward that sitteth therein, doth signifie that there are before him weeping, because it hath happened vnto them to be occupied in bodily labour, that the *Coas* and *Guacales* doe represent. And the Steward is giuing them good counsell, and exhorting them to flee idlenesse, is the cause that they come to be Theeues and players at the Ball, and players at *Patol*, after the manner of Dice, from which Games doe spring theft for to satisfie and fulfill such vices.

3 The Carpenter, Lapidarie, Painter, Gold-smith, and garnisher of feathers, signifie that those Artificers teach their sonnes their occupation from their childhood, that when they are men they might follow their Trade, and spend their time in things of vertue, giuing them counsell that of idlenesse commeth euill vices, and so euill tongues, tale-bearing, drunkennesse, and theeuerie, and many other euill vices.

A *These two Pictures signifie that the young men that were drunke with Wine, dyed for that according to the Law.* B *A young man that was drunke.* C *A young woman if shee were drunke with Wine was killed heere according to the Lawes of* Mexico. D *A Thiefe, they stoned him to death according to the Lawes of the Lords of* Mexico. E *These two Pictures layed and couered with clothes, doe shew that if any man had carnall dealing with a married woman, they stoned them both to death, according to the Lawes of the Lords of* Mexico. F *An old man of threescore and tenne yeeres, hath licence to drinke Wine and to bee drunke aswell publikely as secretly because he is so old, and hath Sonnes and Nephewes, at which yeeres Wine and drunkennesse was not forbidden them.* G *An old woman, wife to the old man aboue pictured, had priuiledge to bee drunke as well as her Husband, because shee had children, and childrens children, and to all those of the like age, drunkennesse was not forbidden them.*

CHAP. VIII.

Conquest of Mexico and New Spaine by HERNANDO CORTES.

a *Gomara* his third part of the Conquest of the West *Indies*, translated into *English* by *T. Nicolas*.

HErnando a *Cortes* was borne at *Medellin* in *Andalozia*, a Prouince of *Spaine*, *Anno* 1485. When he was nineteene yeeres old, he sayled to the Iland of Saint *Domingo*, where *Ouando* the Gouernour kindly entertayned him. He went to the conquest of *Cuba* in the yeere 1511. as Clerke to the Treasurer, vnder the conduct of *Iames Velasques*, who gaue vnto him the *Indians* of *Manicoreo*, where hee was the first that brought vp Kine, Sheepe and Mares, and had heards and flockes of them: and with his *Indians* he gathered great quantitie of Gold, so that in short time he was able to put in two thousand Castlins for his stocke, with *Andres de Duero*, a Merchant. At this time *Christopher Morante* had sent (*Anno* 1517.) *Francis Hernandes de Cordona*, who first discouered *Xucatan*, whence he brought nothing (except the relation of the Country) but stripes: whereupon *Iames Velasques* in the yeere 1518. sent his Kinsman *Iohn de Grijalua*, with two hundred *Spaniards* b in foure ships: he traded in the Riuer of *Tauasco*, and for trifles returned much Gold, and curious workes of feathers, Idols of Gold, a whole harnesse or furniture for an armed man of Gold thin beaten, Eagles, Lions, and other pourtratures found in Gold, &c. But while *Grijalua* deferred his returne, *Velasques* agreed with *Cortes* to bee his partner in the Discouery, which he gladly accepted, and procured licence from the Gouernours in *Domingo*, and prepared for the Voyage.

b Of this voyage Reade *P. Martyrs* fourth Decade: and *Gomara part.* 1. & of all which followes in this Chapter. *P. Mart. Dec.* 5. *Gom. vbi supra.* and *Cortes* his owne large narration to the Emperour, *ap. Ramus. Vol.* 3.

Velasques afterward vsed all meanes to breake off, in so much that *Cortes* was forced to engage all his owne stocke, and credit, with his friends in the Expedition, and with fiue hundred and fiftie *Spaniards* in eleuen ships, set saile the tenth of February 1519. and arriued at the Iland of *Acusamil*. The Inhabitants at first fled, but by the kind entertainment of some that were taken, they returned, and receiued him and his with all kind offices.

They told him of certayne bearded men in *Yucatan*, whither *Cortes* sent; and one of them, *Geronimo de Aguilar* came vnto him, who told him, that by shipwracke at *Iamaica*, their Caruell being lost, twentie of them wandred in the Boat without sayle, water or bread, thirteene or fourteene dayes, in which space the violence of the current had cast them on shoare in a Prouince called *Maiya*, where, as they trauelled, seuen dyed with famine; and their Captayne *Valdiuia* and other foure were sacrificed to be Idols by the *Cacike*, or Lord of the Countrey, and eaten in a solemne Banquet, and he with sixe other were put into a Coope or Cage, to bee fatned for another Sacrifice. But breaking Prison, they escaped to another *Cacike*, enemy to the former, where all the rest dyed, but himselfe, and *Gonsalo Guerrer* a Mariner. Hee had transformed himselfe into the *Indian* cut, boring his nose full of holes, his eares jagged, his face and hands painted; married a Wife, and became a Captaine of name amongst the *Indians*, and would not returne with this *Aguilar*.

Cortes with this new Interpreter passed vp the Riuer *Tauasco*, called of the former Discouerer, *Grijalua*; where the Towne that stood thereon, refusing to victuall him, was taken and sacked. The *Indians* herewith inraged, assembled an Armie of fortie thousand, but *Cortes* by his Horse and Ordnance preuayled; the *Indians* thinking the Horse and Rider had beene but one creature, whose gaping and swiftnesse was terrible vnto them, whereupon they submitted themselues. When they heard the Horses ney, they had thought the Horses could speake, and demanded what they said: the *Spaniards* answered, These Horses are sore offended with you, for fighting with them, and would haue you corrected: the simple *Indians* presented Roses and Hens to the beasts, desiring them to eate, and to pardon them.

Indian simplicitie.

Cortes purposed to discouer further Westward, because hee heard that there were Mines of Gold, hauing first receiued their Vassallage to the King his Master, to whom (he said) the Monarchie of the Vniuersall did appertayne. These were the first Vassals the Emperour had in *New Spaine*. They named the towne, where these things were done, *Victorie*, before called *Potonchan*, contayning neere fiue and twentie thousand houses, which are great, made of Lime, and Stone, and Bricke, and some of mud-wals and rafters, couered with straw; their dwelling is in the vpper part of the house, for the moystnesse of the soyle. They did eate mans flesh sacrificed.

Potonchon called *Victory*.

The *Spaniards* sayled Westward, and came to Saint *Iohn de Vlhua*, where *Teudills* the Gouernour of the Countrey, came to him with foure thousand *Indians*. Hee did his reuerence to the Captayne, burning Frankincense (after their custome) and little strawes, touched in the bloud of his owne bodie: and then presented vnto him victuals and Iewels of Gold, and other curious workes of feathers; which *Cortes* requited with a Collar of Glasse, and other things of small value. A woman-slaue, giuen him at *Potonchan*, vnderstood their language, and shee with *Aguilar*, were his Interpreters. *Cortes* professed himselfe the seruant of a great Emperour, which had sent

ſent him thither, whoſe power he ſo highly extolled, that *Teudilli* maruelled, thinking there had beene no ſuch Prince in the World, as his Maſter and Soueraigne, the King of *Mexico*, whoſe Vaſſall he was, named, *Mutezuma*. To him he ſent the repreſentations of theſe bearded men, and their Horſes, Apparell, Weapons, Ordnance, and other Rarities, painted in Cotton-clothes, their ſhips and numbers. Theſe painted Cottons he ſent by Poſts, which deliuered them from one to another with ſuch celeritie, that in a day and night the meſſage came to *Mexico*, which was two hundred and ten miles diſtant. *Cortes* had demanded, whether *Mutezuma* had Gold? *Teudilli* affirmed, and *Cortes* replyed, That he and his fellowes had a diſeaſe of the heart, whereunto Gold was the beſt remedie. *Spaniſh* incurable ſickneſſe.

Mutezuma ſent him many Cotton-clothes of diuers colours, many tuffes of Feathers, two Wheeles, the one of Siluer, with the ſigne of the Moone, and the other of Gold, made like the Sunne; which they hold for Gods, and giue vnto them the colours of the Metals moſt like them. Each Wheele was two yards and a halfe broad. Theſe with other parts of the Preſent were eſteemed worth twentie thouſand Duckets. *Mutezuma* alſo profeſſed ioy, to heare of ſo great a Prince, & ſo ſtrange people, & promiſed prouiſion of all neceſſaries, but was very vnwilling that *Cortes* ſhould come to ſee him, as he pretended. Yet *Cortes* perſiſted in that his deſire of ſeeing *Mutezuma*, that he might further acquaint himſelfe with the knowledge of thoſe parts.

The ſilly *Indians* hauing neuer ſeene ſuch ſtrange ſights, came daily to the Campe to ſee them and when they heard the Ordnance diſcharged, they fell downe flat, thinking the Heauens had falne: the ſhips they thought were the God of the Ayre, called *Quezalcouatl*, which came with the Temples on his backe, for they daily looked for him. Amongſt the reſt, or rather aloofe off from the reſt, were certayne *Indians* of differing habit, higher then the other, and had the griſtles of their Noſes ſlit, hanging ouer their mouthes, and Rings of Iet and Amber hanging thereat: their neather lips alſo bored, and in the holes, Rings of Gold and Turkeſſe-ſtones, which weighed ſo much, that their lips hung ouer their chinnes, leauing their teeth bare. This vglineſſe they accounted gallantry, and ſuch vncouth deformitie to be the only brauery. And thou Gallant, that readeſt and derideſt this madneſſe of *Faſhion*, if thine eyes were not dazeled with lightneſſe (light I cannot call it) of ſelfe-reflected Vanitie, mighteſt ſee as Monſter-like faſhions at home, and a more faſhionly Monſter of thy ſelfe; thy clothes and oathes, thy geſtures and veſtures, make thy naked Deformitie worſe then their thus deformed nakednеſſe: both in deed ſeeme to haue receiued ſome helliſh Character (if there may bee bodily repreſentation) of that olde Serpent in theſe new faſhions, ſtriuing who ſhall ſhape himſelfe, neereſt to that miſſe-ſhapen vglineſſe, wherein the *Indian*-jagges himſelfe out of humane lineaments; the other ſwaggers himſelfe further out of all Ciuill and Chriſtian ornaments. But theſe Faſhion-mongers haue made mee almoſt out of my faſhion, and to forget my ſelfe, in remembring their forgetfulneſſe. Note for faſhion-mongers.

Theſe *Indians* of this New-cut, *Cortes* cauſed to come to him; and learned that they were of *Zempoallan*, a Citie diſtant thence a dayes journey, whom their Lord had ſent to ſee what Gods were come in thoſe *Teucallis*, that is Temples (ſo, it ſeemeth, they called the ſhips:) which held no conuerſation with the other *Indians*, as being not ſubject to *Mutezuma*, but onely as they were holden in by force. He gaue them certaine toyes, and was glad to heare that the *Indians* of *Zempoallan*, and other their Neighbours were not well affected to *Mutezuma*, but readie, as farre as they durſt, to entertayne all occaſions of warre with him. Hee ſayled from thence to *Panuco*, and paſſed the Riuer farther, till he came to a little Towne, where was a Temple, with a little Towre, and a Chappell on the top aſcended by twenty ſteps, in which they found ſome Idols, many bloudy Papers, and much mans bloud, of thoſe which had beene ſacrificed, the blocke alſo whereon they cut open thoſe Sacrifices, and the Razors made of flint, wherewith they opened their breſts, which ſtrucke the *Spaniards* with ſome horrour and feare. They paſſed a little further, and there hauing taken poſſeſſion, in the Emperours name, of the whole Countrey, they founded the Towne *De la vera Crux*, *Cortes* reſigning his authoritie, and Officers being elected; and laſtly, all with generall conſent appointing *Cortes* their Captaine. *Zempoallan.* *Panuco.* *Vera Cruxi*

Cortes went forward to *Zempoallan*, where hee was ſolemnely receiued and lodged in a great houſe of lime and ſtone, whited with playſter, that ſhined in the Sunne, as if it had beene Siluer; ſo did the Siluer-conceits of the *Spaniards* imagine, the deſire of that Metall hauing made ſuch an impreſſion in their imagination, that they told *Cortes* before hee came at it, they had ſeene a houſe with wals of Siluer. Here, and at *Chiauiztlan*, *Cortes* incited them to rebell againſt *Mutezuma*, and to become ſeruants to the *Spaniards*, which they did: and he vnderhand ſo wrought, that *Mutezuma* tooke him for his friend.

All his intent was to fiſh in troubled waters, and to ſee them both by the eares, that hee might watch oportunitie to benefit himſelfe. His owne people rebelled, ſome of whom he chaſtiſed with the halter and the whip for example to the reſt: and after cauſed all his ſhips to bee ſunke cloſely, that they ſhould not minde any returne. He left 150. men for the guard of the new Towne, vnder *Pedro de Henrico*, and with 400. *Spaniards*, fifteene Horſes, and ſixe Peeces of Artillery, and 1300 *Indians*, they went from *Zempoallan*, and came to *Zacotan*, the Lord whereof was *Olintler* the ſubject of *Mutezuma*, who to teſtifie his ioy, and to honour *Cortes*, commanded fifty men to be ſacrificed, whoſe bloud they ſaw, new and freſh.

They

They carried the *Spaniards* on their ſhoulders, ſitting on Beeres, ſuch as whereon they vſe to carry dead men. He bragged as much of the power of *Mutezuma*, as their *Spaniards* of their Emperour. He ſaid he had thirty Vaſſals, each of which was able to bring into the field an hundred thouſand men of Warre, and ſacrificed 20000. men yearely to the gods: in this he ſomewhat exceeded; the other was true, although ſome yeares, the Sacrifices alſo were thought to amount to 50000. This Towne was great, and had thirteene Temples, in each of which were many Idols of ſtone, of diuers faſhions, before whom they ſacrificed Men, Doues, Quailes, & other things, with great perfumes and veneration. Here *Mutezuma* had 5000. Souldiers in Garriſon. *Cortes*, paſſed from thence to *Mexico* by the Frontiers of *Tlaxcallon*, which were enemies to *Mutezuma*, whom he might eaſily haue ouercome, but reſerued, partly for the exerciſe of his Subiects to the Warre, partly for the Sacrifices to his gods.

Bloudy Sacrifices.

These ioyned an hundred and fifty thouſand men againſt *Cortes*, taking him for *Mutezuma's* friend: and yet euery day ſent him Guinney-cockes and Bread, partly to eſpie his ſtrength, and partly in a brauery, leſt their glory ſhould be obſcured in the conqueſt of men already ſtarued. But when in many skirmiſhes and fights they could not preuaile againſt that handfull of *Spaniards*, they thought they were preſerued from harme by inchantments: and ſent him three preſents with this meſſage; That if he were that rigorous god which eateth mans fleſh, he ſhould eate thoſe fiue ſlaues which they brought him, and they would bring him more: if he were the meeke and gentle god, behold Frankinſence, and Feathers: if he were a mortall man, take here Fowle, Bread, and Cherries. At laſt they made peace with him, and ſubmitted their City to him. Their City *Tlaxcallan* was great, planted by a Riuers ſide, which iſſued into the South-Sea. It had foure Streetes, each of which had their Captaine in the time of Warre. The gouernment was an Ariſtocraty, hating Monarchy no leſſe then tyranny. It had eight and twenty Villages, and in them an hundred and fifty thouſand Houſholds, very poore, but good warriors. They had one Market-place ſo ſpacious, that thirty thouſand perſons in a day came thither to buy and ſell by exchange: for money they had none.

Tlaxcallan a great Citie.

Mutezuma had ſent before to *Cortes*, and promiſed tribute to the Emperour, whatſoeuer ſhould be impoſed; onely he would not haue him come to *Mexico*. And now he ſent againe, that he ſhould not truſt that new friendſhip with the beggerly Nation of *Tlaxcallan*; and they againe counſelled him not to aduenture himſelfe to *Mutezuma*. *Cortes* held his determination for *Mexico*, and being accompanied with many of the *Tlaxcaltexas*, he went to *Chololla*, a little from whence *Mutezuma* had prepared an Army to intrap him in the way; but he finding the trechery, it redounded vpon the *Cholollois*, the ſame day they had thought to haue executed the ſame vpon him. For this end they had ſacrificed ten children, fiue males, and as many females, three yeares old, to *Quezalcouatl* their god, which was their cuſtome when they began their Wars. He out-going them in their owne art of ſubtilty, intrapped their Captains in Counſell, and ſent his Army to ſpoile the City, where were ſlaine thouſands. There were twenty Gentlemen, and many Prieſts which aſcended vp to the high towre of their Temple, which had an hundred and twenty ſteps, where they were burned, together with their gods and Sanctuary.

Chololla.

This Citie had twenty thouſand Houſholds within the Wals, and as many in the Suburbs. It ſhewed outward very faire and full of Towres, for there were as many Temples as dayes in the yeare, and euery one had his Towre. The *Spaniards* counted foure hundred Towers. It was the Citie of moſt deuotion in all *India*, whither they trauelled from many places farre diſtant in Pilgrimage. Their Cathedrall Temple was the beſt and higheſt in all *New-Spaine*, with an hundred and twenty ſteps vp to it. Their chiefe god was *Quezalcouatl*, god of the Ayre, who was (they ſay) founder of their Citie being a Virgin, of holy life and great penance. He inſtituted faſting, and drawing of bloud out of their eares and tongues, and left precepts of Sacrifices. Hee neuer ware but one garment of Cotten, white, narrow, and long, and vpon that a Mantle, beſet with certaine red croſſes. They haue certaine greene ſtones which were his, and are kept for great relikes: one of them is like an Apes head. Eight leagues from *Chololla* is the hill *Popocatepec*, or ſmoake-hill, which the Earth ſeemeth to haue erected as a Fort to encounter and aſſault the Ayre: now with ſmoky miſts endeuouring to choake his purer breath, another while with violent flames, and naturall fire-workes threatning to ioyne league with his elder and ſuperiour brother to diſinherit him: ſometimes with ſhowers of aſhes and embers, as it were, putting out the eyes, and ſometimes with terrible and dreadfull thunders, rending the eares of that Airy Element; alwayes (ſuch is the euent of warre) hurting and waſting it ſelfe, to indamage the enemy. The *Indians* thought it a place of Purgatory, whereby tyrannicall and wicked Officers were puniſhed after their death, and after that purgation paſſed into glory. The *Spaniards* aduentured to ſee it, but two onely held on their iourney, and had there beene conſumed, had they not by a Rocke bin ſhadowed from the violent eruption of the fire which then hapned. It chanced that the Earth, weary it ſeemeth of the warre, as hauing ſpent her ſtore and munition, agreed on a truce which continued ten yeares: but in the yeare 1540. it brake forth into more violent hoſtility then before, quaking and renting it ſelfe with vnbridled paſſion: and whereas the Ayre had alwaies a ſnowie Garriſon about her high tops and frontiers, to coole and quench

Store of Temples and deuotions.

Popocatepec a burning Hill.

quench her fiery ſhowers, yet theſe did but kindle a greater flame, the aſhes whereof came to *Huexozinco*, *Quelaxcopan*, *Tepiacuc*, *Chololla* and *Tlazcallan*, and other places, ten, or as ſome ſay, fifteene leagues diſtant, and burned their hearbs in their Gardens, their fields of Corne, Trees and cloathes that they laid a drying. The *Vulcan*, *Crater*, or mouth whence the fire iſſued, is about halfe a league in compaſſe. The *Indians* kiſſed their garments (an honour done vnto their gods) which had aduentured themſelues to this dreadfull ſpectacle.

Cortes drawing neere to *Mexico*, *Mutezuma* feared, ſaying, Theſe are the people which our gods ſaid ſhould come and inherit this Land. He went to his Oratory, and there ſhut vp himſelfe alone, abiding eight daies in praier and faſting, with ſacrifice of many men, to aſſake the fury of his offended deities. The Deuill bids him not to feare, and that he ſhould continue thoſe bloudy Rites, aſſuring him that he ſhould haue the gods *Vitziliputzli* and *Teſcalipuca* to preſerue him, ſaying, That *Quezalcouatl* permitted the deſtruction at *Chololla*, for want of that bloudy ſacrifice. *Cortes* paſſed a Hill ſix miles in height, where, by the difficulty of the paſſage, and of the cold (being alway couered with Snow) the *Mexicans* might eaſily haue preuented his paſſing further. Hence he eſpied the Lake, whereon *Mexico* and many other great Townes did ſtand, *Ixtacpallapan* a Towne of 10000 houſholds, *Coyocan* of ſix thouſand, *Vizilopuchtli* of fiue thouſand. Theſe Towns are adorned with many Temples and Towres, that beautifie the Lake. From *Iztacpalapan* to *Mexico* is two Leagues, all on a faire cauſey, with many draw-bridges, thorow which the water palleth.

Mutezumas religion.

Mutezuma receiued *Cortes* with all ſolemnity on the eight of *November* 1519. into this great Citie, excuſing himſelfe of former vnkindneſſes the beſt he could. Of his houſe, and Maieſtie, and the diuine conceit the people had of him, we ſhall ſpeake after more fully, as alſo of the Temples, Prieſts, Sacrifices and other remarkeable things of *Mexico*.

Mutezuma prouided all things neceſſary for the *Spaniards* and *Indians* that attended them: euen beds of flowers were made, in place of litter for their Horſes. But *Cortes* diſquieted with thoſe thoughts which commonly attend Ambition (diſcontent in the preſent, hopes and feares of the future) vſed the matter ſo, that he tooke *Mutezuma* priſoner, and detained him in the place appointed for the *Spaniards* lodging, with a *Spaniſh* Guard about him, permitting him otherwiſe to deale in all priuate or publike affaires, as before. Hereupon *Cacama* Lord of *Texcuco*, Nephew to *Mutezuma*, rebelled, but by treachery of his owne people was preſented priſoner to *Mutezuma*. He, after this ſummond a Parliament, where hee made an Oration vnto his Subiects, ſaying, [a] That He and his Predeceſſours were not Naturals of the Countrey, but his Fore-fathers came from a farre Country; and their King returned againe, and ſaid, he would ſend ſuch as ſhould rule them. And he hath now ſent theſe *Spaniards*, ſaith he. Hereupon he counſelled them to yeelde themſelues Vaſſals to the Emperour, which they did at his command, though with many teares on his part and theirs, at this farewell of their liberty. *Mutezuma* preſently gaue to *Cortes*, in the name of tribute, a great quantity of Gold and other Iewels, which amounted to ſixteene hundred thouſand Caſtlins of Gold, beſides Siluer.

[a] The like ſpeech he had made at firſt to *Cortes*, who eaſily wrought on that aduantage, applying this Tradition to the *Spaniards*, *Cortes Narrat.*

Cortes had hitherto a continuall victory in *Mexico* without any fight: but news was brought him of *Pamphilo de Naruaes*, who was ſent with eighty Horſe, and ſome hundreths of *Spaniards* by *Velaſques*, to interrupt the proceedings of *Cortes*: who leauing two hundred men in *Mexico*, with two hundred and fifty other came ſuddenly in the night, and tooke *Naruaes* priſoner, and returned to *Mexico* with *Naruaes* his Company, now his followers alſo, where he found his men exceedingly diſtreſſed by the Citizens for a murther committed in the great Temple at a ſolemne Feaſt, wherein a religious dance they were ſlaine, for the rich garments and Iewels they ware, by the *Spaniards*. *Cortes* came in good time for the reliefe of his men: and *Mutezuma* cauſed the *Mexicans* to bridle their rage, which preſently was renewed; and when *Mutezuma*, was againe by his Guardians, the *Spaniards*, cauſed to ſpeake to the people, a blow of a ſtone on his Temples wounded him, whereof three daies after he died.

Mutezumas death.

Cortes had ſome thouſands of the *Tlaxoltecas* to helpe him, but was driuen to flye from *Mexico* with all his *Spaniards* and *Indians*, which he did cloſely in the night, but yet an alarme was raiſed, and the Bridges being broken, much ſlaughter of his people was made by the *Mexicans*, and all his treaſure in manner loſt. They purſued after him alſo, and had two hundred thouſand in the field: when it was *Cortes* his good hap to ſlay the Sandardbearer, whereupon the *Indians* forſooke the field. This battell was fought at *Otumpan*.

At *Tlazcallan*, he and his were kindely entertained; they had prepared before 50000. men to goe to *Mexico* for his helpe, and now they promiſed him all offices of loyalty and ſeruice. With their helpe he ſubdued *Tepeacac*; and built certaine Brigandines, or Frigats, which were carried many leagues on the backes of thoſe *Indians*, and there faſtned and finiſhed, without which he could neuer haue won *Mexico*.

In *Tezcuco* certaine *Spaniards* had beene taken, ſacrificed and eaten, which *Cortes* now reuenged on them. Eight thouſand men had carried the looſe peeces and timber of this Nauie, guarded with twenty thouſand *Tlaxcallans*, and a thouſand *Tamemez*, or Porters (which carried victuals) attending. They calked them with Towe, and for want of Tallow and Oyle, they vſed

Mans

Mans Greaſe, of ſuch as had beene ſlaine in the Warres. For ſo the *Indians* vſed, to take out the Greaſe of their Sacrifices. *Cortes* had here nine hundred *Spaniards*, of which foureſcore and ſix were Horſe-men, three caſt peeces of Iron, fifteene ſmall peeces of Braſſe, and a thouſand weight of Powder, and 100000. *Indian* Souldiers on his ſide. He made a ſluce or trench aboue twelue foot broad, and two fathome deepe, halfe a league long, in which 40000. men wrought fifty dayes. He lanched his Veſſels, and ſoone ouercame all the Canoas of the Lake, of which were reckoned in all fiue thouſand. The *Spaniards* brake the Conduits of ſweet water, wherewith the City was wont to be ſerued.

Quahutimoc, now the new King of *Mexico*, receiuing incouragement from the Deuilliſh Oracle, cauſed to breake downe the Bridges, and to exerciſe whatſoeuer wit or ſtrength could doe in defence of his Citie, ſometimes conquering, ſometimes (as is doubtfull chance of warre) conquered. *Cortes* had in *Tezcuco* ordained a new King, a Chriſtian Indian, of the royall bloud, who much aſſiſted him in this ſiege. The *Spaniards* being Lords of the Lake, and of the Cauſeyes, by helpe of their Galliots and Ordinance, they fired a great part of the Citie. One day the *Mexicans* had gotten ſome aduantage, and thereupon celebrated a Feaſt of Victory. The Prieſts went vp into the Towers of *Tlatelulco*, their chiefe Temple, and made there perfumes of ſweet Gums, in token of victory, and ſacrificed forty *Spaniards* (which they had taken captiues, opening their breſts, and plucking out their hearts) ſprinkling their bloud in the Ayre; their fellowes looking on, and not able to reuenge it. They ſlew likewiſe many *Indians*, & foure *Spaniards of Aluarado's* company, whom they ate in the open ſight of the Army. The *Mexicans* danced, drank themſelues drunke, made bonefires, ſtrucke vp their Drums, and made all ſolemne expreſſings of ioy. Dread, Diſdaine, and all the Furies that Paſſion or Compaſſion could coniure vp, had now filled the *Spaniards* hearts and their *Indian* partakers: and *Cortes*, that hitherto had hoped to reſerue ſome part of the Citie, now did the vtmoſt that Rage aed Reuenge could effect, helped no leſſe within with Famine and Peſtilence, then with Sword and Fire without. At laſt *Mexico* is razed, the Earth and Water ſharing betwixt them what the Fire had left, and all which had ſometime challenged a lofty inheritance in the Ayre. Their King alſo was taken; all that mightie State ſubuerted. And as the *Mexicans* before had propheſied, That the *Tlaxcaltecas* ſhould againe build the Citie, if conquered, for them; if conquerors, for the *Spaniards*: It was re-builded with a hundred thouſand houſes, fairer and ſtronger then before. The Siege laſted three Moneths, and had therein two hundred thouſand *Indians*, nine hundred *Spaniards*, foureſcore Horſes, ſeuenteene Peeces of Ordinance, thirteene Galliots, and ſixe thouſand Canoas. Fiftie *Spaniards* were ſlaine, and ſixe Horſes: of the *Mexicans*, a hundred thouſand, beſides thoſe which died of Hunger and Peſtilence.

This was effected *Anno* 1521. on the thirteenth day of Auguſt, which for that cauſe is kept feſtiuall euery yeare. For the Deſcription of the Country wherein *Mexico* is ſituate. *Cortes* in his *ſecond Narration* to the Emperour ſaith, it is enuironed with hils: (He telleth of ſome hils alſo in his iourney, wherein diuers of his people died with cold) in the middeſt is a plaine of 70. leagues compaſſe, and therein two Lakes which extend the circuit of 50. leagues; the one ſalt, which ebbeth and floweth (an argument for *Patritius* his opinion, that ſaltneſſe is a chiefe cauſe of that viciſſitude of ebbing and flowing, in the Ocean) the other freſh: When the water of the Salt Lake increaſeth, it runneth like a violent ſtreame into the freſh Lake, which when it decreaſeth, is repaired againe by the like iſſue of this into the former.

Nunno di Guſman[b] hath written his expeditiou into *Mechoacan* and other Countries of *New-Spaine* 1530. ſubduing and taking poſſeſſion for the Emperour: He found ſome of them Sodomites, others Sacrificers of mens fleſh, and ſome cloſly practiſing this butchery after they had profeſſed themſelues Chriſtians: none of them which durſt looke a Horſe in the face, but were afraid that that Beaſt would eate them. The ſeuerall peoples by him reckoned, would here be tedious to name; which we may ſay of the like made by *Godoy* and *Aluarado*[c]. Of the Cuſtomes of the Auntient *Mexicans*, one of *Cortes* his Gentlemen hath written a Treatiſe[d] extant in *Ramuſius*, wherein are deſcribed their Citie, Temples, Rites of Sacrifice, and the like; as after followeth out of him and others.

CHAP. IX.

Larger Relations of things most remarkeable obserued by the Spaniards *at their first comming*: Cholollas *holies*, Popocatepecs *ashes*, Mutezumas *multiforme magnificence and maiestie*. Mexican *Citie and Temple, with other antiquities gathered out of the Third part of the Historie of* Francis Lopez de Gomara.

* This part of *Lopez* was long since translated and published by *Tho. Nichols*. I haue here in diuers places ameded it by the *Italian* translation of *Agostino di Craualiz*: for the *Spanish* originall I haue not.

Chololla is a Citie as *Tlaxcallan*, and hath but one person who is Gouernour and generall Captaine, chosen by the consent of all the Citizens. It is a Citie of twenty thousand housholds within the wals, and in the suburbs as much more. It sheweth outwards very beautifull, and full of Towers, for there are as many Temples as dayes in the yeare, and euery Temple hath his Tower. Our men counted foure hundred Towers. The men and women are of good disposition, well fauoured, and very wittie. The women are Goldsmiths and also Caruers, the men are warriers, and light fellowes, and good Masters for any purpose: they goe better apparelled then any other *Indians* yet seene. They weare for their vpper garment, cloakes like vnto Moriscos, but after another sort. All the Countrey round about them is fruitfull and errable ground, well watered, and so full of people, that there is no waste ground, in respect whereof, there are some poore which begge from doore to doore. The *Spaniards* had not seene any beggers in that Countrey before they came thither.

Chololla is a Citie of most deuotion and religion in all *India*, it is called the Sanctuary, or holy place among the *Indians*, and thither they trauelled from many places farre distant in Pilgrimage, and for this cause there were so many Temples. Their Cathedrall Temple was the best and highest of all the New *Spaine*, with a hundred and twenty steps vp vnto it, The greatest Idoll of all their gods was called *Quecalcouatle*, God of the Aire, who was (say they) the founder of their Citie, being a Virgin of holy life, and great penance. He instituted fasting, and drawing of bloud out of their eares and tongues, and left a precept, that they should sacrifice but onely Quailes, Doues, and other foule. He neuer ware but one garment of Cotten, which was white, narrow, and long, and vpon that a mantle beset with certaine red crosses. They haue certaine greene Stones which were his, and those they keepe for relickes. One of them is like an Apes head. Here they abode twenty dayes, and in this meane while there came so many to buy and sell, that it was a wonder to see. And one of the things that was to be seene in those faires, was the earthen vessell, which was exceeding curious and fine.

The hill called Popocatepec.

THere is a hill eight leagues from *Chololla*, called *Popocatepec*, which is to say, a hill of smoake, for many times it casteth out smoake and fire. *Cortes* sent thither ten *Spaniards*, with many *Indians*, to carry their victuall, and to guide them in the way. The ascending vp was very troublesome, and full of craggie rocks, They approached so nigh the top, that they heard such a terrible noise which proceeded from thence, that they durst not goe vnto it, for the ground did tremble and shake, and great quantity of ashes which disturbed the way: but yet two of them who seemed to be most hardie, and desirous to see strange things, went vp to the top, because they would not returne with a sleeuelesse answer, and that they might not be accounted cowards, leauing their fellowes behinde them, proceeding forwards. The *Indians* said, what meane these men? for as yet neuer mortall man tooke such a iourney in hand.

These two valiant fellowes passed through the Desart of Ashes, and at length came vnder a great smoake very thicke, and standing there a while, the darkenesse vanished partly away, and then appeared the vulcan and concauity, which was about halfe a league in compasse, out of the which the ayre came abounding, with a great noise, very shrill, and whistling, in such sort that the whole hill did tremble. It was to be compared vnto an Ouen where Glasse is made. The smoake and heate was so great, that they could not abide it, and of force were constrained to returne by the way that they had ascended: but they were not gone farre, when the vulcan began to lash out flames of fire, ashes, and imbers, yea and at the last, stones of burning fire: and if they had not chanced to finde a Rocke, where vnder they shadowed themselues, vndoubtedly they had there beene burned. When with good tokens they were returned where they left their fellowes, the other *Indians* kissed their garments as an honour due vnto gods. They presented vnto them such things as they had, and wondred much at their fact.

Purgatory.

The simple *Indians* thought, that that place was an infernall place, where all such as gouerned not well, or vsed tyrannie in their offices, were punished when they died, and also beleeued, that after their purgation, they passed into glory. This Vulcan is like vnto the Vulcan of *Sicilia*,

it is high and round, and neuer wanteth snow about it, and is seene afarre off in the night, it lasheth out flames of fire. There is neere about this Hill many Cities, and *Huexotzinco* is one of the nigheſt. In tenne yeeres ſpace this ſtrange hill of working did expell no vapour or ſmoke: but in the yeere 1540. it began againe to burne, and with the horrible noyſe thereof, the Neighbours that dwelt foure leagues from thence were terrified, for the eſpeciall ſtrange ſmoakes that then were ſeene, the like to their Predeceſſors had not beene ſeene. The aſhes that proceeded from thence came to *Huexotzinco*, *Quelaxcopan*, *Tepiacac*, *Quiahquechollo*, *Chololla*, and *Tlaxcallan*, which ſtandeth ten leagues from thence, yea ſome ſay, it extended fifteene leagues diſtant, and burned their hearbes in their Gardens, their Fields of Corne, Trees, and cloathes that lay a drying.

He left the way that the *Mexicans* had perſwaded him to come, for it was both euill and dangerous, as the *Spaniard* which went to the Vulcan had ſeene, he went another plainer way, and neerer. He aſcended vp a Hill couered with ſnow, which was foure miles of height, where if the 30000. Souldiers had waited for them, they might eaſily haue taken them, by reaſon of the great cold: and from the top of that Hill, they diſcouered the Land of *Mexico*, and the great Lake, with his Villages round about, which is an exceeding goodly ſight: But when *Cortes* ſaw that beautifull thing, his joy was without compariſon.

There came twelue Lords from *Mexico*, among whom was *Cacama*, Nephew to *Mutezuma*, who was Lord of *Texuco*, a young man of fiue and twentie yeeres of age, whom the *Indians* did much honour: he was carried vpon their ſhoulders, and when they ſet him downe, one went before with a Broome to ſweepe the duſt out of his way. In this order hee came to *Iztacpalapan*. Euery two houres came meſſengers betwixt *Cortes* and *Mutezuma*: then came *Cuetlauac* Lord of that Towne, with the Lord *Culhuacan* his Kinſman to receiue him, who preſented vnto him ſlaues, garments, and feathers, and to the value of foure thouſand Duckets in Gold. *Cuetlauac* receiued all the *Spaniards* into his owne houſe, which hath very faire Lodgings all of ſtone, and Carpenters worke, exceeding well wrought, with high and low roomes, with all kind of ſeruice: The chambers were hanged with cloth of Cotton very rich, after their manner. There were faire Gardens repleniſhed with many ſweet flowres, and ſweet trees garniſhed with Net-worke, made of Canes, and couered with Roſes and other fine hearbes, with ſundry ponds of ſweet water. There was another Garden very beautifull of all ſorts of fruits and hearbes, with a great pond walled with lime and ſtone, and was foure hundred paces ſquare, made with faire ſteps to deſcend vnto the bottome in many places, and was full of diuers kinds of fiſhes, and many kind of water Birds, which ſometimes couered the pond, as Gulo, and Mewes, and ſuch like. *Iztacpallapan* is a Towne of 10000. houſholds, and is planted in a Lake of Salt-water, the one halfe of the Towne built on the water, and the other on the Land.

The ſolemne pompe wherewith *Cortes* was receiued into *Mexico*.

From *Iztacpallapan* to *Mexico* is two leagues all vpon a faire Cauſey, vpon the which eight Horſemen may paſſe on ranke, and ſo directly ſtraight as though it had beene made by line. And whoſoeuer hath good eye-ſight might diſcerne the gates of *Mexico* from thence. *Coyoacan* is a Towne of ſixe thouſand dwellers, *Vizilopuchtli* is of fiue thouſand. Theſe Townes are planted in the Lake, and are adorned with many Temples, which haue many faire Towres, that doe beautifie exceedingly the Lake. There is great conſumption of Salt, which is made there, and from thence is carried abroad to Faires and Markets, which thing was a great rent to *Mutezuma*. Vpon this Cauſey are many drawne Bridges built vpon faire arches, that the water paſſeth thorow.

Cortes paſſed this Cauſey with 400. *Spaniards*, and 6000. *Indians* his friends: their paſſage was with much adoe, by reaſon of the great multitude of *Indians* which came to ſee him, and comming neere the Citie, there adioyned another Cauſey with a broader paſſage, where ſtandeth a ſtrong Bulwarke of ſtone, of the heigth of two fathome with two Towres on each ſide, and two gates very ſtrong. Here at this Fort came three thouſand Courtiers and Citizens to receiue him, and euery of them touched the ground with his right hand and kiſſed it, and paſſed forwards in the order as they came. Theſe ſalutations endured an houre and more. From the Bulwarke the Cauſey lyeth directly, and before the entrance into the ſtreet there is another draw Bridge made of timber ten paces broad, vnder the which the water paſſeth too and fro. At this Bridge came *Mutezuma* to receiue *Cortes* vnder a Canopie of greene feathers and gold, with much Argentery hanging thereat, which Canopie foure Noble-men did carrie. And the two Princes *Cuetlauac* and *Cacama* his Nephewes, did leade him by each arme: all three were rich apparelled and all of one faſhion, except *Mutezuma*, which had a paire of ſhooes of gold beſet with precious Stones, and the ſoles were tyed to the vpper part with latchets, as is painted of the Antikes. His Gentlemen went by two and two, laying downe and taking vp Mandles and Couerlets vpon the ground, becauſe his feet ſhould not touch the ſame: then followed him as in Proceſſion, 200. Noblemen bare-footed, with garments of a richer Liuery then the firſt three thouſand. *Mutezuma* came in the middeſt of the ſtreet, and the others came behind him as nigh the wall as they might, their faces towards the ground, for it was a great offence to looke him in the face. *Cortes* alighted from his Horſe, and according to our vſe went to embrace him, but the Princes who led him

Mutezumas ſtate and Maieſtie.

Digitized by Google

him by the armes, would not suffer him to come so nigh, for they held it for sinne to touch him; but yet saluted each one the other.

Cortes put about *Mutezuma* his necke a coller of Margarites, Diamonds, and other stones all of glasse. *Mutezuma* receiued it thankfully, and went before with one of the Princes his Nephewes, and commanded the other to leade *Cortes* by the hand, next after him in the midst of the street: and proceeding forward in this order, then came the Gentlemen in the richest Liuery to welcome him, one by one, touching the ground with their hands, and after returned to their standing. And if the Citizens had come as they requested, all that day would not haue serued for salutations. The coller of glasse pleased well *Mutezuma*, and because hee would not take without giuing a better thing, as a great Prince, hee commanded to be brought two collers of red Prawnes, which are there much esteemed, and at euery one of them hanged eight Shrimps of gold, of excellent workmanship, and of a finger length euery one, he put these collers with his owne hands about *Cortes* his necke, the which was esteemed a most great fauour, yea and the *Indians* maruelled at it. At this time they were come to the street end, which was almost a mile long, broad, streight, and very faire, and full of houses on each side, in whose doores, windowes and tops, was such a multitude of *Indians* to behold the strangers, that I know not who wondred most, our men to see such a number of them, or else they to see our men, their Ordnance and Horses, a thing so strange vnto them. They were brought vnto a great Court or house of Idols, which was the Lodging *Axaiaca*, at the doore whereof, *Mutezuma* tooke *Cortes* by the hand, and brought him into a faire hall, and placed him vpon a rich Carpet, saying vnto him, *Sir, now are you in your owne house, eate and take your rest and pleasure, for I will shortly come and visit you againe.* Such (as you heare) was the receiuing of *Hernando Cortes* by *Mutezuma* a most mightie King, into his great and famous Citie of *Mexico*, the eight day of November, 1519.

Spaniards gilie gawdy glasse for gold and glory.

The house where the *Spaniards* were lodged was great and large, with many faire chambers sufficient for them all: it was neate, cleane matted, and hanged with Cloth of Cotton, and Feathers of many colours, pleasant to behold. When *Mutezuma* was departed from *Cortes*, hee beganne to set his house in order and placed the Ordnance at his doore, and hauing all his things in good sort, he went to a sumptuous Dinner that was prepared for him. Assoone as *Mutezuma* had made an end of his Dinner, hearing that the Strangers were risen from the Table, and reposed a while, then came hee to *Cortes*, saluting him, and sate downe by him. He gaue vnto him diuers Iewels of Gold Place, Feathers, and many Garments of Cotton, both rich, well wouen, and wrought of strange colours, a thing comely, that did manifest his greatnesse, and also confirme their imagination. This gift was deliuered honourably, and then beganne his talke as followeth: *Lords and Gentlemen, I doe much reioyce to haue in my house such valiant men as yee are, for to vse you with courtesie, and intreate you with honour, according to your desert and my estate. And where heretofore I desired that you should not come hither, the onely cause was, my people had a great feare to see you, for your gesture and grimme beards did terrifie them, yea, they reported that yee had such beasts as swallowed men, and that your comming was from Heauen, bringing with you Lightning, Thunder, and Thunder-bolts, wherewith you made the Earth to tremble and to shake, and that yee slue therewith whom yee pleased. But now I doe see and know that you are mortall men, and that yee are quiet and hurt no man: also I haue seene your Horses, which are but your Seruants, and your Gunnes like vnto shooting Trunkes. I doe now hold all for Fables and Lyes which haue beene reported of you, and I doe also accept you for my meere Kinsman. My Father told mee that hee had heard his forefathers say, of whom I doe descend, that they held opinion how they were not Naturals of this Land, but come hither by chance, in companie of a mightie Lord, who after a while that hee had abode here, they returned to their naturall soyle: After many yeeres expired, they came againe for those whom they had left heere behind them, but they would not goe with them, because they had here inhabited, and had Wiues and Children, and great gouernment in the Land. Now these mightie Lords seeing that they were so stubborne, and would not returne with them, departed from them sore displeased, saying, that hee would send his Children that should both rule and gouerne them, in Iustice, Peace, and ancient Religion. And for this consideration, wee haue alwayes suspected and beleeued, that such a people should come to rule and gouerne vs, and considering from whence you come, I doe thinke that you are they whom wee looked for, and the notice which the great Emperour* Charles *had for vs, who hath now sent you hither. Therefore Lord and Captaine, bee well assured, that wee will obey you, if there bee no feyned or deceitfull matter in your dealings, and will also diuide with you and yours all that we haue. And although this which I haue said were not onely for your vertue, fame, and deeds of valiant Gentlemen, I would yet doe it for your worthinesse in the battailes of* Tauasco, Teocazinco, and Chollolla, *being so few, to ouercome so many.*

The Oration of *Mutezuma* to the *Spaniards*.

A strange opinion.

Now againe, if yee imagine that I am a God, and the walls and roofes of my houses, and all my vessell of seruice, to be of pure Gold, as the men of Zempoallan, Tlaxcallan, and Huexozinco, haue informed you, it is not so, and I iudge you to bee so wise, that you giue no credit to such Fables. You shall also note, that through your comming hither, many of my subiects haue rebelled, and are become my

mortall enemies, but yet I purpose to breake their wings. Come feele you my bodie, I am of flesh and bone, a mortall man as other are, and no God, although as a King I doe esteeme my selfe, of greater dignitie and preheminence then others. My houses you doe also see, which are of timber and earth, and the principallest of Masons worke, therefore now you doe both know and see what odious lyers those Tale-bearers were. But truth is is, that Gold, Plate, Feathers, Armour, Iewels, and other Riches, I haue in the Treasury of my Forefathers a long time preserued, as the vse of Kings is, all the which you and yours shall enioy at all times. And now it may please you to take your rest, for I know that you are weary of your iourney. Cortes *with ioyfull countenance humbled himselfe, seeing some teares fall from* Mutezuma *his eyes, saying vnto him, vpon the trust I haue had in your clemencie, I insisted to come both to see, and talke with your Highnesse, and now I know that all are lyes which hath beene told mee. The like your Highnesse hath heard reported of vs, assure your selfe, that the Emperour King of Spaine is your naturall Lord, whom you haue expected, hee is the onely heire from whence your Linage doth proceed, and as touching the offer of your Highnesse treasure, I do most heartily thanke you.*

A louing answere.

After all this communication, *Mutezuma* demanded whether the bearded men which came with him, were either his vassals, or his slaues, because hee would entertayne each one according to his estate. *Cortes* answered, that they were all his brethren, friends, and fellowes, except some that were his seruants.

Then he departed, and went home to his Palace, and there informed himselfe particularly who were Gentlemen, and who were not, and according thereunto, sent euery one particular gift or present. To the Gentlemen he sent his reward by his Comptroller, and to the Mariners and other Seruitors, by a Page of his houshold.

Mutezuma described.

Mutezuma was a man of a small stature, and leane, his colour tawnie as all the *Indians* are. Hee had long haire on his head, fiue little haires vpon him, as though they had beene put in with a Bodkin. His thinne beard was blacke. Hee was a man of a faire condition, and a doer of Iustice, well spoken, graue and wise, beloued and feared among his subiects. *Mutezuma* doth signifie *Sadnesse*.

Cin.

To the proper names of Kings and Lords, they doe adde this syllable *Cin*, which is for courtesie and dignitie, as we vse Lord. The *Turke* vseth *Zultan*. The *Moore* or *Barbarian* calleth his Lord *Mulley*, and so the *Indians* say *Mutezumacin*, His people had him in such reuerence, that hee permitted none to sit in his sight, nor yet in his presence to weare shooes, nor looke him in the face, except very few Princes. Hee was glad of the conuersation of the *Spaniards*, and would not suffer them to stand on foote, for the great estimation hee had of them, and if hee liked any of the *Spaniards* garments, hee would exchange his apparell for theirs. He changed his owne apparell foure times euery day, and hee neuer clothed himselfe againe with the Garments which hee had once worne, but all such were kept in his Guardrobe, for to giue in Presents to his Seruants and Ambassadours, and vnto valiant Souldiers which had taken any enemy Prisoner, and that was esteemed a great reward, and a title of priuiledge. The costly Mantles whereof had beene diuers sent to *Cortes*, were of the same Guardrobe.

Title *Cin.*

Change of Apparell.

His Wardrobe.

His diet-rites.

Mutezuma went alwayes very neate and fine in his attyre. Hee bathed him in his Hot-house foure times euery day. Hee went seldome out of his Chamber, but when hee went to his meate. Hee eate alwayes alone, but solemnely, and with great abundance. His Table was a Pillow, or else a couple of coloured Skinnes. His Chaire was a foure-footed stoole made of one piece, and hollow in the middest, well wrought and painted. His Table-clothes, Napkins, and Towels, were made of Cotton-woolI, very white and new, for hee was neuer serued but once with that Naperie. Foure hundred Pages brought in his meate, all sonnes of great Lords, and placed it vpon a Table in his great Hall. The meate being brought in, then came *Mutezuma* to behold the Dishes, and appointed those Dishes that liked him best, and Chafing-dishes were prepared to keepe that meate warme, and seldome would he eate of any other Dish, except the Lord Steward or Comptroller should highly commend any other Dish.

Magnificent attendance.

His wiues.

Before hee sate downe, came twentie of his Wiues of the fairest and best esteemed, or else those that serued weekly by turne, brought in the Bason and Ewre, with great humblenesse. This done, hee sate him downe, and then came the Lord Steward, and drew a woodden Nette before him, because none should come nigh his Table. And this Noble man alone placed the Dishes, and also tooke them away, for the Pages who brought in the meate, came not neere the Table, nor yet spake any worde, nor no man else.

Bare-foot seruice.

While the Lord *Mutezuma* was at his meate, except some leaster, they all serued him bare-footed. There assisted alwayes somewhat a farre off, sixe ancient and Noblemen, vnto whom he vsed to giue of the Dish that best liked him, who receiued the same at his hand with great reuerence, and eate it incontinent, without looking in his face, which was the greatest humilitie that they could vse before him. Hee had muscke of Fiddle, Flute, and of a

Musicke.

Snaile-

Digitized by Google

Snaile-shell, and a Cauldron couered with a skinne, and such other strange Instruments. They had very euill voyces to sing. Alwayes at dinner time he had Dwarfes, crooke-backes, and other deformed counterfeits, all for maiestie and to laugh at; who had their meate in the Hall among the Iesters and Idiots, which were fed with part of the meate that came from *Mutezuma* his table, all the rest of the meate was giuen to three thousand of the guard, who attended ordinarily in the yard or Court, and therefore they say that there was brought for his Table three thousand dishes, and as many pots of wine, such as they vse, and that continually the Buttrey and Pantrey stood open, which was a wonder to see what was in them. The platters, dishes, and cups, were all of earth, whereof the King was serued but once, and so from meale to meale new. He had likewise his seruice of Gold and Plate very rich, but hee vsed not to bee serued with it (they say) because hee would not bee serued twice therewith, the which hee thought a base thing. Iesters. Plate.

Some affirme, that young children were slaine and dressed in diuers kinde of dishes for *Mutezuma* his table, but it was not so, onely of mans flesh sacrificed he fed now and then. The table being taken vp, then came againe the Gentlewomen to bring water for his hands, with the like reuerence as they vsed at the first, and then went they to dinner with the other wiues, so that then the Gentlemen and Pages waited at their course fell. Mans flesh.

When his table was taken vp, and his Seruitors gone to meate, *Mutezuma* sate still: then came in the suiters that had any affaires to deale with him, bare-footed, for all the persons did vse that reuerence, except some Princes his Kinsmen, as the Lords of *Tescuco*, and *Tlacopan*, and a few others: and beeing cold weather, they vsed to weare olde ragged clothes vpon their rich garments. All suiters vsed to make three or foure courtesies, not looking toward his face, and speaking vnto him their heads dowwards, and in that order retyred backe againe. *Mutezuma* answered his suiters very gravely, with low voyce, and in few words, and not to all suiters, for others his Secretaries or Counsellers that stood by, answered for him, and hauing their answere, they returned backwards, not turning their tailes to the Prince. After these businesses done, he vsed some recreation, hearing Iesters or Songs, wherein he delighted much, or else to looke vpon the Players, who play with their feet, as we doe with our hands. These haue a cudgell like vnto a Pastlers rowler, which they tosse high and low as it were a ball in the Ayre, strange to behold. They vse other Playes to passe the time, in such an order, that it seemed maruellous to the lookers on. *Cortes* brought into *Spaine* some of these Players. Also they vse *Matachines*, in such sort they doe play, that there stand each vpon other shoulders, and hee that standeth highest, sheweth many feates. Sometime *Mutezuma* did behold the Players, who played at a game called *Pacoliztli*, which is much like our Tables, and they play with beanes, squared like Dice, which they call *Patolli*, and throw them out of both their hands vpon a matte, or else vpon the ground, where are made certain strikes, vpon which they set downe the chance that is throwne: and at this game they play all that they haue, and many times they value their owne bodies, and play that into captiuitie, and to remayne a slaue, I meane, such as are common Gamesters of small estate. State ceremonies. Iesters and Players. Games.

Sometimes *Mutezuma* went to the Tennis Court. Their ball is celled *Villamaliztli*, and is made of the gumme which commeth from a tree called *Vlli*. This tree groweth in a hot Countrey. The gumme being kneaded together, and so made round, is as blacke as pitch, and somewhat heauie, and very hard for the hand, but yet good and light to rebound, and better then our wind-bals. They play not at Chases, but at Bandy, or at Check, that is, if the ball touch the wall it looseth. They may strike the ball with any part of their body, but there is alwayes a penaltie if they onely strike not with the buttocke or side, which is the finest play: whereof they vse a skinne vpon each buttocke. They play so many to so many for a packe of Mantles, or according to the abilitie of the Players. Also they play for gold and feathers, and sometime for their owne bodies, as they vse at *Patolli*, which is there permitted and lawfull. The Tennis Court is called *Tlacbco*, and is a Hall long and narrow, but wider vpwards, then downewards, and higher on the sides then at the ends, which is an industry for their play. The house is alwayes white and smooth in the side walles they haue certaine stones like vnto Milstones, with a little hole in the middest that passeth through the stone, the hole is so small, that scarcely the ball may passe through, but he that chanceth to strike the ball into the hole, which seldometh happeneth, winneth the game, and by an ancient Law and custome among Tennis Players, he ought to haue the Cloakes of all those that stand and behold the play, on that side that the ball went in, and in some Tennis Courts, the halfe of the garments of them that stand looking on. The Winner is then bound to make certaine Sacrifice to the God of the Tennis play, and to the stone where the ball entred. The beholders of the play would say, that such a Winner should be a Thiefe and an Adulterer, or else that he should die quickly. The Tennis play in *Mexico*.

They vsed in the Temple of the Tennis play, two Images of the *God of the Ball*, which stood vpon the two lower walles. The Sacrifice was celebrated at mid-night, with many Ceremonies and Witch-crafts, and Songs for that purpose. Then came a Priest from the Cathedrall Church, with other Religious persons to blesse the Sacrifice, saying certain deuillish Prayers, and throw- *God of the Ball.*

ing the ball foure times in the Tennis Court. In this order was the Tennis play consecrated, and after this consecration it was lawfull to play, or else not, for this diligence was first to bee done when any Tennis Court or play was newly built. The owner of the Tennis Court also would neuer suffer any to play, vntill he had first offered something to the Idoll, their Superstition was so great.

His Palace.

Mutezuma had many houses as well in *Mexico* as without, for his recreation and pleasure, as also for his ordinary dwelling. To write of all it should bee tedious, but where his continuall abiding was, he named *Topac*, that is to say, *Palace*. And that Palace had twentie doores or gates which had their out-comming into the common streets. It hath three Courts, and in the one standeth a faire Fountaine, many Hals, and a hundred Chambers of twentie three, and thirtie foot long, an hundred Bathes and Hot-houses: and although the building was without nayles, yet very good workmanship. The walles were made of Masons worke, and wrought of Marble, Iaspe, and other blacke stone, with veines of red, like vnto Rubies and other Stones, which glistered very faire: the roofes were wrought of Timber, and curiously carued: the Timber was Cedar, Cypresse, and Pine-tree: the Chambers were painted and hung with Cloth of Cotton, and Cloth made of Conies haire and feathers. The beds were poore and of no value, for they were nothing but Mantles laid vpon Mats, or vpon Hay, or else Mats alone: few men lay within those Houses.

Twentie doores. Three Courts. Hals, chambers, walls, &c.

Multitude of women.

There were a thousand women, and some affirme that there were three thousand, accounting Gentlewomen, Seruants and Slaues: the most were Noblemens Daughters, *Mutezuma* tooke of them for his selfe, those that liked him best, and the others he gaue in mariage to Gentlemen his Seruants. The saying was, that hee had at one time a hundred and fiftie women his wiues with childe, who through the perswasion of the Deuill, tooke Medicines to cast their creatures, because they knew that they should not inherit the State: these his wiues, had many old women for their Guard, for no man was permitted to looke vpon them.

His Armes hee after saith a Conie was his armes, but this Eagle was generall to all the *Mexican* Kings Gryffon-tale.

The shield of Armes that is set in his Palace, and likewise carried to the Warres, is an Eagle soaring vpon a Tigre his tallons, bent as taking prey. Some thinke it is a Gryffon, and not an Eagle. The Griffons in time past, say they, did cause the Vale of *Anaoatlan* to bee dispeopled, for they were great deuourers of men, and that their abiding was in the Mountaines of *Tovacan*: they approue that these Mountaines were called *Cuitlachtepels*, of *Cuitlachtli*, which is a Gryffon, bigger then a Lion: but the *Spaniards* did neuer see any of them. The *Indians* by their old Pictures doe paint those Gryffons to haue a kind of haire and no feathers, and also affirme, that with their tallons and teeth they breake mens bones. They haue the courage of a Lion, and the countenance of an Eagle: they paint him with foure feet, and teeth, with a kinde of downe, more like wooll then feathers, with his beake, tallons, and wings. There are also other Lords that giue the Gryffon in their Armes, flying with a heart in his tallons.

A house of fowle, which were only preserued for their feathers.

Mutezuma had another house, with very good lodgings and faire galleries, built vpon Pillars of Iaspe which extendeth toward a goodly Garden, in the which there are ten ponds or moe, some of salt-water for Sea-fowle, and other some of fresh water for Riuer-fowle, and Lake-fowle, which ponds are deuised with sluces to emptie and to fill at their pleasure, for the cleannesse of the feathers. There is such a number of Fowle that scarcely the ponds may hold them, and of such diuers kindes both in feathers and making, as sure it was an admiration for the *Spaniards* to behold, for the most of them they knew not, nor yet had at any time seene the like. And to euery kind of Fowle they gaue such bayte as they were wont to feede of in the Fields or Riuers. There did belong to that house three hundred persons of seruice some were to clense the ponds: other some did fish for baite: other some serued them with meate: other did loose them and trimme their feathers: others had care to looke to their Egges: others to set them abrood: others cured them when they were sicke: and the principallest Office was to plucke the Feathers: for of them was made rich Mantles, Tapissary, Targets, tuffes of Feathers, and many other things wrought with Gold and Siluer: a most perfit worke.

A house of fowle for hawking and other strange things.

There is another House with large quarters and lodgings, which is called a House for Fowle, not because there are more then in the other, but because they bee bigger and to hawke with all, and are Fowle of rapine, wherefore they are esteemed as more nobler then all the others.

White men.

There are in this House many high Hals, in the which are kept men, women and children: in some of them are kept such as are borne white of colour: which doth very seldome happen: in other some are Dwarfes, Crooked-backes, Burstenmen, Counterfeites, and monstrous Persons, in great number: they say, that they vsed to deforme them when they were Children, to set forth the Kings greatnesse: euery of these persons were in seuerall Halles by themselues.

Wild beasts.

In the lower Halles were great Cages made of timber: in some of them were Lions, in other Tigres, in other Ounces, in others Wolues: in conclusion, there was no foure-footed beast that wanted there, onely to the effect that the mightie *Mutezuma* might say that hee had such

things

things in his house. They were fed with their ordinary, as Ginea cockes, Deere, Dogges, and such like.

There was also in other Hals great earthen vessels, some with earth, and some with water, wherein were Snakes, as grosse as a mans thigh, Vipers, Crocodiles, which they call *Caymanes*, or *Lizarts* of twenty foote long, with such Scales and head as a Dragon hath: Also other little Lizarts, and other venemous Beasts and Serpents as well of the water as of the land, a terrible sight for the lookers on. Snakes, &c.

There were also other Cages for foule of rapine of all sorts, as Hawkes, Kites, Boyters, and at the least nine or ten kinde of Haukes. This house of foule had of daily allowance fiue hundred Gynea cockes, and three hundred men of seruice, besides the Falconers and Hunters, which are infinite. There were many other sorts of Foules that our men knew not, which seemed by their beake and talents good to Hauke withall. Foules of prey

To the Snakes and other venemous Beasts they gaue the bloud of men sacrificed, to feede them, and some say, they gaue vnto them mans flesh, which the great Lizarts doe eate very well. The *Spaniards* saw the floore couered with bloud like a iellie in a Slaughter-house, it stunke horribly. It was strange to see the Officers in this House, how euery one was occupied. Our men tooke great pleasure in beholding such strange things, but they could not away with the roaring of the Lyons, the fearefull hissing of the Snakes and Adders, the dolefull howling and barking of the Wolues, the sorrowfull yelling of the Ownzes and Tigres, when they would haue meate. Most certaine, in the night season it seemed a Dungeon of Hell, and a dwelling place of the Deuill, and euen so it was indeede, for neere at hand was a Hall of a hundred and fiftie foote long, and thirty foote broad, where was a Chappell with the Roofe of Siluer and Gold in leafe Wainescotted, and decked with great store of Pearle and Stone, as Agattes, Cornerines, Emeralds, Rubies, and diuers other sorts, and this was the Oratory where *Mutezuma* prayed in the night season, and in that Chappell the Deuill did appeare vnto him, and gaue him answere according to his prayers. Deuils den.

He had other houses like vnto Barnes, onely for the feathers of foules, and for mantels which proceeded of his rents and tributes, a thing much to be seene: vpon the doores was set his armes, which was a Conie. Here dwelled the chiefe Officers of his house, as Treasurer, Controller, Receiuers and other officers appertaining to the Kings reuenews. *Mutezuma* had no house wherein was not an Oratorie for the Deuill, whom they worshipped for the Iewels there. And therefore those houses were great and large. Store-houses. Officers.

Mutezuma had some houses of Armor, vpon the doores wherof stood a Bowe and Arrows. In these houses was great store of all kinde of Munition which they vse in their wars: as Bowes, Arrowes, Slings, Launces, Darts, Clubbes, Swords and Bucklers, and gallant Targets more trim then strong, Skuls and Splints, but not manie, and all made of wood, gilt or couered with leather. The wood whereof they make their Armour and Targets, is verie hard and strong, for they vse to toast it at the fire, and at their Arrow ends they enclose a little peece of Flint stone, or a peece of a Fish bone called *Labisa*, and that is venemous, for if any be hurt therewith and the head remaine in the wound, it so festereth, that it is almost incurable. The Armory of *Mutezuma*. Wood for Armes.

Their Swords are of wood, and the edge thereof is of flint stone, enclosed or ioyned into a staffe, with a certaine kinde of glew which is made of a roote called *Zacolt*, and *Tenxalli*, which is a kinde of strong sand, whereof they make a mixture, and after kneade it with bloud of Bats or Rearemice, and other Foule, which doth glew maruellous strong, and lightly neuer vncleaueth: of this stuffe, they make nailes, pearcers, and augers, wherewith they bore Timber and stone: with their Swords they cut Speares, yea and a Horse necke at a blow, and made dents into Iron, which seemed a thing vnpossible and incredible. In the Citie no man may weare weapon, but onely in warres, hunting, and among the Kings Guard. Wodden Swords with stone edges.

Besides the foresaid houses, he had manie others for his onely recreation and pastime, with excellent faire Gardens of medicinall Hearbes, sweete Flowers, and Trees of delectable sauour. In that Garden were a thousand personages, made and wrought artificially of leaues and flowers. *Mutezuma* would not permit that in this Garden should be any kinde of pot Hearbes, or things to be sold, saying, that it did not appertaine to Kings to haue things of profit, among their delights and pleasures, for such things (said he) did appertaine to Merchants. Yet notwithstanding he had Orchards with manie and sundrie fruites, but they stood farre from the Citie, and whither seldome times he went. He had likewise out of *Mexico* pleasant houses in Woods and Forrests, of great compasse, enuironed with water, in the which he had Fountaines, Riuers, Ponds with fish, Warrens of Conies, Rockes and couert where were Harts, Bucks, Hares, Foxes, Wolues, and such like, with wildernesse for euerie sort. To these places the Lords of *Mexico* vsed to goe and sport themselues, such and so many were the houses of *Mutezuma*, wherein few Kings were equall with him. The Gardens of *Mutezuma*. Note of a magnificent minde. Houses of pleasure.

He had daily attending vpon him in his priuate Guard, fiue hundred Noblemen and Gentle-

The Court and Guard of *Mutezuma.*

men, and each of them three or foure seruants, and some had twentie seruants or moe, according to his estate: and in this manner he had three thousand men attendant in his Court, and some affirme more, all the which were fed in his house of the meate that came from his table. The seruing men alwaies abode below in the Court all the day, and went not from thence till after Supper.

Great Vassals.

It is to be thought that his Guard was the greater, because the strangers were there, although in effect of truth it is most certaine, that all the Lords that are vnder the *Mexicall* Empire (as they say) are thirtie persons of high estate, who are able to make each of them a hundred thousand men. There are three thousand Lords of Townes, who haue many vassals. These Noblemen did abide in *Mexico* certaine times of the yeare, in the Court of *Mutezuma*, and could not depart from thence without especiall licence of the Emperour, leauing each of them a sonne or brother behinde them for securitie of rebellion, and for this cause they had generally houses in the Citie: such and so great was the Court of *Mutezuma*.

State-caution.

Tributes and subiection of the *Indians* to their King.

There is not in all the Dominions of *Mutezuma* any subiect that paieth not tribute vnto him. The Noblemen pay their tribute in personall seruice. The Husbandmen called *Macehualtin*, with body and goods. In this sort they are either Tenants, or else heires to their possessions. Those which are *heires*, doe pay one third part of all their fruite and commoditie that they doe reape or bring vp, as Dogges, Hennes, Foule, Conies, Gold, Siluer, Stones, Salt, Waxe, Honie, Mantels, Feathers, Cotten, and a certaine fruite called *Cacao*, that serueth for money, and also to eate. Also all kinde of Graine, and Garden Hearbes, and Fruites, whereof they doe maintaine themselues.

Pouerty of the Tenants.

The *Tenants* doe pay monethly, or yearely, as they can agree, and because their tribute is great, they are called slaues, for when they may haue licence to eate Egges, they thinke it a great fauour. It was reported that they were taxed what they should eate, and all the residue was taken from them. They went verie poorely cloathed, yea and the most of their treasure was an earthen Pot, wherein they boiled their Hearbes, a couple of Milstones to grinde their Corne, and a Mat to lye vpon. They did not onely paie this Rent, and Tribute, but also serued with their bodies at all times when the great King should command. They were in such great subiection to their Prince, that they durst not speake one word although their daughters should be taken from them to beused at pleasure. All the aforesaid rents they brought to *Mexico* vpon their backes, and in Boates, I meane so much as was necessarie for the prouision of the House and Court of *Mutezuma*, all the rest was spent among Souldiers, and bartred for Gold, Plate, Precious stones, and other rich Iewels, esteemed of Princes, all the which was brought to the Treasurie. In *Mexico* was large and great Barnes and Houses to receiue and keepe the Corne for prouision of the Citie, with Officers, and vnderofficers, who did receiue the same, and kept account thereof in Bookes of painted figures.

See our picture bookes.

Receiuers.

And in euery Towne was a Receiuer, who bare in his hand a rod or a bush of Feathers, and those gaue vp their accounts in *Mexico*. If any such had beene taken with deceit and falshood, death was his reward, yea and his kinred punished with penalties, as of a linage of a traitour to his Prince. The Husbandmen, if they paid not well their Tribute, were apprehended for the same, and if they were found to be poore through sicknesse and infirmitie, then they were borne withall, but if they were found to be lazie and sloathfull, they should be vsed accordingly: but in conclusion, if they paied it not at a day appointed, then they should be sold for slaues to pay their debt, or else be sacrificed.

Tribute of mens labours.

There were many other Prouinces, which paid a certaine portion, and reknowledged seruice, but this Tribute was more of honour then profit. In this sort *Mutezuma* had more then sufficient to prouide his house and wars, and to heape vp great store in his Treasury. Moreouer, he spent nothing in the building of his houses; for of long time he had certaine Townes that paid no other Tribute, but onely to worke and repaire continually his Houses at their owne proper cost, and paid all kinde of workemen carrying vpon their backes, or drawing in sleds, Stone, Lime, Timber, Water, and all other necessaries for the worke. Like wise they were bound to prouide all the firewood that should be spent in the Court, which was a great thing, and did amount to two hundred and thirty weight a day, which was fiue hundred mens burdens, and some dayes in the winter much more. And for the Kings Chimneys they brought the barke of Oake trees, which was best esteemed for the light thereof, for they were great Sorcerers. *Mutezuma* had one hundred Cities with their Prouinces, of whom he receiued Rents, Tributes, and Vassalage, where he maintained Garrison of Souldiers, and had Treasurers in each of them.

His dominion did extend from the North sea to the South sea, and six hundred miles in longitude within the maine Land, although in very deede there were some Townes, as *Tlaxcallan*, *Mechuacan*, *Panuco*, and *Tecantepec*, which were his enemies, and paid him neither Tribute nor Seruice: but yet the Ransome was much, when any of them was taken. Also there were other Kings and Noblemen, as of *Texcuco*, and *Tlacopan*, which were not in subiection vn-

to

to him, but onely in homage and obedience, for they were of his owne linage, vnto whom *Mutezuma* married his Daughters.

Description of Mexico *as it flourished in those times.*

Mexico at the time when *Cortes* entred, was a Citie of sixtie thousand houses. The Kings house, and other Noblemens houses were great, large, and beautifull, the other were small and meane, without either doores or windowes: and although they were small, yet there dwelleth in some of them, two, three, yea and ten persons, by reason whereof, the Citie was wonderfully replenished with people.

This Citie is built vpon the water, euen in the same order as *Venice* is. All the body of the Citie standeth in a great large Lake of water. There are three sorts of streetes very broad and faire, the one sort are onely water, with many Bridges: another sort of onely earth: and the third of earth and water: that is to say, the one halfe earth to walke vpon, and the other halfe for Boates to bring prouision of all sorts. These streetes are kept alwayes cleane, and the most part of the houses haue two doores, the one towards the Cawsey, and the other towards the water, at the which they take Boate to goe where they list. And although this Citie is founded vpon water, yet the same water is not good to drinke, whereof there is brought by conduit water from a place called *Capultepec*, three miles distant from the Citie, which springeth out of a little hill, at the foote whereof standeth two Statues or couered Images wrought in stone, with their Targets and Lances, the one is of *Mutezuma*, and the other of *Axaiaca* his Father. The water is brought from thence in two Pipes or Canals in great quantity, and when the one is foule, then all the water is conueied into the other, till the first be made cleane. From this Fountaine all the whole Citie is prouided, so that they goe selling the same water from streete to streete in little Boates, and doe pay a certaine tribute for the same. Three sorts of Streetes.

This Citie is diuided into two streetes, the one was called *Tlatelulco*, that is to say, *a little Iland*, and the other *Mexico*, where *Mutezuma* his dwelling and Court was, and is to be interpreted *a Spring*. This streete is the fairest and most principall, and because of the Kings Pallace there, the Citie was named *Mexico*, although the old and first name of the Citie was *Tenuchtitlan*, which doth signifie *Fruite out of stone*, for the name is compounded of *Tetl*, which is, *Stone*, and *Nochtli*, which is a Fruite in *Cuba* and *Hispaniola*, called *Tunas*; the Tree (or to speake properly, the Thistle) that beareth this fruite, is named *Nopal*, and is nothing almost but leaues of a foote broad and round, and three inches thicke, some more, and some lesse, according to the growth, full of thornes which are venemous: the leafe is greene, and the thorne or pricke russet. After that is planted, it encreaseth, growing leafe vnto leafe, and the foote thereof commeth to be as the body of a tree; and one leafe doth onely produce another at the point; but at the sides of the same leaues proceede other leaues. In some Prouinces where water is scant, they vse to drinke the iuice of these leaues. The fruite thereof called *Nochtli*, is like vnto Figges, and euen so hath his little kernels or graines within, but they are somewhat larger, and crowned like vnto a Medler. There are of them of sundry colours, some are greene without, and Carnation like within, which haue a good taste. Others are yellow, and others white, and some speckled: the best sort are the white: it is a fruite that will last long. Some of them haue the taste of Peares, and others some of *Grapes*: it is a cold and a fresh fruite, and best esteemed in the heate of Summer. The *Spaniards* doe more esteeme them then the *Indians*. The more the ground is laboured where they grow, the fruite is so much the better. There is yet another kinde of this fruite red, and that is nothing esteemed, although his taste is not euill, but because it doth colour and dye the eaters mouth, lippes, and apparell, yea, and maketh his vrine looke like pure bloud. Many *Spaniards* at their first comming into *India*, and eating this Fruite, were in a maze, and at their wits end, thinking that all the blood in their bodies came out in vrine: yea and many Phisitions at their first comming were of the same beliefe: for it hath happened, when they haue bin sent for vnto such as haue eaten this fruite, they not knowing the cause, and beholding the vrine, by and by they ministred medicine to stanch the bloud: a thing ridiculous, to see the Phisitians so deceiued. Of this fruite *Nochtli* and *Tetl*, which is a *Stone*, is compounded *Tenuchtitlan*. When this City was begun to be founded, it was placed neere vnto a great Stone that stood in the middest of the Lake, at the foote whereof grew one of these *Nopal* trees, and therefore *Mexico* giueth for armes and deuise the foote of a *Nopal* tree springing from a stone, according to the Cities name. It groweth also in *Bermuda*.

Mexico is as much to say, as *a Spring or Fountaine*, according to the property of the vowell and speech. Others doe affirme, that *Mexico* hath his name of a more ancient time, whose first Founders were called *Mexiti*, for vnto this day the *Indian* dwellers in one streete of this City are called of *Mexico*. The *Mexiti* tooke name of thir principall Idoll called *Mexitli*, who was in as great veneration as *Vitzilopuchtli*, god of the warre. *Mexico* is enuironed with sweet water, and hath three wayes to come vnto it by cawsie, the one is from the West, and that cawsie is a mile and a halfe long. Another from the North, and containeth three miles in length. Eastward The name of *Mexico*.

the

Two Lakes, one salt, the other fresh.

Ebbing and flowing by the winde. Some (as *Patritius*) hence moued, deriue the cause of the Seas flowing from the saltnesse.

Cause of the saltnesse.

the Citie hath no entrie. But Southward the Cawsey is sixe miles long, which was the way that *Cortez* entred into the Citie. The Lake that *Mexico* is planted in, although it seemeth one, yet it is two, for the one is of water saltish, bitter, and pestiferous, and no kinde of fish liueth in it. And the other water is wholesome, good, and sweet, and bringeth forth small fish. The salt water ebbeth and floweth, according to the winde that bloweth. The sweet water standeth higher, so that the good water falleth into the euill, and reuerteth not backward, as some hold opinion. The salt Lake containeth fifteene miles in breadth, and fifteene in length, and more then fiue and fortie in circuit; and the Lake of sweet water containeth euen as much, in such sort, that the whole Lake containeth more then thirtie leagues, and hath about fiftie townes situated round about it, many of which townes doe containe fiue thousand households, and some ten thousand, yea and one towne called *Tezcuco*, is as bigge as *Mexico*. All this Lake of water springeth out of a Mountaine that standeth within sight of *Mexico*. The cause that the one part of the Lake is brackish or saltish, is, that the bottome or ground is all salt, and of that water great quantitie of salt is daily made.

200000. Canoas.

In this great Lake are aboue two hundred thousand little boates, which the *Indians* call *Acalles*, and the *Spaniards* call them *Canoas*, according to the speech of *Cuba* and *Santo Domingo*, wrought like a kneading trough: some are bigger then other some, according to the greatnesse of the body of the tree whereof they are made. And where I number two hundred thousand of these boats, I speake of the least, for *Mexico* alone hath aboue fiftie thousand ordinarily to carry and bring vnto the Citie victuall, prouision, and passengers, so that on the market day all the streets of water are full of them.

The Market place of *Mexico*.

The Market is called in the *Indian* tongue *Tlanquiztli*: euery Parish hath his Market place to buy and sell in: but *Mexico*, and *Tlatelulco* onely, which are the chiefest Cities, haue great Faires and places fit for the same, and especially *Mexico* hath one place where most dayes in the yeere is buying and selling, but euery fourth day is the great Market ordinarily: and the like custome is vsed throughout the Dominions of *Mutezuma*. This place is wide and large, compassed round about with doores, and is so great, that a hundred thousand persons come thither to chop and change, as a Citie most principall in all that Region. Wherefore the resort is from farre parts vnto that place.

Order of Sellers.

Euery occupation and kinde of merchandise hath his proper place appointed, which no other may by any meanes occupie or disturbe. Likewise pesterous wares haue their place accordingly (that is to say) stone, timber, lime, bricke, and all kinde of stuffe vnwrought, being necessarie to build withall. Also Mats both fine and course of sundrie workmanship, also Coales, Wood, and all sorts of earthen vessell, glased and painted very curiously: Deere skinnes both raw and tanned in haire and without haire, of many colours, for Shoomakers, Bucklers, Targets, Jerkins, and lining of woodden Corselets: also skinnes of other beasts and fowle in feathers readie dressed of all sorts, the colours and strangenesse thereof was a thing to behold. The richest merchandise was Salt, and Mantels of cotton wooll of diuers colours, both great and smal, some for beds, others for garments and clothing, other for tapissarie to hang houses, other cotten cloth for lining breeches, shirts, table clothes, towels, napkins, and such like things.

The diuers wares.

There were also Mantels made of the leaues of the tree called *Metl*, and of Palme tree, and Cony haire, which are well esteemed, being very warme, but the Couerlets made of feathers are the best: they sell threed made of Cony haire, pieces of linnen cloth made of cotton wooll, also skaines of threed of all colours: also it is strange to see the great store of fowle, some wilde, some tame, some water fowle, and other some of rapine. All the brauerie of the Market, is the place where gold and feathers ioyntly wrought is sold, for any thing that is in request is there liuely wrought in gold and feathers, and gallant colours.

Indian workemanship.

The *Indians* are so expert and perfect in this science, that they will worke or make a Butter-flie, any wild Beast, Trees, Roses, Flowers, Herbs, Rootes, or any other thing, so liuely, that it is a thing maruellous to behold. It hapneth many times that one of these workmen in a whole day will eate nothing, onely to place one feather in his due perfection, turning and tossing the feather to the light of the Sunne, into the shade or darke place, to see where is his most naturall perfection, and till his worke be finished he will neither eate nor drinke. There are few Nations of so much patience. The Art or Science of Gold-smiths, among them is the most curious, and very good workmanship engrauen with

Gold-smiths artifices.

tooles made of flint, or in mold. They will cast a platter in mold with eight corners, and euery corner of seuerall metall, that is to say, the one of gold, and the other of siluer, without any kind of solder: they will also found or cast a little caldron with loose handles hanging thereat, as wee vse to cast a bell: they will also cast in mold a fish of metall with one scale of siluer on his backe, and another of gold: they will make a Parret or Popinjay of metall, that his tongue shall shake, and his head moue, and his wings flutter: they will cast an Ape in mold, that both hands and feet shall stirre, and hold a spindle in his hand seeming to spin, yea and an Apple in his hand, as though he would eate it. Our *Spaniards* were not a little amazed at the sight of these things. For our Gold-smiths are not to be compared vnto them. They haue skill also of Amell worke, and to set any precious stone. But now as touching the Market, there is to sell Gold, Siluer, Copper, Leade, Latton, and Tin, although there is but little of the three last metals mentioned. There are

pearles,

Digitized by Google

pearles, precious stones, diuers and sundrie sorts of shells, and bones, spunges and other Pedlers ware, which certainly are many and strange sorts, yea, and a thing to laugh at their Haberdash toyes and trifles. There are also many kinde of Hearbs, Roots, and Seedes, as well to bee eaten, as for medicine, for both men, women, and children, haue great knowledge in hearbs, for through pouertie and necessitie, they seeke them for their sustenance and helpe of their infirmities and diseases. They spend little among Physicians, although there are some of that Art, and many Apothecaries, who doe bring into the market Ointments, Sirrops, Waters, and other drugs, fit for sicke persons: if they cure all diseases almost, with hearbs, yea, as much as for to kill Lice, they haue a proper hearbe for the purpose.

The seuerall kindes of meates to bee sold are without number, as Snakes without head and taile, little Dogs gelt, Moles, Rats, long Wormes, Lice, yea and a kinde of earth, for at one season in the yeere they haue Nets of maile, with the which they rake vp a certaine dust that is bred vpon the water of the Lake of *Mexico*, and that is kneaded together like vnto Oas of the Sea: they gather much of this victuall, and keepe it in heapes, and make thereof Cakes like vnto brick-bats: they sell not onely this ware in the Market, but also send it abroad to other Faires and Markets afarre off: they eate this meate with as good stomacks as wee eate cheese, yea and they hold opinion that this skum or fatnesse of the water, is the cause that such great number of fowle commeth to the Lake, which in the winter season is infinite. All the Sellers pay a certaine summe for their shops or standings to the King, as a custome, and they to bee preserued and defended from theeues: and for that cause there goe certaine Sergeants or Officers vp and downe the Market to espie out malefactors. In the middest of the Market standeth a house which may bee seene throughout the Faire, and there sitteth twelue ancient men for Iudges to dispatch Law matters: their buying and selling is to change one ware for another, as thus, one giueth a Hen for a bundell of *Maiz*, other giue Mantels for Salt, or money which is *Cacao*; and this is their order to chop and change: they haue measure and strike for all kinde of Corne, and other earthen measures for Hony and Wine, and if any Measure bee falsified, they punish the offenders; and breake their measures.

Victuall of diuers sorts.

Bartering.

The Temple is called *Teucalli*, that is to say, *Gods House*; *Teul*, signifieth *God*; and *Calli* is a *House*, a name very fit, if that house had beene of the true God. The *Spaniards* that vnderstand not the language, doe pronounce and call those Temples *Cues*, and the God *Vitzilopuchtli*, *Vchilobos*. There are in *Mexico* many Churches with Towres for their Parishes and Streets, wherein are Chappels and Altars where the Images and Idols doe stand, and those Chappels doe serue for buriall places of their Founders; for others are buried in the ground about them or Church-yards. All their Temples are of one fashion, therefore it shall bee now sufficient to speake of the principall Church. This Temple is square, and doth containe euery way as much ground as a Crosse-bow can reach leuell: it is made of stone, with foure doores that abutteth vpon the three Cawseys, and vpon another part of the Citie, that hath no Cawsey but a faire street. In the middest of this Quaderne standeth a mount of earth and stone, square likewise, and fiftie fathom long euery way, built vpward like vnto a Pyramide of *Egypt*, sauing the top is not sharpe, but plaine and flat, and ten fathom square: vpon the West side, were steps vp to the top, in number an hundreth and fourteene, which being so many, high, and made of good stone, did seeme a beautifull thing. It was a strange sight to behold the Priests, some going vp, and some downe with ceremonies, or with men to be sacrificed. Vpon the top of this Temple are two great Altars, a good space distant the one from the other, and so nigh the edge or brim of the wall, that scarsly a man may goe behinde them at pleasure. The one Altar standeth on the right hand, and the other on the left: they were but of fiue foot high, each of them had the backe part made of stone, painted with monstrous and foule figures, the Chappell was faire and well wrought of Masons worke and timber, euery Chappell had three lofts, one aboue another, sustayned vpon pillars, and with the height thereof it shewed like vnto a faire Towre, and beautified the Citie afarre off: from thence a man may see all the Citie and Townes round about the Lake, which was vndoubtedly a goodly prospect. And because *Cortes* and his companie should see the beautie thereof; *Mutezuma* brought him thither, and shewed him all the order of the Temple, euen from the foot to the top. There was a certaine plot or space for the Idoll Priests to celebrate their seruice without disturbance of any. Their generall prayers were made toward the rising of the Sunne. Vpon each Altar standeth a great Idoll. Beside this Towre that standeth vpon the Pyramide, there are fourtie Towres great and small belonging to other little Temples which stand in the same circuit, the which although they were of the same making, yet their prospect was not Westward, but other wayes, because there should be a difference betwixt the great Temple and them. Some of these Temples were bigger then others, and euery one of a seuerall God, among the which there was one round Temple, dedicated to the God of the aire, called *Quecalcouatl*, for euen as the aire goeth round about the Heauens, euen for that consideration they made his Temple round. The entrance of that Temple had a doore, made like vnto the mouth of a Serpent, and was painted with foule and deuillish gestures, with great teeth and gums wrought, which was a thing to feare those that should enter in thereat, and especially the Christians

The great Temple of *Mexico*.

Seuerall Temples to seuerall gods.

A strange doore.

vnto

Digitized by Google

vnto whom it represented very Hell, with that vgly face and monstrous teeth.

There were other *Teocalles* in the Citie, that had the ascending vp by steps in three places: all these Temples had houses by themselues with all seruice, and Priests and particular Gods. At
Temple-halls. euery doore of the great Temple standeth a large Hall and goodly Lodgings, both high and low round about, which houses were common Armories for the Citie, for the force and strength of euery Towne is the Temple, and therefore they haue there placed their store-house of munition.
Idoll-holes. They had other darke houses full of Idols, great and small, wrought of sundrie metals, they are all bathed and washed with bloud, and doe shew very blacke through their daily sprinkling and
Bloudie walls. anointing them with the same, when any man is sacrificed: yea, and the walls are an inch thicke
Deuillish Priests. with bloud, and the ground is a foot thick of bloud, so that there is a deuillish stinch. The Priests or Ministers goe daily into those Oratories, and suffer none others but great personages to enter in. Yea, and when any such goeth in, they are bound to offer some man to bee sacrificed, that those bloudie Hangmen and Ministers of the Deuill may wash their hands in bloud of those so sacrificed, and to sprinkle their house therewith.

For their seruice in the Kitchin they haue a Pond of water that is filled once a yeere, which is brought by conduit from the principall Fountaine. All the residue of the foresaid circuit serueth for places to breede fowle, with Gardens of herbs and sweet trees, with Roses and flowers for the Altars. Such, so great and strange was this Temple of *Mexico*, for the seruice of the Deuill
5000. residents. who had deceiued those simple *Indians*. There doth reside in the same Temple continually fiue thousand persons, and all they are lodged and haue their liuing there, for that Temple is marueilous rich, and hath diuers Townes onely for their maintenance and reparation, and are bound to sustaine the same alwayes on foot. They doe sowe Corne, and maintayne all those fiue thousand persons with bread, fruit, flesh, fish, and fire-wood, as much as they neede, for they spend more fire-wood then is spent in the Kings Court: these persons doe liue at their hearts ease, as seruants and vassals vnto the Gods.

The Idols of *Mexico*. 2000. gods. The Gods of *Mexico* were two thousand in number, as the *Indians* reported, the chiefest were *Vitzilopuchtli*, and *Tezcatlipuca*, whose Images stood highest in the Temple vpon the Altars: they were made of stone in full proportion as bigge as a Giant. They were couered with a lawne, called *Nacar*. These Images were beset with pearles, precious stones, and pieces of gold, wrought like birds, beasts, fishes, and flowres, adorned with Emeralds, Turquies, Calcedons, and other little fine stones, so that when the lawne *Nacar* was taken away, the Images
A wicked attyre. seemed very beautifull to behold. The Image had for a girdle great Snakes of gold, and for Collars and Chaines about their necks, ten hearts of men made of gold, and each of those Idols had a counterfait visard with eyes of glasse, and in their necks death painted: each of these things had their considerations and meanings. These two Gods were brethren, for *Tezcatlipuca* was the God of Prouidence, and *Vitzilopuchti* God of the Warres, who was worshipped and feared more then all the rest.

There was another God, who had a great Image placed vpon the top of the Chappell of Idols, and he was esteemed for a speciall and singular God aboue all the rest. This God was made of all kinde of seedes that groweth in that Country, and being ground, they made a certaine paste, tempered with Childrens bloud, and Virgins sacrificed, who were opened with their Rasors in the breasts, and their hearts taken out, to offer as first fruits vnto the Idoll. The Priests and Ministers doe consecrate this Idoll with great pompe and many ceremonies. All the *Comarcans* and
A mad offering. Citizens are present at the consecration, with great triumph and incredible deuotion. After the consecration, many deuout persons came and sticked in the dowie Image precious stones, wedges of gold, and other jewels. After all this pompe ended, no secular man may touch that holy Image, no nor yet come into his Chappell, nay scarsly religious persons, except they were *Tlamacaztli*, who are Priests of order. They doe renew this Image many times with new dough, taking away the old, but then blessed is he that can get one piece of the old raggs for reliques, and chiefly for Souldiers, who thought themselues sure therewith in the warres. Also at the consecration of this Idoll, a certaine vessell of water was blessed with many wordes and ceremonies, and that water was preserued very religiously at the foot of the Altar, for to consecrate the King when he should be crowned, and also to bless any Captaine generall, when he should be elected for the warres, with onely giuing him a draught of that water.

The Charnell house, or place of sacrificed mens Sculls. Without the Temple, and ouer against the principall doore thereof, a stones cast distant, standeth the Charnell house onely of dead mens heads, prisoners in warres, and sacrificed with the knife. This monument was made like vnto a Theater, more larger then broad, wrought of lime and stone, with ascending steps, in the walls whereof was grafted betwixt stone and stone a Scull, with the teeth outwards. At the foot and head of this Theater, were two Towres, made
Terrible spectacle. onely of lime and sculls, the teeth outward, and this wall hauing no other stuffe, seemed a strange sight. At and vpon the top of the Theater, were seuentie Poles, standing the one from the other foure or fiue foot distant, and each of them was full of staues from the foot to the top. Each of these staues had others made fast vnto them, so that euery of them had fiue sculs broched through the Temple. *Andrew de Tapia* did certifie me, that he and *Gonçalo de Umbria* did reckon

ron them in one day, and found a hundred thirtie and sixe thousand sculls on the poles, staues, and steps. The other Towres were repleniſhed out of number, a moſt cruell cuſtome, being onely mens heads ſlaine in ſacrifice, although it hath a ſhew of humanitie for the remembrance there placed of death. There are alſo men appointed, that when one ſcull falleth, to ſet vp another in his place, ſo that the number may neuer want.

Other Mexican *Antiquities, Letters, Numbers, Yeers, Dayes, Weekes, &c.*

THere hath not beene found Letters at any time in the Weſt India, *onely in new* Spaine *were vſed certaine figures which ſerued for letters, with the which they kept in memorie and preſerued their Antiquities. The figures that the* Mexicans *vſed for letters are great, by reaſon whereof they occupie great Volumes: they engraue them in ſtone or timber, and paint them vpon walls, and alſo vpon a paper made of cotton wooll, and leaues of the tree* Metl. *Their bookes are great and folded vp like vnto our broad cloathes, and written vpon both ſides. There are ſome bookes rolled vp like a piece of ſtannell. They pronounce not* v, g, r, ſ, y, *therefore they vſe much* p, c, l, x. *This is the* Mexican *ſpeech, and* Nahual, *which is the beſt, playneſt, and the moſt eloquent, in all new* Spaine. *There are ſome in* Mexico *that doe vnderſtand each other by whiſtling, which is ordinarily vſed among Lowres, and Theeues, a ſpeech truly to wonder at, and none of our men could come to the knowledge thereof.*

Their reckoning by numbers was in this ſort.

Ce,	One,	*Chicoace,*	Six,	*Matlactlioce,*	Eleuen,	*Matlactlichicoace,*	Sixteene,
Ome,	Two,	*Chicome,*	Seuen,	*Matlactliome,*	Twelue,	*Matlactlichicome,*	Seuenteene,
Ei,	Three,	*Chicuei,*	Eight,	*Matlactlomei,*	Thirteene,	*Matlactlichicuei,*	Eighteene,
Naui,	Foure,	*Chiconaui,*	Nine,	*Matlactlinaui,*	Fourteene,	*Matlactlichiconaui,*	Nineteene,
Macuil,	Fiue,	*Matlac,*	Ten,	*Matlactlinaui,*	Fifteene,	*Cempoalli,*	Twentie.

Euery number is ſimple vntill you come to ſixe, and then they count, ſixe and one, ſixe and two, ſixe and three. Ten is a number by himſelfe, then you muſt count ten and one, ten and two, ten and three, ten and foure, ten and fiue. Then you count, ten, fiue, and one; ten, fiue, and two; ten, fiue, and three. Twentie goeth by himſelfe, and all the greater numbers.

The Mexican *yeere is three hundreth and ſixtie dayes, for they haue in their yeere eighteene moneths, and euery moneth containeth twentie dayes. They haue other fiue odde dayes, which goeth by themſelues, in the which they vſed to celebrate great feaſts of cruell and bloudy ſacrifice, with much deuotion. And reckoning after this ſort, they could not chooſe but erre, for they could not make equall the punctuall courſe of the Sunne. Yea the Chriſtian yeere is not perfect, although wee haue learned Aſtronomers. But yet theſe ſimple* Indians *went neere the marke.*

The names of the moneths. Tlacaxipeualiztli, Tozcutzli, Huei Tozcuztli, Toxcalt, Ecalcoaliztli, Tocuilhuicintli, Hueitecuilhuitl, Miccailhuicintli, Veymiccailhuitl, Vehpaniztli, Pachtli, Huei Pachtli, Quecholli, Panquecaliztli, Hatemuztli, Tititlh, Izcalli, Coa Vitleuac.

The names of Dayes, were Cipactli, A Spade; *Hecatl,* Aire or Winde; *Calli,* A Houſe; *Cuetz Pali,* A Lizzart; *Couatl,* A Snake; *Mizquintli,* Death; *Macatl,* A wilde Hart; *Teohtli,* A Cony; *Atl,* Water; *Izcuyntli,* A Dogge; *Ocumatli,* An Ape; *Malinalli,* A Broome; *Acatlh,* A Caue; *Ocelotl,* A Tigre; *Coautli,* An Eagle; *Cozcaquahutl,* A Buzzard; *Olin,* A Temple; *Tepatlh,* A Knife; *Quiauitl,* Raine; *Xuchitl,* A Roſe.

Although theſe twentie names ſerue for the whole yeere, and are but the dayes of euery moneth, yet therefore euery moneth beginneth not with Cipactli, *which is the firſt name, but as they follow in order, and the fiue odde dayes is the cauſe thereof. And alſo becauſe their weeke is of thirteene dayes, which changeth the names, as by example.* Cecipactli *can goe no further then vnto* Matlactlomeiacatl, *which is thirteene, and then beginneth another weeke: and we doe not ſay* Matlactlinaui Ocelotl, *which is the fourteenth day, but we ſay* Ceocelotl, *which is one, and then reckon the other ſixe names vnto twentie. And when all the twentie dayes are ended, begin againe to reckon from the firſt name of the twentie, but not from one, but from eight. And becauſe ye may better vnderſtand the matter, here is the example.*

Cecipactli, Omohecatl, Ei Calli, Naui Cuezpali, Macuilcoatl, Chicoacen Mizquintli, Chicome Macatl, Chicuei Tochtli, Chiconauiatl, Matlaciz Cuintli, Mailactlioce Ocumatli, Matlactliome Malinalli, Matlactlomei Acatlh. *The next weeke following doth begin his dayes from one. And that one is the fourteenth name of the moneth and of the dayes, and ſaith:* Ceotelotl, Omecoautli, Eicozcaquahutli, Naui Olui, Macuil Tecpatl, Chicoacen Quiauitl, Chicome Xuchitl, Chicoei Cipactli. *In this ſecond weeke,* Cipactli *came to fall on the eight day, being in the firſt weeke the firſt day.* Cemacatl, Ometochtli, Eiatl, Naui Izcuintli, Macuil Ocumatli. *And ſo proceede on to the third weeke, in the which this name* Cipactli *entreth not, but* Macatl, *which was the ſeuenth day in the firſt*

first weeke, and had no place in the second, and is the first in the third. The reckoning is no darker then ours, which we haue in a, b, c, d, e, f, g. For they also change with time, and run in such sort, that a, which was the first letter of this moneth, commeth to be the fift day of the next moneth, and the third moneth he counteth to be the third day, and so orderly doth the other sixe letters.

The accounting of yeares.

These Mexicans had another order to reckon their yeeres, which exceeded not aboue foure in number, as one, two, three, foure, wherewith they account a hundred, fiue hundred, a thousand, and as many moe as they list. Those foure figures or names, are, Tochtli, Acatlh, Tecpatlh, Calli, and doe signifie a Cony, a Cane, a Knife, and a House, saying: Ce Totchtli, One yeere; Ome Acatlh, Two yeeres; Ei Tecpatlh, Three yeeres; Naui Calli, Foure yeeres; Macuil Tochtli, Fiue yeeres; Chioacen Acatlh, Sixe yeeres; Cicome Tecpatlh, Seuen yeeres; Chicuei Calh, Eight yeeres; Chiconaui Tochtli, Nine yeeres; Matlactli Acatlh, Ten yeeres; Matlactlioce Tecpatlh, Eleuen yeeres; Matlactliome Calli, Twelue yeeres; Matlactliomei Tochtli, Thirteene yeeres. So that the reckoning passeth not aboue thirteene, which is one weeke of the yeere, and endeth where he began.

The second weeke. Ce Acatlh, one yeere; Ome Tlepatlh, two yeeres; Ei Calli, three yeeres; Naui Tochtli, foure yeeres; Macuil Acatlh, fiue yeeres; Chioacen Tecpatlh, sixe yeeres; Chicome Calli, seuen yeeres; Chicuei Tochtli, eight yeeres; Chiconaui Acatlh, nine yeeres; Matlactli Tecpatlh, ten yeeres; Matlactlioce Calli, eleuen yeeres; Matlactliome Tochtli, twelue yeeres; Matlactliomei Acatlh, thirteene yeeres. The third weeke of yeeres. Ce Tecpatlh, one yeere; Ome Calli, two yeeres; Ei Tochtli, three yeeres; Naui Acatlh, foure yeeres; Macuil Tecpatlh, fiue yeeres; Chioacan Calli, sixe yeeres; Chicome Tochtli, seuen yeeres; Chicuei Acatlh, eight yeeres; Chiconaui Tecpatlh, nine yeeres; Matlactli Calli, ten yeeres; Matlactliome Tochtli, eleuen yeeres; Matlactliome Acatlh, twelue yeeres; Matlactliomei Tecpatlh, thirteene yeeres.

The fourth weeke. Ce Calli, one yeere, Ome Tochtli, two yeares; Ei Acatlh, three yeares; Naui Tecpatlh, foure yeares; Macuil Calli, fiue yeares; Chioacen Tochtli, six yeares; Chicome Acatch, seuen yeares; Chienei Tecpatlh, eight yeares; Chiconaui Calli, nine yeares; Matlactli Tochtli, ten yeares; Matlactlioce Acatlh, eleuen yeares; Matlactliome Tecpatlh, twelue yeares; Matlactliomei Calli, thirteene yeares. Each of these weekes, which our men call Indition, doth containe thirteene yeares, so that all the foure weekes make two and fiftie yeares, which is a perfect number in their reckoning, and is called the yeare of grace, for from fiftie two yeares, to fiftie two yeares, they vsed to make solemne feasts, with strange Ceremonies, as hereafter shall be declared. And when fiftie two yeares are ended, then they begin againe, by the same order before declared, vntill they come to as many moe, beginning at Ce Tochtli, and so forward. But alwayes they begin at the Conie figure. So that in the forme of reckoning they keepe and haue in memory, things of eight hundred and fiftie yeares: and by this Chronicle they know in what yeare euery thing happned, and how long euery King reigned: how many children they had, and all things else that importeth to the estate of the gouernment of the Land.

The Indians beleeued that fiue ages were past, which they called Sunnes.

The Indians of Culhua did beleeue that the Gods had made the World, but they knew not how, yet they beleeued that since the creation of the world foure Sunnes were past, and that the fift and last is the Sunne that now giueth light to the World. They held opinion that the first Sunne perished by water, and at the same time all liuing creatures perished likewise. The second Sunne (say they) fell from the heauens, with whose fall all liuing creatures were slaine, and then (said they) were many Giants in that Countrey, and certaine monstrous Bones, which our men found in opening of graues, by proportion whereof, some should seeme to be men of twenty spans high. The third Sunne was consumed by fire, which burned day and night, so that then all liuing creatures were burned. The fourth Sunne finished by tempest of Ayre or Winde, which blow downe Houses, Trees, yea and the Mountaines and Rockes were blowen a sunder, but the linage of Mankinde perished not, saue that they were conuerted into Apes. And touching the fift Sunne, which now raigneth, they know not how it shall consume: But they say, that when the fourth Sunne perished, all the world fell into darkenesse, and so remained for the space of fiue and twenty yeares continually, and at the fifteenth yeare of that fearefull darkenesse, the Gods did forme one man and woman, who brought forth children, and at the end of the other ten yeares, appeared the Sunne which was newly borne vpon the figure of the Conie day, and therefore they begin their account of yeares at that day, and reckoning from the yeare of our Lord 1552. their age or Sunne is 858. so that it appeareth that they haue vsed many yeares their writing in figures: and they had not onely this vse from Cetocli, which is the beginning of their yeare, moneth, and day, of their fifth Sunne, but also they had the same order and vse in the other foure Sunnes which were past: but they let many things slip out of memory, saying, that with the new Sunne, all other things should be likewise new. They held also opinion, that three dayes after this last Sun appeared, all the gods did dye, and that in processe of time, the gods which now they haue, and worship were borne.

The Coronation of the Kings of Mexico.

Although one brother was heire to another among the Mexicans, and after their decease, did inherit the Sonne of the eldest Brother, yet they tooke no possession of the state or name of King, vntill they were annointed and crowned openly.

At soone as any King of Mexico deceased, and his Funerals ended, then were called to Parliament the Lord of Tezcuco, and the Lord of Tlacopan, who were the chiefest estates, and then in order all other Noblemen, who owed any seruice to the Mexican Empire. And being come together; if any doubt of the inheritance

Digitized by Google

heritance of the Crowne happened, then the matter was decided with all haste: then the new King being knowne, he was stripped starke naked, except a cloath to couer his priuie parts, and in this sort was carried among them, to the great Temple of Vitzilopuchtli with great silence, and without any ioy or pleasure: Two Gentlemen of the Citie, whose office it was, led him vp the staires of the Temple by the armes, and before him went the Princes of Tezcuco and Tlacopan, who that day did weare their robes of Coronation, wherevpon was painted their armes and title. Verie few of the Laitie went vp into the Chappels, but onely those that were appointed to attire the new King, and to serue in other Ceremonies, for all the residue stood vpon the steps and below, to behold the Coronation. These Magistrates being aboue in the Chappell, came with great humilty and reuerence, kneeling downe vpon their knees before the Idoll of Vitzilopuchtli, and touched the earth with one finger, and then kissed the same. Then came the high Priest cloathed in his pontificall vestments, with many others in his company, who did weare Surplices: and without speaking any word, they painted or coloured the Kings person, with Inke made for the purpose, as blacke as any coale. After this Ceremonie done, they blessed the annointed King, and sprinkled him foure times with a certaine holy water, that was made at the time of consecration of the God, made of dowe or paste, with a sprinkle made of bowes of Cane leaues, Cedar, and Willow leaues. Then they put vpon his head, cloth painted with the bones and sculs of dead men, and next they cloathed him with a blacke garment, & vpon that another blew, and both were painted with the figures of dead mens sculs and bones. Then they put about his necke certaine laces, whereat did hang the armes of the Crowne. And behinde his back they did hang certain little bottels full of powders, by vertue whereof he was deliuered from pestilence and diseases, according to their opinion: yea, and thereby Witches, nor Witchcrafts could not hurt him, nor yet euill men deceiue him. In fine, with those relicks he was sure from all perill and danger. Vpon his left arme they bound a little bagge of Intense, and then brought vnto him a chaffing-dish of imbers made of the barke of an Oke tree. Then the King arose, and with his owne hand threw of the same Incense, into the chaffing-dish, and with great reuerence brought the same to the god Vitzilopuchtli, and after he had smoaked him therewith, he sat him downe, then came the high Priest and tooke his oath to maintaine the religion of the gods, to keepe also all the lawes and customes of his predecessours, to minister iustice, and not to aggranate any of his vassals or subiects, and that he should be valiant in the warres, that he should cause the Sunne to giue his light, the clouds to yeelde raine, the riuers to runne, and the earth to bring forth all kinde of graine, fruites, and other needefull hearbs and trees. These and many other impossible things the new King did sweare to performe: and then he gaue thankes to the high Priest, and commended himselfe to the gods, and to the lookers on, and they who brought him vp in the same order, carrieth him downe againe. Then all the people cried, the Gods preserue the new King, and that he may raigne many yeares in health with all his people. But then some began to dance, other to play on their instruments, shewing outwardly their inward ioyes of heart. And before the King came to the foote of the steps, all the Noblemen came to yeelde their obedience, and in token of louing and faithfull subiects, they presented vnto him Feathers, strings of Snaile-shels, Collers, and other Iewels of Gold and Siluer, also Mantels painted with death, and bare him company vnto a great hall within the compasse of the Temple, and there left him. The King sitteth downe vnder his cloath of estate, called Tlacatecco, and in foure dayes departeth not out of the circuit of the Temple, the which hee spends in prayers, sacrifice, and penance; he eates then but once a day, and euery day he bathes himselfe, and againe in the night in a great pond of water, and then lets himselfe bloud in his eares, and senseth therewith the god of water, called Tlaloc: he likewise senseth the other Idols, vnto whom he offereth Bread, Flowers, Papers, and little Canes, died in the bloud of his owne tongue, nose, hands, and other parts of his body. After the foure dayes expired, then come all the Noblemen to beare him company to his Pallace, with great triumph and pleasure of all the Citie, but after his consecration few or none dare looke him in the face.

The ointment.

And now with the declaration of the Acts and Ceremonies that the Mexican Kings are crowned, I shall not needs to rehearse of other Kings, for generally they all doe vse the same order, sauing that other Princes goe not vp to the top of the Temple, but abide at the foote of the steps to be crowned, and after their Coronation they come to Mexico for their confirmation, and then at their returne to their Countrey, they made many drunken feasts and banquets.

The opinion of the Mexicans concerning the Soule.

The Mexicans did beleeue that the Soule was immortall, and that they receiued either ioy or paine according to their deserts and liuing in this world, vnto which opinion all their religion did attaine, and chiefly appeare at their burials. They held for an assured [illegible], that there were nine places appointed for soules, and the cheefest place of glory to be neere vnto the Sunne, where the soules of those which were good men slaine in the warres, and those which were sacrificed were placed, and that all other sorts of euill persons their soules abode on the earth, and were deuided after this sort, children that were dead borne went to one place, those which died of age or other disease went to another, those which died of sudden death to another, those which died of wounds or contagious diseases went to another place, those which were drowned went to another, those which were put to death for offence by order of Iustice, as for robbery and adultery to another: Those which slew their Fathers, Mothers, Wiues or Children, to another place by themselues: also those who slew their Masters or any religious person went to another place. The common sort of people were buried, but Lords and rich men had their bodies burned, and their ashes buried. In their shrowdes they had a great difference, for many dead bodies were buried better apparelled

Nine places for Soules.

Digitized by Google

led then when they were on line. Women were shrowded after another sort. And hee that suffered death for adultery, was shrowded like vnto the God of lecherie, called Tlazoulteutl; he that was drowned like vnto the god of water, named Tlacoc; and he that died with drunkennesse was shrowded like vnto the god of wine, called Ometochtli. But the Souldier had an honorable shrowde like vnto the attire of Vitzilopuchtli, and the like order in all other sorts of deaths.

The buriall of Kings in *Mexico.*

When any King of Mexico happened to fall sicke, they vsed forthwith to put a visor vpon the face of Tezcatlipuca, or Vitzilopuchtli, or some other Idoll, which Visor was not taken away, vntill they saw whether the King did amend, or else dye: But if he chanced to dye, then word was sent throughout all his Dominions to bewaile his death, and also other postes were sent to call the Noblemen that were his nighest kinsmen, and to warne them within foure daies to come vnto his buriall.

The dead body was laid vpon a faire Mat, and was watched foure nights, with great lamentation and mourning: then the body was washed, and a locke of haire cut from the crowne of his head, which was preserued as a great relicke, saying, that therein remained the remembrance of his soule. This done, a fine Emerald was put in his mouth, and his body shrowded in seuenteene rich Mantels, of colours, both rich and costly wrought. Vpon the vpper Mantle was set the deuise or armes of Vitzilopuchtli or Tezcalipuca, or some other Idoll, in whom the King had great confidence in his life time, and in his Temple should the body be buried. Vpon his face they put a visor, painted with foule and Deuilish iestures, beset with many Iewels, Precious stones, and Pearles, Then they killed his slaue, whose office was to light the Lampes, and make fire vnto the gods of his Pallace. These things done, they carried the dead body vnto the Temple: some followed him with dolefull tune, others sung the death of the King by note, for so was the custome.

The Noblemen and Gentlemen of his household carried Targets, Arrowes, Mases, and Enfignes to throw into the fire where the body should be buried in the Temple. The high Priest and all the Clergie receiued him at the Temple gate, with a sorrowfull song, and after he had said certaine words, the body was throne into a great fire made for the purpose, with all the Iewels that he had about him, and all the other things which was brought to honour the buriall: also a Dogge newly strangled with an Arrow, which was to guide him his way. In the meane while that the King and Dogge were burning, the Priests sacrificed two hundred persons, howbeit in his Ceremonie there was no ordinary taxe, for sometimes they sacrificed many moe: they were opened with a Rasor of flint in the breasts, and their hearts taken out and throwne into the fire where the Kings body was. These miserable persons being sacrificed, and their bodies throwne into a hole; they beleeued assuredly that those should serue for his slaues in another world: some of them were Dwarffes, monstrous and deformed persons, with some women. They placed about the dead body of the King before his buriall, Roses, Flowers, and sundrie dishes of meate and drinke, and no creature durst touch the same, but onely the Priests, for it seemed to be an offering.

The next day following, all the ashes were gathered together, and the teeth with the Emerald that was in his mouth, the which things were put into a Chest, painted on the inside with horrible figures of deuils, and the locke of haire which was cut from his crowne, and another locke of haire which was preserued from the time of his birth. Then the Chest was locke, and an Image of wood made and cloathed like vnto the Kings person, which was set on the top of the Chest. The obsequies endured foure dayes, in the which the wiues and daughters of the King offered great offerings at the place where his body was buried, and before the Chest and his Image.

On the fourth day after the buriall, fifteene slaues were sacrificed for his soule; and on the twentieth day, other fiue persons were also sacrificed; likewise on the sixtie three and fourescore, which was like vnto the yeares minde.

The order of buriall of the Kings of *Michuacan.*

The Kingdome of Michuacan *is almost as great as the Empire of* Mexico, *and when any King of that Countrey happened to be visited with sickenesse, and brought to such extremitie, that hope of life were past, according to the opinion of Phisitions, then would he name and appoint which of his Sonnes should inherite the estate; and being knowne, the new King or heire, incontinent sent for all the Gouernours, Captaines, and valiant Souldiors, who had any office or charge to come vnto the buriall of his Father, and he that came not, from thenceforth was held for a Traitour, and so punished. When the death of the old King was certaine, then came all degrees of Estates and brought presents to the new King, for the approbation of his Kingdome, but if the King were not throughly dead, but at the point of death, then the gates were shut in, and none permitted to enter; and when his life was departed, then began a generall cry and mourning, and they were permitted to come where their dead King lay, and to touch him with their hands: this being done, the carkasse was washed with sweete waters, and then a fine shirt put vpon him, and a paire of shooes made of a Deere skinne put on his feete, and about his ankles were tied certaine Bels of Gold, about his wristes of his hands were put Manyllas of Turkies, and other Bracelets of Gold, likewise about his necke they hung other collers of precious stones, and gold, and rings in his eares, with a great Turkise in his nether lippe. Then his body was laid vpon a large beere, whereon was placed a good bed vnder him: on his one side lay a Bowe with a quiuer of Arrowes, and on his other side lay an Image made of fine Mantels of his owne stature or bignesse, with a great tuffe of fine feathers, shooes vpon his feete, with Bracelets, and a coller of gold. While his worke was a doing, others were busied in washing the men and women*

men which should be slaine for to accompany him into Hell: these wretched folke that should be slaine were banqueted and filled with drinke, because they should receiue their death with lesse paine. The new King did appoint those who should dye for to serue the King his Father, but yet many of them had rather haue beene without his seruice, notwithstanding some simple fooles esteemed that odious death for a thing of immortall glory. First, seuen Gentlewomen of noble parentage were appointed to dye, the one to haue the office of keeper of his Iewels which he was wont to weare, another for the office of Cup-bearer, another to giue him water with a Bason and Ewer, another to giue him alwayes the Pimpall, another to be his Cooke, and another to serue for Laundresse. They slew also many woman-slaues, and free maidens, for to attend vpon the Gentlewomen, and moreouer, one of euery occupation within the Citie. When all these that were appointed to dye were washed, and their bellies full with meate and drinke, then they painted their faces yellow, and put garlands of sweete flowers vpon each of their heads. Then they went in order of procession before the beere whereon the dead King was carried, some went playing on Instruments made of Snailes shels, others played vpon bones and shels of Sea-turtils, others went whistling, and the most part weeping: the Sonnes of the dead King and other Noblemen carried vpon their shoulders the Beere where the Course lay, and proceeded with an easie pace toward the Temple of the god Curicaueri: his kinsmen went round about the Beere, singing a sorrowfull song. The officers and houshold seruants of the Court with other Magistrates and Rulers of iustice bare the Standarts and diuers other armes.

About midnight they departed in the order aforesaid, out of the Kings pallace, with great light of fire brands, and with a hoarse noise of Trumpets and Drummes. The Citizens which dwelt where the Corse passed, attended to make cleane the streete. And when they were come to the Temple, they went foure times round about a great fire made of the wood of Pine tree, which was prepared to burne the dead body: then the Beere was laid vpon the fire, and in the meane while that the body was burning, they mawled with a club those which had the Garlands, and afterward buried them by foure and foure, as they were apparelled behinde the Temple.

The next day in the morning, the ashes, bones and Iewels, was gathered and laid vpon a rich Mantle, the which was carried to the Temple gate, where the Priests attended to blesse those deuellish relickes, whereof they made a dough or paste, and thereof an Image which was apparelled like a man, with a visor on his face, and all other sorts of Iewels that the dead King was wont to weare, so that it seemed a gallant Idoll. At the foote of the Temple staires, they opened a graue ready made, which was square, large, and two fadom deepe, it was also hanged with new Mats round about, and a faire bed therein, in the which a religious man placed the Idol made of ashes, with his eyes toward the East part, and hung round about the wals, Targets of Gold and Siluer, with Bowe and Arrowes, and many gallant tuffes of Feathers, with earthen vessels, as Pots, Dishes, and Platters, so that the graue was filled vp with houshold stuffe, Chests couered with Leather, Apparell, Iewels, Meate, Drinke, and Armor. This done, the graue was shut vp, and made sure with beames, boords, and flored with earth on the top.

All those Gentlemen which had serued or touched any thing in the buriall, washed themselues, and went to dinner in the Court or yard of the Kings house without any table, and hauing dined, they wiped their hands vpon certaine locks of Cotten woll, hanging downe their heads, and not speaking any word, except it were to aske for drinke. This Ceremonie endured fiue dayes, and in all that time no fire was permitted to be kindled in the Citie, except in the Kings house and Temples, nor yet any Corne was ground, or Market kept, nor none durst goe out of their houses, shewing all the sorrow that might be possible for the death of their King.

Iudges. In Mexico were twelue Iudges, who were all Noblemen, graue, and well learned in the Mexican Lawes. These men lined onely by the rents that properly appertaine to the maintenance of Iustice, and in any cause iudged by them, it was lawfull for the parties to appeale vnto other twelue Iudges, who were of the Princes blood, and alwayes abode in the Court, and were maintained at the Kings owne cost and charges. The inferiour Iudges came ordinarily once euery moneth to consult with the higher. And in euery fourescore dayes came the Iudges of euery Prouince within the Mexican Empire, to consult with the Iudges of Mexico, but all doubtfull causes were reserued to the King, onely to passe by his order and determination. Painters. The Painters serued for notaries, to paint all the cases which were to be resolued, but no suite passed aboue fourescore dayes without finall end and determination. There were in that Citie twelue Sergeants, whose office was to arrest, and to call parties before the Iudges. Sergeants. Their garments were painted Mantels, whereby they were knowne a farre off. Prisons. The Prisons were vnder ground, moist and darke, the cause whereof, was to put the people in feare to offend. Witnesses and oathes. If any witnesse were called to take an oath, the order was, that he should touch the ground with one of his fingers, and then to touch his tongue with the same, which signified that he had sworne and promised to speake the truth with his tongue, taking witnesse thereof, of the earth which did maintaine him. But some doe interprete the oath, that if the partie sware not true, that then he might come to such extremitie, as to eate earth. Sometime they name and call vpon the God of the crime, whose cause the matter touched.

Bribery. The Iudge that taketh bribes or gifts, is forthwith put out of his office, which was accounted a most vile and shamefull reproach. The Indians did affirme that Necaualpincinth did hang a Iudge in Tezcuco, for giuing an vniust sentence, he himselfe knowing the contrary. Murther. The Murtherer is executed

Theft. without exception. The woman with childe that wilfully caſteth her creature, ſuffereth death for the ſame. The Theefe for the firſt offence, was made a ſlaue, and hanged for the ſecond. The Traitor to the King and Common-weale, was put to death with extreame torments. The Woman taken in Mans apparell died for the ſame, and likewiſe the Man taken in Womans attire. Euery one that challengeth another to fight, except in the warres, was condemned to dye. In Tezcuco the ſinne of Sodomie was puniſhed with death, and that Law was inſtituted by Necaualpincinth, and Necaualcoio, who were Iudges, which abhorred that filthy ſinne, and therefore they deſerued great praiſe, for in other Prouinces that abhominable ſinne was not puniſhed, although they haue in thoſe places common Stewes, as in Panuco.

Diſguiſe of ſexe.
